NATIONAL ACCOUNTS INCOME AND EXPENDITURE

SECOND QUARTER 1960

Introductory Review

The Gross National Product, seasonally adjusted, declined by about one and one-half per cent in the second quarter of 1960, following the slowing down in the rate of advance which was evident in the first quarter of the year. With final product prices substantially unchanged, the decline represented for the most part a drop in the physical volume of output from the level of the preceding quarter. The decline marks the first interruption in the upward course of the economy since the final quarter of 1957 when the value (and volume) of output also showed a small drop.

The reversal in the trend of output in the second quarter was associated with a sizable fall-off in total final purchases of goods and services (see Table overleaf) which had shown signs of easing in the first quarter. Much of this decline was centred in external demand for exports of goods and services, which fell by 8 per cent, seasonally adjusted; exports to both the United States and other countries were affected. Final domestic demand was also somewhat lower; further declines occurred in business outlays for plant and equipment, while outlays for new housing fell sharply. These down-

In 1957, price increases obscured the fact that the volume of output began moving downward in the second quarter, recovering briefly in the third, then falling further in the fourth quarter.

ward tendencies were partly, though not completely, offset by a substantial recovery in consumer spending following the weak first quarter. Finally, the rate of business inventory accumulation eased markedly during the quarter, representing a downward shift in terms of new demands on production of close to \$300 million.

While these changes in the major categories of total demand have tended to accumulate in a downward direction in the second quarter, it should be noted that some moderating influences have recently emerged. Merchandise exports recovered strongly in July and were back up to the average levels of the first quarter. (The economies of western Europe have continued buoyant and business conditions in the United States are currently at a very high level). Non-residential building permits were higher in the second quarter, following declines in the first quarter of the year. Thus, the recent tendencies which have appeared in the export figures and in non-residential construction may be somewhat modified when later information becomes available.

The developments in the second quarter have inter-acted to yield a level of production which was about 1 per cent above the same period one year ago in value terms, but about 1 per cent below the same period one year ago in terms of the physical volume of production. Prices over the twelve months have risen by somewhat under 2 per cent.

¹ The price comparisons shown above are based on a set of fixed weight price indexes (1955 = 100), and not upon the implicit price deflators which can be derived by dividing the value series by the volume series. The implicit deflators are weighted by changes in the expenditure pattern over time, and do not permit accurate measurements of price change. A specially constructed set of fixed weight price indexes has therefore been used for purposes of depicting price changes in the above table.

Accompanying these charges in the major demand categories in the second quarter have been associated changes in the composition and direction of the income flows. National income, which had advanced only fractionally in the first quarter, declined by 1½ per cent in the second quarter, on a seasonally adjusted basis. The decline reflected a sharp and widespread drop in corporation profits, and lower returns from other forms of investment income and unincorporated business operations. The flow of income to the business sector was thus substantially reduced in the second quarter.

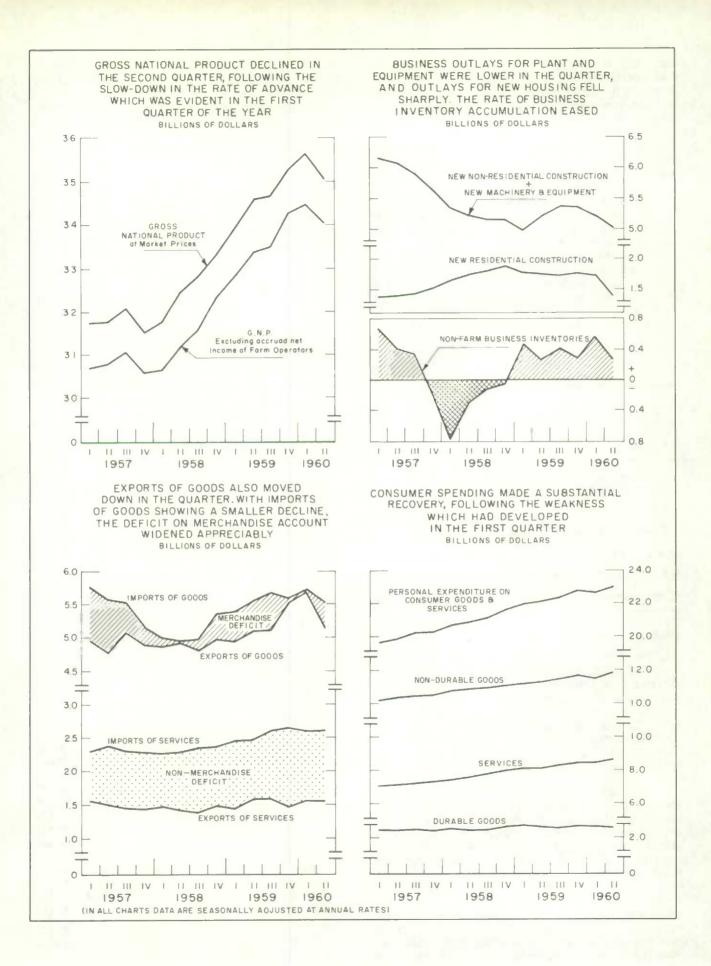

Turning to the personal account, labour income, which had risen uninterruptedly from quarter to quarter since early in 1958, showed virtually no change in the second quarter of 1960; declines in

major goods-producing industries were offset, broadly, by advances in the services sector. Accompanying this stability in labour income, declines occurred in most other forms of personal income in the quarter with the major exception of transfer payments, which rose slightly. On balance, total personal income showed a fractional decline in the quarter, amounting to about one-half of one per cent. This decline in personal income was accompanied by an increase in direct personal tax collections, so that personal disposable income was down to a somewhat greater extent, by about 11/2 per cent. With consumer buying higher, the rate of personal saving fell sharply, to 3.9 per cent of personal disposable income. The second quarter decline brought the level of disposable income to a point approximately equal to that of the second quarter one year earlier. Thus,

disposable income has shown little change over the past twelve months. This retardation in the rate of growth of both personal and disposable income over the past year appears to be a factor of some significance in the development of recent trends in consumer spending. The latter has risen only moderately in 1960, although it moved forward in the second quarter despite the fall-off in disposable income.

Despite reduced business and personal incomes, the flow of revenues to the government sector continued upward in the second quarter. Direct personal tax collections were higher by 10 per cent, partly reflecting the payment in April of tax arrears on income for the year 1959. At the same time, indirect taxes, seasonally adjusted, were also slightly higher in the second quarter, reflecting for the most part gains in Federal excise taxes. Direct taxes on corporations (on an accrual basis) fell off during the

quarter, reflecting the sharp drop in corporation profits. Over all, however, the revenues of the government sector are estimated to have risen by about 2 per cent during the quarter, and were running at an annual rate approximately \$1 billion (or 9 per cent) above the level of the second quarter of 1959. About half of this increase was in the Federal sector. At the same time, Federal expenditures have shown little change over the past year, so that the deficit has narrowed by the full extent of the increase in revenues. In the provincial-municipal government sectors, expenditures have tended to rise along with revenues and the deficit has shown only a moderate improvement.

The table below shows the percentage changes in some of the main income categories from the first half of 1959 to the first half of 1960, compared with those which occurred in the same period one year earlier.

Changes in Major Components of Income

(Seasonally adjusted at annual rates)

	Per cent change					
Selected personal and business income components	First half 1958 to first half 1959	First half 1959 to first half 1960

2. Personal income	6.7	3. 1				
3. Disposable income	6.2	1.8				
4. Wages and salaries	7. 7	4. 3				
Corporate profits before taxes	21.7	-2.3				
S. Net income of non-farm unincorporated business	4.0	-4.2				

Production and Employment

The movement of production by industry in the second quarter reflected the changes in the major categories of demand outlined above. On a seasonally adjusted basis, the volume of total real output is estimated to have declined by close to 1½ per cent. The decline was wholly attributable to the goods-producing industries in which production was down nearly 3 per cent; output in the service-producing industries made a small advance.

The contraction in manufacturing production of about 3 per cent in the second quarter was widespread by industry but more pronounced in the durable sector (5 per cent) than in the non-durable groups (1½ per cent). Production expanded fractionally in one of the major durable groups, namely non-ferrous metal products; in all others, output contracted, the declines ranging from 4 per cent in wood products and 5 per cent in transportation equipment to 7 per cent in iron and steel, electrical apparatus and supplies and non-metallic mineral products. Among individual durable goods industries showing a sharp contraction in output were iron

castings, gypsum products and telecommunications equipment; the loss in output in each of these industries exceeded 20 per cent. The fall in output of 15 per cent in concrete products and of 14 per cent in primary iron and steel was also relatively large. In agricultural implements, heating and cooking apparatus, refrigerators and appliances, motor vehicles, motor vehicle parts and wire and wire goods the decline in production was somewhat in excess of the average for durable manufactures as a whole.

The changes in output in the non-durable manufacturing industries were for the most part also in a downward direction, though the declines were generally small. A modest gain in output occurred in products of petroleum and coal and fractional increases in foods and in the miscellaneous group. In most other non-durable goods industries production fell off a little. Exceptions were textiles and tobacco, where output fell 5 per cent and the rubber industry, where there was a sharp contraction, amounting to 17 per cent.

A 1½ per cent drop in mining production, seasonally adjusted, in the second quarter was the

outcome of conflicting trends among and within the component groups. In fuel mining a sharp advance in output of natural gas (23 per cent) and a significant gain in output of crude petroleum (7 per cent) more than offset the continuing decline in coal mining, raising production of fuels by 6 per cent. Reflecting a substantial improvement in production of asbestos, output in non-metal mining was up 3 per cent. Production in metal mining fell 8 per cent, reflecting the sharp cut-backs in operations in the uranium mines and a small decline in output of copper; production of other major metals and minerals was higher, the largest gains being in iron ore and nickel (13 and 6 per cent). Quarrying, the remaining component of the mining industry, showed a drop in output of 6 per cent in the second quarter.

The volume of activity in the construction industry continued to decline in the second quarter. Output was down about 7 per cent, reflecting the drop in expenditures for housing and the easing in activity in other construction. Likewise in forestry, the rate of decline was substantial and higher than in the previous quarter.

In the other industries and in most of the service-producing industries, output continued to advance in the second quarter, with the overall gain amounting to about 1 per cent.

Despite the drop in production in the second quarter, the first six months of 1960 compares favourably with the same period a year ago for production as a whole as well as for almost all the major industrial groups. The two exceptions are construction and agriculture. Conspicuously large gains occurred in forestry and public utilities. A small decline in farm output reflects lower production of livestock and poultry, largely offset by expanded output of most other farm products. The gain of about 1½ per cent in overall output on the six months basis reflects advances of about equal magnitude in both the service-producing industries and the goods-producing industries.

The decline in total production in the second quarter, seasonally adjusted, was accompanied by an increase in the total number of persons with jobs of about 0.5 per cent, and of nearly 1 per cent in the non-farm sector. It was also accompanied by somewhat shorter hours of work in some industries. However, the number of persons without jobs and seeking work averaged 6.5 per cent of the labour force in the second quarter, compared with 5.9 per cent in the first quarter. (All of these comparisons are on a seasonally adjusted basis).

Comparing the first six months of this year with the same period of the previous year, the number of persons with jobs was higher by about 2 per cent in total and by more than 3 per cent in the non-farm sector.

Personal Expenditure on Consumer Goods and Services

Personal expenditure resumed its upward course in the second quarter, following the hesitation evident in the first. At a seasonally adjusted annual rate of \$23.1 billion, consumer expenditure was more than 1½ per cent higher than in the preceding quarter. Since there was little evidence of any marked overall change in consumer prices, most of the increase in spending represented a gain in real consumption. The notable feature of the quarter was that the expansion in spending was not supported by enhanced demand for durable goods but rather reflected recovery in non-durable markets and further growth in spending for services.

The second quarter's advance in spending for non-durables of more than 2 per cent was the outcome of gains in almost all non-durable lines. Particularly notable is the more than 3 per cent increase in purchases of clothing following the decline in the first quarter. Expenditures on food also rose a little following the previous quarter's decline, but all of the increase was due to price increases. The rise in spending on tobacco products and on auto parts and accessories was also well in excess of the average for non-durables as a whole.

The 2 per cent drop in purchases of durables is largely attributable to household durables although purchases of cars were also off slightly. All categories of household durables were affected, the sharpest decline being in sales of radios and electrical appliances which were off 7 per cent in value terms. Factory shipments of most major appliances in the second quarter were lower than a year ago by: 16 per cent for washers; 5 per cent for dryers; 11 per cent for electric stoves; 12 per cent for radios; 28 per cent for television sets. The contraction in spending on durables may be related in part to the much reduced level of activity in housing. In a situation of declining sales there was a fairly general tendency for prices to shade downward so that the volume of purchases was slightly higher than the value figures indicate.

Expenditures on services continued their upward trend in the second quarter. The gain of 2 per cent reflects in part changes in the adjustment for net expenditure abroad. Excluding this, the increase is $1\frac{1}{2}$ per cent. Most of the major categories showed gains. As in the past, the rise in spending on services reflected some element of price increase.

When the first half of 1960 is compared with the corresponding period of the previous year, the gain in consumer spending amounts to 4 per cent. In most of the durable categories, the year-over-year comparison is unfavourable. Thus the increase in spending was concentrated in the non-durable and service categories, particularly the latter. It may be noted that the over-the-year increase in consumer spending in volume terms is somewhat below the average for the post-war years, and that this development has been associated with a smaller than average rise in real disposable income.

Rusiness Gross Fixed Capital Formation

Gross fixed capital formation in the second quarter is estimated to have been running at a seasonally adjusted annual rate of \$6.4 billion, some 7 per cent lower than in the first quarter. This decline is largely attributable to a steep decline in expenditures for housing but there was also some curtailment in outlays for plant and equipment.

Expenditures for residential construction are estimated to have fallen about 18 per cent between the first and second quarters of 1960. This trend in housing is related in part to the stringency in mortgage markets in the early months of 1960. particularly as it affected lending under the National Housing Act. Altogether, National Housing Act Loans were made for only 10,943 dwellings in the first six months of 1960, compared to 28,968 dwellings in the same period one year earlier. In the second quarter of 1960, total housing starts, seasonally adjusted, declined by 10 per cent, while total completions fell by 21 per cent, seasonally adjusted. After Central Mortgage and Housing Corporation direct loans again became available in April, starts increased in June and July. However, there was a decline in starts in August, despite further easing in the availability of mortgage money.

Business outlays for plant and equipment were also off between the first and second quarters, by close to 4 per cent. Non-residential construction

expenditure declined by 2 per cent, and outlays for machinery and equipment by 5 per cent. Evidence of a drop in purchases of machinery and equipment is to be found in domestic shipments as well as in imports of such goods, both of which were down by 5 per cent in the second quarter. A wide variety of machinery and equipment items were so affected.

In the first six months of 1960, business outlays for plant and equipment were running fairly close to the rate for the corresponding period of 1959, but somewhat below last year's annual rate. The shortfall from last year's annual rate is evident in outlays for both non-residential construction and machinery and equipment, but particularly in the latter. The mid-year review of investment intentions in 1960 indicated an increase of about 6 per cent in business expenditures for plant and equipment (excluding housing). Performance thus far in the year does not confirm these expectations.

Investment in Business Inventories

The rate at which business inventories were being accumulated abated in the second quarter. At a seasonally adjusted annual rate of \$280 million, accumulation was less than half as large as in the preceding quarter. Virtually all the change in the rate of investment in stocks took place in retail and wholesale trade. In manufacturing the rate of accumulation remained about the same although the emphasis shifted sharply toward the durable goods industries. Investment in business inventories by broad industrial groups in the fourth quarter of 1959 and the first two quarters of 1960 is shown in the accompanying table.

 $^{^{1}}$ Monthly data on starts refer to those in municipalities of 5,000 persons, or over.

Change in Business Inventories

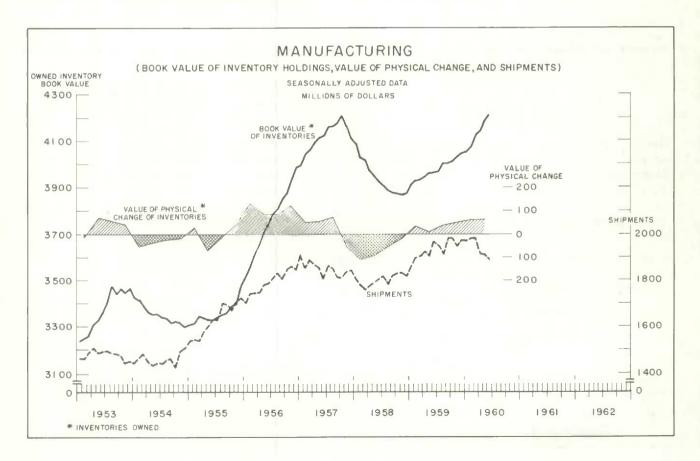

(Seasonally adjusted at annual rates)

	4Q 1959	1Q 1960	2Q 1960
	m	illions of dollars	
Manufacturing Durables Non-durables	208 168 40	256 84 172	268 252 16
Retail trade Motor vehicle dealers Other	40 -112 152	228 92 136	- 4 128 -132
Wholesale trade	52	104	16
Other industries	- 4	8	_
Totals	296	596	280

Manufacturers re-stocked at about the same rate as in the first quarter but the industrial pattern of stock-building changed. In the second quarter, unlike the first, the major part of the accumulation took place in the durable goods lines. All the durable goods industries, with the exception of transportation equipment, added to their inventories, the most pronounced build-up being in iron and steel. The non-ferrous metal and non-metallic minerals industries shifted from liquidation in the first quarter to accumulation in the second and in the former industry the shift was decidedly pronounced. Stocks

were drawn down moderately in most of the non-durable lines.

Manufacturers' shipments, seasonally adjusted, have been on a declining trend since March. New orders declined in both the first and second quarters. At the same time, the book value of inventories owned has continued to rise in line with the trend which began early in 1959 (see Chart). The ratio of stocks to shipments in manufacturing rose sharply in the second quarter, to the highest level since early 1958.

In a situation of selective improvement in retail sales, retail trade dealers shifted from a fairly high rate of accumulation in the first quarter to slight liquidation in the second. This overall result was the outcome of a considerably reduced rate of build-up in the durable trades and a shift to liquidation in the non-durable trades. The rate of accumulation in the stocks of motor vehicle dealers was higher than in the first quarter. In most other durable trades stocks were drawn down, the liquidation being most pronounced in lumber and building materials, hardware, and farm implements. The shift to liquidation of stocks of non-durables took place largely in the miscellaneous trades and in apparel stores.

In wholesale trade the rate of accumulation fell sharply, the durable trades shifting from accumulation to liquidation and the non-durable trades sharply reducing their rate of accumulation.

Exports and Imports of Goods and Services

Exports of goods and services, which had advanced sharply in the fourth quarter of 1959 and made further gains in the first quarter of 1960, receded in the second quarter. At a seasonally adjusted annual rate of \$6.7 billions, they were down 7.5 per cent between the two quarters. At the same time, imports of goods and services declined moderately and at a seasonally adjusted annual rate of \$8.1 billions were about 2½ per cent lower than in the first quarter. The consequence of these

movements was a widening of the deficit on current international transactions from about \$1.1 billion to \$1.4 billion, in contrast to the narrowing that had been a feature of the trade imbalance in the two preceding quarters.

Movements in the merchandise account are primarily responsible for the recent widening of the deficit. Merchandise exports fell about 9.5 per cent, largely as a result of a steep decline in sales of agricultural products and non-ferrous metal products. Commodity imports also fell, but only by about 4 per cent. On the basis of two months' commodity detail available, it appears that the bulk of the decline in imports in the second quarter took place in iron and its products, associated in part with the fall-off in machinery and equipment investment.

The very substantial improvement in merchandise exports in the first half of 1960 reflected an especially strong first quarter. As has been noted, exports declined between the first and second quarters, seasonally adjusted, and were also lower on a year-to-year basis. The year-to-year drop of 3 per cent partly reflects the effect of developments in the second quarter of 1959, when merchandise exports showed an unusually sharp rise in June of that year. As has been pointed out previously, the July 1960 figures recovered strongly and were 8.7 per cent above a year ago. The accompanying tables show for leading commodities and leading countries the pattern of change between the two quarters.

Domestic Exports

	Per cent change							
Leading commodities	1Q 1960 1Q 1959	2Q 1960 2Q 1959	Half year 1960 Half year 1959

Nickel	88.1	- 4.0	31.8					
Copper and products	134.5	20. 4	62.0					
Fish and fishing products	- 13.8	- 6, 0	- 9.7					
Farm machinery and implements	- 16.2	-29.7	-23.4					
Total domestic exports	22, 9	- 2, 9	8. 4					
Leading countries								
United States	18.3	-10, 1	2. 1					
United Kingdom	29.3	13.6	20.6					
European common market	36.8	19.7	27.7					
Other	28.7	1. 7	13.5					
Total domestic exports	22.9	- 2, 9	8. 4					

In the half-yearly comparison the overall increase in commodity exports of more than 8 per cent reflects conspicuously large gains in sales of aluminum, nickel and copper and substantial losses in sales of farm implements and machinery, wheat, fishery products, and uranium ores and concentrates. Considering trade in terms of leading countries, the pattern in the first half-year comparison was one of sharply expanded sales to the United Kingdom and countries of the European Common Market, and a somewhat higher level of sales to the United States.

Commodity imports, by contrast, show a fairly stable pattern between the two years. The slight increase of just over 2 per cent in the half-year occurred in the first quarter. With only 5 months' commodity detail available, automobiles and some other consumer goods and some industrial materials and equipment appear to account for the rise. Increases of 16 per cent in cotton products, 10 per cent in electrical apparatus, 9 per cent in automobiles, trucks and parts, and 7 per cent in machinery (other than agricultural), more than offset a drop of 9 per cent in imports of crude petroleum and 5 per cent in farm implements.

The exchange value of the Canadian dollar declined in the second quarter, by about 2½ per cent. Thus the price of imports of goods and services rose in the quarter. This in turn was reflected in an increase in the price component of gross available supply.¹ However, the price index of Gross National Product, which is adjusted for the effect of changing import prices, remained relatively unchanged. The price of exports also rose slightly in the quarter. With import prices up more sharply, there was, on balance, a slight deterioration in the terms of trade.

Changes in Income Components

National income, seasonally adjusted, declined by 11/2 per cent in the second quarter of 1960; labour income remained unchanged, corporation profits showed a sharp drop, and lower returns were recorded for other forms of investment income and unincorporated business operations. Net income of non-farm unincorporated business enterprises showed little change as a decline in the construction industry was offset by higher returns in retail trade. but net income of farm operators from farming operations was reduced in line with lower levels of livestock production. Rents, interest and miscellaneous investment income showed a small decline, reflecting a fall-off in the trading profits of government enterprises and lower returns from interest on investments.

The stability in labour income in the second quarter reflected offsetting movements in income in individual industries. Labour income was considerably lower in forestry, somewhat lower in mining, construction, agriculture and manufacturing, somewhat higher in finance, insurance and real estate, trade and services and about the same in public utilities and transportation storage and communications. Some reduction in the length of the work week was a restraining influence on the advance of income in the mining and manufacturing industries.

For the first half of the year labour income was higher by more than 4 per cent, with gains in almost all major industries. Construction is a significant exception; income was down slightly. The largest gain (10 per cent) occurred in forestry, reflecting the distinct improvement in employment in this industry. The service industries continued to record relatively large gains and in trade the rise was also above average. In mining and manufacturing the gains were comparatively small. The factors affecting income in these industries are set out in the accompanying table.

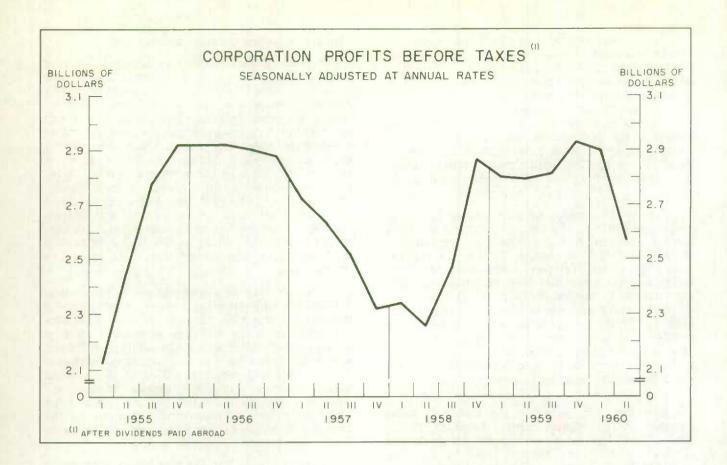

First Half 1960 over First Half 1959

	Per cent change							
	Employment	Hours worked per week	Average hourly earnings	Labour income				
Manufacturing	-0.1	-0.8	3. 7	3. 2				
Mining	-1.4	0.7	2.5	1. 7				

The decline of 11 per cent in seasonally adjusted corporation profits (excluding dividends paid abroad) in the second quarter of 1960 was one of the sharpest on record. Manufacturing profits declined by 11 per cent, associated with a drop of 3 per cent in manufacturing production during the quarter. Declines of over 20 per cent occurred in

iron and steel products, electrical apparatus and supplies and wood products, with smaller losses in chemicals, textiles and printing, publishing and allied industries. Profits in foods and beverages, rubber, and paper sub-groups remained relatively unchanged from the previous quarter.

¹ Gross National Product (domestic production), plus imports.

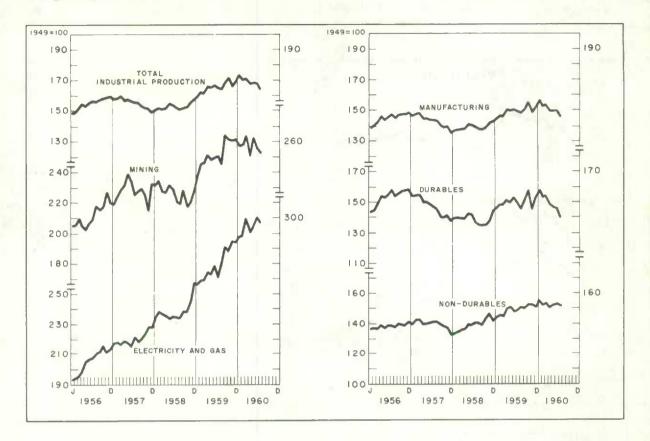

Other major industries in which sharp declines were registered during the quarter were transportation, storage and communication (-25 per cent), and wholesale trade (-22 per cent). Profits in retail trade, and finance, insurance and real estate were somewhat higher during the quarter.

The second quarter fall in total corporation profits is the first major set-back in this area since the recovery which began in 1958, following almost two years of steady decline. Taking the first six months of 1960 together, corporation profits are now about 2 per cent below the average for the first half of the year 1959.

PRODUCTION*

The index of industrial production declined by 2 per cent in July, reflecting a drop in all three major component industries. The July fall-off brought the index to a level about 5 per cent below the peak at the beginning of the year.

^{*}A more detailed breakdown of Industrial Production, Seasonally Adjusted, can be found in Table 6.

(a) Averages or totals of unadjusted data, (b) Seasonally adjusted at annual rates. (c) Gross National Product at market prices excluding accrued net income of farm operators from farm production.

EMPLOYMENT, EARNINGS AND HOURS WORKED*

The composite index of industrial employment edged downward in July, having moved irregularly within a narrow range for the past six months.

Average hours worked per week were higher in July, though the trend has been downward since the latter part of 1959; average hourly earnings were unchanged.

			Manufacturii	ng(t)			Manufa	eturing		age Hours ek in Manuf

(i) Averages of unadjusted data.

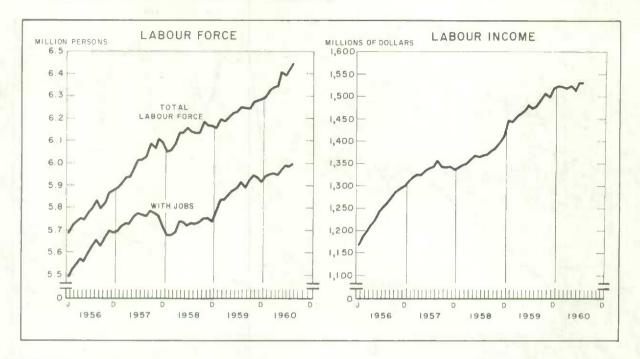

(ii) Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D. or months for cyclical dominance.

LABOUR FORCE AND LABOUR INCOME

Both the labour force and the total number of persons with jobs were higher in August. Persons without and jobs seeking work were also higher, amounting to 6.9 per cent of the labour force on a seasonally adjusted basis.

Total labour income remained unchanged in July.

			(Civilian Labour	Force			D! (('	Labo	ur Income

*More detailed information on retail trade, Seasonally Adjusted, can be found in Table 46.

(DAverages of unadjusted data.

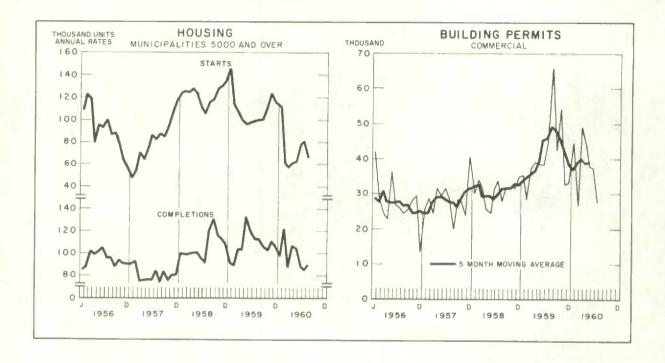

(DSource: Sales of New Motor Vehicles and Motor Vehicle Financing.

(a) Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

CONSTRUCTION AND BUILDING PERMITS

Housing starts declined sharply in August, interrupting the upward trend of the previous four months. Completions rose following a three-month decline.

Commercial building permits declined in July for the fifth consecutive month.

⁽¹⁾Averages or totals of unadjusted data. (2)Seasonally adjusted at annual rates, *Seasonal adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND MISCELLANEOUS SERIES

Exports declined in August from the July level, but were close to the average rate for the first quarter of the year.

Imports in August were somewhat above the July level, but below the average of both the first and second quarters.

⁽i) De facto" population. Annual data are for June. (i) At current market prices. Annual data are totals of the four quarters. (i) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries. (i) All manufactured products. (ii) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates. (ii) Annual data are for June.

Note.—Until the end of 1959, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence.

Figures for 1960 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

O'Not applicable to figures on population and immigration.

O'Yukon and North-West Territories not included in figures for births, marriages and deaths.

O'Estimates are now published quarterly following Census date, June 1, as well as for January 1 and July 1 of each year.

O'Exclusive of stillbirths.

O'Exclusive of stillbirths.

O'Interior Monthly Report of Vital Statistics, D.B.S. and Department of Citizenship and Immigration.

Note: The quarterly data for the years 1956, 1957 and 1958 are now operative on the new revised basis described in the main reference document, "National Accounts. Income and Expenditure, 1926-1956", issued earlier this year. The method of mechanically linking the old quarterly series to the new annual levels which was used for 1956, 1957 and the first two quarters of 1958 is discontinued. No changes have been made to annual totals previously published. The revised quarterly series differs only slightly from the mechanically linked series.

Note: For detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-562) "Revised Index of Industrial Production, 1935-57."

[!The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

O'The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.

(2)The annual and monthly "all industries" totals for 1958 and 1959 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

(i) These totals include all generating agencies producing over ten million kilowatt hours per year, generating industries respectively, producing over ten million kilowatt hours per year.

(ii) Less imports, the amount used in electric boilers.

Source: Monthly Report, Electric Power Statistics, D.B.S.

(2)These columns include all generating utilities and (1)Total net generation less net exports, (3)Mainly

OIn industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

OTotal new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as slipments in the month received) or whether they will be added to existing backlogs.

OEstimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

OManufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

OMonthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

OTotal pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

OCustoms exports.

OMill shipments destined for export.

(i) Includes some silvery pig iron formerly included with ferro-alloys. (ii) Excluding shipments for processing. (iii) Imports include, in addition to all other shapes, wire and wire rope. Imports exclude castings, forgings, fittings and couplings. (iii) Monthly average. (iii) Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1959 and 1959 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data.

Outcomes

OThe coverage was extended to 507 municipalities in 1948, and as of 1959, stands at 1,014, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building astivity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abundanced. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽i) Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.
(i) Planks and boards, flooring and square timber.
(ii) Ilollow blocks including fireproofing and load-bearing tile.
(iii) For building insulation only.
(ii) Figures cover the production of firms which normally account for 85 per cent of the total for Canada.
(ii) Includes concrete chimney blocks.
(ii) Factory sales of firms which normally account for 96% of total Canadian production.
(iii) Reports; Concrete Products; Products made from Canadian clays; Asphalt Roofing; Rigid Insulating Board; Iron Castings and Cast Iron Pipes and Fit lings; Steel Wire and Specified Wire Products; Gypsum Products; Mineral Wool; Sales of Paints, Varnishes and Lacquers and Trade of Canada, D.B.S.

^{*}Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. O'Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. O'Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. O'Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

O'In addition to the items shown here, quarterly figures are available on the use of oil companies' credit cards. Balances were as follows:

June 1958-31 Sept. 1958-39 Dec. 1958-35 Mar. 1959-32 June, 1959-36 Sept. 1959-44 Dec. 1959-40

(i) Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1958 and 1959 differ from the sum of the monthly data due to revisions which cannot be allocated by months. (i) As of January, 1958, statistics include the British Columbia Electric Railway. (i) As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. (i) Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

(ii) Mainly deposits of foreign banks.

(iii) Capital, rest fund and undivided profits as at the latest fiscal year-end.

(iii) Including issues payable in foreign currency.

(iii) Example Canadian day to day loans.

(iii) Including Issues payable in foreign currency assets less foreign currency liabilities.

(iii) Including Issues payable in foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

(iii) Including Issues payable in foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

(iii) Including Issues payable in foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

⁷² ONote Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks, OSubsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. OLess total float, i.e. cheques and other items in transit (net). OAt September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclusified from 'personal savings deposits' to 'other notice deposits'. The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

insurance sales.

OThe Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to not profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies carning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(O'Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

Rubber, Lenther, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

Canadian Agriculture

YESTERDAY The Census of New France in 1667 recorded a population of 3,918 whites (668 families), having 11,448 arpents under cultivation with 3,107 cattle and 85 sheep.

TODAY The 1956 Census recorded a population of 16,080,791 and 3,711,500 families with 2,746,755 persons living on 575,015 farms having an area of 173,923,691 acres, and livestock population of 11,019,403 cattle, 784,018 horses, 4,732,799 pigs, 1,638,194 sheep and 73,160,368 poultry.

Statistics on farming were essential to determine the progress of the young colony. Today agriculture is a far-reaching and complex industry and there is constant need for statistical data on its many phases.

- DBS conducts 5- and 10-year censuses of agriculture which provide a detailed picture of the development of the industry.
- DBS publishes a wide range of current information on production, value and disposition of field and special crops, livestock, dairying, fur farms; and on farm cash and net income, farm wages and prices of agricultural products.
- DBS data on agriculture are essential to planning in the industry and in many other fields and are used extensively by governments, farmers and farm organizations, food packers and processors, storage warehouses, wholesalers and retailers, transportation services, consumers, exporters and importers, manufacturers of farm implements and fertilizers, banks and other lending agencies.

A complete list of DBS publications is contained in the Catalogue of Current Publications. Write for a free copy to: Information Services Division, Dominion Bureau of Statistics.
