CURRENT ECONOMIC CONDITIONS

When the preliminary estimate of Gross National Product for 1958 was prepared some two months ago, there was considerable evidence that the slight down-trend in economic activity had been arrested during the course of the year and a wide variety of economic indicators showed renewed strength in the fourth quarter. The sources of this strength were a sharp rise in consumer expenditure, an advance in exports and a modest accumulation of business inventories. This accumulation was in contrast to the heavy liquidation that had been operating to depress production in the first half of the year. However, about one-fifth of the rise in final demand in the fourth quarter was met by an up-turn in imports. Seasonally adjusted Non-farm Gross National Product was estimated to have risen nearly 2 per cent in the fourth quarter.

When this estimate was prepared, some important and sensitive components were measured on the basis of incomplete data. There is, in addition, a stream of economic statistics on trends in the opening months of 1959, although these statistics are scattered and uneven as to timing and do not fit into any comprehensive framework. It is the purpose of this article to set forth the evidence now available which permit a re-appraisal of the indications of recovery apparent earlier.

Corporate Profits

When the preliminary annual estimate of Gross National Product for 1958 was prepared, the estimate of the corporate profits component for the fourth quarter was based on incomplete returns from the corporate profits sample survey. Now that more information is available, it appears that the rise in corporate profits in the fourth quarter, seasonally adjusted, was well in excess of what the preliminary data indicated. Corporate profits before taxes and including dividends paid abroad were then estimated to have risen 5 per cent. A preliminary appraisal of the more complete data now available suggests that the fourth quarter increase was of the order of 20 per cent, the largest quarterly increase since the third quarter of 1950.

Corporate profits are a sensitive indicator of the changing tempo of economic activity. The quarter-to-quarter downward trend was virtually arrested in the second quarter of 1958 and reversed in the third quarter. Thus the additional information on corporate profits for the fourth quarter is confirmatory evidence of the gathering strength of recovery in the closing months of the year.

The fourth quarter gains in corporate profits were widespread by industry and in general substantial in size in those industries where corporate profits had been most adversely affected by the recession. Among the goods-producing industries, the most pronounced increases occurred in mining, quarrying and oil wells, and in the wood, paper, printing and publishing, the petroleum and coal products, and the iron and steel divisions of manufacturing. Smaller increases were recorded in textiles and non-metallic minerals. In other goods-producing industries corporate profits showed very little change.

In the service-producing industries, for the most part, the upward trend of profits was not interrupted by the recession. In the fourth quarter, the largest gains occurred in transportation, communication and storage, and in wholesale trade. In finance, insurance, insurance and real estate, corporate profits made a significant advance, after having remained level in the two middle quarters of the year.

External Trade

Commodity imports began to decline in the first quarter of 1957 and continued to fall from quarter to quarter until the closing quarter of 1958, on a seasonally adjusted basis. This trend was related to the drop in investment in machinery and equipment and the drawing down of business inventories. The fourth quarter pick-up in imports was substantial, amounting to 10 per cent when seasonal factors are taken into account. Part of this rise may be associated with a strike-induced curtailment of domestic production of iron and steel.

Preliminary data for 1959 indicate a pronounced slackening in the previous quarter's rapid rate of increase, the increase in commodity imports on a seasonally adjusted basis being 2 per cent. Commodity detail is as yet too incomplete to indicate the composition of imports thus far in the year.

While commodity exports in the full year 1958 were virtually the same as in 1957, in the fourth quarter of 1958 they had shown considerable strength, being up about 4 per cent on a seasonally adjusted basis. In the first quarter of 1959 exports were lower by 3 per cent, although the March figures were substantially higher than those of the two preceding months.

When the first three months of 1959 are compared with the first three months of 1958, commodity

imports are higher by nearly 3 per cent and commodity exports lower to a somewhat greater extent, thus bringing about a pronounced widening of the deficit on commodity trade.

The Index of Industrial Production

The index of industrial production, which had reached its recessionary low of 148.6, seasonally adjusted, in December of 1957, made a modest recovery in the early months of 1958, receded again in the summer, and did not resume its upward course until the closing months of the year. By December of 1958 it stood at 155.1, still 3 per cent below its peak of 159.6 reached in March of 1957.

The promise of recovery apparent in the closing months of 1958 was confirmed in subsequent movements of the index, which stood at 160.9 in February, 2 per cent higher than in January and nearly 1 per cent above its previous peak. The rise in February, the sixth successive increase, brings the index about 7 per cent above its August 1958 level. This compares with an increase of 9.5 per cent in the U.S. index of industrial production between April and October of 1958. Industrial production had fallen more sharply in the United States than in Canada.

The three main components of the index all showed gains in January and February, the most pronounced rise being in mining. Some part of the recent strength in industrial production is undoubtedly attributable to the settlement of industrial disputes, but there appears to be underlying improvement in a large number of industries, particularly in February. For example, production of transportation equipment was favourably affected by the higher level of operations in the automotive industry and new ordering in railway rolling stock and shipbuilding.

Employment

The latest statistics indicate a firming in the employment situation. The Labour Force Survey is now available for the week ending March 21st. For the first two months of this year this survey has shown substantial gains over the period a year ago, which were maintained but not increased in March. The seasonally adjusted estimate of persons with jobs in the non-farm sector in the first quarter of 1959 was nearly 2 per cent higher than in the closing quarter of 1958.

The number of persons without jobs and seeking work, which usually increases between February and March, declined this year; at 525,000 it was 12,000 less than in February, and 72,000 less than a year

ago. Further evidence of greater firmness in the labour market is the fact that the number of persons on temporary lay-off and on short time were both substantially lower than a year earlier. As a percentage of the labour force, the number without jobs and seeking work, seasonally adjusted, has declined in each successive month from its peak of 7.9 per cent in October of 1958 to 5.5 per cent in March of this year. The decline in March was partly attributable to a drop in the labour force which normally increases at this stage of the year.

Labour Income

Labour income was at its recessionary low in January of 1958. The upward trend, briefly interrupted during the summer months, was resumed in the closing months of the year when labour income rose at an accelerated rate. By January of this year labour income was 6.5 per cent higher than a year earlier and more than 4 per cent above its previous peak in August of 1957. The rate of increase slackened perceptibly in February and labour income in manufacturing fell a little on a seasonally adjusted basis. This development was associated with large-scale lay-offs in aircraft and related industries.

Retail Trade

In the fourth quarter of 1958 consumer expenditure rose 3 per cent, seasonally adjusted, the largest quarterly advance since 1952. The goods portion of the total rose somewhat more, an important factor in this increase being the rise in purchases of passenger cars. In the same period, retail sales, which are roughly indicative of the trend of consumer purchases of goods, rose nearly 5 per cent. It is therefore interesting to examine subsequent trends in retail sales for the light they may throw on consumer behaviour in the opening months of 1959.

The seasonally adjusted monthly retail trade series is highly irregular, as is apparent in the chart on Page viii¹. The series, now available for the first two months of 1959, moved up sharply in January and down slightly in February, but the average is 4.5 per cent above that of the fourth quarter of 1958.

¹ A large part of this irregularity reflects the inadequacies of the present shopping day adjustment, i.e., no account is taken of the fact that all days are not equally important for shopping purposes. This applies in particular to sales of grocery and combination stores. A shopping day adjustment to the retail trade series is in the course of preparation, and the series, so adjusted, will be released within a few months.

Sales of new passenger cars were higher in the first two months of 1959, when they were nearly 8 per cent above the average for the last quarter of 1958. This increase follows a substantially larger increase between the third and fourth quarters of 1958. Department store and clothing sales were moderately above the fourth quarter rate.

Turning to trades unrelated or not closely related to consumer spending, sales of commercial vehicles and of lumber and building materials and hardware in the first two months of 1959 advanced well beyond fourth quarter 1958 rates.

Other Economic Indicators

The relationship between shipments, stocks and orders in manufacturing industries that have developed in recent months are favourable to the further expansion of production. Shipments and new orders have risen and the ratio of stocks to shipments has fallen, a situation which encourages the building up of stocks to support the current and prospective volume of business.

Manufacturers' shipments in the first two months of 1959 were up 5 per cent over the same period a year ago. From January to February, when shipments usually decline, they rose by 2 per cent. In the first two months' comparison of this year with last, using the economic use classification, most of the ten industry groups showed increases, ranging from 21 per cent in motor vehicles and related industries down to 1 per cent in industries producing largely for export. Shipments declined in heavy transportation and equipment, other construction goods and other capital goods.

The value of inventories owned by manufacturers at the end of February was higher than a month earlier, as is usual at this period of the year, but the increase was less than 1 per cent, compared with increases of more than 2 per cent in 1956 and 1957. Inventories at the end of February were more than 2 per cent lower than a year earlier. The year-over-year difference has been narrowing since last October when inventories were more than 7 per cent lower than in the same period a year earlier.

The consequence of these developments is that the ratio of stocks to shipments in both January and

February was lower than a year earlier and lower than in most years for which this series is available.

New orders in February were 6 per cent higher than in the same period a year earlier. But for a large cancellation in the aircraft industry, new orders (which are measured net of cancellations) would have been higher in February than in January. The same is true of unfilled orders.

Turning to consider the trend of freight car loadings, the seasonally adjusted figures for the end of March show a 3 per cent increase over February.

The goods handling industries, like the goods producing industries, were adversely affected by the recession. For 1958 as a whole freight car loadings were down 7 per cent from 1957. In the first three months of 1959 they were at virtually the same level as in the same period a year ago, this unchanged total being the outcome of a much reduced volume of such important commodities as coal, non-ferrous ores and concentrates, pulpwood and livestock and a sharply increased volume of iron ore, gypsum and automobiles and trucks.

Conclusion

To recapitulate, the magnitude of the rise in corporate profits in the fourth quarter of 1958 suggests that the forces of recovery were then stronger than seemed apparent two months ago. The accelerated rise in industrial production, the more favourable stocks, shipments and orders relationships in manufacturing industries, the continuing broad advance in retail sales, the improvement in the employment situation and the strength of labour income all confirm that recovery was sustained in the opening months of 1959. Indeed, there is much evidence to suggest that recently the pace of recovery has quickened. At the same time, recovery thus far this year lacks support from the side of external trade, with exports down in the first quarter and some part of the rise in domestic demand being met by a further expansion of imports. However, the latest indicators show continuing expansion in economic activity in the United States, thus helping to establish an international setting favourable to further expansion in Canada.

INDUSTRIAL PRODUCTION

In February, the seasonally adjusted index of industrial production, after 6 consecutive monthly gains, has passed its previous peak of March, 1957 and now stands 7.1 per cent above its August, 1958 low. Manufacturing production rose with both durable and non-durable up. Mining exhibited considerable strength owing to the substantial increase in metals output. The index of electricity and gas continued to rise.

NOTE: The seasonally adjusted components of the manufacturing production index formerly presented in this section are now shown in Table 6 along with additional series of the revised index not previously published.

⁽¹⁾Averages or totals of unadjusted data.

⁽²⁾Seasonally adjusted at annual rates.

⁽³⁾Gross National Product at market prices excluding accrued net income of farm operators from farm production.

EMPLOYMENT AND AVERAGE HOURS WORKED

Over the last few months seasonally adjusted industrial composite employment showed little change. Manufacturing employment fell off reflecting a decline in durable employment. Construction increased while mining employment continues at a relatively low absolute level after recovering from the strike of the fourth quarter. The seasonally adjusted average hours worked per week in January moved up reflecting strength in both durable and non-durable manufacturing.

⁽¹⁾Averages of unadjusted data.⁽²⁾Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.⁽³⁾Middle month in each quarter.⁽⁴⁾Percentage seasonally adjusted.⁽⁵⁾In this series.⁽⁶⁾Revisions in the raw data for November, 1957 through June, 1958 are not incorporated

RETAIL TRADE

Seasonally adjusted retail trade remained at a high level in February. Although some of the retail outlets were lower than in January, the majority remained at a high absolute level. Seasonally adjusted department store sales showed little change from their January high.

^(a)Annual estimates are as of June 1. ^(b)Seasonally adjusted at annual rates. ^(c)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. ^(d)Rough cords of 128 cu. ft. ^(e)In urban areas of 5,000 population and over. As of January, 1957, figures are not strictly comparable to those of 1956 due to the inclusion of additional municipalities in the "urban 5,000 and over" category. ^(f)Average of weekly rates. ^(g)Middle of month. ^(h)Revised according to new bench marks. ⁽ⁱ⁾Prior to January, 1957, this total includes the net amount generated by the more important central electric stations, i.e. companies, municipalities and individuals selling or distributing electric energy. From January, 1957 it includes all generating agencies producing over ten million kilowatt hours per year. The total generated on the old basis for January 1957 was 7,457 million kilowatt hours. ^(j)End of period. Including personal savings deposits.

(1) "De facto" population. Annual data are for June.
(2) At current market prices. Annual data are totals of the four quarters.
(3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries.
(4) All manufactured products other than food, fuel and tobacco.
(5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

Note.—Until the end of 1957, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1958 and 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(a) Not applicable to figures on population and immigration. (b) Yukon and North-West Territories not included in figures for births, marriages and deaths. (c) Estimates are given by years as of June 1 and by quarters for Canada. (d) Exclusive of stillbirths. (e) Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

Revised quarterly data for the historical period 1947-1955 are still in course of being re-worked. This material will be released as soon as possible.

8 (1)The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item. (2)Includes adjusting entry. (3)Includes residual error of estimate. (4)This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

⁽¹⁾Seasonal (formerly supplementary) benefit data included. ⁽³⁾On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. ⁽⁵⁾The number of new cases of recorded unemployment among insured persons.

⁽²⁾Revised to relate to the Thursday nearest to the last day of the month. ⁽⁶⁾Estimates are based on average weekly number of payments. ⁽⁷⁾Comencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾Excludes gold.⁽²⁾Arithmetically converted from 1935-39=100.⁽³⁾Field and Total Indexes for crop year August 1957-July 1958, inclusive, are revised

again to include final payments for barley and oats.

⁽⁴⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1957 are final prices. From August, 1957 to July, 1958 western wheat prices were initial plus interim payments. Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽¹⁾These totals include all generating agencies producing over ten million kilowatt hours per year.
⁽²⁾Generating industries respectively, producing over ten million kilowatt hours per year.
⁽³⁾Less imports.
⁽⁴⁾Mainly the amount used in electric boilers.
Source: Monthly Report, Electric Power Statistics, D.B.S.

⁽²⁾These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year.
⁽³⁾Less imports.
⁽⁴⁾Total net generation less net exports.

(1) In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also irrespective of whether they will be added to existing backlog). (2) Total new orders received during the period, at estimated selling values. The series include progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. (3) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period. Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, D.B.S.

⁽¹⁾Releases of domestically manufactured tobacco for consumption in Canada.
⁽²⁾End of period.

⁽³⁾The production of beer is shown in thousand barrels of 25 gallons each.

⁽⁴⁾Includes bottling of imported liquors.

Source: Monthly Report on Primary Iron and Steel, D.B.S.

Note.—Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada.⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 800 sample areas lying outside these municipalities were also chosen for complete enumeration.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1956, stands at 901, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Include subsidy on hogs. (2)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(3)Previous to

January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

(1)Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

(2)Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

(3)Annual data are monthly averages of crop year. (4)Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾ Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾ Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.

⁽³⁾ Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

⁽⁴⁾ In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

Mar. 1957-24

June 1957-28

Sept. 1957-34

Dec. 1957-32

Mar. 1958-29

June 1958-31

Sept. 1958-39

⁽⁵⁾ Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁶⁾ Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1)Since January, 1957, cargo loaded and unloaded by tugs, previously excluded, is included in the total. (2)Since January, 1957, cargo handled at Montreal excludes cargo handled at the port of Contrecoeur, previously included. (3)Since January, 1957, total cargo unloaded includes cargo unloaded by tugs and cargo unloaded at non-customs ports. (4)Annual data are average of nine months. (5)Does not include bulk transportation.

(1) Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1956 and 1957 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (2) Prior to January 1957, includes the C.P., C.N., Quebec North Shore and Labrador and Pacific Great Eastern railways. Beginning in January, 1957, all railways follow the uniform classification of accounts, and the statistics previously shown in the "Other Railways" section in the upper half of the table are combined, as of that date, with those railways already following the new system. (3) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. (4) As of January, 1958, statistics include the British Columbia Electric Railway. (5) As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. (1) Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

(2) The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date.

(3) Mainly deposits of foreign banks.

(4) Including issues payable in foreign currency.

(5) Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans.

(6) Excluding Canadian day to day loans.

(7) Loans to grain dealers and exporters.

(8) Loans to finance purchase of Canada Savings Bonds at time of issue.

(9) Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

(10) Including loans to instalment finance companies.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

⁽²⁾Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

⁽³⁾Less total float, i.e. cheques and other items in transit (net). ⁽⁴⁾At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.											

⁽¹⁾The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total. (1) Ordinary, Industrial and Group.

(2) Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.
