A NOTE TO USERS

REVISIONS:

The unadjusted data on consumer credit by sales finance companies and the cash loans series by consumer loan companies in Table 90 have been revised starting with January 1965. The monthly, quarterly and annual unadjusted totals reflect these changes.

The seasonally adjusted counterparts for the above series and the monthly and quarterly series on pages S-8 and S-9 are further modified from last month to take account of the revisions in the unadjusted data.

REPRINTS:

Copies of this month's feature article are available on request, free of charge, from the Data Bank and Economic Indicators Section, National Accounts and Balance of Payments, D.B.S.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION BUREAU OF STATISTICS¹

The impact of electronic computers on data collection, processing and distribution techniques is increasingly apparent in the Dominion Bureau of Statistics. One example of interest is exploratory work designed to develop a system which will enable geographic codes to be assigned by computer to ordinary mailing addresses. Also in the developmental stage is a data storage, retrieval and analysis system for economic time series.

INDUSTRY STATISTICS

The Industry Division has been using computer processing in the compilation of principal statistics of industries since the annual survey of 1961. Beginning with the 1967 surveys, an interim program will be introduced for the aggregation by computer of commodity detail from the manufacturing and forestry industries for certain geographical areas. An extended computer system to edit and compile both commodity and principal statistics is planned for the 1970 survey. The development of the Industrial Commodity Classification will also lead to further computer applications. This classification will provide for more and improved product and material statistics and will constitute a systematic framework for the coding of commodity data collected by the Industry Division. It should result in a classification which can generally be related to three existing commodity classifications: the Standard, the Export and the Import.

A new survey of the fishing industry scheduled for publication in 1967 will present statistics of 1965 operations. It is the first survey conducted on an establishment basis, and will furnish principal statistics amenable to integration with those of other industry surveys. The enumeration, involving complete coverage of establishments with boats of 25 tons or more and a sampling of smaller establishments, was carried out by officers of the federal Department of Fisheries and the Quebec Bureau of Statistics. It is proposed to conduct this survey at five-year intervals.

Reports on the mining and logging industries will implement the revised Standard Industrial Classification and the New Establishment Concept beginning with the 1964 surveys; they will also contain data for 1961 through 1963 on both the old and new bases. Changes in the treatment of data for large integrated mining-smelting-refining companies have resulted in substantial revisions to the principal statistics for mining. These will also involve considerable revisions to the statistics of the smelting and refining industry in manufacturing.

¹ This is the eighth of a series of notes intended to keep readers of the "Canadian Journal of Economics and Political Science" in touch with the evolution of statistical programs in Canada. The first note was published in November, 1959; subsequent notes were published in February issues of the Journal. This note is reprinted here by kind permission of the Editor. Reprints are available on request.

The new statistical approach, which treats the smelting and refining operations of integrated companies as "custom services," will remove the duplication which previously resulted from attempts to value transfers between the various stages of processing. It will assign to the mining industry the final selling value of the products of the combined operations.

Index of Industrial Production

In a special report issued in May, 1966, the "Annual Supplement to the Monthly Index of Industrial Production", (Catalogue No. 61-005 Supplement), DBS released revised estimates for the monthly and annual index of industrial production and its components from 1949 to 1965, with continuous series shown from 1946. The revised data have also been incorporated into the quarterly and annual real domestic product by industry estimates.

The revisions emanate largely from incorporation into the historical record of more recent census-based annual levels (benchmarks) for manufacturing, mining, and electric power and gas utilities. The new series retain the 1949 weight and reference base and constitute the first stage of a several-stage program. It will extend over a number of years and is aimed at improving the quality and general usefulness of the real domestic product by industry-of-origin data, including the index of industrial production. Census-based annual benchmarks had not been calculated for the index of industrial production beyond the mid-1950's. A major objective of the revision was to remedy this situation, and comprehensive annual benchmarks were accordingly calculated for all industries for at least the year 1959 on a 1948 Standard Industrial Classification (S.I.C.) basis.

The next stage in this program will consist of converting the entire real domestic product system to the 1960 SIC and to a 1961 weight and reference base. Thus, in regard to the index of industrial production components, it should be noted that the indexes are subject to further revisions from 1959 forward. Benchmark levels will be updated to 1961 in industries outside the area of the index of industrial production. Because this will include incorporation of the latest (1961) decennial census data, the historical record from 1951 forward will be changed for such industries as agriculture and wholesale trade.

Productivity Statistics

During the past year DBS released the first annual supplement to the reference paper "Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Nonagricultural Industries, 1947-63", (Catalogue No. 14-501). The supplement, which includes data from 1946 to 1965, incorporates the results of the revision of the real domestic product by industry estimates and extends the coverage of the measures to agriculture, thereby

embracing the entire commercial economy. It also shows the effect on aggregate productivity of the shift from agriculture to the nonagricultural industries. Work on the development of separate productivity indexes for the goods and services producing industries has been started for their possible inclusion in the next annual report on productivity.

The first publication at the detailed industry level was released recently, entitled "Productivity Trends in Industry, Report No. 1: Synthetic Textile Mills, Breweries, Pulp and Paper Mills, 1947-1961", (Catalogue No. 14-502). Work is now in progress to develop similar measures for other manufacturing industries, including iron and steel mills, hosiery mills, and sugar refineries.

Manufacturing Operations of Foreign-controlled Enterprises

Articles in the September 1966 issue of the "Canadian Statistical Review" presented some of the results of a new survey of manufacturing operations in Canada of the larger foreign-controlled enterprises in 1961. The study was a joint undertaking of the Industry and National Accounts and Balance of Payments Divisions. It relates information in establishments gathered by the regular Census of Industry with data on investments in enterprises controlled in other countries, obtained from corporation records maintained for balance of payments purposes. Comparisons are made with similar data for enterprises controlled in the United States for the years 1946 and 1953, but the new survey also includes concerns controlled in other countries.

ECONOMIC STATISTICS

Labour Statistics

In co-operation with the Department of Labour, a feasibility survey of fringe benefits was undertaken in May 1966. This survey covered about 150 establishments selected by size within the manufacturing industry across Canada. It was designed to assess the availability of information relating to supplementary wage costs or fringe benefits from employers' accounting records, and assess the feasibility of collecting such data by mail questionnaire rather than by personal interview. If the experiment proves successful an annual or periodic survey will be developed to extend estimates of unit labour cost, improve estimates of labour income, and provide an indication of the relative importance of various fringe benefits. Information collected in the survey was restricted to those items which can readily be measured in terms of labour cost, such as premium pay; direct payments to employees for time not worked, for example, vacation pay; legally required payments such as workmen's compensation and unemployment insurance; and private benefit plans including life and health insurance, and pensions. Fringe benefits difficult to assess in terms of cost, or of limited importance, were not included in the initial pilot survey (cost of rest periods, miscellaneous services and benefits such as cafeteria facilities, etc.)

The Bureau and the Department of Manpower and Immigration in June 1966 conducted a survey of job vacancies in six centres in Ontario (Kingston, Hamilton, Windsor, Cornwall, Owen Sound, and Collingwood-Midland). The primary purpose was to assess the feasibility of obtaining information on job vacancies through a mail survey. If successful, it will be introduced on a regular Canada-wide basis and will provide information for use in improving the efficiency of employment service operations, for vocational training programs, for counselling through the schools, and for development of immigration programs to attract specific types of workers.

A redesigned sample for the labour force survey was introduced progressively over a two-year period, province by province. The change-over to the new sample in each province was noted in the monthly report "The Labour Force", (Catalogue No. 71-001) for the month in which it took place and an indication was given of the effect of the change-over on major labour force characteristics. A noticeably improved level of reliability has been reached in the estimates for the Atlantic and Prairie regions. This has made possible the release, without restriction, of estimates of the major labour force characteristics for the individual provinces of these regions; series available on request are indicated under "Other Data Available" in the monthly report. A detailed description of the new sample design is provided in "Canadian Labour Force Survey—Methodology", (Catalogue No. 71-504).

During 1966, data were collected through the labour force survey for special studies in the areas of vocational and technical training, and job mobility.

Agriculture

Several new surveys were initiated in agricultural statistics during 1966 by adding questions to existing surveys. Information on the regional distribution of fertilizer use in the Prairie Provinces was collected in conjunction with one of the crop surveys. The field crop yield survey was used to obtain estimates of the flaxseed and rapeseed harvested and to determine the feasibility of changing more crop estimates to a harvested area basis. Information was requested on forage seed output when the annual June acreage survey was taken.

A pilot project was initiated to apply objective crop estimating techniques (counts and measurements of a random sample of immature fruit) to British Columbia apples. This is an extension of similar programs underway in Ontario and Quebec. A new monthly survey was started in 1966 to obtain figures on cold storage holdings of frozen vegetables intended for re-manufacture. Preparation of a revised series of agricultural accounts from 1941 to 1965 was completed in 1966 after a thorough study of the results of the 1958 farm expenditure and income survey and the 1961 Census. The information will be published shortly in the "Handbook of Agricultural Statistics, Part II: Farm Income", (Catalogue No. 21-502).

National Accounts

Good progress is being made on a revised reference document on the national accounts which incorporated new census benchmarks. Very serious consideration is also being given to the possibilities of bringing the Canadian National Accounts more into consonance with the framework now being proposed by the statistical office of the United Nations. International macro-economic accounting concepts are at the moment under intensive review and the Dominion Bureau of Statistics is taking an active part in a series of international meetings dealing with this issue.

Financial Statistics

The financial statistics program is progressing and it is expected that a set of quarterly financial accounts will be published in 1967, covering the period from 1962. These accounts form part of Canada's social accounting system and will show how production in the economy is financed. Data for some sectors will be incomplete and the gaps will be filled in as the work progresses. This year it is expected that quarterly data will become available for fire and casualty insurance companies and for credit unions.

Government Finance

The economic-functional cross-classification of expenditures, which was first devised for the federal government for the fiscal year ended March 31, 1962, was prepared for provincial governments for the fiscal year ended March 31, 1964, and provides answers to two questions: (1) what is the cost of services provided by government, and (2) how does government expend its money to provide these services, that is, by purchase of goods and other services, transfers to other governments, transfers to persons, subsidies to business, etc?

The study on the flow of funds has been extended on a quarterly basis to include significant federal and provincial government enterprises and, on an annual basis, an attempt has been made to show the flow of funds of the federal government by sectors of the economy. The flow-of-funds study was also extended to include an analysis of the balance sheet items and the enterprises of the larger municipalities in Canada.

The survey of municipalities with populations over 50,000 is being extended to obtain employment and payrolls data by function. In addition, the survey has been expanded to include rural and small urban municipalities, under 10,000 population, on a sample basis.

In co-operation with three interested organizations, the Canadian Tax Foundation, the Canadian Council on Urban and Regional Research, and the Institute of Local Government at Queen's University, the Bureau held a conference in May 1966 on the needs of users of municipal finance statistics. Results of this conference are being evaluated and

discussions of probable revisions to the local statistical program have been initiated with officials of provincial departments of municipal affairs.

Co-operation has continued between the Federal-Provincial Relations Division of the Department of Finance and the Dominion-Provincial Tax Structure Committee in preparing analyses of government revenue, expenditure, assets, liabilities, and debt; and providing advice of a statistical nature. A summary of the historical analysis prepared for the Tax Structure Committee was released in February, 1966, and is entitled, "Historical Review, Financial Statistics of Governments in Canada, 1952-62", (Catalogue No. 68-503). The publication contains a description of the conceptual framework underlying government finance statistics prepared by DBS and a selected terminology for use in the financial management series of government finance statistics.

Balance of Payments

Statements of Canada's balance of international payments have been published over a span of four decades. Besides the issue of regular quarterly and annual reports the publication program has included various special publications from time to time. The latter have been designed to cover longer periods by providing perspective and greater degrees of detail than could be offered in regular reports. One of these special volumes, "A Compendium of Balance of Payments Statistics from 1946 to 1965", (Catalogue No. 67-505), has been prepared for publication. It contains revised estimates and a wide range of details over the post-war period relating to international transactions in goods, services and capital movements.

The scope of the monthly publication "Travel between Canada, the United States and Other Countries", (Catalogue No. 66-001), was extended in 1966 to include travel between Canada and countries other than the United States. Details on overseas travel to Canada now include the arrivals of non-immigrant visitors, both on direct services to Canada and on services entering via the United States, classified by country of residence. The series of longer standing, covering the number of Canadian residents returning directly from overseas countries, classified by principal port of re-entry, has been included in the same publication.

Stock of Fixed Capital

Late in 1966 the Business Finance Division released two official publications relating to the stock of fixed capital goods. "Fixed Capital Flows and Stocks, Manufacturing, Canada, 1926-1960—Methodology", (Catalogue No. 13-522), reviews the concepts, sources and methods used in preparing the statistical material on flows and stocks of capital goods in manufacturing industries. The second publication, "Fixed Capital Flows and Stocks, Manufacturing, Canada, 1926-1960—Statistical Supplement", (Catalogue No. 13-523), is a complete tabular presentation of the estimates of

flows and stocks in manufacturing. The estimates cover total manufacturing and the detail of manufacturing industries using five different sets of fixed capital goods. Flows and stocks of capital goods have been computed in terms of 1949 constant dollars, 1957 constant dollars, current dollars, and original cost dollars.

Estimates are currently being developed for non-manufacturing industries using different assumptions as to average length of life of assets. Solutions are being sought for problems created by changes in the S.I.C. which have prevented the extension of capital stock estimates beyond 1960.

Housing

The work is almost completed on reconciling intercensal activity in housing as reflected in annual starts and completions with the stock of housing as measured at the census dates in 1951 and 1961. Preliminary findings reveal an understatement of the intercensal activity. At the moment, work consists of verifying the accuracy of the understatement. The primary purpose of this project is to improve the estimates of residential capital formation incorporated in the National Accounts.

Trade

A second report entitled "Exports by Mode of Transport", (Catalogue No. 65-206), has been published for the calendar year 1964. It provides statistics on the types of transport used to move Canadian exports to their markets.

The annual "Trade of Canada, Volume III, Imports, 1962-1964", (Catalogue No. 65-203), will present statistics according to the Import Commodity Classification introduced in January 1964. It also will include a convertibility key for comparing statistics for 1964 with those for 1962 and 1963.

Import statistics as of September 1965 are compiled monthly, but not published, by tariff item and by country. These data are available on request subject to the usual service charge.

A new historical annual series for exports and imports according to the major sections of the classifications for the period 1946-1965 has been developed covering all countries, the United States and the United Kingdom. New series have also been established for the same period and countries based on a secondary classification by stage of fabrication. In addition to providing dollar values, these series will comprise value, volume and price indexes by sections, or major groups of commodities, and by stage of fabrication. This new secondary classification by stage of fabrication replaces the series of imports and exports based on the former concepts of raw, partially manufactured and fully manufactured commodities. Printed copies are available on request from the Development and Analysis Unit of the External Trade Division.

Transport

A new approach to statistics in government was initiated April 1, 1966 with the creation of the Aviation Statistics Centre as a DBS satellite within the Department of Transport. This centre has complete responsibility for the production of aviation statistics required for the administrative purposes of the Department of Transport, the regulatory functions of the Air Transport Board, and for meeting the statistical requirements of other government departments and the general public.

Commodity flow charts have been prepared for shipping which show, in terms of relative size, selected commodity movement on the Great Lakes and in the Atlantic region. Reaction to the charts has been favourable and it is intended to publish them as the "Shipping Report: Part VI".

A major review of the trucking survey was undertaken to evaluate the design of the present survey in the light of changed conditions in the trucking industry and to decide if a new type of survey is warranted. Survey methodology and compilation procedures were also reviewed to improve survey coverage, reliability and accuracy and to attain maximum efficiency of staff resources. The Standard Industrial Classification was introduced in the road transport series during 1966.

The production of a magnetic tape which will enable Canadian railways to convert their commodity statistics from the American Standard Transportation Commodity Classification to the DBS Standard Commodity Classification (S.C.C.) and report to DBS on that basis was implemented in January 1967. This conversion project forms part of the plan to effect uniformity in the production of commodity statistics in DBS from all sources and will place railway freight traffic data on the same basis as those of other modes of transport.

Quarterly and annual data relating to the expenditures on, and inventories of, materials and supplies were collected for the first time from large transport firms for internal use by the National Accounts and Balance of Payments Division. In addition, a special research project set out requirements of transportation data needed for compilation of the Gross Domestic Product. This will become an increasingly important part of the work of the Transportation Section.

SOCIAL, EDUCATION AND HEALTH STATISTICS

Scientific Research and Development

During 1966 there were two additions to the Bureau's program of statistics on scientific research and development. The first was the preparation by the Business Finance Division of a 1963 expenditures matrix for Canada showing sources and recipients of research and development funds by major sector. These sectors represent business

enterprises, governments, private non-profit organizations and educational institutions. Information resulting from the division's regular surveys of the federal government and Canadian industry was supplemented by estimates for the other areas. The matrix was published in the "DBS Daily Bulletin" of May 12, 1966.

The second development was the initiation of surveys of the scientific activities of non-profit organizations and of provincial research councils and foundations. Estimates of expenditure and personnel in 1965 resulting from these surveys will be published shortly. It is probable that the two surveys will be conducted biennially.

Education

The third edition of "The Organization and Administration of Public Schools in Canada", (Catalogue No. 81-535), was released late in 1966. The separate chapters on the provinces were printed in advance and more than 10,000 copies were sold and distributed to provincial departments of education and to faculties of education in universities across Canada.

The "Manual of Accounting for School Boards", (Catalogue No. 12-528), approved by the Federal-Provincial Conference on Education Finance held at DBS in 1964, has been distributed to provincial departments of education for redistribution to school boards within their respective jurisdictions.

Social and Health Statistics

The Bureau is publishing more extensive information relating to diseases. Reports showing discharges from hospitals, and the days of care associated with these discharges, for the approximately 900 diagnostic categories of the International Classification of Diseases, have been published for the years 1960, 1961 and 1962. The information is published by province and sex, and by five summary age groups and sex, and is available on request by detailed age groups at the provincial level. Acceleration of the publication program will put these hospital morbidity publications on a current basis during 1967.

A first tabulation of surgical operations performed in hospitals will be run during 1967 for detailed age-sex groups at the provincial level. This is perhaps the first detailed information of this kind published for such large populations.

The extension of reporting on tuberculosis to include persons treated on an out-patient basis was begun on January 1, 1966. This extension will enable the Bureau to publish statistics that reflect recent major changes in the method and place of treatment of tuberculosis.

Plans are underway for complete computerization in 1967 of annual processing of data pertaining to births, deaths, marriages and stillbirths. Such a

computer program will assist in the compilation of detailed historical data from 1950, for a more penetrating analysis of fertility, nuptiality and mortality trends than has been possible in the past. The program will also help meet increasing demands for social, demographic and medical statistics.

The Vital Statistics Council for Canada, made up of representatives of provincial registration authorities and the Bureau, has undertaken a review of the statistical, administrative and legal uses of items on present birth, marriage and death registration forms. This review should lead eventually to greater uniformity in the content and wording of items on these records, and possibility to standardization in size and format.

A series of technical reports has been initiated in the Health and Welfare Division to record special investigations in vital and health statistics of interest in demographic and health research. The first two reports in this series are "Canadian Abridged Life Tables, 1961-1963" and "Provincial Abridged Life Tables, 1961-1963"; copies are available from the Vital Statistics Section.

The first of an annual series of publications dealing with reported murders in Canada, "Murder Statistics", (Catalogue No. 85-209), was released in February 1966. This report integrated police and court statistics for the first time and included data on the number of murders reported, multiple murders, incidents when murder occurred, court procedures, and the relationship between the victim and the suspect.

A new annual publication, "Training Schools", (Catalogue No. 85-208), relates to children who are found delinquent, neglected, or in need of protection. The report deals with the movement into and out of training schools and social data relating to the children.

Census

Commencing June 1, the 1966 Census of Population and Agriculture was taken throughout all areas of Canada and the returns are being processed through the document reader and the computer. Five bulletins have been released showing preliminary population counts for all incorporated municipalities in the provinces. These releases informed the municipalities of the census counts and outlined the concepts under which the Census was taken. The municipalities were advised that there might be amendments to the preliminary counts (persons temporarily absent at Census date and assigned to their *de jure* residence). Where a municipality indicated dissatisfaction with the census preliminary count, field checks were made to ascertain the correct population counts. Any amendments will be included in the final figures. It is anticipated that the final population figures for the various provinces and municipalities will be available early in 1967.

Quality checks of both population and agriculture were carried out to assess the completeness of coverage and the quality of some of the information collected. Matching of these returns with census data was carried out, and in a number of instances field follow-ups were conducted and necessary adjustments made to the preliminary counts.

In preparation for the 1971 Census, a test of the self-enumeration procedure from a pre-listing of households is scheduled for 1967 and mechanical reading equipment is being examined for possible use on questionnaires obtained through this procedure. The listing of households in the test city, London, Ontario, was carried out in late 1966 and will be checked by the Post Office Department before questionnaires are mailed.

REGIONAL STATISTICS

A new development in the program of the Regional Statistics and Analysis Staff was the direct participation of staff members in operational aspects of special surveys originated or sponsored by agencies outside DBS, specifically, (1) the design and administration of a pilot survey of the Quebec labour force in co-operation with the Quebec Bureau of Statistics, and (2) the design and implementation of a miniature census of population, labour force and housing characteristics of Bell Island, Newfoundland, in co-operation with the Government of Newfoundland and the Atlantic Development Board.

PROGRAMS TO DEVELOP THE USE OF STATISTICS

A program to develop the use of the statistical material available from the Dominion Bureau of Statistics was initiated in 1966. The work will involve presentations at industry meetings and seminars, business association meetings, and visits to individual companies to examine the possibilities and explain the advantages of using DBS information.

DBS has also undertaken a new type of publication called service bulletins which are designed to bring together a number of small items of information previously issued separately and to make generally available information that previously had limited circulation. For persons interested in subject areas of DBS statistical activities, the service bulletin is also designed to maintain a current total picture of those areas. Two bulletins are being issued at present, one for the food-processing industry and another on energy statistics. Others are being planned and should be available this year.

The DBS publications catalogue will be brought up-to-date and re-issued in 1967. It is planned to issue supplements which will keep users in closer touch with current publications.

CENTENNIAL PUBLICATIONS

In lieu of the customary official handbook, "Canada", the Bureau will publish in the spring of 1967 an enlarged, specially designed and profusely illustrated 512-page volume entitled, "Canada One Hundred 1867-1967" and its French counterpart, *Canada Un Siècle 1867-1967*. Designed for college, high school and general public use in Canada and abroad, this special Centennial volume will highlight one hundred years of Canada's social, political and economic development. It will be available through the Queen's Printer, Ottawa, at \$2.00 a copy.

A deluxe edition of the Bureau's official annual reference volume, the "Canada Year Book", and its French counterpart, *Annuaire du Canada* will be released during the summer of 1967. Both editions can be purchased from the Queen's Printer, Ottawa, \$5.00 cloth-bound and \$3.00 paper bound.

THE CORPORATIONS AND LABOUR UNIONS RETURNS ACT ADMINISTRATION (CALURA)

The purpose of the Corporations and Labour Unions Returns Act is to enquire into the extent of non-resident ownership and control of corporations in Canada and the extent of the association of Canadians with International Labour Unions. The first report under the Act was released in July 1965 covering fiscal periods ending in 1962. Reports containing information for the two subsequent fiscal periods were released in 1966 and early 1967. These reports have made available additional information that will assist in a better understanding of Canada's international involvement in the area of corporations and labour unions.

In 1965 legislation was passed by Parliament that has permitted a merging of the statistical activities of the Department of National Revenue with those of CALURA. As a result of this merger of statistical activity more comprehensive corporation financial statistics will be made available commencing with corporation fiscal periods ending in 1965. The additional information to be made available will include company book profits and the reconciliation of this item with taxable income. Such information has not been available in the past and should prove helpful to a variety of users. The first publications in this new series will be available in 1967.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force advanced in December while unemployment declined. The unemployment rate was 3.6 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
			thousands		per cent	thousands
1965 A	7,118	6,817	6,209	301	4.2	5,959
M	7,134	6,838	6,220	296	4.1	5,951
J	7,163	6,857	6,252	306	4.3	5,944
A	7,166	6,863	6,267	303	4.2	5,961

	7,528	7,260	6,675	268	3.6	6,141

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose by 0.3 per cent in November, with the bulk of the gain originating in electric power and gas utilities which advanced by 2.5 per cent while manufacturing and mining increased marginally.

	total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)		
		total	durables	non-durables	mining	electricity & gas	iron & steel
1965	248.8	224.1	231.6	217.7	361.4	437.1	233.2
	250.3	227.3	233.2	222.2	350.3	434.9	235.4

INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income and wages and salaries in manufacturing continued their upward trend in September. Average hourly earnings were higher in September in both non-durable and durable manufacturing, with the gain in the latter being more pronounced. Average weekly hours in manufacturing were shorter in September as a result of a decrease in the non-durable component.

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Tables 56 and 85)

Total retail trade was virtually unchanged in November as the gains reported in some store types were almost entirely wiped out by the declines in the others.

New motor vehicle sales moved generally but moderately higher in November.

	retail trade (million dollars)				new motor vehicle sales (million dollars)

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Building permits declined sharply in November in both the residential and non-residential sectors, with the drop in the latter being more pronounced.

Housing starts picked up a little in December following the sharp decrease of the previous month. Completions showed good strength in the period.

	value of building permits			new dwelling construction, centres 5,000 and over

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale price index edged fractionally higher in December.

The index of thirty industrial materials recorded the eighth straight month of decline in December.

The consumer price index advanced 0.3 per cent to 145.9 in December, with the gains in durable goods and services contributing to the rise. The food component remained unchanged.

	general wholesale index	thirty industrial materials	industrial common stocks				consumer price index (1949=100)

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Sources: Quarterly Bulletin, Department of Manpower and Immigration.

¹Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths.

Sources: Vital Statistics (84-001), D. B. S.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. ²The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ³The labour force as a percentage of the population 14 years of age and over. ⁴The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

Source: Labour Gazette, Department of Labour.

Table 28: employment indexes,¹ by industrial divisions (1961=100) based on the 1960 standard industrial classification

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹See footnotes 1 and 2 and source in Table 28. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. ³In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ⁴Except machinery and transportation equipment industries.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month.

⁴End of period. Annual figures for inventories and unfilled orders are end of December values. ⁵Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils.

Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Sources: Primary Iron and Steel (41-001), D.B.S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

Table 63: statistics of refined petroleum products¹ (thousand barrels)

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. "Barley No. 1 feed; hags grade "B" alive." ⁴Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁵Quotations refer to steers of all weights. ⁶Grade "B1" hogs. ⁷Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D.B.S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²Stocks included in the mining index are for producing mines. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are for companies whose operations include smelting and refining. ⁵The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification.

*Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Sources: Prices and Price Indexes (62-002), D.B.S.

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments
