A NOTE TO USERS

Publication of two additional tables:

Tables 11a and 11b, quarterly revenues and expenditures of all governments in Canada are presented in this publication for the first time on both an unadjusted and seasonally adjusted basis. The estimates shown here are based on national accounts concepts and consequently differ from those in the conventional budgetary accounting statements as presented in Tables 102 and 103. For example, government expenditures in a national accounts framework are defined to exclude certain financial transactions such as those relating to reserves, write-offs and other similar items as well as the purchase of land and existing capital assets; on the other hand, they include the transactions of extra-budgetary funds, such as unemployment insurance, old age security, etc. On the revenue side, the federal corporation taxes have been adjusted to an accrual basis. For a fuller description of the government sector as defined for national accounts see pages 126 to 129 of the reference document, "National Accounts, Income and Expenditure, 1926-1956".

The user should also note that the sum of provincial and municipal revenue and expenditure published in the annual publication, "National Accounts, Income and Expenditure" (Cat. No. 13-201) will not agree with the provincial and municipal totals shown here in quarterly form. In the quarterly accounts, all the estimates for the provincial and municipal governments are combined with the result that transfers between the provinces and municipalities cancel out, thereby affecting total revenue and expenditure.

Data for the years 1950-58 are available in National Accounts, Income and Expenditure 1947-61, Cat. No. 13-519 and for the

years 1959 onwards in National Accounts, Income and Expenditure, Fourth Quarter and Preliminary Annual 1963, Cat. No. 13-001, D.B.S.

Modifications:

(1) The format and contents of former Table 86 on "The Canadian Balance of International Payments" have been changed to give a more detailed breakdown of the accounts and to agree more closely with the published material contained in Quarterly and Annual Estimates of the Canadian Balance of International Payments (67-001 and 67-201). These data will now be presented in Tables 86, 86A and 86B.

(2) Table 53 "Coal and Coke" has been expanded to include coal production in New Brunswick and Saskatchewan.

Revisions to Data:

The seasonally adjusted data on both Exports and Imports for the total, United States, United Kingdom and "All Other Countries" on page S-7 and Table 83 have been revised from January 1964 to incorporate more completely the "general trade" concept which allows for certain adjustments in warehousing. "General Trade" statistics are records taken at the national frontier, i.e. the point at which goods enter into or pass beyond the control of the national government. All trade statistics prior to that date had been prepared on a "special trade" basis. "Special Trade" statistics are records taken at the "customs frontier", i.e. the point at which imports leave customs supervision or exports enter it. Statistics of the same trade compiled in these two ways can differ in both magnitude and timing.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE

THIRD QUARTER 1964

Introductory Review

Gross National Product rose to a seasonally adjusted annual rate of \$46.7 billion in the third quarter of 1964, compared with \$46.1 billion in the preceding period. With prices higher by about one half of 1 per cent, the greater part of this 1.4 per cent advance in the value of national production represents a gain in the volume of output. The latest estimate of Gross National Product brings it above the cyclical low in the early part of 1961 by nearly 30 per cent in terms of value and 22 per cent in terms of volume.

There has been considerable comment in both Canada and the United States on the duration of the current expansion, which has lasted longer than any expansion in the post-war period. The broadness of its base has also been noted with all the components of final demand over the longer run contributing to the rise in the aggregate and stock-building playing a minor role.

The most important expansionary stimulus in the third quarter came from the consumer sector. Following little change in the second quarter, consumer spending rose at a rate roughly comparable with those of the closing quarter of 1963 and the opening quarter of 1964; expenditure on durables was particularly strong. Spending in the personal sector paralleled the rise in income available for spending. An accelerated rate of stock-building contributed to raising the demand for output. Support also came from the external sector; a further expansion in exports and a falling off in imports brought receipts and payments on international account virtually into balance. On the other hand, the investment sector acted as a restraining influence; outlays for the two construction components were virtually unchanged and, on the basis of available information, machinery and equipment appeared appreciably lower. Government operations were essentially neutral in that the combined government account moved from a small deficit in the second quarter to a small surplus in the third, reflecting continued buoyancy in revenue and some easing in expenditure.

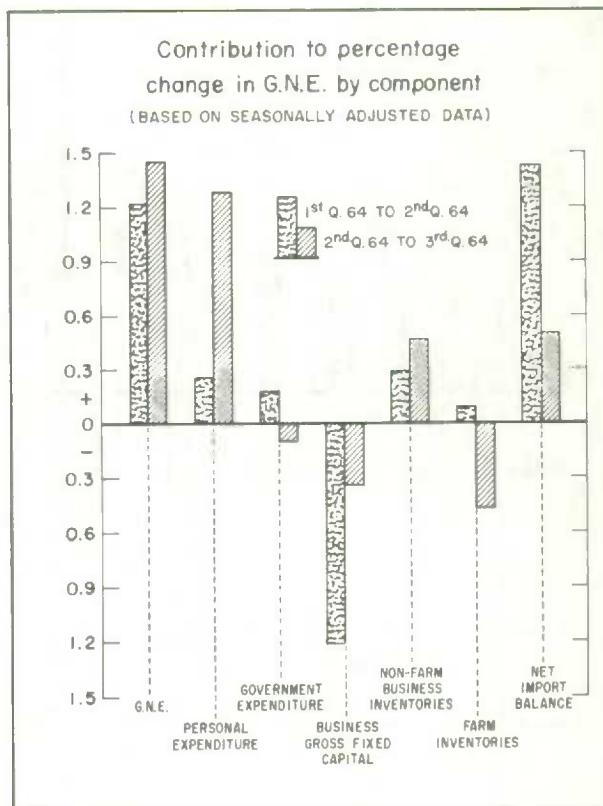

The salient developments on the income side in the third quarter are a distinct pick-up in the rate of increase in labour income and a further slight easing in the high level of corporate profits.

It will be recalled that there was an upsurge in economic activity in the closing quarter of 1963 and the opening quarter of 1964 partly as a result of special influences, notably the heavy volume of wheat exports to the USSR, which had an immediate impact on farm income, the government's house-building incentive programme and possibly also decisions taken in anticipation of the progressive imposition of the tax on certain production machinery and building materials. Following two sharp quarterly

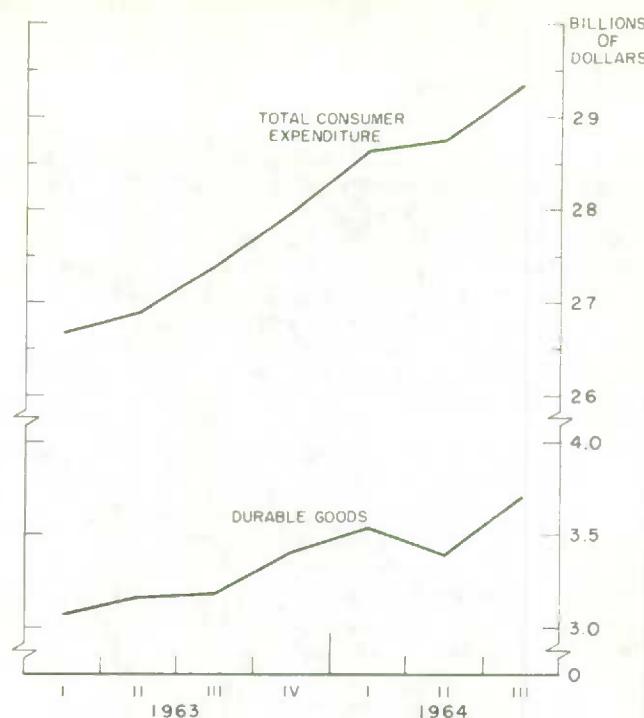

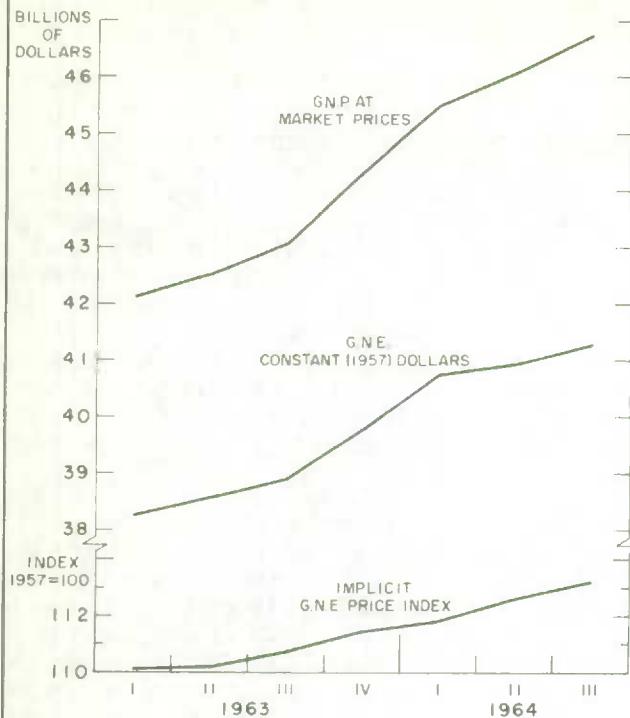

gains, economic activity showed little forward impetus in the second quarter of this year and the third quarter advance is relatively moderate.

Gross National Product in the first three quarters of 1964 was somewhat more than 8 per cent higher than in the same period of 1963. With the data now available it is possible to suggest orders of magnitude for the year 1964 as a whole. If, for instance, it is assumed that there is no change other than seasonal in the fourth quarter, Gross National Product for 1964 will show a gain from 1963 of about 7½ per cent; assuming a 1½ per cent increase in the fourth quarter, the gain will be about 8 per cent.

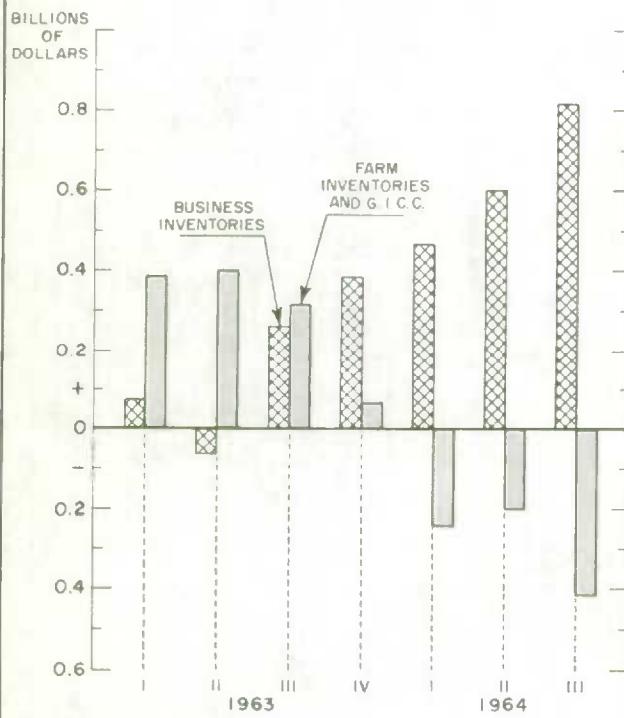

Turning to consider the sources of strength in the first nine months of this year compared with the same period a year ago, it is apparent that all components of final demand, except government expenditure where the increase was relatively moderate, made an important contribution to the rise in the aggregate. Strength pervaded the consumer and investment sectors. While exports rose very sharply, higher demand was met to a significant extent from foreign sources of supply, making for a substantial increase in imports. A significant build-up of business stocks added to the demands on the nation's productive capacity.

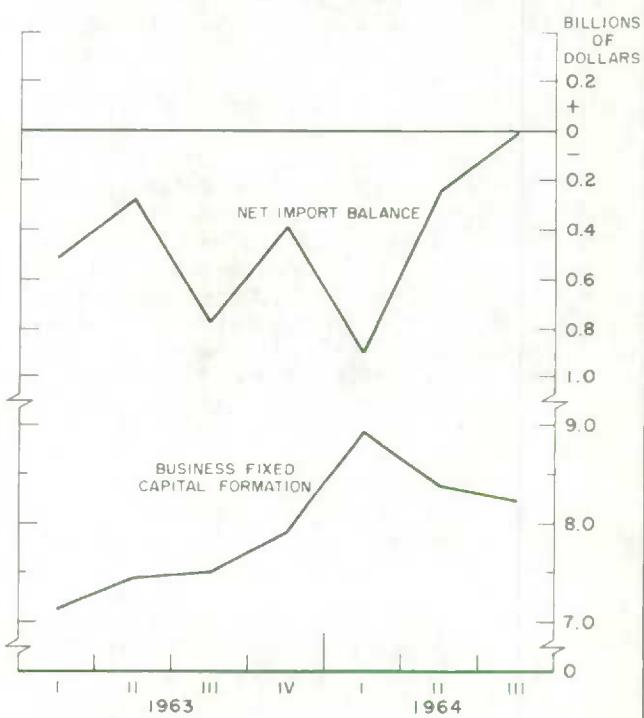

G.N.P. rose by 1.4 per cent in response to.....higher consumer outlays on durable goods, particularly automobiles

Offsets occurred in business and farm inventory movements

The net import balance improved, while business spending on capital declined

DATA IN THE ABOVE CHARTS ARE SEASONALLY ADJUSTED AT ANNUAL RATES.

Price Movements

As is shown in the accompanying table, the over-all price increase of one half of 1 per cent in the third quarter reflected some advance in the price element of most components of expenditure. Services largely account for fractionally higher prices in the consumer sector. Machinery and equipment

prices levelled off, following the increase associated with the sales tax recorded in the previous quarter.

A comparison of the first nine months of 1964 with the same period of 1963 indicates that about three fourths of the increase in the value of production represented a gain in real terms.

¹ Data not adjusted for seasonal variation.

² Implicit Price Indexes.

³ The base weighted price index of Gross National Expenditure seasonally adjusted showed an increase of 0.5 per cent between the second and third quarters.

DEVELOPMENTS IN THE THIRD QUARTER

Consumer Expenditure

After showing only a small increment in the second quarter, personal expenditure, seasonally adjusted, increased by 2 per cent in the third quarter, the same rate of increase as in the latter part of 1963 and early 1964. The increase in the third quarter was supported by an equivalent rise in personal income when labour income showed above average growth. Price increases on average were fractional and centred mainly in services.

Expenditures on goods provided the major impetus as durable goods recovered from the downturn of the previous quarter and, at 9 per cent, registered one of the largest increases in several years. As usual, purchases of cars were the most important element in the movement of durables; net purchases of new and used cars increased by more than 15 per cent. Demand was strong for cars of both North American and overseas manufacture. Purchases of household durables showed increases ranging from $\frac{1}{2}$ per cent to 2 per cent.

Purchases of non-durable goods increased by about 1 per cent with demand for food and clothing contributing to the increase. Purchases of food increased by 1 per cent while clothing increased by 4 per cent. Purchases of alcoholic beverages also increased by $\frac{1}{2}$ per cent.

Expenditures on services increased by almost $\frac{1}{2}$ per cent, with several elements contributing to the rise. Shelter expenses increased by almost 2 per cent while other increases were registered by purchased transportation and personal services.

Business Gross Fixed Capital Formation

At a seasonally adjusted annual rate of \$8,220 million, capital spending fell about 2 per cent below the second quarter. The movement in the total was determined by a 5 per cent decline in outlays for machinery and equipment from their previous high level; outlays for non-residential construction were somewhat higher and for housing virtually unchanged.

The value of new residential construction at annual rates was \$1,752 and \$1,748 million, after discounting seasonal factors, in the second and third quarters. This stability reflects offsetting movements of a 13 per cent rise and a 13 per cent drop in seasonally adjusted figures of housing starts and completions. Starts at annual rates moved from 134,200 to 152,300; completions from 148,000 to 128,900, and as these figures suggest there was some increase in the number of dwelling units under construction. The main strength again centred in multiple dwelling units, although a pick-up in single dwellings became apparent at the end of the quarter as CMHC commenced its direct lending slightly earlier than in 1963.

The annual rate of new non-residential construction rose slightly from \$3,080 to \$3,096 million, while expenditure on new machinery and equipment dropped from \$3,544 to \$3,376 million. While business outlays on new machinery and equipment are estimated to have been lower, detailed import figures for the quarter are not yet available to substantiate part of this estimate.

Non-farm Business Inventories

Investment in business inventories was one of the important factors raising the level of economic activity in the third quarter. Seasonally adjusted estimates show an accumulation of \$816 million at annual rates compared with \$600 million in the previous quarter. More than two-thirds of the increase occurred in manufacturing, with the rest at the wholesale level and, to a lesser degree, in the total of other industries; offsetting movements left stocks at the retail level almost unchanged.

While accumulation in manufacturing was general among durable and non-durable lines, it was dominated by the substantial build-up in the transportation equipment industries. Another industry with more than usual re-stocking was textiles where inventories continued to be raised in response to the optimistic outlook in the industry reflected in part by the high level of shipments and unfilled orders in 1964.

With higher manufacturing production and slightly lower shipments, additions to stocks took place at

all stages of production, the highest being in stocks of finished goods. Unfilled orders showed an increase although the level still does not suggest undue pressure on capacity in relation to the current level of shipments. For the industry as a whole, the seasonally adjusted stock-to-shipments ratio increased slightly.

In wholesale, the re-stocking was also general. The accumulation in durables, almost three times more than that in non-durables, was concentrated mainly in the industrial and transportation equipment and supplies trades. The stock-to-sales ratio for the industry as a whole remained unchanged since the increase in the ratio in durables was offset by the decrease in non-durables.

In retail, the substantial drop in the rate of increase to a virtually unchanged level of stocks was caused by the liquidation of durables, especially of cars, reflecting strong demand. The stock-to-sales ratio for cars was the lowest since 1955. On the other hand, non-durable lines continued to increase their stocks at rates higher than those of the previous quarter. This was accompanied by a less-than-average advance in consumer spending for non-durable goods in the third quarter. For the industry as a whole, the stock-to-sales ratio dropped, but it was still above average of the past four years.

Exports and Imports of Goods and Services

The deficit in the external account virtually disappeared, dropping from an annual rate, after seasonal adjustment, of \$240 million in the second quarter to \$8 million in the third as exports of goods and services rose by 1 per cent to an annual rate of \$10,708 million and imports fell by 1 per cent—moving from \$10,836 to \$10,716 million. The improvement in the import balance over the longer run was due to pronounced increases in merchandise exports, some of which were of a special nature; although in the current quarter declining imports were of greater significance. The deficit on non-merchandise transactions continues to expand, although somewhat erratically, and in the third quarter was the second highest on record.

Exports and Imports of Goods and Services

(Seasonally adjusted at annual rates)

	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
millions of dollars							
1963 - 1Q	6,604	6,152	452	1,948	2,912	- 964	- 512
2Q	7,008	6,400	608	1,972	2,856	- 884	- 276
3Q	7,048	6,768	280	1,984	3,036	- 1,052	- 772
4Q	7,596	7,000	596	2,056	3,044	- 988	- 392
1964 - 1Q	7,788	7,532	256	2,192	3,340	- 1,148	- 892
2Q	8,468	7,616	852	2,128	3,220	- 1,092	- 240
3Q	8,552	7,404	1,148	2,156	3,312	- 1,156	- 8

Exports of merchandise rose 1 per cent while imports fell by almost 3 per cent, raising the surplus on goods, seasonally adjusted, from \$852 to \$1,148 million. With the deficit on non-merchandise trade \$64 million higher, the current account deficit fell \$232 million.

Merchandise export figures indicate that gains were made principally in the United States market, unlike the second quarter when they mainly reflected the sale of wheat to the USSR and other countries in Eastern Europe. Sales abroad increased for agricultural machinery, newsprint, zinc, fertilizer, nickel and ores, aluminum, natural gas, copper and wheat. Commodity detail is not available to identify changes in merchandise imports.

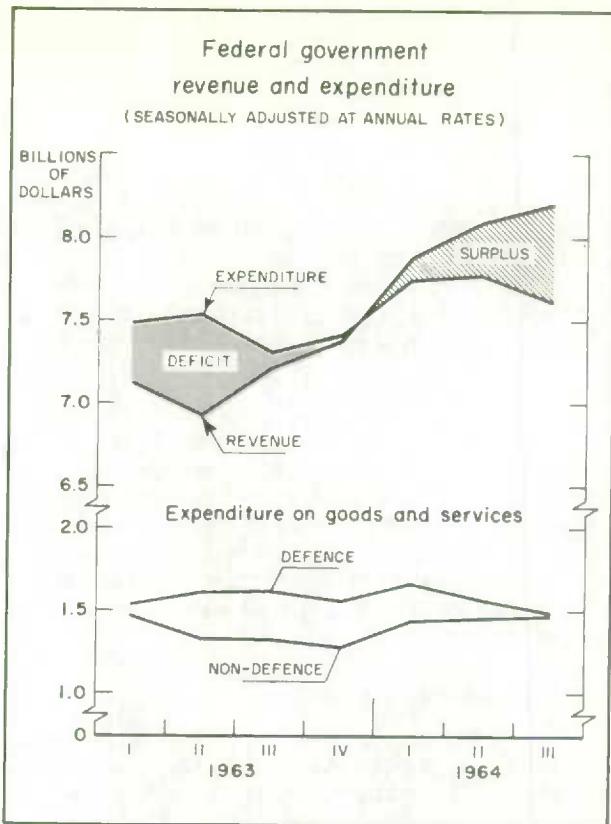

The non-merchandise trade deficit moved from \$1,092 to \$1,156 million, reflecting some deterioration in the interest and dividend account and in the miscellaneous service account (personal remittances, official contributions, business services, etc.).

The Government Sector

For the first time since 1957, total revenues of all governments combined exceeded total expenditures, with the result that on a National Accounts basis there was a shift from a deficit of \$100 million, seasonally adjusted at annually rates, in the second quarter to a surplus of \$148 million in the third quarter. All the gain occurred at the federal level where the surplus rose to a rate of \$588 million, continuing the trend evident since the second quarter of 1963. As for the provincial and municipal governments, the deficit widened from a rate of \$412 million in the second quarter to a rate of \$440 million in the third.

Total revenues of all governments rose to a level of \$15,860 million, an increase of about 1 per cent from the previous quarter. The bulk of the increase was accounted for at the federal level, the major gains being in personal direct taxes and in indirect taxes, the latter due mainly to higher returns from excise taxes. Total revenues at the provincial-municipal level were almost unchanged, as a result of largely offsetting movements; an increase of \$60 million in indirect taxes, reflecting higher returns from sales taxes was partially offset by declines in other components.

On the other hand, total expenditures of all governments decreased about 1 per cent from \$15,828 million in the second quarter to \$15,712 million in the third quarter, with declines occurring in almost all of the components, particularly at the federal level. Federal expenditures on goods and services dropped by over 2 per cent, with lower outlays on defence and a slight advance in non-defence expenditures. The other items of federal expenditure showed declines of varying degree. Expenditures at the provincial-municipal level increased slightly with small gains in expenditures on goods and services and in transfer payments to persons.

National Income

Wages and salaries rose almost 3 per cent in the third quarter, one of the largest gains since 1956 and similar to those recorded in the last quarter of 1963 and the first quarter of this year. Partly as a result of retroactive payments, the rate of advance was higher in the service than in the goods-producing industries.

The rise in wages and salaries of over 2 per cent in the goods-producing industries in the third quarter of 1964 is mainly attributable to manufacturing, where there was a distinct improvement from the moderate advance evident in the preceding period. Although income in construction rose nearly 1 per cent it was still below the unusually high level of the first quarter. Primary industries were up nearly 2 per cent in the third quarter.

Each of the industry groups within the service-producing segment recorded quarter-to-quarter increases roughly equivalent to the service-producing total of 3 per cent.

Corporation profits, (before taxes and before dividends paid to non-residents), dropped by about 2 per cent in the third quarter, following a similar

movement in the preceding period. However, profits remained high, 42 per cent above the cyclical low in early 1961.

The drop of 2 per cent in profits from the second to the third quarter reflects offsetting movements within the component industries. The largest drop

(7 per cent) occurred in manufacturing but this was partially offset by increases in mining and retail trade.

Within manufacturing, declines in profits from the second to the third quarters were widespread, as indicated in the accompanying table.

Percentage Changes in Corporation Profits

(Based on seasonally adjusted data)

	2Q 1964 to 3Q 1964
Mines, quarries and oil wells	11
Manufacturing	-
Foods and beverages	7
Wood products	4
Paper products	4
Metal industries (including transportation)	8
Petroleum and coal	14
Chemicals	13
Other manufacturing	14
	1
Transportation, storage and communication	1
Electric power, gas and water utilities	11
Wholesale trade	4
Retail trade	14
Finance, insurance and real estate	1
Community, business and personal service	4
Other non-manufacturing	-
Total, all industries	2

Seasonally adjusted net income of non-farm unincorporated business increased fractionally in the third quarter, with most industries showing little if any change. Higher than average increases in retail trade and service industries were largely offset by decreases in construction and finance.

Seasonally adjusted, accrued net income of farm operators dropped from a level of \$1,576 million in the second quarter to a level of \$1,348 million in the third, with declines distributed equally between grain and livestock production. Higher operating expenses also contributed. Seasonally adjusted, net income of farm operators (which is a component of personal income) remained virtually unchanged in the quarter.

Production by Industry

Seasonally adjusted real domestic product less agriculture for the third quarter of 1964 was almost 1 per cent higher than in the second quarter, but fell just short of the peak attained in the first quarter of this year. It was at a level approximately 21 per cent above its cyclical low in the first quarter of 1961.

Gains in the quarter were fairly widespread, in contrast to the rather exceptional influences at work during the first and second quarters when construction and related industries accounted for the bulk of the change.

Manufacturing, which increased by 1 per cent, was the largest single contributor to the gain in non-agricultural output. This was almost entirely the result of an increase of nearly 2 per cent in durables. Within durables, transportation equipment showed the largest gain, over 7 per cent, with all components contributing. However, motor vehicles (8%) and motor vehicle parts (11%) accounted for the major portion of the gain. Non-durable manufacturing increased only fractionally, largely as a result of a 6 per cent gain in clothing and a 3 per cent gain in chemicals.

Within trade, a slight decline in wholesale trade was more than offset by a 2 per cent gain at the retail level, resulting in a one per cent expansion in total trade volume. At the retail level, motor vehicle dealers, clothing stores and department stores, with increases of up to 6 per cent, accounted for most of the gain.

Further increases occurred in finance, insurance and real estate (1%), the community, business, recreation and personal service group (1%) and electric power and gas utilities (3%), which together contributed as much to the gain in non-agricultural output as did manufacturing. Returning to its first quarter level following a decline in the second quarter, forestry, with an increase of nearly 10 per cent matched the contribution of total trade to the aggregate expansion. Transportation, storage and communication increased fractionally.

Small decreases in output occurred in construction and in public administration and defence, while mining declined by about 3 per cent. All three components of mining showed decreases in the third quarter, but the major portion of the drop can be accounted for by a decline in the other metal component of metal mining, which reflected curtailments in uranium mining operations.

DEVELOPMENTS IN THE THREE QUARTERS OF 1964

Demand Components

The increase of 7 per cent in consumer expenditure between the first three quarters of 1964 and the same period of 1963 was more than 1 per cent greater than the increase between the years 1962 and 1963, with all the major components showing larger increases.

The largest relative gain was shown by durable goods which increased by almost 14 per cent in the first three quarters of the year, over 4 per cent

more than for the year 1963. Much of the demand was centred on cars, with net purchases of new and used cars increasing by 18 per cent. Sales, over the three quarters, of cars of North American manufacture showed increases comparable with the previous year while sales of cars of overseas manufacture also showed large increases after having been down sharply in 1963. All other durables showed greater increases for the nine months of 1964 than for the year 1963, with increases ranging from 5 per cent for jewellery and watches to 9 per cent for household durables.

Percentage Change in Consumer Expenditure

	Year 1962 to Year 1963	3 Quarters 1963 to 3 Quarters 1964
Food	4.3	4.7
Clothing	4.0	5.8
Other	4.2	5.5
Total non-durable goods	4.2	5.2
Appliances and radios	3.2	9.5
Home furnishings and furniture	5.1	9.4
Autos (new and used)	14.5	17.8
Other	5.7	8.2
Total durable goods	9.5	13.7
Total all goods	5.2	6.8
Total services	6.8	7.6
Total consumer expenditure	5.8	7.1

Non-durable goods showed a larger increase for the 3 quarters of 1964 than between the years 1962 and 1963. Major increases were registered by food and alcoholic beverages which increased 5 and 7 per cent respectively. Consumption of tobacco products was unchanged over the three quarters as

a sharp decline in the first quarter was followed by larger than usual increases in the two following quarters. With the exception of fuel, which decreased slightly, other non-durable goods showed greater increases for the first three quarters of 1964 than for the year 1963.

The increase in expenditures on services for the three quarters was broadly in line with the whole year 1963. Except for shelter, most of the service items showed higher gains in 1964 than for the year 1963. Expenditures on personal services increased by 9 per cent while transportation services rose by 4 per cent. Shelter expenses were up by 6 per cent, 2 per cent less than registered for the year 1963.

Net expenditure abroad, an adjustment to personal expenditure, to include payments abroad by Canadians and to exclude payments in Canada by non-residents, increased noticeably as payments by Canadians travelling abroad increased more than receipts from non-residents.

Capital investment was 15 per cent higher in the first three quarters of 1964 than in the same period of 1963. The rates of increase were high for all three components but the greatest strength manifested itself in machinery and equipment where outlays increased by more than 18 per cent; expenditures on non-residential construction were up over 10 per cent, making for a 15 per cent increase in investment in plant and equipment. It is interesting to note that, seasonally adjusted, plant and equipment outlays in the United States were up 11½ per cent in the same time comparison.

Outlays for housing were 16 per cent higher. There was a considerable change in the composition of housing between the two periods, with a large increase in apartment starts and some decline in starts of single dwelling units.

The pattern of housing outlays in the recent past appears to have been affected by special influences; the government's winter housing incentive programme (initiated in 1963 and being renewed this winter) and possibly also by decisions taken in anticipation of the progressive imposition of the tax on building materials.

A trend towards a build-up of stocks was resumed in the third quarter of 1963 and since then inventory accumulation has gone on at varying rates. For the three quarters of 1964 the value of the physical change in business inventories was \$509 million, an increase of \$473 million over the same period of 1963. However, this increase has not played as significant a role in the current expansion of economic activity as in previous expansions, and the inventory held by business does not appear to be unduly high in relation to output. Almost one-half of this increase of \$473 million was in manufacturing; retail trades accounted for more than one-third; the remainder was in wholesale trades and the total of the other industries.

During the first three quarters of 1964 the deficit in the external account on a national accounts basis narrowed to \$263 million from \$397 million in the same period of the previous year. This change of \$134 million resulted from an improvement of \$255 million in merchandise trade, partly offset by a deterioration of \$121 million in non-merchandise trade. About half of this change in non-merchandise trade can be attributed to the growing deficit in the interest and dividend account, and about one third to a larger deficit in the travel account.

Exports and Imports of Goods and Services (Not seasonally adjusted)

	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
millions of dollars							
1st 3 Quarters:							
1963	5,055	4,769	286	1,497	2,180	- 683	- 397
1964	6,111	5,570	541	1,637	2,441	- 804	- 263
Per cent change	%	20.9	16.8		9.4	12.0	

The 21 per cent increase in the value of merchandise exports was general although the gain was largely determined by higher sales of such commodities as wheat, iron ore, wood pulp, newsprint, aircraft and non-ferrous metals. However, the relative gains in exports of finished manufactured products such as combine reaper-threshers and passenger automobiles and chassis was particularly noticeable.

Full commodity detail is not available to account for the 17 per cent increase in merchandise imports, but seven months data suggest strength in Canadian demand for imported machinery, automobile parts, engines, tractors, fibres, textiles and products and plate steel.

The Government Sector

Reflecting the continuing high levels of income and employment, total revenues of all governments combined increased over 12 per cent in the first nine months of 1964 compared with the first nine months of 1963. Total expenditures of all governments combined increased less than total revenues with the result that the deficit narrowed considerably from \$712 million to \$168 million. The federal government moved from a deficit of \$405 million in 1963 to a surplus of \$110 million in 1964, as sharply increased revenues more than offset a modest increase in expenditures. At the combined provincial-municipal level revenues also rose more sharply than expenditures, narrowing the deficit from \$307 million in the first nine months of 1963 to \$278 million in the same period of 1964.

On the revenue side, receipts from indirect taxes at all levels rose sharply between the two periods and accounted for almost half of the increase in total revenues. There was an increase of almost 18 per cent in federal indirect tax revenues which partly reflected the higher sales tax rate on production machinery and building materials. Indirect tax revenues of provincial and municipal governments combined rose 11 per cent, mainly attributable to larger returns from sales and gasoline taxes and increases in real property tax revenue. Receipts from personal direct taxes and corporation direct tax liabilities also increased substantially at all levels.

Total expenditures of all governments increased by \$735 million in the first nine months of 1964 over the first nine months of 1963 with over \$600 million accounted for by gains in expenditures on goods and services and transfer payments to persons. Federal outlays on goods and services rose by over 3 per cent with all of the increase occurring in non-defence expenditures. Provincial-municipal expenditures on goods and services rose more sharply than the federal government estimate mainly due to increases in salaries, wages and supplementary labour income.

There was a rise of almost 10 per cent in transfer payments to persons from all governments combined with the major gain made at the provincial-municipal level. The increases in provincial-municipal transfer payments were widespread with higher grants to hospitals, educational and other welfare-type institutions being the most important.

National Income

Reflecting an improvement in employment and some increase in wage rates, wages and salaries in the first three quarters of 1964 were nearly 9 per cent higher than in the corresponding period of 1963. The rates of gain in the more cyclically sensitive goods-producing industries were only slightly higher than in the service-producing industries. The

increases in manufacturing and construction were over 9 per cent, compared with a smaller gain of 6½ per cent in the primary industries as a group. Among the service-producing industries the highest rate of gain—11 per cent—occurred in finance and service; transportation, communication and other utilities and public administration recorded gains of about 6 per cent.

Corporate profits (before taxes and dividends paid abroad), having risen sharply in the two winter quarters, eased a little in the two mid-quarters of 1964. The first three quarters of 1964 nevertheless show a gain of almost 13 per cent from the same period of 1963. One of the major gains was in the transportation, communication and storage group (18 per cent). Profits in the mines, quarries and oil wells group also advanced sharply (19 per cent). The gain in manufacturing was more moderate (13 per cent), the major gains being in petroleum and coal (25 per cent), metal industries (15 per cent), and chemicals (12 per cent).

Accrued net income of farm operators from farm production decreased by almost 18 per cent in the first three quarters of 1964 compared with the same period in 1963. The larger portion can be attributed to the lower value of the 1964 crop, which was almost 19 per cent less than that in 1963 and a smaller portion for lower livestock production. Cash income from the sale of agricultural products was nearly 9 per cent higher in 1964 than in 1963, reflecting increased grain sales.

In a comparison of the first three quarters of 1964 with the first three quarters of 1963, non-farm net income increased by 3 per cent. Increases were general by industry with the exception of retail trade and transportation, which showed decreases of 4 per cent and 2 per cent, respectively.

Production by Industry

Real domestic product less agriculture for the first nine months of 1964 was 7 per cent higher than in the corresponding period of 1963. About one third of the aggregate increase was accounted for by a 9 per cent gain in manufacturing. Durable manufacturing, in particular, expanded rapidly during this period (11 per cent), largely as a result of the gains in the output of the motor vehicles and parts industries, which increased by more than 20 per cent, and expansion in iron and steel production. Other industry groups registering increases of about 11 per cent were transportation, storage, electric power and gas utilities, and forestry. Mining and wholesale trade increased by about 10 per cent, while non-durable manufacturing and retail trade showed gains of 7 and 6 per cent, respectively. Construction, which expanded sharply during the first quarter, showed a 5 per cent increase in the nine month comparison, as the initial gains were offset by declines in the second and third quarters.

LABOUR FORCE (More detail in Table 16)

Employment and total labour force were higher in November while the index of unemployment declined; the unemployment rate was 4.3 per cent.

INDUSTRIAL PRODUCTION (More detail in Table 13)

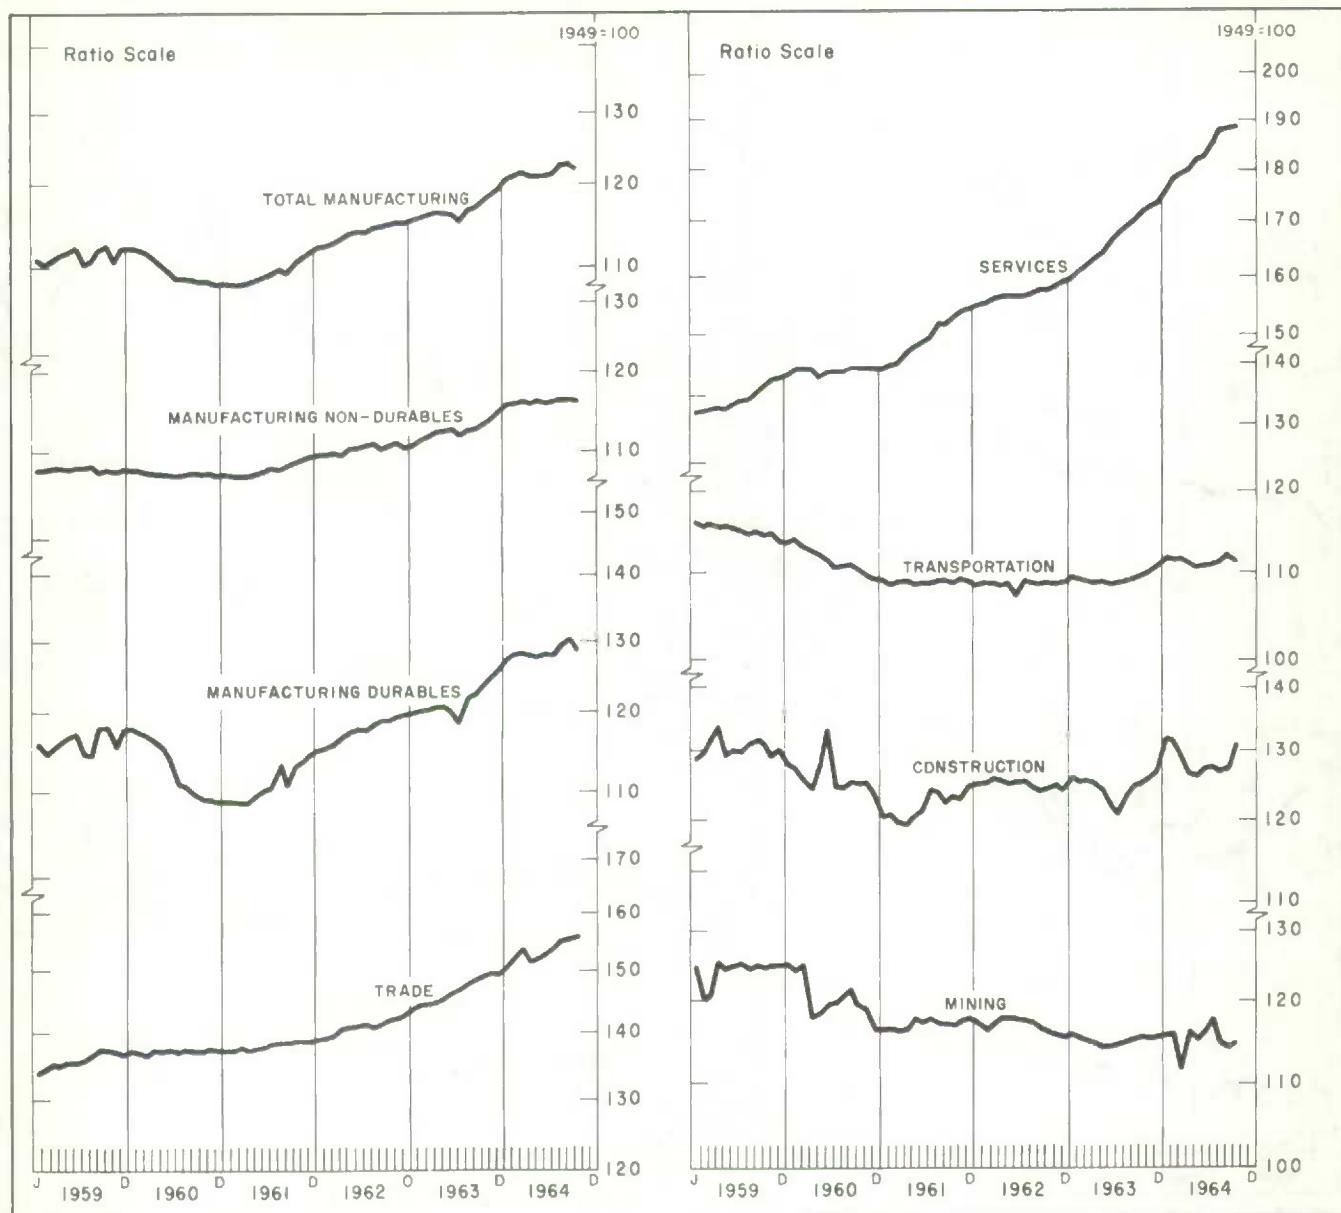

The index of industrial production was marginally higher in October as gains of 3 per cent in both mining and utilities offset a decline of 0.8 per cent in manufacturing. The latter decline almost completely reflected layoffs in the automobile industry as there was widespread strength elsewhere in manufacturing.

	total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 99. ³Original data as in column 8, Table 80.

PRICES (More detail in Tables 28, 30, 31, 84, 85 and 100)

The general wholesale index and the index of thirty industrial materials showed little change in November.

The consumer price index increased 0.2 per cent in November as higher prices were recorded for almost all of the main components.

¹Includes change in farm inventories. ²The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. ³Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. ³Source at bottom of Table 10A.

¹Quarterly indexes for agriculture and for aggregate domestic product for the current year become available only once a year, with the fourth quarter data.²Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, [61-005]. For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505).

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The Agricultural, Finance, Insurance and Real Estate and Public Administration and Defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 19 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. ⁵Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.²The data on building permits are collected for 1,300 municipalities and individual figures are available on request. Some of the annual totals for 1962 and 1963 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.Table 60: building permits by provinces¹ (million dollars)

¹The coverage was extended to 507 municipalities in 1948, and as of 1963, stands at 1,300; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

*See also Table 31.

¹Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1963 are final prices. From August 1, 1963 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley.²Barley No. 1 feed; hogs grade "B" alive.³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. Price of 100 lbs. good steer as a percentage of the price of 100 lbs. hog, grade B.⁴Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁵Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. ⁶Grade "B 1" hog. Sources: Course Grains Quarterly (22-001), Index Numbers of Farm Prices of Agricultural Products (62-004), D.B.S., Livestock and Meat Trade Report, Dept. of Agriculture.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁵Amount owing to all companies, excluding commercial accounts. ⁶Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁷Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. Source: Department of Finance, Department of Agriculture, Bank of Canada, Credit Statistics (61-004), D.B.S.

¹Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such.

²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002), D.B.S.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 33 companies operating in Canada representing 84 per cent of new ordinary insurance sales. ¹The Canada totals by months for 1962 and 1963 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1962 and 1963 nor the monthly averages for 1963 have been revised to agree with the Canada total. Sources: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (Excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction.
