BUSINESS INVENTORIES SINCE 1952

The following discussion deals mainly with the behaviour of inventories on an aggregative basis and within the framework of the National Accounts.¹ It isolates certain similarities in the timing and amplitude of inventory movements and highlights some of the movements during the two business recessions in 1953-1954 and 1957-1958.

Although the level of business inventories is affected by a number of variables, a good deal of uniformity in patterns of behaviour can be observed when figures are examined at the total level. It should be remembered that inventories serve as a link between production and final demand and changes in them may come about through a positive decision to increase or reduce them, that is, the change may be voluntary, or through sudden and unanticipated shifts in production or final demand, that is, the change may be involuntary. There is nothing in the statistics themselves which will identify these two types of change. Therefore, although changes in inventories may show repetitive patterns of behaviour over time, it will not always be possible to explain adequately the reason for such movements on the basis of existing data.

The article deals with non-farm business inventories only and all data have been adjusted to remove purely seasonal influences.

The main economic developments of the period are reviewed briefly in order to establish a setting for more detailed examination of inventory behaviour.

By 1952, the strong inflationary pressures initiated by the outbreak of war in Korea in mid-1950 had begun to subside, and a general downturn

¹ Gross National Expenditure is measured in terms of expenditures made at current prices by consumers, business investors, government and foreign buyers, from which are deducted expenditures on imported goods and services, and the aggregate measuring national production is arrived at by adding or subtracting the changes in inventories.

The measurement of the change in inventories must be consistent with the measurement of other items on the expenditure side, that is physical units must be measured at current prices. This requirement calls for some adjustment of the figures of book value of inventories initially obtained from accounting records. Because of the method of accounting used by business firms, such figures do not record changes in inventories in terms of current prices. If, for example, the first in first out method is used, the goods charged out of inventory reflect some prior period prices. In order to measure the change in inventories for Gross National Product purposes, an inventory valuation adjustment is introduced which has the effect of valuing the change in inventories in terms of prices of the current period.

in prices developed. The rate of accumulation of inventories was much reduced, leaving almost all the increase in national production available to meet rising final demand. New peaks in production, consumption and employment were reached in 1953. However, the decline in defence expenditures in the United States following the Korean Armistice in mid-1953 introduced recessionary influences and inventory movements contributed to the decline in economic activity. In Canada in 1954 business expenditures for plant and equipment fell and a broad corrective movement occurred in inventories.

Expansion was resumed in 1955 and continued in 1956 when investment in fixed capital and in inventories were both strikingly large. In 1957 economic activity levelled off and by the end of the year inventories were being liquidated. During the course of 1958, economic activity returned to its upward course and by the end of the year inventories were being accumulated on a modest scale and thus contributing support to current production.

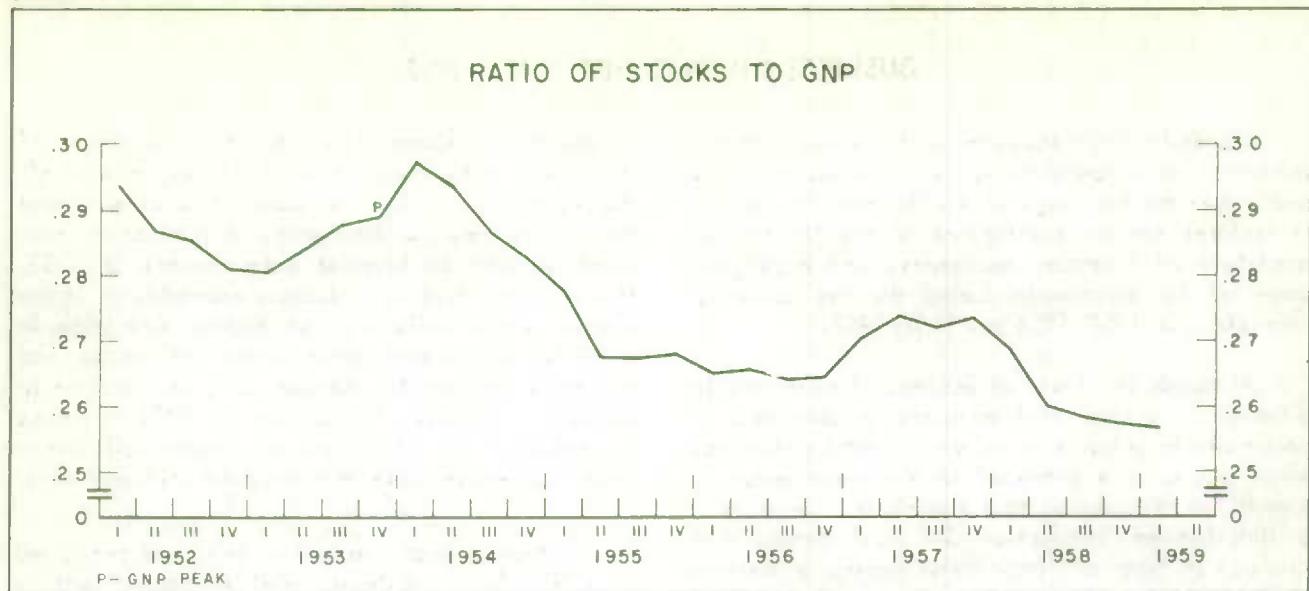

Movements in Inventories and in Gross National Product

Inventories and total output have both moved up during the period reviewed here but inventories have increased much less than Gross National Product. There appears to have been a secular down-trend in the ratio of stocks to Gross National Product, as is illustrated in Chart I. This trend was interrupted in 1953-1954 and in 1957-1958. Before going on to consider the cyclical pattern of the ratio, it is interesting to consider possible explanations of the apparent secular trend.

The explanation may lie in an increase in the relative importance of industries having low inventory-output ratios or it may lie in a general reduction of inventory output-ratios in component industries. Shifts in weighting in the direction of industries having low inventory-output ratios have in fact occurred. Gross domestic product at factor cost by industry since 1947 indicates that such industries as finance, insurance and real estate, mining, construction, and public administration have gained in relative importance and this group normally has a low ratio of inventory to output. Manufacturing and trade, where the ratios are normally high, have not changed in relative importance.

During the seven-year period under review, Gross National Product increased almost 50 per cent and inventory holdings only 25 per cent. It is in-

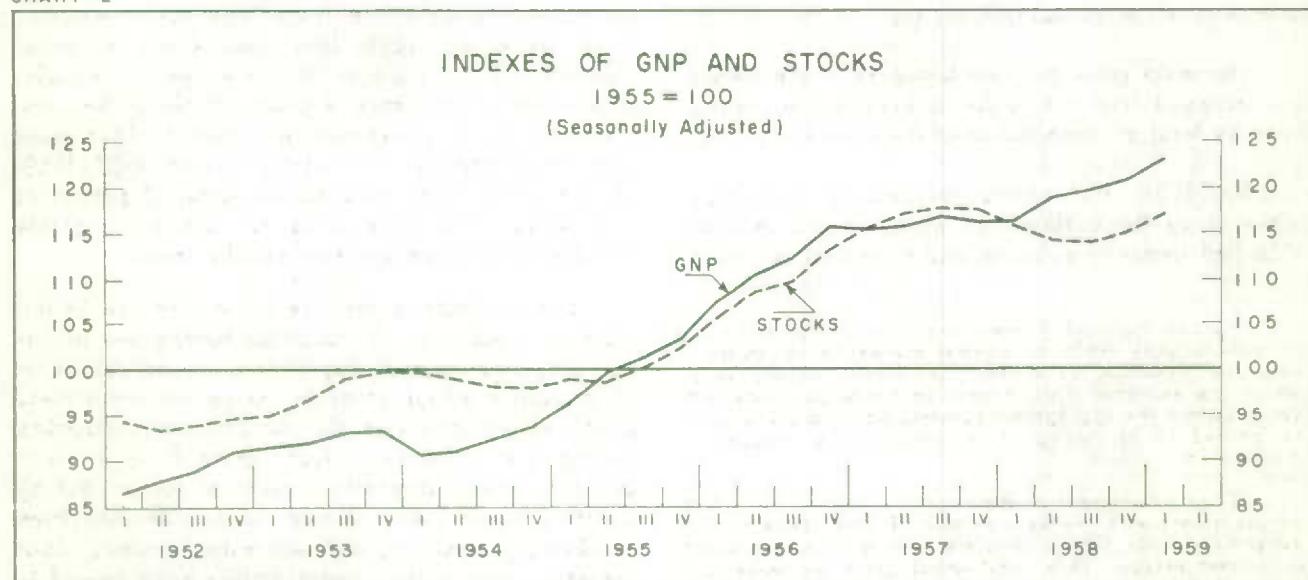

CHART - I

teresting to note the difference in the timing of the movements of the two series. As is apparent in Chart II, most of the increase in inventories was concentrated in the two-year period from mid-1955 to mid-1957, when four-fifths of the total increase took place. In the case of Gross National Product, the movement is much more extended in time and in the two-year period just mentioned only two-fifths of the increase in Gross National Product

took place. This pattern reflects the fact that in the two minor cycles in business activity in the period under review, total stocks have been affected much more than total output. In the 1957-1958 recession, it took Gross National Product only three quarters to regain its previous peak whereas stocks were still not yet ahead of their previous high even after six quarters had elapsed. A similar pattern was apparent in the earlier recession.

CHART - 2

In recent Canadian experience, changes in stocks have tended to lag behind changes in output and this lag is particularly noticeable in the early phases of recovery from recession. The upturn in inventories in both periods did not occur until four quarters after Gross National Product had begun to

rise. The timing and the amplitude of stock movements in both recessions is illustrated in Chart III. This chart is in index form with total stocks at the peak of Gross National Product equal to 100 and the movements are traced through the trough of Gross National Product and several quarters of the re-

covery phase. It is apparent that the stock movements in the 1957-1958 recession were more pronounced than in 1953-1954, moving down by almost 3 percentage points against a movement of just less than 2 percentage points in the earlier period. In both recessions stocks continued to be liquidated well after the recovery phase commenced. Stock peaks coincided with those of Gross National Product on both occasions and then held almost flat for one quarter while Gross National Product dipped to its trough. Subsequently, when Gross National Product was in its recovery phase, stocks were liquidated sharply for two quarters, flattened out in the third and registered their first rise four quarters after the trough in Gross National Product. These timing patterns suggest that inventories tend to hold level for a brief time after the peak in output is reached but that liquidation continues for a considerable time after recovery is under way. It may be noted that in both cycles inventory investment reached its maximum in advance of the peak in business activity.

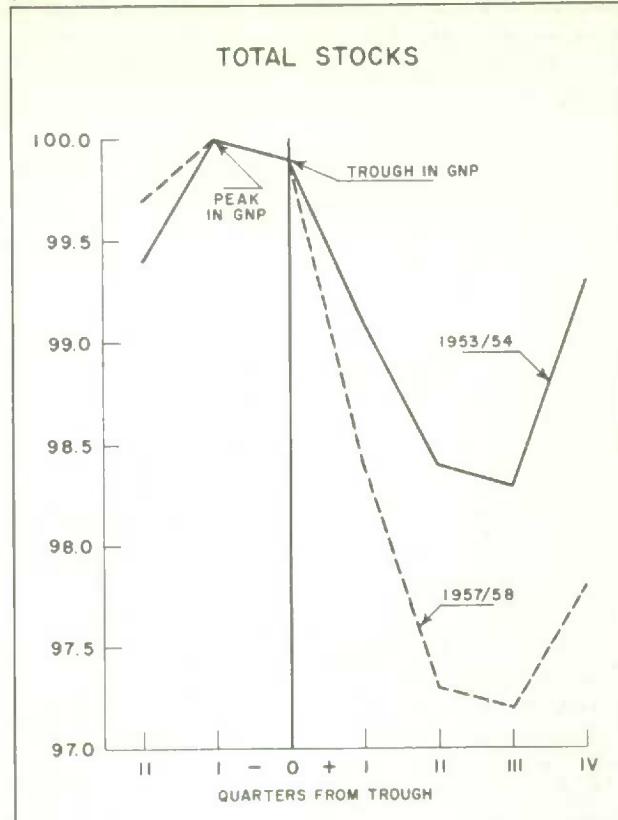

It is interesting to note that in both recessions the trough in Gross National Product occurred one quarter after the peak. On both occasions, as is illustrated in the chart, the ratio of stocks to Gross National Product continued to rise for one quarter after the peak in Gross National Product had been reached and then fell sharply. These sharply falling ratios following the trough are the outcome of recovery in output on the one hand and declining inventories on the other. It may be noted that the progress of recovery from the recent recession has brought the ratio of stocks to output to the lowest level since 1947.

It is not intended to suggest that the pattern of timing, observed in the two recent recessions and described above is a basis for generalizations about inventory behaviour. It may be related to the fact that both recessions were mild and short-lived.

Changes in Investment in Inventories

The importance of inventory investment or disinvestment in the period under review is demonstrated by the fact that changes in this component were equal to half the changes in Gross National Product, ignoring signs in both cases. Also, an examination of the two series indicates that changes in inventories tend to conform to changes in Gross National Product with a one or two quarter lag. For example, if changes in inventories are moved forward two quarters in the period when total output is increasing toward the peak at a slackening rate, and moved forward one quarter in the period when total output is rising from the trough at an accelerating rate, the two series of changes show a high degree of correlation. This is illustrated in Chart IV. The

CHART - 3

time period is divided into four segments and the timing of peaks and troughs in the two recessions is indicated. The first and third segments illustrate the situation in which Gross National Product is rising at a slackening rate and changes in investment in inventories are moved forward two quarters. The other two segments illustrate the situation in which Gross National Product is rising at an accelerating rate and changes in investment in inventories are moved forward one quarter.

Patterns of Investment in Durables and Non-Durables

The analysis in the following paragraphs is limited to three industries, manufacturing, wholesale and retail trade since adequate data on a quarterly basis are not available for the other industries whose investment in stocks goes to make up the total included in the National Accounts. In terms of total book value of inventories, the three industries dealt with are estimated to represent over three-quarters of non-farm business inventories. Special attention is given to the behaviour of durables and non-durables.

Investment in durable goods inventories showed wide fluctuations in this period and this volatility was more marked after 1954. The pattern of behaviour of durables and non-durables is shown in Chart V. Whereas the demand for non-durables tends

to be relatively stable, demand for durables is subject to sharp and sudden shifts. The relation of durables to fixed investment, which is characteristically unstable, is an obvious one. Since purchases of consumer durables are so readily post-

ponable, consumer attitudes and expectations, as well as changes in income, are quick to find expression in the consumer sector of the market for durable goods. Consumer purchases of non-durables display much less volatility.

CHART - 4

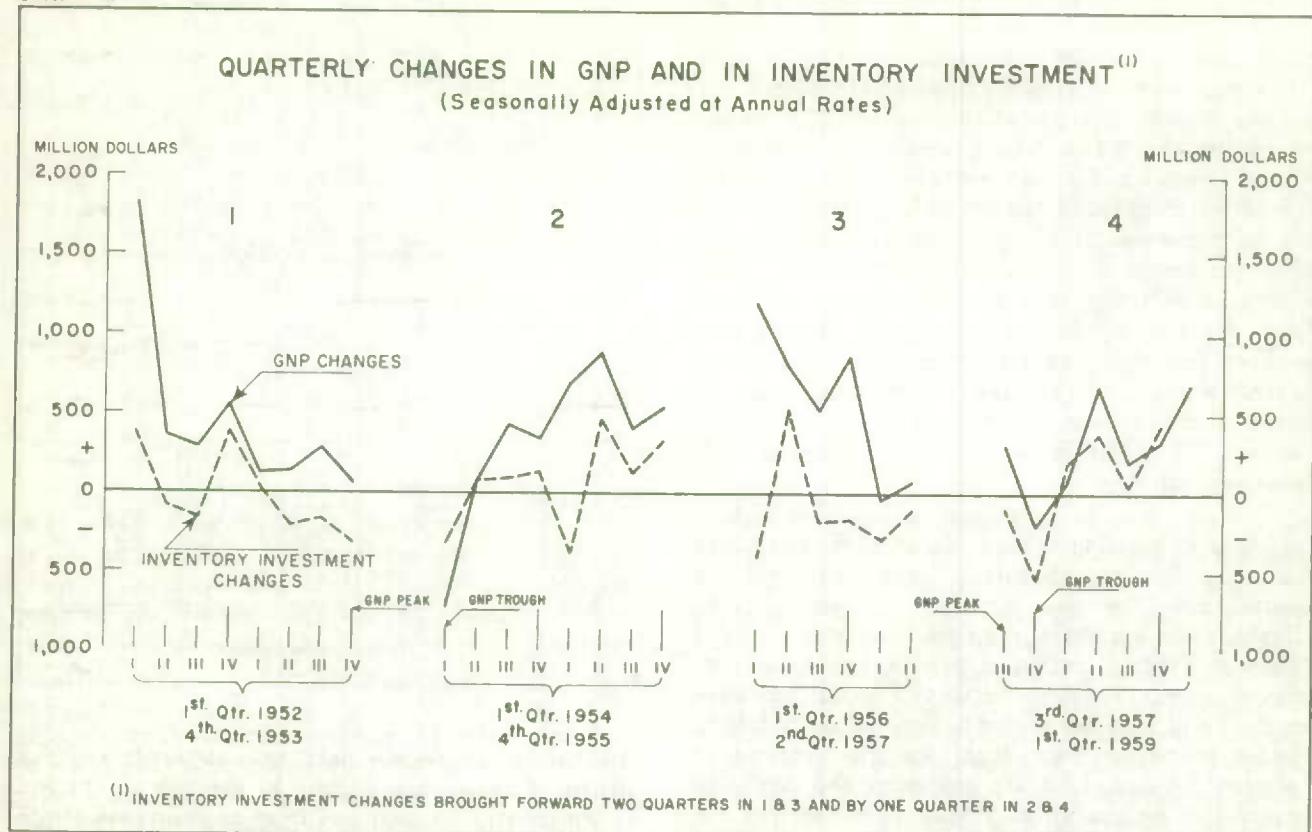

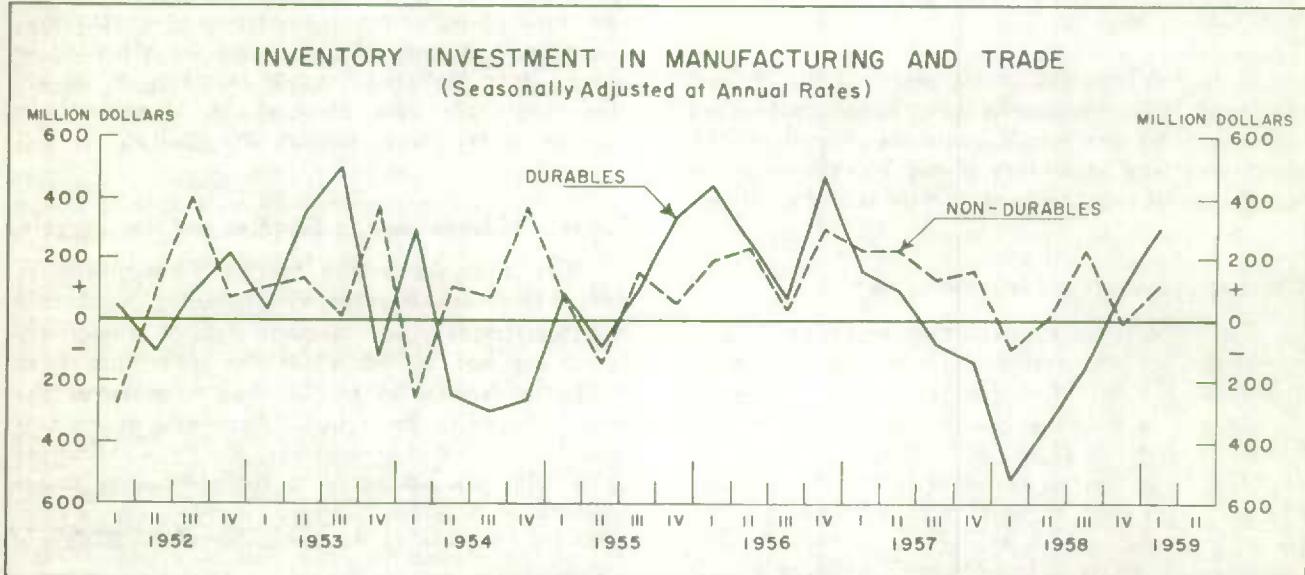

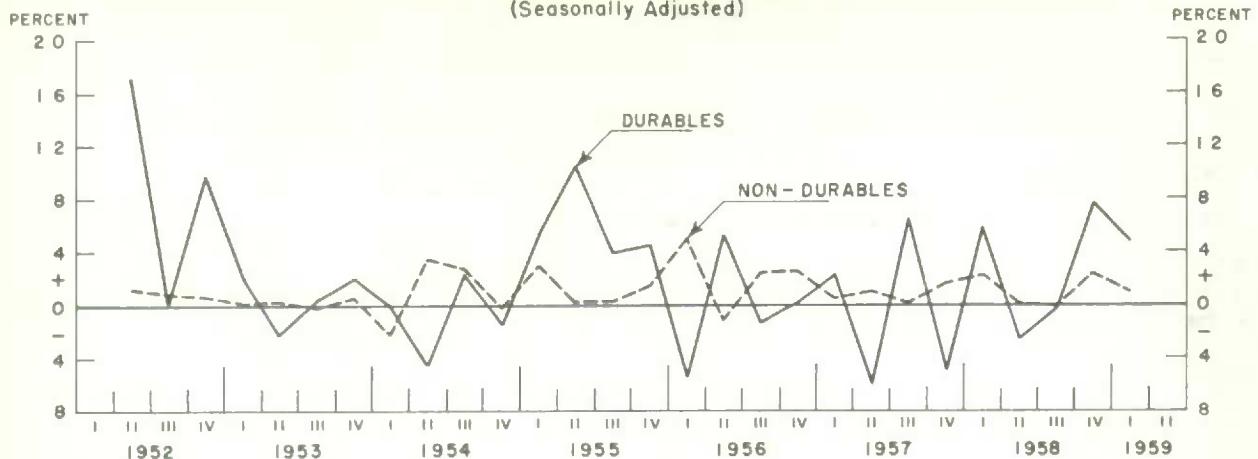

CHART - 5

It is not possible to show total final purchases of goods classified into durables and non-durables but this information is available for the consumer sector. The points made above are illustrated in Chart VI which shows the quarter to quarter changes

in consumer expenditure on durables and non-durables. U.S. experience shows that this pattern is general in other areas of demand for durables, that is, producers' durables, Government purchases of durables and exports of durables.

PERSONAL EXPENDITURE ON CONSUMER GOODS
(PERCENT CHANGE FROM QUARTER TO QUARTER)
(Seasonally Adjusted)

The durable goods display an overall pattern of inventory investment which coincides fairly closely with that of the general level of economic activity over the period. Durable goods stocks generally mounted through the period 1952-1953. In the last quarter of 1953 and in step with business recession, a slight liquidation of stocks took place. While inventory investment rose sharply in the first quarter of 1954, reflecting a sizeable accumulation in the electrical apparatus and supplies and iron and steel products industries, this temporary accumulation was in all probability involuntary. From mid-1954 to mid-1955 stocks of durable goods were being reduced, at first to keep stocks in balance with lower levels of production and consumption and, later, as the recovery got under way, to meet expanding final demand prior to production moving into high gear. Curtailed business spending on machinery and equipment and lower purchases by consumers of durable goods were two factors creating the desire to curtail inventories in the initial phase of this movement.

Beginning in mid-1955 and until mid-1957, stocks of durable goods continued to increase. The build-up was dampened at first by the rapid rate of increase of final sales. Demands for construction goods, machinery and equipment and consumer durables were all heavy. A large part of the big increase in imports in this period consisted of industrial machinery, primary iron and steel and aircraft and automobile parts. In spite of the rapid build-up of stocks of durables in 1956 the ratio of stocks to sales or shipments in retail trade and manufacturing (the only industries for which these

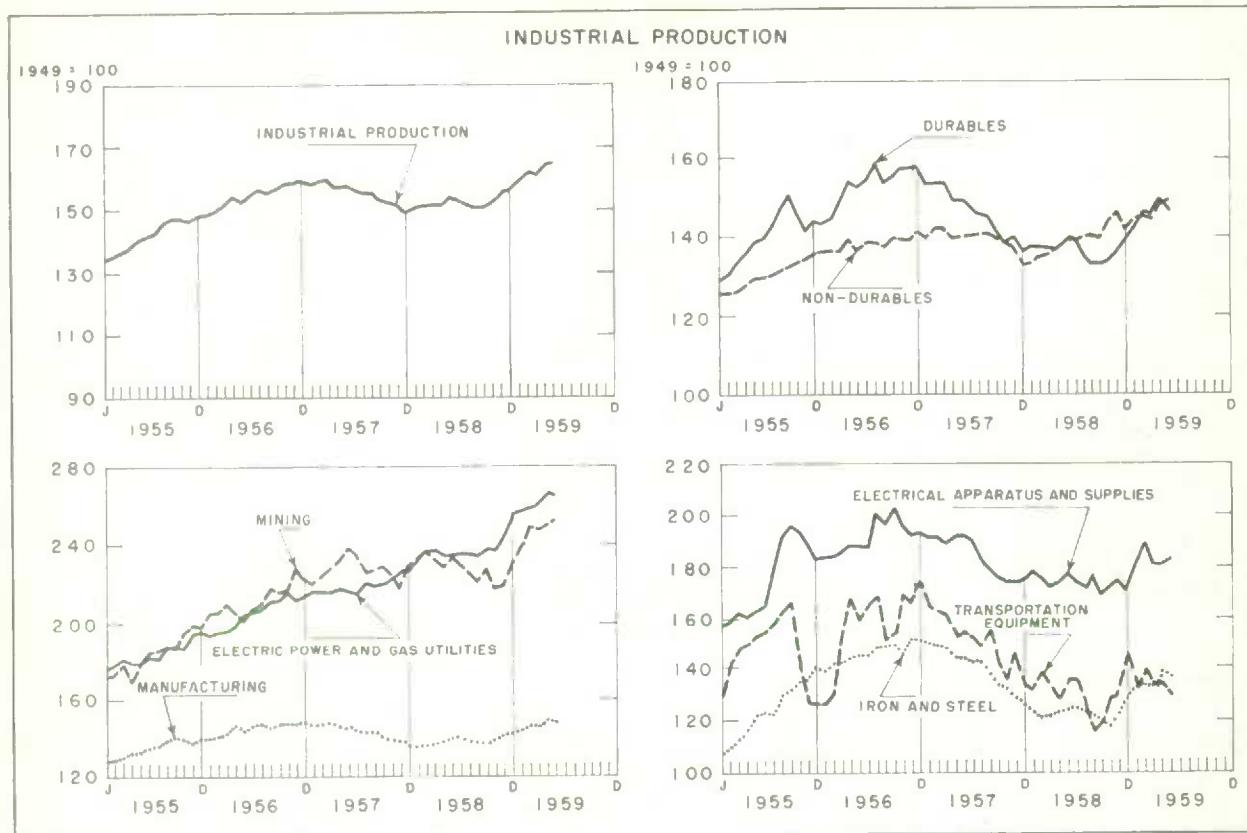

ratios are available) remained well below the average for the whole period. With prices rising somewhat during 1955-1956 and shortages in prospect for such commodities as steel and building materials, part of the accumulation in these industries may have been defensive.

The rate of accumulation of durable goods stocks fell steeply at the beginning of 1957 and by the third quarter durable goods on hand were being reduced. The liquidation of inventories in the first quarter of 1958 was the sharpest experienced in post-war years and it continued through the second and third quarters. The reduction in durable stocks took place against a background of generally reduced demand for producers' durable equipment, stable personal expenditure on consumer durables, and sharply falling new orders. Furthermore, it was associated with excess capacity in many industries which meant that businessmen were able to obtain delivery on short notice, thus obviating the need to carry large stocks. By the fourth quarter, liquidation had ceased and a substantial accumulation took place in the first quarter of 1959 in a situation of rising retail and wholesale sales and manufacturers' shipments.

Investment in inventories of non-durables tended to follow a broadly similar pattern for most of the period but with less pronounced fluctuations. However, durables and non-durables ran counter to one another during the 1953-1954 recession. Investment in inventories of non-durables rose in that period, which may reflect the continued strength of consumer demand in contrast to the weakening demand for capital goods and exports.

INDUSTRIAL PRODUCTION

In May, the seasonally adjusted index of industrial production fell slightly under the impact of a decline in durable manufacturing output. Electricity and gas recorded a slightly lower level of production. Small gains were posted in non-durable manufacturing and mining components. Transportation equipment and iron and steel confirmed a downward movement in total durables while electrical apparatus moved up.

⁽¹⁾Averages of unadjusted data.⁽²⁾Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.⁽³⁾Percentage seasonally adjusted.⁽⁴⁾Revisions in the raw data for November, 1957 through June, 1958 are not incorporated in this series.

RETAIL TRADE

Total seasonally adjusted retail trade moved up abruptly in May under the influence of sharp increases in grocery and combination stores, motor vehicle dealers and clothing store sales. Department store sales bounced back up to the level established in the first quarter.

HOUSING STARTS AND COMPLETIONS

In June, housing starts in municipalities of 5,000 and over have exhibited little change from the May level. Completions remained high reflecting the large number of starts in late 1958 and early 1959.

⁽¹⁾Averages or totals of unadjusted data.

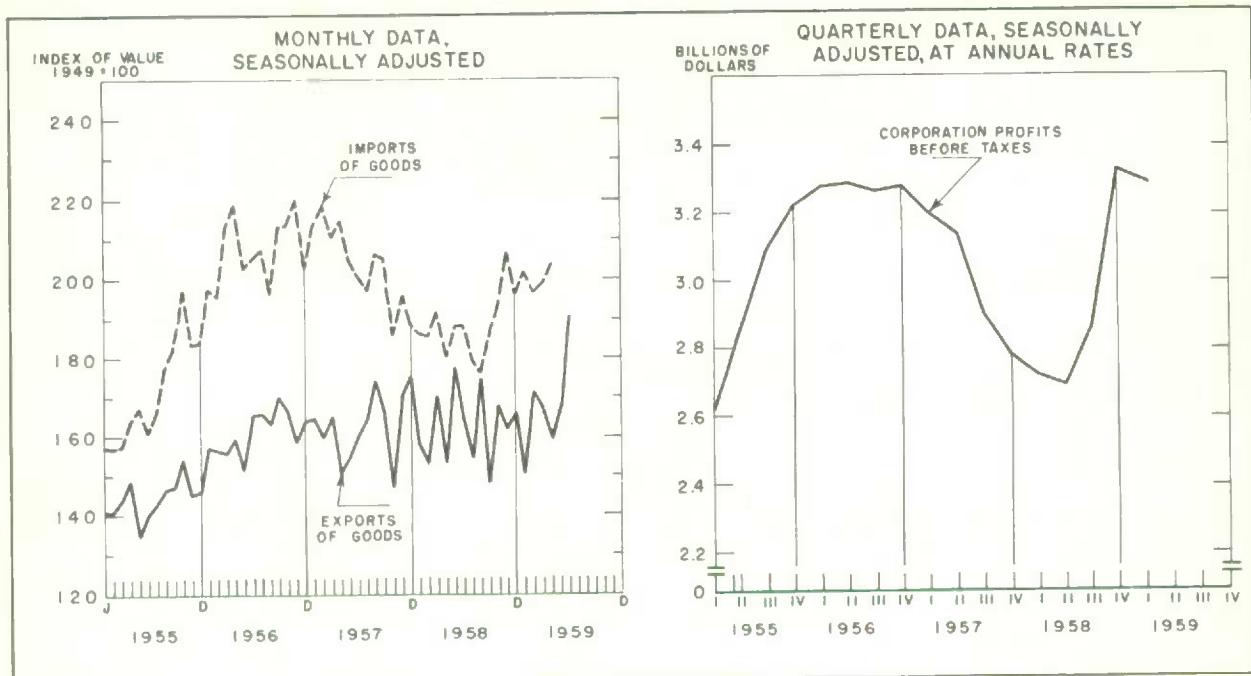

^(*)Seasonally adjusted at annual rates.

⁽²⁾Three-term moving average of seasonally adjusted data.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS AND IMPORTS AND CORPORATION PROFITS

Seasonally adjusted exports climbed rapidly in June with most of the strength coming from agricultural and metal products. March and April seasonally adjusted imports exceeded their previous months level. First quarter seasonally adjusted corporation profits fell marginally from their high fourth quarter level.

(1) Annual estimates are as of June 1. (2) Seasonally adjusted at annual rates. (3) Manufacturing inventory owned by manufacturers, held at plant or warehouse at end of period. (4) Rough cords of 128 cu. ft. (5) In urban areas of 5,000 population and over. (6) Average of weekly rates. (7) Middle of month. (8) Revised according to new bench marks. (9) This total includes all generating agencies producing over ten million kilowatt hours per year. (10) End of period. Including personal savings deposits.

Note.—Until the end of 1957, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1958 and 1959 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration.

⁽²⁾Estimates are given by years as of June 1 and by quarters for Canada.

⁽³⁾Figures for 1958 and 1959 are based on monthly averages.

⁽⁴⁾Yukon and North-West Territories not included in figures for births, marriages and deaths.

⁽⁵⁾Excludes stillbirths.

⁽⁶⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

Revised quarterly data for the historical period 1947-1955 are still in course of being re-worked. This material will be released as soon as possible.

^aThe seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. ^bIncludes adjusting entry. ^cIncludes residual error of estimate. ^dThis item differs from column 6, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note: For a detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

⁽¹⁾The M.C.D. measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. For a fuller description see D.B.S. Reference Paper (61-502).

Data refer to hourly rated wage earners of firms customarily employing 15 persons or more as reported at the first of the month.

* Formerly these average hours were ascribed to the first of the following month.

⁽¹⁾Seasonal (formerly supplementary) benefit data included.⁽²⁾On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.⁽³⁾The number of new cases of recorded unemployment among insured persons.⁽⁴⁾Estimates are based on average weekly number of payments.⁽⁵⁾The number of calendar weeks during which a benefit payment was made.⁽⁶⁾Revised to relate to the Thursday nearest to the last day of the month.⁽⁷⁾Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾As of July, 1957, the statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.⁽²⁾The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾Excludes gold.⁽²⁾Arithmetically converted from 1935-39=100.⁽³⁾Indexes final only to July 1958. For crop year August, 1957-July, 1958 indexes revised to include final payments for western wheat.⁽⁴⁾Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices. Since August 1, 1958, only initial prices are available for wheat, oats and barley.

⁽¹⁾These totals include all generating agencies producing over ten million kilowatt hours per year.
⁽²⁾Generating industries respectively, producing over ten million kilowatt hours per year.

⁽³⁾Less imports.
⁽⁴⁾Total net generation less net exports.
⁽⁵⁾Mainly the amount used in electric boilers.

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. (2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also reported as shipments in the month received) or whether they will be added to existing backlog. (3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. (4)Manufacturing inventory owned by manufacturers, held at

⁽¹⁾Releases of domestically manufactured tobacco for consumption in Canada.

⁽²⁾End of period.

⁽³⁾The production of beer is shown in thousand barrels of 25 gallons each.

⁽⁴⁾Includes bottling of imported liquors.

Source: Department of National Revenue; and Quarterly Report, Stocks and Consumption of Unmanufactured Tobacco, D.B.S.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

⁽³⁾Customs exports.

⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel, D.B.S.

Note.—Effective January, 1957, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada.⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

⁽¹⁾Includes some silvery pig iron formerly included with ferro-alloys.

⁽²⁾Excluding shipments for processing.

⁽³⁾Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings.

⁽⁴⁾Monthly average.

⁽⁵⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.
Note.—These data are the results of a nation-wide survey carried out by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 800 sample areas lying outside these municipalities were also chosen for complete enumeration.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data.

⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

(1)Include subsidy on hogs.									
(2)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.									
January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ⁽¹⁾ Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾ Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁽³⁾ Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁽⁴⁾ In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

June 1957-28 Sept. 1957-34 Dec. 1957-32 Mar. 1958-29 June 1958-31 Sept. 1958-39 Dec. 1958-35

⁽⁵⁾ Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁶⁾ Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

(1)Cargo loaded and unloaded by tugs, is included in the total.

(2)Cargo handled at Montreal excludes cargo handled at the port of Contrecoeur.

(3)Total

65

cargo unloaded includes cargo unloaded by tugs and cargo unloaded at non-customs ports.

(4)Annual data are average of nine months.

(5)Does not include bulk transportation.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. Beginning in January, 1957, all railways follow the uniform classification of accounts, and the statistics previously shown in the "Other Railways" section in the upper half of the table are combined with those railways already following the new system. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

(1) Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2) The September 30, 1957 and subsequent figures for 'personal savings deposits' exclude, and the figures for 'other notice deposits' include, the amount of \$140 million, being the deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes, which were reclassified at that time in the returns of the banks to the Department of Finance. The figures prior to September 30, 1957 are thus not comparable with those since that date. (3) Mainly deposits of foreign banks. (4) Capital, rent fund and undivided profits as at the latest fiscal year-end. (5) Including issues payable in foreign currency. (6) Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (7) Excluding Canadian day to day loans. (8) Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (9) Including loans to instalment finance companies. (10) Source: Statistical Summary of Bank of Canada.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

⁽²⁾Subsidiary coin issued by the Mint less coin held

by Bank of Canada and chartered banks in Canada. ⁽³⁾Less total float, i.e. cheques and other items in transit (net). ⁽⁴⁾At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

(1) The Canada totals by months for 1957 and 1958 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The provincial monthly averages for 1957 have been revised to agree with the Canada total, but the provincial monthly figures have not. Neither the monthly averages nor the monthly figures for 1958 have been revised to agree with the Canada total. Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

⁽¹⁾Ordinary, Industrial and Group.⁽²⁾Part of the apparent increase between 1957 and 1958 is due to a change in the "inflation" factors used to bring figures of reporting firms up to the estimated total level for all insurance companies. Source: The Canadian Life Insurance Officers Association.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction; Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Printing and Publishing and Allied Industries.

NOTE.—*Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such.

(1) In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

\$1 A COPY

The 1959 edition of this popular official Handbook contains a vivid picture of Canada today. In it the reader will find . . .

- . . . a historical sketch of the settlement and growth of Canada during the 200 years since the Battle of the Plains of Abraham, and a brief description of the forces which shaped Canadian Confederation . . .
- . . . an up-to-date portrayal of the Canadian economy and of the political, social and cultural development of the Canadian people . . .
- . . . illustrated articles on the nation's abundant natural heritage — its forest, agriculture, fishery and mining industries — its broadly-based industrial development, keyed to rich energy resources — the significance, magnitude and composition of Canada's international trade — its diverse facilities of transportation and commerce — and its social, educational and cultural life.

CANADA 1959 was prepared by the Information Services Division of the Dominion Bureau of Statistics. Orders must be paid in advance by postal money order or certified cheque made to the order of the Receiver General of Canada and addressed to the Queen's Printer, Ottawa.
