NATIONAL ACCOUNTS INCOME AND EXPENDITURE

FOURTH QUARTER AND PRELIMINARY ANNUAL 1959

Introductory Review

The recovery in Gross National Product, which began in 1958 as the economy emerged from a mild recession, continued during 1959. The upswing carried the Gross National Product to new levels in the first half of the year, but moderated in the third quarter when the expansion was checked by a combination of factors associated in large part with industrial disputes in Canada and the United States. In the fourth quarter the advance was resumed, with a further gain in the value of the nation's total output of goods and services of about 2 per cent from the preceding quarter, seasonally adjusted. For the year as a whole, the Gross National Product averaged about 6 per cent above the year 1958, and with final product prices higher by about 2 per cent, it is estimated that the physical volume of output in 1959 was about 4 per cent above that of the preceding

year.¹ This compares with virtually no change in the physical volume of output in 1957 and 1958, and with a post-war average increase of 4 per cent per year.

The increase in output in 1959 was accompanied by broad changes in the composition of the nation's income and outlay. Over the course of the year, reversals in trend occurred in a number of major categories of demand, and the pattern of the nation's total expenditure showed a marked change. The following table provides some perspective on the nature and magnitude of these shifts in terms of year-to-year percentage changes.

¹ The figures include the value of the 1959 grain crop, which is estimated to be about 7 per cent above the year 1958. However, the full effect of adverse weather conditions which delayed grain harvesting in the Prairie Provinces cannot yet be evaluated. It is assumed that the part of the crop now under snow will be harvested in the spring and will be of average quality.

Changes in Components of Gross National Expenditure

	Percentage changes		Change in billions of dollars
	1957 to 1958	1958 to 1959	
Personal expenditure	5.4	5.8	1.2
Government expenditure	7.4	4.5	0.3
Residential construction	25.1	-1.1	-
Non-residential construction	-9.4	-7.8	-0.2
Machinery and equipment	-14.9	9.4	0.2
Exports	-1.0	5.1	0.3
Total final demand	2.7	4.5	1.8
Inventories	(-\$0.6 b.)	(+\$0.7 b.)	0.7
(Business only)	(-\$0.6 b.)	(+\$0.7 b.)	0.7
Imports	-5.6	9.5	-(+0.7)
Gross National Product	2.6	6.1	2.0

Much of the support to the rising level of production in 1959 came from the renewed build-up of inventories and the reversal of the down-trend in plant and equipment outlays during the year. Business inventories shifted from a position of heavy liquidation in 1958 to one of moderate accumulation in 1959; the turn-around here was the equivalent of about \$0.7 billion in terms of new demands on production. The decline in business capital expenditures for new plant and equipment, which was moderating in the latter part of 1958, was reversed in 1959, and outlays by the business sector were providing a stimulus to the advance in final demand in

the second and third quarters of the year; the slight decline in the fourth quarter appears to have been associated with the effects of the United States' steel strike on machinery and equipment investment in Canada. For the year as a whole, however, plant and equipment outlays were unchanged. On the other hand, outlays for new housing, which rose very sharply in 1958 (by 25 per cent) were moving downward through the first three quarters of 1959, recovering slightly in the fourth quarter as new mortgage money made available by the government was taken up. For the year as a whole, housing outlays were down very slightly from 1958.

GROSS NATIONAL PRODUCT SHOWED A
MARKED RISE IN 1959
FOLLOWING THE UPSWING
WHICH BEGAN IN 1958
(DATA SEASONALLY ADJUSTED AT ANNUAL RATES)

THE VALUE INCREASE FOR THE YEAR AS A WHOLE WAS ABOUT 6 PER CENT OVER 1958, WITH THE VOLUME OF PRODUCTION UP BY ABOUT 4 PER CENT

THE SWING IN BUSINESS INVENTORIES FROM LIQUIDATION IN 1958 TO ACCUMULATION IN 1959 CONTRIBUTED SUBSTANTIALLY TO THE INCREASE IN GROSS NATIONAL PRODUCT
(DATA SEASONALLY ADJUSTED AT ANNUAL RATES)

THE TWO-YEAR DOWNTREND OF BUSINESS OUTLAYS FOR PLANT AND EQUIPMENT WAS REVERSED IN THE EARLY PART OF 1959

CONSUMER EXPENDITURE CONTINUED TO PROVIDE STRENGTH ON THE DEMAND SIDE. HOWEVER, THE UPWARD TRENDS IN HOUSING AND GOVERNMENT EXPENDITURE WERE INTERRUPTED DURING THE PERIOD

EXPORTS ROSE SUBSTANTIALLY, BUT THE RISE WAS ACCOMPANIED BY A MUCH SHARPER INCREASE IN IMPORTS, WITH A CONSEQUENT WIDENING OF THE DEFICIT

CORPORATION PROFITS LEVELLED OFF IN 1959, FOLLOWING THE SHARP UPSWING IN THE LAST HALF OF 1958

PERSONAL INCOME SHOWED A YEAR-TO-YEAR GAIN OF 6 PER CENT, WHICH WAS LARGELY ABSORBED BY THE RISE IN CONSUMER EXPENDITURES AND DIRECT TAXES

(ALL DATA AT SEASONALLY ADJUSTED ANNUAL RATES)

The personal and government sectors contributed significantly to the advance in output in 1959. Personal expenditure on consumer goods and services registered a slightly greater increase than in the previous year, and with prices up more moderately, the volume of consumption showed a more pronounced gain than in 1958. However, government expenditures on goods and services rose less sharply in 1959, by only 5 per cent, compared with 7 per cent in 1958. In the last half of the year, government outlays for goods and services declined.

Turning to transactions on international account, exports of goods and services, after having remained stable at a high level for two years despite the recession, rose by 5 per cent in 1959. Most of the gain was concentrated in the last half of the year. At the same time, imports of goods and services, which fell sharply in the recession period but were rising in the latter part of 1958, continued upward in 1959, and for the year as a whole showed a gain of 9 per cent. The deficit on current account widened substantially, but there was some narrowing of the merchandise deficit at year-end, on a seasonally adjusted basis.

Taken together, these shifts in the pattern of the nation's total expenditure produced a Gross National Product in 1959 which was about 6 per cent above the level of the year 1958, compared with a gain of about 2½ per cent in the 1957-1958 period.

The flow of income to the personal, business, and government sectors was also marked by changes in the trend of important income components and by shifts in the compositional pattern of the income aggregates in 1959. Transfer payments, which rose by 27 per cent between 1957 and 1958, made a much smaller contribution to the gain in personal income in 1959. The reverse is true of labour income, which showed only a small change between 1957 and 1958 but rose sharply in 1959, accounting for a much greater proportion of the increase in total personal income than in the previous year. While corporation profits showed little change over the four quarters of 1959, they were at an average rate about 14 per cent above the year 1958; this compares with a decline of less than 3 per cent between 1957 and 1958.

The shift in the pattern of profits, labour income, and transfer payments was largely responsible for the differing rates of change between national income and personal income in the two periods. In 1958, national income was affected by the small rise in labour income and the drop in profits, and showed only a 3 per cent gain; personal income advanced by 6 per cent, reflecting the sharp rise in transfer payments. In 1959, however, with profits and labour income showing substantial gains and transfer payments moderating, the advance in national income and in personal income were closely in line.

Changes in Major Income Components

	Percentage changes	
	1957 to 1958	1958 to 1959
Selected personal and business income components		
Wages, salaries, and supplementary labour income	2.7	7.8
Transfer payments	27.8	4.8
Personal income	6.2	6.4
Corporation profits after dividends paid abroad	-2.5	14.2
Capital consumption allowances	-1.8	5.3
Rents, interest, and miscellaneous investment income	5.8	3.9
Net income of non-farm unincorporated business	5.4	1.5
Accrued net income of farm operators from farm production	19.8	-7.1
National income	3.5	6.4
Selected government revenues (All levels of government)		
Direct personal taxes	-6.4	16.4
Corporation tax liabilities	-3.5	17.7
Indirect taxes	1.5	9.6

The expansion of activity in 1959 was characterized by a marked recovery in the tax revenues collected by or accruing to the government sector, reflecting the recovery in profits, higher employment and earnings, a higher level of imports, sales and shipments, and increases in tax rates. The changes in government revenues from the three major tax sources for all levels of government combined are shown in the table above.

Value, Volume, Price Comparisons

Taking the change in the price of all components together, it is estimated that the price element of total Gross National Expenditure was higher in 1959 by about 2 per cent. The value, volume and price components of each of the main expenditure categories are shown in the accompanying table:

Percent Changes, Value, Volume and Price

	1959 1958			Price Change ¹
	Value	Volume	Price ¹	Year 1958 Year 1957
Personal expenditure	5.8	4.5	1.2	2.5
Goods	5.3	4.9	0.5	1.8
Non-durable	5.0	4.9	0.3	1.9
Durable	6.3	4.7	1.8	1.4
Services	6.8	3.7	2.7	3.6
Government expenditure	4.5	1.2	2.9	3.2
Business gross fixed capital formation	-0.2	-2.9	3.0	2.1
New residential construction	-1.1	-5.0	4.0	2.5
New non-residential construction	-7.8	-10.1	2.6	1.2
New machinery and equipment	9.4	6.9	2.5	2.7
Exports of goods and services	5.1	2.2	1.5	-0.2
Imports of goods and services	9.5	10.1	-0.4	1.3
Gross national expenditure	6.1	3.5	2.3	2.2

¹ The price comparisons shown above are based on a set of fixed weight price indexes (1955 = 100), and not upon the implicit price deflators which can be derived by dividing the value series by the volume series. The implicit deflators are weighted by changes in the expenditure pattern over time, and do not permit accurate measurements of price change. A specially constructed set of fixed weight price indexes has therefore been used for purposes of depicting price changes in the above table.

Final product prices continued to drift upward slightly between 1958 and 1959. In the over-the-year comparisons, the advance was about the same as that which occurred between 1957 and 1958. The rise in the price of consumer goods and services in 1959 was small, and amounted to less than half the price rise of the 1957-1958 period, but this development was accompanied by a somewhat larger increase in the price of capital goods and in exports. Prices of imported goods declined, reflecting for the most part a higher rate of exchange on the Canadian dollar.

Production and Employment

Most major industry divisions contributed to the rise in the physical volume of output in 1959. The sharpest increases were in forestry, mining, and public utilities. The almost uniformly upward trend of production in 1959 is in strong contrast to the mixed and largely offsetting movements that characterized output in the previous year. A large part of the increase from 1958 levels came in the first half of 1959; the rate of increase dropped in the second half, partly as a result of industrial disputes in Canada and the delayed effects of the steel strike in the United States.

Among the primary industries, an increase of about 9 per cent in forestry production was entirely attributable to pulpwood; output of other forest products was fractionally lower. The improvement in markets for some traditional metals and fuels and the continued expansion of output of new resource industries brought about a more than 10 per cent increase in mining production as a whole and relatively large gains in the output of several important products. Among these are nickel (31 per cent), copper (15 per cent), crude petroleum (12 per cent), uranium (18 per cent), and natural gas (24 per cent). Output of coal continued to decline as did that of lead and zinc. The underlying trend of mining pro-

duction as a whole was strongly upward throughout the year and by December the index was nearly 15 cent higher than a year earlier.

The output of manufacturing industries was about 7 per cent higher in 1959 than in 1958; the gain in durables was about 8 per cent and in nondurables about 6 per cent. All the major divisions of manufacturing increased their production with the single exception of transportation equipment. Production in this industry was off slightly, partly as a result of the steep drop in activity in aircraft and parts. The largest increases in output were in iron and steel products (18 per cent), rubber products (17 per cent), textiles (12 per cent), products of petroleum and coal (11 per cent) and non-metallic mineral products (9 per cent); in paper products, printing and publishing, and electrical apparatus and supplies, the rise in production was close to the average for manufacturing industries as a whole; the remaining divisions recorded smaller gains. The expansion of output was particularly marked in some individual industries, notably agricultural implements (34 per cent), and primary iron and steel (38 per cent).

The rising trend of manufacturing production in 1959 was interrupted in the third quarter, when the prolonged industrial dispute in the woods industry in British Columbia affected production of durable goods. In the closing quarter the rise in manufacturing production was restrained by November lay-offs in the automotive industry due to shortages of steel among United States' suppliers. Nevertheless, production advanced 2 per cent in the final quarter of the year, after allowing for seasonal factors. By the end of the year the index of manufacturing output was 6 per cent above its level one year earlier. Non-durable manufacturing production was running 4 per cent above its previous 1957 peak, but durable manufacturing production was still 3 per cent below the peak reached in July, 1956.

The relatively large year-to-year advance in the output of public utilities — 14 per cent — was mainly the result of a huge increase in the distribution of natural gas to final users; distribution by electric power utilities was up less than 10 per cent.

The volume of construction is estimated to have been 3 per cent lower in 1959 than in 1958. The increase in the volume of public construction did not fully offset the decline in private construction.

All the service-producing industries shared in the 4½ per cent advance in output for the group as a whole. A 6 per cent gain in volume in transportation, communication and storage contrasts with the 4 per cent decline in 1958. Railway car loadings were only slightly higher but most other forms of transport handled a decidedly larger volume of business, notably shipping, air transport, and oil pipelines.

The gains in production outlined above were accompanied by an increase in total employment in 1959. The number of persons with jobs was close to 3 per cent higher than in 1958; the number with jobs in the non-farm sector was 3½ per cent higher. This growth in employment opportunities in 1959 reduced the number of persons without jobs and seeking work from 6.6 to 5.6 per cent of the labour force.

The Fourth Quarter

The advance in Gross National Product which had been temporarily checked in the third quarter of 1959 was resumed in the final quarter of the year. Total production of goods and services is estimated to have risen by about 2 per cent over the third quarter on a seasonally adjusted basis. Price factors were somewhat more prominent in the fourth quarter than had been the case throughout the earlier part of the year, reflecting largely irregular movements in food prices. The increase in the physical volume of production during the quarter was therefore somewhat less than that indicated by the value figures.

The fourth quarter rise in output was widely diffused through the economy, with all industry groups showing an advance over the third quarter. The increase in forestry was particularly sharp, following settlement in mid-September of the work stoppage in the primary wood and wood fabricating industries in British Columbia. Manufacturing production, which had declined in the third quarter, was higher by 2 per cent in the fourth. Durable goods manufacturing rose by 3 per cent, despite the fact that output was off sharply in November as shortages of steel from the United States severely affected motor vehicle production. In part, the fourth quarter rise in the durable index reflected higher output in the wood and wood products industries, and in part a sharp increase in the operating levels of the Canadian primary iron and steel industry. Non-durable manufacturing production, which had also declined in the third quarter, was higher in the fourth by 1 per cent. Mining, quarrying, and oil wells

advanced by 2 per cent in the quarter, while construction and the service industries all showed gains ranging from 1 to 3 per cent.

The major expansionary factors on the demand side during the quarter were a further rise of 2 per cent in personal expenditure on consumer goods and services, and a sharp increase in exports of goods and services. The gain in consumer outlays amounted to 2 per cent, and was somewhat more pronounced in the durable group than in non-durables and services. The chief contributing factor to the rise in durable goods was an increase of more than 8 per cent in purchases of new and used automobiles. In the non-durables group, a very sharp increase occurred in purchases of natural and manufactured gas, reflecting the installation of new transmission facilities which came into operation during the summer and fall of 1959. Gains in most other non-durable items ranged from 1 to 3 per cent. Services (including net expenditure abroad) were higher in the quarter by about 2 per cent.

The pronounced rise in exports of goods and services in the fourth quarter, amounting to 5 per cent, was entirely attributable to the merchandise items, with transactions on invisible account showing a small decline. Three main commodity groups accounted for the major part of the increase in merchandise items; exports of wood and wood products were higher by 7 per cent, as supplies became more plentiful following the end of the work stoppage in British Columbia; exports of iron and its products rose by 34 per cent, reflecting higher purchases of steel and iron ore from Canadian producers; and exports of non-ferrous metals rose by 9 per cent, associated largely with higher sales of aluminum, copper and nickel. The sharp increase in exports of goods and services in the fourth quarter was accompanied by a fractional decline in imports of goods and services, so that the deficit on current account narrowed considerably.

After moving upward for two successive quarters, business outlays for plant and equipment declined slightly in the fourth quarter of 1959. The decline was entirely attributable to a drop in outlays for new machinery and equipment and appears to have been related to supply difficulties associated with the steel strike in the United States; both domestic shipments and imports of machinery and equipment were down in the fourth quarter on a seasonally adjusted basis. Outlays for new non-residential construction were somewhat higher in the fourth quarter than in the third.

Outlays for new housing, which had been declining since early 1959, showed a small increase in the fourth quarter of the year. The gain was associated with a 12 per cent rise in housing "starts" following the taking up of additional mortgage funds made available from government sources; "completions" continued to decline in the quarter.

The rate of business inventory accumulation in the fourth quarter was somewhat lower than in the third. However, the build-up in manufacturing continued at an accelerated rate mainly due to a sharp increase in the rate at which iron and steel products were being accumulated. The rate of accumulation of wholesale inventories was only slightly below that of the third quarter, reflecting developments in the iron and steel and food groups. At retail, however, the rate of accumulation fell

sharply, from \$160 million in the third quarter to \$40 million in the fourth quarter. The decline in the build-up in this group was more than accounted for by the sharp swing in retail holdings of automobiles from a position of accumulation in the third quarter to sizable liquidation in the fourth quarter, on a seasonally adjusted basis. Partially offsetting this swing in retail holdings of automobiles was a fairly substantial rise in holdings of lumber, building materials and farm implements.

COMPONENTS OF GROSS NATIONAL EXPENDITURE

Personal Expenditure on Consumer Goods and Services

Moderate increases in most categories accompanied a 6 per cent rise in personal expenditure on consumer goods and services in 1959. While consumer prices continued to advance, the upward trend moderated. The greater part of the increase in spending in 1959 thus represented a gain in real consumption. On a per capita basis, consumer expenditure showed the first volume increase since 1956.

Consumer expenditure on non-durable goods rose by 5 per cent in 1959. All categories showed increases of varying magnitude, the most significant occurring in gas (34 per cent), electricity and tobacco products (each up 10 per cent), and auto parts and accessories (9 per cent); other important changes occurred in expenditures on alcoholic beverages, clothing, fuel, and soaps and cleaning supplies, all of which increased by amounts varying between 4 per cent and 6 per cent. Expenditures on food increased by about 3½ per cent, one of the more moderate increases in recent years. However, with food prices somewhat lower, the gain in real food consumption was considerably larger.

Expenditure on durables rose more than 6 per cent, the major part of which is accounted for by a 9 per cent gain in purchases of new and used automobiles. However, there was a significant advance in outlays for other durables, notably home furnishings (6 per cent) and appliances and radios (6 per cent); purchases of furniture showed little change.

The 11 per cent gain in sales of new passenger cars in 1959 was the largest since 1955 when they rose by 28 per cent. In contrast to 1955, however, sales of imported European and British models in 1959 accounted for 18 per cent by value of all new car sales, rising by 45 per cent over the year 1958. Sales of domestic and United States manufactured vehicles rose by 6 per cent.

The rise in durable goods purchased in 1959 was accompanied by an increase in consumer credit outstanding. Between December 1958 and December 1959, total consumer credit outstanding on the books of finance companies and retail dealers rose by 6 per cent. Unsecured personal loans by chartered banks (excluding home improvement loans) rose by 30 per cent in the same period.

Continuing to make relatively large gains, expenditure on services rose almost 7 per cent. The most significant increases were in outlays for shelter (8 per cent), medical care (9 per cent) and household operation (8 per cent).

The advance in personal expenditure in 1959 was closely in line with the increase in disposable income so that the level of personal saving showed little change. As a percentage of disposable income, personal saving was 6.7 per cent in 1959 compared with 7.1 per cent in 1958, rates of saving which in both cases are relatively high by the standards of post-war years.

Investment in Business Inventories

The accumulation of business inventories in 1959 amounted to \$355 million, in contrast to a liquidation of \$323 million in 1958. This shift of nearly \$700 million between the two years was an important factor in economic recovery and accounted for almost one-third of the \$2.0 billion rise in Gross National Product in 1959.

Change in Business Inventories

	1957	1958	1959
Manufacturing	128	-257	134
Wholesale	75	- 53	72
Retail	32	- 9	134
Other	76	- 4	15
Total	311	-323	355

Nearly 60 per cent of the turn-around in business inventories took place in manufacturing. The building up of stocks did not keep pace with the growth in sales, and ratios of stocks to shipments fell significantly between 1958 and 1959 in both the durable and non-durable segments of manufacturing. The turn-around in manufacturing was almost totally due to the durable goods industries build-up. All durable groups showed a positive year-to-year shift, the most pronounced of all being in the iron and steel, and transportation equipment industries. In the non-durables group, while stocks

of food and chemicals were depleted heavily, this liquidation was counter-balanced by a build-up in the petroleum, rubber and clothing industries.

Wholesalers built up stocks in 1959, after having drawn them down in 1958. As in manufacturing, stock-sales ratios were lower in 1959 than in 1958. Accumulation of inventories was fairly widespread among durable and non-durable goods' wholesalers, and included substantial build-ups in industrial machinery and equipment and in petroleum products.

Retail traders also built up stocks in 1959 after having depleted them in 1958. Stock-sales ratios however appeared slightly higher than those in 1958. Both durable and non-durable goods' retailers increased their holdings of inventories in 1959.

Business Gross Fixed Capital Formation

At a level of \$7.0 billion, expenditures on construction and machinery and equipment remained almost unchanged in 1959. However, this stable aggregate conceals important changes among components.

Non-residential construction fell to \$2.6 billion, nearly 8 per cent lower than in 1958. The decline in construction, mainly concentrated in engineering works, reflected the completion of certain large projects, such as pipelines, electric power installations and the St. Lawrence Seaway, reinforced by a decided drop in expenditures for construction by manufacturing industries.

At the same time, there was an upsurge in outlays for machinery and equipment which rose to \$2.6 billion, more than 9 per cent above the level of the preceding year.² This increase was supported by higher imports and domestic shipments of machinery and equipment, which were both up more than 10 per cent. New orders in the industries producing capital goods (excluding transportation equipment) averaged higher by 20 per cent. Notable gains were recorded in purchases of farm machinery (22 per cent), and commercial vehicles (17 per cent).

The value of residential construction, at \$1.7 billion, was slightly lower than in 1958. The decline reflects a 14 per cent drop in housing units started and virtually no change in completions. Approvals of N.H.A. loans of all kinds fell by nearly one-third. Approved lenders, in the face of strong competing demands for funds and rising interest rates, curtailed their mortgage lending sharply. From September 1st, Central Mortgage and Housing Corporation made direct loans available to builders. In these circumstances, outlays for housing rose a little in the closing quarter of the year.

² The 1959 annual figure is \$150 million higher than that shown in "Private and Public Investment in Canada, Outlook 1960", to take account of later available information. This adjustment is included in the quarterly distribution of expenditures on new machinery and equipment.

Exports and Imports of Goods and Services

In a situation of vigorous recovery in the United States and expanding economic activity in other industrialized countries, exports of goods and services rose to \$6.7 billion in 1959, 5 per cent higher than the levels attained in 1957 and 1958. The rate of increase was about the same for merchandise exports as for invisible items.

Among merchandise exports, the products of the leading primary industries were prominent in raising the total. Thus exports of forest products, metals and minerals were up over 10 per cent. Exports of iron and its products showed the largest relative gain of all the main commodity groups, rising by almost one-third, in contrast to a decline of about one-sixth in 1958. This unusually large increase was related to the strike-induced shortage of steel in the United States. Among other products showing relatively large gains were lumber, pulp and paper, uranium and some other non-ferrous metals. These gains were partially offset by lower sales of some agricultural products, including grains and cattle; and of some manufactured products, namely, aircraft and ships, sales having been extraordinarily high in the previous year.

So far as invisible items are concerned, receipts from the tourist trade, from freight and shipping, from miscellaneous services and in the form of interest and dividends were all higher in 1959 than in 1958. On the other hand, gold production available for export was lower. Receipts from services totalled \$1.5 billion, compared with \$1.4 billion the previous year.

As has been characteristic of periods of rising economic activity, imports of goods and services advanced sharply in 1959, reaching an annual total of \$8.1 billion, 9½ per cent higher than in 1958. Payments for merchandise imports and for services rose in about the same proportion.

In spite of the substantial increase in merchandise imports in 1959, the level was somewhat below the peak in 1956. The gains were well distributed and included industrial machinery, farm machinery, consumer goods, both durable and non-durable, and industrial materials to support the higher level of production and to replenish stocks. Imports of certain items, such as primary steel and steel pipe, were significantly lower. The largest increase in imports came in the second quarter of the year; thereafter there was little change, seasonal factors apart.

Payments for all items in the service account were substantially higher in 1959 than in 1958. The 12 per cent increase in remittances of interest and dividends reflected growing indebtedness, higher interest rates, and larger dividend payments to non-residents. The rise in merchandise imports, particularly from overseas countries, swelled payments for freight and shipping. Higher economic activity

brought larger payments for business services. Payments on tourist account were also up considerably.

The consequence of the changes in exports and imports of goods and services described above was a deficit on current international account (on the National Accounts basis) of \$1.4 billion, compared with one of \$1.0 billion in 1958, and slightly above the previous peak in 1957. Of this deficit about \$400 million was on merchandise account. The \$1.0 billion deficit on service account, continuing the steady growth characteristic of recent years, was more than double the deficit from this source in 1955. Prices of imports were slightly lower, while

prices of exports were moderately higher. Thus there was some improvement in the terms of trade.

Government Expenditure on Goods and Services

Government expenditure on goods and services rose to \$6.4 billion, about 5 per cent higher than in 1958. All this advance is attributable to provincial and municipal governments; it reflects increased wages and salaries and larger expenditures of a capital nature. Federal government expenditures were down slightly, reflecting a decline in outlays for defence of about 6 per cent, which was largely offset by increased spending for other purposes.

COMPONENTS OF GROSS NATIONAL PRODUCT

Wages, Salaries, and Supplementary Labour Income

Labour income rose to \$17.7 billion in 1959, nearly 8 per cent higher than in the previous year. Unlike 1958, a significant part of the advance reflected gains in employment; a small part came from somewhat longer hours of work. The upward trend in average earnings continued to contribute substantially to the advance in labour income.

All major industries shared in the increase in labour income in 1959, in contrast to the situation in 1958 when income failed to rise in several important industries. The largest gain occurred in the service group,³ where income was higher by more than 13 per cent. Income in government service and in the construction industry, up more than 9 per cent, also registered better than average gains. A small

³ Includes community, business, personal and recreational services.

increase in employment (1 per cent) and in hours of work (1 per cent), together with substantially higher hourly wages (4 per cent), raised income in manufacturing by 6 per cent, in contrast to a slight decline in the preceding year. Income in mining rose 5 per cent, in spite of an unchanged volume of employment, reflecting some increase in hours worked but mainly higher average hourly earnings. The increases in income in the transportation, communications and storage group, in finance, insurance and real estate, in public utilities and in trade were all within a narrow range and somewhat below the all industry average. With a significant improvement in employment in forestry, income rose more than 6 per cent, as opposed to a sharp decline in the previous year.

The factors contributing to the advance in labour income in 1959 for two major industries for which data are available are shown in the following table:

	Employment	Hours worked per week	Average hourly earnings	Labour income
				per cent
Manufacturing	1.2	1.2	3.6	5.8
Mining	—	—	4.1	4.9

Corporate Profits and Other Investment Income

Characteristically sensitive to changes in the tempo of economic activity, corporate profits reversed their downward trend in the middle of 1958 and rose sharply in the closing quarter; they remained high in 1959, reaching an annual total as measured in the National Accounts of \$2.8 billion, a rise of 14 per cent in contrast to a decline of 3 per cent in the previous year. Dividends paid abroad, which are not included in the figure set out above, rose by 10 per cent.

Increases in profits were widespread by industry and in many cases extremely large, particularly in those industries whose earnings had deteriorated during the recession. Thus profits in mining were up 18 per cent, following an even sharper decline in 1958. The same rate of increase occurred in manufacturing industries, with especially large gains in iron and steel (35 per cent) and in chemical products (24 per cent). Among the manufacturing industries, only non-metallic mineral products and products of petroleum and coal failed to record any rise in profits.

Earnings in the goods-handling industries, like the goods-producing industries, had felt the impact of the recession and responded to the upswing in

economic activity in 1959. Thus profits in transportation, communication and storage rose sharply, after having fallen a little in 1958. Profits in wholesale trade also recovered from their recessionary decline. In retail trade, in the financial group and in services, profits were either unchanged or slightly lower, in contrast to the situation in 1958 when profits in the service-connected industries continued to rise.

Rents, interest, and miscellaneous investment income, estimated at \$2.1 billion, rose by 4 per cent in 1959. The advance in rental income continued to reflect the growth of the housing stock and a further slight increase in rents. With the rise in interest rates, interest receipts of persons and governments were sharply higher in 1959. However, a large part of these interest receipts take the form of interest paid on the government debt which is not included as a part of National Income. Trading profits of government enterprises were slightly higher in 1959, and investment income of life insurance companies and industrial pension funds rose sharply.

Net Income of Unincorporated Business

Estimated at \$1.1 billion in 1959, accrued net income of farm operators was about 7 per cent below the preceding year. This estimate involves little

change in farm gross income, accompanied by a rise in farm operating expenses. The value of the new crop is estimated to have been higher by 7 per cent. This estimate, based on the November forecast, assumes that the part of the crop now under snow in

the Prairies will be harvested in the spring and will be of average quality. The full effects of the adverse harvesting conditions in the Prairie Provinces cannot be evaluated at the present time.

	1958	1959	Change 1959 1958	Percent change 1959 1958

Accrued net income of farm operators from farm production	1,193	1,108	- 85	- 7.1

¹ Includes items in investment income and an estimated amount for Newfoundland.

Income of unincorporated business, non-farm, was \$2.2 billion, somewhat higher than in 1958. The major part of the increase originated in the service industries which account for about one-third of the total estimate. Income originating in retail trade and construction, which come next in order of importance, was off slightly.

which were up by 7 per cent; higher real and personal property taxes largely account for the rise of 9 per cent at the municipal level.

Subsidies rose very sharply in 1959, reflecting mainly higher losses incurred under the Agricultural Commodities Stabilization program.

Indirect Taxes Less Subsidies

Indirect taxes less subsidies reached an estimated level of \$4.2 billion in 1959, 9 per cent higher than in the previous year. The sharpest increase in indirect taxes, 11 per cent, was at the Federal level and the major part of it was in excise taxes which rose by 13 per cent. Customs import duties moved up in line with imports and were nearly 9 per cent above the previous year. The April Budget introduced higher rates of taxes and duties on tobacco products and spirits, in addition to an increase in the sales tax to help finance the old age security scheme. Thus Federal revenues from indirect taxes reflect changes in rates as well as expanding activity.

Gasoline and sales taxes, and miscellaneous taxes on natural resources account for most of the increase in indirect taxes at the Provincial level,

National Saving and Investment

Gross national saving increased by 9 per cent in 1959, from \$5.4 billion in 1958 to \$5.9 billion in 1959. This was the first increase in national saving since 1956. Virtually all the domestic sectors contributed towards this improvement in the national saving picture.

The business sector showed a very significant improvement with an increase of 6½ per cent, saving in the personal sector decreased by 1 per cent, while the decline in the dissaving (deficit) of the government sector amounted to over 40 per cent. With an increase of approximately 6 per cent in Gross National Product from 1958 to 1959, and an increase of 9 per cent in national saving over the same period, the proportion of national saving to Gross National Product changed slightly over the two years, from 16.6 per cent in 1958 to 17.0 per cent in 1959.

	1958	1959	Change 1958 to 1959
billions of dollars			
Personal saving	1.6	1.6	-
Business saving	4.8	5.1	0.3
Government deficit	-1.0	-0.6	0.4

Residual error of estimate	0.1	-	
Gross national saving	5.4	5.9	0.5
Business gross fixed capital formation	7.0	7.0	-
Change in inventories	-0.4	0.3	0.7
Net foreign investment	-1.0	-1.4	-0.4
Residual error of estimate	-0.1	-	
Gross national investment	5.4	5.9	0.5

Note: Figures will not add by + .1 or - .1 due to rounding.

The nation's total fixed capital investment program for housing, non-residential construction, and machinery and equipment remained virtually unchanged between 1958 and 1959. The increase in saving took the form of increased investment in inventories, which showed a very significant change over the period, with the turn-around amounting to \$0.7 billion. As in previous years, the amount of

saving available from domestic sources was insufficient to support the investment program. The short-fall in the nation's saving was met by drawing upon foreign sources and the deficit on current account in 1959 amounted to \$1.4 billion, an increase of about 36 per cent over the deficit in 1958. The deficit in 1959 was slightly above the previous peak year 1957.

TECHNICAL NOTE

Rewvisions to Data

The figures published in the present report will be held firm throughout 1960. Revisions to basic source data for 1958 and 1959 which accumulate during the course of the year will not be incorporated until March, 1961, at the time of the fourth quarter and preliminary annual 1960 report. In the past, it has been the practice to revise the Accounts at the time of the fourth quarter and preliminary annual release (March) to bring the data into line with the

results of the private and public investment survey; and again in the fall, to bring in revisions to other basic source material which becomes available about mid-year. It has become apparent that two sets of revisions per year is a considerable inconvenience to the users of the Accounts, notwithstanding the earlier up-dating of the figures. In future, therefore, all outstanding revisions will be incorporated at one time with the release of the fourth quarter and preliminary annual report.

INDUSTRIAL PRODUCTION

Total industrial production rose by 2 per cent in January, with the gain reflecting widespread increases in non-durable manufacturing output, and a sharp advance in motor vehicle production.

LABOUR FORCE AND LABOUR INCOME

Persons with jobs increased in February for the second consecutive month; however, persons without jobs and seeking work as a percentage of the total labour force were also fractionally higher.

Labour income in December showed little change from the previous month.

⁽¹⁾Averages of unadjusted data.⁽²⁾Source: Sales of New Motor Vehicles and Motor Vehicle Financing.

*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D., or months for cyclical dominance.

RETAIL TRADE (concluded)

With supply improving following settlement of the United States' steel strike, sales of new passenger cars in January recovered from their December low, but failed to reach the levels prevailing earlier in 1959.

⁽¹⁾Averages or totals of unadjusted data.

⁽²⁾Seasonally adjusted at annual rates.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND CORPORATION PROFITS

Exports increased in January, continuing the strong upward trend which developed in 1959.

Imports were showing a tendency to level out toward the end of last year.

(1) Annual estimates are as of June 1.

(2) Seasonally adjusted at annual rates.

(3) Manufacturing inventory owned by manufacturers, held at plant or warehouse at end of period.

1

(4) Rough cords of 128 cu. ft.

(5) In urban areas of 5,000 population and over.

2

(6) Revised according to new bench marks.

(7) This total includes all generating agencies producing over ten million kilowatt hours per year.

3

(8) End of period.

(9) Including personal savings deposits.

4

(10) Including personal savings deposits.

(11) Average of weekly rates.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

4 Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(*) Not applicable to figures on population and immigration.

(**) Yukon and North-West Territories not included in figures for births, marriages and deaths.

(**) Estimates are given by years as of June 1 and by quarters for Canada.

(**) Exclusive of stillbirths.

(**) Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1928-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

^(a)The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item.

^(b)Includes adjusting entry.

^(c)Includes residual error of estimate.

^(d)This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

^(e)Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

[1]The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

⁽¹⁾Seasonal (formerly supplementary) benefit data included.

⁽²⁾On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.

⁽³⁾The number of new cases of recorded unemployment among insured persons.

⁽⁴⁾Estimates are based on average weekly number of payments.

⁽⁵⁾The number of calendar weeks during which a benefit payment was made.

⁽⁶⁾Revised to relate to the Thursday nearest to the last day of the month.

⁽⁷⁾Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

⁽¹⁾ The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. 27

⁽²⁾The annual and monthly "all industries" totals for 1957 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

⁽¹⁾Includes copper fine in ore, ingots, bars, billets, rods, strips, sheets and tubing.
⁽²⁾Includes copper oxide and fine.⁽¹⁾Includes ingots, bars and billets.⁽²⁾Includes nickel in matte.

or speiss, oxide and fine.

⁽¹⁾Includes lead in ore and in pigs.

(1) Releases of domestically manufactured tobacco for consumption in Canada.

(2) End of period.

(3) The production of beer is shown in thousand barrels of 25 gallons each.

(4) Includes bottling of imported liquors.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

("Shipments for further processing within own firm and for sale in Canada.

(2)Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1) Includes some silvery pig iron formerly included with ferro-alloys.

(2) Excluding shipments for processing.

(3) Imports include, in addition to all other

shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings.

(4) Monthly average.

(5) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1957 and 1958 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

50 ⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. ⁽²⁾Planks and boards, flooring and square timber. ⁽³⁾Hollow blocks including fireproofing and load-bearing tile. ⁽⁴⁾For building insulation only. ⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Includes concrete chimney blocks. ⁽⁷⁾Factory sales of firms which normally account for 98% of total Canadian production.

^aSee also Tables 18 and 19.^bExcluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 are final prices.

Since August 1, 1958, only initial prices are available for wheat, oats and barley.

^cInclude subsidy on hogs.^dBased on price for hogs including Dominion premium. A rise in ratio favours production of beef.^ePrevious to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.⁽²⁾Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

June 1958-31		Sept. 1958-39		Dec. 1958-35		Mar. 1959-32		June, 1959-36		Sept. 1959-44		Dec. 1959-40							

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ⁽¹⁾ Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾ Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁽³⁾ Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁽⁴⁾ In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

June 1958-31 Sept. 1958-39 Dec. 1958-35 Mar. 1959-32 June, 1959-36 Sept. 1959-44 Dec. 1959-40

(1) Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

(2) Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾ Does not include re-exports.⁽²⁾ As from January 1958, the export total, the three indexes and the "miscellaneous commodities" total exclude various non-commercial and special transactions (mainly "settler's effects" and "private donations and gifts") previously included in domestic exports. During 1958 these transactions averaged approximately \$2,900,000 per month. For a more detailed explanation see Trade of Canada (Exports) January 1960.⁽³⁾ As from January 1958, includes square timber, formerly included with "Other wood and paper."⁽⁴⁾ As from January 1958, excludes square timber, now included with "Lumber and timber."⁽⁵⁾ Includes pigs, ingots, blooms and billets, castings and forgings and rolling mill products.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1957 and 1958 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

⁽²⁾Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

⁽³⁾Less total float, i.e. cheques and other items in transit (net).

⁽⁴⁾At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

⁽¹⁾ Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

Source: Quarterly Corporation Profits, D.B.S.

⁽²⁾ Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

⁽³⁾ Includes Printing and Publishing and Allied Industries.

NOTE.—*Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such.

⁽¹⁾In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

DBS Is At Your Service

The Dominion Bureau of Statistics collects, compiles and publishes statistical data relating to a wide range and variety of the economic and social activities and conditions of the Canadian people.

To make this information readily available to users, DBS publishes some 500 seasonal, monthly, quarterly, semi-annual, annual and biennial reports. Together these contain the statistical facts that measure the state of the national economy, its functioning and its growth.

DBS publishes regular reports on the following and other subjects:

- Agriculture - Farm Crops, Livestock and Incomes
- Construction - Residential - Engineering and General Building
- Education - Schools, Universities and Libraries
- Foreign Trade - Imports and Exports - Travel - International Payments
- Health and Welfare - Public Health - Hospitals - Births, Deaths and Marriages - Crime
- Labour - Labour Force - Employment and Earnings - Labour Income - Unemployment
- Manufacturing - Beverages and Foods to Tobacco and Wood Products
- Merchandising - Retail - Wholesale - Services - Credit
- Prices - Consumer - Wholesale - Securities
- Public Finance - Federal, Provincial and Municipal Governments
- Transportation - Air - Rail - Road - Water - Pipe Lines
- Utilities - Electric Power
- Fishing ► Forestry ► Mining

Requests for information should be sent to the Information Services Division, Dominion Bureau of Statistics, Ottawa. Write for a free copy of the Catalogue of Current Publications 1959.
