### A NOTE TO USERS

#### *Ratio Charts:*

Beginning with this issue, the charts on pages S-2 Industrial Production, S-3 Industrial Employment and S-10 Prices have been prepared on semi-logarithmic or a ratio scale basis. For indicators plotted on these charts, equal percentage changes are represented by equal distances on the vertical scale; this will facilitate comparisons within and between series as approximate rates of change may be obtained by a direct comparison of slopes. Charts not on this basis are marked as being on the arithmetic scale.

#### *Publication of an Additional Table:*

A new table (Table 12) entitled "Real Gross Domestic Product by Industry of Origin" is being introduced in this issue. It presents quarterly indexes of real output on a 1949 base. The indexes are an extension of the Index of Industrial Production to cover the entire range of domestic industries. In addition to mining, manufacturing, and electric power and gas utilities, which comprise the Index of Industrial Production, total domestic product includes the following industry groups: agriculture; forestry; fishing and trapping; construction; transportation, storage and communication; trade; finance, insurance and real estate; public administration and defence; and community, recreation, business and personal service. The indexes are based on the unrevised standard industrial classification.

The real domestic product indexes are also an elaboration of the supply side of the National Accounts. Total domestic product (the sum of the unduplicated output of all industries located in Canada, valued in 1949 dollars and expressed in index number form) differs conceptually from constant dollar expenditure on Gross National Product by (1) the inclusion of income accruing to non-resident owners of Canadian factors of production (2) the exclusion of income accruing to Canadian residents from ownership of factors of production abroad and

(3) the exclusion of "indirect taxes less subsidies". In addition, of course, statistical differences may exist between these two measures of aggregate output.

The quarterly real output indexes are currently published in the monthly *Index of Industrial Production* publication, Cat. No. 61-005. The historical record of production in Canada is published in D.B.S. Occasional Paper 61-505, *Indexes of Real Domestic Product by Industry of Origin*, 1935-61, which also contains a detailed description of concepts and methods used.

#### *Deletions:*

Former Tables 20 and 24 on Industrial Employment and Average Weekly Wages and Salaries by Urban Areas are being discontinued in the Review. Current data in these two tables will still be available monthly in the DBS publication "Employment and Payrolls", Cat. No. 72-002.

#### *Modifications:*

The format and contents of former Table 101 on Federal Government Budgetary Revenues and Expenditures have been changed. Revenues will now be in Table 102 and Expenditures in Table 103. Both tables will carry a longer period of data than formerly, in line with other tables in the Review. On the expenditure side, a selection by departments and items within departments has been introduced. A more detailed monthly classification of expenditures is available in the *Canada Gazette*.

#### *Other Changes:*

(1) The series on pulpwood production previously shown in thousand cords in Table 46 will now appear in thousand cunits. The data have been converted from rough cords to cunits on the basis of 85 cubic feet of solid wood per rough cord.

(2) Former Table 102 "Miscellaneous Financial Statistics" now labelled "Stock Exchange Statistics" will now appear as Table 101.

## RECENT ECONOMIC DEVELOPMENTS IN CANADA AND THE UNITED STATES<sup>1</sup>

The current expansion in North America is now in its fourth year, thus exceeding in duration all previous post-war expansions. As the year draws to a close there is evidence to suggest that the forward impetus has not spent its force. The purpose of this article is to compare economic developments in Canada and the United States at the present stage of the cyclical upswing.

The experience of the two countries presents much more of similarity than of contrast. Measured in terms of the index of industrial production, the latest available data show an advance of about 30 per cent in both countries from the cyclical low point at the beginning of 1961. In terms of the comprehensive measure, Gross National Product, expansion has been somewhat more vigorous in Canada than in the United States. From the first quarter 1961 trough, seasonally adjusted Gross National Product in Canada had risen about 27 per

cent by the second quarter of 1964, compared with about 23 per cent in the United States. With third quarter estimates now available for the United States it is apparent that the momentum of the upswing in that country was being well sustained; Gross National Product was running about 25 per cent above the 1961 first quarter level.

In both countries, the rise in Gross National Product has been based on an increase in final sales; stock-building has made only a small contribution to the upswing in economic activity. In both countries the expansion has been broadly based, with all the major components of final demand—consumer spending, business investment in plant and equipment, government expenditure for goods and services, exports and, until recently, outlays for housing—adding significantly to the demand for output. (See Table 1).

**TABLE 1. Percentage Changes in Components of Gross National Expenditure**

	United States		Canada	
	1962 to 1963	1st half 1963 to 1st half 1964	1962 to 1963	1st half 1963 to 1st half 1964

Imports .....	4.6	5.8	5.6	18.9
Gross National Product .....	5.0	6.8	6.6	8.1

Rising economic activity in the industrialized countries of Western Europe and in Japan (now being restrained in many countries for balance of payments reasons), and in North America itself, created a favourable environment for international trade during the current expansion. The less developed countries have benefited from this situation. Meanwhile, economic developments at home and abroad seem to have improved the competitive position of both countries in their own and in international markets; in the Canadian case the devaluation of the Canadian dollar contributed to the same result. In addition, fortuitously, good crops of wheat on this continent coincided with a

near failure in the Soviet Union and well below average crops in Europe in 1963, with the result that world trade in wheat in the crop year just past is likely to establish a record that will not be surpassed for many years to come. In these circumstances, merchandise exports from both countries have been substantially higher. This statement applies especially to Canada where exports in general and wheat in particular, are relatively much more important in the structure of the economy than in the United States.

QUARTERLY NATIONAL ACCOUNTS  
CANADA AND THE UNITED STATES  
SEASONALLY ADJUSTED INDEXES 1961=100

QUARTERLY NATIONAL ACCOUNTS  
CANADA AND THE UNITED STATES  
SEASONALLY ADJUSTED INDEXES 1961=100

In the past year special factors have affected the timing of quarter to quarter changes in the two countries. In Canada, the winter house building incentive programme and probably also decisions made in anticipation of the forthcoming increase in the sales tax on certain building materials and production machinery<sup>2</sup> made for exceptional strength in the two winter quarters, followed by some levelling off in the second quarter of 1964. In the United States, income tax reductions made their major impact in the spring and summer quarters. Levels and patterns of activity and flows of income through time reflect the special influences that have been brought to bear on each of the two economies.

### The External Sector

Since industrial materials and equipment account for the greater part—some 70 per cent—of the total, United States merchandise exports show a marked sensitivity to changing levels of capital investment and stock-building in other countries. In the course of the current expansion, Europe, Canada, Japan, and the less industrialized countries as a group, increased their purchases of materials and equipment from the United States while purchases of food also rose substantially. Thus merchandise exports, excluding military grant aid shipments, in the first six months of 1964 were at a seasonally adjusted annual rate about 5 per cent above the high level of the previous six months and about one-sixth above the average for 1962. Merchandise exports stopped rising in the second quarter of this year, reflecting the levelling off in industrial production in Western Europe and Japan. In a first nine months comparison, merchandise exports were up 14 per cent.

United States merchandise imports rose sharply in 1962 from the recession level of the previous year and continued to rise in 1963 and the first half of 1964 when they were running about 5 per cent above the 1963 annual rate.

The underlying trend of Canadian merchandise exports has been upward since the beginning of 1961 and the rates of increase accelerated sharply in the latter part of 1963 when wheat began to move out in exceptionally large volume. For the first nine months of this year, the value of exports exceeded that of the same period a year ago by about 23 per cent. Apart from wheat, exports of which were about 70 per cent higher, there was a gain of about 32 per cent in exports of iron ore and concentrates and substantial gains in exports of most other leading commodities.

<sup>2</sup> On July 8th, 1963, it was announced that the exemption from the sales tax on certain building materials and production machinery would be removed in three stages: 4 per cent would be imposed in June 1963, rising to 8 per cent in April 1964 and to the full 11 per cent in January 1965.

The rising trend of merchandise imports into Canada in 1963 not only reflected the underlying expansion in economic activity but also the removal on April 1st of that year of the last of the remaining import surcharges which had been imposed at the time of the exchange crisis in mid-1962. Imports continued to rise in the first two quarters of 1964 although the rate of increase slowed down in the second quarter, presumably reflecting some retardation in the over-all level of economic activity. Imports in the first half year, seasonally adjusted, were 19 per cent above the level of 1963.

Despite some improvement in the surplus on merchandise trade, the deficit on current international account in the first half of 1964, at an annual rate, was higher than in 1963, reflecting the widening gap between payments and receipts for services.

### The Investment Sector

The growing volume of business spending for plant and equipment has been an important element in the present expansion in the United States, though less so than in the previous upswing. According to the August survey of investment intentions conducted by the Department of Commerce and the Security and Exchange Commission, capital outlays were expected to rise in the third quarter of this year and again in the fourth, and the third quarter estimates of actual expenditures now available tend to confirm the expectations expressed earlier. If fourth quarter expectations are realized, this would represent the fourteenth consecutive increase and bring the seasonally adjusted annual rate 38 per cent higher than in the spring of 1961. (In the previous expansion capital outlays rose 47 per cent over a period of ten quarters). If plans are carried out, outlays in 1964 will be 13 per cent higher than in 1963.

The Survey suggests that the largest gains relative to 1963 will be in transportation; increases of one third were planned by the rail group and of one-fifth by the non-rail group. In manufacturing, expected outlays for 1964 are up 16 per cent, with roughly parallel rates of increase for the durables and the non-durables.

The McGraw Hill fall survey of business spending plans for 1965, now available, suggests that the expansion in outlays may be more modest than in 1964. The figure indicated in this survey is an increase of 5 per cent, which compares with the 13 per cent expected to be realized this year. On the other hand, new orders for durable goods, a forward indicator, have remained fairly stable for several months.

Capital expenditures on plant and equipment provided a similar impetus to the economy in Canada, and at annual rates business outlays in the first half of the year were running about 14

per cent above the rate for 1963. The figure compares with an increase of about 9 per cent in the United States in the same time comparison. However, with the imposition of the sales tax on building materials and machinery noted earlier, higher prices will account for some part of this increase.

The mid-year survey of investment intentions indicated that some of the more important increases in levels of investment are occurring in the paper and allied industries and the primary metal manufacturers, while expanded programmes in the utilities, particularly electric power, urban transport, water systems and pipelines call for heavier investment outlays.

In the United States, as in Canada, a plentiful supply of mortgage credit reinforced rising incomes to raise the level of outlays for housing. Following a strong three year advance in multi-family housing, housing starts, principally apartments, began to taper off in the summer months of this year and the drop in building permits suggests a further decline in the months ahead. Outlays for residential construction fell in the second quarter of this year and again in the third. Non-residential outlays continued to rise but total construction expenditures eased a little in the summer months.

In the latter part of 1963 a number of strong expansionary influences came to bear on housing activity in Canada. At mid-year, down payments under NHA had been reduced and later CMHC announced an extended programme of mortgage lending. In addition, the Government announced a winter house-building incentive programme, which provided a cash payment of \$500 to first owners of houses built between the beginning of December and the end of March. The anticipation of the sales tax on building materials, already referred to, may also have had an impact. The result was that a record level of starts of single detached dwellings was added to an already high level of apartment building. Spending on residential construction rose about 25 per cent in the first quarter of 1964 and fell back about the same extent in the second. With data now complete for the third quarter, it appears that there was little change from second quarter housing outlays, when seasonal factors are taken into account.

The pattern of developments in housing in Canada in recent quarters raises difficult problems in interpreting seasonally adjusted data in that seasonal factors based on an average of past experience may no longer be appropriate in the new situation. It should be mentioned that the Government has announced its intention of resuming the winter house-building programme this coming winter.

Compared with past experience, investment in business inventories has played a minor part in the current expansion in both countries. Several factors

suggest themselves as accounting for this development: demand has not pressed on supply which has made for prompt delivery; prices have remained fairly stable, thus dampening the speculative motive in inventory accumulation and, finally, businessmen have been improving techniques of inventory control.

In the United States, investment in inventories in 1963 was much the same as in 1962. In the first half of 1964 the rate of accumulation was below the level of 1963 as a whole and well below the fourth quarter of that year. The over-all changes reflect fairly large and partially offsetting changes within manufacturing and as between manufacturing and trade.

In the quarterly survey of anticipations, conducted in August, manufacturers reported that they planned to increase substantially their build-up of stocks in the second half of the year, the major part of the increase to be in the closing quarter. They also anticipated some increase in sales in the second half of the year.

Now that third quarter estimates are available, it is apparent that stock-building continued, but at a lower rate than in the first half of the year. There was some addition to manufacturer's stocks but a dip in trade stocks which may be attributable to unusually high consumer demand.

Two special factors are likely to influence stock-building in the United States in the months ahead. The labour contract in the steel industry is due to expire next spring and stocks of steel may be built up as a hedge against a strike; trade stocks are now rather low in relation to sales and an effort may be made to restore the relationship of the recent past. September figures tend to suggest that the rate of build-up was rising.

In Canada, the pattern of stock-building has fluctuated but inventory accumulation began to add to the demands on current production in the third quarter of 1963 and continued to do so in the first two quarters of 1964. Data on inventories in the hands of manufacturers and retailers are now available for July and August. These figures suggest that stock-building persisted into the third quarter but at a reduced rate.

### The Consumer Sector

In the United States, as in Canada, consumer markets were buoyant in 1963, with the emphasis falling on the cyclically sensitive durables and on automobiles in particular. The upward trend continued into 1964 when the rise in the first half year was the largest of any half year in peacetime. In the third quarter, gains in consumer spending were widespread, with a rise in purchases of automobiles, which had levelled off in the second quarter, a sharp increase in spending on non-durables and a further expansion in outlays for services.

Important among the factors affecting consumer outlays in the United States this year is the reduction in rates of federal income tax which took effect on March 5th. It is estimated that the tax reduction in itself, apart from offsetting factors, would have raised income available for spending by about \$9 billion at annual rates in the first half of the year. Initially it appears that a good part of the increase was saved, particularly in the second quarter, when the rate of saving out of personal disposable income of 8½ per cent was one of the highest since the end of the Korean war. While the rate of personal saving dropped in the third quarter, it remained above the average of the post-Korean period.

Looking ahead, the Conference Board survey of consumer attitudes and buying plans for the next six months, conducted in July and August, indicates an optimistic outlook which is reflected in intentions to buy. For the season of the year, intentions to buy automobiles were at record levels, appliances at a five year high and house-furnishings at a near peak. Plans to buy houses declined, as in the two previous survey periods.

The rise in personal spending in Canada in 1963 was characterized by unusually heavy spending on durables, the highest rate of increase since 1955 in contrast to little change in 1960 and 1961.

While automobiles account for the major part of the additional outlays on durables in 1963, there were substantially higher purchases of some household durables. This pattern of rising consumer outlays continued into the first quarter of 1964 but changed in the second quarter when spending for automobiles fell from their unusually high first quarter level and purchases of household durables also declined. (The latter development may reflect the sharp drop in housing completions). The result was that consumer spending levelled off in the second quarter, after having been a strong expansionary influence in the economy in the preceding nine months. In this respect Canadian experience differs from that of the United States.

Present indications are that the up-trend in consumer outlays in Canada was resumed in the third quarter. Fairly complete information on purchases of automobiles shows a substantial increase. Furthermore, retail sales, seasonally adjusted, for the months of July and August were running somewhat higher than the average for the preceding three months.

### The Government Sector

In the United States, both Federal and State and local governments continued to support the rise in demand in 1963. However, largely as a result of expanding economic activity, receipts at both levels rose even more rapidly than outlays, thereby narrowing the Federal deficit and widening the surplus at other levels of government. The major part of the increase in federal expenditures is accounted for by national defence.

A particularly sharp rise in government expenditure occurred in the second quarter of 1964, reflecting an abrupt increase in outlays for national defence and continued growth in expenditures by State and local governments. At the same time revenues were reflecting the full effect of the tax cut with the result that a substantial deficit emerged. Government expenditures were virtually unchanged in the third quarter but receipts (official estimates are not yet available) are not likely to have been substantially higher.

Government expenditure in Canada advanced in 1963, with almost all the increase occurring at the provincial-municipal level. However, government revenue rose more, making for a sharp drop in the deficit on a National Accounts basis. The decline in the deficit began in the third quarter of 1963. By the first quarter of 1964, the Federal government was operating with a small surplus, which increased in the second quarter when it was the largest since the second quarter of 1957. Meanwhile, the deficit at the provincial-municipal level in the first half of 1964 at an annual rate was somewhat lower than in 1963.

## Income Flows

By the fourth quarter of 1963 corporate profits in the United States were 37 per cent above the cyclical trough in 1961. While the gains were widespread by industry they were particularly large in the cyclically sensitive durable manufacturing industries. Corporate profits continued to rise in 1964. In the first quarter of 1964 profits after taxes began to register the tax cut (which is effective on all 1964 income) and thus increased somewhat more than profits before taxes.

Reflecting gains in employment and rising wage rates, labour income in the United States began to rise early in 1961 and by the third quarter of this year, at a seasonally adjusted annual rate, it was about 24 per cent higher than in 1960. In the same time comparison, personal income rose about 23 per cent, and, owing to the tax cut, income

at the disposal of consumers for spending was up about 25 per cent.

The rise in corporate profits in Canada (before taxes and before dividends paid abroad) from their cyclical trough at the beginning of 1961 to the end of 1963 matched that which occurred in the United States. Following a further strong increase in the first quarter of 1964, corporate profits eased a little in the second quarter, reflecting the leveling off in economic activity at that time.

By the second quarter of 1964, labour income in Canada (including military pay and allowances) was running about 21 per cent above the level of 1961 and incomplete data for the third quarter suggest a higher rate of increase than in the second quarter. So far as personal income is concerned, the gains in Canada reflect the exceptionally large crops of 1962 and 1963 and large outpayments to farmers by the Wheat Board in the latter year.

## LABOUR FORCE (More detail in Table 16)

Total labour force rose in October while employment declined; the unemployment rate was 5.0 per cent.

## civilian labour force

	total	non-agricultural	employed total	employed non-agricultural	index of unemployed	unemployed as a per cent of labour force

<sup>1</sup>Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates are made on January 1, April 1, July 1 and October 1, as well as June 1. <sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

<sup>2</sup>Includes residual error of estimate. Source at bottom of Table 10A.

<sup>1</sup>Quarterly indexes for agriculture and for aggregate domestic product for the current year become available only once a year, with the fourth quarter data.<sup>2</sup>Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505) D.B.S.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. <sup>3</sup>The Agricultural, Finance, Insurance and Real Estate and Public Administration and Defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

Table 19: employment<sup>1</sup> indexes, by industrial divisions (1949=100), based on the unrevised standard industrial classification

<sup>1</sup>The data in Tables 19 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing, trapping and domestic service. <sup>3</sup>Includes storage and communication. <sup>4</sup>Includes insurance and real estate. <sup>5</sup>Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 33: manufacturing inventories<sup>1</sup> by selected industries as in the revised standard industrial classification (million dollars)

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>4</sup>End of period. Annual figures for inventories and unfilled orders are end of December values. Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

<sup>1</sup>Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. <sup>5</sup>Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

<sup>1</sup>Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

<sup>2</sup>The data on building permits are collected for 1,300 municipalities and individual figures are available on request. Some of the annual totals for 1962 and 1963 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1963, stands at 1,300; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: New Residential Construction (64-002), D.B.S.

<sup>1</sup>Footnote and Source are at Bottom of Table 63. <sup>2</sup>Starting In January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

\*See also Table 31. <sup>1</sup>Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1963 are final prices. From August 1, 1963 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. <sup>2</sup>Includes subsidy on hogs; barley No. 1 feed; hogs grade "B" olive. <sup>3</sup>Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B, or good lamb. <sup>4</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B, or good lamb. <sup>5</sup>Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. <sup>6</sup>Grade "B" hog. <sup>1</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

<sup>2</sup>Includes stocks held by manufacturers, wholesalers and other warehouses.

<sup>3</sup>Many mills were operating at more than the standard 26 working days in the month.

<sup>1</sup>Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. <sup>2</sup>Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

<sup>1</sup>Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. <sup>2</sup>Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. <sup>3</sup>Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. <sup>4</sup>Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. <sup>5</sup>Amount owing to oil companies, excluding commercial accounts. <sup>6</sup>Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. <sup>7</sup>Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. Source: Department of Finance, Department of Agriculture, Bank of Canada, Credit Statistics (61-004), D.B.S.

<sup>1</sup>Data in this table refer to railways with annual operating revenues of \$500,000 or over.

Monthly averages for 1962 and 1963 differ from the sum of the

monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. Sources: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 33 companies operating in Canada representing 84 per cent of new ordinary insurance sales. <sup>1</sup>The Canada totals by months for 1962 and 1963 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1962 and 1963 nor the monthly averages for 1963 have been revised to agree with the Canada total. Sources: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

<sup>1</sup>The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (Excluding government-owned companies). <sup>2</sup>As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. <sup>3</sup>Includes also the furniture and furnishings industry. <sup>4</sup>Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. <sup>5</sup>Includes tobacco products, leather and miscellaneous manufacturing industries. <sup>6</sup>Includes also storage and communication industries. <sup>7</sup>Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.
