A NOTE TO USERS

Table 56 has been expanded to include the numbers of new passenger cars and commercial vehicles. The seasonally adjusted units are now introduced on Page S-5, replacing the value series. The seasonal adjustment of new motor vehicle sales in dollars was discontinued due to changes in the valuation of new motor vehicles applied to sales in 1967, but not to sales in previous years. Statistics of units sold are consistent over time. They have been seasonally adjusted by the X-11

variant of the U.S. Bureau of the Census Method II. A trading-day adjustment based upon the actual variations in the data was applied.

Table 117, has been completely revised and brought up to date. Changes include addition of the Canadian Broadcasting Corporation and Industry Division and two new items identified as "Payments under the Transportation Act" and "Post-Secondary Education Payments to Provinces".

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont. or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada.

2400-501

During the past century, the Canadian economy has been greatly dependent upon external forces. Waves of expansion and growth have tended to coincide with major periods of expansion elsewhere. Throughout this period of progressive development the most characteristic industries have been directed toward the export market. When these have thrived, the economy has thriven also.

While the Act of Confederation may have set the stage for a transcontinental expansion based in the St. Lawrence area, decades passed before this achievement was fully realized. Not until the new century dawned did a conjunction of favourable circumstances in world environment lead to attainment of earlier expectations. As the century progressed, closer relations with the United States economy became a major trend in an industrial age of mass production and consumption, in contrast to earlier east-west concentration on a few staple products for export to Europe.

External capital has always played a significant role in Canadian development. Indeed, scarcity of such capital has often put limits on the pace of Canada's expansion. In a country in which transportation facilities have been a major necessity, requiring large investments, it was natural that a considerable proportion of non-resident capital should have been used to finance canals, roads, railways, etc., and that securities represented borrowing for such purposes. Many productive pursuits carried out during the nineteenth century in small units, such as agriculture and small local industries with local markets, could be largely financed from the savings of individuals and other local sources. But, as industrial development advanced, non-resident capital played a progressively larger part in financing industrial and governmental enterprises.

This change became most evident in the twentieth century with the appearance of new industries, mines and sources of power requiring large investments of capital. Industries exploiting such Canadian resources as pulp and paper, non-ferrous smelting and refining, chemicals, petroleum and mining are all particularly capital-intensive and have drawn heavily upon non-resident sources of capital.

Other capital-intensive industries such as hydro-electric power, originally partly developed by private enterprise, have since become largely government-owned. Many of the secondary industries, for example, automobiles, rubber goods and electrical apparatus, have also been considerably influenced by non-resident capital. On the other hand, such secondary industries as iron and steel, textiles and beverages, are still mainly under Canadian control. Down the years an underlying trend has been to larger units and consolidations with a widening of markets and broader affiliations.

Capital Inflows

Various periods of intensive investment and rapid growth in Canada have been highly dependent upon capital inflows. Some outstanding characteristics of these periods herein described, are largely in a context of capital investment and its sources and the external demands which made expansion possible. In the process of developing into a highly-industrialized economy, Canada has accumulated an exceptionally large balance of external indebtedness.

The total value of externally-owned investments in Canada at the beginning of Confederation was not great, compared with investments in subsequent periods of rapid Canadian expansion. However, such investments constituted a considerable burden for the size of the economy. The value of early non-resident investments is not known precisely, but even by 1900 the total was privately estimated at less than \$1,250,000,000. Much of this total appears to have been accumulated during the first three decades following Confederation.

The Canadian provinces had experienced a period of heavy investment activity in the decade of the 1850's with the building of the Grand Trunk Railway which was financed by British capital and was at the centre of the expansion in that period. Other railways were also constructed before Confederation and were financed by capital both from Britain and the United States. Earlier construction of the various canal systems and other public works often had been made possible only by imports of capital from the sale of provincial bonds in London. Indeed, a number of canals, such as the Rideau system, had been constructed by the Imperial Government.

Investments by non-residents in Canadian industry in that early pre-Confederation period tended to be more limited, except for a few special types of activity where non-residents were major entrepreneurs as in the fur trade and in lumbering. The history of the Hudson's Bay Company alone is a record of Canadian development. In fact, one early objective—and result—of Confederation was Canadian Government purchase from the Hudson's Bay Company of Rupert's Land in order to open up the western prairies for settlement. Close business relations with Britain led to many partnerships and other business connections with that country.

In the period between Confederation and the turn of the century the greatest single influence on the rapid rise in non-resident investment in Canada was the building of the Canadian Pacific Railway. This major investment gave rise to a variety of

* This article, written by Mr. C.D. Blyth, Director General of the Economic Accounts Branch, is reprinted from CANADA ONE HUNDRED 1867-1967, the special Centennial volume published by DBS and available from the Queen's Printer or the Bureau, Ottawa, at \$2.00 per copy.

other capital inflows, for example, agricultural and business opportunities and community development which followed the construction of an all-Canadian transcontinental railway. Financing of the railway itself, under construction from the 1870's to 1885, led to very substantial investments from the United Kingdom and, to a lesser extent, from continental Europe and the United States. Other railway construction of the period was also financed by non-resident investors and the Intercolonial Railway was completed in 1876.

Another aspect of National Policy, the introduction of a new tariff in 1879, was also an influence on industrial development and capital inflows. A number of new establishments in manufacturing and trade were set up in Canada in this period by American and other non-resident businesses. New mineral properties were acquired by non-residents and mining began in some areas, as well as operations in the pulp and paper industry. These industries did not yet play an important role in Canadian exports which were still mainly such primary products as lumber, fish, bacon, cheese, etc.

Through much of this post-Confederation period certain influences were pervasive in the general economic background of Canada. Among these were declining prices in Canada and elsewhere and large-scale emigration to the United States. Following the Civil War in the United States, settlement expanded westward and new industries sprang up to supply the growing markets.

The atmosphere of confidence with which the Canadian economy started the period soon changed with the depressive factors noted above which only receded towards the end of the century under the stimulus of an improving world environment with new gold discoveries, recovering exports and prices. It was only towards the end of the century that Prairie development accelerated although the export of prairie wheat had begun earlier on a relatively small scale.

Accelerated Growth

It was not until the early part of the twentieth century that expansion of the Canadian economy on a more massive and concentrated scale occurred. Large infusions of both capital and immigrants provided a basis of rapid growth which was stimulated by rising prices for wheat and reduced costs of transportation as European industrialization created new markets.

This period of accelerated growth accompanying large investments, which came to a peak just before the outbreak of World War I, was rendered possible only by an infusion of foreign capital in unprecedented volume. In this way foreign resources were utilized to an unusually high degree to supplement domestic sources of capital in furthering the development of the Canadian economy. Again, the period was one in which railway construction was impor-

tant in leading to capital inflows, with the building of two more transcontinental railways and many branch extensions of the main systems. These further reinforced the east-west movements of trade and contributed to the expansion of a transcontinental economy trading with the overseas world.

Much of the expansion accompanied the large and rapid population growth as immigration rose to new high levels and as population shifts within the country occurred with the opening up and development of Western Canada. This movement was encouraged by the growing scarcity of cheaper land in the United States. New borrowings abroad by governments and municipalities to assist in providing for the roads and other infrastructure for the wheat economy occurred in this period. British purchases of Canadian railway, government and municipal securities made up most of the capital inflows, with lesser amounts of Canadian securities being sold in the United States.

In the field of industry, direct investments in branches and subsidiaries controlled abroad continued to make up only a minor part of the totals, although this kind of investment was appearing more frequently than formerly as the economy became more industrialized with wider markets and placed less emphasis on production for local demands in smaller industrial establishments. Although information is incomplete, it has been estimated that, by the turn of the century, there were more than 100 instances of direct United States investments in Canada.

World War I

By the beginning of World War I, apparently partly in response to Canadian tariffs, the number of these direct investments had tripled. In this period the value of Canadian manufacturing more than doubled as did the capital employed, with larger units necessary for developing new industries beginning to appear. Among these were new investments by United States concerns in pulp and paper plants, stimulated by opportunities for free entry into the United States market from 1911 onward, and by restrictions on exports of pulpwood.

Before the War there was also some expansion in non-resident-financed, non-ferrous metal industries. These primary industries, usually based in the Canadian Precambrian region, were to develop rapidly later with technological improvements, new sources of hydro-electric power, and with strong demands for their products in the United States and Europe. Other industries also first appeared in this period. The automobile industry is a significant example of an establishment designed to take advantage of preferential opportunities to export to Commonwealth markets.

World War I was a period of rising activity in both Canadian industry and agriculture. New demands created by the conflict led to full employment of many new facilities developed in the

previous decade of rapid growth. War demands prevented readjustments from the preceding boom which had shown some hesitancy in the year before the War began. Canadian industry was able to expand rapidly into new kinds of production for the common Allied effort and to supply the rapidly-growing Canadian market which had been stimulated by new levels of consumption.

Prices also rose rapidly during, and immediately after, the War. Within a few years, exports had doubled in value and later trebled. Increases in shipments of food and war materials to Britain contributed much of this rise but sharp gains in exports to the United States were also very significant as the economy acquired closer links with that country. There was a notable acceleration in investments and in exports of the pulp and paper and non-ferrous metal industries, and a large merchant marine was constructed. Imports from Britain and continental Europe were curtailed, but they increased from the United States. As Canadian industry supplied more Canadian requirements, there was a widening of Canadian markets and an increasing interdependence between the economic regions of the country.

The United States had become a major source of capital and, during the short period of some four years, United States investments in Canada doubled. In contrast, little change occurred in British investments. At the same time, the high income of businesses and individuals in Canada were reflected in increased savings much of which were invested in Victory Bonds. The boom continued for several years after the War but came to an end in 1920 when prices were at their peak level — more than double the general level before the War. A sharp readjustment followed in 1921 with prices falling by about one third. It was not until 1922 and later that general economic recovery again began.

Industrialization of 1920's

A revival of world trade with recovery and monetary stabilization in Europe, assisted by capital from the United States, again created a favourable environment for Canadian exports and development. Once more Canadian growth was outstanding. In the years from 1925 to 1929, exports were again close to the values of 1918-1920. As prices were much less in the later period, the volume of trade had risen to new peaks. Wheat prices and acreage under production rose once more with a very large crop in 1928. Business investment, too, again became a source of strength. The Canadian economy was becoming more diversified with the rise to greater prominence of new industries such as pulp and paper, gold, non-ferrous metals, automobiles, electric light and power, and electrical apparatus. Consequently, agriculture decreased somewhat in importance as manufacturing and mining became relatively more important in the

latter part of the decade and the service industries gained as well with the growing urbanization of Canada.

Capital exports from the United States to Canada were an important factor in this industrialization of the 1920's. There was a virtual doubling in the value of United States investments in Canada between 1918 and 1926, and a further rise of almost one half in the succeeding four years. This was particularly important in the new industries exploiting the wealth of the Precambrian Shield but it was also widespread in secondary manufacturing, trade and finance. New technologies were imported as well as capital, accelerating the process of industrialization and urbanization.

The new industries included some which were to bring distinction to Canada in the wider front of international industrialization as new metals and materials were required by the United States and other industrial nations. The rapid extensions in the use of electricity and motor transport were also to transform day-to-day life. These changes were the forerunners of even greater industrial transformations to come in later decades. While this influx of United States capital was taking place, Canadian investments abroad were also rising, particularly holdings of United States stocks, as well as Latin American and other foreign bonds.

The 1930's

Canada was particularly vulnerable to the world-wide depression which set in during 1929 and 1930. Being highly dependent upon incomes from a few export staples, the decrease in world trade had far-reaching effects on the Canadian economy. The economic crisis of 1929 and the subsequent depression in the United States had widespread effects on world trade due to curtailments in capital lending. International dislocations were widespread and deep rooted being accompanied by currency readjustments and protective restrictions. In Canada every sector felt the downward pressure between 1929 and 1933 but none more so than did western agriculture. The depression and prolonged drought brought a rapid end to the extended wheat boom. Markets contracted and prices dropped to one quarter of the 1917-1920 peak but there was no corresponding drop in costs and overhead.

The impact of these changes forced readjustment that had postponed by shortphased reactions earlier. Investment activity fell off rapidly, contracting to about one quarter of the 1929 level and was not again to reach that peak until the 1940's. Manufacturing activity was sharply reduced. Imports also contracted rapidly and were not to regain the levels of the more prosperous years until World War II, partly because of the low levels of investment in Canada in the 1930's.

Although world trade again began to increase after 1933, recovery in Canada tended to be slow and resources were under-utilized until World War II.

The climate for some of Canada's primary products continued to be unfavourable because of surplus capacity and reduced world demand. Policies of autarchy in Europe, which lessened demand for wheat, are an example. But there was a rising demand for the products of some mineral industries and the growth which occurred in this area became relatively more important.

A major gain occurred in the production and export of gold, stimulated by the higher prices offered since 1934. Exports of the leading non-ferrous metals also were stimulated by armament demands from overseas. Trade agreements between Canada and the United States signed in 1935 and 1938, combined with the general recovery, led to substantial increases in trade with that country in the years immediately before the War, although the short recession in the United States in 1938 was a restraining factor.

Another growing source of Canadian income was the trade from United States tourists as Canada's highways were developed. As imports gained relatively less than exports, there were sizable surpluses in Canada's external current account from 1934 on. These were available for reducing foreign holdings of Canadian securities.

The 1930's was the last period in which the traditional geographical distribution, the "triangular pattern" of Canada's balance of payments, was predominant, unimpeded by the type of international financial dislocations which were to become typical of the 1940's with the War and its aftermath. There were surpluses in Canada's balance of payments with Britain and overseas which could be freely converted to cover deficits with the United States. The unconvertibility of sterling which emerged with World War II meant that it was necessary to introduce new methods of financing Canada's external trade along more bilateral channels.

World War II

The outbreak of World War II in 1939 brought to an end the long period of under-employment of resources. Once again the external environment was to become the determining factor in Canadian development. Soon, scarcity of resources was an overriding element in the shaping of economic policy. Various official controls were introduced affecting production, prices and foreign exchange as well as general military and economic mobilization. Government expenditures as well as policy became increasingly prominent. New kinds of production were introduced and extended while other kinds were reduced by one factor or another. With a curtailment of imports to meet civilian purposes, new opportunities opened up for Canadian manufacturing. Some major industries, of which the automobile industry is an example, were diverted from production for civilian purposes in order to produce military equipment.

As a result of wartime mobilization, a great increase in the total of Canadian production to new high levels was achieved. Within several years, production had doubled in value and remained consistently above this level thereafter. Full employment became the characteristic situation in contrast to the unemployment which had prevailed for such a long period before the War. In the field of agriculture, production was diverted from wheat to dairy products and livestock in order to provide a wider range of food exports to Britain. In industry, production was greatly increased in many commodities which were to be exported—aluminum, nickel, other metals and materials, and in military equipment including aircraft, chemicals, electronic equipment and instruments, and ships. New investment during the period tended to be concentrated in industries producing war materials. By the end of the war, Canada had much more rounded industrial development than formerly and many of the newest types of facilities.

Gross National Product of Canada, 1926 - 65

Year	Millions of current dollars	Year	Millions of current dollars
1926	5,152	1946	11,850
1927	5,549	1947	13,165

1944	11,850	1964	47,403
1945	11,835	1965	51,996

Mutual Aid

The effect of this wartime economic mobilization was that Canada was able to export a record proportion to Britain and other Allied countries. In the latter years of the War, shipments on Britain's account alone were more than five times as high as exports to that country before the War. This was made possible by a variety of special arrangements including a \$700,000,000 loan to the British Government to convert sterling balances accumulated by Canada early in the War. A contribution of \$1,000,000,000 to Britain followed. Later, over \$2,200,000,000 mutual aid was extended to Britain and other Allied countries. There was also a large-scale official repatriation of many Canadian bonds and other securities held in Britain. By the end of the War, virtually all of the Government of Canada and Canadian National Railway bonds held in Britain had been taken over by Canada. Canada's balance of indebtedness to Britain was considerably reduced, principally by the loan to Britain and the repatriation of securities there. In the same period, the Canadian Government had spent more than \$2,500,000,000 on overseas military expense as well.

Commodity flows between Canada and the United States also rose to record proportions during the War, a major influence being the Hyde Park Agreement of April 1941. As a result, new sources of dollar receipts were developed which permitted Canada to specialize in the production of certain types of product required for the War. Sales of aluminum, ships and other war supplies to the United States were particularly large and demand for some civilian commodities expanded greatly. For example, grain shortages led to very large purchases of Canadian grains. Imports from the United States, although swollen by some heavy defence requirements, were curtailed by the prevailing shortages of the period and by the reduced levels of Canadian consumption brought about by temporary wartime restrictions on non-essential imports and by high taxes.

Long-term capital inflows from the United States continued and both portfolio and direct investments in Canada rose, the latter principally by retained earnings. Canada's reserves of United States dollars rose substantially in the latter part of the wartime period. The backlog of demands which had built up during the period of wartime curtailments in consumption was very great in Canada. This was supported by large accumulations of savings. Consequently, there was only a moderate fall in Canadian production in the transition from a wartime to a peacetime economy. Rising consumer expenditures and a revival of many types of business investment, including the accumulation of stocks, were factors of strength during the period in which government expenditures were being reduced and the composition of production and exports were undergoing alteration.

During 1946, the removal of price and other controls progressed, including the return in mid-year of the Canadian dollar to parity with the United States dollar. Prices rose substantially until the level stabilized temporarily during 1948 was reached. Further substantial rises were to follow in 1950 and thereafter under the world-wide impetus of price increases during the Korean war.

Assistance Programs

Canada continued to extend generous assistance to the overseas world in the early postwar period. There were exceptionally heavy demands for commodities overseas but, to make high exports possible, financial aid was necessary. The early Canadian postwar program of assistance to overseas countries was greater than that of any other nation on a per capita basis. The postwar loan to Britain of \$1,250,000,000 was a prominent part of this assistance which totalled over \$1,800,000,000 including export credit loans to other countries.

Canadian financial assistance to overseas countries had the effect of reducing Canada's own capacity to cover Canadian external purchases concentrated in the United States. At first, imports dropped due to a world-wide scarcity of commodities in civilian demand and the end of trade in war materials, but by 1947 imports from the United States were rising rapidly. As there was less convertible exchange available because of the loans, Canada was able only to meet current expenditures in the United States, first by drawing heavily upon the official reserves accumulated in the wartime period, and later by introducing an emergency exchange conservation program.

Oil Discovery

One of the most important economic events in Canada during the early postwar period was the discovery of oil at Leduc, Alberta. This ushered in a most significant development of a natural resource with many consequences for Canada's national income and balance of payments. It led to a long period of sustained investment activity arising from the exploration and development of petroleum and the increased diversification of the whole nation as well as the region in which the oil was discovered. Development of this new, important source of energy was to sustain and accumulate capital inflows for investment in Canada, at first by United States companies, but later by overseas companies as well. Originally, the new production was used in Canada but later, with the construction of pipelines, it also became a major export to the United States in addition to natural gas, a by-product.

This development of a Canadian resource by United States capital is perhaps the best example of a whole series of new U.S. investments in Canada - a series which expanded greatly in the decade of the 1950's and drew Canada farther into the world of international corporate business. Many

of these investments were for the purpose of supplementing United States resources of industrial materials by developing nearby Canadian resources as well, and required large imports of capital by international corporations. The cumulative effect of this type of activity and other forms of more domestically-oriented expansion led to the great investment boom in the 1950's.

New Industries

In addition to petroleum and natural gas, the more outstanding new industries developed by international capital in this period included the massive investments in iron ore mining in Quebec and Labrador, the development of petrochemical and other chemical industries. Enlargements in such basic industries as aluminum, nickel and other non-ferrous metal mining and smelting and pulp and paper have also depended heavily upon foreign sources of capital.

The uranium industry was another major new mining development undertaken on a massive scale in response to United States needs, with some assistance from British capital. Investments in another source of energy, electric power, have also been outstandingly large, including large developments of power at the time of the construction of the St. Lawrence Seaway. Investments in many secondary industries during the 1950's and 1960's were also impressive. Characteristic industries of the period which grew rapidly were electronics, synthetic fabrics and materials. The capacity of the iron and steel industry was expanded greatly with Canadian capital, making Canada much less dependent upon imports of steel than in the earlier part of the 1950's. The automobile industry and many others were expanded to supply a growing Canadian market as well as to meet the new opportunities for exporting which opened up in the 1960's.

Increased Government Investment

Investments by governments have also been increasing substantially as the social capital needed to support a larger population stimulated by heavy immigration as well as natural increase, and a more industrial urban economy has been catching up with the private investment which was concentrated earlier. Such investments, too, have been partly financed by capital inflows, usually borrowings in the United States by junior governments and government enterprises.

Growth was rapid and sustained with few interruptions in most of the decade of the 1950's. In its rate, and in the extent to which it was supported by non-resident sources of capital, this period of growth had its nearest counterpart in the great expansion of the wheat economy before World War I. But it was more of an extension of the frontiers in depth bringing with it a much needed diversification to the Canadian economy as Canada moved farther into the age of mass production and mass consumption with rising living standards.

Postwar developments have greatly increased the relationships between the Canadian and United States economies. Higher proportions of Canadian trade are now with the United States than in any earlier period. The capital markets of the two countries are more closely linked than ever before with increasing mobility of capital. The close corporate relations between so many of the business firms in the two countries have tended to draw Canadian business into the milieu of the neighbouring country. A wider use of imported technology is also increasing interdependence.

U.S. Investment Capital

The United States has been the principal source of external investment capital for Canada since the 1920's and that country has a much larger investment stake in Canada than in any other country, with the total invested having more than doubled in less than a decade. United States investments in Canada are particularly prominent in industry. Close communications and transportation have also greatly increased contacts between the two countries. The complexity and interrelationships in the business environment have also been extended by the increasing size of business organizations and a tendency for large enterprises to grow and widen their spheres of activities.

The period of rapid growth was interrupted towards the end of the decade of the 1950's by a series of years of only modest over-all gains in output. These years were characterized by the apparent existence of a considerable degree of over-capacity in many industries which had been expanded so rapidly in the postwar years. The extent of under-utilized resources in the economy was most evident in the chronically high rate of unemployment which persisted until the early years of the 1960's. An anomaly of this period was the large current account deficits which continued after the period of rapid growth which extended up to 1956. Once again some of the difficulty could be traced to the external environment. This time the United States also was in a period of slow growth and to this was added an apparent decline in Canada's international competitive position with an exchange rate which was a deterrent to exporting at a time that supplies of many commodities exported by Canada were growing outside of Canada. This was a period during which the slow progress in North America contrasted with more rapid growth in economies elsewhere, particularly in continental Europe. In addition Canada experienced a financial crisis in 1962 which, being one of confidence, was short-lived.

Increased Expansion

North American expansion again got under way in the early part of the decade and by the middle of the 1960's Canada, in common with the United States, had enjoyed over four years of expansion. This growth in Canada was at a somewhat higher rate than in the United States, with greater increases

in exports accompanying the new exchange rate, established in May 1962, higher population increases, and a relatively larger volume of investment. With an apparently improved competitive position, Canada became less dependent upon the United States for capital than in the previous decade. The greatly-reduced current account imbalance of 1963 and 1964 was partly due to large sales of grain to Communist countries as well as to the improved international competitive position and the widespread expansionist environment in the principal industrial nations.

Investment activity in the mid-1960's has once more reached new peak levels both in the public and private categories. Among the more spectacular projects under way to meet external demands, and often with non-resident capital, are those in potash mining, and other chemicals, and new large expansions in non-ferrous metals, pulp, and electric power. An increasing amount of domestic capital is being invested in schools, universities and other institutions, and in housing.

The century of progress which has been briefly outlined here has revealed a transition in Canada from a relatively small economy still disunited, depending mainly on the production of agricultural and other primary staples for local consumption and export overseas into a highly-developed, increasingly-urban industrial nation with growing contacts with the United States and the rest of the world. First, a relatively simple transcontinental economy trading mainly with the overseas world became viable with the great rise in wheat production. This was followed by the development of a new range of

large-scale industries based mainly on forest, mineral resources, and electric power supplying United States and other industrial countries with industrial materials, and the domestic industries producing for a growing internal market stimulated by mass consumption brought about by high living standards.

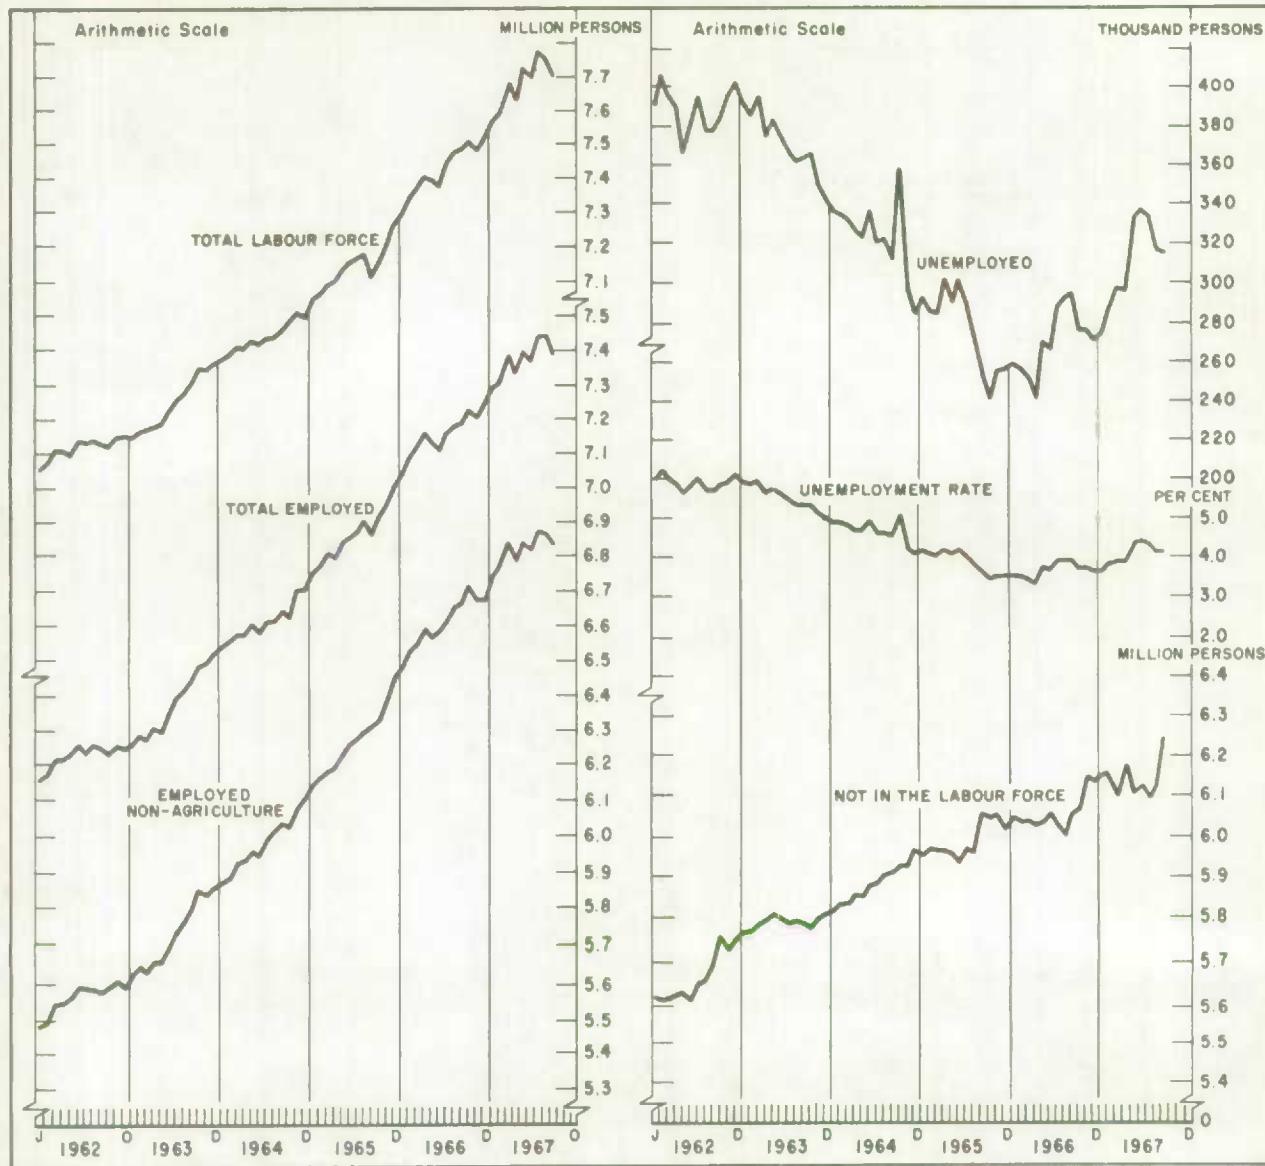

However, certain common factors have remained in the background throughout the century. The external environment continues to be a leading influence upon the health of the Canadian economy for, although Canadian production has all the diversity of an industrial nation, Canadian exports continue to be unusually concentrated in large portions of the production of a number of Canadian commodities. When external demand for Canada's surpluses which must be exported are strong and sustained, there is a reflection in Canadian activity, and when increased new capacity to meet the rising demands is needed on a large scale, expansion in the Canadian economy takes on dominating proportions. Examples of this type of growth occurred in the decade before World War I with the opening up of the West and, during the decade following World War II, with the development of mineral and power resources and rapid urbanization.

Other concentrations of rapid growth have occurred during the two world wartime periods during which the Canadian economy was fully employed, and the periods in the 1920's and 1960's when United States activity and world trade were rising strongly, and new facilities to meet rising demands, both internal and external, were being extended.

LABOUR FORCE (More detail in Table 19)

Employment declined by 56,000 to 7,386,000 in September. Unemployment remained virtually unchanged at 315,000, or 4.1 percent of the labour force.

EMPLOYMENT DECLINED BY 56,000 TO 7,386,000 IN SEPTEMBER. UNEMPLOYMENT REMAINED VIRTUALLY UNCHANGED AT 315,000, OR 4.1 PERCENT OF THE LABOUR FORCE.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
			thousands		per cent	
1966	7,345	7,088	6,522	257	3.5	6,031

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production advanced by 0.4 percent in August to 284.2 (1949=100). All of the gain was contributed by manufacturing, which rose by 0.7 percent, as mining and electric power and gas utilities fell by 0.6 and 0.2 percent respectively. About two third of the increase in manufacturing originated in durables.

THE INDEX OF INDUSTRIAL PRODUCTION ADVANCED BY 0.4 PERCENT IN AUGUST TO 284.2 (1949=100). ALL OF THE GAIN WAS CONTRIBUTED BY MANUFACTURING, WHICH ROSE BY 0.7 PERCENT, AS MINING AND ELECTRIC POWER AND GAS UTILITIES FELL BY 0.6 AND 0.2 PERCENT RESPECTIVELY. ABOUT TWO THIRD OF THE INCREASE IN MANUFACTURING ORIGINATED IN DURABLES.

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 28)

The index of employment in manufacturing at 123.5 (1961=100) was 1.8 percent higher in July, reflecting an increase of 3.4 percent in durable manufacturing and a moderate decrease in non-durables. Employment in services, transportation and construction showed declines of 0.9 percent, 1.0 percent and 1.5 percent respectively.

THE INDEX OF EMPLOYMENT IN MANUFACTURING AT 123.5 (1961=100) WAS 1.8 PERCENT HIGHER IN JULY, REFLECTING AN INCREASE OF 3.4 PERCENT IN DURABLE MANUFACTURING AND A MODERATE DECREASE IN NON-DURABLES. EMPLOYMENT IN SERVICES, TRANSPORTATION AND CONSTRUCTION SHOWED DECLINES OF 0.9 PERCENT, 1.0 PERCENT AND 1.5 PERCENT RESPECTIVELY.

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Tables 56 and 85)

Retail trade at \$1,956 million in September was 1.6 percent higher.

New motor vehicle sales increased 6.2 percent in August to 66.97 thousand units. Canadian and United States manufactured passenger car sales moved up 6.9 percent and commercial vehicles 7.4 percent. Overseas manufactured passenger car sales declined 1.0 percent.

RETAIL TRADE AT \$1,956 MILLION IN SEPTEMBER WAS 1.6 PERCENT HIGHER.

NEW MOTOR VEHICLE SALES INCREASED 6.2 PERCENT IN AUGUST TO 66.97 THOUSAND UNITS. CANADIAN AND UNITED STATES MANUFACTURED PASSENGER CAR SALES MOVED UP 6.9 PERCENT AND COMMERCIAL VEHICLES 7.4 PERCENT. OVERSEAS MANUFACTURED PASSENGER CAR SALES DECLINED 1.0 PERCENT.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

The value of building permits at \$334.9 million was 4.8 percent higher in August. Non-residential permits increased 40.1 percent, while residential permits declined 18.4 percent.

Housing starts in September at 141 thousand units at annual rates were 3.8 percent lower; completions at 125 thousand units were down 13.2 percent. New dwellings under construction at the end of September rose 4.4 percent to 84 thousand units.

¹In single dwelling the removal of the \$500 winter housing bonus has disturbed the seasonal pattern. Figures are subject to revision.

EXPORTS AND IMPORTS (More detail in Tables 91 and 92)

Total exports declined to \$909.3 million in August. Exports to the United States and to All Other Countries declined 0.9 and 3.1 percent respectively, while exports to the United Kingdom increased 6.7 percent.

Total imports at \$882.8 million decreased in August, as an increase in imports from the United States was offset by lower imports from the United Kingdom and from All Other Countries.

¹The effect of the delay in the receipt of customs import documents has been adjusted for the period April 1966-June 1967 for total imports, total trade with the United States, the United Kingdom and Other Countries.

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

New orders in manufacturing advanced 4.7 percent to \$3,263 million and unfilled orders rose 3.3 percent to \$3,877 million. Inventories and shipments increased 1.2 and 2.0 percent to \$6,754 million and \$3,140 million respectively.

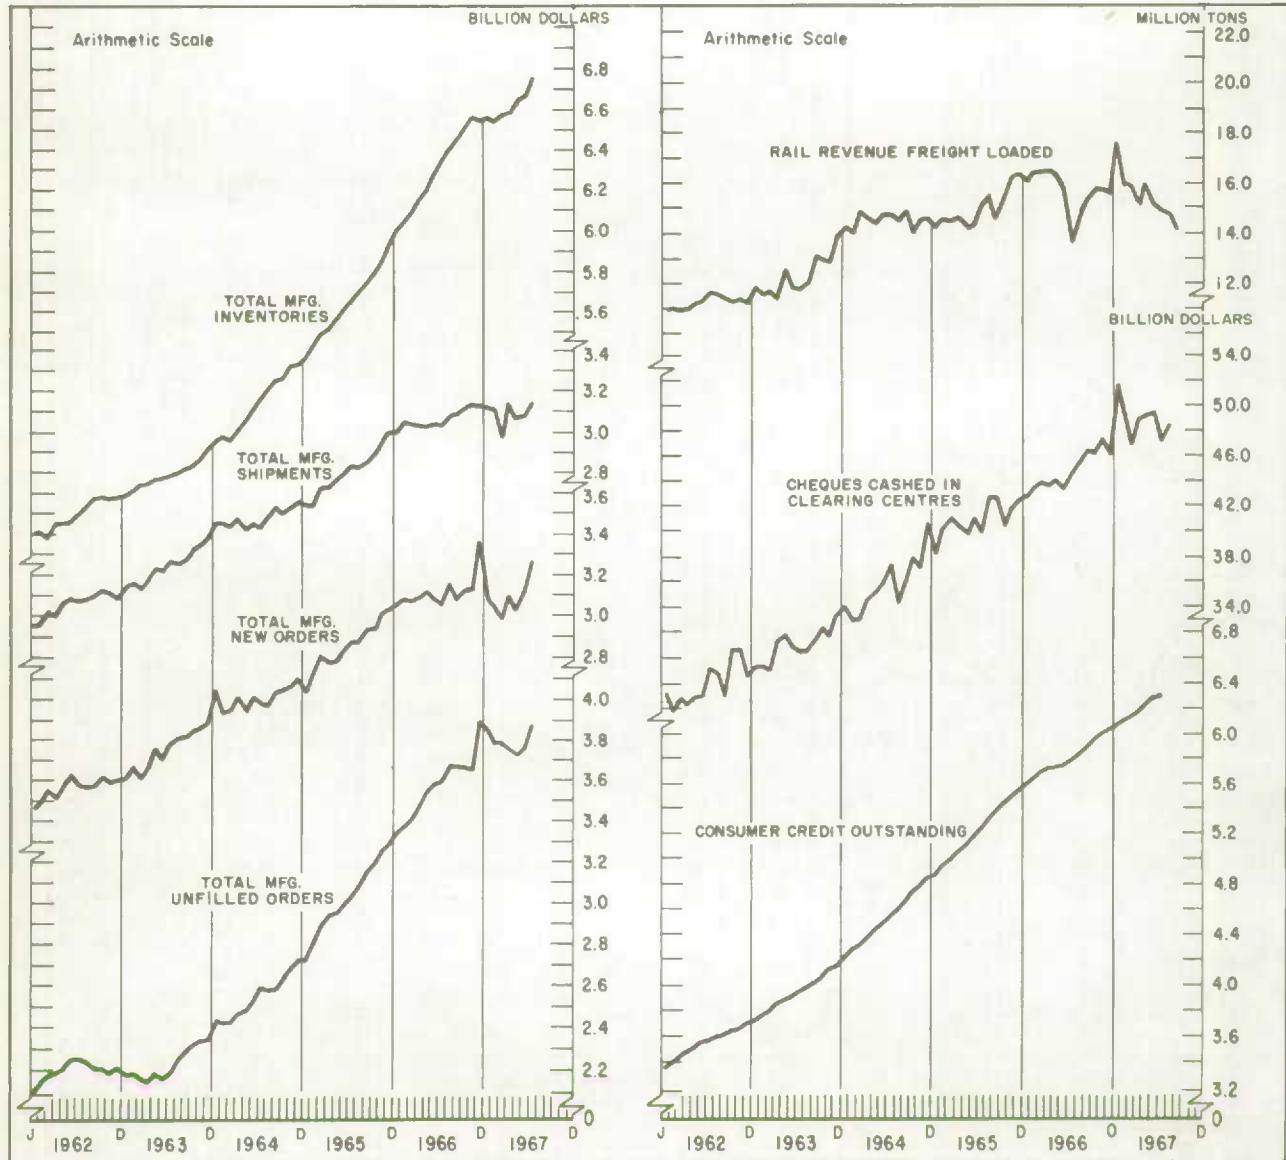

Rail revenue freight loaded declined 4.2 percent to a low of 14.1 million tons.

Cheques cashed in Clearing Centres increased 2.7 percent to 48.4 billion dollars.

NEW ORDERS IN MANUFACTURING ADVANCED 4.7 PERCENT TO \$3,263 MILLION AND UNFILLED ORDERS ROSE 3.3 PERCENT TO \$3,877 MILLION. INVENTORIES AND SHIPMENTS INCREASED 1.2 AND 2.0 PERCENT TO \$6,754 MILLION AND \$3,140 MILLION RESPECTIVELY.

RAIL REVENUE FREIGHT LOADED DECLINED 4.2 PERCENT TO A LOW OF 14.1 MILLION TONS.

CHEQUES CASHED IN CLEARING CENTRES INCREASED 2.7 PERCENT TO 48.4 BILLION DOLLARS.

¹Total of all series available monthly as in column 10, Table 90.

SELECTED QUARTERLY SERIES (More detail in Tables 7, 11, 69, 70, 71, 75, 90 and 104)

In the third quarter, construction starts of dwelling units were 178 thousand units at annual rates, a decline of 10.0 percent from the second quarter. Completions at 163 thousand units at annual rates were 19.0 percent higher, while dwelling units under construction were 5.3 percent higher at 102 thousand units.

IN THE THIRD QUARTER, CONSTRUCTION STARTS OF DWELLING UNITS WERE 178 THOUSAND UNITS AT ANNUAL RATES, A DECLINE OF 10.0 PERCENT FROM THE SECOND QUARTER. COMPLETIONS AT 163 THOUSAND UNITS AT ANNUAL RATES WERE 19.0 PERCENT HIGHER, WHILE DWELLING UNITS UNDER CONSTRUCTION WERE 5.3 PERCENT HIGHER AT 102 THOUSAND UNITS.

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

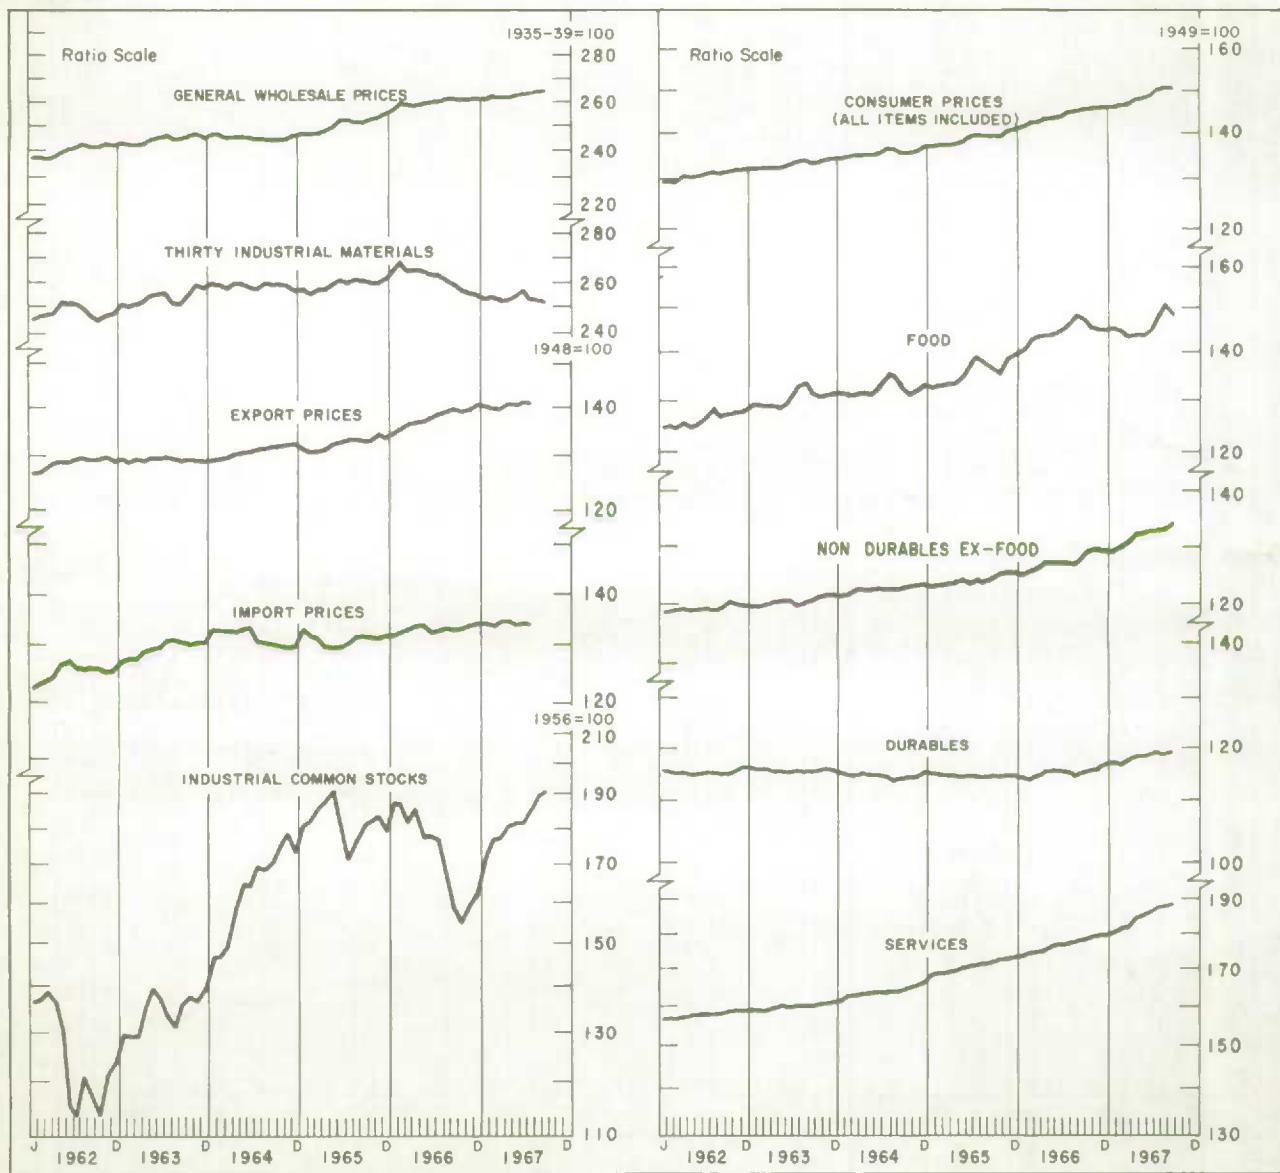

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index was steady in September, while the index of 30 industrial materials was again slightly weaker. The index of industrial common stocks (1956=100) moved up from 189.3 to 190.4.

The consumer price index (1949=100) eased lower to 150.7 in September, mainly attributable to a 1.8 percent decline of the food index. Indexes of non-durables excluding food, durables and services showed increases.

THE GENERAL WHOLESALE INDEX WAS STEADY IN SEPTEMBER, WHILE THE INDEX OF 30 INDUSTRIAL MATERIALS WAS AGAIN SLIGHTLY WEAKER. THE INDEX OF INDUSTRIAL COMMON STOCKS (1956=100) MOVED UP FROM 189.3 TO 190.4.

THE CONSUMER PRICE INDEX (1949=100) EASED LOWER TO 150.7 IN SEPTEMBER, MAINLY ATTRIBUTABLE TO A 1.8 PERCENT DECLINE OF THE FOOD INDEX. INDEXES OF NON-DURABLES EXCLUDING FOOD, DURABLES AND SERVICES SHOWED INCREASES.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Figures for births, marriages and deaths for 1966 and 1967 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D.B.S.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Quarterly indexes for agriculture and for aggregate domestic product for the current year become available later in the year. ²Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505) D.B.S.

Table 16: industrial production, volume indexes (1949 = 100)¹, based on the unrevised standard industrial classification

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. ¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted.
²Total manufacturing inventory owned by manufacturers including warehouse stocks.
³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month.
⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. ¹⁰Sources: Refined Petroleum Products (45-004), D.B.S.

Note: Components may not add to totals due to rounding differences. The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous year's operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁶Quotations refer to steers of all weights. ⁷Grade "B1" hogs. ⁸Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Department store stocks at end of period at selling value. The series on "total sales, all departments" is a revised series based on the results of the 1961 Census of Merchandising and Service Establishments, (see also column 5, Table 85). The departmental breakdown for the months prior to January 1967 has not been adjusted to the new basis. The stock series at the total level and by components for the period prior to 1967 are based on the 1951 Census. Source: Department Store Sales and Stocks (63-002), D.B.S.

¹Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²Stocks included in the mining index are for producing mines. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are for companies whose operations include smelting and refining. ⁵The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification.

⁶Includes also the machinery industries (except electrical machinery) and the transportation equipment industries.

¹This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loans and advances, or from accumulations on annuity, pension and insurance funds. ²For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1967-68. Figures are rounded and may not add to totals. Sources: The Canada Gazette and Dept. of Finance.
