A NOTE TO USERS

**ANNUAL SUPPLEMENT
TO THE CANADIAN STATISTICAL REVIEW
(CAT. NO. 11-206):**

The fifth issue of the Annual Supplement (1965 edition) has now been released. It contains the latest revised figures and the complete historical record for all series appearing in the S-pages of the monthly Review.

MONTHS FOR CYCLICAL DOMINANCE (M.C.D.):

The user will find this expression in abbreviated form in several tables throughout this publication.

The measure indicates the number of months required on average for emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of five implies that a five-month moving average is required to offset irregular movements and allow examination of the underlying cyclical trend.

The M.C.D. is used in Tables 17, 18, 20, 21, 22, 23, 24, 25, 28, 29, 42, 43, 44, 45, 67, 85, 90, 91 and 92 to indicate the relative variability of the series. Its value can range from one to six months since values greater than this are not calculated. In the S-section, for series with an M.C.D. of four or more, five-term moving averages are used to aid in charting. These averages are correct for series with an M.C.D. of five, but for M.C.D.'s of four or six they are used as approximations to avoid the problem of centering even-term averages. The M.C.D. is not charted for series with values of three or less, since it does not increase the clarity of the charted series.

2204-501

LARGE ENTERPRISES IN CANADIAN MANUFACTURING

Concern over economic growth is frequently directed to smallness within the economy. Fragmented markets, short runs, inadequate financing, low capital intensity, and bases too small to provide for research and innovation on the scale required to take full advantage of rapidly advancing technology, are all among the influences cited as inhibiting high growth rates. Some of these influences apply primarily at the level of the plant or production unit and others at the entrepreneurial or decision-making and financing level, although the size of the enterprise has implications for the size and character of the production units which it embraces. This article attempts to provide some perspective about bigness within enterprises in Canada.

Although some characteristics of the Canadian economy may be cited which foster smallness, many influences work in the direction of bigness. The rewards for economies of scale demand it. Technological advances lead to increasing capital intensity in many existing industries and to the development of whole new industries dependent on massive amounts of capital. Markets grow in size with rising population and increasing affluence. They widen geographically with improvements and extensions in transportation and communication; mobility of people and of their wants leads increasingly to national, continental and world markets. This trend is in turn reinforced in the case of some industries by the need for country or indeed continent-wide facilities to service increasingly complex products.

A potent and pervasive influence in the direction of bigness lies in the important role of research and development. These are the foundation for much of industrial growth. Frequently so costly that they can be carried out on a significant scale only by large enterprises, they in turn reinforce the growth of these enterprises.

Other factors affecting concentration include vertical integration arising from the need felt by enterprises to ensure the whole range of their activity, extending from control over their raw materials to accessibility of their markets. Diversification may be undertaken with the object of reducing risks of technical obsolescence of an industry or its product, or of mitigating the effects on the enterprise of cyclical swings in demand. Both vertical integration and industrial diversification are facilitated by the availability of capital, either through internally generated savings with their concomitant tax advantage, or through ready access by large successful established enterprises to the capital market. These resources in turn sustain large enterprises through the frequently long and costly period of product gestation. They permit them to assume risks of innovation which might jeopardize the very existence of a smaller enterprise.

Bigness is not surprising, but it can be given overemphasis. It is more likely to be prevalent in goods-producing industries than in the less capital intensive and more localized service industries. Yet there are goods-producing industries where bigness plays no part. And in any event there is a good deal of churning. New manufacturers come into existence, some to flower, some to fail. The more successful, almost by definition, tend to grow, and may indeed merge with other larger established enterprises which can provide them with the sustenance for more rapid growth than would otherwise be possible. The process of innovation continues inexorably both within the great enterprises and at the lowest size level, although there are some grounds for believing that bigness may be growing.

How important statistically are the large enterprises in manufacturing? There are at least three units of industrial and corporate organization and activity which are in statistical use and may be used in analyses of concentration. This note brings together the data on manufacturing for enterprises or aggregations of firms under common ownership and financial control, which are the units having greatest entrepreneurial and financial significance, and those of establishments, the smallest units which are separate operating entities capable of reporting all elements of basic industrial statistics. (The intermediate unit, which may be equivalent to both the enterprise and the establishment, is the corporation or firm, generally a legal entity with tax and to a lesser extent internal organizational significance.)

At the beginning of the decade there were 230 enterprises in Canada which employed more than \$25 million of long-term capital in Canada. They covered a broad spectrum of Canadian industry and commerce. Based upon their principal activity, 85 of them can be classed under manufacturing, exclusive of the integrated petroleum industry. Together they accounted for \$7 billion of the \$12 $\frac{1}{4}$ billion of long-term capital employed by manufacturing enterprises in Canada. Some of this capital was of course employed in ancillary activities in other industries, while at the same time some of the capital employed in enterprises classified as non-manufacturing (particularly the petroleum and natural gas industry and mining) was devoted to manufacturing activity. A large proportion of the investment in Canadian manufacturing is thus concentrated in a relatively few enterprises.

At the end of World War II there were only 20 manufacturing enterprises in this size group, employing just over \$1 billion of long-term capital. By 1953, the number had reached 55 covering some \$3,450 million of the total of more than \$7 $\frac{1}{2}$ billion employed in the industry. In part the changes in each period reflect the rising cost of new and replacement investment, so that in real terms the

dividing line has been falling. In part they represent growth through the retention of earnings or the raising of new capital and in part they represent the effect of mergers.

In 1961, although constituting only 3 per cent of Canada's 32,415 manufacturing establishments, the 984 establishments of enterprises with an aggregate investment in Canada of more than \$25 million provided 29.7 per cent of all employment, 36.2 per cent of all salaries and wages paid, and 43.8 per cent of the factory shipments, of Canadian manufacturing industry. As might be expected, salaries and wages paid by establishments in this group, at \$5,036 per employee, were significantly higher than the manufacturing industry average of \$4,136 but in total represented only 42.7 per cent of value added by manufacture compared with the industry average of 49.0 per cent, presumably reflecting higher capital intensity.

The average number of employees per establishment at 382 was almost ten times the industry average of 39, and value added per employee was also appreciably higher (\$11,781 compared with \$8,445).

The aggregate investment per employee engaged in manufacturing, at \$18,600 was nearly double the industry average of \$9,700; this may, in part, reflect the existence of highly integrated concerns whose operations extend vertically into non-manufacturing activities, although it should be noted that the large manufacturing establishments of petroleum and mining enterprises whose value is excluded are highly capital intensive.

In considering the role of large enterprises it is well to remember the greatly varied character of different industries. By far the largest number of manufacturing establishments (7,444 in 1961) is to be found in the food and beverage industries. While this major industry group embraces some very large production units, more than a third (2,529) of the total is made up of bakeries with an average of only 14 employees; butter and cheese plants, and feed manufacturers (1,872 establishments in all) with an average employment of less than 8, account for a further quarter of the food and beverage total. In fact ten industries characterized by large numbers

of small establishments—sawmills, bakeries, butter and cheese plants, pasteurizing plants, feed manufacturers, men's and women's clothing factories, printing and publishing, printing and bookbinding, and household furniture (seven of which are among the 20 leading industries)—together account for 40 per cent of the total number of manufacturing establishments. At the other end of the scale, manufacturing establishments in smelting and refining, petroleum refining, motor vehicle manufacturing, and iron and steel mills, for example, tend to be very large.

Numerically, the establishments of large enterprises account for only 3.0 per cent of the total, but range from zero to 42.9 per cent of the different major industrial groups of manufacturing activity under the Standard Industrial Classification, tending to vary inversely with the total number of establishments in the group. They represent about 3.8 per cent by number of the 7,444 food and beverage establishments in manufacturing, only 1.0 per cent of the 5,251 wood establishments, and 0.1 per cent of the printing, publishing and allied establishments. At the other end of the industrial ranking by number of establishments, large enterprises represent 14.0 per cent of the 93 rubber establishments, 42.9 per cent of the 91 petroleum and coal products establishments, and 23.7 per cent of the 38 tobacco products establishments.

This tendency does not, however, hold when the examination relates to the selling value of factory shipments rather than the number of establishments. Here the large enterprises account for 43.8 per cent, ranging for major groups between zero and 95.4 per cent. For the three leading industrial groups, food and beverages (\$4,905 million), primary metal (\$2,806 million), and paper and allied industries (\$2,206 million), the proportions representing establishments of the large enterprises are 32.2 per cent, 78.2 per cent, and 70.9 per cent respectively. Not unexpectedly the proportion for petroleum and coal products is 95.4 per cent. At the other end of the scale in leather (\$291 million) and knitting mills (\$219 million) establishments of large enterprises account for less than 5 per cent of the selling value of factory shipments, but in the two preceding groups, tobacco products (\$335 million) and rubber (\$331 million) the proportions rise to 45.5 per cent and 52.3 per cent respectively.

MANUFACTURING OPERATIONS IN CANADA OF FOREIGN-CONTROLLED ENTERPRISES

A new study confirms the importance in Canadian manufacturing industry of foreign-controlled enterprises, as well as the important role which foreign investment plays in total Canadian economic activity. In 1961, 1,464 foreign-controlled manufacturing establishments representing the bulk of foreign-controlled investment in Canadian manufacturing and comprising 4.5 per cent of all manufacturing establishments in Canada, accounted for 29.4 per cent of all employment provided, 34.5 per cent of all salaries and wages paid, and 40.4 per cent of all factory shipments made by Canadian manufacturing establishments. The relative importance of foreign-controlled plants was greatest in Ontario, where their shipments represented 48 per cent of total shipments. Foreign control varied much more widely by industrial group; the selling value of foreign-controlled factory shipments ranged from 2.3 per cent of the clothing industries' total to 89.9 per cent of the total for the petroleum and coal products' industries.

The foreign-controlled manufacturing establishments selected for the study covered all those forming part of foreign-controlled enterprises having more than \$1 million of long-term capital employed in Canada.

The selected United States controlled manufacturing establishments numbered 1,108 (3.4 per cent of manufacturing establishments) and accounted for factory shipments valued at \$7,896 million or some 46 per cent more than the corresponding figure of \$5,420 million at the time of the last study for 1953. This represented almost 33 per cent of 1961 shipments by all manufacturing establishments or nearly 3 percentage points more than in 1953. The 289 establishments controlled in the United Kingdom constituted 0.9 per cent of all establishments and gave rise to factory shipments valued at \$1,568 million or 6.5 per cent of all Canadian factory shipments. Shipments of \$327 million (1.3 per cent of total factory shipments) originated with the 71 establishments controlled in all other foreign countries.

On average the selected foreign-controlled enterprises provided more employment per establishment, higher wages and salaries, and a higher output per employee than the average for all manufacturing industry. Selected establishments controlled in the United States, the United Kingdom and other foreign countries had, on average, 257, 267, and 153 employees, respectively, compared with the industry average of 39; paid salaries and wages per employee of \$4,889, \$4,661, and \$4,805 respectively (the industry average was \$4,136) and had shipments per employee of \$27,758, \$20,329 and \$30,212 compared with the industry-wide figure of \$19,165. The value added by manufacture per employee averaged \$11,999, \$9,408 and \$11,904 re-

spectively for enterprises controlled in the United States, United Kingdom and other countries compared with an average of \$8,445 for all enterprises.

In part these differences¹ probably reflect the generally higher capital intensity of the foreign-controlled enterprises covered in the survey, with the possibility that their manufacturing operations include a higher degree of vertical integration and are more concentrated in those industries which call for large amounts of capital. It is also likely that there is a concentration of foreign interest in the larger firms with greater potential. There is, naturally, relatively little foreign ownership in industries characterized by large numbers of small establishments that make up a significant part of industrial operations.

In 1961, aggregate investment in Canadian manufacturing industry by United States-controlled manufacturing enterprises averaged \$16,900 per employee engaged in manufacturing or some 75 per cent more than the \$9,700 per employee average for the whole industry. Aggregate investment per employee by United Kingdom and other foreign-controlled manufacturing enterprises averaged \$17,100 and \$32,200.

Foreign-controlled manufacturing operations in 1961 were most heavily concentrated in the petroleum and coal products industries, where they represented 89.9 per cent of total factory shipments, in the transportation equipment industries (75.2 per cent), chemicals and chemical products industries (61.5 per cent) and electrical products industries (55.0 per cent). Conversely the impact of foreign control was lowest in the clothing industries, and printing, publishing and allied industries where foreign-controlled shipments formed only 2.3 per cent and 5.9 per cent of total shipments.

The importance of United States control ranged widely from the clothing industries group where the value of shipments from United States-controlled plants constituted only 2.3 per cent of the industry group total to the petroleum and coal products industries (79.5 per cent). In every industry group apart from the tobacco products industries, shipments from establishments controlled in the United Kingdom and all other foreign countries (excluding the United States) kept below 20 per cent of total shipments by the group.

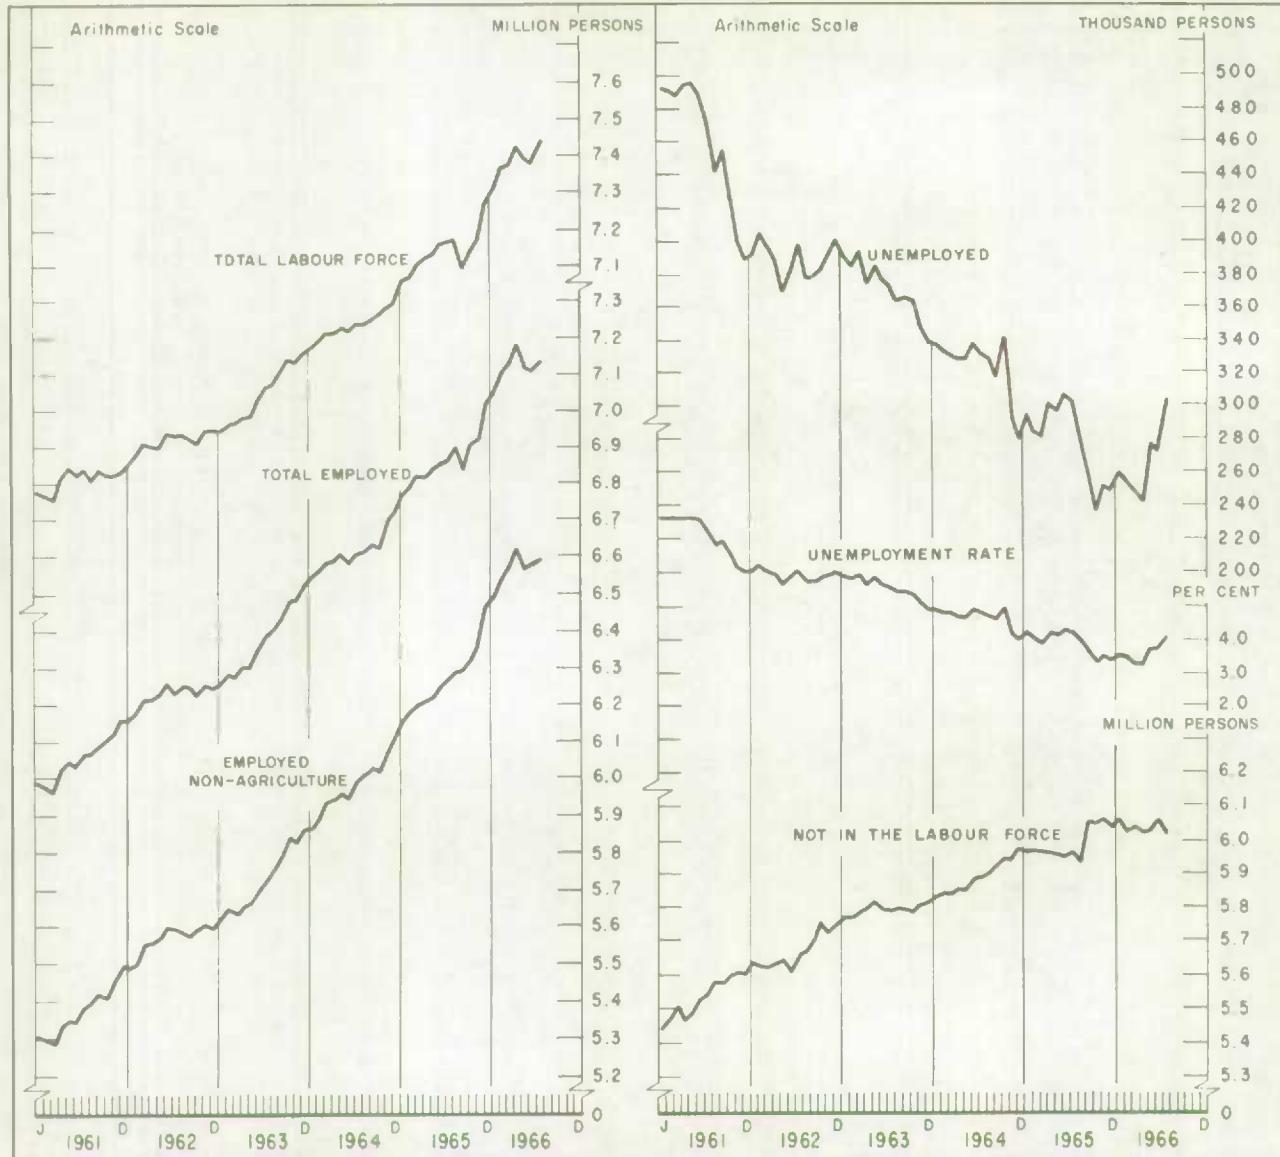

¹ Unfortunately it was not possible to assemble information relating to Canadian-controlled enterprises with an aggregate investment of \$1 million or more. Comparisons of the averages per establishment which related to the same size group for both foreign and Canadian-controlled enterprises would be preferable. It is to be expected that establishment averages for foreign-controlled enterprises will be much greater when they are compared to averages for the total universe irrespective of size considerations.

Turning to the component industries of these major industry groups, foreign-controlled establishments provided 44.9 per cent of the shipments of the 20 leading Canadian industries in 1961, or a rather higher proportion than their 40.4 per cent share of total Canadian shipments. Some degree of foreign control was evident in 1961 in all but two of these industries (printing and publishing, and metal stamping, pressing and coating). In six of the industries, foreign control (as measured by proportion of total factory shipments) exceeded 60 per cent. Foreign control was strongest in motor vehicle manufacturing where it accounted for 99.0 per cent of the selling value of factory shipments, petroleum refining (91.2 per cent) and aircraft and parts manufacturers (87.2 per cent). In contrast, shipments from foreign-controlled butter and cheese plants, men's clothing factories and pasteurizing plants comprised 2.9 per cent, 4.1 per cent and 9.3 per cent of total factory shipments from these respective industries.

No clear pattern emerges to link foreign-controlled plants with the 20 leading industries in 1961 which showed the largest compound annual growth rates of their factory shipments between 1957 and 1963. Both the industry which recorded the highest growth rate in shipments between these two years and the industry which recorded the only decrease had high levels of foreign control. Furthermore, the industry showing the second highest growth rate and the industry showing the lowest growth rate were entirely, or almost entirely, controlled in Canada. (The largest growth rate of 11.8 per cent was recorded by motor vehicle parts and accessories manufacturers; in 1961, 73.9 per cent of the selling value of shipments of this industry came from selected foreign-controlled enterprises. The decrease of 2.1 per cent per annum occurred in aircraft parts manufacturers where in 1961, 87.2 per cent of shipments came from selected foreign-controlled establishments).

LABOUR FORCE (More detail in Table 19)

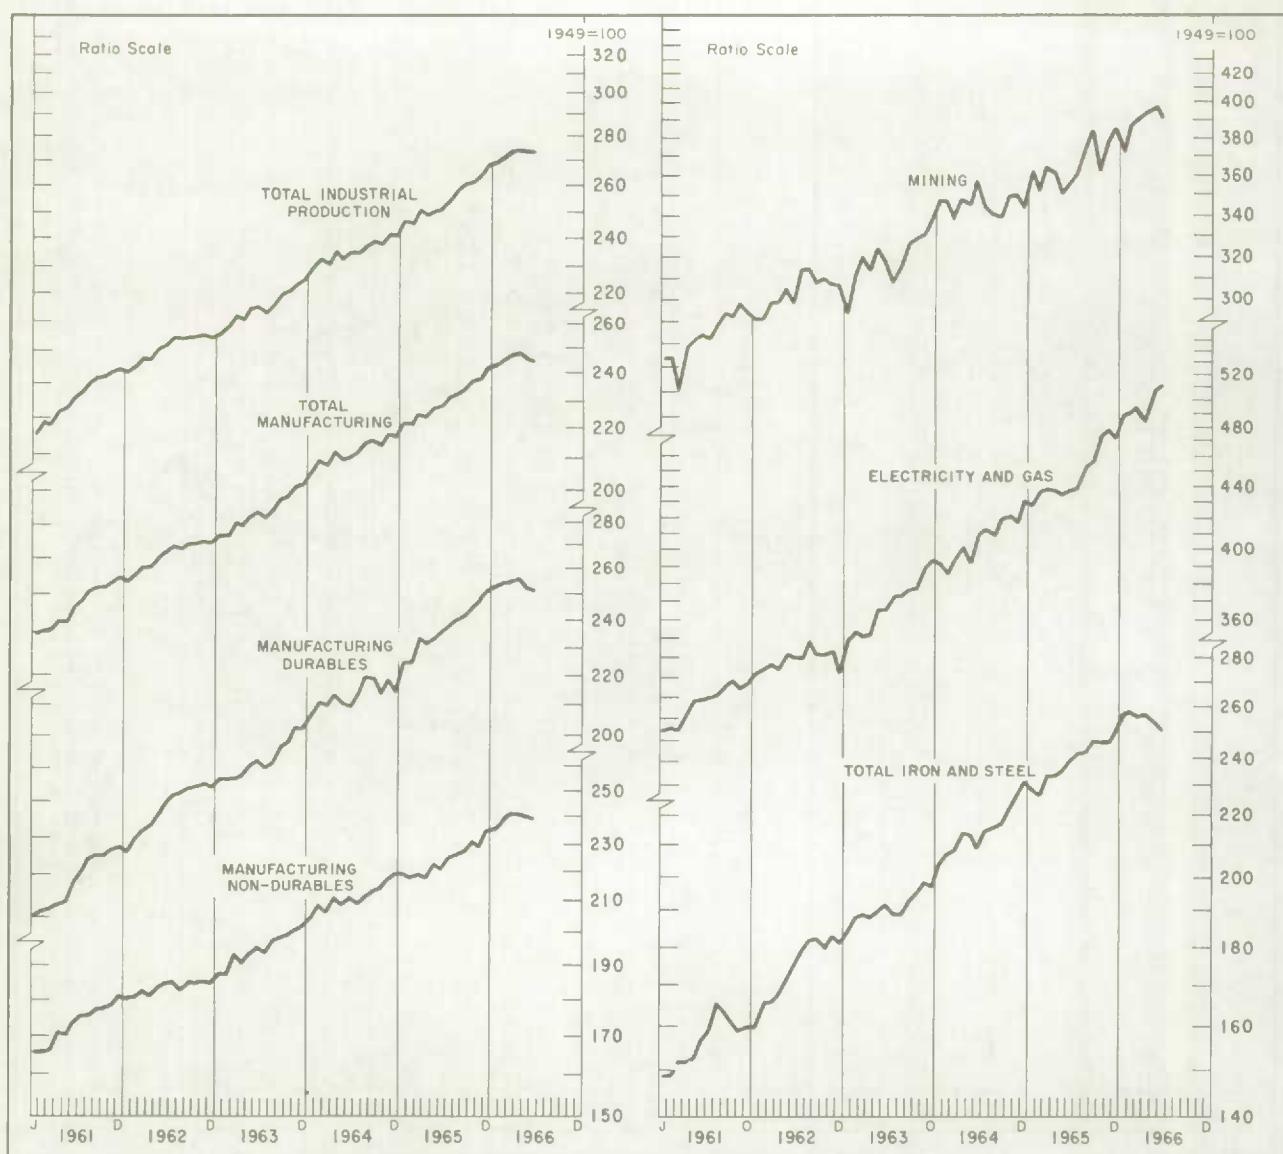

Unemployment was higher between June and July; employment and total labour force also advanced in the period. Unemployment as a percentage of labour force was 4.1 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

INDUSTRIAL PRODUCTION (More detail in Table 16)

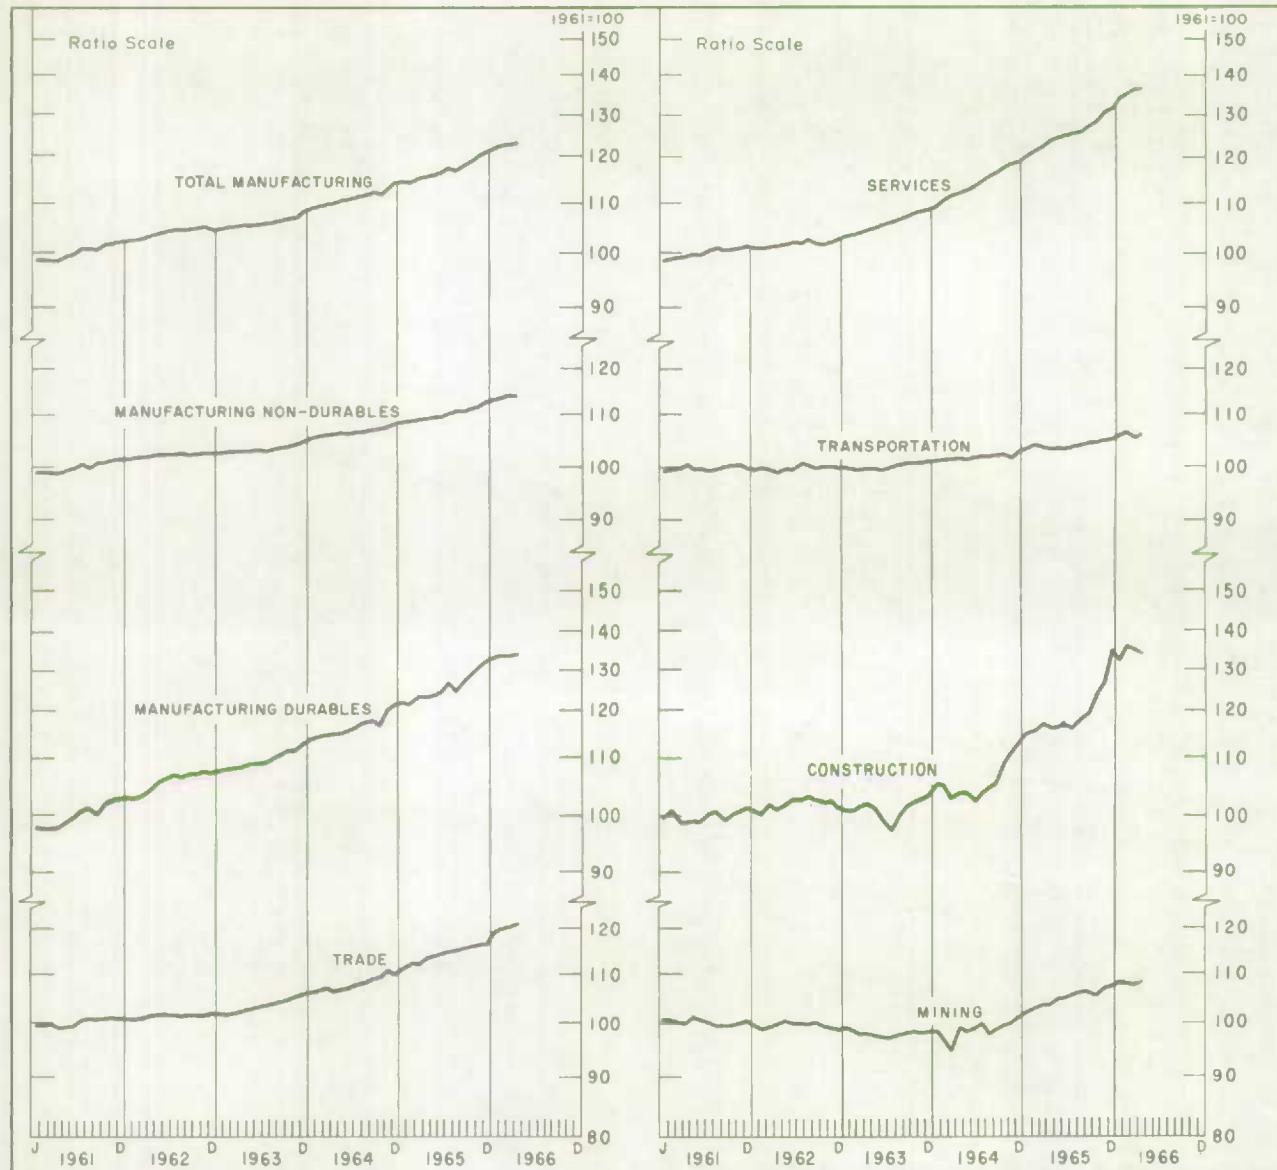

The index of industrial production declined marginally in June for the second consecutive month; the decreases in mining (1.4%) and manufacturing (0.2%) were partially offset by a 0.7% gain in electric power and gas utilities.

	total industrial production (1949=100)	manufacturing (1949=100)				(1949=100)

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Tables 56 and 85)

Total retail trade rose 4.6% in June following the declines of the previous two months. Increases were recorded in all store types except fuel dealers and jewellery stores.

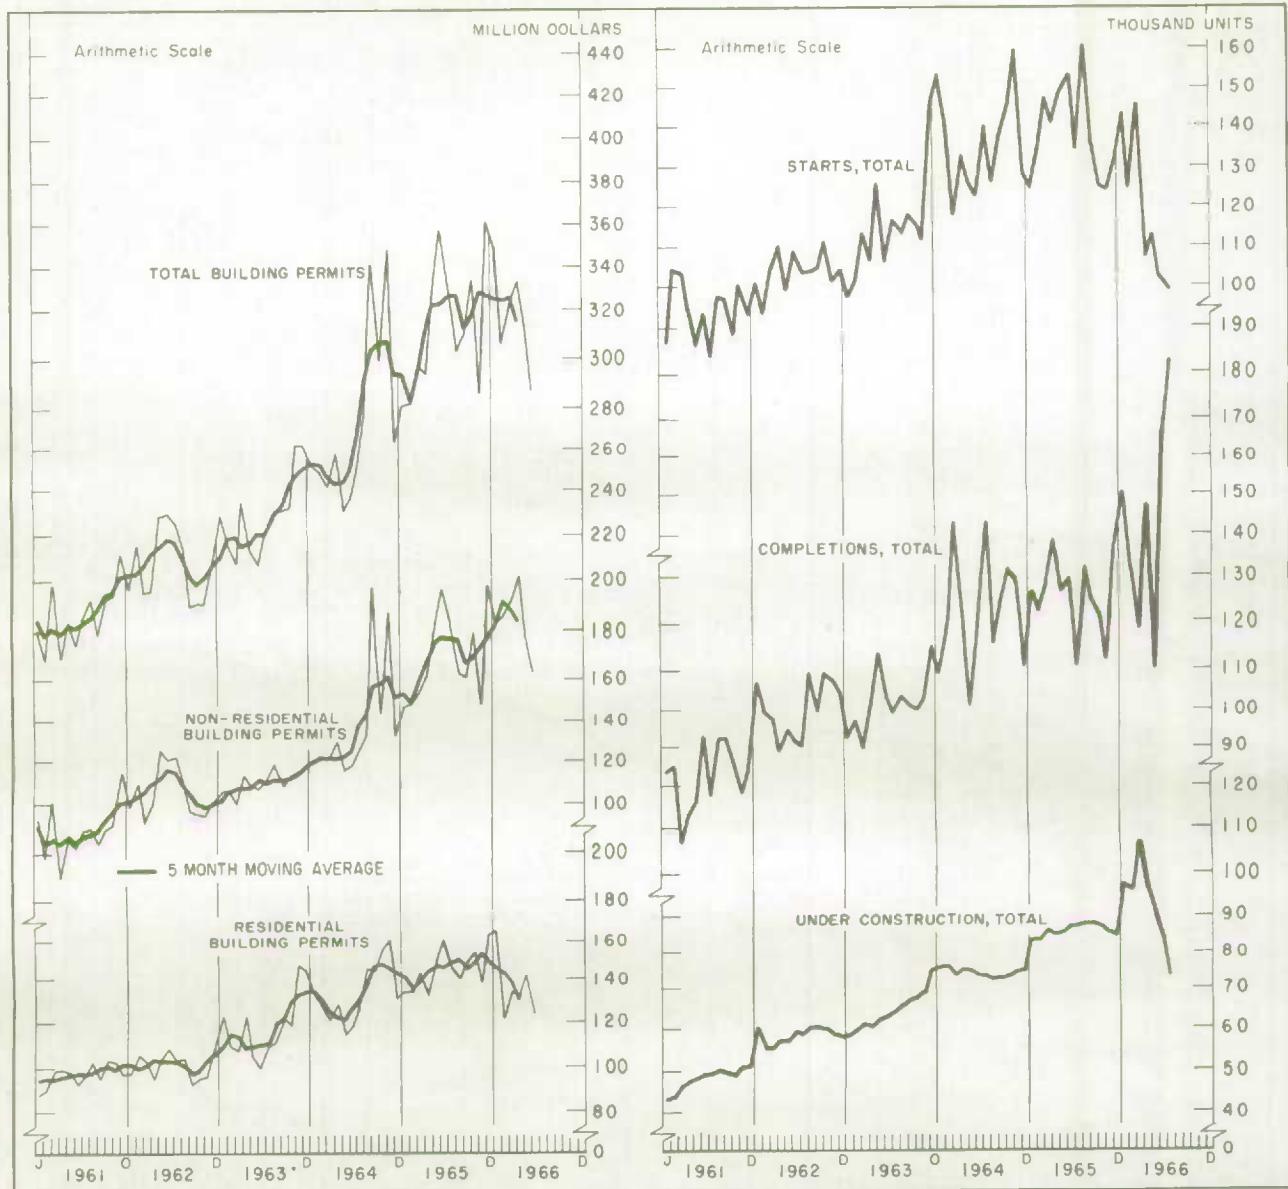

Total sales of new motor vehicles picked up in June owing to a greater demand for American passenger and total commercial type cars.

	retail trade (million dollars)				new motor vehicle sales (million dollars)

CONSTRUCTION (More detail in Tables 67, 72 and 73)

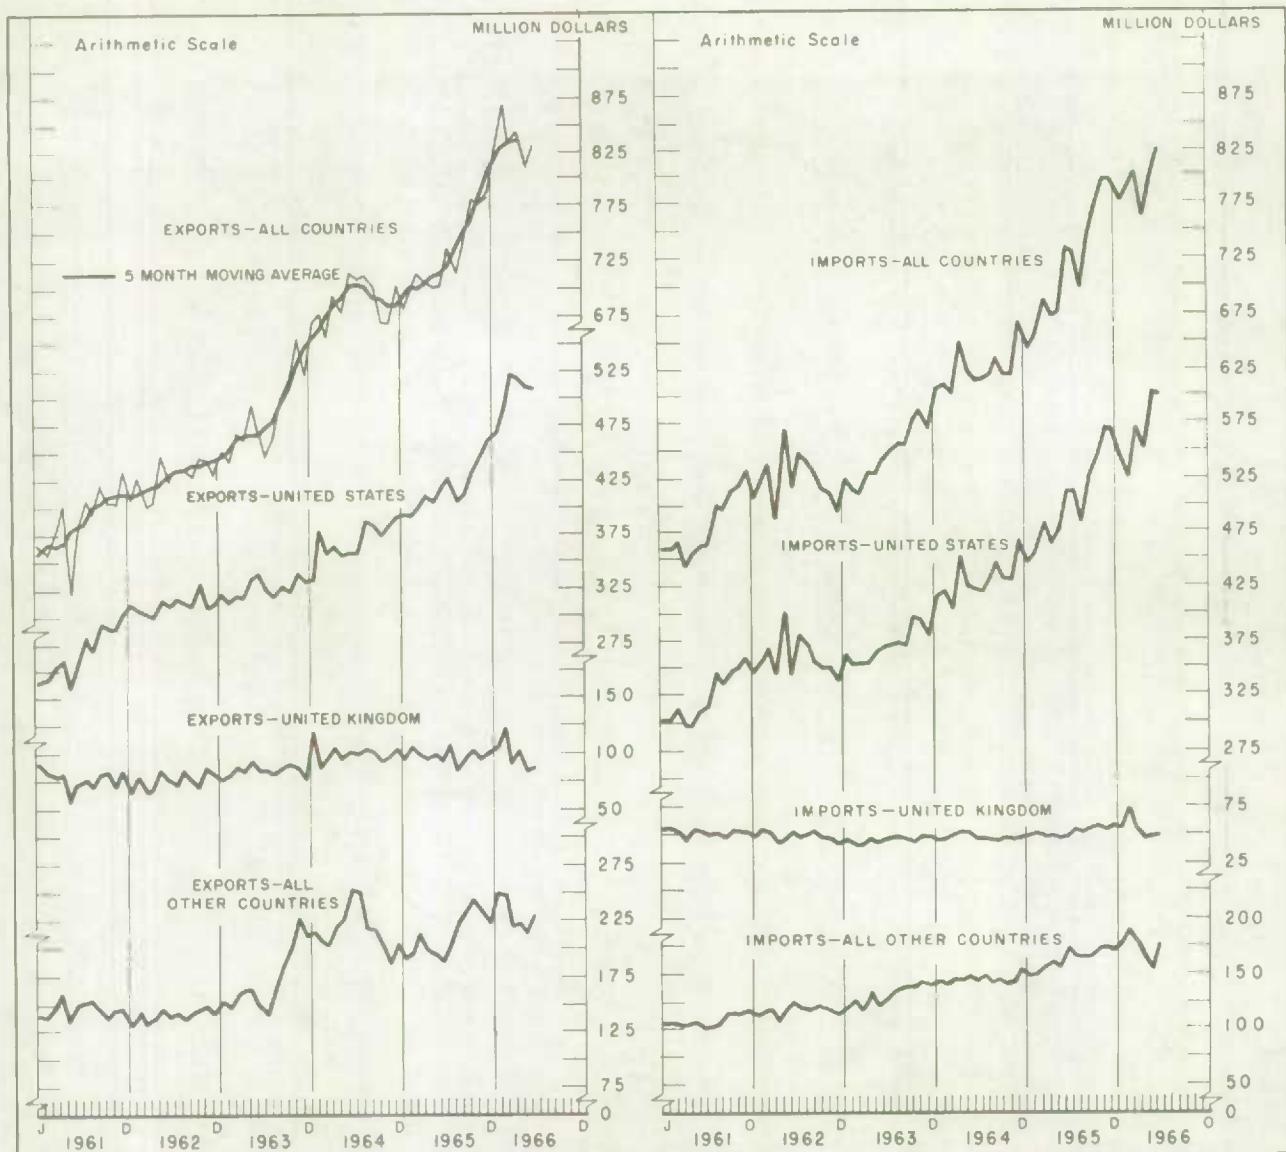

Value of all building permits was lower in June as a result of reduced activity in both the residential and non-residential sectors. Housing starts were down slightly in July while completions increased appreciably for the second successive month. Dwellings under construction continued the downward trend prevailing the last three months.

		value of building permits			new dwelling construction, centres 5,000 and over		
		total		residential	starts, total	completions, total	under construction thousand units, end of month
		non-residential	million dollars	thousand units	thousand units at annual rates	thousand units at annual rates

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

New orders in manufacturing industries declined in June while inventories, shipments and unfilled orders showed marginal changes. Rail revenue freight loaded dropped noticeably in July from the level of previous months. Cheques cashed in clearing centres reversed its previous gain recorded in May (+\$3.60 billion) with a loss of \$2.76 billion in June.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index remained virtually unchanged in July.

The index of industrial common stocks moved down fractionally in July.

The consumer price index advanced 0.3 per cent to 144.3 in July, with the increase resulting mainly from a 1.2% rise in the food component and a small advance in services.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths.

Sources: Vital Statistics (84-001), D.B.S.

Table 7: national income and gross national product (million dollars)

years and quarters	salaries, wages and supple- mentary labour income		corporation profits before taxes	deduct: dividends paid to non- residents	rent, interest and mis- cellaneous investment income	accrued net income of farm operators from farm production ¹	net income of non-farm unincor- porated business	capital consumption allowances and mis- cellaneous valuation			gross national product at market prices ²
	military pay and allowances	before taxes						valuation adjustment	net national factor cost	indirect taxes less subsidies

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

Source: Labour Gazette, Department of Labour.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. *Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.*

Table 29: employment indexes,¹ industrial composite, by provinces (1961=100)

¹See footnotes 1 and 2 and source in Table 28. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. ³In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ⁴Except machinery and transportation equipment industries.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. ¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant.

¹End of period. ²Does not include apartment-type machines. ³Electric and other. ⁴Gas types are included.⁵In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month.

Note: Components may not add to totals due to rounding. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only.

Sources: Crude Petroleum and Natural Gas Production (26-006) and Sales of Manufactured and Natural Gas (45-005), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. ¹⁰Source: Refined Petroleum Products (45-004), D. B. S.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. ²Mainly deposits of foreign banks. ³Capital, rest fund and undivided profits as at the latest fiscal year-end. ⁴Including issues payable in foreign currency. ⁵Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. ⁶Excluding Canadian day to day loans. ⁷Loans to grain dealers and exporters. ⁸Loans to finance purchase of Canada Savings Bonds at time of issue. ⁹Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

¹⁰Including loans to instalment finance companies.

¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²Stocks included in the mining index are for producing mines. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are for companies whose operations include smelting and refining. ⁵The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification.

⁶Includes also the machinery industries (except electrical machinery) and the transportation equipment industries.

D.B.S.
