NATIONAL ACCOUNTS INCOME AND EXPENDITURE

FIRST QUARTER 1960

Introductory Review

The advance in Gross National Product moderated in the first quarter of 1960. Apart from the third quarter of last year, the increase of 1 per cent was the smallest quarter-to-quarter gain in the value of production (seasonally adjusted) since the expansion began following recovery from the 1957-1958 recession. With prices showing no overall change, the first quarter advance represents a real, though modest, gain in the physical volume of output.¹

The less vigorous advance in Gross National Product in the first quarter was associated with a levelling off in total final purchases of goods and services (see Table, overleaf). While there was a decline in final domestic demand, external demand for Canadian export products continued to rise. All of the production gain during the quarter was represented, on balance, by a movement into inventory stocks. There was a significant increase in the rate of inventory accumulation at the retail and wholesale levels, and in livestock held on farms.

Prominent among the developments which operated to suppress the level of final demand during the quarter was a small, but unusual, decline in personal expenditure on consumer goods and services. A number of factors were associated with this drop in consumer outlays in the first quarter, among them the delayed spring weather and the late date of Easter this year. In addition, disposable income had stopped rising between the second and fourth quarter of 1959, as the effects of the work stoppage in the primary wood and wood-fabricating industries in British Columbia in the third quarter and the United States steel strike in the fourth, impeded the flow of income; higher direct personal taxes were also a factor in this development. Disposable income by the first quarter of 1960 had, in fact, risen by less than 1 per cent over the second quarter of 1959.² In addition, there was a small decline in the price of consumer goods between the fourth and the first quarters, so that the drop in the volume of consumer outlays was only about half as much as that indicated in the value figures. While it is clear that the retardation in the growth

¹ A small part of the first quarter increase (about \$50 million) represents a higher estimate of crop production in 1960, based on a calculation involving acreage intentions and 10-year average yields.

² A factor of some significance in the current period has been the fact that recent gains in employment have been concentrated in the service industries where wage rates tend to be lower than in the goods-producing industries. Structural changes of this nature in the composition of employment have slowed the rate of growth in labour income and this in turn may have had an effect on the level of personal expenditures.

of consumer income and the price decline have affected the movement of the figures, it is not possible to assess the relative importance of these factors in relation to the irregular influences of a delayed spring and a late Easter this year.

A further factor contributing to the relatively unchanged level of total final purchases in the first quarter was a decline in business outlays for new plant and equipment, seasonally adjusted, following the levelling which occurred in the fourth quarter of last year. The decline was mainly in machinery and equipment investment, and reflected a reduction in outlays by the transportation industry for railway rolling stock. Non-residential construction was little changed in the quarter, and outlays for housing remained steady. However, new orders for construction goods, non-residential building permits, and shipments of construction materials showed declines during the quarter, after allowing for seasonal factors. Housing starts fell sharply during the quarter, although completions were running well above the fourth quarter level.

Other elements of final demand continued to show moderate strength during the quarter, with exports of goods and services advancing further over the fourth quarter, on a seasonally adjusted basis, and government outlays showing a small rise following two quarters of decline in the last half of 1959. The gain in exports reflected continued strength in both overseas markets and in the United States for Canadian non-ferrous metal and forest products, particularly copper, nickel, aluminum, and lumber. On a year-to-year basis, commodity exports were higher than the first quarter of 1959 by 21 per cent.

These developments in the major demand categories during the first quarter were accompanied by shifts in the composition of the income flow. With labour income rising by less than 1 per cent from the fourth quarter, profits remaining unchanged, and net income of unincorporated business enterprises reflecting a decline in retail trade, the advance in national income in the first quarter was small, amounting to about one-half of 1 per cent. This rate of growth is considerably less than that which occurred during the fourth quarter of 1959, when national income advanced by 2 per cent, and labour income showed a similar rise. The rate of advance in both personal and disposable income has also slackened in recent quarters; while the first quarter rise in these two components, amounting to about 1 per cent, was similar to that which occurred in the fourth quarter of 1959, the rates of increase are now running well below those of a year ago.

THE ADVANCE IN GROSS NATIONAL PRODUCT MODERATED IN THE FIRST QUARTER OF 1960, FOLLOWING A GAIN OF 2 PER CENT IN THE FINAL QUARTER OF 1959

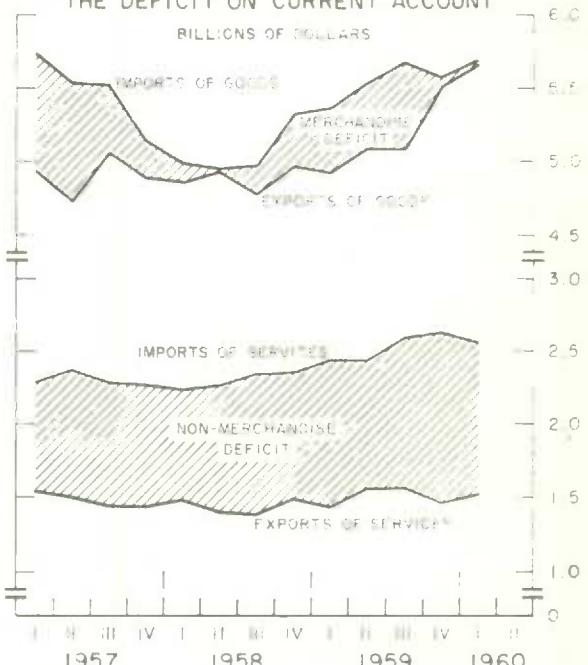

THE SLOW-DOWN WAS ACCCOMPANIED BY WEAKNESS IN THE CONSUMER SECTOR, WHERE SPENDING DECLINED IN SPITE OF A SMALL RISE IN DISPOSABLE INCOME DURING THE QUARTER

BUSINESS INVENTORY ACCUMULATION WAS SHARPLY HIGHER, REFLECTING MAINLY THE MOVEMENT OF GOODS INTO RETAIL AND WHOLESALE CHANNELS; BUSINESS OUTLAYS FOR PLANT AND EQUIPMENT DECLINED SLIGHTLY

EXPORTS OF GOODS AND SERVICES CONTINUED TO ADVANCE MODERATELY, BUT THE INCREASE IN IMPORTS WAS SMALL, LEADING TO A FURTHER NARROWING IN THE DEFICIT ON CURRENT ACCOUNT

(IN ALL CHARTS DATA ARE SEASONALLY ADJUSTED AT ANNUAL RATES)

The table below shows percentage changes in some of the main income components from the first quarter of 1959 to the first quarter of 1960,

compared with those which occurred in the same period one year earlier.

Changes in Major Income Components
(Seasonally adjusted at annual rates)

Selected personal and business income components	Percent change 1Q 1958 to 1Q 1959	Percent change 1Q 1959 to 1Q 1960
1. National income.....	8.1	3.8
2. Personal income.....	6.4	4.2
3. Disposable income.....	6.4	3.3
4. Wages and salaries.....	7.6	5.0
5. Corporate profits before taxes.....	19.7	4.4
6. Net income of non-farm unincorporated business.....	3.5	-2.1

Production and Employment

The advance in the physical volume of output between the fourth quarter of 1959 and the first quarter of 1960, estimated at slightly less than 1 per cent, on a seasonally adjusted basis, reflected mixed and partly offsetting movements in individual industries. Available information indicates that gains occurred in manufacturing production, public utilities, agriculture, finance, insurance, and real estate, government, and "other" services. Losses were recorded in mining, forestry, construction, and trade. Taken over all, the increase in production in the first quarter is entirely attributable to the goods-producing industries; output in the service-producing industries was, on balance, unchanged. Over the full year, the volume of output in the first quarter of 1960 was running about 4 per cent above the first quarter of 1959.

Manufacturing output in the first quarter of 1960 showed a gain of 1.5 per cent over the fourth quarter of 1959, on a seasonally adjusted basis; however, the level of manufacturing production in March was about 2.5 per cent below the level at the beginning of the year. The increase in durable goods output over the full quarter was somewhat greater than that in the non-durable group. Within durables, much the largest gain was in the transportation equipment industry, which showed an increase of 17 per cent, largely reflecting the resumption of operations in the automotive industry which were interrupted in the fourth quarter when stocks of steel imported from the United States became depleted; production of motor vehicles rose by 35 per cent in the quarter. Production in ship-building was also up, but output in the aircraft and railway rolling stock industries was lower. Changes in the output of other durable goods industries were mixed and more moderate; production was higher in non-ferrous metal products and electrical apparatus and supplies, roughly unchanged in non-metallic mineral products, and lower in iron and steel and wood products.

The non-durable manufacturing industries also showed varying trends in production in the first quarter. Those industries recording gains were textiles, rubber products, chemicals, and products of petroleum and coal; the largest gains, amounting to 8 and 7 per cent respectively, were in the first two of these industries. Declines in production of other non-durable goods were moderate except in the tobacco and tobacco products industry where output fell 7 per cent.

By comparison with the same period a year earlier, manufacturing production in the first quarter was about 5½ per cent higher, with both durables and non-durables showing closely similar gains. All the durable goods industries except non-metallic mineral products and wood products were above a year ago, the largest increases being in non-ferrous metal products (12 per cent), and iron and steel products (9 per cent). Among the non-durable goods industries, clothing, rubber products and leather products were lower by amounts ranging from 1 to 4 per cent; all other industries recorded gains, the largest (15 per cent) being in chemicals.

Output of public utilities continued to make relatively large gains in the first quarter; the increase from the fourth quarter of 1959 was more than 3 per cent and from the same quarter a year earlier about 13½ per cent. The major factor in these gains was the continued expansion in the distribution of natural gas to final users; higher output in electric power utilities also contributed to these changes.

Mining output fell nearly 1 per cent between the fourth quarter of 1959 and the first quarter of 1960, after seasonal adjustment; production was unchanged in metal mining, fractionally lower in fuels, and significantly lower in non-metals and quarrying. There were some striking changes in the composition of the output of metals within an unchanged total; major gains occurred in lead, zinc and copper (up 17, 10 and 8 per cent respectively) and major

declines in iron ore and nickel (down 19 and 7 per cent). By comparison with a year earlier, mining output was higher by 7 per cent, with gains in fuels, non-metals and metals, ranging from 5 to 10½ per cent; quarrying output was down 4 per cent.

While output in the forestry industry was down moderately from the fourth quarter of 1959, seasonally adjusted, in the year-over-year comparison the rise in production of 12½ per cent was the largest of any major industry except public utilities. Exports of forest products in the first quarter were running higher than a year ago by 15½ per cent.

The physical volume of activity in the construction industry was down slightly in the first quarter, compared with the preceding quarter, reflecting the slight fall-off in non-residential construction activity.

The volume of output in the trade group in the first quarter was affected by the decline in consumer spending, and showed a slight drop from the fourth quarter of 1959 on a seasonally adjusted basis. Compared with a year earlier, output in trade in the first quarter of 1960 was only slightly above the first quarter of 1959, with all of the gain occurring in the wholesale trade group.

The overall gain in the physical volume of production in the first quarter was accompanied by further increases in employment. The total number of persons with jobs rose 0.4 per cent from the fourth quarter to the first quarter, seasonally adjusted, as did the number with jobs in the non-farm sector. The total number of persons with jobs was higher by 131 thousand than in the same period a year earlier; the number of persons with jobs in the non-farm sector was 158 thousand above a year ago. The gain in total employment of 2.4 per cent over the full year was somewhat smaller than the gain in total production which is estimated to have been about 4 per cent. At the same time, hours of work have declined a little in three of the four industries for which data are available. The number of persons without jobs and seeking work averaged 541 thousand in the first quarter of 1960, compared with 533 thousand in the first quarter of 1959.

Consumer Buying

Personal expenditure on consumer goods and services, seasonally adjusted, declined by 0.6 per cent in the first quarter of 1960 from the level of the preceding quarter. The decline was accompanied by a small drop in the price of consumer goods. In terms of the real volume of consumption, the first quarter decline was only about half of that indicated by the value figures. Compared with one year earlier, consumer spending in the first quarter was about 3 per cent above the first quarter of 1959 in value terms, and about 2 per cent in terms of volume.

The drop in total consumer expenditure in the first quarter was caused entirely by a decline in expenditures for non-durable goods, which were 1½

per cent below the level of the fourth quarter, on a seasonally adjusted basis. Declines were evident in most commodities; the only important exceptions being alcoholic beverages (+4 per cent) and electricity (+3 per cent). Food declined by 1 per cent; tobacco by 1½ per cent; clothing and footwear by almost 3 per cent; gas, oil, and grease and auto parts and accessories both by 5 per cent; and fuel by 1½ per cent. However, there were price declines in many of these commodities, so that the changes in real consumption were less marked. The most notable example of this occurred in food. With a price decline slightly greater than 1 per cent, there was actually a fractional rise in the real volume of food consumption. For all non-durables, the price decline of greater than ½ per cent dampened the drop in real consumption to about 1 per cent.

Expenditures on durable goods were relatively unchanged in the first quarter, on a seasonally adjusted basis. Here again some price declines were evident. For durables as a whole, these price declines averaged almost 1 per cent, so that there was a corresponding increase in real consumption. The largest single durable component, purchases of new and used autos, rose by slightly more than 1 per cent. A decline in expenditures on household appliances and radios reflected a drop in price, and it is estimated that there was a 2 per cent increase in real consumption. Purchases of furniture declined by 2 per cent.

Expenditures on services also showed little change in the first quarter. In contrast to durable and non-durable goods, the prices of services continued their upward trend. Increases in expenditures on personal services, medical care, purchased transportation, and shelter, were almost offset by declines in user-operated transportation, recreation, and net expenditures abroad.

The flow of consumer income has been retarded in recent quarters by a number of factors, among which were the industrial disputes in both Canada and the United States in the last half of 1959, and a structural change in employment which is characterized by a higher proportion of new workers entering the lower wage rate service-producing industries. In addition, hours worked per week have declined in a number of industries in recent quarters. Disposable income remained unchanged between the second and fourth quarters of 1959, and in the first quarter of 1960 was less than 1 per cent above the earlier period. However, the rate of personal saving rose sharply in the first quarter, reflecting the decline in consumer spending and a modest advance in disposable income.

Consumer credit outstanding, including unsecured bank personal loans, rose by 10 per cent between March 31st, 1959 and March 31st, 1960, with the greater part of the increase centred in personal loans from chartered banks which were higher by 15 per cent. As a percent of disposable income, consumer credit outstanding was 11.9 per cent in the first quarter of 1960 compared with 11.1

per cent one year earlier. The data suggest that, after making allowance for seasonal factors, there was little change in consumer credit outstanding from the fourth quarter of 1959 to the first quarter of 1960.

Investment in Business Inventories

Business inventories in the first quarter of 1960 were built up at a seasonally adjusted annual

rate of \$572 million, a rate of accumulation nearly twice as high as in the closing quarter of 1959. While retail trade accounts for the major part of the increase in the rate of stock-building, there was also a considerably higher rate of accumulation in wholesale trade. Stocks of manufacturers continued to accumulate at about the same rate as in the preceding quarter. Investment in business inventories by broad industrial groups in the two quarters is shown in the following table:

Change in Business Inventories
(Seasonally adjusted at annual rates)

	4th Quarter 1959	1st Quarter 1960
millions of dollars		
Manufacturing	208	192
Durables	168	8
Non-durables	40	184
Retail trade	40	256
Motor vehicle dealers	-112	100
Other	152	156
Wholesale trade	52	108
Other	- 4	16
Totals	296	572

The movement of stocks in retail trade was dominated by the changes in inventory in the hands of motor vehicle dealers. Stocks of motor vehicle dealers had been drawn down in the fourth quarter when automotive production was interrupted as a consequence of the United States' steel strike. The resumption of production on a large scale, together with a fairly modest increase in sales, combined to produce heavy inventory accumulation in the first quarter. Retail stocks in other durable lines, considered as a group, continued to accumulate, but at a lower rate than in the fourth quarter; a shift from heavy accumulation to moderate liquidation in the lumber and building materials' trade between the two quarters was the paramount factor in this development.

Retail stocks in non-durables' lines accumulated at a considerably higher rate in the quarter. Accumulation was fairly general among the trades, in contrast to the fourth quarter, when stocks remained unchanged in many industries. Inventories in the food group continued to accumulate, though at a lower rate than in the fourth quarter.

Within wholesale trade, the accumulation of stocks was substantial in both durable and non-durable lines. However, liquidation took place in some trades, prominent among them being industrial and commercial equipment and construction and building materials.

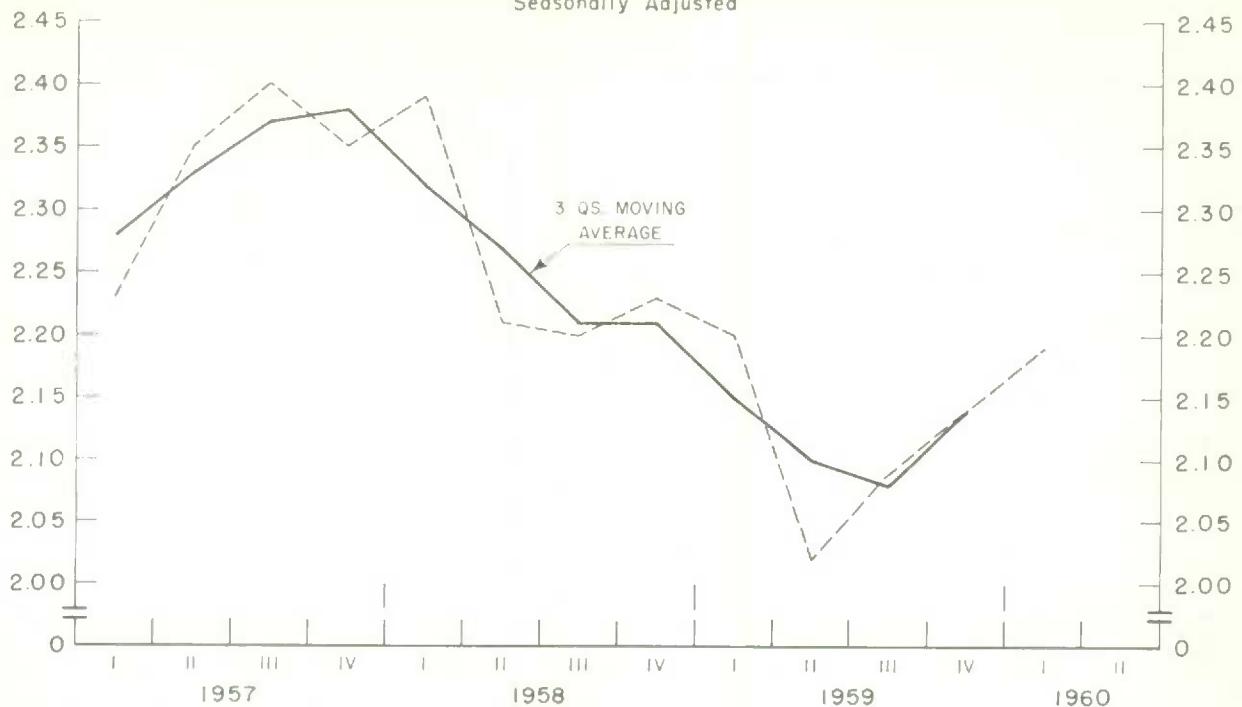

The approximately steady rate of stock-building in manufacturing industries in the first quarter reflects strongly opposed developments in durable and non-durable industries. The rate of accumulation fell sharply in the durable industries, reflecting a markedly reduced rate of stock-building in iron and steel, a shift to heavy liquidation in non-ferrous metals and a shift to moderate liquidation in electrical apparatus and supplies and in non-metallic mineral products; in the wood products industry the shift was in the opposite direction, stocks having been drawn down a little in the fourth quarter and built up considerably in the first quarter.

In the non-durable goods-manufacturing group, the rate of stock accumulation in the first quarter was sharply higher, the highest rates of build-up being in food, chemicals and paper industries.

Business inventories have been built up at varying rates, from quarter to quarter, since the beginning of 1959. By the end of the first quarter of 1960, the relationship of stocks to sales differed considerably in some instances from what it had been a year earlier. In retail trade the ratio of stocks to sales was considerably higher than a year earlier, and also above the 1954 and 1957 peaks, on a seasonally adjusted basis. Stocks of automotive dealers in relation to sales were at a post-war high for that time of the year at the end of March. In wholesale trade, on the other hand, stocks were

MANUFACTURING-STOCK/SHIPMENTS RATIO

Seasonally Adjusted

NOTE. THE RATIO REFERS TO THE LAST MONTH OF THE QUARTER

somewhat lower in relation to sales than a year earlier, and much below the 1954 and 1957 peaks. In manufacturing, the ratio of stocks to shipments was virtually unchanged from a year earlier, but again well below the previous peaks reached in 1953 and 1957. (See Chart).

The relatively low levels of stock/sales (or shipments) ratios in a number of industries during the course of the current expansion have given rise to considerable comment. A number of explanations have been suggested for this, including the possibility that the spread of electronic data processing has led to more effective inventory control, the high rates of interest which have discouraged excessive inventory investment, and the existence of excess capacity which makes it possible to obtain prompt delivery on order. The incentive to accumulate inventories in anticipation of higher prices has also disappeared as prices have been more stable during the recent period.

Exports and Imports of Goods and Services

Exports of goods and services continued to rise in the first quarter of 1960, and at a seasonally adjusted annual rate of \$7.2 billion were nearly 3 per cent higher than in the fourth quarter of 1959 when they were at an all-time peak. For the third quarter in succession, imports of goods and services showed very little change. At a seasonally adjusted annual rate of \$8.3 billion, they were less than 1 per cent higher than in the fourth quarter.

Merchandise exports were at a rate of \$5.7 billion in the first quarter, about 2½ per cent above the level of the preceding quarter. Gains were recorded by almost all the main commodity groups, iron and its products being an important exception. The quarter-to-quarter increases were moderate in most commodity groups except non-ferrous metals. The advance of 12 per cent in exports of non-ferrous metals was the fifth successive quarterly increase for this important export group.

Incomplete detail on commodity imports suggests that the commodity composition of merchandise imports changed considerably between the two quarters. Imports of non-metallic products, agricultural products, wood products, chemicals, and animal products declined, while increases occurred in imports of iron products, and non-ferrous metal products.

On a seasonally adjusted basis, receipts from services rose moderately while payments for services fell moderately between the two quarters. The service series are, however, highly irregular and these movements are not necessarily significant.

The consequence of these divergent movements in total payments and receipts was a further narrowing of the deficit on international current account. The merchandise account came closer into balance, after having fallen to about \$70 million in the fourth quarter of 1959 from about \$590 million in the third (all data at seasonally adjusted annual

rates). The overall deficit fell from about \$1.2 billion in the fourth quarter of 1959 to about \$1.1 billion in the first quarter of 1960.

The international current account for the first quarter of 1960 is compared with the same period a year ago in the following table:

	1Q '59 ¹	1Q '60	Change
millions of dollars			
Receipts	1,347	1,586	239
Merchandise	1,061	1,284	223
Services	286	302	16
Payments	1,745	1,887	142
Merchandise	1,215	1,330	115
Services	530	557	27
Deficit	398	301	- 97
Merchandise	154	46	-108
Services	244	255	11

¹ Small revisions in the 1959 Balance of Payments data have not yet been incorporated in the National Accounts.

In this comparison, merchandise exports rose about twice as much as merchandise imports and the deficit on merchandise trade fell sharply. The deficit on services continued to increase.

The major gains in merchandise exports in this comparison were in exports of metals and forest products; the increase in exports of steel, copper, nickel and aluminum was particularly large; other important export commodities showing gains were uranium, pulp and paper and lumber. The increase in imports was widely distributed among commodities; automobiles, industrial materials and machinery and equipment showed further increases; petroleum and some agricultural commodities were exceptions to this trend.

Fixed Capital Formation

Total spending on gross fixed capital formation showed a small decline in the first quarter, from a seasonally adjusted annual rate of \$7.1 billion in the fourth quarter of 1959, to \$7.0 billion, a drop of 1 per cent. The first quarter figure represents a rate only slightly below the \$7.1 billion foreseen by businessmen for the year 1960 as a whole in the outlook survey published last February.

The first quarter decline was centred in business outlays for new plant and equipment and was mainly attributable to a fall-off of 3 per cent in machinery and equipment investment. The latter development reflected reduced outlays by the transportation industry for railway rolling stock. Non-residential construction expenditures showed a fractional loss.

The value of housing construction was unchanged in the first quarter from the level of \$1,748 million reached in the fourth quarter of 1959. This rate of investment is at present somewhat above

the predicted level of \$1,677 million for the whole year, although the first quarter decline of 33 per cent in dwelling unit starts (seasonally adjusted) suggests there will likely be a fairly substantial falling off in housing investment in the second quarter. The completion of 157.7 thousand dwelling units in the first quarter (reflecting the high level of starts in the two previous quarters), was responsible for the maintenance of the high value of residential construction put in place during the quarter.

Related statistical information indicates that, after allowing for seasonal factors, there was a drop in shipments of construction materials in the first quarter, and also a drop in new orders received by those industries producing construction goods.

Changes in Income Components

National income, seasonally adjusted, showed only a small rise in the first quarter of 1960, as the rate of increase in labour income slowed, and corporation profits remained unchanged. Net income of non-farm unincorporated business enterprises fell during the quarter, reflecting losses in retail trade; however, there was an increase in net income of farm operators associated with a rise in production of livestock. The flow of interest, dividends and net rental income of persons continued upward.

The small advance in labour income from the fourth quarter of 1959 (seasonally adjusted), reflected the slight fall-off in this component which occurred between January and March. The main contributors to this decline within the quarter were forestry, construction, and transportation; adverse weather conditions affected logging operations in British Columbia and also had an influence on railway operations and construction activity.

Taking the quarter as a whole, the increase of 0.8 per cent in labour income from the fourth quarter of 1959 was concentrated in the service industries; labour income in manufacturing showed virtually no change, and labour income in construction declined. Most of the small first quarter increase appears to be attributable to higher wage rates since employment of paid workers showed little change and hours of work were lower in some industries.

Compared with one year earlier, labour income was higher by 5 per cent in the first quarter of 1960. The service industries continued to record relatively large gains—more than 7 per cent. As is shown in the accompanying Table, a slight reduction in the length of the average work week operated to restrain the expansion of labour income in manufacturing and mining.

	Employment	Hours worked per week	Average hourly earnings	Labour income
	(1)	(2)	(3)	(4)
Manufacturing.....	0.9%	-0.2%	3.7%	4.2%
Mining	1.9%	-0.3%	2.5%	3.5%

Note: Columns (1) and (4) refer to all paid workers; columns (2) and (3) refer to production workers only.

The relatively unchanged level of corporation profits in the first quarter of 1960 conceals divergent trends in individual industries. Profits declined in mining by 10 per cent, associated with a small drop in output in this industry in the first quarter. Profits in manufacturing declined by 2 per cent, with a moderate fall-off in foods and beverages, and a sharp drop in non-metallic mineral products; the latter may be associated with the decline in output in the construction industry, which is a large consumer of cement and glass products. Profits were also lower in the retail and wholesale trade industries in the first quarter, the decline amounting to 10 per cent for the trade group as a whole.

The declines in these industries were counterbalanced by higher profits in a number of other industrial groups. Gains occurred in public utility operation and in some of the service industries.

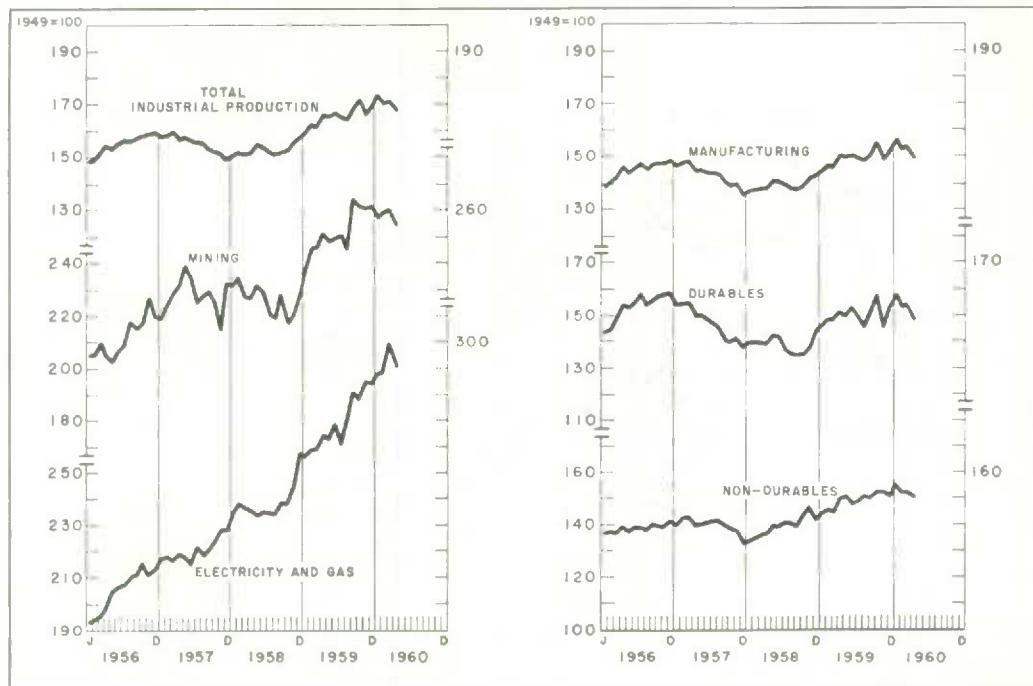

Within manufacturing, the major gain was in electrical apparatus and supplies. Profits in transportation, storage and communication showed a sharp increase in the quarter.

Seasonally adjusted corporation profits data by industry are now being released on a regular basis in the quarterly D.B.S. series, "Corporation Profits", published by the Business Finance Division of D.B.S. Detail of the changes described above will appear in the first quarter 1960 issue of this publication.

Compared with one year earlier, corporation profits (after dividends paid abroad) in the first quarter of 1960 were higher by about 5 per cent; at \$2.9 billion, profits in the first quarter were running at about the same seasonally adjusted annual rate as that reached at the previous peak in mid-1956.

INDUSTRIAL PRODUCTION*

The index of industrial production declined by 2.4 per cent in April, and was at a level about 3.5 per cent below the January figure; all three major sectors of the index contributed to the April decline.

PRODUCTION

ADJUSTED FOR SEASONAL VARIATION

	Gross National Product at Market Prices		Total Industrial Production	Mining Production	Manufacturing Production

*A more detailed breakdown of Industrial Production, Seasonally Adjusted, can be found in Table 6.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.⁽³⁾Gross National Product at market prices excluding accrued net income of farm operators from farm production.

EMPLOYMENT AND HOURS WORKED*

The composite index of industrial employment also fell slightly in April, with employment in mining and manufacturing showing declines.

Average hours worked continued to edge downward, following the general trend of the last few months.

⁽¹⁾Averages of unadjusted data.⁽²⁾Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D. or months for cyclical dominance.

LABOUR FORCE AND LABOUR INCOME

The increase in persons with jobs in May was somewhat short of the increase in the total labour force, and the proportion of persons without jobs and seeking work was higher than in the previous month.

Total labour income rose slightly in April.

⁽²⁾Seasonally adjusted at annual rates.

*Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND MISCELLANEOUS SERIES

Exports were higher in May following the sharp decline of the previous month.

Imports in April were above the March level.

(1) "De facto" population. Annual data are for June. (2) At current market prices. Annual data are totals of the four quarters. (3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (4) All manufactured products. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at £250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates. (6) Annual data are for June.

4 Note.—Until the end of 1958, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1959 and 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Not applicable to figures on population and immigration. (2) Yukon and North-West Territories not included in figures for births, marriages and deaths. (3) Estimates are now published quarterly following Census date, June 1, as well as for January 1 and July 1 of each year. (4) Exclusive of stillbirths.

(5) Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

NOTE: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts, Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item. ⁽²⁾Includes adjusting entry. ⁽³⁾Includes residual error of estimate. ⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. ⁽⁵⁾Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57."

[1]The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

(1) Seasonal (formerly supplementary) benefit data included.

(2) On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.

(3) The number of new cases of recorded unemployment among insured persons.

(4) Estimates are based on average weekly number of payments.

(5) The number of calendar weeks during which a benefit payment was made.

(6) Revised to relate to the Thursday nearest to the last day of the month.

(7) Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

(1) The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. 27

(2) The annual and monthly "all industries" totals for 1958 and 1959 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(1)In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

(2)Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlog.

(3)Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

(4)Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

⁽¹⁾Releases of domestically manufactured tobacco for consumption in Canada, barrels of 25 gallons each.

⁽²⁾End of period.

⁽³⁾The production of beer is shown in thousand barrels.

⁽⁴⁾Includes bottling of imported liquors.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.
⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.
⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

Total									

Source: Monthly Report on Primary Iron and Steel—D.B.S.

Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada.⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1958 and 1959 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data.

⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

^{*}See also Tables 18 and 19.

(1)Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1958 include final payments for all grains. From August, 1958 to July 1959, western wheat prices are initial plus interim payments. Since August 1, 1959, only initial prices are available for wheat, oats and barley.

(2)Include subsidy on hogs.

(3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4)Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

⁽¹⁾ Prior to 1958 data are not comparable to subsequent data which exclude trades extending credit largely to commercial users.

⁽²⁾ Conditional sale agree-

ments.

⁽³⁾ Other deferred payment plans.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods.

⁽²⁾Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.

⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

⁽⁴⁾In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards.

Balances were as follows:

June 1958-31

Sept. 1958-39

Dec. 1958-35

Mar. 1959-32

June, 1959-36

Sept. 1959-44

Dec. 1959-40

⁽⁵⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁶⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Does not include re-exports. ⁽²⁾As from January 1958, the export total, the three indexes and the "miscellaneous commodities" total exclude various non-commercial and special transactions (mainly "settler's effects" and "private donations and gifts") previously included in domestic exports. During 1958 these transactions averaged approximately \$2,900,000 per month. For a more detailed explanation see Trade of Canada (Exports) January 1960. ⁽³⁾As from January 1958, includes square timber, formerly included with "Other wood and paper." ⁽⁴⁾As from January 1958, excludes square timber, now included with "Lumber and timber." ⁽⁵⁾Includes pigs, ingots, blooms and billets, castings and forgings and rolling mill products.

(1) As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. (2) Includes pigs, ingots, blooms and billets, casting and forgings, ferro-alloys and rolling mill products.

(1) The trade figures have been adjusted to conform to balance of payments definitions of the international exchange of commodities.

(2) Balance also reflects all other current transactions.

(3) Net sales (+) or purchases (-) by Canadians of Canadian and foreign securities (trading, new issues and retirements).

Sources: Quarterly Estimates of the Canadian Balance of International Payments, D.B.S. and Statistical Summary of Bank of Canada.

70 (1)Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. (2)Mainly deposits of foreign banks. (3)Capital, rest fund and undivided profits as at the latest fiscal year-end. (4)Including issues payable in foreign currency. (5)Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. (6)Excluding Canadian day to day loans. (7)Loans to grain dealers and exporters. (8)Loans to finance purchase of Canada Savings bonds at time of issue. (9)Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. (10)Including loans to instalment finance companies. Source: Statistical Summary of Bank of Canada.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

Source: Quarterly Corporation Profits, D.B.S.

(2) Includes, in addition to the industries listed, Tobacco.

(3) Includes Printing and Publishing and Allied Industries.

NOTE: Symbols used: Throughout the Review (...) means "not available"; (—) means "nil" or "less than can be shown with number of digits used"; (P) signifies "preliminary" and (R) indicates "revised". In some cases the annual data for 1958 and 1959 are provisional.

Canadian Minerals . . .

STATISTICS CANADA LIBRARY
BIBLIOTHÈQUE STATISTIQUE CANADA
1010734985

have contributed tremendously to the nation's economic development

In 1886, when systematic data were first collected, minerals were produced to the value of \$10 million

Now the value exceeds \$2 billion a year, and the mining industry employs 145,000 persons, pays \$600 million in salaries and wages and upwards of \$900 million for materials and supplies. Minerals are a major contributor to Canada's export trade.

The Dominion Bureau of Statistics keeps close tab on the developments in this field and publishes 9 monthly and 20 annual reports on the full range of Canadian minerals. The monthlies provide current production and other data, while the annuals contain detailed statistics on products shipped, employment, salaries and wages, materials and supplies used and other information.

Monthly Reports are issued separately on—

- Gold ● Silver, Lead and Zinc ● Copper and Nickel
- Asbestos ● Iron Ore ● Salt ● Coal
- Crude Petroleum and Natural Gas ● Leading Minerals

Annual Reports range in coverage from Asbestos to Zinc. A special report contains a chronological record of Canadian mining events from 1604.

A list of DBS publications on Mining and other aspects of the Canadian economy is contained in the Catalogue of Current Publications 1959. Write for a free copy to: Information Services Division, Dominion Bureau of Statistics.
