## A NOTE TO USERS

### *Modification and Revisions:*

Table 75 on "Farm Cash Receipts" by source has been changed to provide more detail and to correspond more closely with the published material contained in the DBS publication "Farm Cash Receipts", Catalogue No. 21-001. The modifications in the new format coincide with revisions to the data for the years 1963 onwards. The series on a provincial basis in Table 76 are also revised commencing with the first quarter of 1963.

Revised data for the period not covered by the Review are provided in the publication mentioned above.

### *Industrial Production:*

The unadjusted data on the Index of Industrial Production in Table 16 and its seasonally adjusted counterparts in the same table and on page S-2 have been revised for the entire year 1966.

### *Annual Supplement to the Canadian Statistical Review:*

The sixth issue of the above Supplement (1966 edition) will be completed shortly and will carry the latest revised figures and the complete historical record of all series appearing in the S- pages of the monthly Review.

### *Other Material:*

There is still available a limited number of reprints on the following feature articles:

- (1) Recent Developments in the Work of the Dominion Bureau of Statistics—February 1967 issue.
- (2) Canadian Manpower Statistics—March 1967 issue.

The above copies are available on request, free of charge, from the Current Business Indicators and Data Bank, Economic Accounts Branch, DBS.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2400-501

## Historical Background

The recent upsurge of interest in expenditure surveys for welfare purposes and research into poverty is reminiscent of the origin of modern family living studies in the first half of the nineteenth century. Surveys of poverty carried out in European countries by Frederic Le Play during the period 1829 to 1879 were in the nature of case studies of workers' families selected as typical of large groups of workers. The information collected in Le Play's investigations and also by Quetelet in the first statistical survey of family expenditures in 1853, provided a basis for the formulation of the famous consumption laws of the Prussian statistician, Ernest Engel. An American contemporary of Engel, Carroll D. Wright, tested Engel's laws on this continent in 1875, in a Massachusetts expenditure survey. He found that this survey, in common with subsequent surveys in the United States and also in Canada, confirmed two of Engel's propositions, that as income rises the proportion of buying power devoted to food declines, and that the proportion devoted to consumption categories other than food, shelter, and clothing increases.

In England, investigations into working-class living conditions were initiated by Charles Booth in 1886 and published in seventeen volumes in 1902. Early in this century improvements in method were introduced with the use of interviewing in 1901 and the introduction of sampling in 1912 by A.L. Bowley. By 1905, when Faith Williams and Carle Zimmerman issued their "Studies of Family Living in the United States and Other Countries", no less than 1,500 family living studies were on record.

The period of rapid price change in and after World War I aroused interest in the measurement of the impact of price change and the use of expenditure statistics in the construction of consumer price indexes. In 1925 the Second International Conference of Labour Statisticians recommended family living studies as the most satisfactory method of determining the weights for consumer price indexes. Along with the development of specialized uses of expenditure data, for price indexes, studies of food consumption and nutrition, minimum and standard budgets, increasing attention was given during the thirties to scientific methods of sample selection and interviewing. The great change in consumption habits after World War II resulted in an increased demand for expenditure statistics for a variety of uses related to comparisons in consumption levels between time periods and from place to place. Uses of the data for consumer demand analysis and market research reflected the great increase in the margin of resources available for consumption other than necessities. In the light of these changes, it is interesting to note that in recent years the word "poverty" has again become significant in demands for expenditure statistics to assist in re-defining the basic necessities for human well-being.

## Expenditure Surveys in Canada

In Canada, family expenditure surveys have been predominantly urban. Information on farm family living expenses was collected in two separate surveys, first in 1934 when schedules were obtained from 2,700 crop correspondents, and again in 1958 as part of a comprehensive survey of farm income and expenditure. The first scientifically-planned expenditure survey, carried out in 1948, referred to wage-earner families in twelve Canadian cities. This was followed in 1948-49 by a national survey of expenditure and income which had reference to the total civilian, non-institutional population. Although the sample was national in scope, the survey did not yield adequate data for farm families, and results were published only for the non-farm population. While this survey was in progress, plans were being made for the collection of data on family budgets by means of small-scale continuing surveys which would serve the purpose of providing up-to-date information on expenditure patterns, and at the same time build up experience and skills in expenditure surveys. A small staff was established which would be concerned solely with the development of expenditure surveys and the various aspects of survey planning, processing and analysis. A parallel development at this time was the establishment of a section to develop sample surveys of family income, assets and indebtedness. It was recognized that although income and financial change were essential parts of expenditure surveys, the collection of reliable financial statistics could be more efficiently pursued in separate surveys. The location of the section on family expenditure surveys in the Prices Division was an indication of the strong orientation of the surveys to the needs of the Consumer Price index.

Results from the nation-wide survey of 1948 had been used to develop a post-war weighting pattern for the Consumer Price Index. Beginning in 1953, a series of biennial survey programmes was initiated with the primary purpose of utilizing data from relatively small samples in major cities to observe expenditure patterns of the population group which had been selected from the 1948 survey results as the "target group" of the Consumer Price index. From 1953 to the present, six survey programmes have been carried out, four of which have been restricted in order to sample only the target group of middle-income families in the size range two to six persons in urban centres with populations of 30,000 and over. The four specialized surveys in 1953, 1955, 1957 and 1962 each had a dual programme, consisting of surveys of family food expenditure throughout the year, in which a different sample of families kept records of food expenditure in each month, followed by an annual recall survey in which a new sample of families was interviewed concerning their expenditure and income over the previous year. This pattern, of record-keeping for food, and recall for other areas of the budget had also characterized the surveys of 1938 and 1948.

<sup>1</sup> Prepared in Prices Division by Miss I. McWhinney, Chief, Family Expenditure Surveys Section.

In the surveys of 1959 and 1964, no food surveys were conducted, but the sample reporting on the complete budget was doubled in size in order to sample more adequately all families and individuals in the cities covered by the survey. In each survey approximately 2,000 usable expenditure schedules were collected from a sample of 3,000 households.

About half of the records collected referred to the target group. These surveys thus served many needs not filled by the restricted surveys and also provided an opportunity to review the whole spectrum of expenditure patterns in larger urban areas in order to re-define the limits of the target group. The only difference in design between the surveys of 1959 and 1964 was that the 1959 survey sample was a new sample drawn from the Labour Force area sample frame to represent populations in all urban centres of 15,000 and over, whereas the 1964 sample referred to selected cities and was drawn from households previously interviewed in the monthly Labour Force Surveys.

### Methodology of Expenditure Surveys

"Sir", said Dr. Johnson, "it is like a dog walking on its hind legs. It is not done well, but is surprising that it is done at all." Neither this reply nor the question which elicited it, had any reference to expenditure surveys. Nevertheless, the answer expresses aptly enough the feeling of those who attempt in an affluent society to collect exhaustive information on the money transactions of households. The two main alternatives, record-keeping and recall by interview, each present manifest difficulties.

Alfred Marshall summed up the survey-taker's dilemma when he said: "Workingmen's budgets have often been collected and compared. But like all other figures of the kind they suffer from the fact that those who will take the trouble to make such returns voluntarily are not average men, that those who keep careful accounts are not average men; and that when accounts have to be supplemented by the memory, the memory is apt to be biased by notions as to how the money ought to have been spent, especially when the accounts are put together for another's eye." In addition to the problem of persuading families to keep records even for short periods, there is an apparent conditioning effect which results in higher expenditures in the first week than in subsequent weeks, a phenomenon which has been observed in Canada as well as in many surveys in other countries. Recall surveys which collect by interview information for a past period are much more subject to inaccurate reporting than record-keeping because of the difficulty in remembering past purchases. Annual surveys may suffer either from under-reporting due to memory loss or from over-reporting due to faulty estimation or "telescoping". This latter type of error, the reporting of expenditures made outside the survey period, is one of the hazards of shorter recall periods. One way to cope with it which has been used

by the U.S. Bureau of the Census has been the use of a panel with "bounded" monthly or quarterly recall: in order to prevent the shifting of expenditures from one period to the next, the interviewer checks reporting in each survey against the record obtained in the previous period.

There are many possible variations of account-book or recall interview either separately or in combination. Canadian surveys in their dual programme of food surveys (record-keeping) and annual recall (interview) have accumulated experience in both methods. The large-scale surveys conducted by the United States Bureau of Labor Statistics have employed the recall technique exclusively, annual recall for the comprehensive budget, as in Canada, and one-week recall for food detail. In the United Kingdom, where surveys of family expenditure are continuous as well as continuing, records are kept of all family purchases for a two-week period, with additional information being collected by interview for certain income and expenditure items with a longer reference period. This method, of record-keeping supplemented by recall, is employed also in France and other European countries.

The method of annual recall followed in both the United States and Canada employs a very detailed questionnaire, designed to jog the memory by multiplicity of questions, and enumeration of items. Much depends on the skill and persistence of the interviewers. In Canada, they are chosen from experienced Labour Force enumerators who are given a special training in the expenditure questionnaire and the survey definitions. Nevertheless, because of the short period in which field operations for any one survey are carried out, the interviewers are still relatively inexperienced when the survey is over. In contrast, the United Kingdom surveys by their continuous nature, permit a longer training period and the development of a continuing staff whose major occupation is expenditure surveys.

An advantage of the recall survey is the balancing check between receipts and disbursements which is applied to individual records, not only as a part of field procedures, but in the final editing process. Results obtained in Canadian surveys show an encouraging degree of consistency, not only internally, but between surveys. Global estimates of total food expenditure have been generally consistent with annual estimates built up from detail obtained in the food diary surveys. The under-reporting of alcoholic beverages and tobacco which is observed in expenditure surveys generally appears to be a problem in record-keeping as well as recall, bearing witness to those peculiarities of human nature which tend to defeat even the most scientific investigator.

A feature of the recall survey, as conducted in Canada and the United States, is the necessity of re-constructing the spending unit over the survey year. Spending units which existed for only part of the year are not included in the tabulation of averages, although in a sample weighted to national aggregate levels, they would be included. The

expenditure survey would not include unattached individuals who had no income and therefore no existence as spending units in the survey year. This reconstruction principle constitutes a difference between expenditure surveys and the separate income surveys which count as income units all unattached individuals and families in the household at the date of the survey, but do not consider income of persons who left a family unit during the year. In part as a result of these differences, the proportion of one-person spending units in expenditure surveys is smaller than the proportion of unattached individuals in income surveys. Average income of one-person spending units tends to exceed the average income for unattached individuals obtained in income surveys, and the average income for all families and individuals is also higher than would be obtained in an income survey covering the same universe.

#### Patterns of Family Expenditure in 1964

Some results from the most recent survey of family expenditure, referring to eleven urban centres in 1964 are presented in the accompanying tables which summarize survey detail in broad expenditure categories for families classified by city, family type, family income, age of head and tenure. In addition, averages and percentages defining family characteristics are shown for each class. With the exception of Table 2, which classified families of two or more by city, all tables refer to the complete sample of families.

It is not intended to deal exhaustively with the content of these tables in this article. They are presented as self-contained abstracts of information from the survey and should stand by themselves, along with the accompanying notes and definitions.

Like its predecessors, this survey gives a respectful nod to both Engel and Wright, verifying the two consumption laws of Engel which Wright confirmed in 1875, and agreeing with Wright's qualifications concerning the behaviour of shelter and clothing which Engel had found to maintain unvarying proportions with rising income. For the cross-section of families by income class in Table 4, shelter showed a pattern similar to that of food, which declined from 29 per cent of total expenditure in the lowest income group to 16.5 per cent in the highest income class. The percentage taken by shelter decreased from 30 per cent in the lowest income group to 13 per cent in the group with incomes of \$10,000 and over. The proportion taken by clothing, however, rose moderately with income, from 6.7 per cent in the lowest group to 9.3 per cent in the highest. For food, shelter and clothing combined, the proportion, averaging 46 per cent over the whole sample, decreased, from 66 per cent for families with incomes under \$2,500, to 39 per cent for families with incomes over \$10,000.

Current consumption expenses as a group declined in relation to total expenditure as income rose, because of the increasing proportions taken

by personal taxes, security payments such as insurance, and gifts. At the lower end of the income scale, 92 per cent of expenditure went for current consumption, in contrast to 75 per cent at the upper level. The margin of current consumption over and above food, shelter and clothing increased in proportion to total expenditure from 27 per cent to 36 per cent between the two income extremes. The major part of this increase was taken by transportation which advanced in importance from less than 5 per cent of expenditure in the lowest income group to 14 per cent in the two income groups between \$7,000 and \$10,000, declining again in the group over \$10,000.

The use of food, shelter and clothing to indicate the importance of "basic necessities" in the budget is no longer strictly valid because of the intermixture of luxuries and necessities in these groups as well as in other areas of the budget. The modern suburban shopper possibly regards the family car as a more absolute necessity than many of the food purchases she transports in it. However, it is still a useful comparison, if it is kept in mind that the 66 per cent devoted to these groups by families with incomes under \$2,500 represents more hard-core necessity than the 39 per cent at the highest income level.

Another type of information appearing in the tables among the family characteristics provides an indication of the extent of saving or dissaving by survey families over the survey year. Over the whole sample of families and individuals the net change in assets and liabilities was positive, averaging \$258. However in Table 4, it can be seen that it was predominantly negative, indicating dissaving, for income groups below \$6,000. The relatively small amounts indicate that there was probably a considerable balancing of increases and decreases within any one group. In Tables 1 and 2 it will be seen that for the majority of cities it was positive, and for those cities which registered a net dissaving the amount was small. Among family type groups, the net change was negative for families consisting of two adults and three or more children, and the largest positive changes were among all-adult or predominantly adult families. For families classified by age of head, only the under 25 group registered a negative change. In the tenure classification, owners and mixed-tenure families averaged net changes which were positive, with larger changes being registered for mortgage-free owners, while regular tenants averaged net negative changes.

It should be noted that the average account-balancing differences in the survey were smaller than those which might be obtained by balancing expenditure plus positive net financial change against income plus negative financial change, because of the presence of other money receipts which are not counted as income. Taking into account other money receipts, disbursements exceeded receipts over the whole survey by \$82 or

1.3 per cent of average income. By city these differences ranged in amount from \$15 to \$167, or from less than 1 per cent to 3 per cent of income. By income group, the largest net discrepancies were recorded in the groups between \$4,500 and \$7,000, ranging from 2 per cent to 6 per cent in the \$4,500 - 4,999 income class. By family type, groups of families with two adults and children had net differences indicating an excess of reported disbursements of from 2 to 5 per cent. By age of head the largest discrepancies were in the age groups from 25 to 44, with an excess of disbursements of around 2 per cent. In the upper age groups over 55, differences were small and tended to be positive,

indicating that net receipts were greater. In the tenure classification, the most outstanding discrepancy was registered in the mixed tenure group, consisting of families which had changed their tenure during the survey year; on average, disbursements exceeded receipts by \$514, almost 7 per cent of average income for the group. This group tended to have rather more complex transactions during the year, and frequently it was difficult for the enumerator to obtain a clear record.

These differences, which are not shown in the tables presented here, will be published in detail in the final report on this survey.

## NOTES AND DEFINITIONS

**Family.** — The family or spending unit is defined as a group of persons dependent on a common or pooled income for the major items of expense and living in the same dwelling. Never-married sons or daughters living with their parents are considered as part of their parents' spending unit. In the great majority of cases the members of spending units of two or more are related by blood, marriage or adoption, and are thus consistent with the "economic family" definition employed in surveys of family income, "a group of individuals sharing a common dwelling unit and related by blood, marriage or adoption". Individual or one-person spending units are financially independent persons living alone or as roomers.

**Family head.** — In husband-wife families, the husband was considered as head. In one-parent families with unmarried sons or daughters, the parent was considered head. In all other types of spending units, the head was the person mainly responsible for the maintenance of the spending unit.

**Age of family members.** — Age at December 31, 1964, in other words the age attained at the 1964 birthday.

**Adult.** — Person 16 years of age or over at December 31, 1964.

**Child.** — Person under 16 years at December 31, 1964.

**Family type.** — Defines the family in terms of numbers of adults and children listed as family members during the survey year.

**Earner.** — Any person 14 years of age or over who earned more than \$250 in the survey year.

**Employment status of wife.** — Refers only to number of weeks worked within the survey year including holidays with pay. No distinction was made between full-day and part-day employment. Full-time employment refers to employment of 48 weeks or more.

**Home-owner.** — Refers to families living in a dwelling (either with or without mortgage) owned for the entire survey year by a member of the spending unit.

**Car owner.** — Refers to families owning a car at December 31, 1964.

**City.** — Refers in each case to the metropolitan area or urban area comprising city proper and fringe areas.

**Family size.** — Family size or "year-equivalent persons" was computed by dividing the total number of weeks during which family members belonged

to the unit in the survey year by 52 weeks. In this way, part-year members were counted as fractions of a year-equivalent person.

**Weighted percentage of families.** — Survey results were adjusted by city weight factors, designed to give each city the relative importance of its population. In some cities different weights were assigned to individuals to compensate for lower response rates for this group.

**Money income.** — Included: (1) Employment income, i.e., gross income from wages and salaries; net income before taxes from self employment; and receipts from military pay and allowances. (2) Other income, i.e., gross receipts from roomers and boarders; net rentals; family allowances; interest and dividends; all pensions; workmen's compensation and unemployment insurance benefits; regular receipts from insurance policies and annuities; and miscellaneous regular income receipts.

**Other money receipts.** — Reported but not included in income, comprised inheritances; bequests; lump sum settlements from property insurance, accident and health policies; and irregular gifts from outside the family.

**Net change in assets and liabilities.** — Referred to net changes during the survey year in assets such as bank accounts, money on hand, investments in business, stocks and bonds (excluding change in market value), loans made to others, and the sale of real estate and personal possessions along with net changes during the survey year in liabilities such as mortgages, notes due to banks, loans and insurance companies, etc., installment purchases, charge accounts and other bills, rents and taxes. If on balance a family dissaved, i.e., if credits (net increase in assets and net decrease in liabilities) were exceeded by debits (net increase in liabilities and net decrease in assets) then, this would result in a negative figure (-). There was no allowance for depreciation in any of these asset changes.

**Expenditures for current consumption.** — Included expenses incurred during the survey year for food, housing, fuel, light and water; household operation; clothing; automobile purchase and operation; other transportation; medical care; personal care; recreation; reading; education; smoking and alcoholic drinks and a miscellaneous group. Consumer durables such as automobiles and household equipment were considered as consumption items, but changes in equity, purchases and sales of homes were considered as changes in assets and liabilities. Family expenditures for items used partially for business, such as home or cars were adjusted to exclude the amount chargeable to business use. Sales, excise, automobile and real estate taxes were included as part of consumption expenditure for the commodity or service to which these taxes applied.

## LABOUR FORCE (More detail in Table 19)

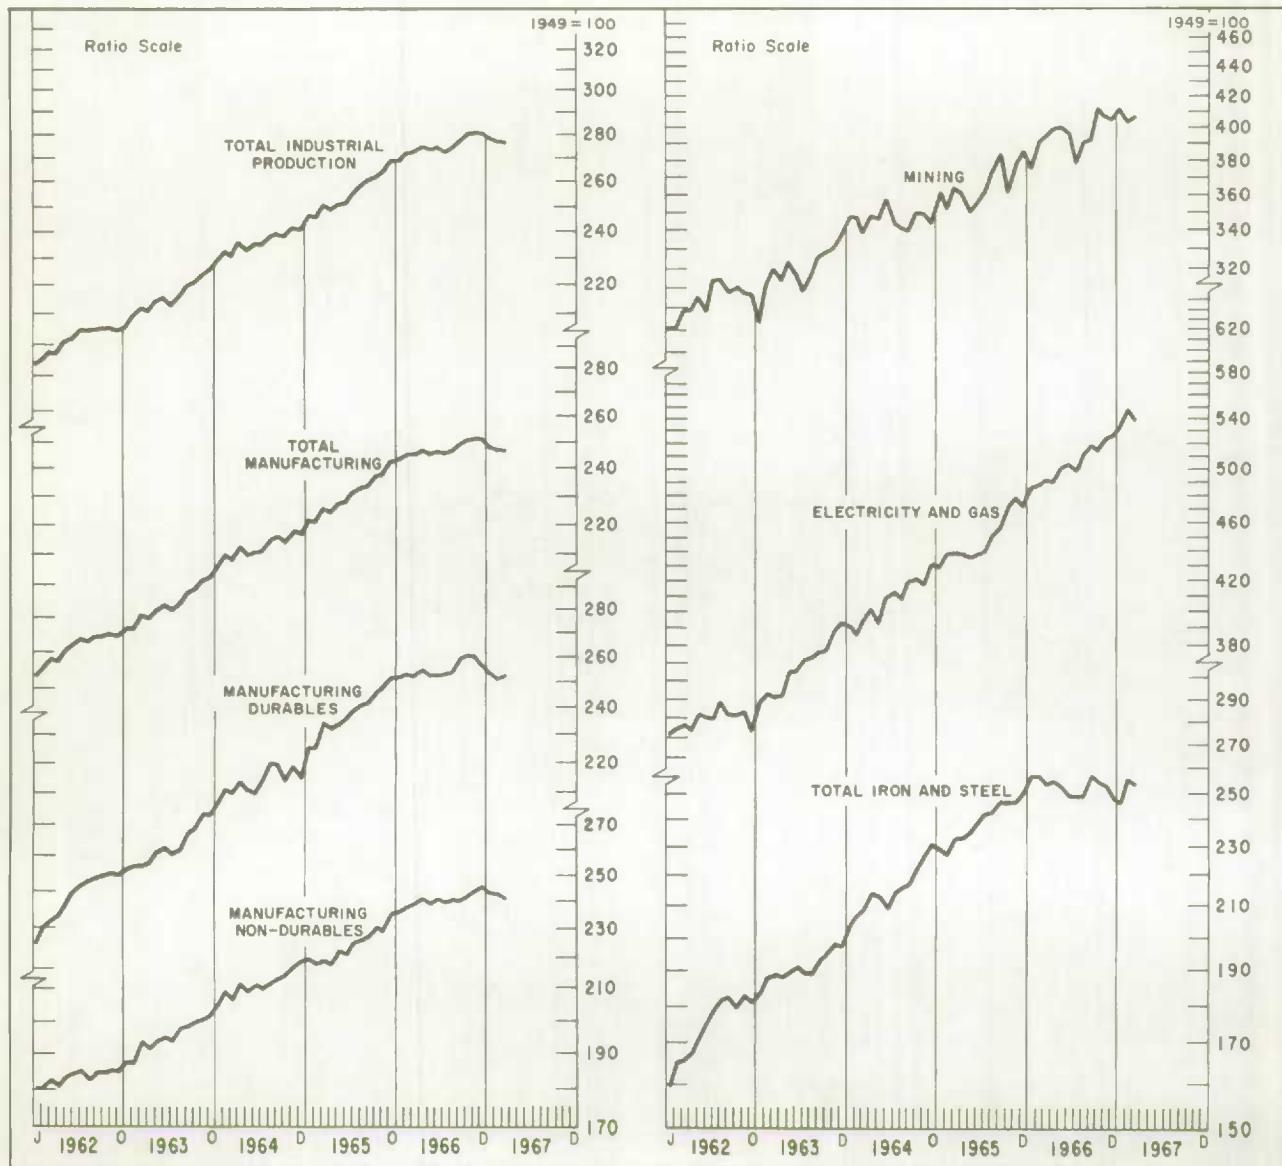

Employment and total labour force declined in April, thus reversing the upward trend prevailing in the previous four months. The unemployment rate remained unchanged at 3.9 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

## INDUSTRIAL PRODUCTION (More detail in Table 16)

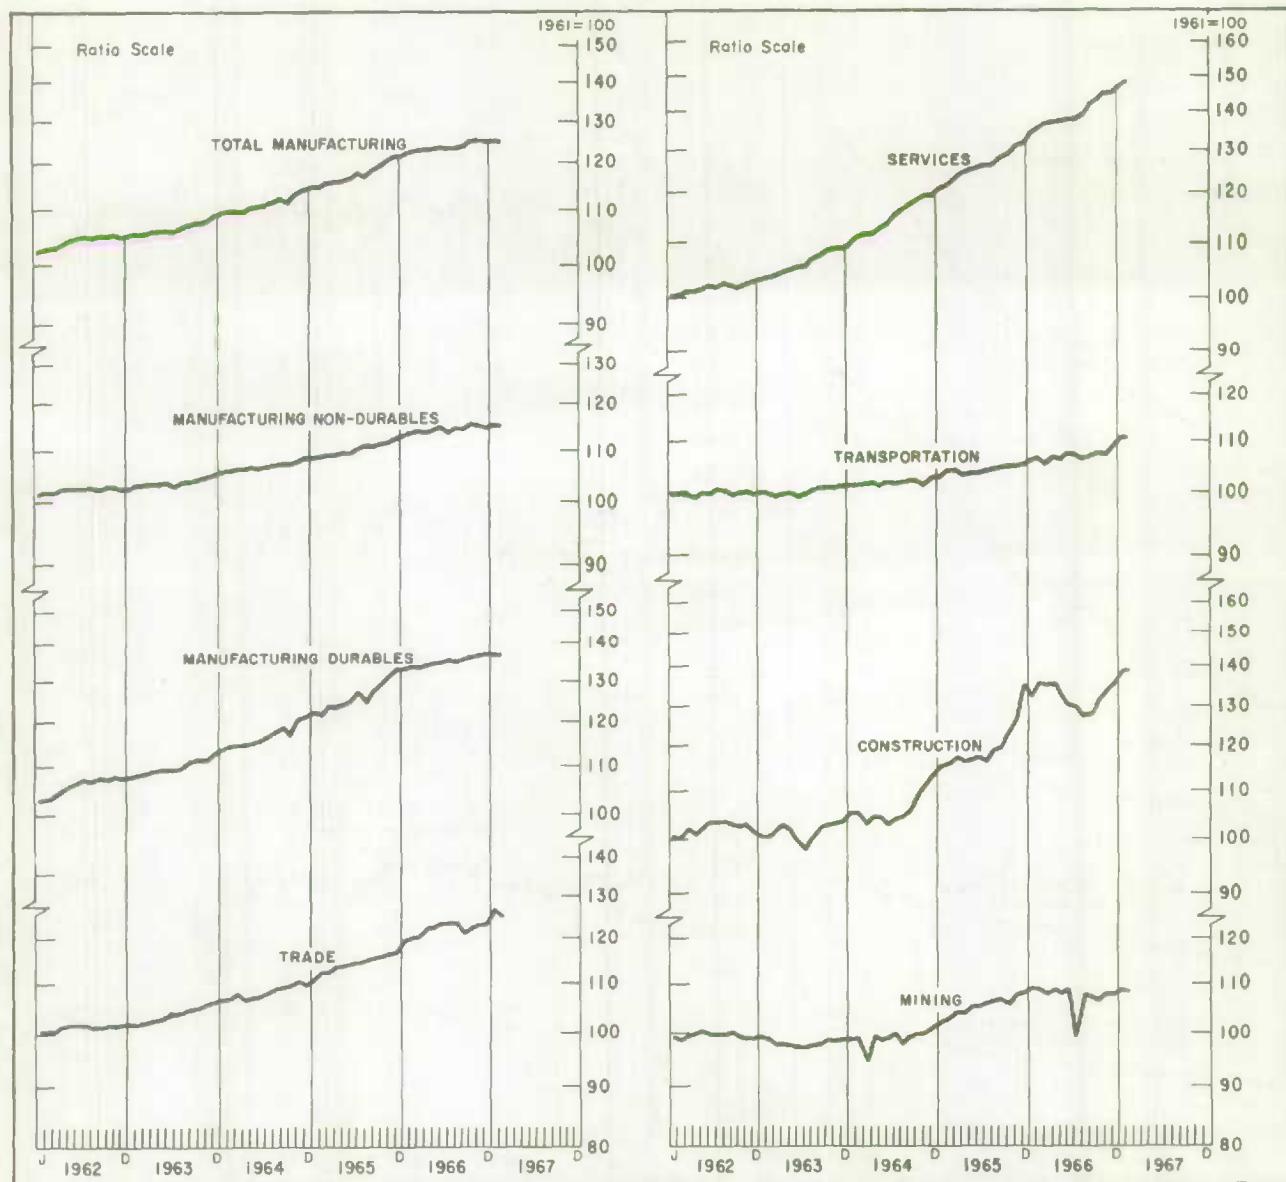

The index of industrial production edged slightly downward in March with the decline being concentrated in electric power and gas utilities, as manufacturing was virtually unchanged while mining rose.

	total industrial production (1949=100)	manufacturing (1949=100)				(1949=100)	
		total	durables	non-durables	mining	electricity & gas	iron & steel

## EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 28)

Employment showed little change in February. Decreases were recorded in trade, manufacturing and mining, while the other industry divisions showed increases except construction where there was no change.

## CONSTRUCTION (More detail in Tables 67, 72 and 73)

Value of building permits dropped noticeably in March in both the residential and non-residential sectors with the decline in the latter being more pronounced.

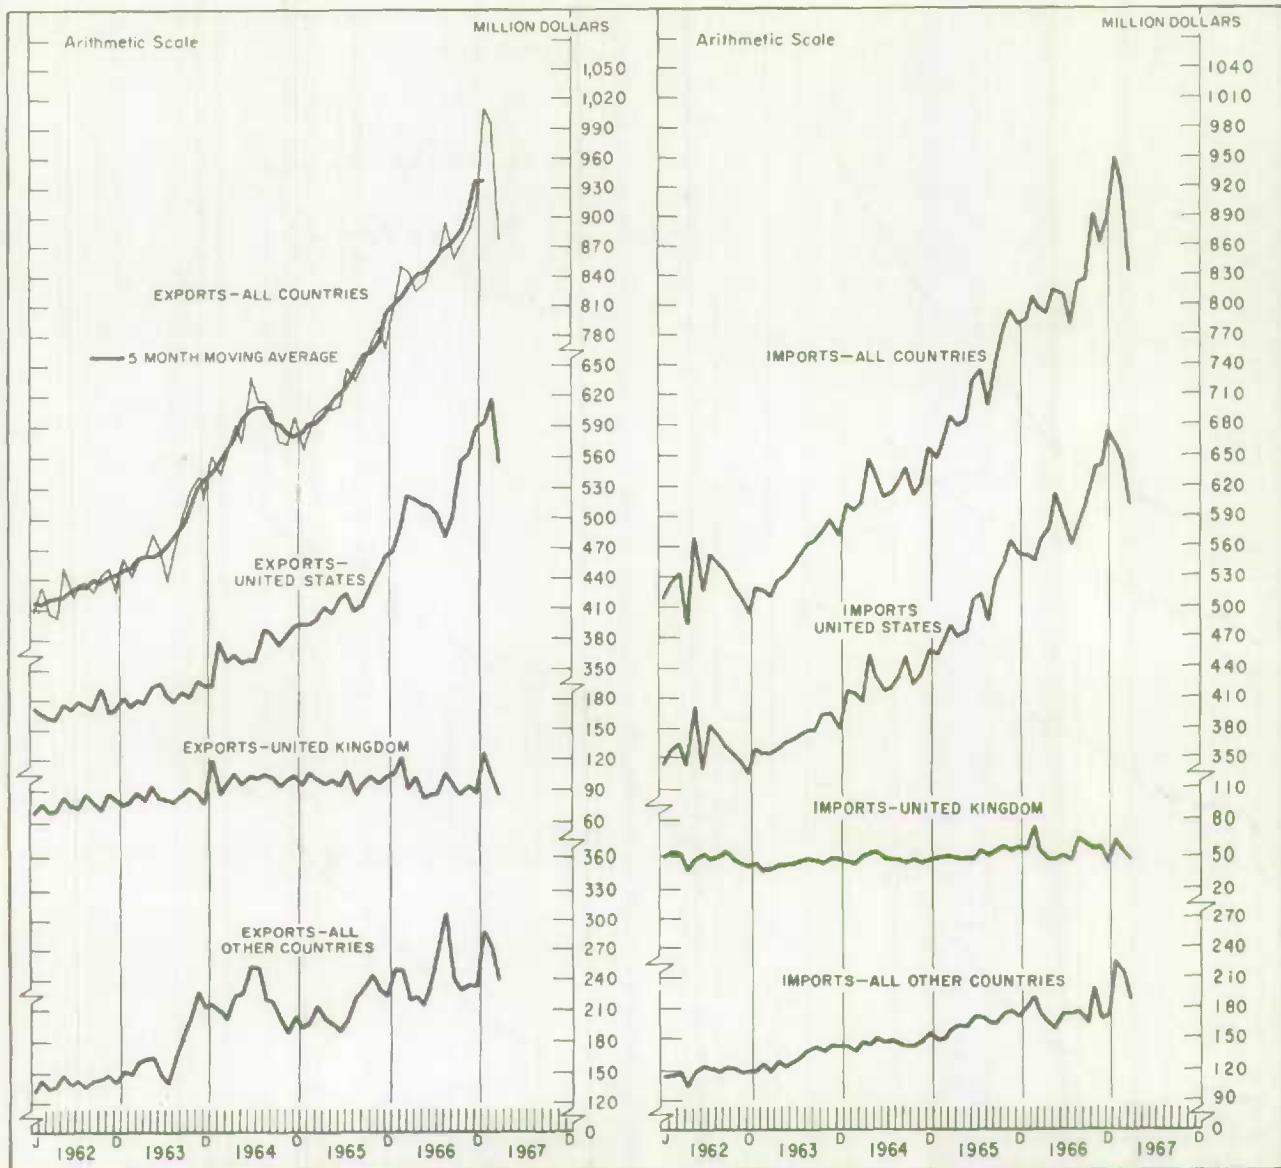

Housing starts picked up in April for the second consecutive month with completions recovering following the irregular low point registered in the previous month.

	value of building permits			new dwelling construction, centres 10,000 and over

## SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

Manufacturing inventories, shipments and orders moved slightly down in March.

Rail revenue freight loaded declined by 2 per cent in April.

Value of cheques cashed in clearing centres dropped in March for the second consecutive month.

Consumer credit expansion continued in February.

<sup>1</sup>Gross National Product at market prices excluding accrued net income of farm operators from farm production. <sup>2</sup>Before dividends paid to non-residents; see also footnotes on Table 113. <sup>3</sup>Total of all monthly and quarterly series as in column 14, Table 90. <sup>4</sup>Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

## PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale price index remained stable in April.

The index of industrial common stocks experienced a sixth straight month of increase in April.

The consumer price index jumped by 0.9 per cent in April as all index components rose, with sales tax increases in Quebec and Newfoundland contributing to the rise.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancées or fiancées and other unspecified persons not intending to enter the labour force. <sup>1</sup>Figures for births, marriages and deaths for 1966 and 1967 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D.B.S.

<sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

<sup>2</sup>Includes residual error of estimate. Source at bottom of Table 12.

<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>The labour force as a percentage of the population 14 years of age and over. <sup>3</sup>The unemployed as a percentage of the labour force. <sup>1</sup>See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.<sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. <sup>3</sup>The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries.

<sup>1</sup>The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing, trapping and public administration and defence. <sup>3</sup>Includes storage, electric power, gas and water utilities. <sup>4</sup>Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

Table 41: manufacturing inventories<sup>1</sup> by industries as in the revised standard industrial classification (million dollars)

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>4</sup>End of period. Annual figures for inventories and unfilled orders are end of December values. <sup>5</sup>Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

<sup>1</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>2</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export.

<sup>1</sup>Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. <sup>4</sup>Excluding shipments for re-processing at maker's own plant.

<sup>1</sup>Includes record players.

<sup>2</sup>Radio phonograph combinations.

<sup>3</sup>Includes monaural and stereo with and without amplifiers.

<sup>4</sup>Customs clearance;

radio sets include radio phonographs, radio receiving sets transistor, n.e.s. and radio receiving sets, n.e.s. (43-004), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field and processing plants less field flared and waste, Canadian sources only. <sup>4</sup>By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

<sup>1</sup>Barrels of 35 Canadian gallons. <sup>2</sup>Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. <sup>3</sup>Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. <sup>4</sup>Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. <sup>5</sup>Includes inventories at end of period being held at gas plants and in storage caverns. <sup>6</sup>Includes stove oil, kerosene and tractor fuel. <sup>7</sup>Includes aviation gasoline and aviation turbo fuel. <sup>8</sup>Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. <sup>9</sup>Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Sources: Refined Petroleum Products (45-004), D.B.S.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nationwide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: New Residential Construction (64-002), D.B.S.

<sup>1</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

<sup>2</sup>Planks and boards, flooring and square timber.

<sup>3</sup>Hollow blocks including fireproofing and load-bearing tile.

<sup>4</sup>For building insulation only.

<sup>5</sup>Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

<sup>6</sup>Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

<sup>a</sup>These indexes are available for January, April and August only. <sup>b</sup>Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. <sup>c</sup>Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. <sup>d</sup>Price of 100 lbs. live hog, grade B. <sup>e</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. <sup>f</sup>Quotations refer to steers of all weights. <sup>g</sup>Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

<sup>a</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

<sup>b</sup>Includes stocks held by manufacturers, wholesalers and other warehouses.<sup>c</sup>Many mills were operating at more than the standard 26 working days in the month.<sup>d</sup>Includes solid, coated, bulk, packages and novelties.<sup>e</sup>Includes beef stews and bailed dinners.<sup>f</sup>Includes tomato sauce, souces for meat and fish and sauces, other.

<sup>1</sup>Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. <sup>2</sup>Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

<sup>1</sup>Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. <sup>2</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. <sup>3</sup>Regular and chartered services are included. Revised figures to December 1963 only. <sup>3</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

<sup>1</sup>Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. <sup>3</sup>United States and other foreign carriers. Excludes in transit passengers. <sup>4</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>5</sup>Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

<sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. <sup>1</sup>Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. <sup>2</sup>The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. <sup>3</sup>Total new settled-for ordinary sales in Canada.

<sup>4</sup>Under new or amended contracts. Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Connecticut, U.S.A.

<sup>1</sup>The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). <sup>2</sup>As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. <sup>3</sup>Includes also the furniture and furnishings industry. <sup>4</sup>Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. <sup>5</sup>Includes tobacco products, leather and miscellaneous manufacturing industries. <sup>6</sup>Includes also storage and communication industries. <sup>7</sup>Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

<sup>1</sup>This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. <sup>2</sup>Expenditures for administration applicable to the Treasury Board have not been transferred from Finance.

<sup>3</sup>Under the Technical and Vocational Training Assistance Act. <sup>4</sup>Government contributions under the Hospital Insurance and Diagnostic Services Act. <sup>5</sup>Includes treatment and rehabilitation services.

\*April 1 to January 31.
