A NOTE TO USERS

ANNUAL SUPPLEMENT TO THE REVIEW:

The fourth issue of the Annual Supplement (1964 edition) has been released recently; it contains the latest revised figures and the complete historical record of all series appearing in the S-pages of the monthly Review.

BACK RECORDS:

The following back records, original and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S. These series are in addition to those appearing in the 1964 Annual Supplement to the Review.

(1) The series on Manufacturing Inventories Held broken down into raw materials, goods in process and finished products from 1952 to date as in Table 37.

(2) The series on Building Permits by type, as in Table 58 from 1948 to date namely, industrial, commercial, institutional and government permits.

(3) The series on Merchandise Exports and Imports in Table 83 for the European Common Market, European Free Trade Association and the O.E.C.D. countries from 1946 to date.

(4) Employment indexes from 1949 to date for the following series in Table 19: industrial composite, forestry, public utilities and finance.

(5) All Retail Trade series by type of business and provinces appearing in Table 76 from 1947 to present time.

CHANGES IN THIS ISSUE:

Table 41 now labelled: "Raw Hides, Skins and Finished Leather" has been expanded to provide for the addition of the following additional series:

(1) receipts of cattle hides held by tanners

(domestic-packer and country, plus imported) and receipts of sheep and lamb skins.

(2) wettings of sheep and lamb skins held by tanners.

(3) packers, dealers and tanners' stocks of sheep and lamb skins, goat skins, horsehides and "all other" skins.

(4) production, in square feet, of cattle leather splits, all types, but excluding those produced by the pound.

(5) Production, in square feet, of "all other" cattle leather such as used for upholstery, specialties, luggage, etc. but excluding leather sold by the pound.

MONTHS FOR CYCLICAL DOMINANCE (MCD):

The user will find this expression in abbreviated form in several tables throughout this publication.

The measure indicates the number of months required on the average for emergence of the cyclical trend from the seasonally adjusted series. An MCD of five implies that a five-month moving average is required in order to offset irregular movements and allow examination of the underlying cyclical trend.

The MCD is used in Tables 13, 14, 15, 16A, 16B, 16C, 16D, 16F, 19, 20, 34, 35, 36, 37, 58, 76, 80 and 83 to indicate the relative variability of the series. Its value can range from one to six months since values greater than this are not calculated. In the S-section, for series with an MCD of four or more, five-term moving averages are used to aid in charting. These averages are correct for series with an MCD of five, but for MCD's of four or six they are used as approximations to avoid the problem of centering even-term averages. The MCD is not charted for series with values of three or less, since it does not increase the clarity of the charted series.

Annual Subscription: \$5.00 — Single copy: 50c.

TYPES OF FARMS - 1961 CENSUS OF AGRICULTURE

The first of the analytical reports of the 1961 Census of Agriculture to be published was "Types of Farms", followed by "Crops and Livestock" and "Farm Mechanization". The last of the reports "Farms and Farm Land" has not yet been released. The purpose of this article is to select from the wealth of information available in the report "Types of Farms" such facts as will give the reader a broad picture of the characteristics of the types of commercial farms in Canada.¹

The Census report discusses the relative importance of each type of farm in 1961 and makes comparisons with the findings in the 1951 Census. It goes on to describe geographical distribution and then to consider farm types under such subjects as size of farm, land use, crop acreages, livestock numbers, capital values, land tenure and agricultural labour.

The report deals with commercial farms only, defined as farms whose sales were reported as \$1,200 or more.² There were 353,293 commercial farms in Canada in 1961, which constitutes nearly three quarters of all farms. The predominant types were: cattle, hogs, sheep; dairy; and wheat, in that order; together these three types accounted for more than two thirds of all commercial farms. Small grains

and livestock combination were the next most important, together making up about 17 per cent of the total. Each of the remaining farm types represented less than 3 per cent of all farms.

As is apparent from the accompanying table, (Table 1) the relative importance of farm types in 1961 was much the same as in 1951. The 1951 data did not type wheat farms separately but included them with small grains. At both Census dates the two together accounted for about 30 per cent of all farms. Cattle, hogs, sheep farms were slightly less important in 1961 while dairy farms were somewhat more important. There was one noticeable difference as between the two dates, namely mixed combination farms had declined considerably in relative importance over the decade. Generally, a criterion of 51 per cent or more of sales was used for type of farm classification. To prevent the possibility of a farm qualifying for more than one product type, priorities were given in the order in which the types are listed above.

The type of farming in Canada varies considerably from region to region, between provinces within a region as well as within provinces. In the Atlantic region the most important types of commercial farms were dairy; cattle, hogs, sheep; livestock combination; and field crops other than small grains. In Quebec nearly two thirds of the commercial farms were dairy farms, representing one half of all dairy farms in Canada. In Ontario in 1961 the predominant type was cattle, hogs, sheep, which accounted for about 40 per cent, followed by dairy farms which made up 30 per cent. In the Prairie region, about 45 per cent of farms were classified to wheat and a further 16 per cent to small grains. In British Columbia dairy farms, the most common type, comprising 27 per cent of all farms, were followed by fruits and vegetables, about 23 per cent, and cattle, hogs, sheep, about 20 per cent.

**TABLE 1. Percentage Distribution of Commercial Farms classified by Farm Types,
Canada and the Regions, 1951 and 1961**

	Atlantic		Quebec		Ontario		Prairies		British Columbia		Canada	
	1951	1961	1951	1961	1951	1961	1951	1961	1951	1961	1951	1961

² Estimates not made because of small size of sample.

DISTRIBUTION OF FARMS AND VALUE OF AGRICULTURAL PRODUCTS SOLD,
FOR COMMERCIAL FARMS, BY TYPE OF FARM, CANADA, 1960⁽¹⁾

⁽¹⁾ JUNE 1, 1960 TO MAY 31, 1961

As for differences within regions, it may be noted that field crops other than small grains (chiefly potatoes) were important in Newfoundland, Prince Edward Island and New Brunswick but of little significance in Nova Scotia. In the Prairie region, about two thirds of the farms in Saskatchewan were wheat farms, in Manitoba over one quarter and in Alberta 20 per cent. The predominant farm type in this last named province was cattle, hogs, sheep, which accounted for about 40 per cent of the total. In Manitoba small grain farms were almost as important as wheat.

Within provinces, the greatest concentration of dairy farms was in the industrialized areas around the main urban centres of Quebec and Ontario. Cattle, hog, sheep farms in Ontario were dispersed over a wide area in the southwest of the province and in Alberta over an even wider area from the foothills southwest of Calgary into the northern parklands. Poultry farms, mainly to be found in the Central region, showed considerable dispersion. Wheat and small grain farms covered a large block in the southern part of the Prairie region and were also to be found in the Peace River district. As for field crops other than small grains, the bulk of the farms in Quebec and Ontario were to be found in the southern portion of the two provinces; in both provinces, but particularly in Ontario, tobacco and sugar

beets were important crops. As is to be expected no farms were more highly concentrated than fruit and vegetable farms, the highest concentration in all Canada being in particular areas of Southern Ontario. British Columbia has relatively few combination farms, but for the rest of Canada they are fairly widely dispersed.

While the average size of all commercial farms in 1961 was 423 acres, as is to be expected there was a very wide dispersion around this average according to type of farm, ranging from 66 acres for fruit and vegetable farms to 668 acres for wheat farms.

Of the wheat farms, about 70 per cent were over 400 acres and a fairly large proportion—about 13 per cent—were over 1,120 acres. Corresponding figures for small grain farms, where acreage also tends to be large, were 54 per cent and 8 per cent respectively. The size group 70-239 acres was much the most common for dairy farms, 70 per cent; for other field crops, 66 per cent; for forestry farms, 43 per cent; for poultry and for mixed combination farms, about 40 per cent. About 60 per cent of the fruit and vegetable farms were in the size group 10-69 acres.

The data on size of farm by type are summarized in the table below.

TABLE 2. Size of Farm by Type, 1961

	Average acreage	Modal size group	P.c. of farms in modal size group
Dairy	193	70 - 239	69.5
Cattle, hogs, sheep	513	70 - 239	44.0
Poultry	140	70 - 239	41.3
Wheat	668	240 - 399	22.9
Small grains	528	240 - 399	23.8
Other field crops	183	70 - 239	65.6
Fruits and vegetables	66	10 - 69	57.9
Forestry	357	70 - 239	42.8
Miscellaneous specialty	95	10 - 69	27.4
Mixed combination	378	70 - 239	39.9

The total capital value of commercial farms in 1961 was \$11.5 billion, an average of \$33,000 per farm, of which almost two thirds represented the value of land and buildings, about one fifth consisted of machinery and equipment, and the remainder of livestock and poultry.

For eight of the farm types the modal capital value was the \$24,950-\$49,949 group. The modal group for field crops other than coarse grains was \$49,950-\$99,949, while for forestry it was \$9,950-\$14,949.

The proportion of the value of land and buildings to total capital was highest—over 80 per cent—for the following farm types: miscellaneous specialty; fruits and vegetables; and field crops other than small grains. The proportion for other farm types was not greatly different from the 64 per cent average. Reflecting the high degree of mechanization in the Prairie Provinces, the proportion of capital value represented by machinery and equipment was highest for wheat farms and small grain farms. The proportion was lowest for the miscellaneous specialty group.

Turning to consider land use, for all commercial farms nearly two thirds of the farm acreage was improved land, the remainder unimproved. Cropland comprised nearly 40 per cent of the total, 18 per cent was summer fallow and the remainder woodland and improved pasture. These uses varied widely as between farm types.

More than three quarters of the area of wheat and small grain farms consisted of improved land³ and a large proportion—32 per cent and 24 per cent respectively—was in summer fallow, reflecting the crop rotation practices common on the grain farms of the Prairie region.

On dairy farms, over 60 per cent of the farm land was improved, over 40 per cent was in crops and about 16 per cent in improved pasture. For cattle, hogs, sheep farms the comparable figures are much lower—44 per cent, 27 per cent and 7 per cent respectively.

As would be expected, much the largest proportion—80 per cent—of land on forestry farms was unimproved and most of that was woodland.

Data on crop acreages show that 66 per cent of the area sown to wheat was found on farms classified to wheat and a further 23 per cent on farms classified to small grains and cattle, hogs, sheep farms in roughly equal proportions. Cattle, hogs, sheep, wheat, dairy, mixed combination and small grain farms accounted for about 80 per cent of the acreage under oats, in amounts ranging from 27 per cent for the first named and 13 per cent for the last. Almost all the barley was grown on wheat, small grain, cattle, hogs, sheep and mixed combination farms. Over two thirds of the hay was grown on cattle, hog, sheep and dairy farms. About half the potato crop in 1961 was produced on farms classified as other field crops. Most of the flax seed came from farms classified as wheat and other grains.

Turning to livestock, over 40 per cent of the cattle were on farms classified as cattle, hogs and sheep, 25 per cent on dairy farms and nearly 25 per cent on wheat farms and mixed combination farms. Of the cows and heifers (2 years old and over) about 55 per cent were on dairy farms and most of the remainder on cattle, hogs, sheep farms (20 per cent) and on mixed combination farms (13 per cent). Over half the hogs were on cattle, hog, sheep farms but there was a significant proportion on dairy and combination farms. Over 60 per cent of the sheep were on cattle, hog and sheep farms. While over 70 per cent of the turkeys were on poultry farms, these farms account for less than half of other types of poultry.

Turning to consider tenure groups, rather more than two thirds of commercial farms in 1961 were owner-operated, ranging from a low of 51 per cent for

wheat farms to a high of 93 per cent for forestry farms. The proportion of owner-operation was relatively low for small grains and for field crops combination.

The degree of owner-operation varied widely by region, being highest—about 90 per cent—in Quebec and lowest—slightly more than one half—in the Prairies. Part-owner, part-tenant farms comprised a little more than one quarter of the farms, being most important in the Prairie region. The relative importance of tenant farmers was highest for the field crop types, ranging from about 11 per cent for field crops other than small grains to about 7 per cent for field crops combination. The manager-operated farms made up less than 1 per cent of the total.

The custom of residing in town all or part of the year and commuting to work on the farm is common for certain farm types and in certain regions. About one fifth of wheat farmers and more than one tenth of the small grain farmers reported that they did not reside on the farm. The percentage of those living on the farm part of the year was fairly small. Non-resident operation tends to be concentrated in the Prairies, particularly in Saskatchewan, which is to be expected, given the type of farming to be found there.

The age composition of farm operators was much the same for all farm types. About 53 per cent of all farm operators were between 35 and 54 years of age, fairly evenly divided between the 35-44 group and the 45-54 group; about 12 per cent of the operators were in the age group 55-59 and a further 14 per cent in the age group 60-69; 15 per cent were in the 25-34 age group.

Turning from tenure to agricultural labour, the largest share of paid and unpaid labour (excluding the operator) in the year preceding the Census date was accounted for by dairy farms, closely followed by cattle, hogs, sheep farms, the percentages being 26 and 22 respectively. Mixed combination, wheat and other field crop farms together accounted for about one third of agricultural labour.

As for paid male labour, cattle, hog, sheep farms and dairy farms reported the largest shares of total paid weeks, about 22 per cent for each. Female paid labour was to be found mainly in the following three farm types: field crops, other than small grains; fruits and vegetables; and miscellaneous specialty, making up over three quarters of the total.

The average number of weeks of paid labour per reporting farm was much the highest—105 weeks of male labour and 89 weeks of female labour—for the miscellaneous specialty group (mainly the greenhouse and nursery establishments). Other field crops, poultry, and fruits and vegetable farms also made heavy use of paid labour (male and female), ranging from 100 weeks down to 69, as against a national average of 56 weeks.

³ Improved land consists of land under crops; in summer fallow; improved pasture; and other, such as farmsteads and barnyards.

Farm Data by Farm Type and Economic Class⁴

About 14 per cent of the commercial farms in Canada reported sales of \$10,000 or over in the year before the Census date. Much the largest proportion—almost half—of the field crops other than small grain farms (which include the specialty crops, potatoes, tobacco and sugar beets) were in this sales group, as were over one third of the poultry farms and the miscellaneous specialty farms. At the lowest end of the scale—farms reporting sales of \$1,200-\$2,499, 60 per cent of the forestry farms were in this group, about 30 per cent of the dairy farms, and about 25 per cent of the following farm types: cattle, hogs, sheep; wheat; small grains; fruits and vegetables; and miscellaneous specialty.

Of the \$2,275 million sales of agricultural products by commercial farms, more than 25 per cent were made by farms typed as cattle, hogs, sheep; dairy farms and wheat farms each accounted for about 18 per cent; all other farm types accounted for less than 10 per cent of the total.

Turning to consider the characteristics of the three main types of farms by economic class, the average size of dairy farms in 1961 was 193 acres and in Quebec and Ontario, where most of them are located, the average size was 167 to 184 acres respectively. As is to be expected, the larger dairy farms fall in the higher economic classes; for the sales group \$1,200-\$2,499 the average size was 160 acres; for the sales group \$5,000-\$9,999, 205 acres; for the sales group \$25,000 and over 488 acres.

Tenure of dairy farms varied widely by economic class. In the sales group \$1,200-\$2,499, 90 per cent were owner-operated compared with 45 per cent for the \$25,000 and over group. On the other hand, nearly half the farms in the top economic class were part-owner part-tenant operated but this decreased to less than 10 per cent of the farms in the lowest economic class.

Capital values for dairy farms were closely related to agricultural sales, ranging from an average of \$15,113 for the lowest group to \$131,410 for the top class. Capital values were higher in Ontario than in Quebec.

⁴ This two way cross-classification of farm types is based on the value of products sold divided into \$25,000 and over; \$15,000-\$24,999; \$10,000-\$14,999; \$5,000-\$9,999; \$3,750-\$4,999; \$2,500-\$3,749; \$1,200-\$2,499.

By economic group, the average number of milk cows per dairy farm ranged from 11 head to 66 head. Average milk production for the month of May, 1961 ranged from 6,232 lb. to 54,033 lb. per farm.

As for cattle, hogs, sheep farms, again agricultural sales were positively correlated with size of farm. The average size for farms in the \$1,200-\$2,499 group was 261 acres, for the \$5,000-\$9,999 group 511 acres and for the \$25,000 and over 2,797 acres; corresponding figures for Alberta, where ranches are large, were 361 acres, 782 acres and 3,911 acres.

The relationship between tenure and economic group for cattle, hogs, sheep farms was similar to that shown for dairy farms, that is owner-operated farms accounted for a diminishing proportion, moving from the lowest to the highest economic class and the opposite situation existed when the farms were part-owned part-rented.

Capital values rose with economic grouping, ranging from \$19,687 for the farms reporting sales of \$1,200 to \$2,499 to \$141,917 for the top economic group. Corresponding figures for Alberta were \$19,436 and \$178,773 and for Ontario \$21,631 and \$87,736.

Livestock inventories on cattle, hogs and sheep farms were higher for farms reporting higher agricultural sales, with 28 cattle, 20 pigs and 49 sheep per reporting farms in the economic group \$1,200-\$2,499 and 271 cattle, 186 pigs and 496 sheep in the top economic group. In the \$25,000 and over group the largest average inventories of cattle and sheep were in Alberta while Ontario had the largest average inventories of pigs.

The average size of wheat farms in the Prairie Provinces, where most of them are located, was 670 acres, ranging from 371 in the \$1,200-\$2,499 group to 2,848 acres for the top economic group. Size of farm was distinctly correlated to economic class.

Somewhat more than half of the wheat farms in the Prairie Provinces were owner-operated. As with the two other types of farms discussed above, owner-operation diminished with rising economic grouping and part-owned part-rented tenure increased.

Farm capital for the wheat farms of the Prairie Provinces averaged \$33,958, ranging from \$16,407 in the lowest economic class to \$170,306 in the top economic group.

LABOUR FORCE (More detail in Table 16)

Unemployment declined in July; employment and total labour force showed little change. The unemployment rate was 4.3 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
			thousands		per cent	thousands
1963	S	6,797	6,428	5,787	369	5.4

INDUSTRIAL PRODUCTION (More detail in Table 13)

The index of industrial production rose fractionally in June as both manufacturing and mining contributed about equally to the increase; electric power and gas utilities were little changed.

	total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)		
		total	durables	non-durables	mining	electricity & gas	iron & steel

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 99. ³Total of all monthly and quarterly series as in column 14, Table 80.

PRICES (More detail in Tables 28, 30, 31, 84, 85 and 100)

The general wholesale index and the index of thirty industrial materials edged down in July.

The index of industrial common stocks fell off in July.

The consumer price index rose 0.4 per cent in July chiefly as a result of higher food prices.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Citizenship and Immigration.

¹Figures for births, marriages and deaths for 1964 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. These figures are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D.B.S.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 11.

¹Corporate tax liabilities are included in total revenues on an accrual basis; the collection series are on a cash basis and are provided for added information only.
²Include both employer and employee contributions. Sources: National Accounts, Income and Expenditure, (13-001). Data for the years 1950-1958 are available in National Accounts, Income and Expenditure 1947-1961 (13-519); for the years 1959 and 1960 in National Accounts, Income and Expenditure, Fourth Quarter and Preliminary Annual 1963, (13-001) D.B.S.

¹Quarterly indexes for agriculture and for aggregate domestic product for the current year become available only once a year, with the fourth quarter data.²Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505) D.B.S.

Table 13: industrial production, volume indexes (1949=100)¹, based on the unrevised standard industrial classification

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. ²The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ³The labour force as a percentage of the population 14 years of age and over. ⁴The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 16. Labour force obtained as the sum of employed and unemployed from tables 16B and 16D. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 19 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence

and such community services as health and education. Source: Employment and Payrolls, (72-002), D. B. S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001). D.B.S.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant.

Source: Primary Iron and Steel (41-001), D.B.S.

¹End of period. ²Does not include apartment-type machines. ³Electric and other.⁴Gas types are included. ⁵In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month.

¹Data refer to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan areas.²The data on building permits are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.Table 60: building permits by provinces¹ (million dollars)

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Sources: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 78 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

*See also Table 30. ¹Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Barley No. 1 feed; hogs grade "B" alive. ³Based on price for hogs including Dominion premium up to September 1960. ⁴Rise in ratio favours production of beef. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. ⁸Grade "B1" hogs. Sources: Coarse Grains Quarterly (22-001), Index Numbers of Farm Prices of Agricultural Products (62-004), D.B.S., Livestock and Meat Trade Report, Dept. of Agriculture.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D.B.S.

Table 76: value of retail trade by types of business and provinces, based on the unrevised standard industrial classification--concluded

¹Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D.B.S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82 per cent of new ordinary insurance sales. ¹The Canada totals by months for 1963 and 1964 do not correspond to the sum of the provincial totals as revision applied to the national total are not yet available for the provinces. Neither the monthly figures for 1963 and 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. Sources: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.
