A NOTE TO USERS

CLASSIFICATION OF NEW MOTOR VEHICLE SALES:

The classification headings of new motor vehicle sales in Table 56 and Page S-5 are changed commencing with this issue from "American type" to "Canadian and United States manufactured vehicles" and from "European type" to "Overseas manufactured vehicles".

Some confusion among users has arisen regarding the definition of American type vehicles. The revised headings correspond to the monthly report on New Motor Vehicle Sales, Catalogue No. 63-007, which stratifies vehicles by *origin of manufacture*. For example, motor car "X" is classified as a Canadian and United States manufactured vehicle because there is an automotive plant in Canada which assembles car "X"; however, cars "X" which are imported would be classified as Overseas manufactured vehicles.

The data pertaining to these series are not affected by the change in heading.

REVISIONS:

(1) The series on births, deaths and marriages by provinces in Tables 4, 5 and 6 respectively have been revised for the entire year 1965. Revised data for the period not covered by the Review are available in the D.B.S. publication, "Vital Statistics", Catalogue No. 84-201.

(2) The data on "bale openings of raw cotton" in Table 51 which had been erroneously reported for the months of July 1966 to date have been amended in this issue.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

CANADIAN MANPOWER STATISTICS¹

INTRODUCTION

Before outlining the requirements for manpower information in Canada, it is useful to review briefly the post-war performance in this field since the demands for economic statistics are largely shaped by policy needs and hence by economic activity.

In the period immediately following World War II, employment was maintained at consistently high levels: as may be seen from Table 1, between 1946 and 1953 the unemployment rate rose above 3% in only three out of the eight years. This buoyant condition resulted from a combination of expansionary economic forces, both domestic and external, as well as deliberate stimulation of the economy by both monetary and fiscal measures.

By the mid and later 1950's, many of the expansionary forces had lost strength (the boom generated by the Korean War had dissipated as well) and the loss of momentum in the economy was reflected in a rise in unemployment, at first gradual, and then much more marked after 1957. Between 1954 and 1957, the unemployment rate averaged just over 4% while between 1958 and 1961, the average rate was almost 7%. At these very high levels of unemployment, regional disparities — which exist even under conditions of full employment — were exacerbated, as were differentials among workers of different ages, occupations and industries.

Since 1961, the beginning of the current upswing in activity, the overall unemployment rate has declined considerably and is approaching the level

TABLE 1. Unemployment Rates 1946 to 1965 — Annual Averages

Year	Unemployment rate per cent	Year	Unemployment rate per cent
1946	3.8	1956	3.4
1947	2.6	1957	4.6
1948	2.6	1958	7.0
1949	3.3	1959	6.0
1950	3.8	1960	7.0
1951	2.6	1961	7.1
1952	3.0	1962	5.9
1953	3.0	1963	5.5
1954	4.6	1964	4.7
1955	4.4	1965	3.9

Notes: ¹ Rates from 1946 to 1952 inclusive have been adjusted for inclusion of Newfoundland and timing of the **Labour Force Survey** which was conducted quarterly before November 1952.

² Rates from 1956 to 1965 are based on estimates revised to take account of 1961 Census population counts.

Source: Based on data from **Labour Force Surveys**.

of the early 1950's. In some regions of the country, in some sectors and occupations, shortages of labour have begun to emerge with consequent pressure on costs and prices. Policy efforts in the manpower field are increasingly directed to **selective** manpower measures — to reduce persistent "hard core" unemployment on the one hand and alleviate or forestall bottlenecks on the other — rather than the **general** stimulative policies typical of the earlier post-war years. The formulation of selective manpower policies requires much more detailed "diagnostic" information (for both current analysis and protection) in addition to the information on indicators (levels) which form the background to aggregative employment policies.

¹ This article is based on a paper presented by Dr S. Ostry and Donald J. Bailey to the Sixth Conference of Commonwealth Statisticians held in Ottawa, September 19-30, 1966.

REQUIREMENTS

Labour Supply

The basic economic intelligence required on the labour supply side is a current (monthly) count of the adult population classified by labour force status i.e. employed, unemployed, not in the labour force. For purposes of analysing trends and changing composition, a number of demographic characteristics of the adult population, the labour force and its components, are also essential — viz age, sex, marital status. Further, it is apparent from many recent studies that some key decisions affecting the labour market are made in a **family** context and thus it is also useful to have both population and labour force estimates classified on a family basis, although such information is probably not required as frequently as the other demographic data mentioned.

In addition to the demographic characteristics of the labour force and its components, a number of key economic and social characteristics are essential for analytical purposes. These include the occupational and industrial attachment of the employed and the unemployed²; the class of worker status (paid worker, unpaid family worker, own account) and the educational level. A measure of educational levels is not required as frequently as is information on the other variables but ideally it should include estimates of attainment in both academic schooling as well as technical and vocational training. In practice, the latter — and, indeed the former as well — are extraordinarily difficult to measure and no great reliance should be placed on detailed statistics or small differences in the measure overtime and among regions.

Another socio-demographic characteristic of the population and labour force which is of considerable importance for current analysis and projection is immigrant status. While the inflow of immigrants is recorded monthly by the Immigration authorities, only a current survey (such as the sample survey of the labour force) can provide information on the labour market activity of immigrants after entry into Canada. Again, such information need not be provided monthly: semi-annual or perhaps quarterly observations are sufficient. Because the size of the immigrant group is small relative to the total population, the sample size is correspondingly limited. The extent of sampling variability precludes detailed cross-classification of the immigrant estimates and thus intensive analysis is possible only with decennial Census information.

An annual survey of the work experience of the population over a twelve month period provides an extremely useful supplement to the current data based on a reference period of a week. There are, of course, problems of recall involved in all retrospective surveys. But taking this into account, the annual work experience information provides a measure of the total number of different people who were employed or unemployed at some time during the year and the total number of weeks they were employed or unemployed counting all spells they may have worked or looked for work. These data have proved especially useful in the analysis of long-duration unemployment but they are also suggestive in terms of the insight they provide into the phenomenon of labour force turnover.

Finally, information on the hours worked of the labour force is important both as a measure of voluntary and involuntary part-time employment. The former has been growing rapidly in certain sectors of the economy, especially among women. Involuntary part-time is an indicator of one type of underemployment and leads unemployment at the turning points of the short cycle.

² The occupation or industry of last employment. The unemployed also include persons seeking work for the first time.

Labour Mobility

Data on labour mobility are essential for analysis of the labour market allocative mechanism as well as for projections of labour requirements. Mobility, in this context, is defined as a change in an individual's "status" during a specified period of time and thus may be of five sorts (or any combination of these five):

1. Occupational
2. Industrial
3. Geographic
4. Inter-firm
5. Into and out of the labour force.

Mobility as a **measurable** or **operational** concept is usually conceived of as actual movement, i.e. an actual change in status between two points in time, although what the theory of the labour market really requires is information on the **propensity** to move or, as it is sometimes termed, "latent mobility". Detailed and comprehensive information on actual mobility, if available over time, should serve as an indicator of propensity. Mobility rates are usually required for age, sex, marital, status groups as well as geographic areas. Occupational, educational and sometimes income grouping is also useful. Mobility surveys generally involve retrospective questioning and are thus subject to recall bias. Another possible source of mobility data which has been explored, however, is the mechanical matching of individual administrative or survey records over a period of time. It should be noted that administrative records of individuals can be sampled, if properly identified.

Labour Demand

Current measures of employment have already been mentioned as a requirement on the supply side. They can, of course, also be taken as estimates of demand, i.e. fulfilled demand for labour. Cross-classifications by occupation and industry are basic to demand analysis and projections: information on employment by size of establishment is also often useful. The need for small area statistics will be discussed separately below. The importance of statistics on hours has already been mentioned. A measure of overtime worked is useful as an indicator of demand pressures in specific industries or regions.

Data on employment may be regarded as measures of "satisfied" or fulfilled demand for manpower. What is also required, however, is some measure of **unfilled** demand or job vacancies analogous to the measure of "excess" supply or unemployment. A job vacancy measure serves a number of analytical and operational purposes, particularly if available in occupational and geographic detail. The possible analytical uses of such data have not yet been fully explored — since no country at present has succeeded in producing a satisfactory series in this area — but there seems no doubt that job vacancy information used in conjunction with other labour statistics will contribute substantially to our understanding of the operation of the labour market. Their use for placement purposes and manpower training and mobility programmes appear reasonably clear.

The results of the first of a series of job vacancy feasibility surveys, undertaken jointly by the D.B.S. and the Department of Manpower have now been reviewed and a large scale national survey is now in process of development.

Small Areas

Of recent years governments at both federal and provincial levels have taken a growing interest in stimulating employment and raising income levels in localities which have not shared in the general prosperity of the country. These include both largely urban areas in which the industrial base has deteriorated and rural areas in which farming is no longer an economic proposition.

To carry out a program for improving conditions in specific areas of economic distress, information is first required to develop a criterion for identifying and classifying such areas. Supplementing this is the need for detailed information regarding individuals in the area, to administer and evaluate programs.

The criterion for selecting areas to be assisted involves unemployment, employment and income data. Persistent high levels of unemployment, below average employment growth and low income levels are all taken into consideration in reviewing areas to determine needs.

Information required regarding the labour supply within a designated urban or rural area must relate both to individuals and family units and cover a wide range of economic and social data. Some of this information might be considered as benchmark data for projection purposes and for periodic program evaluation. This includes demographic data and detailed information regarding education, income levels, occupation and industrial attachment.

In addition, information is needed on a more frequent basis regarding changing levels of employment, unemployment and income. Information regarding job mobility and education, having a bearing on availability and quality of the local labour supply is also required on a relatively current basis.

STATISTICS CURRENTLY AVAILABLE

Labour Supply

Information regarding labour supply is derived from three main sources: household surveys including periodic complete enumerations, establishment surveys and administrative records. In Canada the latter source has not, to date, assumed the same importance as in some countries with a less well developed statistical framework.

Of the household surveys, the decennial population census occupies a special position in providing a periodic comprehensive picture of the detailed characteristics of the population and the labour force. Thus the census is the basis source of detail-

ed information regarding the total population of working age — the potential labour force — as well as that segment of the population actively participating in the labour force.

Census data are the only detailed source of such basic qualitative information regarding labour supply as household and family composition, education, income, occupational and industrial attachment. It is also the basic source of demographic labour force and income data at a level of fine geographic detail needed for benchmark purposes, particularly in relation to needs for small area data described above.

The other principal household survey providing information regarding labour supply is a monthly labour force survey of all persons of working age in some 35,000 households. This provides a current measure of the characteristics — age, sex, marital status and location of persons in the labour force and the voluntarily idle, retired, students, and housewives who are not in the labour force.

For those in the labour force with a job, some qualitative information is available regarding their industrial and occupational attachment within broad groupings. Similarly, for the unemployed the number of weeks seeking work is recorded. Because of the relatively small size of the sample (about 1% of the population of working age) sampling variability limits the amount of detail from this source. Thus for most series only Canada and regional data are available.

Aside from providing regular estimates of the size and composition of the labour force, the survey is used as a vehicle for special questions regarding particular attributes. Thus during the past few years supplementary information regarding aspects of labour supply has been obtained through questions regarding educational attainment and job mobility. The labour force characteristics of immigrants as an element of labour supply have also been investigated using the same medium. Because of the relatively high cost per interview, and the restrictions on level of detail imposed by sampling, the labour force sample survey is not an adequate source of data regarding employment trends by industry and small area. Similarly, it is not a suitable vehicle for collecting related data concerning manhours and earnings.

A program of monthly and annual establishment surveys is carried on to provide employment, hours and earnings data at a relatively fine level of detail. This program presently covers the commercial non-agricultural sector but recently has been extended for employment data only, to such non-commercial areas as education and health.

As part of the DBS program of education statistics, information is collected annually regarding school enrolments by grade. Retention rates derived from this body of statistics provide an indication of the extent to which students stay on in school. In terms of the growing emphasis on educational quali-

fications in industry hiring practices, the circumstance that the percentage in final year of high school is rising from about 33% in 1960 to about 53% in 1965 is of some consequence.

Additional qualitative information regarding labour supply will be available from a survey of high school students conducted recently by the federal Department of Manpower. The main purpose of this survey is to throw some light on the process of career decision-making going on among students. However, it will also provide information which, broadly speaking, will be relevant to the occupation intentions of new entrants into the labour force during the next five years.

Administrative records have not been utilized as a source of information on labour supply to the same extent in Canada as in some other countries having a less well developed program of household and establishment surveys. This is also partly because of certain deficiencies in the records which limit their usefulness as economic statistics.

Information collected annually in connection with the renewal of unemployment insurance books provides information in considerable detail regarding characteristics of that segment of the paid worker labour force covered by unemployment insurance (about two-thirds). The completeness of the information is restricted by the exclusion of workers in certain industries, e.g. agriculture, and salaried workers over a specified wage ceiling. If, as has been recommended recently, coverage is made universal the value of these data as a qualitative measure of labour supply will be greatly increased.

Subject to the limitations noted, the annual sample enumeration of the insured population has been utilized to provide some information regarding geographical, occupational and industrial mobility. This investigation was carried out by comparing the location, occupational and industrial attachment of a sample of the insured population at time of book renewal. It could not take account of movements taking place over the year.

Some useful information regarding labour supply is available from statistics of persons registering for jobs with the National Employment Service. From this source, information is available regarding the personal characteristics and occupation of the job applicant. This series suffers from the defect that it is influenced by the administrative provisions that claimants for unemployment insurance must register for employment.

At the present time persons applying for employment at public employment offices are classified, by occupation, according to the U.S. Dictionary

of Occupation Titles. This detailed classification is not entirely applicable in the Canadian context and is not consistent with the Canadian Census classification. Recently DBS and the Department of Manpower have launched a joint project to establish a detailed Canadian occupational classification. The objective of this project is to create a classification system sufficiently detailed for operational use in placement work while suitable at a more aggregative level for statistical use. At this aggregative level the classification will also be compatible with the International Standard Classification of Occupations.

Statistics Available regarding Labour Demand

Information regarding labour demand is much less extensive than data regarding labour supply. The second Annual Report of the Economic Council recognized the need for such data and as noted earlier an experimental project to develop information is underway. At present, however, the only information on this aspect of the global labour market is that obtained from administrative or quasi-administrative sources.

The principal source of labour demand data is the listing of job openings filed with employers at offices of the Canada Manpower Centre. Since registration is not mandatory, vacancies notified represent only a portion of total job openings and tend to give a disproportionate weight to unskilled occupations.

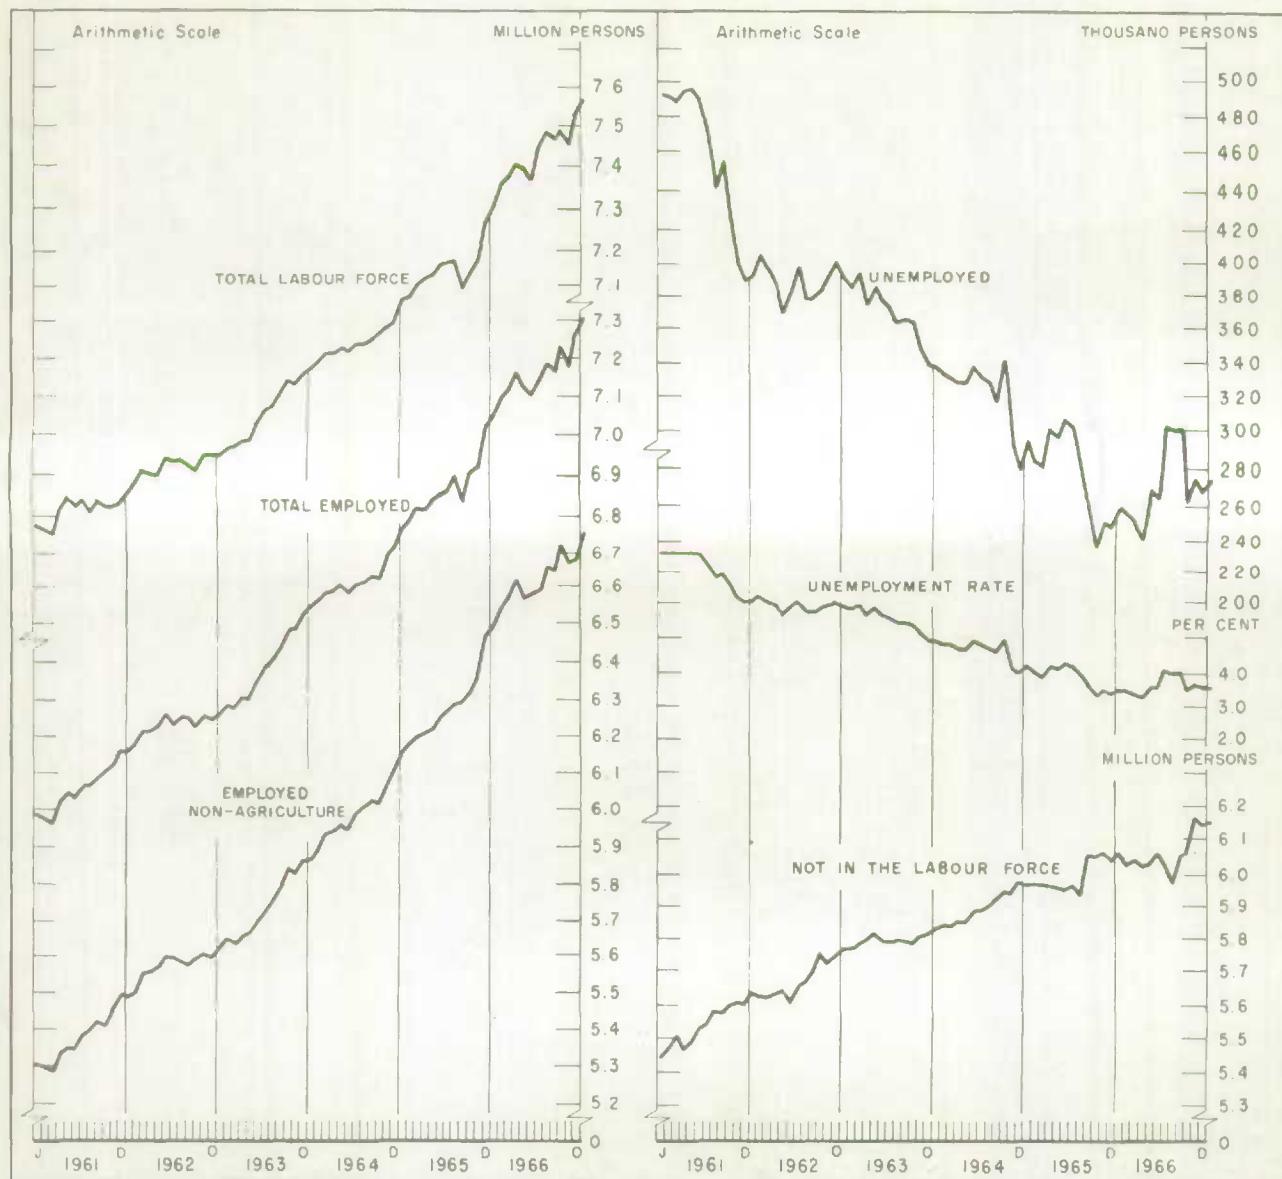

The other source of information regarding labour demand is a semi-annual survey of hirings and separations in certain industries carried out by the Department of Manpower and Immigration and processed in DBS. This survey provides information regarding hirings in terms of total and net labour demand for larger firms in all industries covered by unemployment insurance.

Conclusion

An extensive program of labour statistics based mainly on household and establishment surveys has existed in Canada for many years to meet policy and other needs. A recent shift of emphasis from needs for data for an aggregative approach to problems of employment and unemployment to selective manpower measures to relieve "hard core" unemployment and improve employment prospects in particular areas has required expansion of present programs and the production of new statistical series. These include provision of additional qualitative information regarding the characteristics of the labour force such as education and mobility, improved measures of labour demand and increased employment and other data at provincial and sub-provincial levels of detail.

LABOUR FORCE (More detail in Table 19)

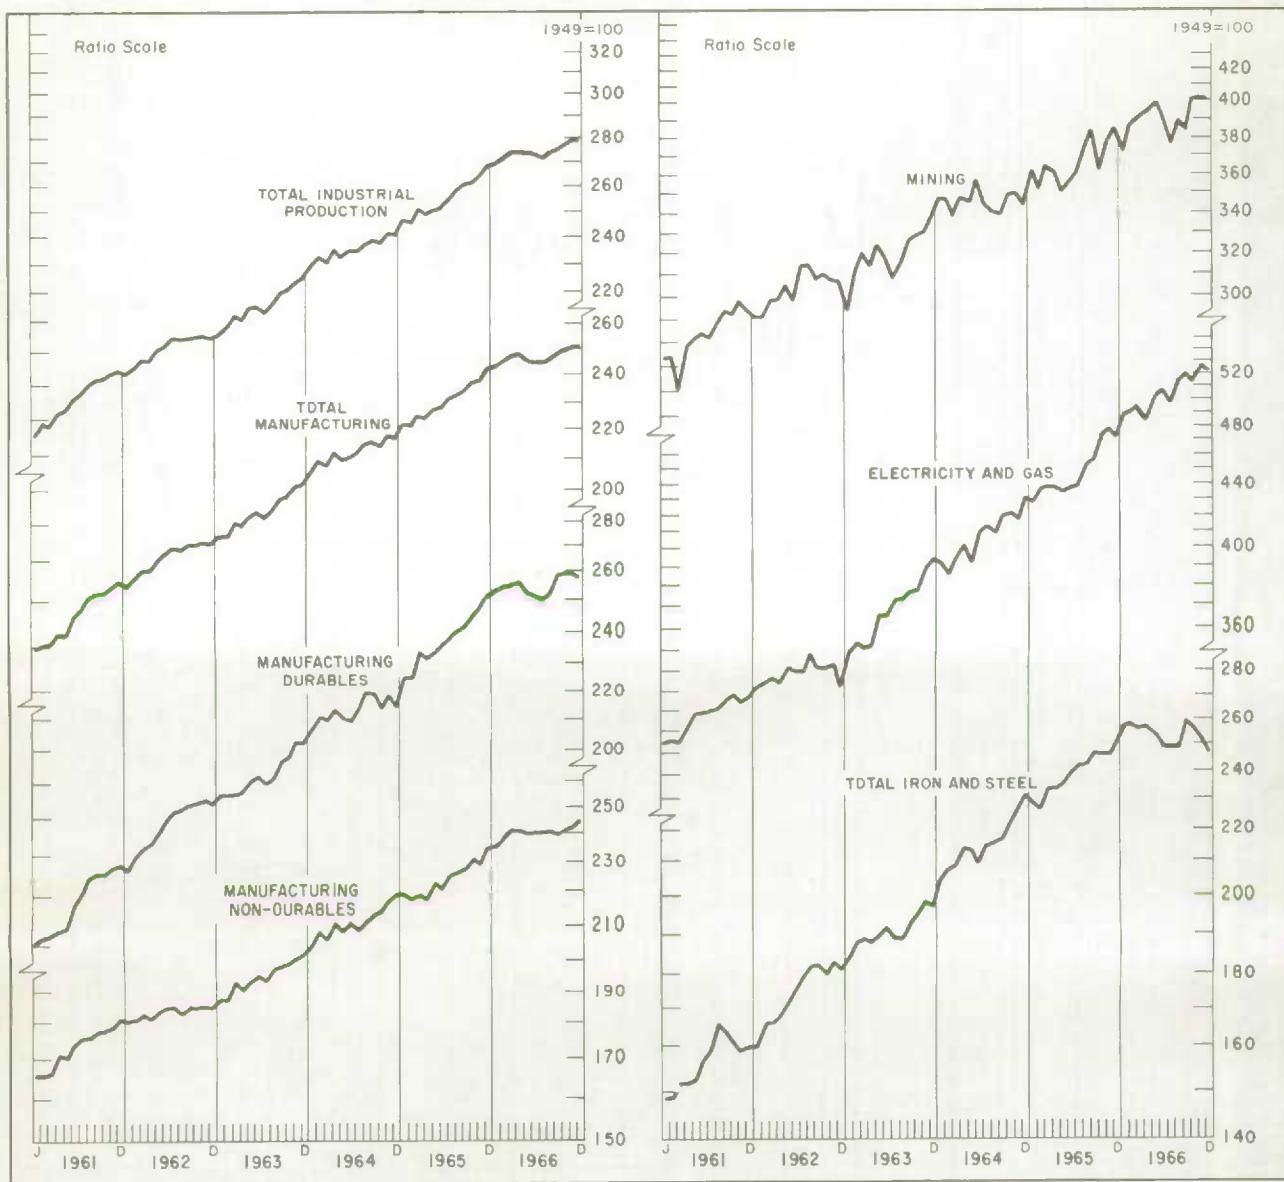

Employment and total labour force were fractionally higher in January. The unemployment rate remained unchanged at 3.6 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
			thousands		per cent	thousands
1965 M	7,134	6,838	6,220	296	4.1	5,951

INDUSTRIAL PRODUCTION (More detail in Table 16)

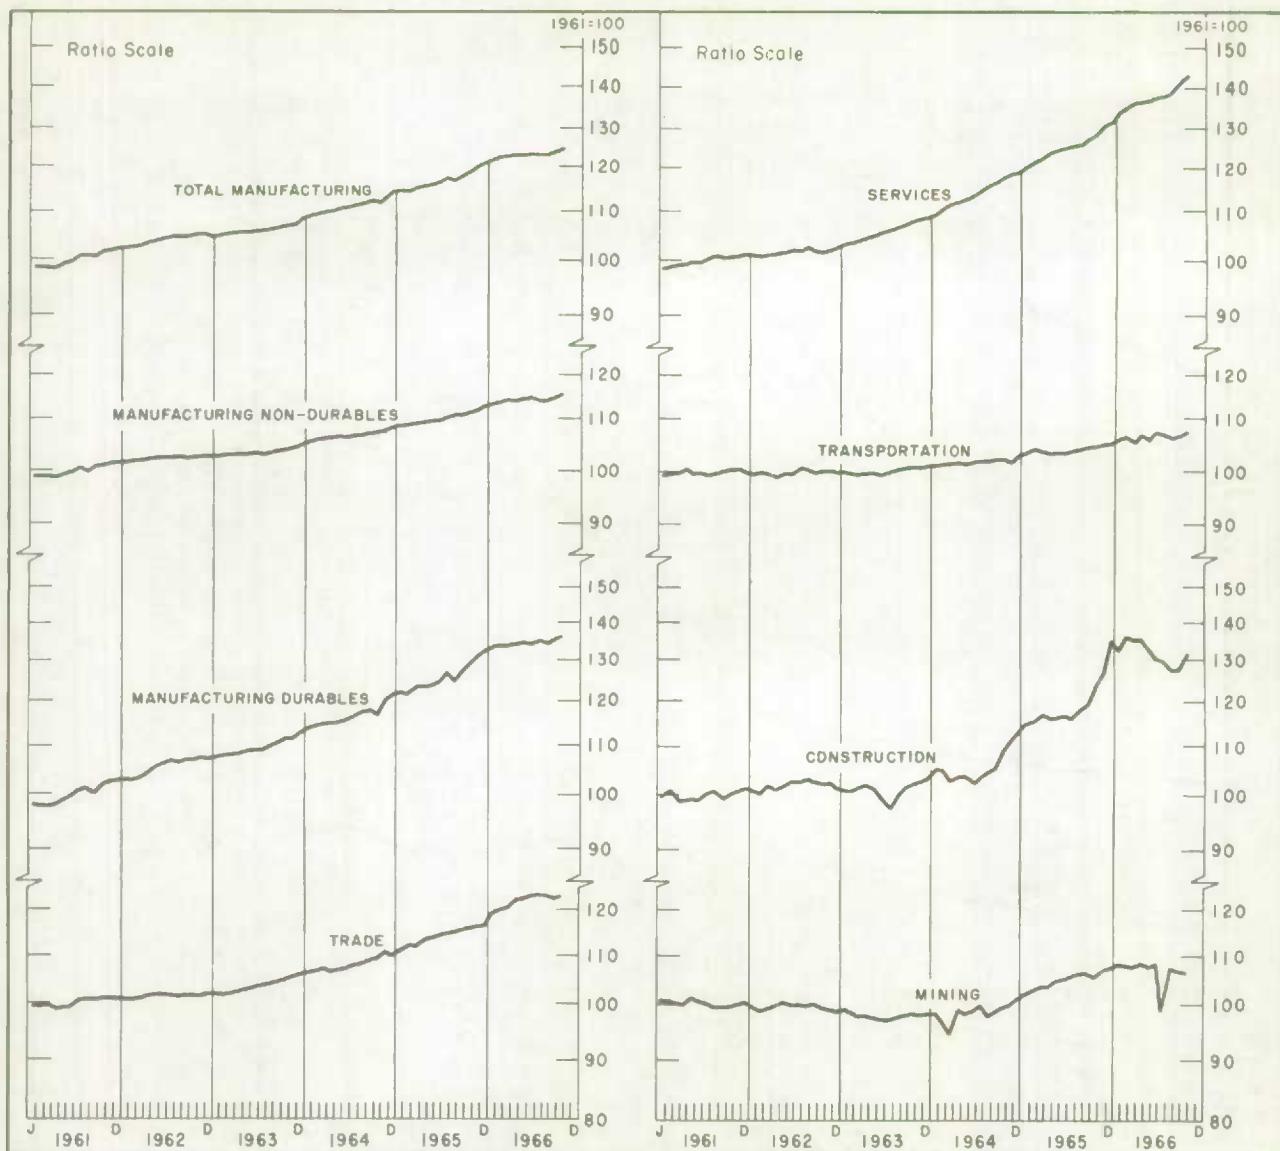

The index of industrial production declined by 0.1 per cent in December. Drops in electric power and gas utilities and mining, amounting to 0.9 and 0.3 per cent respectively, were almost entirely offset by a 0.2 per cent gain in manufacturing mainly due to a 0.9 per cent rise in non-durables, as durables fell by 0.7 per cent.

	total industrial production (1949-100)	manufacturing (1949-100)			(1949-100)

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 28)

Employment was higher in October in most selected industries except mining where there was a small decline. The largest gain was in construction (2.7%); increases in other components were all under 1 per cent.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Figures for births, marriages and deaths for 1966 and 1967 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and death are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D.B.S.

Table 7: national income and gross national product (million dollars)

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages.³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total.⁴Includes miscellaneous manufacturing industries.⁵Includes also publishing and allied industries.⁶Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

Table 29: employment indexes,¹ industrial composite, by provinces (1961=100)

¹See footnotes 1 and 2 and source in Table 28. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. ³In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ⁴Except machinery and transportation equipment industries.

Table 31: average weekly wages and salaries,¹ by industrial divisions, based on the 1960 standard industrial classification-(dollars)

monthly averages	manufacturing								transportation, communication and other utilities				trade		finance, insurance and real estate			service

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted.

²Total manufacturing inventory owned by manufacturers including warehouse stocks.

³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month.

⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant.

¹End of period. ²Does not include apartment-type machines. ³Electric and other. ⁴Gas types are included. ⁵In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. ¹⁰Source: Refined Petroleum Products (45-004), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁶Quotations refer to steers of all weights. ⁷Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001). D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D.B.S.

¹Monthly averages for 1964 and 1965 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. ³Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ⁴Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.

¹Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. ²Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. ³Regular and chartered services are included. Revised figures to December 1963 only. ⁴Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D.B.S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. ²Mainly deposits of foreign banks. ³Capital, rest fund and undivided profits as at the latest fiscal year-end. ⁴Including issues payable in foreign currency. ⁵Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. ⁶Excluding Canadian day to day loans. ⁷Loans to grain dealers and exporters. ⁸Loans to finance purchase of Canada Savings Bonds at time of issue. ⁹Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.

¹⁰Including loans to instalment finance companies.

¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²Expenditures for administration applicable to the Treasury Board have not been transferred from Finance.

³Under the Technical and Vocational Training Assistance Act. ⁴Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁵Includes

treatment and rehabilitation services.

*April 1 to December 31.

LIST OF STATISTICAL TABLES

POPULATION STATISTICS	Page	FUEL, POWER, MINING—Continued	Page
1. Population.....	1	64. Metals.....	48
2. Immigration by Countries.....	1	65. Non-Metallic Minerals.....	49
