CANADA'S CHANGING ENERGY PATTERN

PART I - The Supply and Distribution of Individual Commodities in 1952

This is the first of three articles on the supply and distribution of energy in Canada, based on a new method that has been developed for the presentation of the statistics in this field. The year 1952 was chosen because it is the last year for which a complete study is available. All data in this article are given in terms of weight, volume or kilowatt hours. The second article will present many of the 1952 data in terms of a common unit of measurement, the British thermal unit. On this basis, it is possible to assess the relative importance of the different commodities which make up Canada's energy pattern. The final article will take several of the leading concepts covered by the first two articles, and will show the changes over time, from 1926 where possible, up to the latest date for which figures can be computed. Statistics presented in the second and third articles will fit into the framework of the main table presented here for the year 1952.

The table on pages II and III shows the supply and distribution of energy in Canada in 1952, and a brief description of it is given in the following paragraphs. Full details on the way in which the table was built up, together with a detailed explanation of the concepts used, are contained in Reference Paper Number 69 "Energy Sources in Canada; Commodity Accounts for 1948 and 1952". Available data for earlier years are given in Reference Paper Number 74, "Energy Sources in Canada; Commodity Statements for 1926, 1929, 1933 and 1939".

The Method of Approach

For the purpose of this study, the fuels used in Canada were broken into commodity groups as finely as the available data permitted. Each commodity group has a column in the consolidated table, as does electricity. For 1952, it was not possible to break out the electricity completely between that generated by water and that generated by thermal plants, although such a breakdown would be preferable. Reference Paper Number 69 gives (page 15) sufficient information for an estimate to be made with reasonable accuracy for most economic purposes.

For each commodity group, a series of data are given, which demonstrate where the available supply came from, and how it was used. The available supply in Canada is taken to be the amount produced within the country plus the excess of imports over exports (net imports) plus the net amount withdrawn from stocks during the year. In cases where stocks were built up during the year, the change in stocks is given as a negative quantity.

The use of net imports is satisfactory for an aggregate approach, but more detail is needed, of course, to give the full picture of the impact of international trade on the Canadian energy pattern. For 1952, when exports of fuel were comparatively unimportant, the use of net imports does not obscure a broad view of the international aspect. However, it could be less satisfactory for a year in which there were heavy imports and exports of the same commodity. In 1956, for instance, a statement of net imports of crude petroleum might be somewhat misleading, because in that year there were heavy exports from western Canada, simultaneously with heavy imports to eastern Canada. A similar table for 1956 might, therefore, need to be presented somewhat differently.

Having worked out the available supply, the next step was to account for its use. The total accounted for is given as line 6 of the table. Line 5, use unaccounted for, is a balancing item obtained by subtracting the use accounted for from the available supply.

To some extent, waste can be accounted for. Measured waste is stated on line 7, and the deduction of it from use accounted for leaves use accounted for net of waste, on line 8.

Because one purpose of this study was to determine the net use of energy, it was necessary to break out separately the amounts of fuel and electricity used in the process of producing other units of fuel and electricity. Lines 9 to 17 give information about these. Deduction of the amounts used within the energy-producing sector gives, at line 18, the amount used outside the energy-producing sector, as far as this was measured. The next step is to deduct the amount of fuel commodities used as raw materials. Finally, line 20 shows the total amount of fuel or electricity used to supply energy outside the energy-producing sector. Lines 21 to 27 break this total down between the more important categories of end use.

The statistical gap — One advantage of the consolidated table is that it provides a check on the cover of the statistical system, and to some extent on its quality. The total for supply available in Canada should theoretically be the same as that for use accounted for, including waste. Under the conditions of actual measurement, there is a difference, usually in the form of a shortfall of measured distribution below the apparent supply. For all the commodities covered, this supply figure can be

Supply and Distribution of Fuel and Electricity in Canada, 1952

9. Includes line losses.

10. Street lighting and municipal power.

11. Free service.

assumed to be reasonably reliable. Information on the change in inventories is sometimes incomplete, but this item is probably never more than a small part of the total supply. The statistical gap is therefore best measured as the percentage by which the measured portion of consumption falls short of the apparent available supply. The table below shows this statistical gap, ranking the commodities according to the size of the gap, irrespective of sign.

Energy Account, 1952

Per cent by which measured portion of distribution fell short of apparent available supply.

Natural gas	0.33
Crude petroleum	0.4
Gasoline and naphtha	2.2
Coke (other than petroleum or pitch coke)	2.5
Manufactured gas	2.6
Coal (excluding briquettes)	2.8
Electricity	3.0
Other petroleum fuels	4.7
Coal briquettes	6.0
Petroleum coke	6.6
Liquefied petroleum gases	81.5
Fuelwood	94.0

The first point which springs to mind is that the degree of cover was quite high in 1952, 93.4 per cent or more of the supply being accounted for on the distribution side for ten of the commodity groups, including all the major ones. Most of the fuelwood unaccounted for was used by households for heating or cooking. Studies have shown that there was a considerable increase in cover for most fuels between 1939 and 1948. This was due to wartime controls and the consequent need for additional information.

The Supply and Distribution of Individual Commodities

The consolidated table shows a varying pattern of supply and distribution for the different sources of energy. An outline of the main features for each commodity group is given below.

Coal (excluding briquettes) — It is clear from the table that Canada was dependent on imports for the greater part of her coal supply in 1952. In fact, she produced only 42.5 per cent of her domestic requirements. Production was concentrated in Nova Scotia and New Brunswick in the east, and in Saskatchewan, Alberta, British Columbia and the Yukon in the west. Of the 6,648,088 tons mined in the Maritimes

6,120,657 were from underground mines, and 527,431 tons from open pits, which are much easier to operate. Of the 10,930,914 tons mined in the West, 5,889,286 tons were from underground mines, and 5,041,628 tons from open pits. Central Canada produced no coal, and because of the long distances between it and the Canadian mines, it met its requirements from more readily accessible sources in the United States. The waste accounted for in the coal industry consisted of material dumped at the mines as being sub-standard. Most of this is a carbonaceous type of shale mixed with the coal hauled out of pits. Of the use accounted for, 19.7 per cent occurred within the energy-producing sector. Most of this was in coke and gas plants, mainly for the production of coke. Canada's iron and steel industry consumes large quantities of coke in its blast furnaces and to some extent in its steel furnaces. These furnaces together consumed the equivalent of about 7 tons of coal for every 10 tons of iron ore. About 1.3 million tons of coal were used by central electric stations.

Use of coal otherwise than for producing fuel or electricity was fairly evenly divided between three groups: household and commercial users which require coal mainly for space heating, manufacturers and mines which use it both for space heating and for power, and the transportation industry which uses it mainly for power.

Coal briquettes afford a convenient means of using the dust and small pieces which always occur when coal is mined. They do not form a major part of the energy picture. In 1952, they were used mainly by the railroads.

Crude petroleum — Crude petroleum was another major energy source for which Canada was heavily dependent on imports in 1952, when domestic production made up 44.0 per cent of the available supply. This was a considerable increase over the period before the Alberta oilfields were major producers. In 1939, for instance, Canadian sources supplied 17.0 per cent of domestic crude oil requirements; in 1948, the comparable figure was 13.7 per cent.

In 1952, the refineries of the Maritimes and of Quebec imported all their requirements of crude oil, because of their distance from the oilfields of the Canadian west. Ontario refineries met 59.5 per cent of their requirements from Canadian sources, from which a pipeline had been laid eastwards. The refineries of the Prairies and the Northwest Territories obtained almost all their crude oil from domestic wells. In British Columbia, 93.6 per cent of refinery requirements were imported by sea. Exports in 1952 were small, being about 1 per cent of available domestic supply. Almost all the crude petroleum used in Canada went into the refineries. A very small amount was used in pipeline operations.

Natural gas — Canada met her own requirements of natural gas in 1952, and had net exports of this commodity. The energy-producing sector itself used up 15.8 per cent of the natural gas produced. A slightly larger amount, 16.7 per cent, was wasted at the gas fields. Of the use outside the energy-producing sector, households were the major consumer, followed by manufacturing and mining establishments, and by commercial establishments. A certain amount of natural gas was used as a raw material, but the amount cannot be disclosed, because of the need to keep the activities of individual firms confidential.

Coke (except petroleum and pitch coke) — Canadian plants turned out 94.5 per cent of the Canadian supply of coke in 1952. Of this supply, 7.7 per cent was used by coke and gas plants. Blast furnaces consumed 2,493,903 tons, or well over half the available supply. When other uses as raw materials are taken into account, 2,790,415 tons, or 65.0 per cent of the available supply, were used as raw materials. Net use as energy, mainly by manufacturers and mines, accounted for less than a quarter of the available supply.

Gasoline and Naphtha — Naphtha was included with gasoline because they cannot be separated in certain trade statistics, but the data relate almost entirely to gasoline. Canadian refineries provided 89.8 per cent of the available supply of this important fuel. Owing to some discrepancy in the statistical system, use accounted for was greater than the apparent available supply. Almost all of this commodity was used outside the energy-producing sector. Most of it was for transportation, mainly for road transport.

Other petroleum fuels — A smaller proportion, 76.3 per cent, of the supply of other petroleum fuels was made up from domestic sources. Use within the energy-producing sector took up 7.6 per cent of available supply, petroleum refineries being the heaviest users here. Of the amount used as fuel outside the energy-producing sector, household and commercial users consumed most. Their use was primarily for space heating, and accounted for about two fifths of total consumption. The transportation sector, using petroleum fuels as a source of power, was responsible for almost a quarter of all use. Manufacturers and

mines, which used the oil partly for heating and partly for power, accounted for just over one fifth of the amount consumed.

Fuelwood — Fuelwood was supplied entirely from domestic sources. Data on its use are scanty, but it is known that about 6 per cent went as raw materials. It is probable that most of the remainder was used for domestic heating and cooking, although it is known that quantities of wood waste are burnt by manufacturers.

Electricity — Canada met her own requirements of electricity, and was a net exporter on a limited scale. Of the 66.1 billion kilowatt hours generated, at least 57.0 billion were generated by water power, and 2.4 billion by thermal plants. About 96.0 per cent of electricity was used outside the energy-producing sector, manufacturers using 60.6 per cent of the available supply. Most of this would be used for light and power, although substantial quantities of off-peak power were used for heating purposes by the pulp and paper industry, and large quantities were also used for industrial processes of which the use of electricity is an integral part, such as electro-plating and certain stages of aluminum production. Household and commercial users accounted for about 19.2 per cent of the available supply. This use was probably mainly for lighting, cooking, and the operation of appliances. When electricity is transmitted over power lines, some of it is used up in overcoming resistance. Such line losses have been included in use for transportation, which absorbed about 10.2 per cent of the supply.

Other fuels — Petroleum coke was not a major source of energy. It was mainly used as a raw material, by manufacturing industry. The entire supply of manufactured gas was produced in Canada. Of this, 35.2 per cent was used by the coke and gas plants or the petroleum refineries which produced it. Manufacturers and mines were the other major users of manufactured gas, followed by households. Half the supply of liquefied petroleum gases was made up of Canadian production. Information about the disposal of this commodity is not complete, and 81.5 per cent of its use was unaccounted for. The energy-producing sector itself used 18.0 per cent of the output, petroleum refineries being responsible for nearly all of this.

INDUSTRIAL PRODUCTION

The index of industrial production continued to decline in May. The fall in mining and power output was only partially offset by a small increase in manufacturing production.

(1)Averages or totals of unadjusted data.

(2)Seasonally adjusted at annual rates.

(3)Gross National Product at market prices excluding accrued net income of farm operators from farm production.

(4)Seasonally adjusted quarterly averages of monthly data.

MANUFACTURING PRODUCTION

Durable manufacturing output declined fractionally in May as non-ferrous metal production declined and iron and steel turned up. Non-durable output increased with the advance in paper products production.

LABOUR INCOME AND FARM CASH INCOME

Seasonally adjusted total labour income turned up in May due mainly to a recovery in income in service industries. Farm cash income was up in the first quarter.

HOUSING STARTS AND COMPLETIONS

Seasonally adjusted housing starts have recovered steadily since January of this year to a level of 80,000 units. Housing completions remained stable.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS AND IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports of goods increased slightly in May with small contrary movements in the components. Imports of goods turned down in May. Corporation profits before taxes declined in the first quarter.

(1)Seasonally adjusted at annual rates.

(2)Manufacturing inventory owned by manufacturers, whether held at plant or not, at end of period.

(3)Rough

cords of 128 cu. ft.

(4)In urban areas of 5,000 population and over. As of January, 1957, figures are not strictly comparable to those of 1956 due to the inclusion of additional municipalities in the "urban 5,000 and over" category.

1

(5)Average of weekly rates.

(6)Middle of month.

(7)Revised according to new bench marks.

(8)Prior to January, 1957, this total includes the net amount generated by the more important central electric stations, i.e. companies, municipalities and individuals selling or distributing electric energy. From January, 1957 it includes all generating agencies producing over ten million kilowatt hours per year. The total generated on the old basis for January 1957 was 7,457 million kilowatt hours.

(9)End of period. Including personal savings deposits.

4 Note.—Until the end of 1955, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1955 have been revised accordingly. Monthly figures for 1956 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(¹)Not applicable to figures on population and immigration. (²)Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951. (³)Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. (⁴)Exclusive of stillbirths. (⁵)Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

⁽¹⁾Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item.

⁽²⁾This item differs from column 4, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

(1)Seasonal (formerly supplementary) benefit data included.

(2)On last working day of month; claimants formerly classified as "short time" and temporary

lay-off are included.

(3)Estimates based on number of payment documents; prior to February 1955, data related to week containing last working day of month; commencing with February 1955 estimates are based on average weekly number of payments.

(4)Commencing with October 1955, the number of calendar weeks during which a benefit payment was made; prior to that date, payment was made on the basis of individual days.

(5)Unemployed days prior to October 2, 1955.

(6)Revised to relate to the Thursday nearest to the last day of the month.

⁽¹⁾Excludes gold.⁽²⁾Arithmetically converted from 1935-39 = 100.⁽³⁾Indexes August, 1955—July, 1956 are final with the inclusion of final participation payments for Western wheat announced in May, 1957. Subsequent indexes are subject to revision.⁽⁴⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1956 are final prices. Since August 1, 1956, only initial prices are available for wheat, oats and barley.

28 Note: The coverage of this series has been expanded as of January, 1957 to include, in addition to Central Electric Stations industrial power installations that generate electricity for their own use. Except for utilities, comparable data for previous months are not available.

(1)Prior to January, 1957, these totals include the net amount generated by the more important central electric stations, i.e. companies, municipalities, and individuals selling or distributing electric energy. From January, 1957 they include all generating agencies producing over ten million kilowatt hours per year. The total generated on the old basis for January 1957 was 7,457 million kilowatt hours.

(2)Less imports.

(3)These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year.

(4)Total net generation less exports. Total power available for disposal for January, 1957 on the old basis was 7,170 million kilowatt hours.

(5)Mainly the amount used in electric boilers.

Note: In view of the change, in March 1955, in the method of reporting certain categories of refining operations, the classification of the table was altered so that continuity of the series could be maintained as much as possible.

(1)As of January, 1957, includes tractor fuels.

(2)Prior to March, 1955 excludes a certain amount of imported fuels.

(1)Includes copper fine in ore, ingots, bars, billets, rods, strips, sheets and tubing.
(2)Includes lead in ore and in pigs.

(3)Includes ingots, bars and billets.

(4)Includes nickel in matte or speiss, oxide and fine.

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. ⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also irrespective of shipments in the month received) or whether they will be added to existing backlog. ⁽³⁾Estimated total unfilled orders on books at end of month, in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. ⁽⁴⁾Manufacturing inventory owned by manufacturers, whether held at plant or not, at end of period.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

⁽³⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel, D.B.S.
Note.—Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

(1) Shipments for further processing within own firm and for sale in Canada.

*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities were also chosen for complete enumeration; in June, 1955, the number of sample areas was increased to nearly 800.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1956, stands at 901, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Planks and boards, flooring and square timber. ⁽³⁾Hollow blocks including fireproofing and load-bearing tile. ⁽⁴⁾For building insulation only. ⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Includes concrete chimney blocks.

⁽⁷⁾Factory sales of firms which normally account for 90% of total Canadian production.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

Note: Excluded from this tabulation are the charge accounts of certain categories of dealers whose credit is extended mainly to farmers or other businesses rather than to consumers.

⁽¹⁾Consumers' charge accounts receivables outstanding on the books of retail dealers.

⁽²⁾Consumers' instalment receivables outstanding on the books of retail dealers.

⁽³⁾Instalment paper held by sales finance, acceptance, small loan companies and money lenders in connection with the financing of retail purchases of consumer goods largely new and used automobiles.

⁽⁴⁾Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

(1) Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1955 and 1956 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (2) As of January, 1955, the C.P., C.N. and Quebec North Shore and Labrador Railways use the "Uniform Classification of Accounts for Common Carriers by Railway". The Pacific Great Eastern Railway uses the new classification system as of January, 1956. Beginning in January, 1957, all railways follow the uniform classification of accounts, and the statistics previously shown in the "Other Railways" section in the upper half of the table are combined, as of that date, with those railways already following the new system. (3) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

⁽¹⁾Foreign exchange and foreign securities.⁽²⁾Industrial Development Bank capital stock, bonds and debentures.⁽³⁾Bank premises and all other assets.⁽⁴⁾Capital, rest fund and all other liabilities.⁽⁵⁾On December 31, 1956, the basis for the valuation of securities held by The Bank of Canada was changed from "not exceeding market values" to amortized values, and for this reason figures for December 31 and later dates are not comparable with those for earlier dates.

⁽¹⁾ Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

⁽²⁾ From July, 1954, the figures are not adjusted for items in transit.

⁽³⁾ Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent.

⁽⁴⁾ Mainly deposits of foreign banks.

⁽⁵⁾ Capital, rest fund and undivided profits as at the latest fiscal year-end.

⁽⁶⁾ Including issues payable in foreign currency.

⁽⁷⁾ Beginning January 31, 1957, month-end figures for chartered bank holdings of Government of Canada and provincial government securities are based on "amortized value" and are therefore not directly comparable with figures for preceding month-ends, which are based on "not exceeding market value".

⁽⁸⁾ Beginning January 31, 1957, figures for June 30, 1954, and later, are not adjusted for re-allocation of inner reserves consequent upon the change referred to in footnote 7.

⁽⁹⁾ Excluding Canadian day-to-day loans.

⁽¹⁰⁾ Figures for June 30, 1954, after adjustment for items in transit, was 3,789. Includes loans to grain dealers and exporters, loans to finance the purchase of Canada Savings Bonds at time of issue and all other loans in Canada.

⁽¹¹⁾ Includes deposits with other banks in foreign currency, foreign bank notes, gold and coin outside Canada and foreign currency items in transit (net).

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 31 companies operating in Canada representing 87 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1955 and 1956 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The Canada totals are comparable for these two years. Provincial monthly totals for 1955, however, are not comparable with those for previous years due to changes by several companies in the manner of reporting new business. For 1956, the provincial figures are comparable with each other, but are not strictly comparable with previous years; the same applies to the 1957 data. The annual figures for Canada and the provinces are consistent, although the 1956 data are still preliminary.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.

Note.—*Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such.

⁽¹⁾Quarterly data for the last five columns are monthly averages. ⁽²⁾In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.
