Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics,
including the free annotated catalogue of current publications, may
be ordered from the Information Services Division, Dominion
Bureau of Statistics, Ottawa, Ontario, and remittances
made payable to the Receiver General of Canada.

NOTE: Symbols used throughout the Review: (...) means "not available"; (—) means "nil"
or "less than can be shown with number of digits used"; (P) signifies preliminary; (R) indicates
"revised since last monthly issue"; (†) opposite the top entry in a column indicates that revisions
have been made to 1958 and in some cases to earlier years since the last issue of the Biennial Supple-
ment. Many of the 1957 monthly series have also been revised since publication of the Biennial
Supplement. Users wishing the most up to date historical series should therefore refer to the sources
listed in the individual tables of the C.S.R.

RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION

BUREAU OF STATISTICS

The present article¹ brings up to date a previous article of the same title, which was published in the Canadian Statistical Review in November 1959. The purpose of these articles is to keep readers in touch with the evolution of statistical programmes in Canada.

The previous note outlined the work that was being undertaken to develop new statistics or to effect major improvements in established series. Much of that work is still in progress and will be referred to here only in so far as thinking and planning have been modified in the light of experience or as a distinct phase of development can be marked off. There is little new to report at present on the following projects: criminal and correctional statistics, hospital statistics, the survey of farm and farm-family expenditure and income, the indexes of prices of investment goods, pension plan statistics, the extension of the index of production to cover the whole economy, and the measurement of the stock of fixed capital. Recent developments have been mainly in the areas of labour statistics and statistics of government operations.

Organizational Changes

Statistics on various subjects should be designed so that they fit into an over-all plan with coherence among the various parts. To this end, a Central Research and Development Staff (later organized as a Division) was created in 1944. However, with the growth of the Division, it became increasingly difficult for it to carry out its integrating function and at the same time to prepare the large and complex body of statistics for which it was responsible. Accordingly, the Division has been split up into (a) a separate National Accounts Division, and (b) a Central Research and Development Staff. The latter, in keeping with the interdivisional nature of its duties, has been assigned to the Assistant Dominion Statistician for Statistical Integration.

Another interesting development is the creation of a Sampling Research and Consultation Service responsible to the Senior Mathematical Adviser. The Service is available to advise all divisions of the Bureau on the design and analysis of sample surveys; it will undertake research in the field of sample surveys and organize formal training courses in sampling techniques. Its attention will be directed initially to labour force problems.

The Decennial Census

The censuses of population, housing, and agriculture will be taken starting on June 1, 1961. For the first time an electronic computer will be

used to compile the data. The use of the computer is expected to speed up the tabulation of the returns and facilitate cross-classification. As in the past, sampling is being used to obtain information on subjects where fine detail is not considered essential. Thus, a 20 per cent sample is being used to obtain information on money income from all sources, size of family, and movement of population. As in the past, questions on wage and salary income will be asked of all respondents. The census of distribution will be conducted early in 1962.

Economic Statistics

In response to the recommendations of an interdepartmental committee, resources have been requested in order to improve the existing statistics on employment and unemployment. One of the most important needs in this area is a comprehensive set of employment statistics which will provide major industry totals for each province. In order to provide these, the monthly establishment survey of employment will be extended to cover a sample of establishments usually employing less than fifteen workers. Since this survey at present excludes agriculture and some industries within the service group, it will also be necessary to use employment data collected from other sources in order to provide an adequate body of data for employment analysis.

It is also proposed to exploit more fully the potentialities of the Labour Force Survey so as to obtain from it statistics on the familial and educational characteristics of the unemployed, information on their previous pattern of employment, and data on those moving from job to job, from employment into unemployment, and on the flows into and out of the labour force.

The Committee on Unemployment Statistics, on which several federal departments and agencies including the Dominion Bureau of Statistics were represented, released a report in October, 1960.² The report discusses problems in the measurement of unemployment and examines the Labour Force Survey and the administrative statistics arising from the operations of the Unemployment Insurance Commission and the National Employment Service. As a result of the recommendations of the Committee, a definition of unemployment was adopted using data from the Labour Force Survey. The definition includes, in addition to "persons without jobs and seeking work," persons on temporary lay-off—a series which was formerly published as a separate category within the group "persons with jobs." This definition is comparable to that recommended by the International Labour Organization and is similar to that used by many other countries, including the United States.

¹ This article was published in the February issue of the *Canadian Journal of Economics and Political Science*, and is reproduced here by kind permission of the Editor. Reprints of the article are available on request to the Information Services Division, Dominion Bureau of Statistics.

² Copies of the report may be obtained from the Information Services Division of the Dominion Bureau of Statistics and the Information Branch of the Department of Labour, Ottawa.

In February, 1960, the Dominion Bureau of Statistics completed an experimental study of labour mobility³ based on the records of the Unemployment Insurance Commission. This was the first study of labour mobility conducted in Canada, and it covered the years 1952 to 1956 inclusive. A companion study is now under way covering the years 1956 to 1960 inclusive. It is hoped that at least preliminary results will be ready for release within the coming year.

The present study is expected to be an improvement on the first in several respects. It is based on a 1 per cent sample of the insured population in each year of the period and thus takes account of deaths, new entries, and withdrawals from the labour force. (The previous study was based on a 1 per cent sample in the *first* year of the period only.) The insured population is now being classified by marital status and by fine rather than broad age-groups, and the number of occupational and industrial groups to be tabulated is being enlarged. The previous study measured only average mobility whereas the present study measures the number of moves made by individuals during the survey years. In addition, the present study tabulates those who were unemployed on the insurance book renewal date each year and analyses their status in the preceding and succeeding years with a view to examining the relation between job-changing and unemployment.

For some years the Bureau has been endeavouring to fill the gaps in the existing statistics on government operations. Information on provincial and municipal finances are inadequate and little is available on a current basis. In the important field of government-owned enterprises, information is inadequate on either an annual or a quarterly basis.

A quarterly sample survey of municipal government employment and payrolls, to parallel the existing surveys of federal and provincial government employment and payrolls, is being established. (The federal government series has been published for some years, but the provincial government series, although used internally, was released for the first time in 1960.) In 1961 the Bureau plans to inaugurate a quarterly sample survey of municipal government expenditures in order to provide a current indicator of the trend of these outlays. The primary purpose is to improve the estimates for the government sector in the quarterly *National Accounts*.

A programme covering the financial statistics of the industrial and commercial enterprises operated by governments is being initiated. This is the first step in measuring those activities of government which lie outside the basic budgetary accounts; institutions, social security funds, and government pension funds are to be included eventually.

³ Movements within the Canadian Insured Population" (restricted), Feb., 1960; "A Study of Labour Mobility Based on Unemployment Insurance Records," *Canadian Statistical Review*, July, 1960, p. 2.

Finally, government revenue and expenditure tables on a quarterly basis have been completed and it is expected that they will be released within the coming year; they have been prepared in detail, by level of government, both on a seasonally adjusted and unadjusted basis. With the completion of these estimates quarterly national savings and investment accounts can be constructed. In recent years, the swings from surplus to deficit, particularly at the federal level, have been an important element in the trend of economic activity and have had considerable impact on financial markets. Thus the new tables should be useful for analytical purposes.

The responsibility for the collection of financial statistics in Canada is divided among a number of government departments; these statistics do not fit into an over-all framework, and coverage and timeliness are in some degree deficient. In view of this situation and the recent revival of interest in monetary policy, an informal interdepartmental committee on financial statistics was organized in 1959. The committee considered that the most serious gap was the lack of current balance sheet data on corporations. Accordingly, the Bureau carried out a quarterly pilot survey of assets and liabilities of corporations in 1960. The results indicated that quarterly surveys on a regular basis would be feasible and resources have been requested in order to start such surveys beginning with the year 1961. The committee is continuing to assess the problems in such areas as statistics of consumer credit, mortgage liabilities, and other financial areas.

The pronounced seasonal fluctuations characteristic of the Canadian economy make seasonally adjusted series a valuable analytical tool. The Bureau's objective is to publish seasonally adjusted data for a large number of the time series which are now published on an unadjusted basis in the *Canadian Statistical Review*. In addition to an expansion in the range of seasonally adjusted series, improvements are being made in the quality of existing series. The work of seasonally adjusting manufacturers' inventories, orders, and shipments is virtually complete, and it is expected that the series will be published by the end of 1960. Progress has been made in constructing a new seasonal adjustment of merchandise exports and imports. The new seasonally adjusted series is based on export and import data as revised in the manner described in the paragraph on external trade statistics (see below), and the break-down is on a country rather than a commodity basis; a working day adjustment is incorporated in it. The new series will have to be tested before any plans for publication can be formulated. The work of seasonally adjusting the components of the industrial composite employment index is going forward. (At present the seasonally adjusted employment series include the industrial composite, the manufacturing total and the durable and non-durable components, mining, and construction,

building, and general engineering.) It is expected that additional employment series will be ready for publication during the coming year.

The seasonally adjusted quarterly estimates of Gross National Expenditure and its components in constant 1949 dollars, mentioned in the previous note, have been completed. However, on testing the results it became apparent that there had been enough price dispersion and weight shifts between the base period and the current period to give significantly different results according to whether the base period chosen was near or remote in time. It therefore seemed desirable to recalculate the series using a more current base period, and experimental work on this project is now being carried out.

A historical summary of urban average retail food prices was published in 1950 under the title, *Urban Retail Food Prices, 1914-1959* (Catalogue no. 62-514 Occasional). This publication brings together in tabular and chart form a comprehensive review of some seventy food items which were priced in 1959 and for which continuous series are available for varying periods from 1914 to 1959. Price averages are shown annually for all years for which data are available and monthly for current years; price relatives are also provided on a 1949 base. Detailed explanations of methods of pricing, techniques of calculation, coverage, and price collection are provided.

In the spring of 1960 a sample survey of urban family expenditure and income covering the year 1959 was conducted in sixty urban centres, selected to represent all centres with populations of 15,000 and over. This survey was part of a continuing programme of small sample biennial surveys initiated in 1953 for the purpose of reviewing expenditure patterns of the families to which the Consumer Price Index refers. The 1959 survey was larger and wider in scope than the previous surveys; it covered all families and individuals, regardless of family size or income level, in a sample of about 3,000 selected households. The survey will provide, for a major portion of the non-farm population, material comparable to the data on family living expenditure for the farm sector which were gathered in the 1958 Survey of Farm Income and Expenditure.

A reference paper will shortly be published on Industry Selling Price Indexes. (These are the indexes described in the previous note and referred to then as Manufacturers' Selling Price Indexes.) In this new type of wholesale price index the classification is by industry rather than by commodity. The new indexes, which supplement but do not displace the present wholesale price indexes, have been prepared in response to a need for more precisely based price indexes relating to industries.

In order to bring the coverage of export and import statistics more closely into line with one another and with the adjusted trade totals used in balance of payments calculations, several adjust-

ments were made as of January, 1960. The principal adjustments were the deletion from imports of goods to supply foreign diplomats and armed forces in Canada (already excluded from exports), tourist purchases (already largely excluded from exports), and settlers' effects and private donations and gifts (also deleted from exports). As of the same date, a new country classification of external trade statistics was adopted with a view to providing more up-to-date and usable country information. Plans for the adoption of the standard commodity classification for external trade statistics, the major new development in this area, are outlined below in the section, "Standard Classification Systems."

Following the publication late in 1959 of a reference paper of background material, *Canada's External Short-Term Assets and Liabilities* (Catalogue no. 67-504), further work was undertaken to extend basic Canadian banking statistics on international short-term movements of capital.

The revised inter-industry flow table for 1949 was published in January, 1960, in *Supplement to the Inter-Industry Flow of Goods and Services, Canada, 1949* (Supplement to Reference Paper no. 72, Catalogue no. 13-513). The supplement includes several new tables, one of which is the inverse matrix; it is a self-contained document in that all the relevant explanations of concepts, sources, and methods contained in the original reference paper are repeated. Plans are being made to construct another table for 1961.

The results of the second survey of incomes, assets, and liabilities, carried out in the spring of 1959, were released in the latter part of 1960, in *Incomes, Liquid Assets and Indebtedness of Non-Farm Families in Canada, 1958* (Catalogue no. 13-514). This report is similar in scope to an earlier report (Catalogue no. 13-508) covering incomes in 1955 and assets and debt-holdings early in 1956; the only additional information collected in 1959 was on the estimated market value of owner-occupied homes and the amount of the equity in home ownership. Another income survey was carried out in the spring of 1960; the results will be released in the spring of 1961. In addition to income data, families were asked to provide information on the number of cars owned, the make and age, the year of purchase, whether bought new or used, and, for cars purchased in recent years, the price paid.

The Bureau collaborates with the National Research Council in preparing statistics on expenditures for research and development. The programme moved one stage forward with the recent publication of the first report, *Federal Government Expenditures on Scientific Activities, Fiscal Year 1958-59* (Catalogue no. 13-515). (A third survey had already been carried out on research and development expenditures by industry.) Ultimately, it is hoped to complete the programme by bringing in the provincial governments and the universities.

Work on the development of regional statistics is being resumed after having been in abeyance for several years. An initial project will be to revise and republish the regional zoning system originally published by the Department of Defence Production under the title *Economic-Administrative Zoning in Canada* (now out of print). In keeping with an agreement made at the last Dominion-Provincial Conference on Economic Statistics, the Bureau will act as an information centre in this field, and serve as a clearing house for the exchange of information and for answers to inquiries.

A number of new developments in statistics on transportation are under way or planned for the near future; some of these will provide data for the study of competition between the various modes of transport. The *Classification of Financial Accounts of Motor Carriers of Freight in Canada*, first produced in 1947, has been revised and is now available for distribution. The motor vehicle report is being expanded to include for the first time information on provincial motor vehicle fees, licences, and regulations. The results of the Motor Transport Traffic Survey are to be produced on a quarterly as well as on an annual basis and will contain additional details on commodities. The proposed sample survey of passenger automobile travel which was to have been inaugurated in 1960 has been postponed until 1962. Another gap in the existing data on road transport has recently been filled by the inclusion of contract carriers of freight in the annual motor carrier report.

The publications on civil aviation are now being completely reviewed and it is expected that the 1960 editions will be considerably expanded. Additional information now being collected by the Department of Transport on airport traffic and origin and destination of passengers will become available for publication in the near future.

Statistics on ton miles of cargo carried in coastal shipping will become available in 1961. Data on the origin and destination of freight carried by water are now available on request and it is hoped that some of this material will soon be published.

Another comprehensive survey of prime mover and electric generating equipment is being planned for December, 1961, similar to the survey conducted in December, 1958. This survey is to be conducted at five-year intervals in the future. Arrangements have been made with the provinces concerned to collect statistics on gas distribution jointly so as to avoid having two sets of figures on the same subject. This procedure takes effect at the beginning of 1961. The first annual statistics on the transport of gas by pipeline and on its distribution were collected and published for the year 1959.

Standard Classification Systems

The revised *Standard Industrial Classification Manual* is now being printed. In the meantime, much work has been done towards implementing it in the various statistical surveys made for the purpose of obtaining information from industry. When the classification was being revised, a good deal of attention was paid to the question of developing a uniform definition of "establishment." In most cases, the establishment is the unit from which information is obtained and, therefore, a standard definition facilitates the obtaining of data from the same respondents on different surveys such as the census of manufactures, and employment statistics.

A further move toward the integration of industrial statistics from different sources is the "Standard List of Establishments." This project consists of matching the lists used on existing surveys and eliminating inconsistencies so that the coverage of each survey can be described as a certain segment of the standard list. The matching of manufacturing and mining establishments has been completed and work is now proceeding on other industry divisions. In manufacturing, it is planned that the new definition of establishment will be applied to 1961 data. Thus, there will be a break in the series and steps are being taken to ensure that a desirable degree of historical continuity is preserved.

Two volumes of the *Standard Commodity Classification* have been published and it is expected that the third volume, an alphabetical index, will be issued during 1961. The details of materials used and shipments on the census of industry schedules are being brought into line with the standard classification. Since all schedules will undergo a major revision for 1961 data, those that are not already on the standard basis will be made to conform at that time.

A programme for implementing the Standard Commodity Classification in external trade statistics is well advanced. Exports will be put on the new classification beginning January, 1961. Tests have been made and the new classification has been printed. A first draft of the classification for imports is now ready and is being examined by those most immediately concerned to ensure that it is practicable and that it provides the best possible data. A second draft will be ready in the spring. Barring unforeseen obstacles, the new classification system will be used for imports beginning January, 1962.

The classification of occupations to be used for the 1961 census, and also to be used widely for other statistical series, has been revised and is now being indexed. The classification manual will be available before the middle of 1961.

INDUSTRY SELLING PRICE INDEXES — A TECHNICAL NOTE

The Dominion Bureau of Statistics recently inaugurated a new series of wholesale prices, which supplements, but does not displace, the present General Wholesale Price Index. The new series is the subject of a Reference Paper entitled, *Industry Selling Price Indexes, 1956-1959*.¹ It will also be carried currently in the monthly publication, *Prices and Price Indexes*. It is the purpose of this note to outline the reasons for broadening the basis and increasing the range of wholesale prices indexes and to describe briefly the nature of the new series.

The General Wholesale Price Index is chiefly designed to measure the movements of prices of raw and semi-processed products. Manufactured products are inadequately represented; for example, there is no wholesale price index for automobiles or tractors. There is keen interest, among users, in price statistics relating to industries, particularly manufacturing industries, augmented by commodity series for more manufactured goods. The new series is intended to meet these needs.

The Industry Selling Price Indexes are organized according to the Standard Industrial Classification. This system groups manufacturing establishments into industries according to the principal product produced. The Standard Industrial Classification has been developed to facilitate the compilation of different statistical series within a systematic and uniform system. The Bureau's programme calls for bringing all the industrial series collected within the system. This system provides a useful framework for price analysis, since industrially classified price series can be related to other series so classified. It facilitates an assessment of the immediate effects of price changes on other elements in the economy and of the probable direction and extent of their repercussions.

The new Industry Selling Price Series was inaugurated in the Manufacturing Division of the Standard Industrial Classification, because of the evident interest in this area of price statistics; because it is the largest division in terms of its contribution to Gross National Product; and for the purely practical reasons that detailed records are available and the concentration of industry such as to make it feasible to collect data by means of small samples.

The new indexes are weighted according to the value of shipments in 1953 as reported to the Industry and Merchandising Division of the Bureau. The year 1953 was not abnormal and was acceptable as a weight base. Moreover, it was the latest year for which data were available at the time of the inception of the project. However, the year 1956 was

chosen as the reference period (equalling 100) because of the difficulty of obtaining accurate information on prices prior to that year.

The series now published cover about 100 manufacturing industries, but it is hoped eventually to provide indexes for almost all industries in the Manufacturing Division. In addition, about 170 new indexes for manufactured products are now being published and further commodity indexes for individual industries are available on request, so that users may compile aggregate indexes made up of ingredients of their choice.

No average index for the Manufacturing Division will be published, since prices reported differ from firm to firm, depending on the description of the product and the terms of sale, so that an average cannot be calculated from the data.

Each Industry Selling Price Index is weighted according to the total value of factory shipments as reported to the Industry and Merchandising Division. Users should be aware of the implications of this system of weighting. Each manufacturing establishment usually carries on a limited range of activities, with the result that most products pass through a number of industries before they emerge as a finished product to be shipped out of the Division. Thus the sum of the value of factory shipments by industry substantially exceeds the value of shipments *out of* the Manufacturing Division. Users who propose to make their own aggregations should recognize the possibility of double-counting. The finer the level of aggregation the less duplication there is likely to be. If there is little or no exchange of commodities between the industries to be aggregated, as for example, slaughtering and meat packing and carbonated beverages, there is little or no double-counting. An aggregation of the carbonated beverages and the sugar refining industries would, on the other hand, involve substantial duplication. A system of "final output" weights, which cancels out inter-industry shipments, is difficult to construct and of necessity excludes many primary and intermediate commodities whose price behaviour is both important and sensitive.

The indexes are compiled from sellers' prices, i.e., they exclude the freight, insurance, and taxes which enter into the price paid by the purchaser.

Representative price indicators for each industry were chosen. The commodities and groups of commodities initially selected for inclusion in the index accounted for 75 per cent of the volume of shipments in their respective industries. Within this framework, it was necessary to identify specific products. This choice, based on the importance of the product, was made in consultation with the firms that were to provide price quotations. Changes have

¹ Catalogue No. 62-515, Occasional, Queen's Printer, Ottawa, \$1.50.

been made and will continue to be made as some products disappear from the market and others take their place.

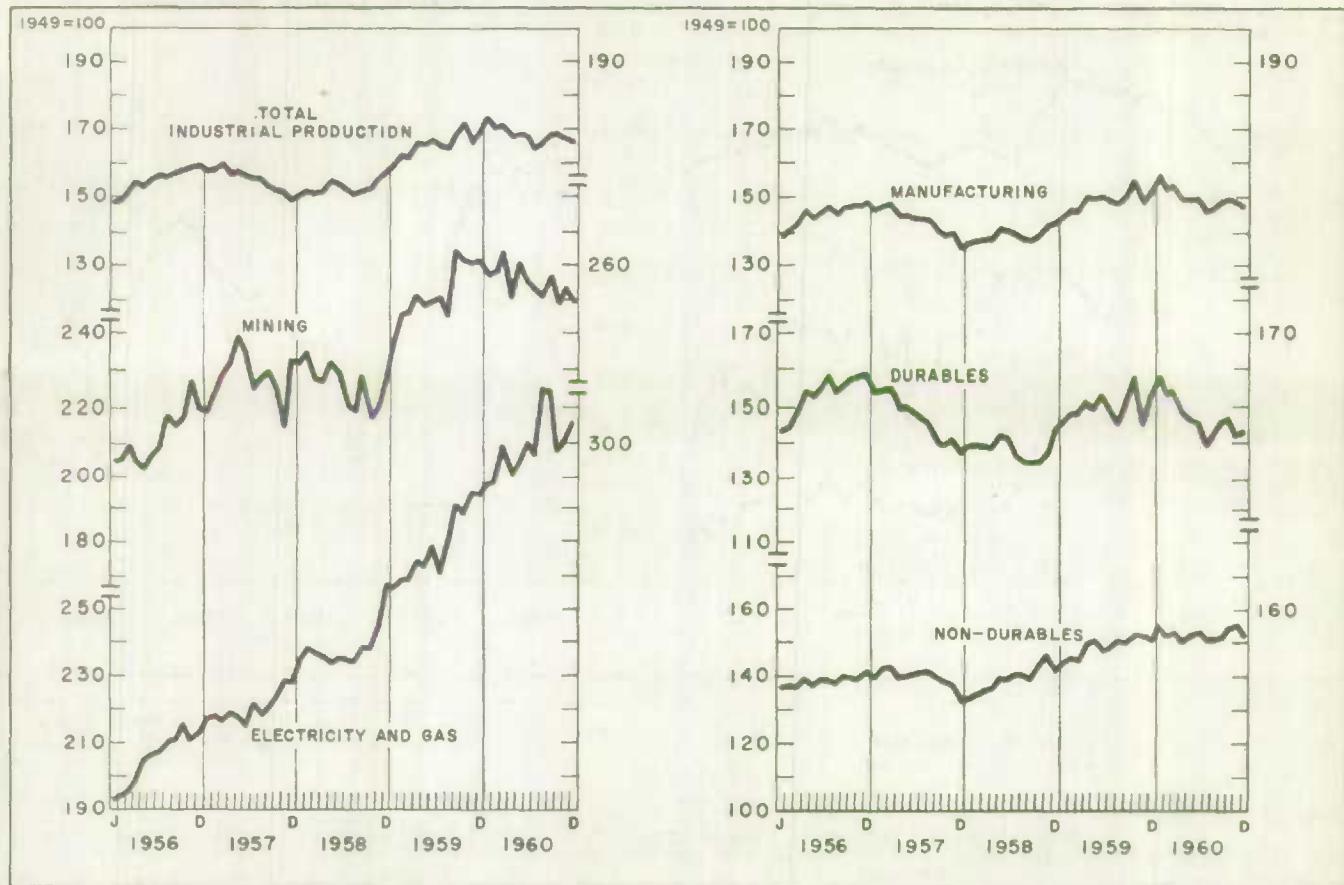

Models and varieties of product alter through time, thereby making it necessary to estimate price equivalents for different products. This problem is dealt with by comparing direct costs of labour and materials in the two products.

"Unique" goods, that is, goods which are rarely, if ever, repeated, require special treatment. In some instances, the price of a "unique" good is assumed to move with that of another related priceable product; in other instances, respondents are asked to quote a price on a model having approximately the same proportion of labour, materials and other inputs.

INDUSTRIAL PRODUCTION*

The index of industrial production declined in December for the second successive month and was at a level of about 4 per cent below the January peak. The decline is attributable to downward movements in non-durable manufacturing production and in mining output, which more than offset increases in durable manufacturing and in electricity and gas.

For the fourth quarter as a whole, the total index of industrial production was about one half of one per cent above the immediately preceding quarter.

	Total Industrial Production	Mining Production	Manufacturing Production			
			1949=100	1949=100

*A more detailed breakdown of Industrial Production, Seasonally Adjusted, can be found in Table 6.

†Averages or totals of unadjusted data.

EMPLOYMENT, EARNINGS AND HOURS WORKED*

The composite index of industrial employment declined in December for the fourth consecutive month, reflecting decreases in many of its components; manufacturing employment was off by close to 1 per cent. However, average weekly wages and salaries, average hourly earnings and the average work week in manufacturing were all higher in December.

Industrial Composite Employment (2)	Manufacturing (2)				Construction: Building and General Engineering (2)				Manufacturing				Average Hours Worked per Week in Manufacturing (2)		
	Total	Durables	Non-durables	Mining (2)	Average Weekly Wages and Salaries	Average Hourly Earnings	Total	Durable Goods	Non-durable Goods

(1) Averages of unadjusted data.

(2) Employment indexes and average hours worked are compiled from data which relate to the last pay period of the month.

*The purpose of the moving average in the following charts is to indicate the underlying trend-cycle component as opposed to irregular factors. The moving averages are applied to the seasonally adjusted data and their lengths depend on a calculated measure called the M.C.D. or months for cyclical dominance.

LABOUR FORCE

The total labour force showed little increase in January. Total employment was slightly above the December figure. The rate of unemployment, on a seasonally adjusted basis, amounted to 7.7 per cent of the labour force.

⁽¹⁾Averages of unadjusted data.⁽²⁾Percentage seasonally adjusted.⁽³⁾The data printed here are revised in accordance with the new definitions of "employment" and "unemployment" which came into effect in the September, 1960 issue of *The Labour Force*.

RETAIL TRADE*

Retail trade was higher in December, by somewhat less than 1 per cent. There were small gains in sales of motor vehicle dealers and most other store types. On a quarterly basis, retail trade in the fourth quarter was nearly 3 per cent above the third.

*More detailed information on retail trade, Seasonally Adjusted, can be found in Table 46.
†Averages of unadjusted data.

(1) Includes sales of new and

used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

CONSTRUCTION AND BUILDING PERMITS

Housing starts increased in January for the fifth consecutive month. Completions were somewhat higher following the erratic downtrend of recent months.

⁽¹⁾Averages or totals of unadjusted data.⁽²⁾Seasonally adjusted at annual rates.

Adjustment computed by Central Mortgage and Housing Corporation.

EXPORTS, IMPORTS AND MISCELLANEOUS SERIES

Merchandise exports in the fourth quarter showed little change from the third, but merchandise imports rose 6 per cent.

The index of industrial common stock prices increased in January, continuing the general upward trend since the latter part of 1960.

(1) "De facto" population. Annual data are for June.

(2) At current market prices. Annual data are totals of the four quarters.

(3) Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries.

(4) All manufactured products. (5) Exchange Equalisation Account holdings of gold and convertible currencies. Gold is valued at 250 s. per ounce fine, and currencies at parity, except the Canadian dollar which is valued at the appropriate rates.

(6) Annual data are for June.

Note.—Until the end of 1959, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1960 and 1961 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Not applicable to figures on population and immigration.

⁽²⁾Yukon and North-West Territories not included in figures for births, marriages and deaths.

⁽³⁾Estimates are now published quarterly following Census date, June 1, as well as for January 1 and July 1 of each year. ⁽⁴⁾Exclusive of stillbirths. ⁽⁵⁾Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

8 ⁽¹⁾The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for livestock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item.

⁽²⁾Includes adjusting entry.

⁽³⁾Includes residual error of estimate.

⁽⁴⁾This item differs from column 5, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

⁽⁵⁾Excluding dividends paid to non-residents.

Note: For detailed description of concepts, sources and methods see D.B.S. Reference Paper (61-502) "Revised Index of Industrial Production, 1935-57." 9

(^t)The M.C.D. (months for cyclical dominance) measure indicates the number of months required, on average, for the emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of 4 implies that a four month moving average of the series (dated at the second month) is required in order to offset irregular movements and allow examination of the underlying cyclical trend. The series in this table are not adjusted for M.C.D.

⁽¹⁾Seasonal (formerly supplementary) benefit data included.⁽²⁾On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included.⁽³⁾The number of new cases of recorded unemployment among insured persons.⁽⁴⁾Estimates are based on average weekly number of payments.⁽⁵⁾The number of calendar weeks during which a benefit payment was made.⁽⁶⁾Revised to relate to the Thursday nearest to the last day of the month.⁽⁷⁾Commencing with November 1958, figures exclude fishing benefit claimants during the seasonal benefit period. Adjustments have been made in figures for November 1957-June 1958 which included fishing claimants.

(1) In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

(2) Total new orders received during the period, at estimated selling values. The series cover total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlog.

(3) Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated year-end total values for each industry as obtained from annual surveys.

(4) Manufacturing inventory owned by manufacturers, held at plant or plant warehouse at end of period.

⁽¹⁾Releases of domestically manufactured tobacco for consumption in Canada.
of 25 gallons each.

⁽²⁾End of period.

⁽³⁾The production of beer is shown in thousand barrels

⁽⁴⁾Includes bottling of imported liquors.

⁽¹⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

⁽²⁾Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

⁽³⁾Customs exports. ⁽⁴⁾Mill shipments destined for export.

46 Note.—The data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included.

⁽¹⁾Shipments for further processing within own firm and for sale in Canada. ⁽²⁾Because of the confidential provisions contained in the Statistics Act, comprehensive details of production and shipments of rolled steel products were not available for publication by months during the period of the strike at one of the major reporting plants. The figure published here is the total production for the last five months of 1958.

*Construction of dwelling units.

Note.—These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Note.—The data on building permits are collected for 1,014 municipalities and individual figures are available on request. Some of the annual totals for 1958 and 1959 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. ⁽¹⁾Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

*See also Tables 18 and 19. †Excluding Newfoundland. Western grain prices used in the construction of the index prior to August 1, 1959 are final prices.

Since August 1, 1959, only initial prices are available for wheat, oats and barley. ‡Include subsidy on hogs. §Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef.

§Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. Source: Livestock and Meat Trade Report, Dept. of Agriculture, Coarse Grains Quarterly, Cold Storage Holdings, and Index Numbers of Farm Prices of Agricultural Products, D.B.S.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year. ⁽⁴⁾Includes eggs for hatching.

⁽¹⁾Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

⁽²⁾Includes stocks held by manufacturers, wholesalers and other warehouses.

⁽³⁾The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November.

* Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

⁽¹⁾Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ⁽²⁾Companies licensed under the Small Loans Act.

Cash loans have no conditional sales contract but are usually repaid in instalments. ⁽³⁾Excluded from the above tabulation are charge accounts and instalment credit of certain categories of dealers whose credit is extended mainly to farmers and other businesses rather than to consumers. ⁽⁴⁾Instalment credit includes conditional sales agreements only.

⁽⁴⁾Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. ⁽⁵⁾Excludes loans to finance purchase of Canada Savings Bonds.

⁽⁶⁾Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

⁽¹⁾Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1958 and 1959 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ⁽²⁾As of January, 1958, statistics include the British Columbia Electric Railway. ⁽³⁾As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system.

⁽¹⁾Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

by Bank of Canada and chartered banks in Canada.

⁽²⁾Subsidiary coin issued by the Mint less coin held

(3)Less total float, i.e. cheques and other items in transit (net).

(4)At September 30, 1957, the deposit

balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

NOTE: This statement does not include any receipts other than revenues nor any disbursements other than regular budgetary expenditures. Excluded, for example, are all receipts arising from repayments of loans and advances, or from accumulations on annuity, pension and insurance funds. Similarly excluded on the expenditure side, for example, are all Govt. outlays arising from increases in loans, advances and investments.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales.

⁽¹⁾The Canada totals by months for 1958 and 1959 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly averages nor the monthly figures for 1958 and 1959 have been revised to agree with the Canada total.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(2) Includes, in addition to the industries listed, Tobacco, Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(3) Includes Printing and Publishing and Allied Industries.

NEW**REFERENCE PAPER
on INDUSTRY SELLING
PRICE INDEXES****1956 - 1959****Provides data for industry analyses and comparisions**

This DBS publication introduces a new system of wholesale price indexes designed to measure prices of manufactured goods.

It contains . . .

- . . . separate price indexes for almost 100 manufacturing industries and for more than 150 of the most important products of the industries covered . . .
- . . . a line chart for each of the industry price indexes, tracing its monthly movement from January 1956 to December 1959 . . .
- . . . general descriptions of the products priced and base weights, plus descriptive text, tables and charts.

Current data in this series will be published in the monthly publication "Prices and Price Indexes" (catalogue no. 62-002)

86 pages

-

\$1.50 per copy

Available from the Dominion Bureau of Statistics or the Queen's Printer, Ottawa. When ordering please use catalogue no. 62-515.
