# NATIONAL ACCOUNTS INCOME AND EXPENDITURE

## Second Quarter 1957

GROSS NATIONAL PRODUCT IN THE SECOND QUARTER WAS UNCHANGED FROM THE FIRST QUARTER RATE OF \$30.7 BILLION.

(At Seasonally Adjusted Annual Rates)  
(BILLIONS OF DOLLARS)

FURTHER GAINS IN WAGES AND SALARIES WERE OFFSET BY DECLINES IN OTHER COMPONENTS OF NATIONAL INCOME.

(At Seasonally Adjusted Annual Rates)  
(BILLIONS OF DOLLARS)

BUSINESS OUTLAYS FOR MACHINERY AND EQUIPMENT SHOWED A SMALL DECLINE, BUT A FURTHER ADVANCE OCCURRED IN EXPENDITURES FOR NEW NON-RESIDENTIAL CONSTRUCTION. OUTLAYS FOR HOUSING CONTINUED TO MOVE DOWNWARD.

(At Seasonally Adjusted Annual Rates)  
(BILLIONS OF DOLLARS)

PERSONAL EXPENDITURE ON CONSUMER GOODS AND SERVICES SHOWED LITTLE CHANGE IN THE SECOND QUARTER. A DROP IN PURCHASES OF DURABLE GOODS WAS APPROXIMATELY OFFSET BY SOMEWHAT HIGHER OUTLAYS FOR NON-DURABLES AND FOR SERVICES.

(At Seasonally Adjusted Annual Rates)  
(BILLIONS OF DOLLARS)

## INTRODUCTORY REVIEW

Preliminary estimates of Gross National Product in the second quarter show no change from the seasonally adjusted first quarter rate of \$30.7 billion. This stability in the value figures was accompanied by a further advance in final product prices, which rose during the period by almost 1 per cent. The levelling-off in output which was noted in the first quarter has thus been continued into the second quarter, and is in contrast to the strong upward trend which has characterized the figures since mid-1954. The recent levelling-off in output was not reflected in aggregative employment measures, which continued to move upward.

At \$30.7 billion, the Gross National Product in the first half of this year has averaged about 3 per cent above the annual figure for the year 1956 as a whole. This comparison includes an estimate of the value of crop production in Canada for the year 1957, which is substantially below the year 1956. Most recent data suggest that grain output

may drop by about \$350 million this year, mainly due to extremely dry weather conditions in the Prairie Provinces. Such a decline would represent about 1 per cent of the total value of the Gross National Product. Non-farm Gross National Product, seasonally adjusted, has averaged about 4 per cent over last year's annual total in the first half of 1957.

The relative stability in the value of total production between the first and second quarters of this year was accompanied by mixed and offsetting tendencies in important categories of income, expenditure, and output. Labour income rose further as employment and earnings continued to advance. Investment income was off slightly, reflecting a continuation of the downward trend in profits, and a rise in dividends paid abroad. Other categories of National Income showed small declines; farm net income from the sale of livestock products was lower, while unincorporated non-farm income was affected by a decline in retail sales.

\*Seasonally adjusted at annual rates.

On the expenditure side, offsetting tendencies were again present, with gains in non-residential construction and in government expenditures counterbalanced by declines in other demand categories. Personal expenditure on consumer goods and services was virtually the same as a drop in durable goods purchases was almost offset by gains in outlays for non-durables and for services; it may be noted that the advances in the latter two categories in the second quarter were somewhat smaller than

in recent quarters. Although housing starts have risen sharply since the Spring, housing outlays showed a further decline in the second quarter, reflecting the fact that completions were lower. The strong upward movement in outlays for new machinery and equipment came to an end in the first quarter, and in the second quarter gave way to a minor decline. At the same time, imports of goods and services fell slightly, in response to a smaller inflow of iron and its products, marking the first break in

a long period of successive quarter-to-quarter gains. Exports of goods and services, which were level throughout most of 1956, were adversely affected in the second quarter by a further decline in exports of agricultural products, notably grains. These widespread, though individually quite small, declines in the above-noted categories of final demand were accompanied by a fall-off in the rate of inventory accumulation, as both the trade groups and manufacturers added less to their holdings of inventories. The net effect of these divergent movements was to leave total Gross National Expenditure approximately unchanged at the level of the first quarter of 1957.

### Real Output

Related indicators suggest varied trends in output in the main industrial groups. Seasonal factors apart, major gains in output continued to occur in the primary industries, forestry, and mining, quarrying and oil wells; output in the construction industry also rose. Output in manufacturing was off 3 per cent, with the major part of that loss concentrated in durable goods industries, which were down 4 per cent in contrast to a 1 per cent decline in non-durables. Losses were for the most part small and fairly widely dispersed among the various manufacturing industries. A sharp fall in output occurred in two industries, non-ferrous metals and transportation equipment; in the first-named the sharpness of the drop is partly attributable to a prolonged work stoppage in a large aluminum plant; in transportation equipment, the decline in output is mainly accounted for by the lower level of production in the automotive industry.

In addition to manufacturing, losses occurred in some other industries; output in transportation was lower, reflecting the drop in rail freight traffic. Likewise output in trade reflected the reduced volume of retail sales.

In spite of declines in output in a number of industries in the second quarter, the level of production in almost all industrial groups in the first half of 1957 was above that of the corresponding period of 1956. The sharpest gains were in mining (10 per cent), electric power and gas utilities (8 per cent) and construction (5 per cent). The increase in

manufacturing output (1 per cent) was the lowest of any major industry.

### Employment

In spite of the levelling off in production, employment continued to rise in the second quarter, with the industrial composite index of employment showing a small gain of 0.6 per cent, apart from seasonal factors. With employment in manufacturing and mining slightly lower, the gains have taken place in construction and the service industries.

The number of persons with jobs in the first six months of this year was nearly 3 per cent higher than in the corresponding period of 1956 and those with jobs in the non-farm sector 4 per cent higher. However, the rise in employment did not keep pace with the unusually rapid growth of the labour force and the number without jobs and seeking work as a percentage of the labour force averaged 4.7 as compared with 4.3 in the same period of 1956.

### Prices

While the pressure on prices at the wholesale level appears to have eased since early in the year, final product prices continued to move upward in the second quarter. It is estimated that the over-all level of prices at the final product stage rose by somewhat less than 1 per cent in the second quarter. Varying increases were noted in each of the major expenditure components. However, at the wholesale level, prices declined fractionally in the second quarter, and in June were somewhat lower than the peak reached in January of this year. It should be noted that movements in the components of the wholesale price index over the past year have been conflicting, with declines occurring in non-ferrous metal products, vegetable products, and wood and wood products; some components of the index have levelled off while others have continued to move upward. Compared with the second quarter of 1956, the over-all wholesale price index shows a gain of 1 per cent in contrast to the rise of 3 per cent which occurred in the previous 12-month period. The rise in the consumer price index during the past six months is mainly attributable to the services segment, with the goods content of the index showing relatively small gains.

## COMPONENTS OF GROSS NATIONAL PRODUCT

### Wages, Salaries and Supplementary Labour Income

Labour income in the second quarter is estimated to be \$15,300 million at a seasonally adjusted annual rate, which represents an increase of 1½ per cent from the preceding quarter. This rise is the result of an increase in employment of about 1 per cent and higher average earnings.

Labour income in the construction industry continued to show relatively large gains. Significant increases also occurred in public utilities, transportation, communication and storage, finance, insurance and real estate, and forestry. With employment in manufacturing down 1 per cent, seasonally adjusted, labour income in this industry was slightly below the level of the first quarter.

When the first half of 1957 is compared with the same period of 1956, the advance in labour income is 10 per cent and the industries showing relatively large gains are finance and services, and public utilities, transportation, communications and storage. The advance of 10 per cent in labour income in this comparison reflects a 4 per cent increase in the number of employed paid workers and higher average earnings. It may be noted that hours worked per week in manufacturing were lower in the half-year comparison, by about 1 per cent.

#### **Investment Income**

Investment income in the second quarter of 1957 was at a seasonally adjusted annual rate of \$4,664 million, a decline of 3 per cent from the level of the first quarter.

Corporate profits before deduction of dividends paid abroad were slightly lower, seasonally adjusted, than in the first quarter. The small change in the aggregate conceals divergent experience in the various industrial groups. About one-half of the component industries registered lower profits, the largest declines being in iron and steel, non-ferrous metals and textiles. Somewhat higher profits were recorded in mining, chemicals, non-metallic minerals, foods and beverages and in some of the service-producing industries. With the continued sharp advance in dividends paid abroad, corporate profits after deduction of dividends paid abroad were estimated to be down 4 per cent.

Seasonally adjusted, investment income of individuals was up 2 per cent, reflecting higher receipts in the form of interest and rents, partially offset by lower dividends. On the other hand, government investment income was substantially reduced.

In the six months' comparison, investment income in 1957 was slightly below the level of 1956. Corporate profits before dividends paid abroad were nearly 5 per cent lower and corporate profits entering

National Income were down about 8 per cent. Other elements of investment income rose almost enough to offset the decline in corporate profits.

#### **Net Income of Unincorporated Business**

Net income originating in unincorporated business was lower in the second quarter than in the first, by about 2 per cent. Farm income seasonally adjusted, declined as a result of a somewhat lower level of livestock production. In the non-farm sector, net income showed a drop of about 1 per cent, reflecting chiefly a decline in the retail trade group.

It may be noted that net farm income in the second quarter shows a drop of about 22 per cent from the same period one year ago. This decline reflects the fact that grain production for the full year 1957 is estimated to \$350 million below 1956. In the seasonally adjusted estimates, crop production is divided evenly among the four quarters of the year.

#### **Indirect Taxes less Subsidies**

Seasonally adjusted at annual rates, indirect taxes less subsidies amounted to \$3,764 million, 3 per cent less than in the first quarter. The decline was attributable to a drop in excise taxes (8 per cent) and customs import duties (7 per cent) at the Federal level.

However, when the second quarter of 1957 is compared with the same period of 1956, Federal indirect taxes were unchanged. Customs import duties, reflecting the decline in imports, were substantially lower but this decline was offset by higher receipts from excise and other indirect taxes. Provincial indirect taxes rose, mainly as the result of higher yields from the gasoline and retail sales taxes. Real and personal property taxes account for the major part of the increase in municipal revenues.

In the six-months' comparison, indirect taxes less subsidies showed an increase of 8 per cent.

### **COMPONENTS OF GROSS NATIONAL EXPENDITURE**

#### **Government Expenditure on Goods and Services**

Government expenditure on goods and services, seasonally adjusted, in the second quarter was \$5,448 million, 5 per cent higher than in the first quarter. The gains were concentrated at the provincial and municipal level. It may be noted that the estimate is on a cash basis and therefore does not take into account the increase in wages and

salaries at the Federal level which became effective, but was not paid, in the second quarter.

When the first half of 1957 is compared with the first half of 1956, government expenditure on goods and services shows an increase of 5 per cent. Defence outlays have shown little change in the half year, but other outlays have risen at all three levels of government.

### Gross Domestic Investment (excluding change in inventories)

Gross domestic investment (excluding change in inventories) in the second quarter was \$7,072 million, at seasonally adjusted annual rates, 2 per cent above the level of the first quarter. The composition of investment changed somewhat as the emphasis shifted toward construction and away from machinery and equipment. The two construction components in the second quarter, seasonally adjusted, were \$4,400 million compared with \$4,228 million in the first quarter, while outlays for machinery and equipment, also seasonally adjusted, were \$2,672 million, \$44 million less than in the first quarter. The rise in construction outlays is the result of an 8 per cent increase in non-residential construction, partially offset by a 4 per cent decline in expenditures for housing. There was a distinct recovery in housing starts in the second quarter but completions continued to be below the level of the preceding quarter. The slight falling off in expenditures for machinery and equipment in the second quarter follows a two-year period of steadily advancing outlays.

The rise in the price of investment goods between the first and second quarters appears to have been

less than one per cent, so that the volume of investment was to that extent lower than the value figures indicate. The major part of the gains reflected wage rates rather than prices of materials.

In the first six months of this year gross domestic investment was at an annual rate of \$7,008 million, compared with \$6,310 million in the same period of 1956.

### Investment in Business Inventories

At a seasonally adjusted annual rate, investment in business inventories in the second quarter amounted to \$312 million, in contrast to \$568 million in the first quarter. The reduction in the rate of investment reflects the decided falling off in the rate of accumulation in trade following a substantial build-up of stocks in the first quarter. Manufacturers' stocks continued to increase but at a lower rate than in the first quarter. Since prices were somewhat higher the increase in the volume of stocks was lower than the value figures indicate.

Within manufacturing, after allowing for normal seasonal variation, stocks continued to accumulate in the clothing, pulp and paper, non-ferrous metals and non-metallic minerals groups but at lower rates

### THE RATE OF BUSINESS INVENTORY ACCUMULATION WAS SMALLER IN THE SECOND QUARTER THAN IN THE FIRST QUARTER OF THIS YEAR

(At Seasonally Adjusted Annual Rates)

MILLIONS OF DOLLARS

than those of the first quarter. Some manufacturing industries, in particular, food and beverages, tobacco, rubber products, and electrical apparatus and supplies, shifted from accumulation to liquidation between the two quarters. Textiles and transportation equipment appear to be an exception to the general trend in manufacturing. Having shown some liquidation in the first quarter, they added to stocks in the second.

Declines in investment in inventories, seasonally adjusted, were widely dispersed among the various trade groups. At the wholesale level, investment in stocks was generally lower in the durable groups (household equipment, farm, industrial and commercial machinery, and building materials). The same development occurred in clothing at both the wholesale and retail level. Mixed trends were evident in food items, with generally lower stocks at wholesale partly offset by further accumulation at retail.

Stocks of new passenger cars were somewhat higher at retail, but the principal accumulation of automobiles in the second quarter appeared to have taken place at the manufacturing level, accounting in large part for the development noted above in the transportation equipment group.

The recent lower level of investment in inventories followed the general downward trend in evidence since the first quarter of 1956 when accumulation was at its peak of more than \$900 million at seasonally adjusted annual rates. At that time final demand was expanding very rapidly. The tendency toward smaller additions to stocks in the second quarter was accompanied by a general increase in the ratio of stocks to sales from the comparatively low levels of 1955 and early 1956, although stocks-sales ratios were not back to their mid-1954 levels.

#### **Exports and Imports of Goods and Services**

At a seasonally adjusted annual rate of \$6,224 million in the second quarter, exports of goods and services were nearly 3 per cent below the level of the first quarter. The bulk of the decline is attributable to goods rather than services. The most important factor in the movement of exports was the sharp drop in sales of wheat, which was partially offset by an increase in exports of some other products. Receipts from invisibles were moderately lower as a result of a reduction in exports of gold not fully offset by larger receipts of interest and dividends and on tourist account.

Imports of goods and services in the second quarter were at a seasonally adjusted annual rate of \$7,840 million, about 1 per cent lower than in the first quarter. This decline follows a steady succession of increases since the second quarter of 1954. The reductions were concentrated in merchandise items while payments for services were higher, largely as a result of a larger outflow of interest and dividends. The slackening rate of investment in machinery and equipment was reflected in a moderate falling-off in imports of iron and its products.

The increase in prices in the external sector between the first and second quarter was insignificant so that the declines in the volume of exports and imports of goods and services roughly correspond to the changes in value.

With exports of goods and services in the second quarter falling more than imports, the deficit on current international account, seasonally adjusted, rose from \$1,520 million to \$1,616 million.

In a comparison of the first six months of 1957 with the first six months of the previous year, the value of exports of goods and services is virtually unchanged while the value of imports is higher by 4 per cent.

#### **Personal Income, Expenditure and Saving**

With conflicting movements in the various components, personal income in the second quarter of 1957 was at a seasonally adjusted annual rate of \$22,808 million, slightly more than 1 per cent higher than in the first quarter. Personal taxes moved in line with income, so that the rise in disposable income paralleled that of personal income. With consumer prices higher by 1 per cent, the gain in real income fell short of the rise in money income.

Consumer expenditure in the second quarter, \$19,484 million, receded slightly from the level of

the first quarter, reflecting an appreciable decline in purchases of durables accompanied by a smaller than usual expansion in purchases of non-durables and services. Sales of new passenger cars, which had been unusually high in the first quarter, were down about 25 per cent on a seasonally adjusted basis. There was a distinct recovery in purchases of used cars but net expenditure on cars (sales less trade-in allowances) was down 15 per cent. There were also some relatively small declines in purchases of other durables.

Changes in purchases of non-durables showed no clear pattern. Of the main categories, purchases of food were about the same while purchases of clothing were lower. The small increase in expenditures on services is accounted for by an increase in rents, paid and imputed, partially offset by losses in some other service categories.

The major part of the rise in prices in the consumer sector is in the service items, with goods showing very little change. The continuing upward trend of prices of services accounts for the increased expenditure.

In the first six months of the year consumer expenditure was higher by 6 per cent than in the same period of last year. In this comparison, as in the quarterly comparison for this year, the major change in the pattern of spending is in purchases of durables, whereas purchases of non-durables and services were higher by 7 per cent and 8 per cent respectively; expenditures on durables remained at the same level.

With disposable income higher by about 1 per cent in the second quarter, and personal expenditure showing little change in total, the rate of personal saving was appreciably higher than in the first quarter, rising from \$1.1 billion to \$1.4 billion. As a percentage of disposable income, personal saving was 5.3 per cent in the first quarter and 6.8 per cent in the second quarter.

## INDUSTRIAL PRODUCTION

The index of industrial production remained stable in July as a sharp increase in the production of secondary electrical power offset declines in manufacturing and mining output.

(1) Averages or totals of unadjusted data.

(2) Seasonally adjusted at annual rates.

(3) Three-term moving average of seasonally adjusted data.

\*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

## EXPORTS AND IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports of goods continued to rise in July with increases occurring in the majority of the commodity groups. Imports of goods showed little change. Corporation profits continued to decline in the second quarter.

<sup>(1)</sup>Seasonally adjusted at annual rates.<sup>(2)</sup>Manufacturing inventory owned by manufacturers, whether held at plant or not, at end of period.<sup>(3)</sup>Rough

cords of 128 cu. ft.

(4)In urban areas of 5,000 population and over. As of January, 1957, figures are not strictly comparable to those of 1956 due to the inclusion of additional municipalities in the "urban 5,000 and over" category.

1

<sup>(5)</sup>Average of weekly rates.<sup>(6)</sup>Middle of month.<sup>(7)</sup>Revised according to new bench marks.<sup>(8)</sup>Prior to January, 1957, this total includes the net amount generated by the more important central electric stations, i.e. companies, municipalities and individuals selling or distributing electric energy. From January, 1957 it includes all generating agencies producing over ten million kilowatt hours per year. The total generated on the old basis for January 1957 was 7,457 million kilowatt hours.<sup>(9)</sup>End of period. Including personal savings deposits.

Note.—Until the end of 1956, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1956 have been revised accordingly. Monthly figures for 1957 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup>Not applicable to figures on population and immigration.

<sup>(2)</sup>Yukon and North-West Territories not included in figures for births, marriages and deaths.

<sup>(3)</sup>Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952.

<sup>(4)</sup>Exclusive of stillbirths.

<sup>(5)</sup>Immigrant admissions

by country of last permanent residence. Annual and quarterly figures are totals for the period.

Source: Monthly Report of Vital Statistics, D.B.S. and Department of Citizenship and Immigration.

<sup>8</sup> <sup>(1)</sup>Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item.

<sup>(2)</sup>This item differs from column 4, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports: National Accounts, Income and Expenditure, D.B.S.

<sup>(1)</sup>Excludes gold.<sup>(2)</sup>Arithmetically converted from 1935-39 = 100.<sup>(3)</sup>Indexes August, 1955—July, 1956 are final with the inclusion of final participation pay-ments for Western wheat announced in May, 1957. Subsequent indexes are subject to revision. <sup>(4)</sup>Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1956 are final prices. Since August 1, 1956, only initial prices are available for wheat, oats and barley.

Note: The coverage of this series has been expanded as of January, 1957 to include, in addition to Central Electric Stations industrial power installations that generate electricity for their own use. Except for utilities, comparable data for previous months are not available.

(1)Prior to January, 1957, these totals include the net amount generated by the more important central electric stations, i.e. companies, municipalities, and individuals selling or distributing electric energy. From January, 1957 they include all generating agencies producing over ten million kilowatt hour per year. The total generated on the old basis for January 1957 was 7,457 million kilowatt hours.

(2)Less imports.

(3)These columns include all generating utilities and generating industries respectively.

(4)Total net generation less net exports. Total power available for disposal for January, 1957 on the old basis was 7,170 million kilowatt hours.

Note: In view of the change, in March 1955, in the method of reporting certain categories of refining operations, the classification of the table was altered so that continuity of the series could be maintained as much as possible.

<sup>(1)</sup>As of January, 1957, includes tractor fuels.<sup>(2)</sup>Prior to March, 1955 excludes a certain amount of imported fuels.

<sup>(1)</sup>In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. <sup>(3)</sup>Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlog.

<sup>(2)</sup>Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. <sup>(4)</sup>Manufacturing inventory owned by manufacturers, whether held at plant or not, at end of period. Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, D.B.S.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

<sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>(3)</sup>Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel, D.B.S.  
Note.—Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

<sup>(1)</sup> Shipments for further processing within own firm and for sale in Canada.

\*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities were also chosen for complete enumeration; in June, 1955, the number of sample areas was increased to nearly 800.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, and as of 1956, stands at 901, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Planks and boards, flooring and square timber. (3)Hollow blocks including fireproofing and load-bearing tile. (4)For building insulation only. (5)Figures cover the production of firms which normally account for 85 per cent of the total for Canada. (6)Includes concrete chimney blocks.

(7)Factory sales of firms which normally account for 96% of total Canadian production.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

<sup>(2)</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

<sup>(3)</sup>Annual data are monthly averages of crop year. <sup>(4)</sup>Includes eggs for hatching.

Note: Excluded from this tabulation are the charge accounts of certain categories of dealers whose credit is extended mainly to farmers or other businesses rather than to consumers.\*

<sup>(1)</sup>Consumers' charge accounts receivables outstanding on the books of retail dealers.

<sup>(2)</sup>Consumers' instalment receivables outstanding on the books of retail dealers.

<sup>(3)</sup>Instalment paper held by sales finance, acceptance, small loan companies and money lenders in connection with the financing of retail purchases of consumer goods largely new and used automobiles.

<sup>(4)</sup>Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

<sup>(1)</sup> Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1955 and 1956 differ from the sum of the monthly data due to revisions which cannot be allocated by months.

<sup>(2)</sup> As of January, 1955, the C.P., C.N. and Quebec North Shore and Labrador Railways use the "Uniform Classification of Accounts for Common Carriers by Railway". The Pacific Great Eastern Railway uses the new classification system as of January, 1956.

"Uniform Classification of Accounts for Common Carriers by Railway". Beginning in January, 1957, all railways follow the uniform classification of accounts, and the statistics previously shown in the "Other Railways" section in the upper half of the table are combined, as of that date, with those railways already following the new system.

<sup>(3)</sup> Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

<sup>(1)</sup>Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

<sup>(2)</sup>From July, 1954, the figures are not adjusted for items in transit.

<sup>(3)</sup>Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent.

<sup>(4)</sup>Mainly deposits of foreign banks.

<sup>(5)</sup>Capital, rest fund and undivided profits as at the latest fiscal year-end.

<sup>(6)</sup>Including issues payable in foreign currency.

<sup>(7)</sup>Beginning January 31, 1957, month-end figures for chartered bank holdings of Government of Canada and provincial government securities are based on "amortized value" and are therefore not directly comparable with figures for preceding month-ends, which are based on "not exceeding market value".

<sup>(8)</sup>Beginning January 31, 1957, figures for earlier dates owing to the reallocation of inner reserves consequent upon the securities valuation change referred to in footnote 7.

<sup>(9)</sup>Excluding Canadian day-to-day loans.

<sup>(10)</sup>Figures for June 30, 1954, and later, are not adjusted for items in transit.

<sup>(11)</sup>Includes deposits with other banks in grain dealers and exporters, loans to finance the purchase of Canada Savings Bonds at time of issue and all other loans in Canada.

68 NOTE: This statement does not include any receipts other than revenues nor any disbursements other than regular budgetary expenditures. Excluded, for example, are all receipts arising from repayments of loans and advances, or from accumulations on annuity, pension and insurance funds. Similarly excluded on the expenditure side, for example, are all Govt. outlays arising from increases in loans, advances and investments.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 31 companies operating in Canada representing 87 per cent of new ordinary insurance sales.

<sup>(1)</sup>The Canada totals by months for 1955 and 1956 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The Canada totals are comparable for these two years. Provincial monthly totals for 1955, however, are not comparable with those for previous years due to changes by several companies in the manner of reporting new business. For 1956, the provincial figures are comparable with each other, but are not strictly comparable with previous years; the same applies to the 1957 data. The annual figures for Canada and the provinces are consistent, although the 1956 data are still preliminary.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction; Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(3) Includes Printing and Publishing and Allied Industries.

Note.—\*Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such.  
<sup>(1)</sup>Quarterly data for the last five columns are monthly averages. <sup>(2)</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.
