NATIONAL ACCOUNTS - INCOME AND EXPENDITURE

FOURTH QUARTER AND PRELIMINARY ANNUAL 1958

INTRODUCTORY REVIEW

The Year 1958 - Annual Review

The year 1958 witnessed a gradual resumption of the upward trend in Gross National Product which had been interrupted in 1957 as recessionary influences began to bear adversely upon the level of economic activity. By the second quarter of the year, the Gross National Product was showing a firmer trend and by the final quarter was responding to a sharp rise in consumer expenditures, a strong advance in exports of goods and services, and a cessation in the rate of business inventory liquidation which had previously been operating to hold production in check as final demand was met out of current inventory stocks. The year thus ended on a stronger note, although business outlays for new plant and equipment were still tending downward at year-end.

Despite the improvement in a number of the main statistical aggregates during the course of 1958, Gross National Product for the year as a whole was affected in a major way by the heavy inventory liquidation of the first half, and by the continued downward drift in business spending for new plant and equipment. As a result, the Gross National Product showed an advance of only 2.5 per cent over the year 1957, of which the larger part repre-

sented higher prices prevailing in the period. In volume terms, Gross National Product in 1958 is estimated to have risen by less than 1 per cent. The slight volume gain was attributable to higher production in the farm sector; the physical volume of non-farm production remained unchanged from the previous year. This relative stability in the physical volume of total output in 1958 compares with a gain of 9 per cent in 1955, 7 per cent in 1956, no change in 1957, and a postwar average for the years 1947 to 1958 of 4 per cent per year.

The broad changes in the main expenditure categories between the years 1957 and 1958, and the effect of these shifts on the Gross National Product, are shown in the table below. It is apparent that a major downward pressure during 1958 was coming from the business investment sector, with inventory liquidation assuming a major role, and declines in business outlays for non-residential construction and machinery and equipment acting to reinforce the curtailment in inventory demand. Altogether, these three components of the expenditure side accounted for a cutback in the flow of expenditures equivalent to about \$1.3 billion in terms of new production. As will be noted, however, these downward tendencies in the economy were counter-

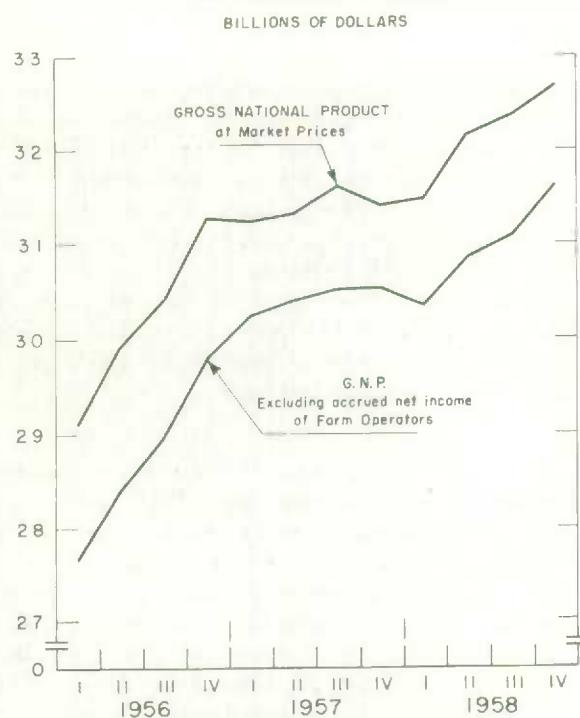

Changes in Components of Gross National Expenditure¹ 1957 to 1958

THE UPWARD TREND OF G.N.P.,
WHICH WAS INTERRUPTED IN 1957,
WAS RESUMED IN 1958

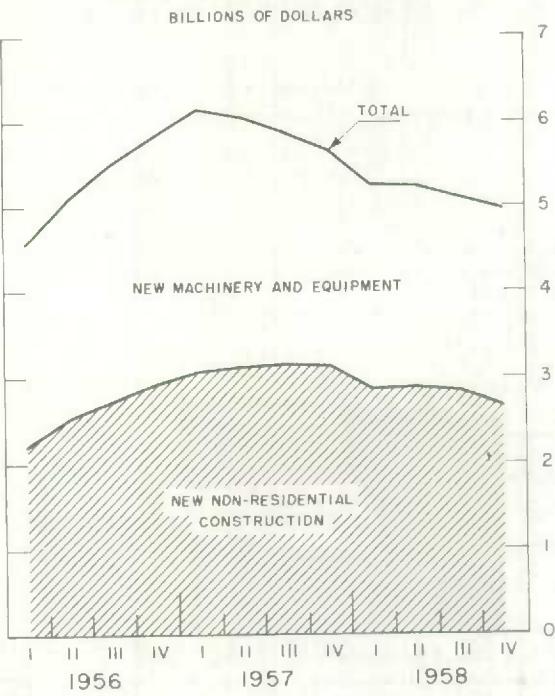

THE VALUE INCREASE FOR THE YEAR AS A WHOLE,
OF 2.5 PER CENT, WAS LARGELY ACCOUNTED FOR
BY PRICE FACTORS; THE VOLUME OF PRODUCTION
ROSE BY LESS THAN 1 PER CENT.

BUSINESS INVENTORY LIQUIDATION, WHICH
ADVERSELY AFFECTED THE LEVEL OF PRO-
DUCTION IN THE FIRST HALF OF THE YEAR,
CAME TO A HALT IN THE SECOND HALF.

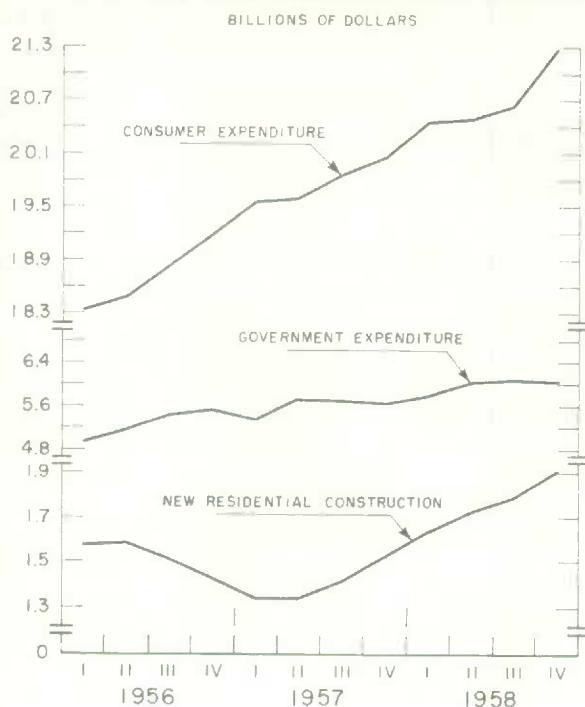

HOWEVER, THE TREND OF BUSINESS
OUTLAYS FOR PLANT AND EQUIPMENT
CONTINUED DOWNWARD THROUGHOUT
THE COURSE OF THE YEAR.

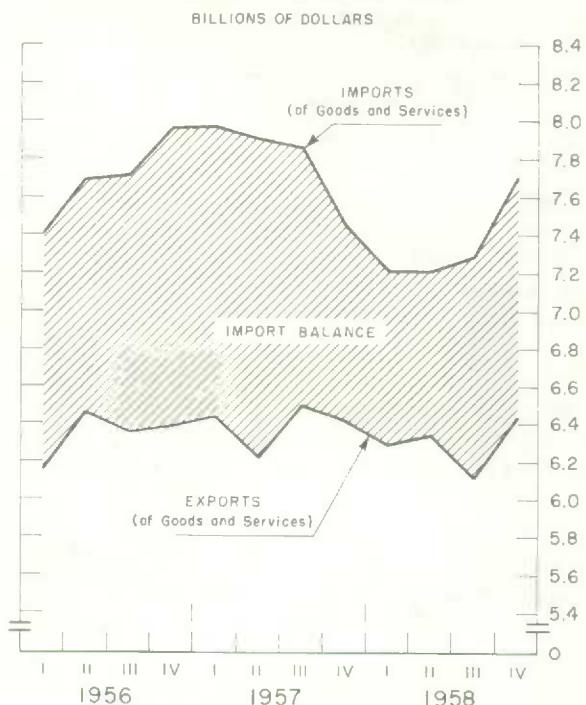

(DATA IN CHARTS 1, 3 AND 4 AT SEASONALLY ADJUSTED ANNUAL RATES)

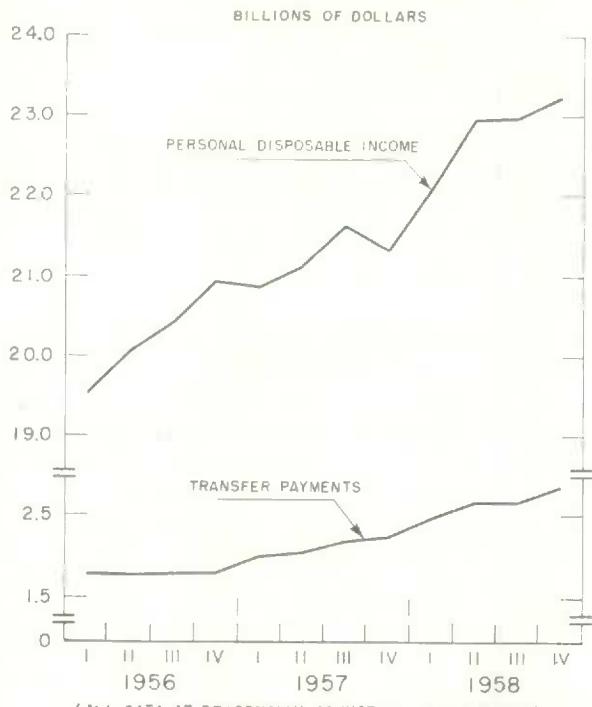

THE MAJOR STRENGTH ON THE DEMAND SIDE DURING 1958 WAS PROVIDED BY CONTINUED GROWTH IN CONSUMER AND GOVERNMENT EXPENDITURES AND BY A SHARP RISE IN OUTLAYS FOR NEW HOUSING.

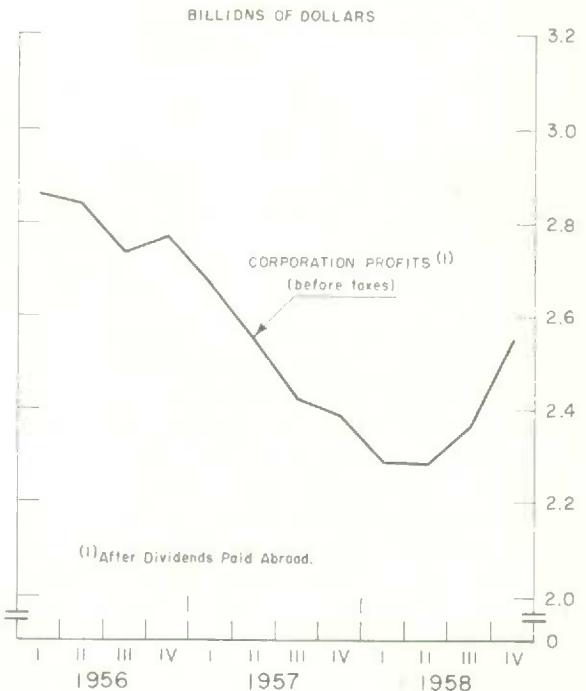

IMPORTS MOVED UPWARD IN THE LATTER HALF OF THE YEAR, FOLLOWING THE EARLIER SHARP DECLINE; EXPORTS CONTINUED TO MOVE IRREGULARLY THROUGHOUT 1958.

TRANSFER PAYMENTS FROM GOVERNMENT WERE THE LARGEST SINGLE FACTOR IN THE YEAR TO YEAR INCREASE OF DISPOSABLE INCOME.

THE DOWN-TREND IN CORPORATION PROFITS WAS REVERSED DURING THE COURSE OF THE YEAR.

(ALL DATA AT SEASONALLY ADJUSTED ANNUAL RATES)

acted by the continued growth in consumer and government expenditures for goods and services, and the upswing in residential construction. These three elements on the demand side more than offset the declines noted in the business investment sector. At the same time, a good deal of the effect of the downward shift in domestic demand was transferred on to foreign sources of supply through the mechanism of declining imports of goods and services. The fall-off here in 1958 amounted to \$0.4 billion, or about one-third of the net reduction in demand attributable to the business investment sector. The overall effect of these developments was to bring about a change in the value of Canadian production in 1958 of about 2.5 per cent over the level of the year 1957.

While these annual comparisons provide a useful setting for viewing the year 1958 in perspective, they conceal to a considerable extent the evidence of developing strength which became more ap-

parent toward the end of the year. The table following provides a view of the quarter-to-quarter changes, seasonally adjusted, in the main expenditure categories in 1958 against a background of trends in the two previous years. As has already been noted, business inventories, which were being liquidated heavily in the early part of the year (and thus acting as a brake on production), moved to a position of small net accumulation in the last half. In addition, while the downtrend in business outlays for new plant and equipment which developed in 1957 continued through all quarters of 1958, the declines were of more modest proportions in the last three quarters of the year. Thus, the major downward pressures on production which arose from weakness in these three areas during 1957 and the early part of 1958, were moderating in the last three quarters; in fact, the swing in business inventories to a position where they were making new demands on production all but offset the declines in plant and equipment investment.

This easing of the downward pressures coming from the business investment sector was accompanied by a sharp upswing in other final purchases of goods and services in the fourth quarter of the year, the largest increase since early in 1956. The rise reflected a sharp advance in personal expenditure on consumer goods and services of more than 3 per cent, though it should be noted that this increase followed upon a period in which consumer expenditures had shown little change for two quarters. Exports of goods and services, which were showing some weakness in 1958, also advanced strongly in the fourth quarter, with widespread gains in most of the main commodity groups. The developing strength in these final demand categories, and

in the accompanying swing in business inventories brought about a reversal in the down-trend of imports of goods and services which had been under way since the second quarter of 1957; by the second quarter of 1958, imports had stopped declining, and in the last half of the year they moved upward, with an exceptionally sharp rise in the fourth quarter.

Changes in Income During 1958

National income rose by about 3 per cent in 1958, but personal income increased by 6 per cent, and disposable income by more than 7 per cent. The major factors in the reconciliation of these differences are indicated in the following table.

Analysis of Changes in Major Income Components 1957 to 1958

	Year 1957	Year 1958	Change	Change ¹
billions of dollars				%
National Income	23.8	24.7	+0.9	+ 3.5

Equals Disposable Income	21.2	22.8	+1.6	+ 7.4

¹ Per cent changes based on unrounded data.

Transfer payments from government provided the most important single element in the differing rates of increase between national and personal income, and the rise here was very sharp, amounting to about 26 per cent. In addition, disposable income was further bolstered by a decline in direct personal tax collections. It is of interest to note that more than 40 per cent of the over-the-year increase of \$1.6 billion in disposable income can be attributed to changes which have occurred in the flow of transfer payments from the government to the personal sector, and in the reverse flow of tax collec-

tions from the personal sector to the government sector. National income, which does not reflect changes in these transfer-type transactions, was adversely affected in 1958 by a significant decline in the level of corporation profits, amounting to about 5 per cent.

A summary and consolidation of the series which accounted for the changes in total disposable income between 1957 and 1958, is given in the following table.

Changes in Disposable Income 1957 to 1958

	Year 1957	Year 1958	Change	Change ¹
billions of dollars				%
Transfer Payments from Government	2.1	2.6	+0.5	26.2
Personal Direct Taxes	- 1.9	- 1.8	+0.1	- 6.8
Wages and Salaries	15.8	16.2	+0.4	2.2
Net Income of Farm Operators	1.0	1.2	+0.2	23.8
Interest, Dividends and Net Rental Income	2.4	2.5	+0.2	7.6
Other Disposable Income	1.8	2.1	+0.2	12.8
Total Disposable Income	21.2	22.8	+1.6	7.4

¹ Per cent changes based on unrounded data.

Turning to the trend of income during 1958, the movement from quarter to quarter of most of the components was uniformly upward, though the rates of increase varied substantially as is indicated by the year-to-year comparisons shown in the preceding tables. The major exception occurred in the case of corporation profits, where the down-turn which had been under way since early in 1956 was reversed during the course of the year 1958.

Production and Employment in 1958

The volume of production in 1958 was up only slightly above 1957, by less than 1 per cent. In

general, gains in non-farm output originating in the broad group of service industries were substantially offset by losses in the output of the commodity-producing industries, considered as a whole. This shift in the product pattern of output, continuing a trend evident in 1957, is related to the impact of recessionary influences which bore most heavily on the commodity-producing industries.

Among the primary industries, the trends were mixed. Agricultural output rose substantially, mainly as a result of higher output and sales of livestock associated with opportunities for export to the United States and higher domestic prices; crop pro-

duction was about the same as that of the previous year. Production in the forestry industry fell by about 10 per cent in the year-over-year comparison, reflecting a further sharp decline in output of pulpwood which was partially offset by higher production of other forest products. However, in the last three quarters of 1958, after allowing for seasonal factors, production in forestry appears to have stabilized at a level somewhat higher than at the end of 1957. Production in mining, quarrying and oil wells was about the same as in 1957; greatly expanded production of uranium and natural gas was important in sustaining over-all mining production in the face of a major decline in output of nickel, asbestos, iron ore and crude petroleum. Deterioration in the export market for these products accounts for these declines in output, although in the case of nickel a prolonged industrial dispute involving a major producer was also a factor. Mining production followed a gently declining trend throughout the year.

Manufacturing production fell by nearly 4 per cent in the year-to-year comparison, virtually all the decline being in durable manufacturing. The majority of the durable group industries shared in the decline, with the drop in output being most pronounced in transportation equipment (13 per cent) and in iron and steel (12 per cent). However, output of non-metallic minerals, having risen a little in 1957, rose substantially in 1958. In addition, output of wood products was a little higher than in 1957, after a sharp decline in that year. The decline in the production of durables of 7 per cent in 1958 compares with one of 5 per cent in 1957.

The non-durables manufacturing group displayed mixed trends within a relatively unchanged total. Printing, publishing and allied industries, products of petroleum and coal, clothing, rubber products and textiles reduced production by rates ranging from 3 to 7 per cent; the decline in output in leather products and paper products was comparatively small; output in the remaining divisions continued to rise, the significant gains being in tobacco products (8 per cent) and in food and beverages (3 per cent).

The pattern of manufacturing production through the year 1958 was one of recovery in the opening months rising to a peak in May, followed by a setback in the summer months, and renewed recovery in the last quarter. By December of 1958 the index of manufacturing production stood at 139.7 (1949 = 100), about 5 per cent above its low point one year earlier, but still 6 per cent below the peak reached in December 1956.

Production rose in all the service-producing industries in 1958 with the exception of transportation, communications and storage. The decline in the latter group was related to a drop in revenue freight car loadings of nearly 7 per cent; some other forms of transport, including oil pipelines and shipping also handled a smaller volume of business in 1958 as commodity-producing industries reduced their scale of operations and the volume of imports declined.

Turning now to the employment side, the total number of persons with jobs in 1958 averaged 0.4 per cent lower than in 1957, though the number of persons with jobs in the non-agricultural sector was up by 0.2 per cent. With the growth in the labour force and the decline in the total number of persons with jobs, the number of persons without jobs and seeking work amounted to 6.6 per cent of the labour force in 1958, compared with 4.3 per cent in 1957.

Value-Volume-Price Comparisons

Taking the change in the price of all components together, it is estimated that the price element of total Gross National Expenditure was higher in 1958 by about 2 per cent. As has been noted, this price advance accounted for the greater part of the increase in the value of production from 1957, so that in volume terms the Gross National Product showed only a slight increase. The value, volume and price components of each of the main expenditure categories are shown in the accompanying table.

It will be apparent that price factors were less conspicuous as an element of the value change in Gross National Product between 1958 and 1957, than in the preceding year. Almost all components of the Gross National Product registered smaller price advances in 1958 than in 1957. The price of consumer goods and services showed a further rise of 2.5 per cent, a somewhat more moderate advance than in 1957. The greater part of the increase was in the area of consumer services and non-durable goods; however, the price of consumer durable goods in 1958 also showed a small advance over the year 1957.

The capital goods sector in particular was less strongly influenced by advancing prices in 1958 than in the preceding year. The influence of moderating prices in this sector was reflected in both the machinery and equipment component and in the non-residential construction item; however, the price factor in residential construction advanced by about the same amount as in the previous year.

Percentage Change - Value, Volume and Price

	Year 1958 Year 1957			Price Change ¹
	Value	Volume	Price ¹	Year 1957 Year 1956
Personal Expenditure	4.8%	2.2%	2.5%	(3.5) %
Goods	4.2	2.2	1.8	(3.1)
Non-Durable	4.4	2.3	2.0	(2.9)
Durable	3.1	2.0	1.4	(3.9)
Services	5.8	2.0	3.6	(4.4)
Government Expenditure	6.8	3.5	2.4	(5.2)
Gross Fixed Capital Formation	- 5.9	- 7.7	2.2	(3.4)
New Residential Construction	25.1	22.3	2.5	(2.4)
New Non-Residential Construction	- 9.3	- 11.0	1.2	(2.8)
New Machinery and Equipment	- 17.7	- 19.4	2.7	(4.6)
Exports of Goods and Services	- 1.5	1.2	-0.4	(0.5)
Imports of Goods and Services	- 5.6	- 6.0	1.1	(2.4)
Gross National Expenditure	2.5	0.8	2.1	(3.4)

¹ The price comparisons shown above are based on a set of fixed weight price indexes (1955 = 100), and not upon the implicit price deflators which can be derived by dividing the value series by the volume series. The latter are weighted by changes in the expenditure pattern over time; between 1957 and 1958, weight shifts of this nature were sufficiently large to affect the use of the implicit deflators for pure price analysis. (See page 177, "National Accounts, Income and Expenditure, 1926-1956" for a discussion of the effect of weight shifts on the implicit deflators). A specially constructed set of fixed weight price indexes has therefore been used for purposes of depicting price changes in the above table.

The Fourth Quarter

As is indicated in the table on page 4, total final purchases of goods and services rose sharply in the fourth quarter of 1958, showing much the largest advance since early in 1956. However, Canadian production did not reflect the full effects of this renewed strength, since close to one-half of the increase in final demand in the fourth quarter was met by a pronounced rise in imports of goods and services; in addition, that part of the rise in demand attributable to higher exports of goods and services was met in part by drawing upon existing stocks of grain and livestock, which showed a sharp liquidation in the fourth quarter. The rise in Gross National Product, seasonally adjusted, thus amounted to about 1 per cent in the fourth quarter, though the non-farm Gross National Product rose by close to 2 per cent.

Related information suggests that the advances in output in the fourth quarter were quite widespread by industry. Manufacturing production advanced by more than 2 per cent, following the weakness of the preceding quarter; both durable and non-durable production advanced by about the same amount as the total index. All of the service-producing industries showed strong advances in the fourth quarter, with the gains in retail and wholesale trade, and transportation, storage and communication being especially marked. However, construction and mining were lower in the fourth quarter.

Personal expenditure on consumer goods and services, seasonally adjusted, rose by 3 per cent in the fourth quarter, one of the largest quarterly increases in recent years. A major advance occurred in expenditures on durables which were up by 8 per cent, largely as a result of a 15 per cent increase in expenditure on passenger cars. Outlays on non-durables and services rose by about 2 and 3 per cent respectively.

Exports of goods and services, seasonally adjusted, rose by 5 per cent in the fourth quarter, with both the commodity and service items showing roughly parallel movements. Gains were widespread among the commodity groups, but especially pronounced in agricultural and animal products and wood and wood products; exports of non-ferrous metals declined.

Business gross fixed capital formation remained practically unchanged in total in the fourth quarter, seasonally adjusted, but the components showed sharply divergent trends. A further advance in outlays for housing was not sufficient to offset the continued drop in expenditures on non-residential construction, but expenditures on machinery and equipment were moderately higher.

Investment in business inventories made only a small contribution to the level of activity in the fourth quarter. Stocks of manufacturing inventories

showed some liquidation in the fourth quarter, but this was more than offset by an accumulation of stocks in trade. The latter build-up was most apparent in the durable trade groups, largely reflecting the flow of new model automobiles to dealers.

As has been noted, the rise in final demand in the fourth quarter was met in part by a large increase in imports of goods and services, amounting to 6 per cent. The advance was entirely attributable to an increase in commodity imports, which showed widespread gains; however, imports of iron and its

products accounted for over half of the total increase, in addition to showing the sharpest percentage gain.

The major development on the income side in the fourth quarter was an estimated 8 per cent rise in corporate profits, following a smaller increase in the third quarter; the rise thus appears to have been fairly sharp in spite of the adverse effect of industrial disputes during the quarter. The rate of advance in labour income was also moderately higher than in the preceding quarter.

COMPONENTS OF GROSS NATIONAL EXPENDITURE

Personal Expenditure on Consumer Goods and Services

Personal expenditure on consumer goods and services rose to \$20.7 billion in 1958, nearly 5 per cent higher than in the previous year. The increase was fairly well distributed over the three main categories of consumer spending, with a gain in services of 6 per cent, non-durables of 4 per cent, and durables of 3 per cent. Higher prices and increased real consumption were about equally important in accounting for the near 5 per cent increase in total spending. The rise in real consumption fell somewhat short of the growth of population and on a per capita basis real consumption declined a little for the second successive year; all three of the main categories of spending were affected.

Consumer outlays for non-durable goods were up about 4 per cent in 1958, with expenditures on food up 5 per cent, and on clothing up 4 per cent. The element of price increase contained in the estimate for expenditure on non-durables amounted to 2 per cent and to that extent the gain in real consumption was lower than the value figures. The drop in real per capita consumption, already noted, was common to most of the principal non-durable groups.

After showing no change in 1957, consumer purchases of durables rose 3 per cent in 1958. Modest gains took place in all the durable groups. Purchases of new passenger cars were up by more than 4 per cent but this gain was partially offset by lower purchases of used cars, so that the two together rose by 3 per cent. Since prices of durables are estimated to have risen only 1 per cent between the two years, the greater part of the rise in outlays represents higher purchasing in real terms.

Continuing to make relatively large gains, outlays in services rose nearly 6 per cent. Again, as

in 1957, the advance in prices was most apparent in the services sector and nearly 4 percentage points of the gain mentioned above are accounted for by higher prices. Relatively large gains occurred in expenditure on shelter, household operation and utilities and medical care.

The rate of change in consumer expenditure was far from uniform through the year. The major part of the annual increase occurred in the first and final quarters, particularly in the latter; the second and third quarters showed only a small advance on a seasonally adjusted basis. This pattern in 1958 is largely the result of the decline in purchases of durables in the two middle quarters, but at the same time expenditures on non-durables remained virtually stable in this period.

The gain in total consumer expenditure in 1958 fell considerably short of the more than 7 per cent advance in personal disposable income. Thus a rise in the rate of personal saving, from \$1.5 billion in 1957 to \$2.1 billion in 1958, is one of the notable developments of the year. As a percentage of disposable income, personal saving amounted to 6.9 per cent in 1957 and 9.2 per cent in 1958, the latter being one of the highest ratios in the post-war period.

Investment in Inventories

Total holdings of inventories were reduced in 1958, by about \$0.4 billion, in contrast to the year 1957 when a moderate build-up of inventories occurred. The turnaround reflects mainly a shift in the position of business inventories from accumulation to liquidation, but farm inventories and grain in commercial channels also contributed to the running down of total stocks in 1958.

For the year as a whole, business inventories generally were reduced against a background of un-

certain business conditions. The liquidation of \$216 million in 1958 was the largest annual decline in the post-war period and represented a turnaround of just under \$500 million from 1957.

This drawing down of business inventories in 1958 was concentrated mainly in the manufacturing industries, and was in part a response to reduced factory shipments as well as a drop in the backlog of unfilled orders. Also, with excess capacity in many industries, businessmen were able to obtain delivery on shorter notice, a factor which contributed to the trimming of stocks. Inventory liquidation was most pronounced in iron and steel products, and transportation equipment industries.

At the year-end, manufacturers in general had succeeded in reducing stock/shipments ratios sharply below the levels prevailing at year-end 1956 and 1957, and close to the low levels prevailing at the end of 1955. The most notable exception to this trend was the non-ferrous metal products industry, where stock/shipments ratios at the end of the year were higher than in the three previous years.

Trade inventories showed, on balance, a slight accumulation in 1958, mainly as a result of the continued build-up of stocks in retail food stores. This accumulation appears consistent with increased retail and wholesale sales in 1958. The pick-up in sales, however, reduced stock/sales ratios at the year-end below the level of the year-end 1957.

The trend of business inventories through the year was an important determinant of the level of economic activity in 1958. In the first quarter final demand was partly met by drawing down business inventories, with the liquidation amounting to an annual rate, seasonally adjusted, of \$560 million. The rate of liquidation slowed markedly in the second quarter and by the fourth quarter stocks were being built up at a rate of \$56 million. Thus the shift from liquidation to accumulation between the first and last quarters of the year represented an additional demand on current production and imports of over \$600 million at annual rates.

Gross Fixed Capital Formation

Business gross fixed capital formation, estimated at \$6,899 million in 1958, fell about 6 per cent from the level of the previous year, following three years of impressive increases. The total was the outcome of a major advance in outlays for housing and a drop in expenditures for both non-residential construction and machinery and equipment, especially the latter.

Investment in housing established new records in 1958; dwellings started rose to 164,600 units from 122,300 units, dwellings completed to 146,700 units from 117,300 units, and dwellings under construction at the year-end to 88,200 units from 72,600 a year earlier. Estimated at \$1,762 million in 1958, expenditures on housing were 25 per cent higher than in 1957. Activity in housing was encouraged by Government advances to the Central Mortgage and Housing Corporation for mortgage lending under the National Housing Act and by the increased availability of financing from private sources. Somewhat more than half the houses started in 1958 were financed under the National Housing Act. Expenditures on housing rose continuously throughout the year.

Business expenditures for plant and equipment, estimated at \$5,137 million in 1958, were 13 per cent lower than in 1957, with the construction component down 9 per cent and the machinery and equipment component down 18 per cent. The distribution of investment by industry was strikingly altered. Outlays for financial services and for institutions rose sharply, but all other industries except agriculture curtailed their investment in varying degrees. The rate of decline was pronounced in the primary industries, particularly in mining, which showed a drop of 40 per cent. Investment in manufacturing fell 27 per cent, reflecting reduced outlays in all industry divisions except foods and beverages, tobacco products and products of petroleum and coal. The huge investment program of the utilities was lower by 8 per cent. The fact that some major projects initiated in previous years moved close to completion, without new projects of comparable size coming forward, was a factor in the trend of investment outlays in 1958.

So far as the trend through the year is concerned, expenditures for non-residential construction were falling in the second half of 1958 but purchases of machinery and equipment were stronger in the final quarter, after several successive declines.

The prices prevailing in the investment sector in 1958 were about 2 per cent higher than in 1957, so that the decline in the volume of investment was actually somewhat greater than the 6 per cent drop indicated by the value figures.

Exports and Imports of Goods and Services

Exports of goods and services in 1958 amounted to \$6.3 billion, 2 per cent lower than in 1957. The fall in receipts pertains largely to the service items; commodity exports held close to the level of the record year 1957.

Mixed trends in merchandise exports had developed in 1957 and were accentuated in 1958; the virtually unchanged total for the year was the outcome of large increases in some commodities and numerous declines in others. Two new resource products, uranium ores and concentrates, and natural gas, continued to make growing contributions to export totals, their value rising by about \$165 million between the two years. Other exports whose value rose sharply were wheat and flour, an increase of about \$75 million; cattle, an increase of about \$45 million; and aircraft, an increase of about \$70 million. Decreases occurred in many traditional exports as well as in some of the new resource products. In the first category are pulp and paper, copper, nickel, lead, zinc and asbestos, and in the second, petroleum and iron ore; the value of exports of the last two items fell by about \$110 million. The quarter-to-quarter movement of commodity exports during the year was uneven, with a rise in the second quarter, a decline in the third, and a further sharp rise in the fourth.

Imports of goods and services in 1958 were \$7.4 billion, nearly 6 per cent less than in 1957. The bulk of the decline occurred in commodity imports; payments on invisible account were only slightly lower.

Most of the 8 per cent drop in commodity imports was concentrated in those groups where imports had risen very sharply during the period of rapidly rising investment in plant and equipment in 1955 and 1956. The biggest increases had been in metal products and it was these groups which accounted for some three-quarters of the decline in commodity imports in 1958, imports of iron and its products fell by 13 per cent and of non-ferrous metals by 11 per cent. Even more striking were the declines in imports of specific types of metal products; imports of mining and metallurgical machinery, rolling mill products and pipes, tubes and fittings were down by rates that ranged from 35 to 40 per cent. The reduction in imports of fuels was also large. The drawing down of inventories in the first half of the year was a further factor contributing to the drop in imports in 1958. However, imports of many consumer goods

remained at much the same level as in the previous year. By the middle of 1958, the downtrend of imports of goods and services had levelled off, and in the last half of the year imports were rising again; the fourth quarter advance was one of the sharpest for several years.

Receipts from invisibles fell by 5 per cent in 1958, an important factor in the decline being lower earnings from freight and shipping. This development was associated with lower external trade in commodities having high transportation costs and further sales of Canadian vessels. Receipts from miscellaneous services were also considerably lower. Payments on invisibles in 1958 were only a little lower than in 1957. However, payments for freight and shipping were substantially lower, reflecting the drop in imports and a decline in rates for ocean shipping.

With commodity exports at \$4,890 million and commodity imports at \$5,064 million, the deficit on visible account in 1958 contracted sharply to \$174 million from \$579 million in 1957; the deficit on invisibles rose to \$889 million from \$823 million in the previous year. The over-all deficit was thus sharply reduced, falling from \$1.4 billion in 1957 to \$1.1 billion in 1958, a decline of 24 per cent.

Government Expenditure on Goods and Services

Government expenditure on goods and services rose to \$6.0 billion in 1958, some 7 per cent higher than in 1957. More than two-thirds of this advance is accounted for by increased outlays of the provincial and municipal governments, reflecting mainly higher expenditures for capital works and for wages and salaries. At the federal level, outlays for goods and services were higher by about 4 per cent in 1958. Defence expenditures were lower by about 6 per cent, but this decline was more than offset by a 23 per cent advance in outlays for goods and services for non-defence purposes; the latter reflected larger expenditures for public works, higher payments on wage and salary account, the service costs of the conversion loan, and larger purchases under the Agricultural Stabilization Act.

COMPONENTS OF GROSS NATIONAL PRODUCT

Wages and Salaries

Labour income rose to \$16.2 billion in 1958, slightly more than 2 per cent above the level of the year 1957. The major part of this advance in labour income is accounted for by higher average weekly earnings.

Forestry, transportation, construction, mining and manufacturing did not share in the annual advance in labour income. Labour income in forestry fell sharply, reflecting the much reduced level of employment in the industry. The decline in labour income in mining and manufacturing, a little more than 1 per cent, is related in part to the incidence of industrial disputes in these industries.

Labour income rose in all the service-producing industries in 1958, except in transportation, reflecting generally expanded employment as well as further advances in average weekly earnings. In general, the increases were quite substantial; for example, finance, insurance and real estate and non-government services recorded gains of about 9 per cent.

Corporation Profits and Other Investment Income

Corporate profits before taxes and including dividends paid abroad declined more than 6 per cent in 1958, reflecting the impact of recessionary influences on corporate earnings. In this situation dividends paid abroad (including remitted profits), were cut by 10 per cent so that corporate profits after dividends paid to non-residents, the figure included in national income, declined by about 5 per cent.

The trend of corporate earnings by industry mirrored the mingled elements of weakness and strength present in the economy in 1958. The sharpest drop in profits—25 per cent—occurred in mining, quarrying and oil wells. Profits in manufacturing fell 10 per cent, the major declines being in iron and steel, petroleum and coal and electrical apparatus and supplies. This experience is related in part to the lower domestic demand for durable goods. Certain other manufacturing industries had higher earnings, notably foods and beverages, wood and paper products and chemicals.

In general, the service-connected industries earned somewhat higher profits in 1958. The major exception was wholesale trade where profits declined by 13 per cent. There was also some decline in earnings in transportation, communications and storage.

The quarterly pattern of corporate profits during 1958 reveals the sensitivity to changes in the tempo of economic activity characteristic of this component. After a series of successive declines, corporate profits stabilized in the second quarter of 1958 and then rose at an accelerating rate in the second half of the year. Although the fourth quarter returns are not yet fully tabulated, preliminary compilations indicate that the increase in the final quarter of the year was quite pronounced and was fairly widespread by major industry groups.

Rent, interest and miscellaneous investment income, estimated at \$2.4 billion in 1958, was 9 per cent higher than in the previous year. All the components,—net rents, investment income of life insurance companies, trading profits of government enterprises and other miscellaneous investment income—contributed in varying degrees to this increase.

Net Income of Unincorporated Business

Accrued net income of farm operators from farm production is estimated to be \$1,202 million in 1958, a major advance of 24 per cent over 1957. With little change in crop production, the source of the increase was larger output and higher prices for livestock and animal products.

Net income of non-farm unincorporated business rose to an estimated \$2,079 million in 1958, 7 per cent higher than in 1957. The largest gains occurred in construction and fishing but retail trade and the service groups also showed some increases.

Indirect Taxes Less Subsidies

Indirect taxes less subsidies, estimated at \$3.8 billion in 1958, were slightly higher than in the preceding year. The increase reflected a small gain in yields from indirect taxes partly offset by a sharp rise in subsidies.

A 1 per cent increase in yields from indirect taxes was the outcome of largely offsetting changes in the revenues of the different levels of government. Revenues from this source dropped significantly at the federal level, mainly as a result of the fall in imports and the accompanying decline in the yield of customs import duties; excise taxes were also down. Higher yields from real and personal municipal taxes and increased revenues from provincial sales and gasoline taxes were largely responsible for raising indirect taxes in total.

Federal subsidies rose by 21 per cent, with agricultural subsidies accounting for most of the increase.

National Saving and Investment

Gross national saving declined by 9 per cent in 1958, from approximately \$6.0 billion in 1957 to \$5.5 billion. The decline was entirely attributable to a shift in the position of the government sector from a small surplus in 1957 to a deficit of more than \$1 billion in 1958;¹ this change in the position of the government sector was partly offset by a sharp increase in the rate of personal saving, but the saving of the business sector remained unchanged from the previous year. As a percent of Gross National Product, total national saving amounted to 17 per cent in 1958 compared with 19 per cent in 1957.

¹ The deficits and surpluses referred to here are based on National Accounts definitions and thus differ from the conventional budgetary figures reported in the various public accounts.

The nation's total capital investment program for plant, machinery and equipment, housing, and inventories was considerably lower in 1958 than in the previous year. Business gross fixed capital formation declined by 6 per cent, while inventories shifted from a position of accumulation in 1957 to one of net liquidation in 1958. As in the preceding year, however, the amount of saving available from

domestic sources was insufficient to support the capital investment program. This short-fall in the nation's saving was met by drawing upon foreign resources, and the deficit on current account in 1958 amounted to \$1.1 billion, a decline of about 24 per cent from the \$1.4 billion deficit of the previous year.

	1957	1958	Change 1957 to 1958

PRIVATE AND PUBLIC INVESTMENT - OUTLOOK 1959

Private and Public Investment - Outlook 1959

The regular survey of anticipated capital expenditures, a joint project of the Dominion Bureau of Statistics and the Economics Branch of the Department of Trade and Commerce, was recently published in a report entitled *Private and Public Investment in Canada - Outlook 1959*. For the most part, this report embodies the findings of a survey of intentions but estimates based on current trends and informed opinion are used in some areas where direct surveys are difficult to make. The results are subject to the qualifications that attach to any survey of expectations. Spending plans for the year ahead inevitably reflect the business situation at the time the plans are formulated and are likely to be modified in response to new developments.

The economic environment in which investment plans were being made at the end of 1958 is described in detail in the preceding article. Briefly, the situation was then one of developing strength following some weakness and hesitation in the preceding two years.

The Investment Programme for 1959

Public and private expenditures on new investment in 1959 are expected to amount to \$8.3

billion, which compares with expenditures of \$8.4 billion in 1958, and a peak of \$8.7 billion in 1957. Absorbing 26.6 per cent of Gross National Product in 1956, 27.7 per cent in 1957 and 26.3 per cent in 1958, capital investment has been extraordinarily high in recent years, not only in terms of Canadian experience but also by comparison with most other countries having broadly similar political and economic systems.

In recent years there has been pressure on prices of capital goods and the changes in outlays for investment when measured in dollars of constant purchasing power differ considerably from dollar changes as is shown in the table below. Thus investment in real terms in 1958 was 5 per cent lower than in 1957, with machinery and equipment falling 18 per cent and construction expenditures up 1 per cent.

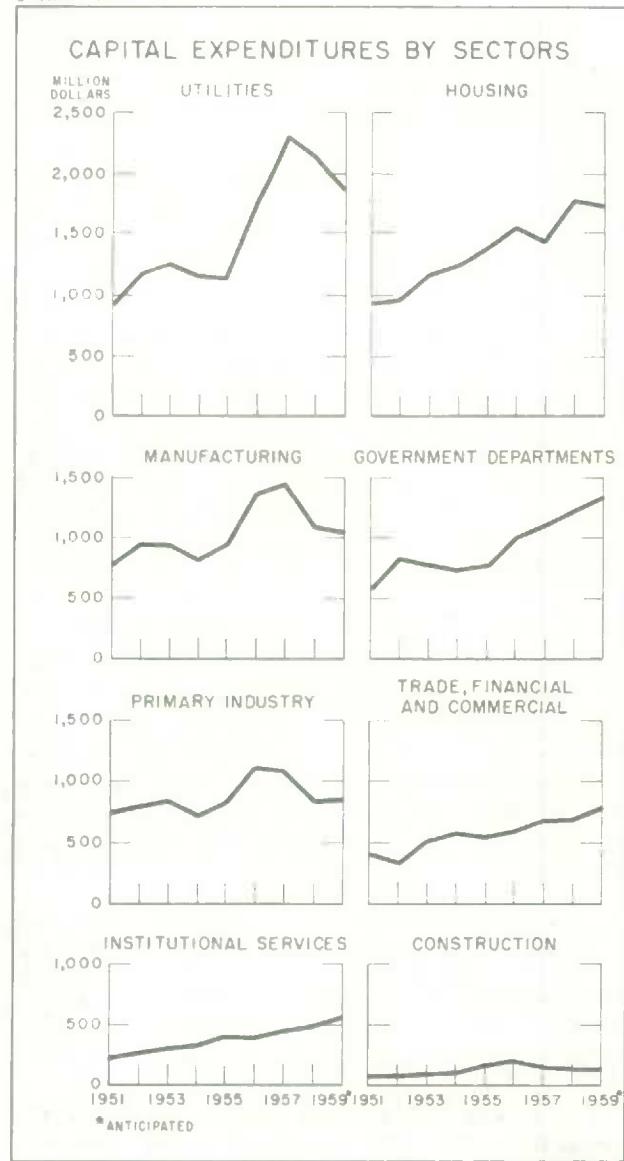

Percentage Change in Investment Outlays	Current Dollars	Constant Dollars
1955 to 1956	28.7	22.0
1956 " 1957	8.4	3.9
1957 " 1958	-3.4	-5.2

It is impossible to say what expectations with respect to the future course of prices were held

when spending intentions were reported. In this connection, it should be mentioned that in 1958 a number of factors combined to moderate the rising trend of construction costs, among them being lower prices for construction materials, greater efficiency in the industry and more competitive bidding.

Anticipations are that the spending pattern established in 1958 will be slightly modified in 1959; outlays for construction are planned to be somewhat lower in 1959 and expenditure for machinery and equipment virtually the same. In 1958, while outlays for construction had risen a little, purchases of new machinery and equipment had fallen sharply, thereby contributing to the decline in domestic production of durable goods and the decided drop in imports of machinery and equipment and related materials, both outstanding developments of that year.

CHART - I

The distribution of planned expenditures by sector for 1959 is changed somewhat from that of the previous year. The major changes are the sharp drop in expenditures by the utilities and the increases planned by government departments and the two service groups. The last three would account for 32.5 per cent of the total in 1959, compared with 29 per cent in 1958 and 26 per cent in 1957. Manufacturing, primary industry and housing would have virtually the same importance as in 1958.

Capital Expenditures by Sectors as a Percent of Total

	1956	1957	1958	1959 ¹
Primary Industry ²	13.8	12.5	10.3	10.4

¹ Anticipated.

² Includes agriculture and fishing, forestry, and mining, quarrying and oil wells.

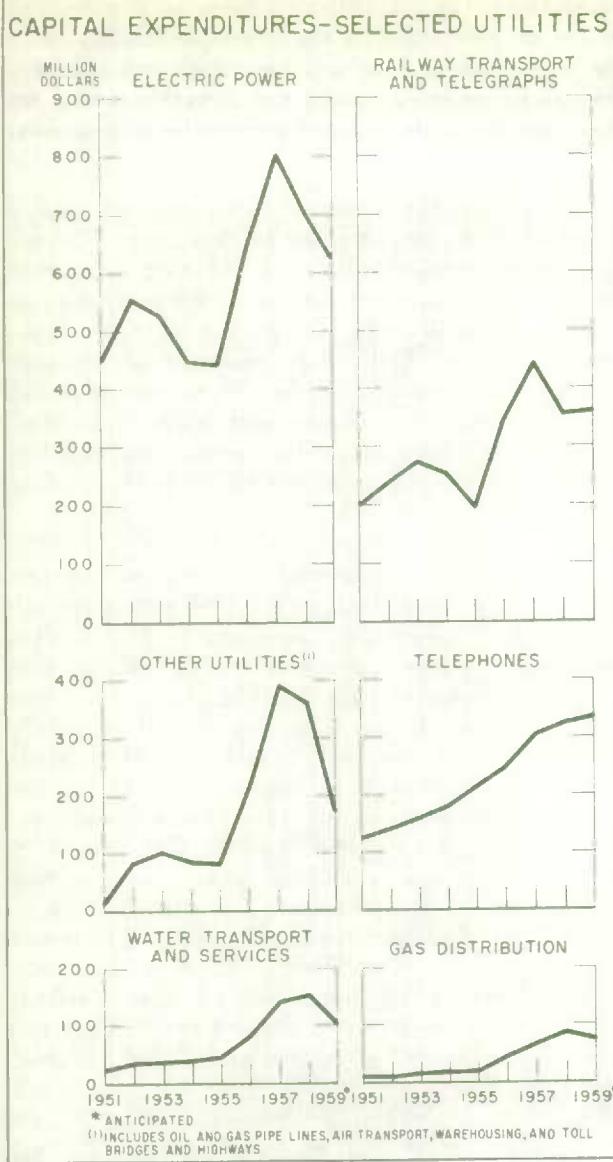

Recent Trends in Capital Expenditures by Sectors

The Utilities.—The great magnitude of the capital investment undertaken by the utilities has been an outstanding feature of Canada's investment programme in recent years. At their peak in 1957, outlays amounted to \$2.3 billion and were nearly as high in the following year, representing about one quarter of the nation's total capital expenditures in both years. Thus the projected decline of about \$290 million, or 14 per cent, in 1959 is a reduction from very high levels; it reflects the completion or near completion of major undertakings for the generation of electric power and for pipelines initiated in earlier years.

The largest reductions are planned for "other" utilities (which includes pipelines), electric power, and water transport and services in that order, the three together amounting to nearly \$320 million. Partially offsetting are planned increases in outlays in two other major groups, namely telephones and to a lesser extent railway transport and telegraphs. Anticipated outlays of the less important groups are for the most part higher.

It is interesting to note that the small increase projected for railways is the outcome of a sharp reduction in purchases of machinery and equipment

CHART-2

and a slightly more than offsetting increase in expenditures on construction. The new railway being built in Quebec to link the St. Lawrence with iron-ore properties in the North is important in this connection.

Primary Industry—Projected outlays in primary industry in 1959 are \$870 million, somewhat higher than in 1958 but well below the \$1,106 million peak in 1956. The three groups, agriculture and fishing, mining, quarrying and oil wells, and forestry show conflicting trends.

Capital expenditures in the mining group, mounting rapidly after the outbreak of the Korean War, rose from \$164 million in 1951 to their peak of \$606 million in 1957. This spectacular expansion reflected the development of new and known re-

sources in a situation of strong demand. Uranium is conspicuous in this connection.

Considerable new capacity having been brought into production in Canada and elsewhere, the deterioration in markets in the past few years for a wide variety of products had a marked effect on new investment. Capital expenditures in this group fell sharply in 1958 and at a projected \$346 million in 1959 would be somewhat lower than in the previous year.

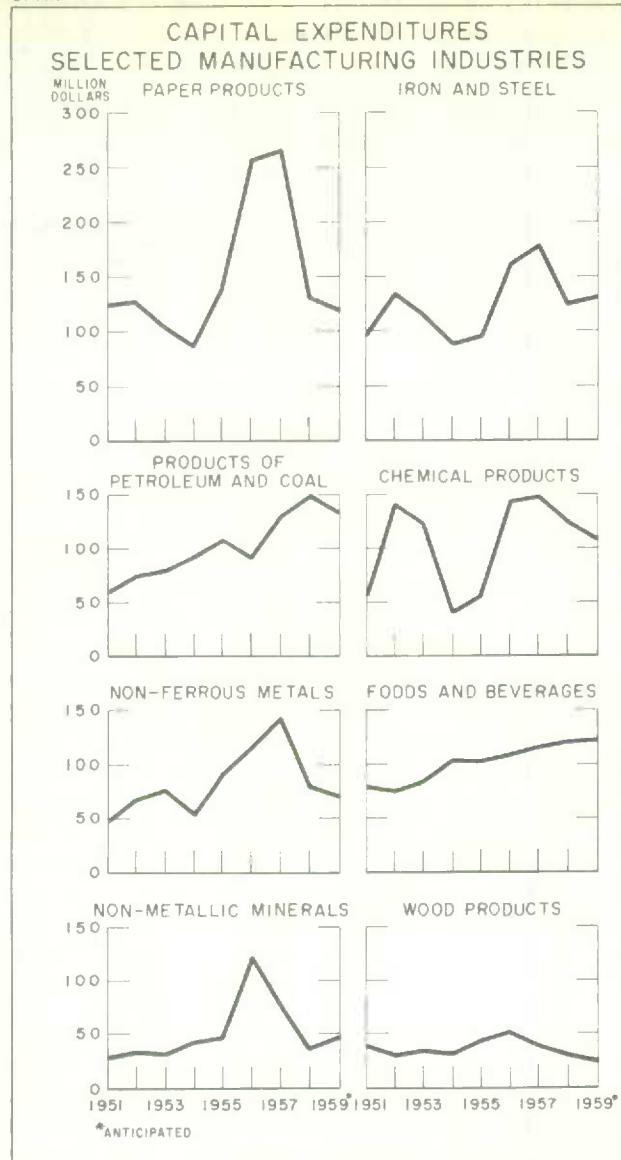

Capital expenditures in agriculture and fishing have shown considerable year to year fluctuations in recent years. The estimate for 1959 is for capital outlays of \$476 million in agriculture and fishing much the same as expenditures in 1958.

Capital outlays in forestry, a fairly small component in the total for primary industry, have been highly variable from year to year. Anticipated expenditures for 1959 of \$48 million, while substantially above those realized in 1958, are well below the peak expenditures of \$76 million in 1956.

Manufacturing—Capital expenditures in manufacturing industries in 1959 are expected to be \$1,043 million, about 4 per cent lower than in 1958, when expenditures in this sector fell by 27 per cent. The total expected for 1959 reflects a cessation of the strong downward trend in the durable groups and a continuing decline in non-durables.

The impact of recession is clearly evident in the changes in capital expenditures in the durable group. In 1957, with fairly large but offsetting changes within the group, the total was virtually the same as in 1956. Non-metallic mineral products and wood products, particularly the former, where expenditures had been extremely high in 1956, curtailed their programmes sharply but capital expenditure continued to rise in other industries, notably non-ferrous metals and iron and steel. However, in 1958, all the durable groups reduced their capital expenditures, by rates that ranged from 18 per cent in transportation equipment to 54 per cent in non-metallic mineral products, bringing the reduction for the group as a whole to 35 per cent.

Capital expenditures in durables in 1959 are expected to be at much the same level as in the previous year. The non-ferrous metal and electrical apparatus and supplies group plan a further curtailment in their spending but renewed expansion in capital outlays is expected in the non-metallic mineral products industry. In other industries, prospective changes, positive or negative, are small.

Capital outlays in the non-durable group continued to rise in 1957 and were about 11 per cent above the level of 1956. An advance in outlays was common to all the industry divisions except leather products. Three industries having large programmes in 1956, products of petroleum and coal, paper products and chemical products, carried out still larger programmes in 1957. This applies in particular to the first named. Capital expenditures in these three industries above in 1957 amounted to about \$545 million out of a total for non-durables of about \$880 million.

Capital outlays in the non-durable group as a whole fell 22 per cent in 1958, a reduction in outlays being common to most industries. Products of petroleum and coal is a notable exception in that there was a further significant expansion in capital

expenditure. The paper products industry curtailed expenditures drastically and there was a decided falling off in outlays by the chemical industry. With the exception of food and beverages and tobacco, the groups oriented toward the domestic market for consumer goods also carried out smaller programmes.

In general, the trends evident in the non-durable group in 1958 are expected to persist in 1959 and investment contemplated is 7 per cent lower than in 1958. In products of petroleum and coal, the programme is still large, though substantially lower than last year. Food and beverages and tobacco products are again an exception to the downward trend evident in consumer soft goods industries. However in these industries, notably in textiles, rates of decline are scheduled to be lower than in 1958.

Housing — Whether measured in terms of physical units or in value, housing in 1958 was at an all-time high. Expenditures amounted to \$1.7 billion, nearly 25 per cent higher than in 1957, 15 per cent above the previous peak in 1956. Apart from more basic demand factors, housing is influenced by changes in the availability and cost of mortgage credit. The expansion of housing in 1958 was encouraged by the funds provided by the Government to Central Mortgage and Housing Corporation for mortgage purposes as well as by an increasing flow of funds from private sources. The 1959 Outlook assumes that expenditures for housing will remain about the same as in 1958; it assumes starts will be lower than in 1958, but a record number of houses was under construction at the end of 1958 and this carryover adds to the volume of housing construction this year.

Trade, Financial and Commercial Services — The planned outlays for capital expenditures in trade, financial and commercial services of \$800 million in 1959 would represent a 15 per cent increase over the record established in 1958. In 1956 and again in 1957 relatively large increases occurred in this sector.

In both absolute and percentage terms the largest anticipated increases are in the finance, insurance and real estate group, \$58 million or 32 per cent, following the same percentage expansion in outlays in the previous year, which brings the projected programme up to \$237 million.

The major part of the increase in outlays realized in 1958 and projected for 1959 is in the "other" financial group and is accounted for by expenditure of real estate companies engaged in developing, owning and leasing properties.

Capital outlays in trade in 1959 are expected to be \$390 million, \$45 million above those of 1958 and \$20 million above the previous peak in 1957. All the trade groups surveyed in 1959 propose to raise their outlays in 1959 but the largest increase in outlays is projected in the automotive trade.

Projected outlays of \$172 million in commercial services for 1959 are only slightly above those of 1958, which compares with a recent peak of \$184 million in 1957. This result would be largely the outcome of a further sharp drop in expenditures for hotels offset by a further expansion in outlays for "other" commercial services, which includes professional services, independent restaurants, recreation and amusement centres other than theatres.

Institutional Services — Outlays for institutional services have been rising almost without interruption in recent years and planned outlays for 1959

are \$550 million, more than 12 per cent higher than in 1958. The largest increase is planned for hospitals and the planned programme for 1959 amounts to \$181 million. The other large increase is for expenditures by universities, which would raise their outlays to \$77 million.

Government Departments — Planned outlays by government departments for 1959 are \$1.4 billion, a rise of 9 per cent, following a much smaller rate of increase in the preceding year. Larger outlays are planned by all levels of government. Defence needs account for virtually all the increase at the federal level and highways are important in the increase at the provincial level. The largest increase is planned by the municipalities where long-term trends toward urbanization and suburbanization, reinforced by the recent high level of house-building, make for a persisting pressure for a wide variety of municipal services.

INDUSTRIAL PRODUCTION

The seasonally adjusted index of industrial production rose 1.4 per cent in January, recording its fifth consecutive monthly increase. Both durable and non-durable manufacturing advanced. Continued sharp gains in the production and distribution of natural gas resulted in a large increment in electricity and gas. The abrupt upward shift in the mining index reflects the end of a major strike.

Note: The seasonally adjusted components of the manufacturing production index formerly presented in this section are now shown in Table 6 along with additional series of the revised index not previously published.

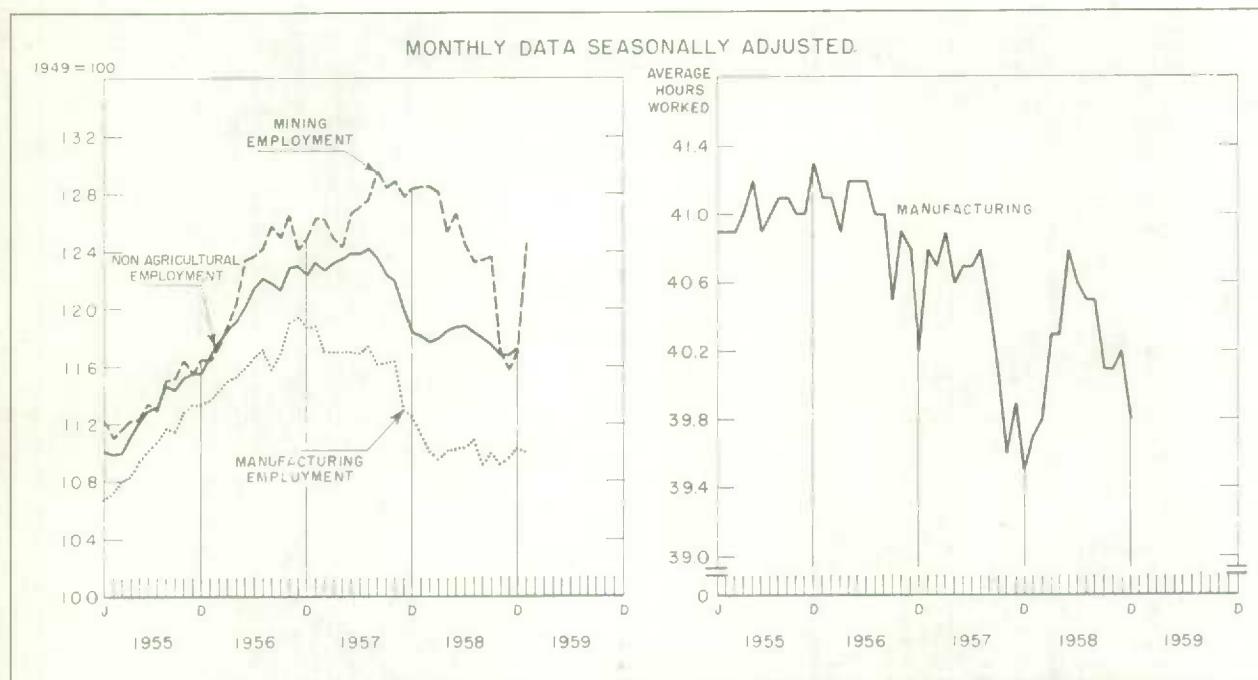

⁽¹⁾Averages or totals of unadjusted data.

Seasonally adjusted at annual rates.

⁽²⁾Gross National Product at market prices excluding accrued net income of farm operators from farm production.

EMPLOYMENT AND AVERAGE HOURS WORKED

In January, the seasonally adjusted index of industrial composite employment moved upward. Manufacturing showed a marginal gain, with durables up and non-durables unchanged. Construction strengthened while mining rose abruptly due to termination of a major strike. Average hours worked per week in manufacturing fell off in December.

RETAIL TRADE

In January, seasonally adjusted retail trade rose sharply, with grocery and department stores leading the trend. Sales of fuel dealers and garages and filling stations declined.

SELECTED GROUPS IN RETAIL TRADE

In January, seasonally adjusted new passenger car sales remained at a high level although falling short of the record December sales. After declining in December, sales of both clothing and furniture and appliance stores rose again in January to their November levels.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Three-term moving average of seasonally adjusted data.⁽⁴⁾Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS AND IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports fell abruptly in January. The decline was widespread with substantial reduction in wood and non-ferrous metal exports. In December, imports, although down, maintained a high level.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. (4) Rough cords of 128 cu. ft.

(5) In urban areas of 5,000 population and over. As of January, 1957, figures are not strictly comparable to those of 1956 due to the inclusion of additional municipalities in the "urban 5,000 and over" category. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) Prior to January, 1957, this total includes the net amount generated by the more important central electric stations, i.e. companies, municipalities and individuals selling or distributing electric energy. From January, 1957 it includes all generating agencies producing over ten million kilowatt hours per year. The total generated on the old basis for January 1957 was 7,457 million kilowatt hours. (10) End of period. Including personal savings deposits.

⁽¹⁾"De facto" population. Annual data are for June. ⁽³⁾At current market prices. Annual data are totals of the four quarters. ⁽⁵⁾Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. ⁽⁶⁾New series. All manufactured products other than food, fuel and tobacco.

Note.—Until the end of 1957, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1958 and 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Not applicable to figures on population and immigration. (2) Yukon and North-West Territories not included in figures for births, marriages and deaths. (3) Estimates are given by years as of June 1 and by quarters for Canada. (4) Exclusive of stillbirths. (5) Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

Revised quarterly data for the historical period 1947-1955 are still in course of being re-worked. This material will be released as soon as possible.

8 ⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item. ⁽²⁾Includes adjusting entry. ⁽³⁾Includes residual error of estimate. ⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

⁽¹⁾Seasonal (formerly supplementary) benefit data included. ⁽²⁾On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. ⁽³⁾The number of new cases of recorded unemployment among insured persons.

⁽⁴⁾Estimates are based on average weekly number of payments. ⁽⁵⁾The number of calendar weeks during which a benefit payment was made.

⁽⁶⁾Revised to relate to the Thursday nearest to the last day of the month. ⁽⁷⁾Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾Excludes gold.⁽²⁾Arithmetically converted from 1935-39=100.⁽³⁾Indexes August, 1956—July, 1957 are final with the inclusion of final participation payments for Western grains.⁽⁴⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1957 are final prices. From August, 1957 to July, 1958 western wheat prices were initial plus interim payments. Since August 1, 1958, only initial prices are available for wheat, oats and barley.

(1) Includes gas used for house heating.

(2) Barrels of 35 Imperial gallons.

(3) Increase in natural gas sales and decrease in manufactured gas sales caused by transfer of large company from manufactured to natural gas.

(4) Includes some free customers.

⁽¹⁾In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. ⁽²⁾Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also reported as shipments in the month received) or whether they will be added to existing backlog.

⁽³⁾Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. ⁽⁴⁾Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1)Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. (2)Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. (3)Customs exports. (4)Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel, D.B.S.

Note.—Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada. ⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1) Includes some silvery pig iron formerly included with ferro-alloys.

(2) Excluding shipments for processing.

(3) Imports include, in addition to all other shapes, wire and wire rope.

Imports exclude castings, forgings, fittings and couplings.

(4) Monthly average.

(5) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 800 sample areas lying outside these municipalities were also chosen for complete enumeration.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1956, stands at 901, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Include subsidy on hogs.

(2)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(3)Previous to

January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods.

⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.

⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

Mar. 1957-24 June 1957-28 Sept. 1957-34 Dec. 1957-32 Mar. 1958-29 June 1958-31 Sept. 1958-30

⁽⁵⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁶⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

SOURCES: Department of Insurance, Department of Agriculture, Bank of Canada.

(1) Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1956 and 1957 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (2) Prior to January 1957, includes the C.P., C.N., Quebec North Shore and Labrador and Pacific Great Eastern railways. Beginning in January, 1957, all railways follow the uniform classification of accounts, and the statistics previously shown in the "Other Railways" section in the upper half of the table are combined, as of that date, with those railways already following the new system. (3) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. (4) As of January, 1958, statistics include the British Columbia Electric Railway. (5) As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. (1) Foreign exchange and foreign securities. (2) Industrial Development Bank capital stock, bonds and debentures. (3) Bank premises and all other assets.
 (4) Capital, rest fund and all other liabilities. (5) On December 31, 1956, the basis for the valuation of securities held by the Bank of Canada was changed from "not exceeding market values" to amortized values, and for this reason figures for December 31 and later dates are not comparable with those for earlier dates.

⁽¹⁾Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. ⁽²⁾The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date. ⁽³⁾Mainly deposits of foreign banks. ⁽⁴⁾Capital, rest fund and undivided profits as at the latest fiscal year-end. ⁽⁵⁾Including issues payable in foreign currency. ⁽⁶⁾Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. ⁽⁷⁾Excluding Canadian day to day loans. ⁽⁸⁾Loans to grain dealers and exporters. ⁽⁹⁾Loans to finance purchase of Canada Savings Bonds at time of issue. ⁽¹⁰⁾Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ⁽¹¹⁾Beginning January 31, 1957, figures for certain chartered bank asset items are not strictly comparable with those for earlier dates. ⁽¹²⁾Including loans to instalment finance companies.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

⁽²⁾Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

⁽³⁾Less total float, i.e. cheques and other items in transit (net).

⁽⁴⁾At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total. Source: Monthly Survey of Life Insurance sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

⁽¹⁾Ordinary, Industrial and Group.⁽²⁾Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.
Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

Source: Quarterly Corporation Profits, D.B.S.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.
