## RECENT ECONOMIC DEVELOPMENTS IN THE UNITED STATES AND CANADA

When operations were resumed in the United States' steel mills early last November, following the long-drawn out work stoppage in the industry, there was an immediate upsurge in economic activity, carrying many important monthly economic indicators to new highs. This development was in accordance with past experience in post-strike periods and in keeping with the anticipations of most observers, some of whom expected that the re-building of depleted stocks would be a powerful stimulus to the economy for some time to come. By the end of the first quarter it was apparent that these expectations had not been realized. The rate of inventory accumulation dropped during the course of the quarter, retail sales proved disappointing and industrial production eased slightly. The Gross National Product of \$500.2 billion was up 3.5 per cent from the fourth quarter but in terms of constant dollars was only 1.7 per cent above pre-strike levels. It has, of course, to be recognized that the level of activity in the second quarter of 1959 was unusually high by reason of the accumulation of stocks in anticipation of the stoppage of production in steel as well as in the non-ferrous metal industries. Economic indicators now available into the second quarter show conflicting tendencies, with some quickening in activity in certain sectors, notably retail sales and the automotive industry, and some falling off in activity in other sectors, notably in the steel industry.

In Canada, as in the United States, the level of activity in the second half of 1959 had been affected by industrial disputes, directly, in the third quarter by the strike in the forest industry in British Columbia, and indirectly, in the fourth quarter, by the deficiency in supplies of steel imported from the United States. In Canada, likewise, industrial production receded from its January high during the course of the first quarter; retail sales were some-

what lower than in the preceding quarter, on a seasonally adjusted basis. However, merchandise exports continued to testify to the strength of international demand for Canadian export products and although merchandise imports were moving up, support came from the external sector. As in the United States, employment showed no clear rising trend. Estimates of the economy's performance in terms of comprehensive aggregates are not yet available but it is apparent from scattered evidence that there were conflicting and partially offsetting trends within the first quarter.

In both countries, forecasts of capital investment for 1960 had pointed to an increase in outlays for plant and equipment, more pronounced in the United States than in Canada, and a partially offsetting decline in outlays for housing. In the United States, the forecast of capital expenditures for plant and equipment was reviewed in the spring and the earlier estimates raised slightly. In that country, surveys of consumer intentions to spend also testify to confidence and suggest a considerable increase in consumer outlays.

The purpose of this article, which brings up to date a previous article published in the "Canadian Statistical Review" last October, is to review and compare economic developments thus far in the year in the two economies, and to consider recent performance in the light of surveys of plans, intentions or anticipations.

### Production and Employment

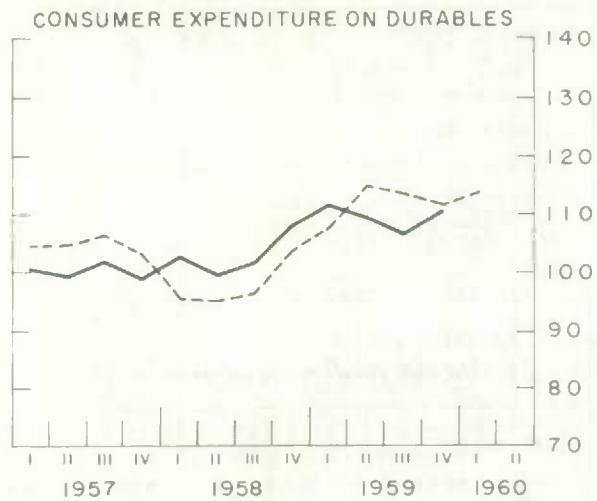

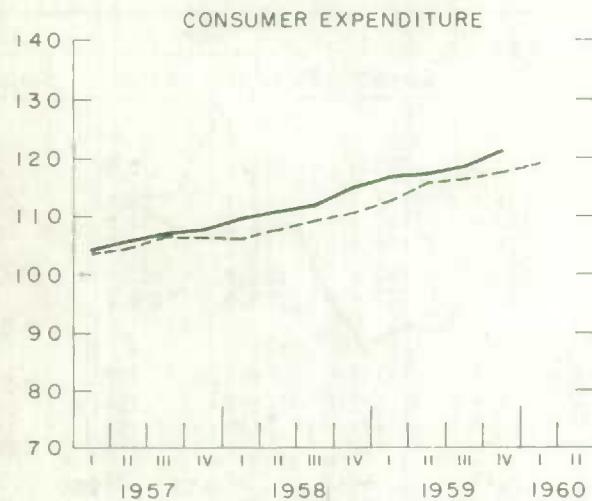

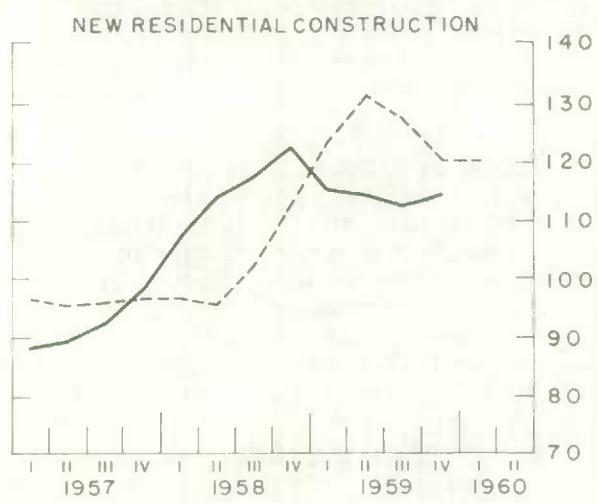

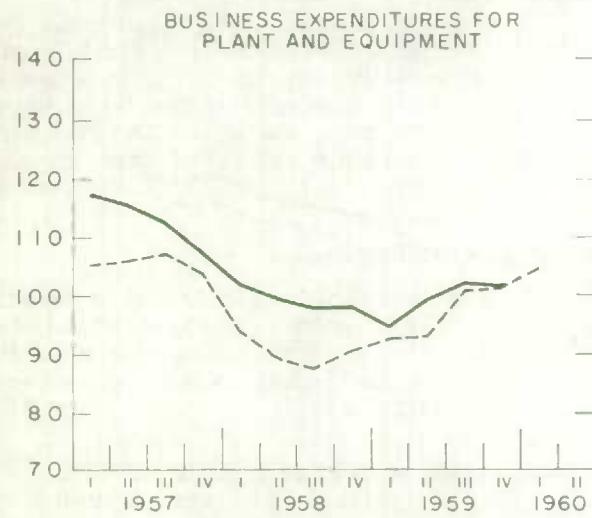

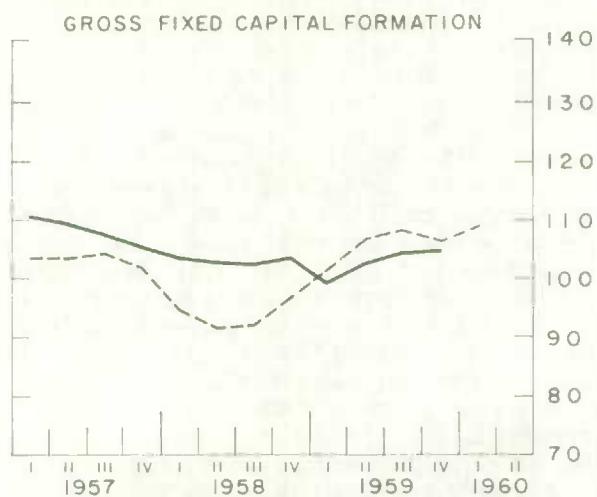

After the initial pick-up at the turn of the year, production in both countries showed mixed and largely offsetting trends during the opening months of 1960, when seasonal factors are taken into account, as is shown in Table 1.

**TABLE 1. Index of Industrial Production — United States and Canada**  
(Seasonally adjusted)

Following the resumption of activity in the steel industry early in November, industrial production moved up rapidly in the United States, and by January the seasonally adjusted index stood at 111 (1957 = 100) compared with its pre-strike peak of 110 in June. During the course of the first quarter of 1960 production schedules were cut back in some industries, notably iron and steel and automobiles and the index for the quarter averaged 110, 5 per cent higher than in the preceding quarter and 1 per cent above the high second quarter of 1959. The pattern for manufacturing was virtually the same as for the total index. The manufacturing industries operating below earlier highs in the first quarter included primary metals, fabricated metals, clay, glass and lumber and aircraft and other equipment among the durable group and petroleum products and textile, apparel and other products among the non-durables. In April, when an increase in output of consumer goods offset further declines elsewhere, the index stood at 109, the same as in the previous month. There was a notable increase in automotive output and schedules for May indicated further gains.

The cut-backs in the automotive and steel industries during the first quarter should be seen in the perspective of the quarter's total performance. The automotive industry turned out 2.3 million passenger cars and trucks, about the same as in the like period of 1955, and about 20 per cent higher than a year earlier. Without a corresponding rise in sales of new passenger cars, stocks accumulated in dealers' hands and were at a record high for that time of year by the end of March.

During the quarter the United States steel industry produced 3 per cent more ingots and castings than in the previous quarterly peak output in the second quarter of last year. The automotive industry, which takes more than 20 per cent of the steel industry's output, was buying steel at record rates, well in excess of its takings in 1955 when automotive production was at an all-time high. Furthermore, the compact car, which now accounts for about 20 per cent of the market, uses 25 per cent less steel than standard models. The steel operating rate, which was 96 per cent in January, had fallen to 91 per cent in March, to 75 per cent early in May, and was still trending downward at time of writing.

Production of consumer durables other than automobiles in the United States was down in the first quarter (after seasonal adjustment) from the high rates in the closing quarter of 1959, presumably reflecting the declining trend of sales around the turn of the year.

Industrial production in Canada, adversely affected in the latter half of 1959 by the prolonged strike in the woods industry in British Columbia and then by cut-backs in production in the automotive industry (a result of the interruption in supplies of steel from the United States) rose at the turn of the year, reaching 173.3 (1949 = 100) in January. It eased in February and rose a little in March when it stood at 170.8. This slight decline is attributable

to manufacturing; some easing was apparent in both durables and non-durables. The index for the first quarter was about 1 per cent above the fourth quarter and about 6 per cent above the like period of 1959. The gains from the fourth quarter were in manufacturing, both durable and non-durable, and electricity and gas; mining production was down about 1 per cent. By comparison with the like period of 1959, all the main components show significant gains of almost 6 to 7 per cent in manufacturing and mining and of 13 per cent in electricity and gas.

In the United States, seasonally adjusted employment continued to rise after the settlement of the steel strike until March, when it receded a little. This decline in employment may be attributable to the heavy snowstorms that occurred in many parts of the country. That seasonally adjusted figures rose again in April and that the rate of unemployment fell to 5.0 per cent of the labour force, after having been 5.4 per cent in March and 4.8 per cent in February, lends some support to this explanation. However, employment indicators were not uniformly favourable in April; employment eased more than seasonally in a number of durable goods industries, namely primary and fabricated metals, electrical and non-electrical machinery and transportation equipment, and hours of work in manufacturing, usually regarded as a sensitive indicator, continued to fall. To put recent rates of unemployment in perspective, it may be noted that in peacetime years since the end of the Second World War, which includes three recessions, unemployment averaged about 4.8 per cent of the labour force.

In Canada the seasonally adjusted month-to-month changes in employment in the first quarter were all positive though small. The number of persons without jobs and seeking work averaged 5.7 per cent of the labour force, compared with 6.0 per cent a year earlier. Manufacturing employment, in the first quarter, showed little other than the usual seasonal change, with a slightly firmer trend in durables than in non-durables. Hours of work in manufacturing eased a little in February.

### The Investment Sector

Private capital expenditures recovered earlier and more vigorously in the United States than they did in Canada during the recent expansion. The down-trend in the United States was reversed in the third quarter of 1958 and by the closing quarter of 1959 the seasonally adjusted rate had advanced 17 per cent from its recession low. The reversal in Canada did not come until the second quarter of 1959 and by the closing quarter the seasonally adjusted rate had risen only about 5 per cent. These differences are largely accounted for by the divergent behaviour of housing in the two countries; housing advanced earlier in Canada than in the United States and also contracted earlier, thus tending to bring the movements in total private capital investment in the two countries more closely into line in the latter part of 1959.

Surveys of investment intentions for 1960 will, if realized, make for a considerably higher rate of increase in the United States than in Canada, as is shown in Table 2. The report "Business Anticipations of Plant and Equipment Expenditures in 1960", prepared by the Department of Commerce and the Security and Exchange Commission indicates a planned increase in outlays for capital investment of 14 per cent in total, with all major industries expecting to spend more in 1960 than in 1959. Outlays are expected to rise throughout the year, the implied rate for the second half of 1960 being \$38 billion, compared with a seasonally adjusted annual rate of \$33.5 billion in the closing quarter of 1959. Much

of the anticipated strength in investment originates in manufacturing, particularly the durable segment of it. Manufacturing outlays in total are expected to rise 25 per cent, and the durable goods industries outlays by 33 per cent; these projected increases are in many instances from rather low rates and in most individual industries projected capital investment in 1960 is below the records established in 1956-57. However, new records are expected to be established in the electrical machinery and rubber, while in the steel and the stone, clay and glass industries investment in 1960 is about the same as previous peaks.

In order to make the Canadian and United States figures more nearly comparable, the Canadian total excludes agriculture and fishing, housing, Government Departments and municipal waterworks, and the figure for utilities excludes telephones and broadcasting, which are included with Commercial and other.

The 14 per cent planned increase in private non-farm investment outlays in 1960 in the United States compares with one of 8 per cent in Canada. Much less buoyancy is evident in the plans of Canadian manufacturing industries, whose capital outlays are expected to rise by 11 per cent. By contrast with the United States outlays by durable goods manufacturing industries are expected to rise moderately. The anticipated increase in the non-durable goods industries in Canada of 18 per cent is about the same as in the United States. In both countries, the rubber and chemical industries are sharply expanding their investment outlays and in Canada the paper industry contributes prominently to the expected increase in outlays by non-durable manufacturing industries. While in the United States all the durable manufacturing industries plan in-

creased outlays, in Canada only the iron and steel and the electrical industries expect any significant expansion in capital expenditures.

The greater buoyancy in the investment outlook in the United States is not evident in other segments. For business other than manufacturing, expectations are that capital outlays will rise about 7 per cent in both countries. In the United States all the major industrial divisions plan to raise their outlays but in Canada the anticipated direction of change is not upward in all instances.

In the United States the survey of investment intentions is published by the Department of Commerce in conjunction with a survey of sales anticipations. The investment plans outlined above were

associated with favourable sales anticipations. Manufacturers expected their sales in 1960 to be 8 per cent higher than in 1959, with an expected gain of 10 per cent in the durable lines and of 6 per cent in the non-durables; retailers and wholesalers anticipated increases of 6 and 4 per cent respectively, and public utilities a rise of 9 per cent.

A more recent survey of investment intentions in the United States, released by McGraw Hill at the end of April, suggests that plans may have been revised upward slightly since the Department of Commerce SEC survey was undertaken. The McGraw Hill Survey, which is on a somewhat different basis, shows a planned increase of 16 per cent, rather than 14 per cent. Insofar as first quarter experience of profits and sales may have been disappointing, capital spending has not been adversely affected as might have been expected in such a situation. In the 1960 programme as set out in the McGraw Hill Survey, the emphasis falls heavily on replacement and modernization. In manufacturing industries about two-thirds of planned spending is of this nature; capacity is expected to expand only about 5 per cent despite the record level of capital spending.

In the United States, residential construction dropped in the second half of 1959, after rising for more than a year. In the first nine months of 1959 private housing starts were above an annual rate of 1.3 million, falling to an average of 1.2 million units in the closing quarter. In December of last year the Department of Commerce estimated that expenditures for private housing construction would decline by 6 per cent in 1960, in contrast to an increase of 25 per cent in 1959; it forecast private starts of 1.2 million units in 1960, 125,000 units less than in 1959.<sup>1</sup> At the same time, it suggested that starts in the opening months of 1960 might be below the expected annual average in view of the tightness in mortgage money at the turn of the year. Housing starts were running at a rate of about 1.1 million units in February, March and April of this year, although there was a slight improvement from month to month during the period. The easing in money markets in recent months should improve the prospects for housing. Early in May the Federal Housing authority lowered its down-payments for houses in the middle price range. Statistics are not sufficiently current to indicate whether the recent easing in terms of purchase has stimulated house-building activity.

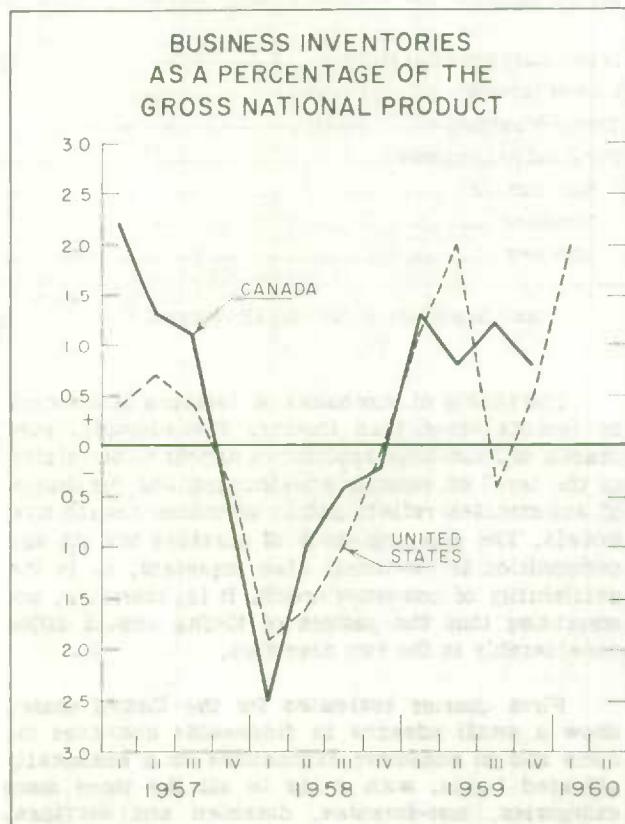

Likewise, in Canada, it is expected that the value of residential construction in 1960 will be below that of 1959. The report "Private and Public Investment in Canada—Outlook 1960" suggested a 10 to 15 per cent decline in starts, about the same number of completions, and a drop in value of about 4 per cent. In the first quarter, starts in municipalities of 5,000 and over were, in fact, well below any quarter of last year, on a seasonally adjusted basis.

It may be noted that Central Mortgage and Housing Corporation was not accepting applications for direct loans between the months of November and April.

In both countries, anticipated expenditures for construction are expected to rise very moderately and projected dollar outlays, if realized, will do little more than cover the rise in construction costs, leaving the volume of activity much the same as in 1959. Thus the greater strength in the investment outlook in the United States is in the area of expenditures for machinery and equipment and is associated with the pronounced pick-up in investment in the durable manufacturing industries.

### The Behaviour of Inventories

In the first half of 1959 in the United States, stocks were being built up as a precaution against a strike-induced interruption in the flow of supplies. In the second quarter accumulation of business inventories reached the extremely high level of \$9.8 billion at a seasonally adjusted annual rate of which an estimated one-third was in holdings of steel mill products. In the third quarter stocks were being drawn down at the rate of \$1.8 billion. Following the resumption of operations in the steel industry early in November, accumulation again set in and acted as a powerful stimulant to the economy at the turn of the year. For the first quarter as a whole accumulation was at an annual rate of \$10.1 billion, although the rate fell during the course of the quarter.

<sup>1</sup> Construction Review, December 1959, U.S. Department of Commerce.

Recently the situation in which businessmen have made decisions about inventory policy has been one of readily available supplies, generally stable prices and high interest rates, that is to say, one which would appear to encourage businessmen to keep inventories as low as is consistent with efficient operation. It may be noted that by historical standards inventories are, in fact, low in relation to sales.

The quarterly pattern of inventory in Canada in 1959 was consistently one of accumulation, although at varying rates. For the year as a whole, the shift from liquidation of \$323 million in 1958 to accumulation of \$355 million in 1959 was an important expansionary element and accounted for almost one-third of the \$2.0 billion increase in Gross National Product. However, the building up of stocks did not keep pace with the growth in sales and ratios of stocks to shipments fell significantly between the two years. Indications are that stocks continued to accumulate in the first quarter of 1960 at a considerably higher rate than in the closing quarter of

1959. The accumulation was concentrated in retail trade and in the stocks of motor vehicle dealers in particular.

### The Consumer Sector

In 1959, unlike 1958, the broad influences brought to bear on the consumer sector were much the same in the two countries. Disposable consumer income rose at about the same rate, as did labour income, reflecting higher employment and earnings, and the rising trend of consumer prices moderated. Consumer expenditure rose more or less in line with income and there was a considerable expansion in consumer credit outstanding. The notable difference in behaviour in the consumer sector was in sales of durables; the rate of increase in purchases of durables of nearly 15 per cent in the United States was more than twice as high as in Canada. This sharp increase in sales of durables in the United States in 1959 followed a significant decline in the preceding year. The contrasts and similarities between Canadian and United States experienced in 1958 and 1959 are apparent in Table 3.

TABLE 3. Personal Income and Expenditure — Canada and the United States, 1958 and 1959

	Per cent change from previous year			
	Canada		United States	
	1958	1959	1958	1959

Durables .....	2.8	6.3	-6.7	14.4
Services .....	7.1	6.8	6.3	6.4

<sup>1</sup> Includes military pay and allowances.

The timing of purchases of durables is affected by factors other than income. For example, purchases of household appliances appear to be related to the level of housing construction and purchases of automobiles reflect public attitudes toward new models. The existing stock of durables and its age composition is obviously also important, as is the availability of consumer credit. It is, therefore, not surprising that the pattern of timing should differ considerably in the two countries.

First quarter estimates for the United States show a small advance in disposable consumer income and in consumer expenditure on a seasonally adjusted basis, with gains in all the three main categories, non-durables, durables and services. The latest figures show a further gain in personal

income going into the second quarter. The estimate for April is at a seasonally adjusted annual rate of \$397.4 billion, an increase of \$3.4 billion from the March estimate. The greater part of this gain reflects higher labour income.

In the first quarter of 1960, retail sales in the United States were running at a rate of \$18.2 billion, about 2 per cent higher than in the closing quarter of 1959 but somewhat below the peak month rate of \$18.3 billion recorded in July and October of 1959. The trend of retail sales in the early months of the year proved disappointing to many observers and was admittedly difficult to interpret because of the unusually severe winter weather and the late date of Easter. The coming of spring brought a distinct pick-up in sales. In the six weeks preceding Easter,

department store sales were 11 per cent higher than in the same period a year earlier which seems to confirm the view that the weather and the timing of Easter accounted in part for lagging sales. Retail sales in April were at a seasonally adjusted annual rate of \$18.9 billion, 3 per cent over March and 5 per cent over April of last year; for the first four months of 1960 they were 3 per cent higher than in the same period a year earlier. Statistics of department store sales, which are more current, have not shown uniformly favourable year-to-year comparisons in recent weeks.

In the important automobile market, sales in the United States also improved in the spring and by mid-April new cars were selling at a rate of 15 per cent higher than at the same date in March and also 15 per cent higher than at the same period of 1959. In the first four months of 1960, sales of new cars were up 15 per cent from a year earlier.

These trends in sales in the United States in the early part of the year can be considered in the light of findings of the recent survey of consumer attitudes. This survey suggested that consumers' outlook was optimistic and their buying plans considerably larger than a year ago; the number of consumers intending to buy new cars was 20 per cent higher than a year earlier and plans for buying household equipment were also considerably larger.

The ratio of consumer credit to personal income has risen in the past year in the United States. At the end of March total short and intermediate term consumer credit amounted to \$51.2 billion and the ratio of credit to income was well above any previous experience. The pattern of consumer credit is normally closely associated with the trend in sales of new cars and in 1959 the need for borrowed funds on the part of persons affected by work stoppages is also believed to have been a factor.

Likewise in Canada, retail trade failed to show buoyancy in the opening months of this year and likewise this development may be associated with the timing of Easter and possibly also with the weather. Retail sales in the first quarter were barely in excess of the same period a year earlier and on a seasonally adjusted basis were 1.0 per cent below the fourth quarter. In the year-over-year comparison significant gains occurred only in the food group and in sales by drug stores. Sales were down in varying degrees in all the durable goods trades and likewise in all the apparel trades. The timing of Easter is particularly important for the latter group.

Sales by motor vehicle dealers were down about 1½ per cent. The Canadian market for new passenger cars continued to exhibit the characteristics so strikingly apparent in 1959 when total sales had risen 12 per cent and sales of British and European models by more than 45 per cent; in the first quarter total sales were up about 4.5 per cent and sales of the British and European type were up about 25 per cent, compared with the same period a year ago.

Consumer debt in Canada, as in the United States, rose considerably in the year-over-year comparison. Balances outstanding on the books of sales finance companies, predominantly associated with the financing of automobiles, were up 13 per cent at the end of March. Credit at small loan companies and accounts receivable of department stores were also considerably higher than a year earlier. There was a notable increase in the unsecured personal loans of chartered banks.

### The External Sector

Reflecting the growing strength of demand in international markets, particularly in Western Europe and the United States, Canada's merchandise exports began to rise sharply in 1959 and continued to do so in the opening months of 1960. The first quarter recorded gains of 23 per cent over the same period a year earlier. All the commodity divisions shared in the advance, prominent among them being a more than 50 per cent increase in exports of non-ferrous metals and products and of about 16 per cent in chemicals and allied products and of 16 per cent in wood, wood products and paper. The increase in sales to Western Europe amounted to 32 per cent and in sales to the United States 18 per cent; there were some offsetting declines in sales to some other areas.

Preliminary estimates of Canada's merchandise imports for the first quarter of 1960 continue to show the rising trend apparent during most of 1959. However, the gain of 9 per cent was moderate by comparison with the rise in merchandise exports and the deficit on commodity account was reduced to \$38.7 million from \$166.2 million in the same period a year ago.

In the United States, as in Canada, exports were responding to the generally favourable climate for international trade in the opening months of the year. In the first quarter merchandise exports were up 20 per cent from the same period a year ago. Whereas in Canada the recent improvement in exports has raised them well above previous peaks, in the United States the first quarter rate of about \$18.0 billion is still well below the extraordinarily high levels of 1957 when they rose to \$19.5 billion, partly as a consequence of the Suez crisis. Moreover, some of the recent gains in exports reflect special or temporary factors, as in the case of cotton and aircraft. The incomplete evidence now available on the first quarter suggests that merchandise imports also rose but much less than exports.

The deterioration in the United States' balance of payments in recent years has given rise to some concern in official quarters. The excess of exports of goods and services over imports of goods and services, at its post-war peak of \$5.8 billion in 1957, fell to \$2.2 billion in 1958, and in 1959, when the steel strike temporarily depressed exports and

stimulated imports, payments exceeded receipts by \$1 billion. Indications are that in the first quarter of 1960 the excess of receipts over payments may have been of the order of \$1.0 billion at annual rates, thus bringing to bear a positive influence on the economy in place of the negative effect of current international transactions in 1959.

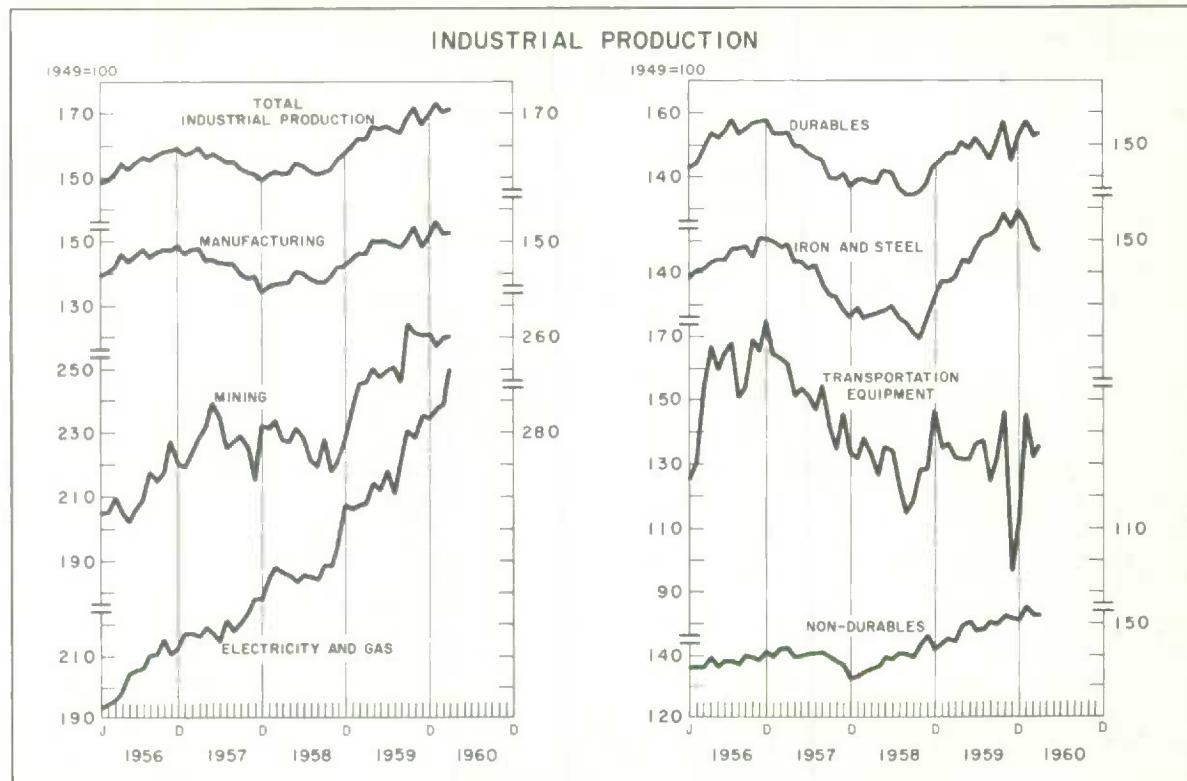

## Conclusion

In summing up economic events in the opening months in Canada and the United States, it is apparent that somewhat similar forces have been at work in both countries, but not in the same degree. A resurgence of business investment in plant and

equipment is common to both, but is more pronounced in the United States than in Canada. Temporarily, at least, the level of housing starts is low in both countries, especially in Canada judging by the standards of recent years. The expansionary influences that come from the building up of business inventories has weakened, particularly in the United States. Consumer behaviour as evidenced by retail sales is difficult to evaluate; it is worth noting, however, that important elements of personal income continued to rise and were well ahead of a year ago. Strength has been present in the external sector, especially in Canada, where international trade plays a much more important role than it does in the United States. Meanwhile, these conflicting and largely offsetting trends are reflected in industrial production and in important areas of employment.

## INDUSTRIAL PRODUCTION

The index of industrial production rose fractionally in March, with the major advance in output of electricity and gas; mining and manufacturing production were little changed.

## PRODUCTION

## EMPLOYMENT AND HOURS WORKED\*

The composite industrial employment index edged slightly downward in March, but remained close to the levels prevailing in recent months. However, employment in building and general engineering construction declined for the third consecutive month.

Average hours worked in manufacturing declined in February for the second consecutive month.

<sup>(1)</sup>Averages of unadjusted data.

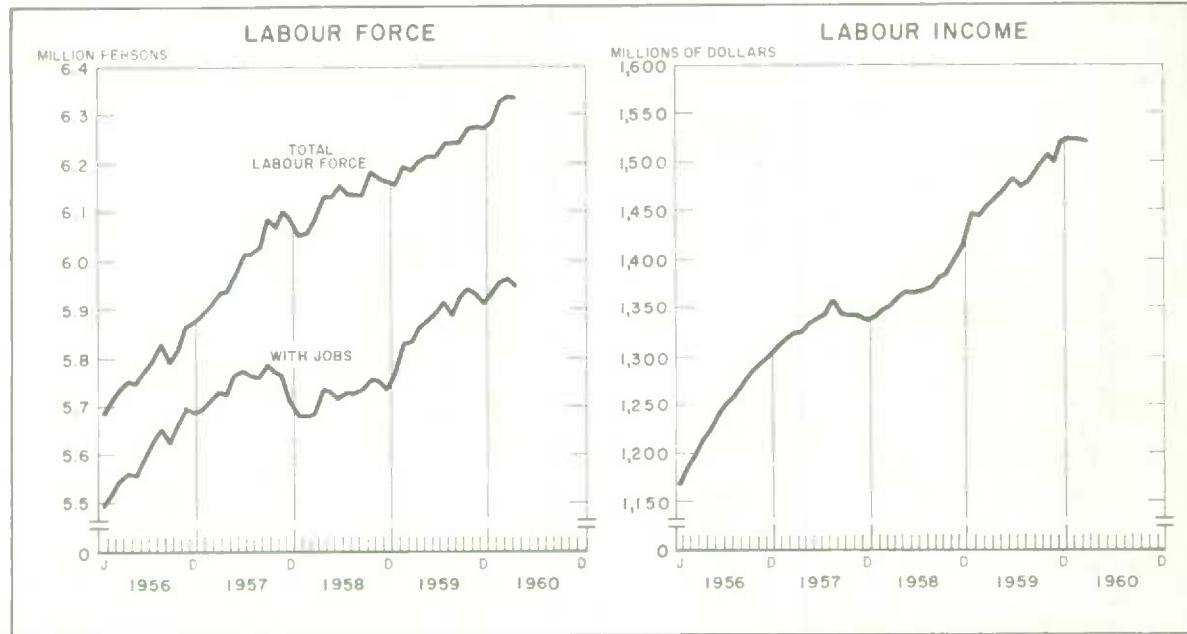

<sup>(2)</sup>Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

\*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D. or months for cyclical dominance.

## LABOUR FORCE AND LABOUR INCOME

The total labour force remained unchanged in April, but the number of persons with jobs was fractionally lower. Persons without jobs and seeking work were a somewhat higher proportion of the total labour force.

Total labour income in March edged downward slightly.

## RETAIL TRADE (concluded)

March sales of new passenger cars were off from the comparatively high February level. Fuel Dealers' sales were higher in March, as a result of the late season.

## CONSTRUCTION AND BUILDING PERMITS

Housing starts and completions rose in April, following previous declines.

Commercial building permits were higher in March but the overall trend of the past few months has been downward.

(<sup>a</sup>) De facto population. Annual data are for June. (<sup>b</sup>) At current market prices. Annual data are totals of the four quarters. (<sup>c</sup>) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (<sup>d</sup>) All manufactured products. (<sup>e</sup>) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates. (<sup>f</sup>) Annual data are for June.

4 Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Not applicable to figures on population and immigration.

(2) Yukon and North-West Territories not included in figures for births, marriages and deaths.

(3) Estimates are now published quarterly following Census date, June 1, as well as for January 1 and July 1 of each year.

(4) Exclusive of stillbirths.

(5) Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

<sup>8</sup> <sup>(1)</sup>The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item. <sup>(2)</sup>Includes adjusting entry. <sup>(3)</sup>Includes residual error of estimate. <sup>(4)</sup>This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. <sup>(5)</sup>Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production," 1935-57.

[<sup>r</sup>]The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

<sup>(1)</sup>Seasonal (formerly supplementary) benefit data included.<sup>(2)</sup>On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.<sup>(3)</sup>The number of new cases of recorded unemployment among insured persons.<sup>(4)</sup>Estimates are based on average weekly number of payments.<sup>(5)</sup>The number of calendar weeks during which a benefit payment was made.<sup>(6)</sup>Revised to relate to the Thursday nearest to the last day of the month.<sup>(7)</sup>Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

<sup>a</sup>The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. 27<sup>b</sup>The annual and monthly "all industries" totals for 1958 and 1959 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(1) In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

(2) Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also reported as shipments in the month received) or whether they will be added to existing backlog.

(3) Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

(4) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

(1)Releases of domestically manufactured tobacco for consumption in Canada.

(2)End of period.

(3)The production of beer is shown in thousand barrels of 25 gallons each.

(4)Includes bottling of imported liquors.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. <sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>(3)</sup>Customs exports. <sup>(4)</sup>Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

<sup>(1)</sup>Shipments for further processing within own firm and for sale in Canada. <sup>(2)</sup>Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

(1) Includes some silvery pig iron formerly included with ferro-alloys.

(2) Excluding shipments for processing.

(3) Imports include, in addition to all other

shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings.

(4) Monthly average.

(5) Because of the confidential provisions contained in

the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

\*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1958 and 1959 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. <sup>(a)</sup>Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.      <sup>(2)</sup>Planks and boards, flooring and square timber.      <sup>(3)</sup>Hollow blocks including fireproofing and load-bearing tile.      <sup>(4)</sup>For building insulation only.      <sup>(5)</sup>Figures cover the production of firms which normally account for 85 per cent of the total for Canada.      <sup>(6)</sup>Includes concrete chimney blocks.

<sup>(7)</sup>Factory sales of firms which normally account for 98% of total Canadian production.

<sup>a</sup>See also Tables 18 and 19. <sup>(1)</sup>Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 include final payments for all grains. From August, 1958 to July 1959, western wheat prices are initial plus interim payments. Since August 1, 1959, only initial prices are available for wheat, oats and barley. <sup>(2)</sup>Includes subsidy on hogs. <sup>(3)</sup>Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

<sup>(4)</sup>Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. <sup>(5)</sup>Source: Livestock and Meat Trade Report, Dept. of Agriculture, Coarse Grains Quarterly, Cold Storage Holdings, and Index Numbers of Farm Prices of Agricultural Products, D.B.S.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

Revised to include bagged seed wheat previously excluded. <sup>(2)</sup>Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. <sup>(3)</sup>Annual data are monthly averages of crop year. <sup>(4)</sup>Includes eggs for hatching.

\* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

<sup>(1)</sup>Conditional sale agreements held in connection with the financing of retail purchases of consumer goods.

<sup>(2)</sup>Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.

<sup>(3)</sup>Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

<sup>(4)</sup>In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

June 1958-31

Sept. 1958-39

Dec. 1958-35

Mar. 1959-32

June, 1959-36

Sept. 1959-44

Dec. 1959-40

<sup>(5)</sup>Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

<sup>(6)</sup>Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

<sup>(1)</sup>Does not include re-exports.<sup>(2)</sup>As from January 1958, the export total, the three indexes and the "miscellaneous commodities" total exclude various non-commercial and special transactions (mainly "settler's effects" and "private donations and gifts") previously included in domestic exports. During 1958 these transactions averaged approximately \$2,900,000 per month. For a more detailed explanation see Trade of Canada (Exports) January 1960.<sup>(3)</sup>As from January 1958, includes square timber, formerly included with "Other wood and paper."<sup>(4)</sup>As from January 1958, excludes square timber, now included with "Lumber and timber."<sup>(5)</sup>Includes pigs, ingots, blooms and billets, castings and forgings and rolling mill products.

(1)The trade figures have been adjusted to conform to balance of payments definitions of the international exchange of commodities.

(2)Balance also reflects all other current transactions.

(3)Net sales (+) or purchases (-) by Canadians of Canadian and foreign securities (trading, new issues and retirements.)

Sources: Quarterly Estimates of the Canadian Balance of International Payments, D.B.S. and Statistical Summary of Bank of Canada.

<sup>(1)</sup>Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1958 and 1959 differ from the sum of the monthly data due to revisions which cannot be allocated by months. <sup>(2)</sup>As of January, 1958, statistics include the British Columbia Electric Railway.

<sup>(1)</sup>Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

<sup>(2)</sup>Subsidiary coin issued by the Mint less coin held

by Bank of Canada and chartered banks in Canada.

<sup>(3)</sup>Less total float, i.e. cheques and other items in transit (net).

<sup>(4)</sup>At September 30, 1957, the deposit

balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

<sup>(1)</sup>The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

Note.—\*Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such.

<sup>(1)</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

You read the Canadian Statistical Review

## You know the value of accurate facts and figures

For the exporter there is a special source—

**FOREIGN TRADE**—that provides him with the facts and figures that can mean more sales and larger profits.

FOREIGN TRADE gives an up-to-date picture of markets abroad because its reporters are Canadian Trade Commissioners living in the countries they write about. A sample copy will give you a small idea of the variety of products and the number of markets covered in FOREIGN TRADE. Write for one to the Editor, Department of Trade and Commerce, Ottawa.

A year's subscription to FOREIGN TRADE brings you 26 issues and costs only \$2.00. Use the coupon to order yours.

Supervisor of Government Publications,  
The Queen's Printer,  
Ottawa, Canada.

Please send me *Foreign Trade* for a year. Enclosed is my cheque /  
money order for \$2.00 (\$5.00 outside Canada) made payable to  
the Receiver General of Canada.
