A NOTE TO USERS

CHANGES IN THIS ISSUE:

(1) Table 39 "Consumer Price Index" has been expanded to include, under housing, the shelter and household operation components.

The farm family living series will now be carried in table 79.

(2) Table 79 "Selected Agricultural Prices and Prices Ratios" now provides data on farm wages with and without board. These series reflect the average wages paid to all male farm help regardless of age and skill.

(3) Table 115 "Stock Exchange Statistics" has been extended to show a) the number and value of mining and oil shares traded on the Montreal and Canadian Stock Exchanges and b) the number and value of industrial, mining and oil shares traded on the Toronto Stock Exchange.

The quoted market values of stock listed on the Toronto Stock Exchange are discontinued as it is

felt that these figures revealed nothing of statistical value. The ratios to total market values are also eliminated for both the Toronto and Montreal Stock Exchanges.

REVISIONS TO DATA:

(1) The unadjusted data on manufacturing shipments and inventories by industries in tables 40 and 41 are revised back to January 1961.

(2) The unadjusted data on total manufacturing inventories, shipments and orders (Table 45) have been similarly revised commencing with January 1961.

(3) The seasonally adjusted counterparts of the series in (2) above (Table 45) and appearing also on page S-8 are revised for the entire period of the series. Complete back records, with matching unadjusted data, were published in the October 13 issue of the Weekly Supplement to the Canadian Statistical Review (Cat. No. 11-004).

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE
SECOND QUARTER
1965

Introductory Review

Gross National Product in the second quarter of 1965 rose to a seasonally adjusted annual rate of \$50.9 billion, a gain of nearly 2 per cent from the preceding period. Displaying more movement than in the immediately preceding quarter, prices were about 1 per cent higher, so that somewhat less than half of the quarterly advance represented an increase in real terms. Expectations of a record crop are incorporated in the second quarter estimates and have also resulted in a sizeable revision to the first quarter estimate.¹ The value of Gross National Product excluding accrued net farm income rose in line with Gross National Product as a whole.

Although the increase in the second quarter was slightly less than that in the preceding period, for each of the past three quarters the Canadian economy has experienced a sustained growth in final domestic demand with increases which were surpassed in only two other quarters of the current expansion. In the second quarter, all the components of final domestic demand contributed to the advance in the total, with consumer spending the predominant influence in the quarterly movement in Gross National Product. Further impetus came from the already large capital programme in plant and equipment and from government outlays for goods and services. At the same time the rate of accumulation of business inventories, although remaining high, declined, thereby restraining the upward tendency in economic activity rather than reinforcing it, as in the preceding period. Although there was some further widening in the deficit on current international account, the change was less pronounced than in the preceding quarter.

With consumer spending rising nearly 3 per cent, the highest rate of growth since the beginning of the current expansion, the major increment to demand in the second quarter came from the personal sector. A substantial advance in outlays for non-durables, following little change in the preceding quarter, is attributable in part to the significant rise in prices in this area. At the same time purchases of durables moved ahead of their high first quarter level and spending on services continued to rise.

¹ The original estimate of Gross National Product for the first quarter assumed an average crop. This estimate was based on acreage intentions and ten-year average yields. Gross National Product for the first quarter has been revised upward by \$300 million to take account of the August forecast of a record crop.

The continuing strength in business gross fixed capital formation brought it more than 2 per cent above the first quarter, with most of the increase accounted for by outlays for plant and equipment. The increase in government outlays for goods and services was also an important expansionary influence; they rose 2½ per cent, mainly, it appears, as a result of capital outlays at the municipal level. Federal government expenditure was somewhat lower in total, as decreased payments for military equipment more than offset rising non-defence expenditures.

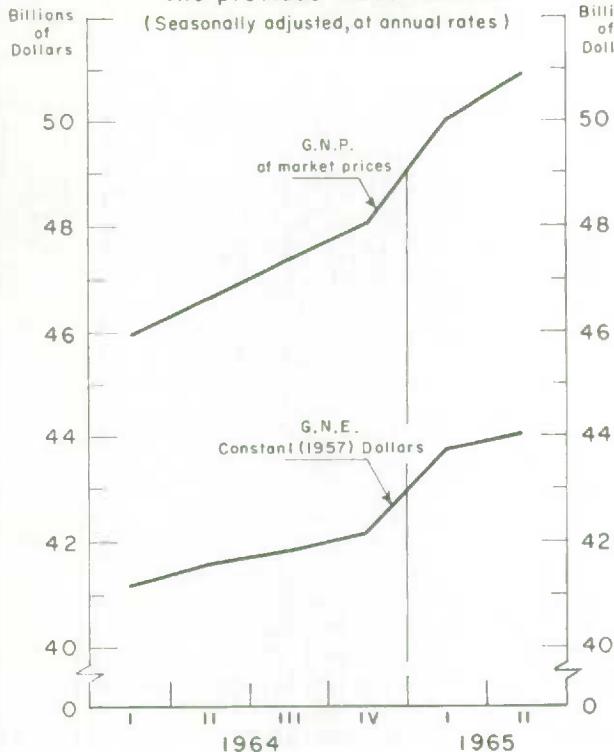

The rising flow of goods from domestic production and imports exceeded the expansion in final demand, with the result that there was a substantial accumulation of business stocks. However, the rate of build-up was below the unusually high level of the first quarter. The pattern of shifts in business inventories in recent quarters has been influenced to some extent by the sequence of events in the strike-affected automotive industry.

The deficit on current international account widened in the second quarter. Exports of goods rose somewhat more than imports but there was a larger gap between receipts from, and payments for, services.

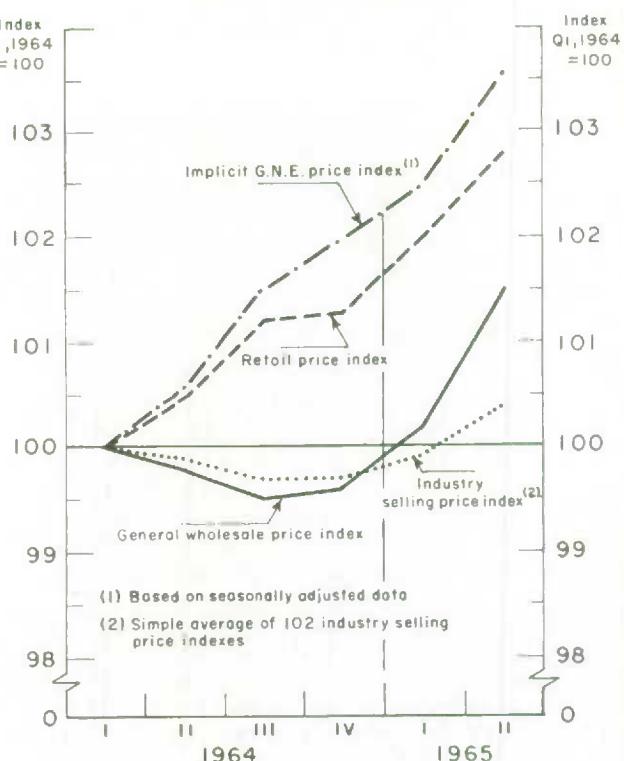

Turning to the income side, labour income continued to rise but not at the unusually high rate of the first quarter, while corporation profits were virtually unchanged at a high level. Personal income fell over 1 per cent, despite the advance in National Income; most of this divergence is accounted for by sharply reduced payments to the farmers by the Canadian Wheat Board which had been at an all-time high in the preceding quarter.

It may be useful to view the performance of the economy in the second quarter in the light of the two preceding quarters and the first half of this year compared with the same period of 1964. The figures are shown in the accompanying table. Between the first two quarters of 1965 the emphasis shifted away from accumulation of business inventories and capital investment toward consumer spending. The first half year comparison brings out the importance of the role of capital spending and the response shown by imports to the higher level of economic activity in Canada.

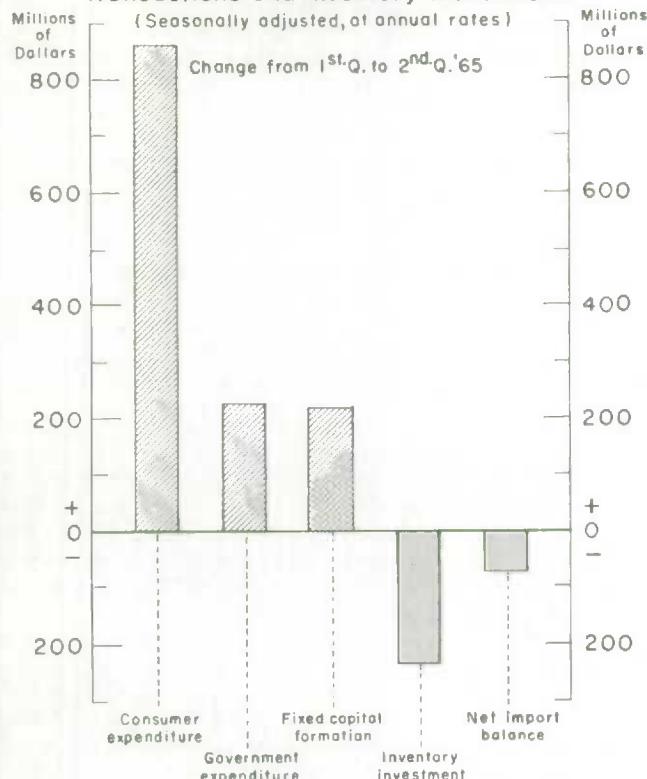

Gross National Product continued to rise
despite unusually sharp gains in
the previous three months.

Price increases were more evident
than in recent quarters.

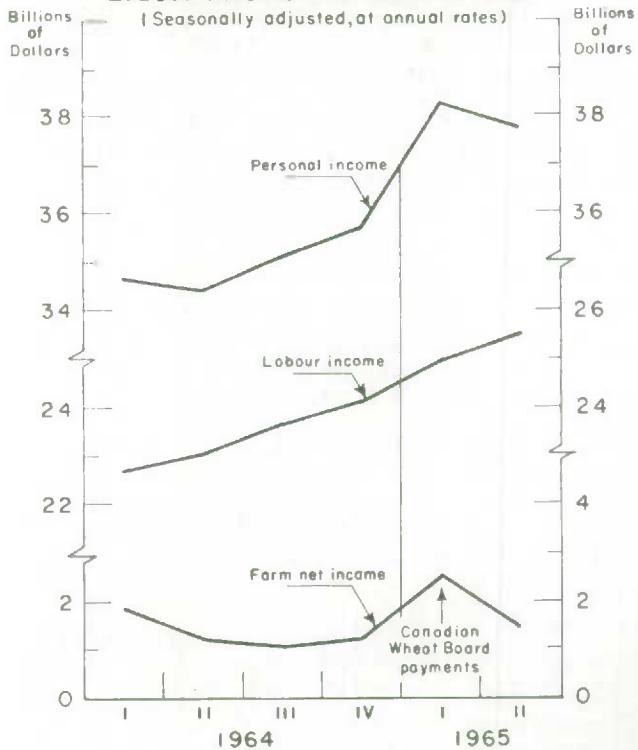

Increases which occurred in final domestic demand were dampened by external transactions and inventory investment.

The decline in personal income resulted from the return to more normal levels of farm income.

Labour income continued to rise.

Price Movements

Price increases were somewhat more pronounced in the current quarter than in other recent quarters. Significant changes, however, appeared to be confined to prices of food and certain construction materials.

An examination of the non-food, final product prices in the manufacturing sector suggests that there has been on average no appreciable change over the past twelve months, so that the recent price increases in certain of the metal groups do not appear to have affected manufacturing final product prices.²

The price component of personal expenditure advanced by about 1 per cent during the current quarter. Food prices, which increased by over 2 per cent on a seasonally adjusted basis, were mainly

² A selection of industry selling price indexes was used for this examination.

responsible for this increase. Discounting seasonal movements, food prices reached a peak in June and have since begun to move down. Prices of non-food commodities increased by about $\frac{1}{2}$ per cent, while service prices advanced by less than 1 per cent. Prices of durable goods, which have been notably stable over the past year, showed a slight increase between the first and second quarters.

The price component of business gross fixed capital formation appears to have advanced by close to 1½ per cent between the first and second quarters as a result of increases in both construction material prices and wage rates.

Export prices on average showed only moderate increases during the quarter, despite sharp gains in the prices of live animals.

The following table shows per cent changes in the implicit price index of Gross National Expenditure and its components over the past four quarters.

Implicit Price Indexes¹
Gross National Expenditure and its Components — Per cent Change from the Preceding Quarter

	2Q' 64 to 3Q' 64	3Q' 64 to 4Q' 64	4Q' 64 to 1Q' 65	1Q' 65 to 2Q' 65

¹ Seasonally adjusted.

Components of Demand

Consumer Expenditure on Goods and Services

Consumer expenditure on goods and services reached a level of \$31.4 billion seasonally adjusted at annual rates, a 2.8 per cent increase over the first quarter, 1965, the highest rate of growth since the beginning of the current expansion. In real terms, however, the gain was dampened by the above-noted increase of almost 1 per cent in prices. The sizeable increment in consumer credit outstanding shows that again a part of the increased purchases was financed by the extension of credit. The value of consumer expenditure in the first half of this year was running almost 7 per cent above the comparable period in 1964.

In contrast to the first quarter, when services accounted for the larger share of the additional purchases of consumers, more than 70 per cent of the \$860 million increment in the present quarter was spent on goods, where it was reflected in the buoyancy of retail sales for the quarter.

Whereas in the first quarter, purchases of new and used cars accounted for virtually all the increased spending on goods, in the present quarter spending was concentrated among non-durables, where the money value of sales registered the highest rate of growth for many years — certainly during the present expansionary period. Chiefly responsible for the record increase in purchases are foodstuffs, which made a rapid recovery from the first quarter dip, for a gain of close to 4½ per cent, about half of which was attributable to price change.

Apart from a decrease in purchases of tobacco, all other components shared in the strong demand for non-durables. Spending on alcohol increased by 5½ per cent, fuel, electricity and gas by 2½ per cent and commodities associated with the operation of cars (gas, oil, grease, parts and accessories) by almost 1 per cent. Purchases of clothing (including footwear) increased by 2 per cent, reversing a downward trend evident for the past two quarters.

At annual rates spending on durable goods advanced by \$96 million over the first quarter, with most of the gain taking place in new and used cars — up over 4½ per cent. Net purchases of used cars increased more than 18 per cent as purchases increased relative to trade-ins in contrast to the previous quarter. Purchases of new cars rose moderately. Among other durables, furniture increased 2 per cent, appliances and radios by 1½ per cent and jewellery and watches by close to 4½ per cent.

Spending on services rose by about 2 per cent with all items making a contribution. Outlays on shelter increased by about 1½ per cent and purchased transportation by about 2½ per cent with about half the increase reflected in prices. Personal services and personal care rose by approximately 1 per cent each, while spending on household operation was up by more than 2½ per cent.

Business Gross Fixed Capital Formation

The rate of investment in fixed capital rose in the second quarter. At an annual rate of about \$10.3 billion, after discounting seasonal factors, capital spending was 2 per cent above the first quarter. Increases in new plant and machinery and equipment outlays accompanied a modest rise in housing. Although total business outlays during the first half of the year ran 13 per cent ahead of the year 1964, this level was below the almost 19 per cent forecast in the mid-year review of investment intentions.

The estimate of \$2.2 billion of new housing put in place was up 1 per cent from the first quarter. Estimated starts moved from 158.0 to 173.9 thousands, while completions advanced from 165.1 to 168.2 thousands seasonally adjusted at annual rates. The value estimate which does not exhibit the strength suggested by the starts series is affected by the compositional shift from single to the lower cost multiple dwellings. Single-detached dwelling unit starts in urban centres fell about 3 per cent in the second quarter, while multiple dwelling units rose 22 per cent.

The value of new non-residential construction totalled about \$4.0 billion in the second quarter, a rise of 2 per cent from the first. Second quarter adjusted production figures for certain individual building materials show gains from the first quarter for most other than iron and steel and concrete items. Outlays on new machinery and equipment rose almost 3 per cent to a level of about \$4.1 billion in the second quarter. Combined outlays on plant and machinery in the first half of the year ran 15 per cent above the year 1964. In view of lack of complete data on imports of machinery, overall estimates of investment in machinery for the second quarter should be regarded as tentative. However, it is clear that business spending on commercial vehicles rose sharply and that there was a higher level of investment in other machinery and equipment which generated increased production in the directly related domestic industries.

Non-farm Business Inventories

The pronounced rate of accumulation in business inventories evident in the first quarter fell in the second quarter of 1965. After allowance is made for seasonal variation, the inventory build-up was \$676 million at annual rates, compared with a build-up of \$944 million in the previous quarter. Although final purchases continued to expand, the combined supply of domestically produced goods, particularly manufacturers of durable goods lines, and the higher rate of imports of goods was sufficient for a sizeable stock accumulation. About half of the build-up in business inventories occurred in the holdings of retail traders, concentrated mainly in durable goods, while the greater part of the remainder was in wholesale and in manufacturing industries, where it was also concentrated mainly in durable good lines. The following table shows the value of physical change in non-farm business inventories in the 1st and 2nd quarters, 1965, by industry:

Change in Non-farm Business Inventories
(Seasonally adjusted, at annual rates)

	1965	
	1Q	2Q
millions of dollars		
Manufacturing	540	140
Durables	308	212
Non-durables	232	- 72
Wholesale	84	152
Retail	204	308
"Other" industries	116	76
Totals	944	676

Manufacturing stocks continued to increase on balance, but at a much reduced rate when compared with the previous quarter. While there was a widespread accumulation in the stocks of manufacturers of durable goods, noticeably in electrical, and transportation industries, non-durable lines showed a mixed movement which resulted in a depletion of stocks. At all stages of processing but more noticeably in goods-in-process, there were additions to stocks. The stock-to-shipments ratio was higher than in the previous quarter but was still low relative to the early period of the current expansion.

In wholesale trades, the major part of the restocking took place in durable lines. In non-durables, the small accumulation was the result of the build-up of stocks of petroleum and other trades, offsetting slightly the liquidation of stocks of groceries. The stock-to-sales ratio declined when compared with the previous quarter.

A considerable build-up occurred in the stocks of retail traders in both durables and non-durables. The durables were largely influenced by the accu-

mulation of stocks in the hands of motor vehicle dealers, as shipments received kept ahead of sales. Among non-durables, the movement was mixed, leaving on balance, a small accumulation. The stock-to-sales ratio was higher when compared with the previous quarter, but the level remained the same as in the previous year.

Exports and Imports of Goods and Services

The deficit in Canada's external account on a national accounts basis showed little change, moving from \$968 million in the first to \$1,044 million seasonally adjusted at annual rates in the second quarter. The change of \$76 million resulted from an increased deficit of \$96 million on non-merchandise trade offsetting an increase of \$20 million in the surplus on merchandise trade. Flows of goods both into and out of the country recorded appreciable gains of a similar size in the second quarter, but merchandising transactions between the opening halves of both 1964 and 1965 registered a much sharper growth in imports.

Exports and Imports of Goods and Services

(Seasonally adjusted, at annual rates)

	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
millions of dollars							
1964-1	7,804	7,528	276	2,192	3,312	- 1,120	- 844
2	8,480	7,572	908	2,124	3,200	- 1,076	- 168
3	8,572	7,476	1,096	2,184	3,308	- 1,124	- 28
4	8,096	7,576	520	2,308	3,500	- 1,192	- 672
1965-1	8,204	8,068	136 ¹	2,348	3,452	- 1,104	- 968
2	8,448	8,292	156 ¹	2,360	3,560	- 1,200	- 1,044
1Q' 65 to 2Q' 65 per cent change	3.0	2.8		0.5	3.1		

¹ Adjustments to Trade of Canada figures for National Accounts purposes reduced exports and increased imports in the first quarter, thereby narrowing the surplus on merchandise trade, while in the second quarter the direction of these adjustments was reversed. Details of adjustments appear in the second quarter estimates of the Canadian Balance of International Payments.

In relation to the first quarter exports, gains were made in aluminum, newsprint, non-farm machinery, copper, zinc, wood pulp, fish, crude petroleum, and natural gas. Reductions appeared in exports of iron ore, wheat clearances, nickel, lumber, and asbestos. Data on commodity imports are not yet available but if the pattern of the first quarter is maintained some increases may be recorded in automobiles and parts, fabricated steel materials, and machinery and equipment.

Export gains over the previous quarter were made in United States' markets, offsetting losses in the United Kingdom and elsewhere (primarily O.E.C.D. countries other than those cited and Japan). United States' suppliers accounted for two-thirds of the increase in imports.

Larger deficits in the travel account and in the freight and shipping account were the main elements in the change in services, in both cases as a result of a higher level of expenditures by Canadians.

The Government Sector

The combined saving of all levels of government, as measured by the surplus on a national account basis, rose to an annual rate of \$340 million from \$140 million in the previous quarter. The improvement in the surplus position came at the federal level with the federal government registering the largest quarterly surplus since 1957. This movement was dampened somewhat by a widening of the deficit at the provincial-municipal level as the rate of increase in provincial-municipal expenditures was more than double that of revenues.

Total combined revenue reached an annual rate of \$17,448 million in the second quarter, a rise of 2 per cent, or almost \$350 million. The revenue increases were partly attributable to receipts from federal and provincial personal direct taxes and corporate income taxes which rose by \$72 million and \$52 million respectively, but mainly to the increased revenue stemming from the higher yield of indirect taxes, which rose by \$200 million. Indirect tax receipts registered gains in excise taxes, excise duties and custom import duties at the federal level, and in gasoline taxes at the provincial-municipal level. The increases are largely the result of a greater volume of transactions rather than tax rate changes.

Higher outlays which raised total government expenditure to an annual rate of \$17,108 million, and almost 1 per cent above the previous quarter are mainly due to a 2½ per cent increase in government expenditure on goods and services. This increase, as noted in the introduction, appears to have been associated with an expansion in capital spending at the municipal level, with slightly higher provincial outlays and with higher federal non-defence expenditure. The drop back to more normal levels of defence spending, after the substantial outlays made on military equipment in the first quarter, resulted in an overall decline in federal government purchases of final goods and services.

Transfer payments made by governments to persons were maintained at a high level in the second quarter but registered a 2 per cent decline as provincial payments dropped back from the exceedingly high level of the first quarter. The decline at the provincial level was spread over all major components.

Income Flows

Labour Income

Labour income continued to move upward in the second quarter, but at a perceptibly slower rate than in the previous quarter, partly reflecting the slowdown in addition to the numbers employed. Total labour income seasonally adjusted, rose by just over 2¼ per cent, an addition of over \$0.5 billion at annual rates between the first and second quarters. Gains in employment and in average earnings appear to have contributed equally to the increase.

Wages and salaries in the goods-producing industries were 2 per cent higher in the second quarter, with the primary industries advancing 3½ per cent and manufacturing recording a gain of over 2¼ per cent. Construction wages and salaries declined slightly from the record level attained in the first quarter, a movement consonant with the dip in employment in the industry.

Wages and salaries in the service-producing industries continued the established pattern of sizeable quarterly gains with a 2½ per cent rise. A more than 3 per cent increase in trade, and a 3 per cent advance in the finance and service industries were largely attributable to the greater numbers employed in these industries. The increases in the government wage and salary bill and in the transportation, storage and communication industries, between 1 and 2 per cent, were below the overall average.

Other Income Flows

Corporation profits (before taxes and before dividends paid to non-residents) made no further gains from the record level attained in the previous quarter. At seasonally adjusted annual rates, profits remained at the \$4.9 billion level, lower by ½ per cent from the previous quarter.

The quarter-to-quarter changes in profits by industry were fairly large, though offsetting. Among manufacturing industries, there was a decline in the metal, wood, and paper industries while some increases were registered in non-metallic mineral products, petroleum and coal, and chemicals. Profits increased in mining and fell in the transportation, storage and communications group and in finance.

Rent, interest and miscellaneous investment income at \$3,472 million in the second quarter of 1965 was up by over 1 per cent from the \$3,416 million in the first quarter of the year, seasonally adjusted at annual rates.

The record high new crop expectations are reflected in the sharply revised estimate of seasonally adjusted accrued net income of farm operators from \$1,364 to \$1,664 million in the first quarter 1965. In the second quarter accrued net income increased by over 1½ per cent, mainly as a result of increased livestock production. A record number of calves born and higher receipts from livestock marketings were the main factors in this increased production.

Net income of non-farm unincorporated business increased 5 per cent, seasonally adjusted, in the second quarter 1965 from the first quarter. The increase was concentrated in retail trade, fishing, and the transportation industry. The most marked increase was recorded in retail trade with the highest quarterly increase since the summer of 1961. The remaining industries showed little or no change in net income.

Production by Industry

Seasonally adjusted real domestic product less agriculture for the second quarter of 1965 was about 1 per cent higher than in the preceding quarter. During the seventeen quarters of the current expansion, real non-agricultural output has achieved a gain of 28 per cent from its cyclical trough in the first quarter of 1961.

Trade and manufacturing were the largest contributors to the second quarter increase in non-agricultural real output, accounting for about one quarter of this gain in each case. Transportation, storage and communication and the remaining service-producing industries jointly contributed another 40 per cent to this gain.

Within manufacturing, which showed a 1 per cent increase, durables advanced more rapidly than non-durables. The 1½ per cent gain in the durables group accounted for over two-thirds of the second

quarter increase in manufacturing output. Most major components contributed to the gain. As in the first quarter, transportation equipment showed the largest gain and accounted for more than half of the increase in durables. Electrical apparatus and supplies also continued to expand, while the output of the iron and steel products and wood products industries resumed its upward trend following a pause in the first quarter. The only industry group to show a decline in the second quarter was non-metallic mineral products, which declined substantially, largely as a result of decreases in the output of cement products. Within the non-durables group, which was up by about ½ per cent, only the chemical industries showed fairly substantial gains in the second quarter. Increases of up to about 1 per cent were recorded by textiles, paper and tobacco products. Leather products and foods and beverages showed declines of about 2 per cent, the latter mainly as a result of an 8 per cent drop in the production of beverage products.

The 2 per cent increase in trade came mostly from the 3 per cent gain in its retail trade component, while wholesale trade increased by about 1 per cent. Within retail trade, most stores showed increases in the second quarter, with motor vehicle dealer sales accounting for about one-fifth of the gain in total retail trade. Sales of food and beverage stores were also up compared with first quarter levels.

Among the remaining industry groups, transportation showed a 2 per cent increase, with air and water transport exhibiting the largest gains. Construction, storage and forestry recorded increases ranging from 2 to 8 per cent. Mining, with a 2 per cent decline, was still slightly above its fourth quarter levels. Of its three components only fuel mining showed a gain in the second quarter while metal mining and non-metal mining both dropped about 5 per cent.

LABOUR FORCE (More detail in Table 19)

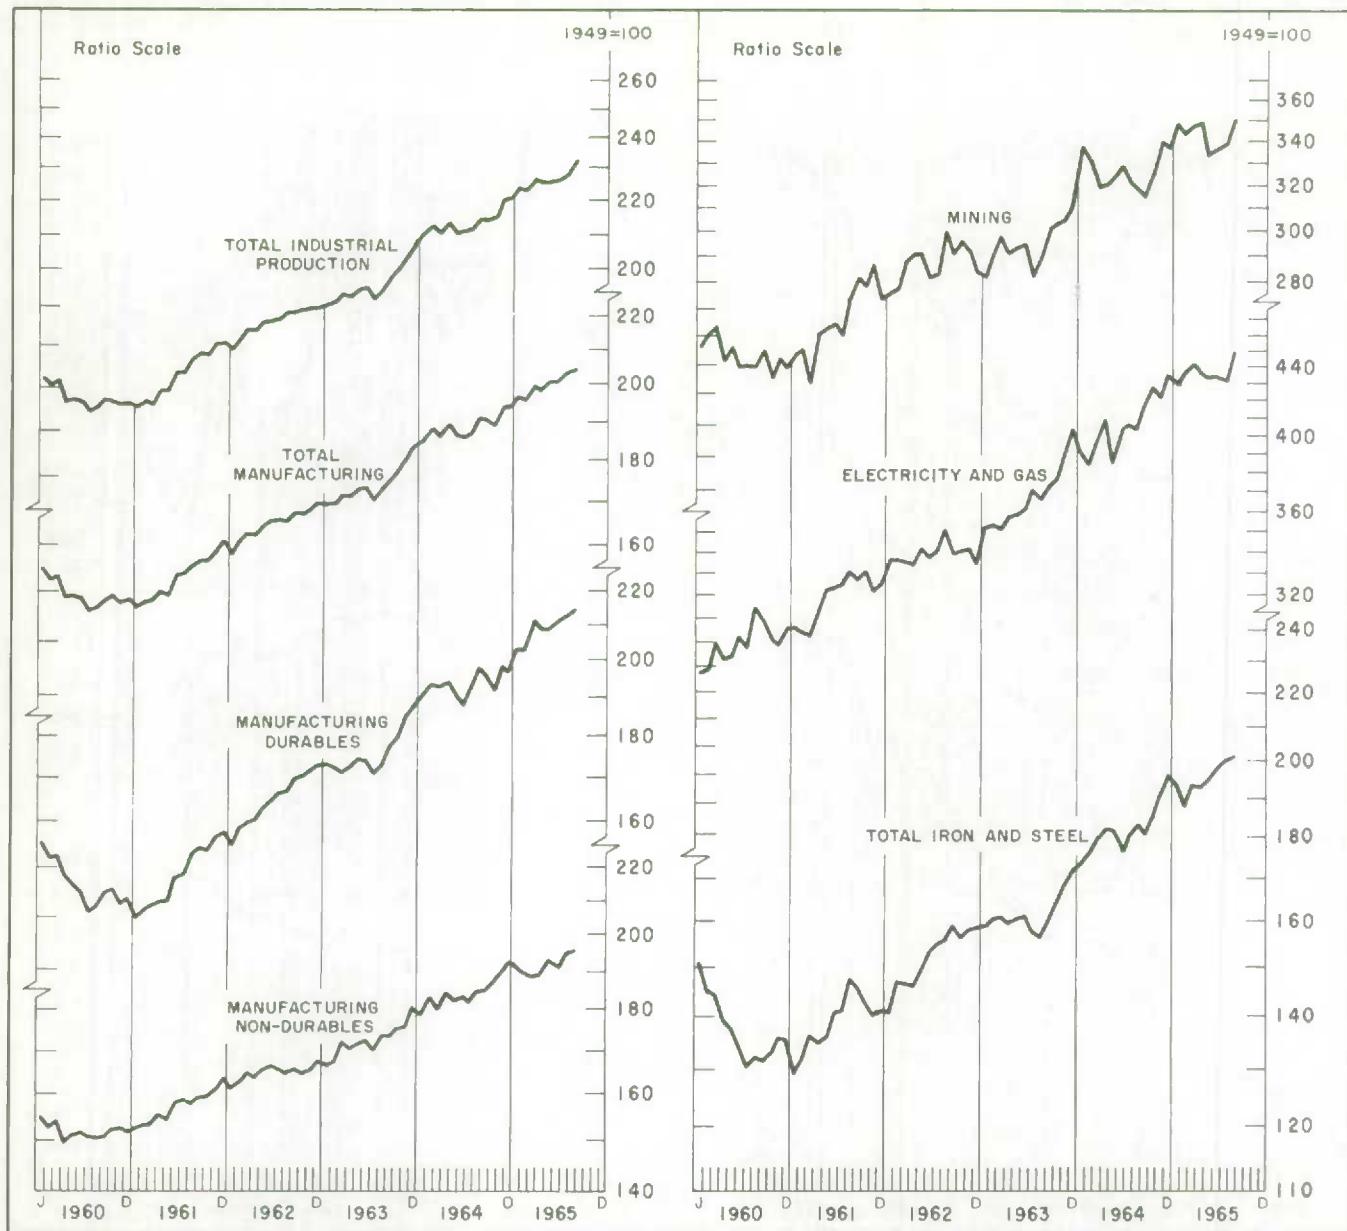

Employment and total labour force declined in September; the unemployment rate was 3.6 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate		not in the labour force
					thousands	per cent	
1963 N	6,828	6,476	5,817	352	5.2	5,809

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The index of industrial common stocks rose in September to the level attained in the early part of the year.
 The consumer price index edged down in September primarily as a result of lower food prices.

	general wholesale index	thirty industrial materials	export prices	import prices	industrial common stocks	consumer price index (1949=100)					
						1935-39=100		1948=100		1956=100

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number of non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Includes change in farm inventories.

The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 12.

¹Quarterly indexes for agriculture and for aggregate domestic product for the current year become available only once a year, with the fourth quarter data.

²Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505).

Table 16: industrial production, volume indexes (1949=100), based on the unrevised standard industrial classification—continued

monthly averages or months	non-durable manufacturing											
	textiles			clothing		paper products		printing, publishing and allied industries	petroleum and coal		chemicals and allied products	miscellaneous manufacturing industries
	total	cotton goods	wool goods	synthetic textiles and silk	total	total	pulp and paper		total	petroleum products

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹The unemployed as a percentage of the labour force for each region. Due to weighting differences, a simple average of the regional rates will not give the seasonally adjusted Canada rate on page S-1, nor the unadjusted Canada rate in table 19. Source: The Labour Force, (71-001) D.B.S.

Table 25: not in the labour force by region¹ (thousands of persons)

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries. ⁷Source: Labour Gazette, Department of Labour.

Table 29: employment¹ indexes, industrial composite, by provinces (1949=100)

¹The data for the current year are subject to revision. ²Includes gold. ³Consists of general wholesale index less animal products and vegetable products component groups. ⁴Consists of iron products and non-ferrous metals products component groups less gold. ⁵These two series comprise the general wholesale index. ⁶Excludes gold.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

end of year or month	total inventories owned	non-durable goods	durable goods	food and beverage	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export.

Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included.²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities.³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal.⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refer to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan areas. ²The data on building permits are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 71. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tiles.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Table 85: value of retail trade by types of business and provinces, based on the unrevised standard industrial classification—concluded

Note: Components may not add to totals due to rounding.
¹Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds.
²Includes loans on the security of household property.
³Includes loans to finance companies which are affiliates of retail merchandisers.
⁴Religious, educational, health and welfare institutions.
⁵Not available on a monthly basis.
⁶Differs from general loans in Table 106 by the exclusion of loans to instalment finance companies.

¹Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D.B.S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002) Quarterly, D.B.S.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82 per cent of new ordinary insurance sales. The Canada totals by months for 1963 and 1964 do not correspond to the sum of the provincial totals as revision applied to the national total are not yet available for the provinces. Neither the monthly figures for 1963 and 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. Sources: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

Table 114: index numbers of security prices¹ (1956=100), based on the revised standard industrial classification²

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²Stocks included in the mining index are for producing mines. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are for companies in the mining industry. ⁵The headings for "basic metals" and "industrial mines" are not found in the Standard Industrial Classification.

whose operations include smelting and refining. The headings for "base metals" and "industrial mines" are metal products (except electrical machinery) and the transportation equipment industries.
