A NOTE TO USERS

(1) There are no January data in this publication on employment, man-hours and hourly earnings statistics carried in Tables 17, 18, 28 to 35 and pages S-3 and S-4. This is caused by the revision of these series to a 1961=100 time base and to the 1960 Standard Industrial Classification. The next issue of the Review (May edition) will provide users with the usual data based on the latest revisions to the above tables. Revised data for earlier years not carried in the Review will be available in the D.B.S. publication "Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics Historical Series, January 1961-May 1965 Catalogue No. 72-504.

(2) The seasonally adjusted data on merchandise exports and imports in Tables 91 and 92 and page S-7 have been revised starting with October 1963. All revisions for these series were published in the March 30 issue of the Weekly Supplement to the Review (Catalogue No. 11-004).

(3) The seasonally adjusted data on cheques cashed in clearing centres, on page S-8, have been revised starting with May 1964.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

SHOPPING CENTRES IN CANADA¹

Although its basic concept may be traced back to the Roman Empire and medieval Europe, the shopping centre²—as it is known today—is a distinctly twentieth-century, North American retailing innovation, which has now spread to such other countries as England and Sweden.

In Canada, the first planned shopping centre was officially opened for business in September 1950 in Vancouver B.C., approximately three decades after a somewhat comparable project was first initiated in the United States.

From this rather late start in Canada, the growth of shopping centres has been phenomenal. Between 1950 and 1963, 346 shopping centres of various shapes and sizes were developed throughout Canada. Total retail sales registered by these developments rose from an estimated \$17 million in 1951 to \$1,341 million in 1963. Even from 1956—when the first official survey of shopping centres was undertaken by the Dominion Bureau of Statistics—to 1963, retail sales made in shopping centres increased by 400 per cent as compared to 32 per cent for total retail trade. By 1963, in fact, consumers were spending approximately \$0.10 of each retail dollar in stores located within shopping centres.

The rapid growth of shopping centre structures during the intervening years since 1950 is attributable to a number of interrelated changes which have gradually been taking place in Canada's economic and social structure, such as growth in population

¹ A more detailed study of the development and characteristics of shopping centres in Canada will be contained in the monograph "Trends in Canadian Merchandising 1930-1961" which is being written by M.S. Moyer, Associate Professor of Marketing, University of Toronto, and G. Snyder, Chief of Current Statistics, Merchandising and Services Division, Dominion Bureau of Statistics. This monograph will be published during the latter part of 1966.

² The Dominion Bureau of Statistics defines a shopping centre as follows:

"A group of stores which are planned, developed, and designed as a unit. It must contain a minimum of five retail establishments in operation during any part of the current year. It must have a minimum of 20 thousand square feet of usable parking area adjacent to the shopping centre and free of charge to the customers of that centre. For merchandising developments with paved parking area of 20 thousand to 50 thousand square feet, the ratio of parking area to gross ground floor area must be 1.5 to 1 or better. The retail development must contain either a grocery and combination store, a department store or a chain variety store. While a shopping centre is usually designed as a single project, all establishments do not necessarily have to be leased from a single (private or collective) ownership. A retail establishment may own the building and land on which it is situated but still be fully integrated with the centre. A shopping centre usually bears a name and as a rule matters of common interest to the tenants, such as children's playground, community activities, parking, etc., originate from one authority."

and its effect upon the changing pattern of urban-rural settlement, increased ownership and use of automobiles and the growing affluence of a majority of the population.

Although the population of Canada has grown at an ever-increasing rate, especially during the 1946-61 period (+48.4 per cent), it was not simply population growth which stimulated the development and expansion of shopping centre structures in Canada. Such developments were, rather, a more direct result of the changing urban-rural population pattern—a change which, in turn, was brought about by many complex and interacting forces within the Canadian economy.

In 1931, the population of Canada was divided almost evenly between urban and rural—53.7 per cent urban as compared to 46.3 per cent rural. By 1961, the percentage of urban dwellers to total population had risen to approximately 60 per cent.

A large percentage of this urban growth has occurred in the areas surrounding the core cities of Canada's metropolitan areas; in fact, the rate of growth in the fringe areas since 1931 has consistently exceeded that of the core cities by a wide margin. The most spectacular increase in fringe-area population growth occurred during the 1951-61 period. The suburbs of seventeen metropolitan areas experienced an average increase of 96.8 per cent—almost double—while the cities proper rose only 19.1 per cent during the same period.

The accelerated rate of urbanization was also due to the rise of per capita disposable income, which increased by over 100 per cent between 1945-61—creating a built-in demand not only for better housing (which was at a premium, especially during the period immediately following the war) but also for more and better quality goods and appliances. The increase in automobile ownership was also an important factor in the movement of population to the outlying areas. The number of passenger cars on the road increased from 1,160,058 in 1945 to 4,325,682 in 1961—an over-all increase of 272.9 per cent.

As the fringe areas became more populated, a number of retailers, and some real estate developers as well, began to sense the advantages inherent in following the trend of population towards the suburbs. Firms in the chain food field were possibly the first merchandisers to build suburban outlets on a large scale. Equipped with large parking lots and catering to the immediate needs of the surrounding community, suburban supermarkets were an immediate success.

It was not long before other retailers, purely local concerns for the most part, began drifting to the suburbs, situating themselves usually in close proximity to the increasingly popular food store in hopes of benefitting from the pulling power which it generated. At the same time, real estate promotors were begining to perceive the possibilities of significant gain which could be directly derived from the development of shopping centres, as well as their increasing value as an inducement to prospective buyers of their homes.

The success of "strip" shopping areas in Canada and the tremendous popularity of planned shopping centres in the United States finally convinced those retailers and developers who had at first held back that considerable potential for large-scale retailing development did in fact exist in the now heavily populated suburbs and outlying fringe areas. By 1956, carefully planned and organized shopping centres were springing up on the outskirts of many metropolitan areas. Increased attention was given to tenant composition, adequate parking facilities, unified architectural planning and centralized management.

Shopping centres have generally been stratified into three broad types — neighbourhood, community and regional.³ In terms of number, the neighbourhood type of shopping centre predominates the Canadian scene. In 1956, over 60 per cent of all shopping centres were of the neighbourhood variety; by 1963, the percentage of such centres had climbed to over 72 per cent of the total. The remaining 28 per cent was split between community shopping centres (21 per cent) and regional shopping centres (7 per cent).

Although the great majority of shopping centres are of the neighbourhood type, retail sales emanating from this group have remained relatively constant, comprising approximately one-third of total shopping centre sales.

³ For the purpose of the annual survey of shopping centres undertaken by the Dominion Bureau of Statistics, shopping centres are stratified into three types:

- | | |
|------------------------|---|
| Neighbourhood (Type A) | — Shopping centres with 5 to 15 retail establishments; |
| Community (Type B) | — Shopping centres with 16 to 30 retail establishments; |
| Regional (Type C) | — Shopping centres with more than 30 retail establishments. |

**TABLE 1. Number and Retail Sales of Shopping Centres by Type of Centre,
Canada 1956 and 1963**

Type of centre	Number		Sales	
	1956	1963	1956	1963
(\$000)				
Neighbourhood	41	250	68,000	458,000
Community	22	72	148,000	459,000
Regional	1	24	19,000	424,000
Totals	64	346	236,000	1,340,000

Note: Totals may not balance due to rounding.

Regional shopping centres, on the other hand, have absorbed an increasingly large share of the shopping centre dollar. In 1956, the one regional centre then in existence accounted for only a very small percentage of total retail sales in shopping centres. In 1963, however, regional shopping centres accounted for nearly one-third of aggregate shopping centre sales.

As mentioned previously, the majority of shopping centres have been established in areas,

or on the fringes of areas, with high population density. The following table shows the distribution of shopping centres by number and by province for the years 1956 and 1963. The early growth of these retailing entities took place primarily in the two central provinces, Ontario and Quebec. As this development gained momentum, construction of shopping centres has spread to every region in Canada with the exception of Prince Edward Island and the Yukon and Northwest Territories.

**TABLE 2. Number of Shopping Centres by Type of Centre and by Province,
1956 and 1963**

Province	Type of centre							
	Neighbourhood		Community		Regional		Total	
	1956	1963	1956	1963	1956	1963	1956	1963
number

British Columbia	3	39	1	4	—	3	4	46

Although the majority of shopping centres are predominantly metropolitan phenomena, the following table indicates that neighbourhood shopping centres are less heavily concentrated in metropolitan areas than community and regional centres, since they are, for the most part, limited to a walk-in trade and can therefore subsist within a small trading area. Community and regional centres, on the other hand,

rely on very large trading areas and therefore must locate in close proximity to major population centres. This table also indicates that although most shopping centres were located in metropolitan areas during the initial years of construction, decentralization outside of metropolitan areas took place as the development of shopping centres accelerated throughout Canada.

**TABLE 3. Number and Percentage of Shopping Centres in Metropolitan Areas,
by Type of Centre, 1963**

Location	Type of centre					
	Neighbourhood		Community		Regional	
	1956	1963	1956	1963	1956	1963
(1) Number of shopping centres in metropolitan areas	35	173	21	58	1	22
(2) Total number of shopping centres	41	250	22	72	1	24
Percentage (1)/(2)	85.4	69.2	95.5	80.6	100.0	91.7

It is interesting to note the composition of retail outlets within different types of centres. The following table describes the relative importance in terms of sales of selected kinds of retail businesses within the three types of shopping centres in 1963. These data indicate that neighbourhood shopping

centres generate the major portion of their trade from convenience-goods stores—that is, stores which sell commodities which are considered as daily or weekly requirements for the average family, such as food and drugs.

The tenants within neighbourhood shopping centres consist for the most part of small independent retailers, usually local in origin. National chains have not usually established branches in these smaller shopping centres, with the possible exception of grocery, shoe and clothing chains. In 1963, there were 616 chain stores operating in 250 neighbourhood shopping centres—comprising 28.9 per cent of all retail stores in this type of shopping centre—an average of 2.5 chain stores per centre. These included 200 grocery and combination stores, 92 shoe stores, 86 clothing, and 83 other food and beverage stores.

As one moves to the next larger-size development—the community shopping centre—it is seen that the reliance on convenience goods as the major source of sales tends to diminish. In 1963, grocery and combination stores, drug stores and other food and beverage stores accounted for only 51.4 per cent of sales as compared to 75.4 per cent in neighbourhood centres. On the other hand, sales of clothing and shoes as a proportion of total sales increased to 11.4 per cent, in contrast with 5.9 per cent in the smaller centres.

In the majority of community centres, the grocery and combination outlet continues to be a focal point for consumers, although to a much lesser degree than in neighbourhood centres. A number of these centres contain suburban department store branches and there is certainly a much wider variety of stores available to the shopper than in the smaller centres.

As well, community shopping centres have been far more successful in attracting chain branch stores, as indicated by the fact that, in 1963, there was an average of 10.4 such stores per community shopping centre. Chain stores during that year constituted 46.6 per cent of all retail stores within this type of centre.

The trend towards greater diversification in the type of retail outlet represented continues as one moves from the community to the regional shopping centre. In many regional centres, a department store or stores forms the nucleus or focal point of interest. This is evidenced by the fact that, in 1963, department store branches generated over 43 per cent of total retail sales in such centres. On the other hand, convenience-goods outlets accounted for only 28.1 per cent of total sales, as compared to 51.4 per cent and 75.4 per cent in community and neighbourhood centres respectively.

In the regional centre, the architectural design composition, as well as parking and other facilities, have been carefully planned to yield optimum returns—not only for each store but for the shopping centre as a whole. The regional centre—of all such centres—approaches most closely the concept of "one-stop" shopping. As might be expected, the impact of the chain store has been greatest in regional shopping centres—chain stores constitute 48.2 per cent of all retail stores in these centres, or 18.2 chain stores per shopping centre.

TABLE 4. Percentage Distribution of Retail Sales by Kind of Business, by Type of Centre, 1963

Kind of business	Type of centre			
	Neighbourhood	Community	Regional	Total
percentage				
Grocery and combination stores	62.1	42.9	20.9	42.5
Other food and beverage stores	6.6	4.8	5.4	5.6
Department stores	¹	¹	43.8	18.5
Variety stores	4.3	7.7	5.0	5.7
Garages and filling stations	¹	¹	0.2	0.7
Men's clothing stores	1.2	2.3	2.0	1.8
Family clothing stores	0.7	1.6	1.0	1.1
Women's clothing stores	2.4	4.7	4.8	3.9
Shoe stores	1.6	2.9	2.4	2.3
Hardware stores	1.9	2.3	1.4	1.9
Furniture, appliance and radio stores	0.9	1.5	1.7	1.4
Restaurants	2.0	2.1	1.4	1.8
Drug stores	6.6	3.7	1.8	4.1
Jewellery stores	0.3	0.8	1.0	0.7
Miscellaneous	5.7	11.1	7.2	8.0
Totals	100.0	100.0	100.0	100.0

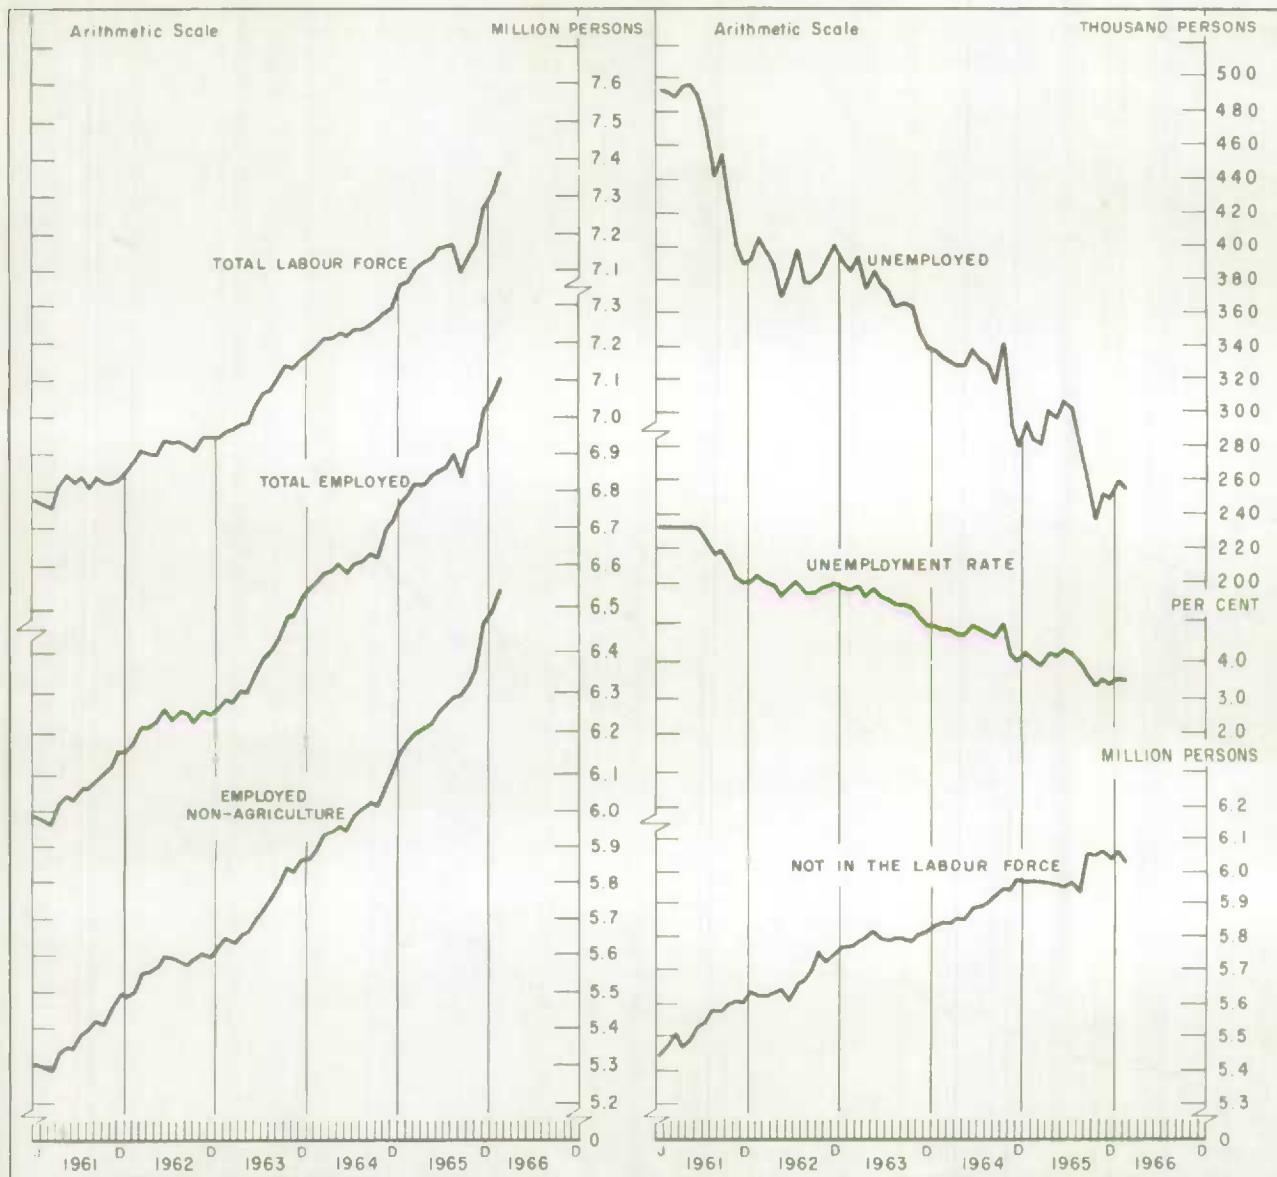

¹ Indicates figures withheld to avoid disclosing individual operations.

There is no doubt that the shape and form of shopping centres will change to some extent in the relatively near future. Some changes have already

taken place, such as the construction of enclosed small-type shopping centres designed to protect the consumer from adverse weather conditions.

LABOUR FORCE (More detail in Table 19)

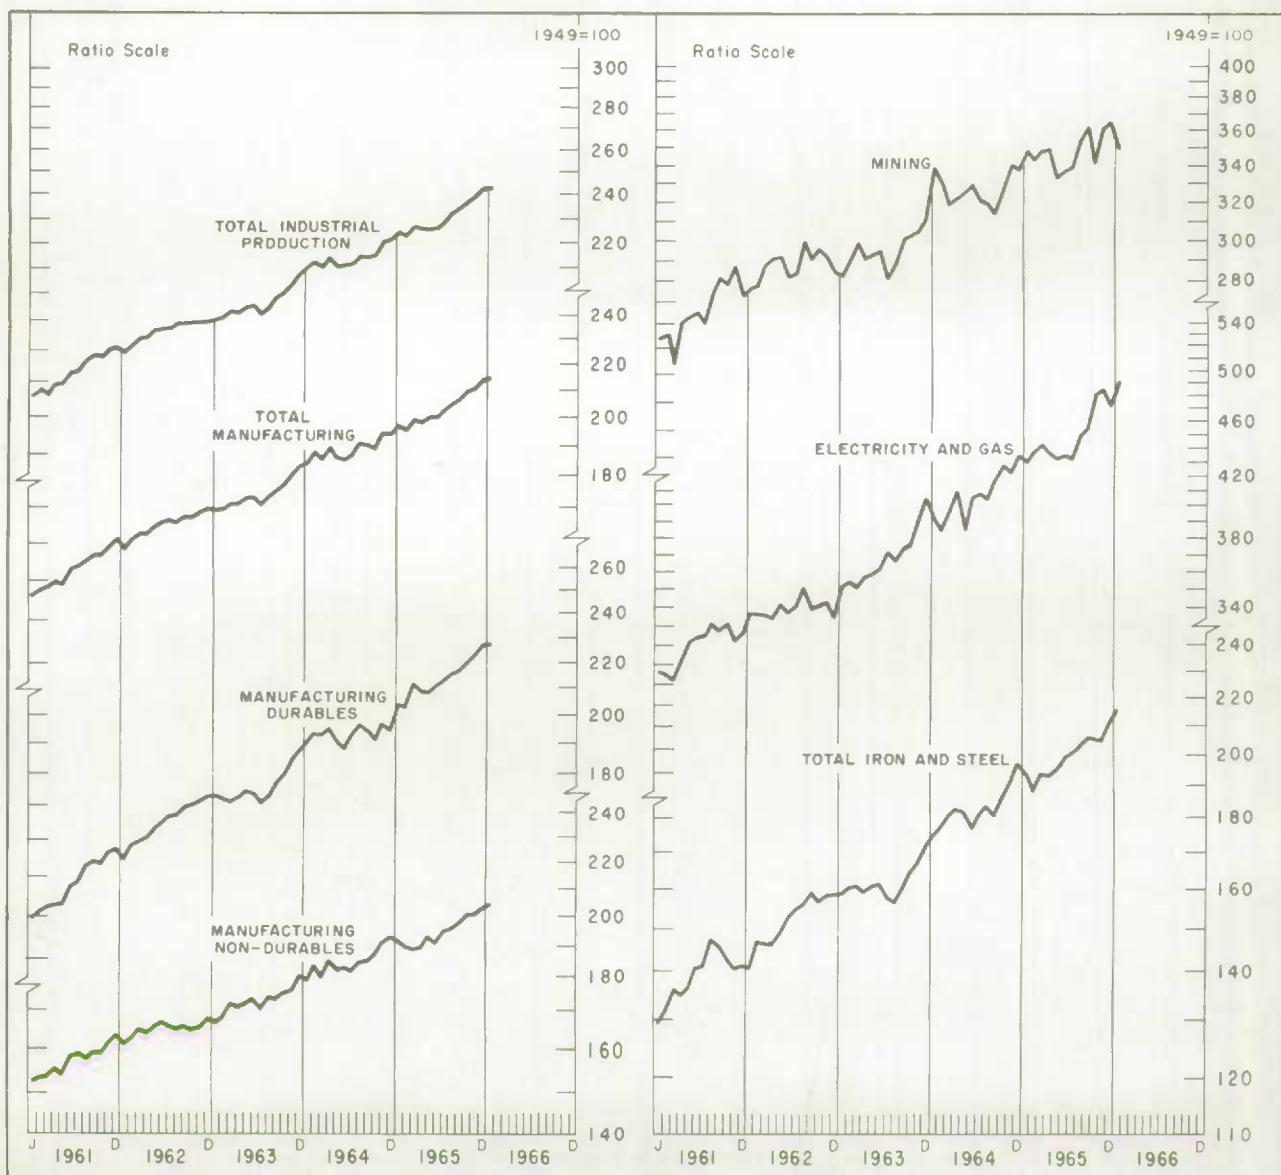

Employment and total labour force were again slightly higher in February; the unemployment rate was 3.5 per cent.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index advanced for the fifth consecutive month in February.
 The index of industrial common stocks eased lower in February following the strong January advance.
 The consumer price index rose by 0.6 per cent in February reflecting for the most part higher prices for food.

	general wholesale index	thirty industrial materials				industrial common stocks	consumer price index (1949=100)

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. These figures are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths.

Sources: Vital Statistics (64-001), D.B.S.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 12.

¹Quarterly indexes for agriculture and for aggregate domestic product for the current year become available later in the year. ²Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505) D.B.S.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages.³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total.⁴Includes miscellaneous manufacturing industries.⁵Includes also publishing and allied industries.⁶Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. ¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export.

Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils.

Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D.B.S.

Note: Components may not add to totals due to rounding. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Sales of Manufactured and Natural Gas (45-005), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. ¹⁰Source: Refined Petroleum Products (45-004), D.B.S.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

²End of period. Sources: New Residential Construction (64-002), D.B.S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Note: Components may not add to totals due to rounding. ¹Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds.

²Includes loans on the security of household property.

³Includes loans to finance companies which are affiliates of retail merchandisers.

⁴Religious, educational, health and welfare institutions. ⁵Not available on a monthly basis. ⁶Differs from general loans in Table 106 by the exclusion of loans to instalment finance companies.

¹Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. ⁶Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

Table 114: index numbers of security prices¹ (1956=100), based on the revised standard industrial classification⁵
