## RECENT ECONOMIC DEVELOPMENTS IN CANADA AND THE UNITED STATES<sup>1</sup>

The present article reviews economic developments in Canada and the United States in 1961 bringing up to date a previous article published in the Canadian Statistical Review in January of this year.

In the United States the year thus far has been one of prompt and vigorous recovery from a minor down-turn, although at the time of writing recovery seems to have lost some of its momentum, presumably because of work stoppages in the automotive industry which have interrupted the flow of orders to automotive suppliers and the deliveries of the new model cars to distributors. Defence requirements have been an important stimulus to production and a series of government measures have swelled the flow of income to the personal sector. The demand for output to rebuild stocks in response to rising production and sales together with a moderate upward revision of plans for fixed investment and an increase in housing have also given a forward impetus to the economy. The external sector has made no contribution to recovery. Consumer demand, although well sustained, has lacked buoyancy, particularly in the market for durables, despite rising personal income and a lower level of consumer indebtedness. The slackening pace of expansion is evident in the third quarter estimate of Gross

National Product which at \$526.0 billion, is 1.9 per cent higher than in the second quarter when it was 3 per cent higher than the recessionary low first quarter.

The recovery in Canada, like the preceding down-turn, has been less vigorous than in the United States although the most recent evidence seems to suggest some quickening in the tempo of the up-swing. As in the United States, government transactions have played a supporting role and stock-building is now making demands on new production. Fixed investment has acted as a drag on activity thus far in the year. Housing has made no sustained response to easier terms of mortgage credit and consumer market for goods have also lacked buoyancy. Recent data on the external side seem to indicate growing strength as the improvement in economic activity in the United States augments the demand for Canadian export products and the progress of recovery in Canada swells the flow of imports.

The rates of change in Gross National Product and its major components in the two countries in 1960-61 are shown in the accompanying table.

SEASONALLY ADJUSTED INDEXES 1956=100

## Production, Sales, Orders and Inventories

Industrial production in the United States reached its recession low in February of this year when it stood at 102 (1957 = 100), or about 7 per cent below the levels of the first half of 1960, after seasonal adjustment. Lost ground had been pretty well recovered by mid-year. Most of the loss was in durable manufactures which had fallen 15 per cent in the down-turn. It is notable that the down-turn as measured by the index was much less severe and shorter in duration than in the preceding down-turns of 1957-59 and 1953-55. A further rise brought the index to 113 in August but it receded to 112 in September, largely as a result of the strike in the automotive industry and the disruptive effects of hurricanes. Strikes continued to be a factor in October.

While the impetus toward expanding production in the second quarter came from many segments of demand, the most important stimulus came from rising military expenditure. The Department of Commerce reports that contracts placed for defence procurement, research and construction in the first five months of 1961 were 11 per cent higher than in the like period of 1960. Spending out of fiscal year 1961 obligations were lower than planned earlier and will therefore carry over into the current fiscal year.

An improvement in shipments and new business received have been characteristic of all major manufacturing industries in the United States.

By the second quarter, sales by manufacturing industries had risen 5 per cent from the level of the first quarter, the gain in sales of the durable goods group being 8 per cent and of non-durables 3 per cent; in the same time comparison, new orders were up 6 per cent, with the durable goods group up 10 per cent and the non-durable groups up 2 per cent. The improvement in new orders continued into the third quarter and August figures, topping July by 3 per cent, were at a new high. Preliminary reports indicate a further rise in new orders for durables in September, although at considerably less than the August rate; sales of durable goods, however were down slightly, primarily because of the strike in the automotive industry. Thus, the backlog of unfilled orders was rising.

In Canada, as in the United States, the index of industrial production had virtually recovered by mid-year all the ground lost since the previous peak in January, 1960. The 5 per cent decline was, as in previous down-turns, less severe than in the United States, but the duration of the swing was the same. However, the upswing in Canada was less vigorous than in the United States. The most recent data (August) suggest that the expansion, particularly in the durable goods sector of manufacturing, was gaining momentum going into the second half of the year. The accompanying table compares the changes in industrial production in the two countries during the 1960-61 recession.

Index of Industrial Production — United States and Canada

<sup>1</sup> Refers to the total index, not to its components. The peak and trough of the 1960-61 cycle in the United States were January, 1960 and February, 1961; for Canada January, 1960 and July, 1960.

.. Not available.

Data on manufacturers' shipments and new orders in Canada confirm the impression of less vigorous recovery in this country. There was virtually no increase in shipments by manufacturers between the first and second quarters of this year and new orders were off slightly as a whole, although there was some pick-up in new orders for

capital goods and construction goods. However, July and August figures show some improvement in shipments and even more in new orders, thereby building up the backlog of unfilled orders, and sharply reducing the ratio of inventories to shipments.

During the course of the 1960-61 down-turn in the United States, accumulation of business inventories, at the high rate of \$10.8 billion in the first quarter of 1960 when stocks depleted by the steel strike were being built up, fell steadily from quarter to quarter, turning to liquidation in the fourth. Liquidation reached a rate of \$4.3 billion in the first quarter of 1961, but renewed stock-building began in the second. Changes in stocks in the hands of automotive producers and distributors accounted for the greater part of the liquidation in the first quarter and for about one quarter of the build-up in the second. The monthly data for manufacturing inventories indicate a further small build-up in the summer months. Manufacturers' inventories in August, seasonally adjusted were \$53.99 billion compared with \$53.55 billion in July and \$53.36 billion in June, the greater part of the build-up being in the durable goods industries.

In Canada liquidation of business inventories occurred only in the third quarter of 1960, although the rate of accumulation fell sharply during the course of the year. In the first quarter of 1961, the rate of accumulation was negligible but by the second quarter the building-up of stocks was making modest demands on new production. The change in stocks in the hands of automotive dealers was important in the first to second quarter movements in business inventories. Manufacturers, however,

### BUSINESS INVENTORIES AS A PERCENTAGE OF THE GROSS NATIONAL PRODUCT

continued to draw down stocks in the second quarter. Incomplete data for the third quarter shows conflicting movements in manufacturers' inventories rather than the small build-up apparent in the United States.

### The Investment Sector

Business outlays for plant and equipment in the United States appear to have reached the low point of the recent recession in the second quarter of 1961. The recent (July-August) survey of spending plans indicated third and fourth quarter outlays of \$34.8 billion and \$35.9 billion, at seasonally adjusted annual rates, compared with \$33.5 billion in the second, that is a rise of 7 per cent by the fourth quarter. If the investment programme for 1961 is realized, it will be 3 per cent lower than in 1960, with all major industries lower except utilities. Following a hesitant and incomplete recovery between mid-1958 and mid-1960, the down-turn plant and equipment expenditures that occurred in 1960-61 was the smallest of the post-war period.

The expectation of a second half year rise in capital outlays (compared with first half) is common to all major industries except railways, the greatest rate of increase—ranging from 8 to 13 per cent—occurring among non-durable goods manufacturers, commercial firms and public utilities. Generally speaking, the upswing in investment is taking place in the industrial groups where the preceding decline had been relatively mild.

If anticipations are realized, outlays by manufacturing industries in 1961 will be 5 per cent lower than in 1960, with the non-durable groups up 3 per cent and the durable groups down 13 per cent. The July-August survey represents a decline from expectations expressed a quarter earlier by the durable groups, but outlays were expected to level out between the third and the fourth quarter of the year. Fourth quarter rates for non-durable industries would be restored to nearly the previous high of late 1957; upward adjustment in spending plans has characterized this group over the past year.

While outlays by non-manufacturing industries are expected to be lower by 3 per cent, experience and expectations have varied widely as between the different industries. Railways outlays are expected to be down nearly 40 per cent, and plans have been cut back during the course of the year; the non-rail transportation industry plans outlays for 1961 fairly close to the 1960 level. Expenditures for electric and gas utilities, which had reached a peak in 1957 following a prolonged build-up of productive capacity in the mid-50's, are expected to continue at rates about 10 per cent below the peak. Communications and commercial firms expect to remain close to their 1960 peak. Commercial firms expect to reach a new record in the second half of 1961.

After having made some recovery in the latter half of 1960, business outlays for plant and equipment in Canada fell in the first quarter of this year

and again in the second. At a seasonally adjusted annual rate of \$4.7 billion in the second quarter, they were 4½ per cent below the first quarter, which in turn had been 6 per cent lower than in the preceding quarter. Both construction and machinery and equipment were affected. The recent movement of new orders for construction and capital goods, however, does suggest some improvement in the trend of investment outlays in the second half of the year.

During the course of 1961 several steps were taken in the United States to encourage activity in residential construction. Apart from the general easing of long-term credit, buying prices for F.H.A. insured mortgages were raised, borrowing rights of savings and loan associations with the Federal Home Loan Banks were increased and the maximum interest rate of F.H.A. insured mortgage was reduced. Subsequently, the Housing Act of 1961, passed in June, extended the term of F.H.A. no-down-payment mortgages and authorized home improvement loans up to 20 years; the Act also provided for special housing for the elderly and in a number of other ways offered support to housing in urban areas. Early in October the Federal Home Loan Bank Board authorized more liberal terms for loans to finance the "trading in" of existing buildings for new property; it also arranged for hearings on a measure extending the geographic area in which federally chartered savings and loans associations can extend credit without prior approval.

Expenditures on residential construction (non-farm) rose from \$19.3 billion in the first quarter of 1961 to \$20.6 billion in the second and to \$21.9 billion in the third which compares with the peak annual rate of \$22.3 billion in 1959. While housing starts had been rising in the first half of the year, the upward trend was temporarily reversed in the summer months. However, in September starts rose by 3 per cent and Federal housing authorities expressed the opinion that the year's total would be about 2 per cent above that of 1960, despite the fact that they noticed some tightening in mortgage markets.

In Canada, as in the United States, conditions of mortgage credit had eased in the course of 1960 and then at the turn of the year lending terms under the National Housing Act were liberalized. In these circumstances, starts began to rise in the second half of 1960, and were at a very high level in the first quarter of 1961. However, this upward trend was reversed in the second quarter, when starts fell considerably; completions were moderately lower and expenditure on residential construction was down 5 per cent. Data now available for the third quarter indicate a small increase in starts but a near 20 per cent rise in completions, reflecting the high rate of starts in the winter months. Preliminary estimates point to a considerable increase in outlays for housing in the third quarter.

## The External Sector

United States exports of non-military merchandise, which had been rising but at a slackening rate from early in 1959, dropped fairly sharply in the second quarter of 1961. They were then at a seasonally adjusted annual rate of \$20.2 billion, about 6 per cent lower than in the first quarter. Special factors may have been of major importance in this development; higher subsidies on shipments of cotton became effective at the beginning of the current crop year (August) and shipments may have been postponed for this reason; the shipping strike in the second half of June is another special factor; furthermore, exports of wheat declined more than seasonally, partly owing to smaller movements of grain financed under foreign assistance programmes. However, more basic factors were present, namely a slowing down in the rate of growth in production in industrialized countries. In terms of commodities, the major declines were in exports of cotton and to a lesser extent machinery. The eight months cumulative total shows merchandise exports up 3 per cent from the same period a year ago.

Merchandise imports, which had been declining fairly consistently since the last quarter of 1959, picked up a little in the second quarter of 1961, when they were at a seasonally adjusted annual rate of a little more than \$13.6 billion. The movement of imports in the summer months was erratic and the eight month's comparison shows a decline of 6 per cent compared with 1960, but most of that decline was concentrated in the early part of the year.

Industrial materials account for most of the second quarter rise in imports. Iron and steel mill products, imports of which increased about one-third between the first and second quarters, were particularly important in this connection. Where stocks were large, as in the case of copper and iron ore, imports were unaffected by the quickening in domestic economic activity. Imports of machinery and automobiles were practically unchanged between the two quarters; imports of automobiles had already fallen considerably by the first quarter. Imports of non-farm consumer goods (other than cars) were well below the peak rates reached in the second quarter of 1960.

Thus the surplus on merchandise trade, which had been improving for two years, deteriorated considerably between the first and second quarters of this year. However, the international liquidity position of the United States as measured by holdings of gold and convertible currencies, improved by about \$1.0 billion, at seasonally adjusted annual rates, in contrast to a deterioration of \$1.4 billion in the first quarter. The shift between the two quarters reflected large non-recurring transactions and special developments, among them being repayments of loans by foreign governments, some of which took place in advance of schedule. However, the gold outflow was resumed during the course of the third quarter. This outflow was partly a response to the higher rate of interest to be earned in the United Kingdom where bank rate had been raised from 5 to 7 per cent in July. Recently, this rate was reduced to 6½ per cent.

The flow of payments and receipts between Canada and the outside world has been influenced in the recent past by shifts in the interest and dividend account. Payments for services, which had been unusually low in the fourth quarter of 1960, rose sharply in the first quarter of 1961 and then dropped sharply in the second quarter. Meanwhile receipts from services rose from quarter to quarter, and particularly in the second quarter of 1961. On a seasonally adjusted basis, merchandise exports, having risen 5.5 per cent in the first quarter, were virtually unchanged in the second while merchandise imports showed little change in the first quarter and declined moderately in the second. The result as is shown in the accompanying table was a small if growing surplus on commodity account in the first half of the year and a sharply narrowed deficit on invisibles. Between the first and second quarters of this year the total deficit on current international account was reduced by about one-third. The second quarter deficit was the lowest in five years, despite the widening gap on invisibles.

The most recent data show a distinct pick-up in both merchandise exports and imports seasonally adjusted, going into the third quarter. In July, exports (a highly irregular series) slightly exceeded the April rate, the previous all time high; the greater part of this gain was in increased shipments to the United States, presumably reflecting the progress of recovery in that country. Imports rose in both July and August, particularly the latter month; all the increase in imports in the month of August was in purchases from the United States. A substantial part of the recent increase in the value of both exports and imports is due to the altered exchange rate of the Canadian dollar.

#### Government Transactions

Government expenditures have provided support to the level of economic activity in the United States. Purchases of goods and services by the Federal Government rose in the first quarter of 1961 and again in the second, when defence spending reached the highest level in three years. Defence spending is scheduled to rise still further as present programmes are implemented. State and local government expenditures also continued to rise. The government also bolstered income in the personal sector by increasing transfer payments in a series of measures described later in the section entitled "Income Flows". Meanwhile, tax receipts, particularly corporate taxes were shrinking in reflection of the earlier easing in economic activity. The consequence of these opposing movements was a deficit of \$7.9 billion in government transactions in the first quarter of 1961 (on a National Accounts basis) in contrast to a surplus of \$3.5 billion in the second quarter of 1960.

In Canada, government expenditures rose in the second quarter of 1961, after having been roughly unchanged in the first. As in the United States, the increase is largely attributable to outlays for defence. Transfer payments rose sharply

in the second quarter, largely reflecting the extension of national health insurance. As in the United States, corporate tax yields narrowed in the first quarter. The consolidated government deficit widened in the second quarter when it was at an annual rate of \$1.2 billion, in contrast to deficits of \$536 million in 1959 and \$809 million in 1960.

#### Consumer Spending

The sluggishness of retail trade in the United States in spite of record levels of personal income and a relatively favourable debt position has been a subject arousing considerable comment. Consumer expenditure, which had eased a little in the first quarter of the year with a marked softening in the market for durables, made a small gain in the second quarter when it was at a seasonally adjusted annual rate of \$336.1 billion, about 1½ per cent higher than in the first quarter. Much of the increase came in purchases of durables, particularly automobiles, and in the further expansion of spending on services.

Retail sales during the summer months showed no sustained upward movements. At a seasonally adjusted annual rate of \$18.2 billion in September, they were fractionally lower than in August and compared with a recessionary low of \$17.8 billion in January of this year. Department store sales going into the fourth quarter showed good gains over the same weeks a year ago, by comparison with earlier periods of the year, which may indicate some quickening in consumer interest. Moreover, initial reports suggest a fairly good response to the new model cars but the strikes in the industry make it difficult to appraise conditions in the automotive market at this time.

Several factors have been suggested as having a dampening effect on the market for consumer goods in the United States. After a long-sustained high level of purchasing of durables, stocks in the hands of consumers are large. The rate of family formation now reflects the low birth rates of the depressed thirties and this in turn is a basic restraining influence in the market for new housing and in the demand for the household durables associated therewith. Furthermore, services now absorb a larger portion of the consumer dollar reflecting a shift in tastes as well as the relatively large rise in prices in this sector. These factors may also be operative in consumer markets in Canada.

The two surveys of consumer buying intentions, one conducted by the National Industrial Conference Board (May-June) and the other by the Bureau of the Census for the Federal Reserve Board (July), although they differ in points of detail, seem to suggest sustained or improved consumer confidence over a year earlier but they do not indicate any immediate intention to translate renewed confidence into buying plans. In other words, these surveys do not point to an upsurge in consumer spending.

As in the United States, consumer spending in Canada eased a little in the first quarter of 1961 and advanced moderately in the second; the largest gain in the second quarter was in purchases of durables, particularly automobiles. Purchases of new cars rose 8 per cent in the second quarter with all the gain being accounted for by cars of North American manufacture; purchases of British and European cars dropped for the second quarter in succession.

The latest data on retail trade in Canada suggest some improvement in the summer months. July was somewhat higher than the previous quarterly average and August topped this average by nearly 5 per cent, when seasonal factors are taken into account; the August figure was realized despite a distinct decline from the previous month in sales of motor vehicle dealers. However, much of the gain in retail sales was concentrated in Ontario and presumably reflects buying in advance of the sales tax which became effective at the beginning of September.

#### Income Flows

Legislative changes have been or will be among the factors sustaining or expanding personal income in the United States. Unemployment benefits were extended in the spring of the year and the dividends to holders of national service life insurance policies were paid in advance of the original schedule. A special dividend was paid to holders of government life insurance policies. Retirement benefits under the old age and survivors' programme were raised and retirement privileges liberalized. The 15 per cent increase in the minimum wage was scheduled to take effect in September.

Meanwhile the cyclical recovery in production has been adding to the flow of income. The rise in non-farm employment between February and September was about double the normal seasonal gain. At a seasonally adjusted annual rate of \$419.4 billion in August personal income was 4 per cent above the low point in February of this year; further improvement occurred in September, despite the second successive decline in factory payrolls. Moreover, the wage settlements negotiated during the course of the year in major industries have in general involved fairly significant increases in wage rates.

Personal income in Canada rose 1 per cent between the first and second quarters; of the major components, labour income has made modest gains from month to month up to July (the latest figure available). In Canada, as in the United States, non-farm employment rose during the summer months, on a seasonally adjusted basis, and in August was more than 2 per cent above its low point in April of this year. Farm income in the

first half of this year, seasonally adjusted, was running substantially below the level of last year, largely by reason of the much reduced crop of grain in the Prairie Provinces.

In Canada an important factor tending to raise transfer payments in recent years is the gradual adoption of national health insurance. Grants under this heading were at a seasonally adjusted annual rate of \$676 million in the second quarter of 1961, or 55 per cent of all transfer payments, compared with \$177 million in 1957 when they represented about 30 per cent of all transfer payments.

Corporate profits in the United States began to decline in the second quarter of 1960 and this trend was not reversed until the second quarter of 1961 when they rose to a seasonally adjusted annual rate of \$45½ billion, 5½ billion higher than in the preceding quarter but \$2 billion below the previous year's high. Most of the drop in profits was in manufacturing industries and centred in the durable goods industries. Initially, the impact of the down-turn fell on iron and steel and the machinery producing industries, but when the pressures eased in these areas profits in the automotive and construction materials industries began to drop. In the non-durable goods industries profits were fairly well maintained except for the last quarter of 1960 and the first quarter of 1961. Dividends were increased fractionally so that undistributed profits and corporate tax liabilities bore the brunt of the drop in earnings. The scattered evidence available from company reports suggest a further improvement in profits in the third quarter.

In Canada, corporate profits began to decline in the first quarter of 1960, and began to recover in the second quarter of 1961. The pattern of change in corporate profits as measured for National Accounts purposes, that is less dividends paid abroad, has been very much influenced this year by wide swings in dividends paid abroad which were unusually large in the first quarter and dropped sharply in the second. Before dividends paid abroad, corporate profits declined 8 per cent in the first quarter and rose 13 per cent in the second, one of the largest quarterly increases in recent years, but profits were still substantially below the levels of the second half of 1959. After dividends paid abroad, the same time comparisons show a drop of 22 per cent, followed by a rise of 27 per cent. There is scattered evidence of growing strength in corporate profits in the third quarter. The depreciation in the exchange rate of the Canadian dollar has tended to raise profit margins in a number of commodity-producing industries.

#### Conclusion

With the resumption of full-scale operations in the automotive industry in the United States, it should soon become clear whether the recent

slackening in overall activity is simply related to the strikes or whether it is due to more basic factors. Meanwhile the full impact of rising defence expenditures has still to be felt and likewise the effect of the moderate up-turn in business outlays for plant and equipment. Whether the present recovery will be abortive and short-lived, like the 1958-59 recovery, depends to a large extent on the willingness of consumers to come into the market for goods in greater volume.

In Canada, likewise, much depends on the behaviour of consumers. Thus far the building up of inventories has been modest and intensified stock-building may give further stimulus to economic activity. Recent trends in exports are encouraging and further progress of recovery in the United States would give added firmness to external markets.

---

#### NOTE TO USERS OF THE CANADIAN STATISTICAL REVIEW

##### Changes in this Issue

(1) The former Tables 46 and 47 are combined into one table entitled "Table 46 Primary Iron and Steel". This consolidation avoids the repetition of "exports" in both tables and removes the series "Producers Interchange" and "total" shipments to avoid double counting. The series for "domestic" shipments is replaced by a series for the sum of domestic and export shipments. Domestic shipments may be obtained by subtracting exports.

(2) Tables 51 and 52 on Housing Starts and Completions, respectively, in centers of 5,000 and over are added to the section on Construction.

(3) Table 71 contains exports and imports for the 18 countries included in the Organization for European Economic Co-operation (O.E.E.C.). As of October 1, 1961, Canada and the United States

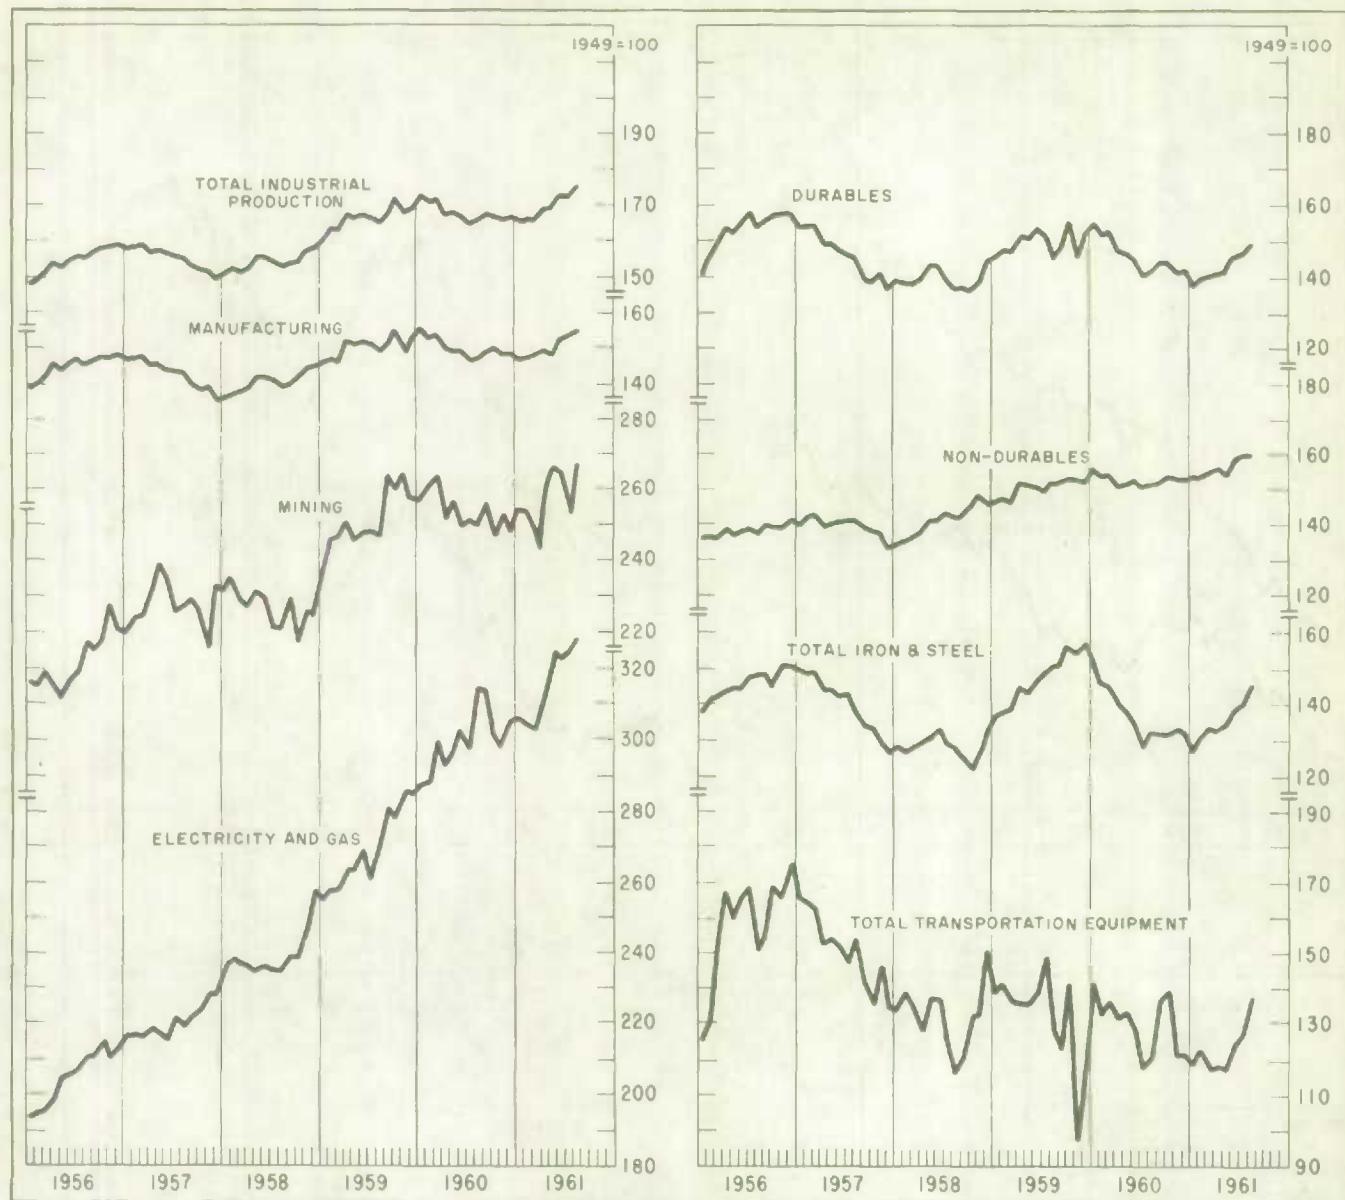

became full members and it is now known as the Organization for Economic Co-operation and Development (O.E.C.D.). Exports and imports for the new grouping of countries will be available with the arrival of October data.

##### Back Records

Past "Notes to Users" gave the publications which carried back records of some of the series in the S section. These publications are often not conveniently available to users, or if available the complete back record has to be compiled from more than one publication. The Dominion Bureau of Statistics has prepared a limited number of back records, seasonally adjusted, for many of the series in the S section, and they are available on request to users who otherwise have difficulty in obtaining them.

**INDUSTRIAL PRODUCTION** (More detail in Table 11)

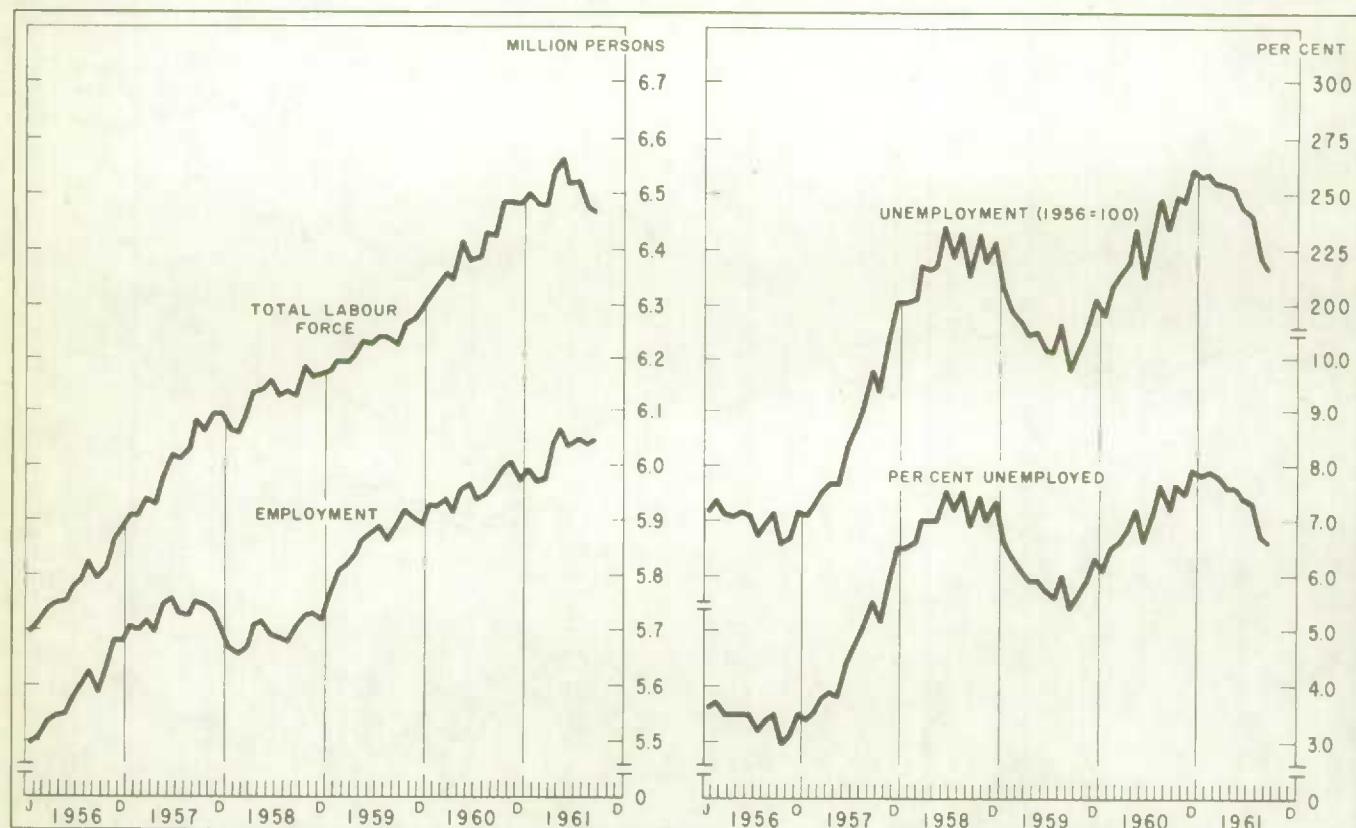

The index of industrial production advanced 1.6% in August on the strength of a sharp gain in mining and more modest gains in manufacturing and in electricity and gas utilities.

## EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 17)

Employment in August increased in the service and trade industries. There was a marked decline in mining, but the other industries showed little change.

## RETAIL TRADE, MOTOR VEHICLE SALES (More detail on Retail Trade in Table 64)

Total retail trade rose 3.6% in August mostly on the strength of pre-sales tax buying in Ontario. This increase was reflected in all sales except those of motor vehicle dealers.

Sales of American type passenger cars were down 15% in August.

	Retail Trade Total	Retail Trade (ex. motor vehicle dealers)	Motor Vehicle Dealers	Department Stores	New Motor Vehicle Sales

**EXPORTS AND IMPORTS** (More detail in Table 71)

Total exports to all countries rose by 8% in July reflecting marked increases to the U.S. and to the "all other countries" group and a modest increase to the United Kingdom.

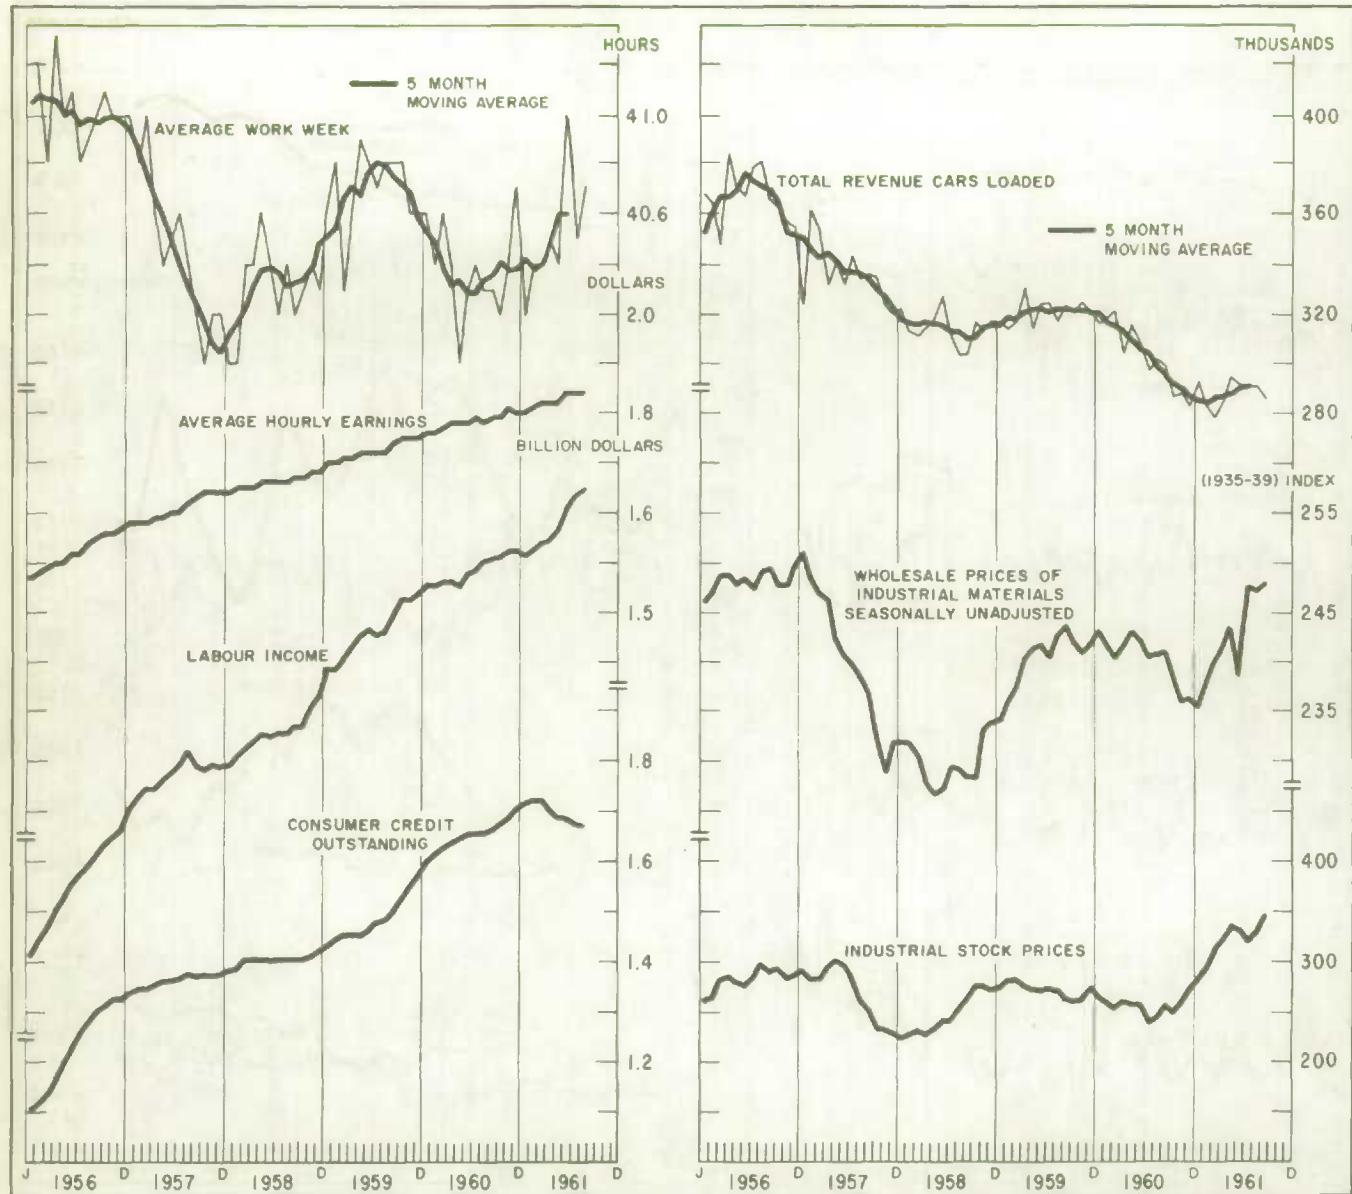

Total imports increased 8% in August on the strength of greatly increased exports to the United States.

<sup>(1)</sup>In previous publications this item was shown after deduction of dividends paid to non-residents; it is now shown inclusive of such dividends. To derive series consistent with past published figures, columns 3 and 4 must be combined.

<sup>(2)</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

<sup>(3)</sup>Includes residual error of estimate.

<sup>(4)</sup>This item differs from column 6, page 5, by excluding the adjustment which has been made to take account of accrued net earnings arising out of Canadian Wheat Board operations.

<sup>(1)</sup>Includes workers on temporary lay-off.

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error.

<sup>(1)</sup>The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. Annual and monthly "all industries" totals for 1959 and 1960 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote (1).

<sup>(1)</sup>Seasonal (formerly supplementary) benefit data included.<sup>(2)</sup>On last working day of month; claimants formerly classified as "short time" and temporary lay-off were included.<sup>(3)</sup>The number of new cases of recorded unemployment among insured persons.<sup>(4)</sup>Estimates are based on average weekly number of payments.<sup>(5)</sup>The number of calendar weeks during which a benefit payment was made.<sup>(6)</sup>Revised to relate to the Thursday nearest to the last day of the month.<sup>(7)</sup>Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

<sup>(1)</sup>In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values. <sup>(2)</sup>Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlog. <sup>(3)</sup>Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys. <sup>(4)</sup>Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, D.B.S.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.  
<sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>(3)</sup>Rough cords of 128 cu. ft.      <sup>(4)</sup>Customs exports.      <sup>(5)</sup>Mill shipments destined for export.

<sup>(1)</sup>Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>(2)</sup>Excluding shipments for re-processing at maker's own plants. <sup>(3)</sup>Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings.

\*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1959 and 1960 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. <sup>(1)</sup>Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

(1) Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

(2) Planks and boards, flooring and square timber.

(3) Hollow blocks including fireproofing and load-bearing tile.

(4) For building insulation only.

(5) Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

(6) Includes concrete chimney blocks, up to December 1959.

(7) Factory sales of firms which normally account for 96% of total Canadian production.

<sup>a</sup>See also Tables 18 and 19.<sup>r</sup>Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1960 are final prices.

From August 1, 1960 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. Final prices for oats and initial prices for barley. Since August 1, 1960, only initial prices are available for these three grains.

<sup>(1)</sup>Include subsidy on hogs.<sup>(2)</sup>Based on price for hogs including

Dominion premium up to September 1960. A rise in ratio favours production of beef.

<sup>(3)</sup>Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. <sup>(2)</sup>Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. <sup>(3)</sup>Annual data are monthly averages of crop year. <sup>(4)</sup>Includes eggs for hatching.

<sup>(1)</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

<sup>(2)</sup>Includes stocks held by manufacturers, wholesalers and other warehouses.  
<sup>(3)</sup>The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 161,000 hundredweight in November.

\*Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total.

<sup>(1)</sup>Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

\* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

<sup>(1)</sup>Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. <sup>(2)</sup>Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. <sup>(3)</sup>Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. <sup>(4)</sup>Instalment credit includes conditional sales agreements only. <sup>(5)</sup>Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. <sup>(6)</sup>Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

<sup>(1)</sup>As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For more detailed explanation see Trade of Canada (Exports) 1960.

<sup>(2)</sup>Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products.

<sup>(1)</sup>Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1959 and 1960 differ from the sum of the monthly data due to revisions which cannot be allocated by months. <sup>(2)</sup>As of January, 1958, statistics include the British Columbia Electric Railway. <sup>(3)</sup>As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

<sup>(1)</sup>Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.  
<sup>(2)</sup>Mainly deposits of foreign banks.  
<sup>(3)</sup>Capital, rest fund and undivided profits as at the latest fiscal year-end.  
<sup>(4)</sup>Including issues payable in foreign currency.  
<sup>(5)</sup>Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans.  
<sup>(6)</sup>Excluding Canadian day to day loans.  
<sup>(7)</sup>Loans to grain dealers and exporters.  
<sup>(8)</sup>To finance purchase of Canada Savings bonds at time of issue.  
<sup>(9)</sup>Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.  
<sup>(10)</sup>Including loans to instalment finance companies.

(1) Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

(2) Subsidiary coin issued by the Mint less coin held

67

by Bank of Canada and chartered banks in Canada. (3) Less total float, i.e. cheques and other items in transit (net). (4) At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

<sup>(1)</sup>The Canada totals by months for 1959 and 1960 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1959 and 1960 nor the monthly averages for 1960 have been revised to agree with the Canada total.

72 Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

<sup>(1)</sup>Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

<sup>(2)</sup>Includes, in addition to the industries listed, Tobacco and Leather.

NOTE.—\*Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such.

(1)In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

Source: Commercial Failures Under the Provisions of the Bankruptcy and Winding Up Acts, D.B.S.
