RECENT ECONOMIC TRENDS IN CANADA AND THE UNITED STATES - A COMPARISON

A year ago it was becoming evident that the North American economy was moving into a new phase of expansion and by June of this year comprehensive indicators of economic activity were well above their previous peaks. During the summer months, prolonged industrial disputes in basic industries in the United States introduced cross-currents into the American economy and upward trends were arrested or reversed. At the same time, some important indicators in Canada showed signs of pause or hesitation. The purpose of the present article, which brings up to date a previous article published in the Canadian Statistical Review, October, 1958, is to review and compare economic developments in the two countries during the past year or more.

Economic aggregates in Canada and the United States have followed broadly similar patterns although the timing, magnitude and direction of the movement of some individual components has differed as between the two countries. It must always be borne in mind that as the recession itself was mild in Canada, so the recovery and expansion has been less vigorous than in the United States. However, by the second quarter of 1959 the rate of expansion in relation to previous peaks was about the same in the two countries. By the second quarter of 1959, Gross National Product in Canada had reached an annual rate of \$34.7 billion, about 10 per cent higher than at its recessionary low in the closing quarter of 1957; Gross National Product in the United States had reached a rate of \$484.5 billion, about 12½ per cent above its low in the first quarter of 1958. These rates are 8 and 9 per cent above the pre-recession peak. While prices have continued to move gradually upward in both countries, the major part of these impressive gains represents higher real output. Reflecting the impact of industrial disputes, the estimate of the Gross National Product for the third quarter in the United States is \$481 billion.

Supported by rising disposable consumer income, consumer expenditure in both countries, but particularly in the United States, has acted as an expansionary influence. Business expenditures for plant and equipment, reversing their previous down-trend, had begun to rise around the turn of the year but by the second quarter of 1959 were still running well below previous peaks in both countries. Meanwhile, the re-stocking of business inventories was augmenting the demands on current production. With a steel strike in prospect, the building-up of inventories was especially important in the United States in the first half of this year. The rise in activity and incomes was pushing up government revenues

at the same time as it curtailed those government expenditures closely related to recession; by the second quarter of 1959 the government account¹ in both countries was moving toward balance, in contrast to the high deficits of a year earlier, and the impetus toward expansion was increasingly coming from the private sector.

There are major differences in the role of housing in the two countries. In Canada, expenditures on residential construction began to fall in 1959, after having played an important part in sustaining and raising economic activity in the preceding eighteen months; in the United States, housing took an expansionary role about a year later and continued in it through the second quarter of 1959. The pattern of behaviour in the external sector also differs in the two countries. In Canada, external transactions were initially a sustaining factor in that exports were fairly well maintained and imports fell sharply but in recent quarters the deficit on current international account has widened as the progress of recovery arrested and then reversed the downward trend of imports. In the United States, the external sector contributed to the downturn in economic activity in 1957 and thus far has made little contribution to recovery.

Before going on to discuss in more detail economic developments in the two countries, changes in the aggregates and in selected components of expenditure and income over the past three years are set out for convenient comparison in the table appearing on page 4.

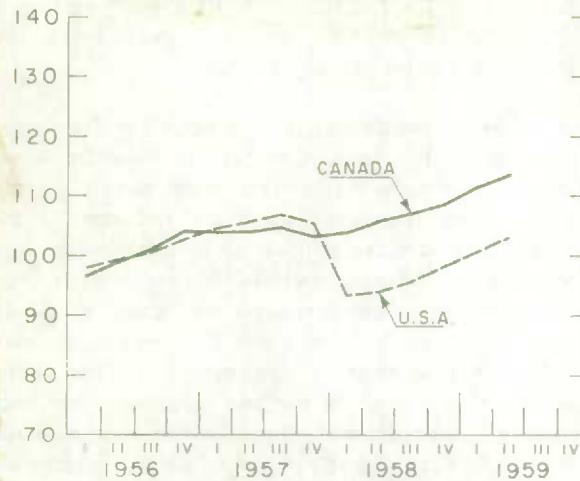

Production, Employment and Profits

Industrial production in Canada, after some hesitation in the summer months of 1958, began to show a firmer trend in the closing quarter and by December was 5 per cent above its recession low a year earlier but still a little below its previous peak. For the most part, it continued to rise in the opening months of 1959 but the improvement did not continue during the summer months. The index for August stood at 163.3, which compares with a high of 165.5 in April. All the main components show somewhat the same pattern of hesitation in recent observations. While total manufacturing output had almost returned to its pre-recession peak, output of durable manufactures in August was still about 9 per cent below its previous high. Mining production, though receding a little in recent months, was well above its previous high.

² All levels of government.

In the United States the decline in industrial production was more severe than in Canada and the recovery more vigorous. Between the end of 1956 and the spring of 1958 the index dropped from 147 to 126 or 14 per cent and it had not recovered lost ground until March of this year. The index reached 155 by June, at which time total manufacturing and the durable segment of it were above previous peaks. Despite a marked recovery in mineral production, this component was significantly lower than early in 1957. Industrial disputes, beginning in July in the steel industry and a month later in the non-ferrous metal industry, affected the level of industrial production in the summer months. By September, the index had fallen to 148, compared with a pre-strike figure of 155.

The level of employment in Canada was well maintained, despite the recession. In fact the number of persons with jobs in the non-farm sector was slightly higher in 1958 than in 1957, considering annual averages. After receding a little in the winter of 1957-58, employment showed no clear

upward trend until the beginning of 1959, on a seasonally adjusted basis. By July of this year the number of persons with jobs in the non-farm sector was about 4 per cent higher than a year earlier. However, the rising trend was arrested during the summer months and September figures indicate a slight decline, after seasonal adjustment.

The effect of recession is clearly evident in statistics of employment collected on an establishment basis. Manufacturing employment fell fairly consistently during 1957 and has since shown remarkably little change. Thus the index for August of this year is only slightly higher than a year earlier; the same is true of the durable segment of it. However, hours of work in manufacturing, which had fallen during the recession, are considerably higher than a year ago. Employment in mining is significantly lower than in August of last year.

In the United States the decline in non-agricultural employment was more pronounced and more prolonged than in Canada. However, by July of

this year non-agricultural employment had risen to a level 4 per cent higher than a year earlier and well above its pre-recession peak.

Employment in manufacturing and in the durable segment of it, as in Canada, despite considerable recovery, had not returned to its pre-recession peak by mid-year. During the summer months the level of employment in manufacturing was affected by strikes and the September figure is considerably lower than two months earlier. As in Canada, hours of work have risen with the progress of recovery and expansion. It is noteworthy that in both countries gains in production have exceeded gains in employment, reflecting a cyclical improvement in output per worker.

In both countries corporate profits reversed their downtrend during the course of 1958 and had risen sharply by the first half of 1959. In fact, in the United States in the second quarter, corporate profits made a further substantial gain bringing them well above previous peaks. In Canada, corporate profits showed very little change in the first half of this year, after a marked increase in the third and fourth quarters of 1958. However, they were still somewhat below previous peaks.

The Trend of Capital Formation

By the second quarter of 1959 business expenditures for plant and equipment in Canada were again providing a stimulus to the expansion of economic activity. Rising 5 per cent between the first and second quarters, they reached a seasonally adjusted annual rate of \$5,344 million, still 9 per cent lower than in the record year 1957; expenditure on machinery and equipment in particular was well below its previous high.

In Canada, the survey of investment plans reflects growing confidence in the outlook. The mid-year review of investment intentions indicated that where plans made at the beginning of the year had been revised the revisions were for the most part in an upward direction and more new projects were being initiated than had been the case a year earlier. Statistical indicators of investment activity, now available into the third quarter, confirm the continuation of the recent up-turn.

Likewise, in the United States, business outlays for plant and equipment continued to rise in the second quarter. This third increase in succession brought outlays about half of the way back to their previous peak.

Surveys of investment intentions are always subject to qualifications and difficult to interpret. In view of the duration of the steel strike in the

United States and the consequent shortage of basic materials, the recent survey of investment intentions in that country is particularly difficult to assess. It may be that plans will not be carried out in the time period contemplated or may be otherwise modified. However, it seems worthwhile to set out these intentions in outline.

In the United States, as in Canada, business plans for capital investment were revised upward during the course of the year. The results of the latest quarterly survey of investment intentions, released in September, indicated planned outlays of \$34.3 billion in the third quarter and of \$35.3 billion in the fourth at seasonally adjusted annual rates. These figures compare with actual expenditures of \$30.6 billion and \$32.5 billion in the first two quarters of this year. If plans are realized, business capital outlays in 1959 would be 9 per cent higher than in 1958 but still about 10 per cent below the record year 1957. The upward trend in planned investment is widespread by industry.

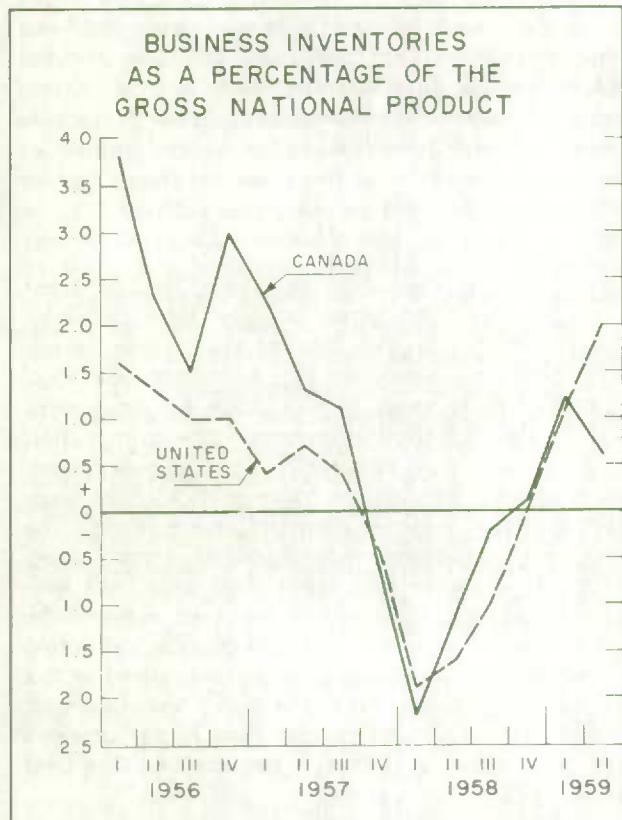

Outlays on housing in Canada, which had been rising throughout 1957 and 1958, to reach a record rate of \$1,876 million in the fourth quarter of last year, declined for the second time in succession to a level of \$1,616 million in the second quarter of this year. Housing has been much affected by the availability of mortgage funds. Direct lending by Central Mortgage and Housing Corporation was sharply reduced early in the year and approved lenders, finding N.H.A. loans less attractive, curtailed their lending. Central Mortgage and Housing Corporation increased its lending during the spring and summer and arrangements for direct lending to builders became effective September 1st, but private sources continued to provide less financing. In these circumstances, housing starts, which had been extremely high, fell sharply in the early months of the year although there was some improvement in urban areas in the summer months. Completions, however, reflect the low level of starts some months earlier.

Expenditures in residential construction in the United States began to rise early in 1958 and rose rapidly thereafter to reach a record rate of \$23.1 billion in the second quarter of 1959. However, starts began to decline in the early summer, reflecting tightness in mortgage markets. Private housing starts, reaching a peak annual rate of 1,434,000 units in April, had fallen to 1,325,000 units by September; these figures compare with a record of 1.35 million units in 1950.

In the closing quarter of 1958 business inventories in Canada began to accumulate, following two quarters of rapidly declining rates of liquidation, thus providing increasing support to the

level of economic activity. The rate of accumulation accelerated sharply in the first quarter of 1959 and fell back in the second. Thus far the rate of stock-building in relation to Gross National Product has been low compared with that of the year 1956. Despite some further building-up of manufacturers' stocks in the second quarter, stocks-shipments ratios continued to decline.

Likewise in the United States, the shift from high rates of liquidation to accumulation of business inventories was a supporting element in 1958. However, the rate of accumulation continued to rise in the second quarter of 1959, reaching an annual rate of \$10½ billion; in relation to Gross National Product, this rate is higher than in 1956. In spite of the build-up, stocks did not keep pace with the rise in production and sales. The accumulation of stocks of steel in anticipation of the strike was a factor in the movement of inventories in the first half of the year.

The Role of Government

In both countries the sequence of recession and recovery has strongly influenced the flows of funds between the government and the private sector. A larger volume of unemployment, together with legislative changes in social insurance schemes, swelled the stream of transfer payments and at the same

time the easing in business activity reduced government revenues, particularly those related to the volatile corporate sector. In Canada the consolidated government account¹ moved from a surplus of \$70 million in 1957 to a deficit of \$1.0 billion in 1958; in the United States the shift was also pronounced—from a surplus of \$1.4 billion in 1957 to a deficit of \$10.7 billion in 1958. In both countries the progress of recovery is reflected in a decided narrowing of the deficit.

In Canada, government expenditure on goods and services continued to rise in the first half of 1959. Transfer payments also advanced, reflecting higher payments by the provinces to hospitals under the new national hospital insurance scheme. At the same time revenues were responding to the rise in production, employment and incomes, the higher level of sales, shipments, and imports and some increase in rates of taxation. The sum of revenues for all levels of government from the three major sources of taxation, direct personal taxes, corporate taxes² and indirect taxes, which had fallen 7 per cent between the second quarter of 1957 and the second quarter of 1958, had risen 16 per cent by the second quarter of 1959; about three quarters of the rise in revenues during the past year are those of the Federal Government. The result of these developments on the revenue side was a decided reduction in the deficit.

In the United States, Federal Government purchases of goods and services remained about the same in the second quarter of 1959, after having risen from quarter to quarter during 1958. Both defence and non-defence expenditures had risen in 1958 reflecting higher costs, rising defence requirements and larger outlays for farm programmes. Since the beginning of 1959, non-defence purchases have fallen and the increase in defence expenditures has slackened. Likewise, Federal Government transfer payments have stabilized in the first half of 1959. The drop in unemployment benefits associated with the improvement in the labour market was offset by the higher payments under old age and survivors insurance resulting from the amendment to the Social Security Act.

Meanwhile, Federal collections under social security schemes rose in the first half of 1959 in the United States reflecting legislative changes in the rate and base of the tax, effective at the beginning of the year, as well as the improvement in employment and earnings. The increases in personal taxes and corporate profits tax accruals were of about the same order of magnitude. By the second quarter

¹ See footnote 1, Page 1.

² Considered on an accrual basis.

of 1959, the Federal deficit had fallen to \$0.5 billion compared with the peak of about \$10.9 billion a year earlier. With rising revenues and some decline in expenditure, the combined deficit of state and local governments was also falling.

The External Sector

In Canada, the effect of recessionary influences abroad and other adverse factors was to halt the expansion of exports, rather than to reduce them. As is characteristic of periods of easing economic activity at home, imports fell fairly sharply so that developments in the external sector initially tended to support levels of domestic production. Thus commodity exports in 1958 were only fractionally below their previous peak in 1957 and commodity imports were lower by 8 per cent. Recovery thus far has brought about an upsurge in imports without a commensurate advance in exports.

Even though easing demand abroad had a decided impact on sales of many important export products, merchandise export totals had been maintained in 1958, largely because of continuing rapid expansion in sales of uranium, unusually large sales of certain farm products, and non-recurring factors, such as government loans and foreign contracts for military aircraft. Exports have shown a somewhat stronger trend thus far in 1959. In the first eight months of 1959, exports were only 1.5 per cent above those of the same period a year ago, but this small gain was the outcome of a 10 per cent increase in exports to the United States, largely offset by a decline in sales elsewhere, notably in Europe. Of the \$99 million drop in exports to Europe, \$60 million is accounted for by military aircraft. Important export commodities showed mixed trends. Exports of newsprint were a little higher, and planks and boards and woodpulp made notable gains, as did such other traditional export products as farm implements and machinery and asbestos. Exports of iron ore advanced sharply and sales of uranium made further major gains. However, exports of such important metals as copper and nickel, particularly the latter, were running below the level of a year earlier. Exports of wheat and other grains were lower, as were exports of crude petroleum.

The rising trend of merchandise imports, which began in the latter part of 1951, continued at an accelerating rate in 1959. Reflecting renewed stock-building, the up-turn in investment in plant and equipment and the further expansion of consumer expenditure, imports in the first eight months of this year were 11 per cent higher than in the same period of 1958. Imports from the United States, the traditional source of most of Canada's imports of capital goods, were up by nearly the same extent.

The result of these trends in commodity trade was a deficit on merchandise items in the first eight months of the year of \$494 million, compared with one of \$172 million a year earlier; in the same comparison, the deficit on commodity trade with the United States was \$550 million, as against \$500 million a year earlier. The virtual disappearance of Canada's long-standing surplus on overseas trade is one of the outstanding features of the year, even though this surplus has been dwindling for some time.

Turning to consider Canada's international current account as a whole, for which data are available for only the first six months of the year, 1959 has brought further widening in the deficit on invisible items. This growing gap is a consequence of the interest and dividends associated with mounting international indebtedness and the growth in expenditures abroad for other purposes, such as travel and freight and shipping, which accompanies general economic expansion. The deficit of \$482 million on invisible items in the first half of 1959, the largest ever recorded and well over half the total of \$837 million, compares with one of \$450 million in the first half of 1958. Largely as a result of developments in money markets, the proportion of the deficit financed by the inflow of short-term capital was larger in the first half of 1959 than in the same period a year earlier.

Turning to consider the United States, merchandise exports dropped sharply from mid-1957 to early 1958 and this decline was an important factor in the recession in economic activity. Although exports began to rise in the second quarter of 1959, thus far they have made little contribution to the progress of recovery. These developments are in striking contrast to those of 1953-1954 when exports were a sustaining influence during the downswing in economic activity and an expansionary influence during the subsequent recovery. Thus merchandise exports advanced 60 per cent between the first half of 1954 and the first half of 1957, reflecting the strength of demands abroad, intensified at the end of 1956 by the Suez crisis. By the first half of 1958 exports had fallen more than 20 per cent and they had fallen a further 5 per cent by the first half of 1959.

In the 1957-1958 recession, as in the preceding one, United States imports declined only moderately. In the first half of 1958 merchandise imports were down 5 per cent from the same period a year earlier but by the first half of 1959 they were nearly 20 per cent above the same period of 1958. Indeed, second quarter merchandise imports were at an all-time high and slightly in excess of non-military merchandise exports.

The high level of United States imports this year undoubtedly reflects some special circumstances, notably anticipations of the steel strike, as well as the upswing in business activity. The cyclical up-turn in United States imports appears to have been reinforced by the growing ability of the industrially advanced countries to compete in the American market. Thus imports of finished manufactures rose in 1958 almost enough to offset the decline in imports of raw materials. In that year they were about 55 per cent above the 1952-1956 average, compared with an increase of only about 15 per cent for imports as a whole.

With those divergent movements of exports and imports, the United States surplus on merchandise account¹ in the first six months of the year dwindled to an annual rate of \$0.5 billion, compared with \$3.3 billion in 1958 and \$6.1 billion in 1957.

The United States provides dollars to foreign countries well in excess of what is necessary to cover the surplus on trade and services through the medium of military expenditures abroad, government grants and loans and private investment. The consequence of the developments in trade described above is that the rate at which foreign countries acquire dollars has accelerated.

The Personal Sector

Disposable personal income in Canada, having receded a little in the first half of 1957, began to rise thereafter and by the second quarter of 1959 was running at an annual rate of \$24.0 billion, about 6 per cent higher than in 1958 and about 14 per cent higher than in 1957. The rise in labour income,² virtually uninterrupted during the recession, brought it to \$18.2 billion in the second quarter of 1959, 7 per cent higher than in 1958. Likewise transfer payments were well above the 1958 rate in the second quarter of 1959. Most other components of personal income were also higher.

In the United States likewise, recession had little impact on disposable personal income. The annual rate reached by the second quarter of 1959 was about 6 per cent higher than in 1958, the same rate of increase as in Canada, and about 9 per cent higher than in 1957. Labour income by the second quarter of this year was about 9 per cent above the 1958 rate. While transfer payments levelled out in the first half of the year, other components of personal income, with the exception of farm income, also rose in the second quarter.

¹ Excluding military aid programmes.

² Including military pay and allowances.

It is against this background of trends in income that the strength of consumer spending must be viewed.

In Canada, consumer expenditure continued to rise from quarter to quarter throughout the recession. The impact of recession and recovery was registered in changing rates of increase. Thus the gain of more than 3 per cent in the fourth quarter of 1958 was the largest quarterly increase in recent years and contrasts with one of less than 1 per cent in the same quarter of 1957.

Consumer expenditure continued to rise in the first half of 1959 but the quarterly gains were fairly small in terms of recent Canadian experience and notably lower than those recorded in the United States.

Purchases of durables, having risen about 9 per cent in the closing quarter of 1958, continued to advance at a rate of about 2 per cent in the first two quarters of 1959, bringing them to a second quarter level 11 per cent above the previous peak in the same quarter of 1956. Purchases of non-durables rose in both quarters but expenditure on services was virtually unchanged in the second quarter. This interruption in the long-term upward trend in services was the result of a sharp drop in net expenditures abroad offset by increases in other service items. The second quarter rate of increase for consumer expenditure was only about 1 per cent, in contrast to a 2½ per cent increase in the United States.

In 1958 disposable personal income rose considerably more than personal spending. An unusually high rate of personal saving continued to characterize the personal sector in the first half of 1959. In Canada, as in the United States, the rise in spending has been accompanied by an increased use of consumer credit.

In the United States, consumer expenditure began to rise early in 1958, after having receded a little during the recession; it continued to rise, and at an accelerating rate, in the first half of 1959. Indeed, consumer purchasing in the second quarter was about 2½ per cent above the first quarter rate and 8 per cent above the low point in the first quarter of last year. With consumer prices very little higher, most of these increases represent a gain in real consumption.

The second quarter advance in purchases of durables was unusually large and the expansion in purchases of non-durables was also among the largest quarterly gains since the recovery began. Purchasing of automobiles and parts, which was

already relatively high, rose sharply in the second quarter to reach a rate only exceeded in the record year 1955.

Reflecting the renewed strength of demand, the recovery has been marked by a sharp rise in the output of a wide range of consumer goods. The Federal Reserve Board index of output of consumer durables by June had reached 145, on a seasonally adjusted basis, close to 50 per cent higher than at the recession low and 9 per cent higher than at the beginning of the year, though still somewhat below the peak in the third quarter of 1955.

Throughout the recovery in the United States the rise in personal spending has matched fairly closely the growth in disposable personal income. Nevertheless, consumer credit outstanding began to rise during the course of 1958 and by the end of July of this year it was 10 per cent above the level of a year earlier.

Conclusion

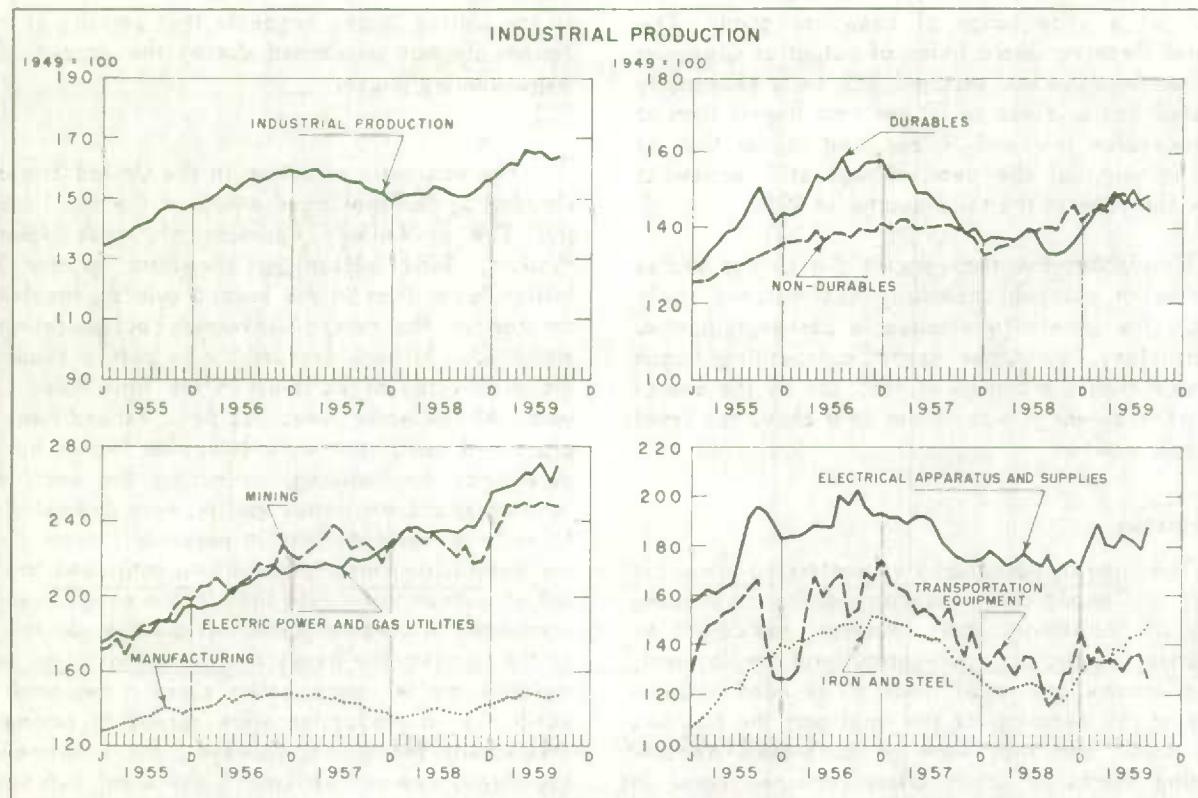

The opening paragraphs characterized economic trends in Canada in the summer months as showing signs of hesitation. Such important indicators as industrial production, non-agricultural employment, labour income and retail trade all receded at some stage of the summer; for the most part the changes were small and they form no consistent pattern. Housing starts in urban areas remained level in August and September, after having risen in July. Exports continued to be fairly strong in the third

quarter, bringing the nine-month total nearly 3 per cent above that of the same period of last year. These conflicting movements suggest a moderation in the third quarter of the rapid rates of expansion characteristic of the economy in the first half of the year. However, the history of business cycles in the United States suggests that periods of hesitation are not uncommon during the course of an expansionary phase.

The economic situation in the United States is clouded by the prolonged strike in the steel industry. The preliminary estimate of Gross National Product, \$481 billion for the third quarter, \$3.5 billion lower than in the second quarter, involves a decline in the rate of inventory accumulation of about \$9.5 billion, presumably in part a sequel to the high rates of build-up in the first half of the year. At the same time, business expenditures for plant and equipment were somewhat higher but expenditures for housing, reflecting the decline in housing starts mentioned earlier, were down slightly. In spite of some decline in personal income during the period, consumer expenditure continued to rise, but at a much lower rate than in the second quarter; purchases of durable goods fell a little. By the end of the quarter, the heavy inventories of steel accumulated earlier were being rapidly depleted and cut-backs in production were spreading among the steel-using industries. However, the settlement of the three previous strikes in the steel industry in the United States was followed by a sharp rebound in economic activity.

INDUSTRIAL PRODUCTION

The seasonally adjusted index of industrial production edged upward in August. Manufacturing production showed little change with gains in non-durables offset by a decline in durables. The strike in lumber on the west coast and the more extensive model change-over in automobiles accounted for most of the fall off in durables. Mixed movements in mining, with fuels up and non-metals down, resulted in a marginal decline in total mining. In August, electricity and gas recouped most of its July fall-off.

Note: The seasonally adjusted components of the manufacturing production index formerly presented in this section are now shown in Table 6 along with additional series of the revised index not previously published.

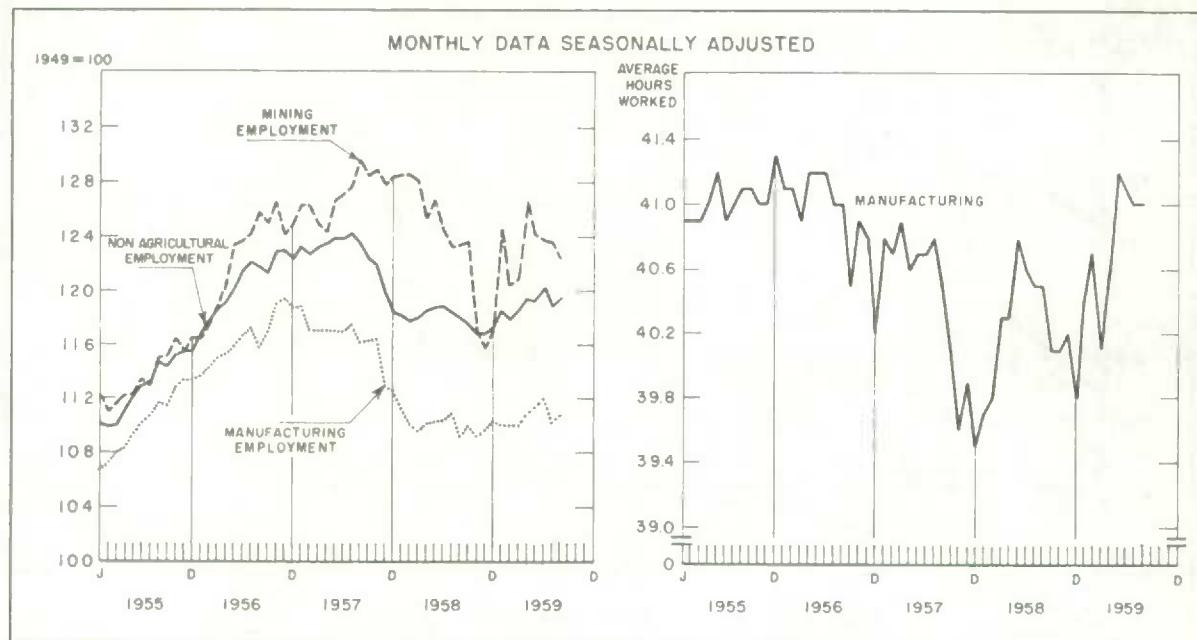

⁽¹⁾Average or totals of unadjusted data.

⁽²⁾Seasonally adjusted at annual rates.

⁽³⁾Gross National Product at market prices excluding accrued net income of farm operators from farm production.

EMPLOYMENT AND AVERAGE HOURS WORKED

The August seasonally adjusted index of industrial composite employment rose despite conflicting movements in its components. Manufacturing employment rose marginally reflecting gains in both durables and non-durables. Seasonally adjusted average hours worked have remained stable over the last few months.

RETAIL TRADE*

In August, seasonally adjusted retail trade fell off. The decline was widespread with the majority of retail outlets moving down from their July level. Grocery and combination stores, the major exception to the trend, posted a strong gain. Department store sales have remained high despite irregular movements in current months.

⁽¹⁾Averages of unadjusted data.⁽²⁾Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

The current revision employs an improved shopping day adjustment to the raw data prior to seasonal adjustments. In addition to correcting for variations in the number of shopping days in different months, each day of the week is weighted according to the percentage of weekly sales normally transacted on that day for that store type. Sales may differ between months not only because months vary in length, but also because the number of Fridays and Saturdays differ. Shopping tends to be concentrated on these days.

SELECTED GROUPS IN RETAIL TRADE

Seasonally adjusted new passenger car sales in August exhibited little change from their July level. Clothing stores declined sharply while furniture, radio and appliance stores fell off after showing some strength over the last few months.

(2)Seasonally adjusted at annual rates.*

(3)Three-term moving average of seasonally adjusted data.

EXPORTS, IMPORTS AND CORPORATION PROFITS

Exports seasonally adjusted have moved steadily upward since the beginning of the year. Seasonally adjusted June imports remained at substantially the same level as in May, despite contrary movements in its components, agriculture and non-metallic imports fell off while iron and non-ferrous imports showed considerable strength.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1928-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

^(a)The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item. ^(b)Includes adjusting entry. ^(c)Includes residual error of estimate. ^(d)This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. ^(e)Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1933-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

(1) Seasonal (formerly supplementary) benefit data included.

(2) On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.

(3) The number of new cases of recorded unemployment among insured persons.

(4) Estimates are based on average weekly number of payments.

(5) The number of calendar weeks during which a benefit payment was made.

(6) Revised to relate to the Thursday nearest to the last day of the month.

(7) Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

(1) As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

(2) The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. ⁽³⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlog. ⁽⁴⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. ⁽⁵⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1) Releases of domestically manufactured tobacco for consumption in Canada.

(2) End of period.

(3) The production of beer is shown in thousand barrels of 25 gallons each.

(4) Includes bottling of imported liquors.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

^aShipments for further processing within own firm and for sale in Canada.^bBecause of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1) Includes some silvery pig iron formerly included with ferro-alloys. (2) Excluding shipments for processing. (3) Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. (4) Monthly average. (5) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

⁽¹⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices.

Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽²⁾Include subsidy on hogs.

⁽³⁾Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

⁽⁴⁾Previous to January, 1959, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.
Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. ⁽³⁾Data shown for the last three months are not so adjusted. ⁽⁴⁾Annual data are monthly averages of crop year. ⁽⁵⁾Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods.

⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.

⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

Sept. 1957-34

Dec. 1957-32

Mar. 1958-29

June 1958-31

Sept. 1958-39

Dec. 1958-35

Mar. 1959-32

⁽⁵⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁶⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date.

⁽³⁾Mainly deposits of foreign banks.

⁽⁴⁾Capital, rent fund and undivided profits as at the latest fiscal year-end.

⁽⁵⁾Including issues payable in foreign currency.

⁽⁶⁾Excluding Canadian day to day loans.

⁽⁷⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans.

⁽⁸⁾Loans to grain dealers and exporters.

⁽⁹⁾Loans to finance purchase of Canada Savings Bonds at time of issue.

⁽¹⁰⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

⁽¹¹⁾Including loans to installment finance companies.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total.

⁽¹⁾Ordinary, Industrial and Group.⁽²⁾Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies. Source: The Canadian Life Insurance Officers Association.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, (3) Includes Printing and Publishing and Allied Industries.

NOTE: Symbols used: Throughout the Review () means "not available"; (—) means "nil" or "less than can be shown with number of digits used"; (P) signifies "preliminary" and (R) indicates "revised". In some cases the annual data for 1958 and 1959 are provisional.

CANADA'S FISHERIES

As early as the middle of the fifteenth century venturesome European fishermen were regular visitors to the prolific fishing grounds off Canada's Atlantic Coast . . . And here were written the first pages in the history of the nation's commercial fisheries.

Now nearly 80,000 Canadian fishermen harvest a bountiful crop of food fish from both sea and inland waters . . . and some 14,000 workers are employed in Canada's fish-processing and handling industries.

About 150 kinds of fish and shellfish are taken in commercial operations running in an average year to some 2,000,000,000 pounds with a marketed value of about \$200,000,000. Canadians consume about 13.5 pounds per person a year and large quantities of fish and fish products are exported.

The Dominion Bureau of Statistics publishes statistical information on Canada's fisheries on a monthly and annual basis. Data on production, freezings, stocks, imports, exports and prices are published in the monthly reports, and these and other data on capital equipment, employees and salaries and wages are contained in the annuals.

- Monthly Reports:**
- Review of Canadian Fisheries Statistics
 - Fish Freezings and Stocks

- Annual Reports:**
- Canada Summary ● Newfoundland ● Prince Edward Island
 - New Brunswick ● Nova Scotia ● Quebec
 - Ontario, Prairie Provinces and Northwest Territories
 - British Columbia ● Fish Processing Industry
