A NOTE TO USERS

Back Records:

The following back records, raw and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S.

- (1) The series on total shipments, new orders, unfilled orders, and inventories broken down into raw materials, goods in process and finished products and the ratio of inventories owned to shipments as in Table 37 from 1952 to date.
- (2) The series on building permits by types (Table 58), namely, industrial, commercial, institu-

tional and government permits are available from 1948 to date.

- (3) The series on merchandise exports and imports in Table 83 for the European Common Market, European Free Trade Association, and the O.E.C.D. countries from 1946 to date.
- (4) Employment indexes from 1949 to date for the following series in Table 17: industrial composite, forestry, public utilities and finance.
- (5) Labour income by provinces as in Table 12, is available from 1947 to date.
- (6) All retail trade series by types of business and provinces as in Table 76 from 1947 to 1962.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

THE CHANGING AGE AND SEX COMPOSITION OF THE CANADIAN POPULATION

The rapid growth of population in Canada during the present century has been accompanied by striking changes in the composition of the population by age and sex. These changes reflect birth rates, mortality rates and shifts between high and low rates of immigration. The progress of industrialization, the mechanization of farming and internal migration have at the same time altered the composition of the population as between provinces and as between rural and urban areas.

The Sex Composition of the Canadian Population

The sex composition of the population of Canada has varied through time and at any one time has varied as between age groups, places of residence and other characteristics of the population (see Table 1). These variations are accounted for by levels of birth rates, differential mortality rates and differential rates of immigration. Within the country, patterns of internal migration have modified the sex composition as between provinces and as between rural and urban areas.

As is well known, the number of male births exceeds the number of female births. The number of male births to every 1,000 female births varied from a low of 1,048 in 1935 to a high of 1,067 in 1944 in the period 1926 to 1946, and the average between 1941 and 1960 was 1,058.

Differential mortality rates create a marked imbalance between the sexes in specific age groups. The likelihood of death is greater for males from

the moment of birth but especially so in the older age groups. For example, in 1960 in the age group 55-59 the death rate for women was 8.2 per 1,000 of population, while that for men was 15.6, so that death rates have made for a marked preponderance of women in the older age groups. War losses, which occur largely in the young adult ages are a special factor affecting the sex composition of the population.

The sex composition of immigrants has altered drastically over time. Up to 1931 there was a marked predominance of male immigrants but since that time women have sometimes outnumbered men.

It is interesting to note that the preponderance of males over females, 1,025 men to 1,000 women in 1881 is very much the same as at the latest censal date when it was 1,021 (excluding Newfoundland). The highest ratio, 1,129, was registered in 1911, following the heavy influx of immigrants accompanying the opening up of the West particularly in the decade 1901 to 1911. There was a sharp decline in the ratio of men to women between 1911 and 1921 but thereafter the drop has been more gradual.

The opening up of the West was accomplished by migration from Eastern Canada as well as by immigration from abroad, thus contributing to the sharp differences in sex ratios as between the areas of old and new settlement. Thus in 1911, Manitoba, Saskatchewan, Alberta and British Columbia had an excess of males over females of 1,214, 1,454, 1,487,

**TABLE 1. Sex Composition of the Population, Canada and Provinces:
Selected Years, 1881 - 1961**

	Number of males per 1,000 females									
	1881	1891	1901	1911	1921	1931	1941	1951 ¹	1956 ¹	1961 ¹

¹ Excluding Newfoundland. Including Newfoundland, the sex ratios were 1,024 in 1951, 1,028 in 1956, and 1,022 in 1961.

PER CENT INCREASE BY AGE GROUP CANADA, 1941-61

and 1,786 respectively. These differentials have shrunk, and in the case of Manitoba virtually disappeared, Saskatchewan and Alberta having the highest excess of males over females in 1961.

Some figures will illustrate the importance of immigration in altering the sex composition of the Canadian population. In 1911 for the non-Canadian born there were 1,583 men for every 1,000 women while the corresponding figure for Canadian born was 1,029. By 1961 the sex ratio for non-Canadian born had fallen to 1,074 and for Canadian born to 1,012.

In 1961 women predominated in certain age groups, namely, 20-24, 35-44, and over 65. Losses in World War II may help to account for the disparity in the age group 35-44 and losses in World War I for the disparity in the age group 65-69. Furthermore, advances in medicine have apparently had more effect upon mortality among women than among men in most age groups. The pattern of sex ratios by age groups varies widely from province to province.

The progress of industrialization and the shift of population from the farms have affected the sex and age composition of the population in rural and urban communities. As is to be expected, men predominate in the rural farm areas, the ratio in 1961 being 1,176 men per 1,000 women. There was an

excess of women in all urban areas, with the exception of the smallest communities (1,000 to 2,499 population) where the number of men only slightly exceeded the number of women. In the metropolitan areas there were 979 men to every 1,000 women, with 961 men to 1,000 women in the metropolitan city proper and an even balance between men and women in the fringe areas.

Migration from rural to urban areas appears to be selective as to age and sex. The ratio of men to women for all ages in urban areas in 1961 was 982, but only 906 in the age group 20-24. For the age group 25-34 the sexes in urban areas came close to being in balance. The highest ratio of men to women in the rural farm areas, 1,583, was in the age group 20-24 and the next highest in the upper age ranges.

The Age of the Population

In 1961 the median age of the Canadian population, that is, the age at which one half is below and the other half above, was 26.3, compared with 20.1 in 1881 (see Table II). The steady rise in the median age, which was especially marked during the period of low birth rates of the depressed thirties, was not interrupted until 1956. The 1961 median age (including Newfoundland) was 26.3 and compares with one of 27.7 in 1951.

TABLE II. Median age of population by sex for Canada, 1881-1961

Year	Median age		
	Total	Males	Females
1881	20.1	20.1	20.0
1891	21.4	21.5	21.2
1901	22.7	22.9	22.4
1911	23.8	24.5	22.9
1921	23.9	24.8	23.2
1931	24.7	25.5	24.0
1941	27.0	27.5	26.6
1951	27.8	27.9	27.7
1956	27.4	27.3	27.5
1961	26.5	26.2	26.8
Including Newfoundland			
1951	27.7	27.8	27.6
1956	27.2	27.2	27.3
1961	26.3	26.1	26.6

For purposes of analyzing changing age composition, the population can be divided into three broad groups, those under 15, those between 15 and 64,

and those over 65, corresponding roughly to the dependent group, the working ages and the ages of retirement (see Table III).

**TABLE III. Percentage Distribution in the Three Broad Age Groups,
Canada, 1881 - 1961¹**

	1881	1891	1901	1911	1921	1931	1941	1951	1961

¹ Not including Newfoundland in 1951 and 1961.

Note: In some cases, components will not add to totals because of rounding.

The high birth rates of the forties continuing into the post-war period have increased the proportion of children under 15 in the population from 27.8 per cent in 1941 to 33.7 per cent in 1961. The most recent proportion is the highest recorded since 1931.

The year 1941 marks the period when the proportion in the working age group was at its peak; almost two thirds of the population were in this age group at that time compared with 57.2 per cent in 1881, 62.4 per cent in 1911 and 58.6 per cent in 1961. Reflecting the heavy influx of male immigrants during the first decade of the century, the proportion of total men in the working age groups rose sharply from 61.0 per cent in 1901 to 64.1 per cent in 1911; the corresponding figures for women were 60.2 per cent in 1901 to 60.4 in 1911.

In 1961 the relative size of the older population represented 7.7 per cent of the total, much the same as in 1951. The proportion of the population over 65 rose at every censal date from 1881 to 1911 when it fell to 4.7 per cent, and began to rise again in 1921.

The two groups that could be described as economically inactive, that is, the children and those over 65, can also be considered in relation to the working groups. In 1961 the child population represented 57.6 per cent of the population of working age, compared with 67.7 per cent in 1881 and a low of 42.4 per cent in 1941. On the other hand, the older group as a proportion of the population of working age has undergone an even more dramatic change, rising steadily from 7.2 per cent in 1881 to 13.1 per cent in 1961.

Growth of Canada's Population by Age Groups, 1931-61

The age composition of the population and its capacity for growth reflect past trends in births, deaths, and migration. The low birth rates of the thirties and the drop in immigration in this period means that the child-bearing population at the 1961 Census was smaller than normal growth would have brought about thus affecting the capacity for future growth (see Table IV).

The Canadian population rose 30.2¹ per cent in the decade 1951-61 and 18.6 per cent in the preceding decade, in contrast to a growth of only 10.9 per cent in the decade 1931-41 and a peak increase for the present century of 34.3 per cent recorded in the 1911 Census.

In respect of age groups, the outstanding features of the growth of population in the period 1931-61 are the remarkable increase in the population under fifteen in the last two censal periods (following a drop in the period 1931-41), a rate of growth less than that for the whole population in the 15-64 group, the working ages, in the past twenty years, and a rate of growth for those 65 and over greatly exceeding that of the total population between 1931 and 1951 and slightly less in the last censal decade. With only a few exceptions, all age groups in all provinces showed similar patterns in rates of growth.

¹ Not including Newfoundland.

**TABLE IV. Percentage Increase of the Population by Specified Age Groups, Canada,
1931-61**

Age group	1931-41	1941-51 ¹	1951-61 ¹	1951-61 ²
Totals	10.9	18.6	30.3	30.2
0-4	- 2.1	58.1	31.6	31.0
5-9	- 7.7	29.2	49.1	48.8
10-14	2.5	- 0.6	64.1	64.1

70+	33.4	38.7	38.9	38.5

¹ Not including Newfoundland in 1951 and 1961.

² Including Newfoundland.

Turning to consider the last censal period, when the total population of Canada increased 30.2 per cent, the rate of growth for children was 46.0 per cent. In the fastest growing provinces, British Columbia, Alberta and Ontario, the rate of increase for those under 15 was over 60 per cent.

The growth rate for the age group 15-64, 22.9 per cent for Canada as a whole, between 1951 and 1961 was lower than that for the total population as well as for younger and older age groups, a statement which applies to all provinces but Newfoundland. There was, however, wide variation as between the provinces in the rates of growth of this group in the period 1951-61. Much the highest rate of growth, probably the result of in-migration, took place in Alberta. While the population in the older age groups increased 28.4 per cent in the decade 1951-61, somewhat less than the population as a whole, the three Maritime Provinces, and Quebec, Manitoba, and Saskatchewan all recorded relatively higher rates for this group than for their respective total.

In the decade 1951 to 1961 the differential rates of increase for older men and women are extremely striking, in contrast to fairly uniform rates of growth in the previous twenty years. In the last censal decade the population of women 65 and over rose by 34.4 per cent while the population of men in this group rose only 22.5 per cent. Some part of this development is attributable to differential mortality rates, some part to World War I (casualties apart, some men took their discharge overseas), and some to the emigration of males in the period 1911-21.

In terms of specific age groups, among children and young people in the decade 1951-1961 the highest rate of growth, 64.1 per cent, was in the group 10-14 years, the next highest, 48.8 per cent, in the group 5-9 years, and the lowest, 31.0 per cent, in the 0-4 year group. These rates of increase have obvious implications for the planning and financing of education at all stages from elementary to university levels.

The age group 15-19 years increased 35.4 per cent, in contrast to a decline in the group in the previous censal decade. The groups 20-24 years and 25-29 years between 1951-61 increased only 8.7 per cent and 6.9 per cent respectively, which has undoubtedly contributed to the drop in the number of marriages in recent years.

In Canada and in most provinces the rate of growth of population slowed down in the quinquennium 1956 to 1961.

Age Composition of Canada's Rural and Urban Population, 1961

There are considerable differences between rural and urban populations in respect of age composition. Children under 15 constitute a larger proportion of the rural than of the urban population—38.0 per cent, as compared with 32.2 per cent. However, the farm and non-farm children constitute about the same proportion of the total population in these areas. As for the urban population, metropolitan areas had only 30.9 per cent of their population under the age of 15.

For the age group 15-24 years, the percentages were higher for males in the rural, farm and non-farm and the percentages for women higher in the urban and metropolitan areas.

In the working ages from 25-44 years of age people tend to concentrate in the metropolitan areas. The proportion in this age group in the metropolitan areas was 29.6 per cent, as compared with 26.7 per cent for Canada as a whole. The farm population has a somewhat lower proportion of persons aged 65 years and over. The percentages of women 65 and over in urban and metropolitan areas were higher than for men. The 1961 Census reveals considerable variation in the age composition of metropolitan areas. However, most metropolitan areas had about three-fifths of their population in the working ages 15-64 years at that time, Victoria having the lowest percentage and Toronto and Montreal the highest.

Factors Affecting the Age Composition of Canada's Population

The birth rate was declining after the 1881 Census, and was especially low in the depressed thirties, reaching a low point of 20.1 in 1937. There-

after, it began to rise, with minor fluctuations, reaching 24.3 at the end of the war. It continued to rise after the war, reaching about 28 per thousand in the fifties and declining to 26.1 in 1961. Death rates have declined for all age groups, particularly for women.

The effect of immigration on the age composition of the population is difficult to assess since little is known about emigration. For the provinces the problem is further complicated by inter-provincial migration.

The following table shows the percentage of foreign born in the total population for the census years 1931-61 (see Table V). Since immigrants are heavily concentrated between the ages of 20 to 44, the age composition of foreign born reflects the high level of inflow in the period before 1921 and to a lesser extent between 1921 and 1930. Thus by 1961 the highest percentage of the foreign born was in the age groups 65-69 years and 70 years and over.

At the time of the 1961 Census, immigrants arriving between 1951 and 1961 represented 42.3 per cent of all foreign born, compared with 42.8 per cent of the foreign born who had arrived before 1930.

TABLE V. Percentage Foreign-born of Total Population by Age Groups, Canada,¹ 1931-61

Age group	Percentage of foreign-born			
	1931	1941	1951	1961
All ages	22.2	17.5	14.7	15.6

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 48 and 76)

Total retail trade declined fractionally in November following slight decreases in most store types.

New motor vehicle sales were higher in November as a result of increases in the American passenger and total commercial car sales.

	retail trade				new motor vehicle sales			
	retail trade total	(ex. motor vehicle dealers)	motor vehicle dealers	department stores	total	American type passenger	European type passenger	total commercial

CONSTRUCTION (More detail in Tables 60, 64 and 65)

Value of building permits increased sizeably in November, the largest increase being in the residential sector.

Total housing starts increased significantly in December mainly as a result of the House Building Incentive Program; total completions increased slightly.

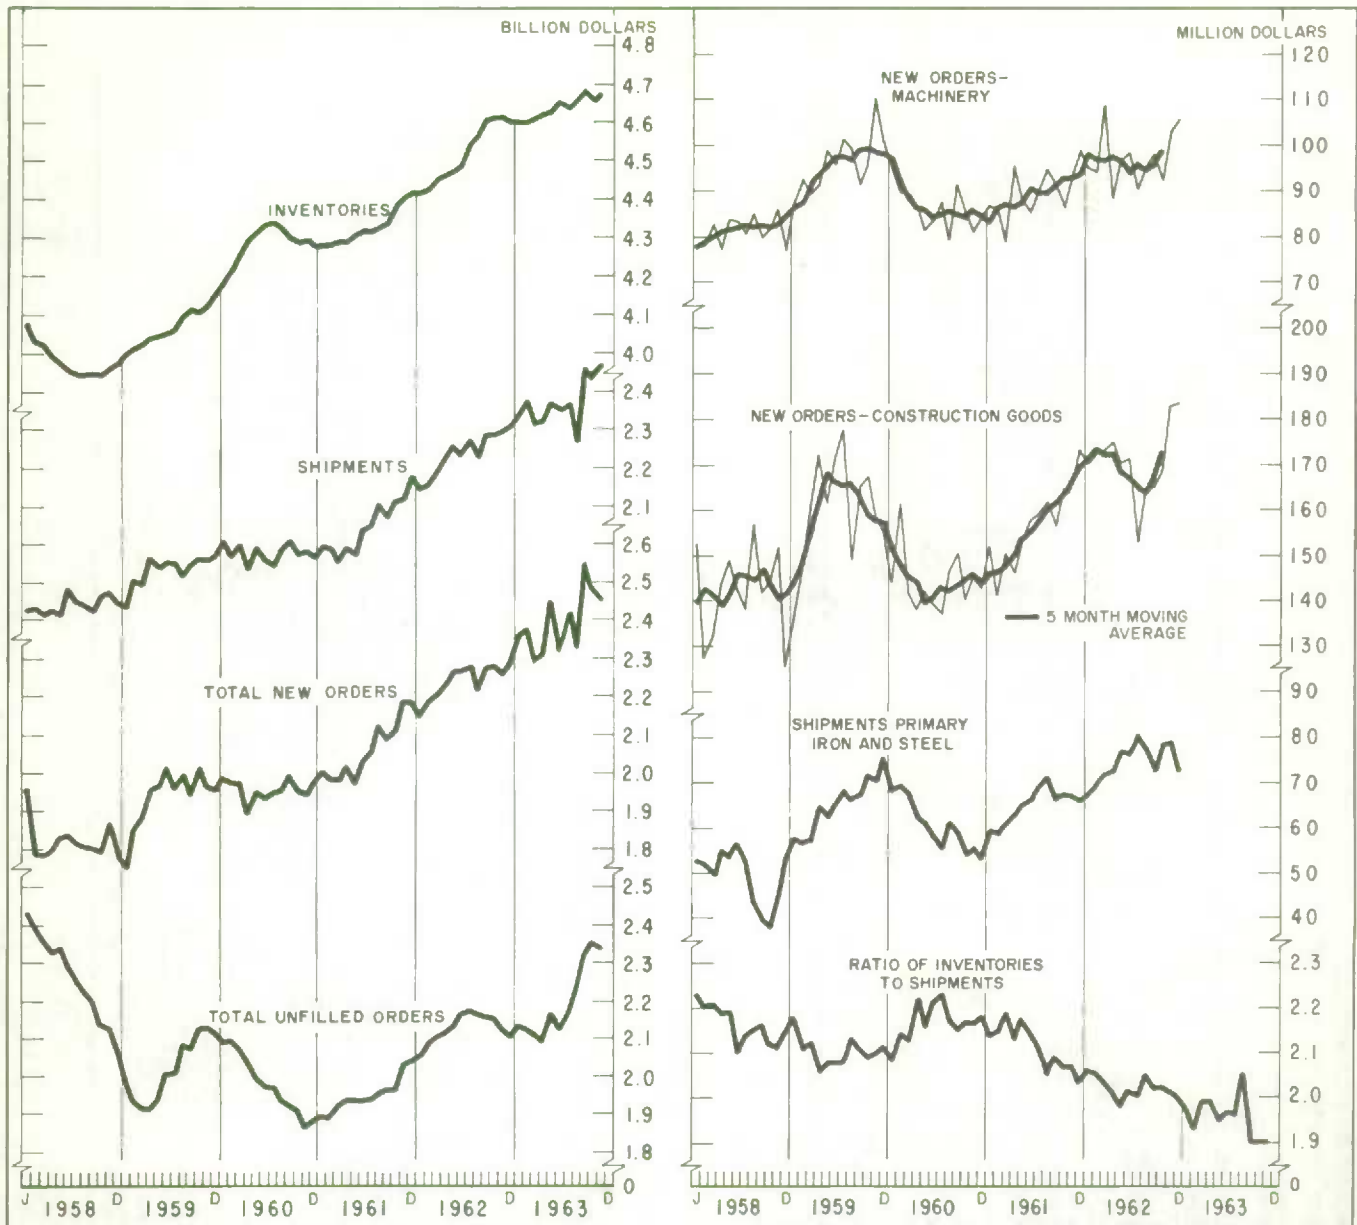

value of building permits

¹Prior to the census in 1964, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1964 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. ¹Figures for births, marriages and deaths for 1963 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. These figures are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths.

Table 6: national income and gross national product (million dollars)

years and quarters	salaries wages and supplementary labour income	military pay and allowances	corporation profits before taxes and before dividends paid to non-residents		rent, interest and miscellaneous investment income	accrued net income of farm operators from farm production ¹	net income of non-farm unincorporated business	inventory valuation adjustment	net national income at factor cost	indirect taxes less subsidies	capital consumption allowances and miscellaneous valuation adjustments	gross national product at market prices ²
			deduct: dividends paid to non-residents	deduct: dividends paid to non-residents

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 10A.

¹The data in Tables 17 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. ²Total inventories owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), U.B.S.

Table 34: shipments in manufacturing¹, by economic use groups (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Excluding shipments for re-processing at maker's own plants. ³Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ²The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1961 and 1962 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

*See also Table 31. ¹Excluding Newfoundland. Western grain prices used in the construction of the index prior to August 1, 1962 are final prices. From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Includes subsidy on hogs. ³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. ⁴Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. ¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Source: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total.

²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁵Amount owing to oil companies, excluding commercial accounts. ⁶Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁷Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. Source: Department of Finance, Department of Agriculture, Bank of Canada, Credit Statistics (61-004), D.B.S.

¹The trade figures have been adjusted to reflect more closely the timing of transactions, and to exclude commodities which are covered elsewhere or are not pertinent for balance of payments purposes. ²Net resources supplied to or by the International Monetary Fund and other special financial assistance. ³Annual data for long-term forms include +28 million in 1959, whose quarterly distribution is not known. Quarterly data include this amount as short-term forms. Sources: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), D.B.S.

¹Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ²Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. ¹Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

²Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

³Less total float, i.e. cheques and other items in transit (net).

⁴At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 33 companies operating in Canada representing 84 per cent of new ordinary insurance sales. ¹The Canada totals by months for 1961 and 1962 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1961 and 1962 nor the monthly averages for 1962 have been revised to agree with the Canada total.

Note: — The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies). ¹Includes Tobacco products, Leather and Miscellaneous Manufacturing industries. ²Includes Electric Power, Gas and Water Utilities. ³Includes Community, Business and Personal Service industries. ⁴Includes Agriculture, Forestry, Fishing and Construction. Source: Corporation Profits (61-003). D.B.S.
