A NOTE TO USERS

Revisions and modifications:

Table 105: Bank of Canada.

Certain series pertaining to assets and liabilities have been added to provide more information. Under *assets*, data are now published for: Government of Canada direct and guaranteed securities 3 to 5 years and 5 to 10 years; bankers' acceptances; cheques on other banks; net amount of Government of Canada items in process of settlement and accrued interest on investments. Under *liabilities*, the additional series are Government of Canada enterprises deposits and Bank of Canada cheques outstanding.

Table 106: Canadian Chartered Banks.

The table has been extended to include: de-

bentures issued and outstanding; accumulated appropriations for losses and other residential mortgages.

For certain items, revisions have been effected back to July 1966.

Table 112: Security Issues and Retirements.

Starting with this issue, a more elaborate breakdown for some series is provided. Provincial and municipal governments, corporations, other bonds and debentures, preferred and common stocks will show, respectively, gross new issues delivered, retirements and net new issues.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont. or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada.

2400-501

RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION BUREAU OF STATISTICS¹

This note follows the general pattern of previous years in describing new projects initiated in the DBS and in reporting significant stages of existing projects. Emphasis this past year has been on improving the timeliness of statistics to satisfy contemporary demand and on planning to take advantage of up-to-date electronic data-processing systems and programming expertise.

The Bureau is striving to reduce the time lag of statistical releases for DBS series. As a start, a number of key economic indicators have been selected for significant gains by the end of the present fiscal year. These include employment and payrolls, imports and exports, retail trade, selected commodity data, and the Index of Industrial Production.

A new storage and retrieval system is now being developed for the time series data bank. This represents the first phase of a large system now being designed in the Bureau with the assistance and cooperation of the Economic Council of Canada and the Bank of Canada. Use of the data bank is at present limited by the inadequacy of existing programs for handling large volumes of data.

Increased emphasis is being given to three closely related fields: prices, output and productivity. First will be developed a framework for fully-integrated statistics in these fields, including consistency in concepts, basic component detail and aggregates appropriate for analysis and policy decisions, and priorities for development and improvement. Steps are being taken to update and broaden the primary data base in areas where improvement and expansion are urgently required.

A new section of the Bureau, "General Survey Systems Staff", is charged with the development and implementation of the computer-based geographic coding system referred to in last year's note. The system specifications have now been developed and programming partially completed for the geographic location identifiers in urban areas. Development of the necessary large computer-stored directories has begun. Arrangements have also been made to develop a computer program capable of accepting addresses in non-standard format, and of translating them into the standard format. This project will greatly enlarge the information available by small areas and custom-made aggregations of areas.

A guide to small area data available in DBS, now in preparation, will provide sources and notes on coverage and continuity. Programs are under way

¹ This is the ninth of a series of notes intended to keep readers of the "Canadian Journal of Economics and Political Science" in touch with the evolution of statistical programmes in Canada. The first note was published in November, 1959; subsequent notes were published in February issues of the Journal. This note is reprinted here by kind permission of the Editor. Reprints are available from DBS on request.

to produce experimental estimates of unemployment and money incomes for sub-provincial areas. A study of growth patterns in manufacturing employment by counties, which analyses employment changes in the periods 1949-59 and 1961-65, is nearing completion. Also under way is experimental work on annual population estimates, initially for counties and census divisions and later possibly for census subdivisions. Testing of the initial results and refinements of methodology are in progress. Estimates for census subdivisions, if feasible, would not be published as such but would be aggregated to meet the need for statistics relating to areas having boundaries which cut across county boundaries.

The immediate objective of a new company establishment integration program is to link financial and production statistics within a more consistent and detailed framework. Production inputs and outputs such as sales, payrolls, materials used and inventories have been collected for many years mainly on an establishment basis. But comprehensive financial statements containing the same items of information have become available to DBS much more recently, principally on a company basis. A sample of establishment and company returns will be studied to determine the reporting differences for the same items of information, the reasons for these differences, and the methods for eliminating them, where appropriate. If warranted, a new reporting system will be developed to ensure that data which apply to the different levels of the organization will be related, or integrated in a consistent fashion. An integral part of the project is experimentation with a questionnaire designed to link company financial statements with a wide range of establishment data.

On behalf of the Department of Manpower and Immigration, DBS is developing a monthly survey of job vacancies, to tell us "where the jobs are" — a three-month moving average of vacancies by occupational title and job location. Large manufacturing firms are being surveyed immediately. Other sectors of the economy will be introduced periodically to attain full coverage by the end of 1968.

A Canadian Standard Classification and a Dictionary of Occupations is under development in co-operation with the Department of Manpower and Immigration. The classification structure is meant to be used in the 1971 Census.

Also, in response to a demand from land-use planners and others interested in detailed classification of economic activity for local areas, the Standard Industrial Classification for non-manufacturing industries is being expanded, adding a finer level of detail.

A revised reference document on the National Accounts now under way will present revised statistics incorporating 1961 census benchmarks.

Statistical revisions will be confined to the last two decades but presentational and conceptual changes will be made for earlier years, bringing the Canadian National Accounts closer to the UN's suggested framework.

The 1961 Input-Output table is virtually completed. Some delay in publication may, however, be necessary because the Input-Output table and the revision of the National Accounts based on the 1961 Census must be co-ordinated. The Input-Output staff plans a system for the regular compilation and updating of Input-Output tables, anticipating that the first such table will be for the year 1969.

Although the implementation of the Revised (1960) Standard Industrial Classification and the new establishment definition did not progress as rapidly as anticipated in the logging and mining industries, the project is now virtually complete. The 1965 publication for the logging industry will include statistics on both the former and the revised basis for 1963 and 1964 thus providing a two-year link between the old and new classification systems. The 1964 publications for the various mining industries will include statistics on both bases for the period 1961-63 thus providing a three-year link.² Beginning with the results of the 1966 Census, there will be advance statements for each industry, abbreviated versions of the final reports comprising the basic industrial statistics and shipments of the major products of the industry. Data should be available up to five months earlier for a number of industries.

Following the release of revisions to the 1949-based Index of Industrial Production in the May 1966 "Annual Supplement to the Monthly Index of Industrial Production" (Catalogue No. 61-005), the staff of the Industrial Output Section has been engaged in a major overhaul and updating of the entire industry real output system. Rebasing monthly and quarterly measures for the post-1961 period, as well as the revised annual data up to 1961, will be made available as soon as possible in 1968.

The series of fixed capital flows and stocks which were published from 1926 to 1960 are being extended to 1966 and should be available shortly on the basis of the 1948 Standard Industrial Classification. Work is continuing on developing a method which will enable the switch of the major manufacturing groups from the basis of the 1948 to the 1960 Standard Industrial Classification, and on developing flows and stocks estimates for non-manufacturing industries, beginning with particular emphasis on utilities.

A survey was introduced in January 1968 for the mining industry, to obtain data on structures and equipment acquired by the mining industry and

on activities and expenditures prior to production, such as exploration, purchase of mining land and rights, development, etc.

The annual Capital Expenditures Intentions survey, which takes place in the fall and requests a preliminary estimate for the year ending and intentions for the year ahead, has a coverage sufficiently large to derive detailed provincial estimates. In 1966 and 1967, the coverage of the mid-year survey was expanded sufficiently so that it too will permit the production of revised estimates by province. It should be possible to release provincial estimates of the revised intentions of capital spending for 1968.

The work on a set of financial accounts is near fruition, and publication of important parts of the tables is expected in 1968. These tables will assist in showing the role played in the financing of the economy by financial intermediaries, governments, non-financial corporations, individuals and the foreign sector.

A study of corporation financial statistics for the years 1958 to 1964 inclusive has been undertaken to provide annual information on the source and use of funds for Canadian and for foreign-owned companies as well as other information on the affairs of corporations in Canada.

The Eighth Federal-Provincial Conference on Municipal Finance Statistics was convened in April 1967. The Eighth Conference has as its objective a revised edition of the "Municipal Finance Reporting Manual" (Catalogue No. 12-507) which will reflect improvements in the finance reporting scheme on a national scale.

The DBS is also represented on the Federal Government Expenditure Coding Committee which has developed a comprehensive system of recording expenditures both by activity and by object, presently being implemented by all federal government departments. This committee now has the responsibility for advising the Treasury Board on matters of policy arising from the implementation of the system.

The Special Manpower Studies and Consultation Staff was established in January of 1967. In part it will continue some of the work of the Research and Analysis Section of the Labour Division, and in particular, the preparation of the Special Labour Force Studies. To date, seven studies have been released covering a variety of labour topics: education; work experience; job content; geographic mobility; female labour force participation; immigration (Catalogue Nos. 71-505 to 71-511 inclusive).

A sample survey of selected labour costs in the manufacturing industries of Canada was introduced in January 1968, following the successful completion of a pilot survey of employer expenditures for selected employee benefits in the spring and summer of 1966.

² Details of the revised methodology and the results of this conceptual approach may be found in "Smelting and Refining Industry, 1964", (Catalogue No. 41-214).

Emphasis on the improvement of the timeliness of Employment Section data has produced a three-phase approach. Some immediate improvement has resulted from the streamlining of existing procedures and the introduction of relatively minor innovations. Work in the direction of producing preliminary estimates for large establishments based on earlier cut-off dates will provide significant results in the intermediate run. In the meantime work is well advanced on an entirely new and completely automated program designed to produce major improvement in timeliness as well as other long-run benefits.

In May 1967, the main tables in the two monthly publications of the large establishment survey, "Employment and Average Weekly Wages and Salaries" and "Man-hours and Hourly Earnings" (Catalogue Nos. 72-002 and 72-003), were produced by means of a photocopy system thus saving about two weeks and eliminating several sources of possible error.

A large-scale income and work history survey of 30,000 households will be carried out in April 1968 in conjunction with the April Labour Force Survey. This is the largest such survey attempted; previous surveys had samples of 12,000 or fewer households; farm households will also be included.

A number of methodological studies dealing with the quality of DBS income series are in progress. A study is being made from 1961 census data of the farm population by farm characteristics, with special emphasis on the labour force, age, educational levels, etc. of farm population on non-commercial farms (those with product sales of less than \$1,200).

Planning is under way for a further family expenditure survey to be carried out early in 1968, referring to the year 1967. It is designed to sample the population in the same eleven cities as in the survey of 1964, and to be comparable in size and scope to that survey. Utilization of existing computer programs is expected to yield considerably improved timeliness in producing results.

Work continued throughout 1967 on the revision of the Industry Selling Price Indexes and it is planned to publish the revised series in 1968, at least for the period since 1961. The revision includes an updating of the weighting system from 1953 to 1961, a change in time base from 1956 to 1961-100 and the introduction of the 1960 Standard Industrial Classification to replace the 1948 S.I.C.

The revised Price Index of Commodities and Services Used by Farmers (Operating Inputs) and its components will be published monthly on a 1961 time base early in 1968. In addition to a review of concepts, the item content and weighting patterns have been updated and the price samples revised.

Plans are being developed to update the national and regional city Consumer Price Indexes reference

base to 1961 early in 1968. Some progress has been made in expanding and improving the collection of retail price data.

During the year, a research unit was established in the Transportation Statistics Division to review and examine existing transportation series relative to the requirements of both internal and external users.

A commitment to provide additional information was made to the former Canadian Maritime Commission in line with its new duties and responsibilities as part of the new Canadian Transport Commission. Also, early in 1966 the Bureau agreed to become the collection agency for the statistical requirements of the Department of Transport and the Board of Broadcast Governors. A glossary of technical terms on the radio and television broadcasting industry has been developed, and should be available early in 1968. Considerable progress has been made with a new series on Community Antennae (TV) Systems.

During the year, the Aviation Statistics Centre has extended and improved its services to the Air Transport Board and the Department of Transport. In connection with the latter's airport development program, the Centre has expanded its survey of aircraft movements; monthly and annual data on over 160 airports are now available.

The collection of Canadian railway freight traffic on the basis of the DBS Standard Commodity Classification has been delayed because of difficulties in producing a magnetic tape which would move permit conversion from the U.S. Standard Transportation Commodity Classification.

The quarterly Motor Transport Traffic Survey, which has been conducted on a national basis for the past ten years, was discontinued in its present form at the end of 1967. The Bureau is working closely with trucking industry associations at provincial and national levels on a proposed two-part survey of truck fleets and individual trucks. Field testing is expected to be undertaken in 1968 and it is hoped to begin the new survey in 1969.

A study and test are now under way to investigate the feasibility of a new sample design for Retail Sales estimates which would involve the use of area sampling and an extension of the lists used for the employment surveys. If the study proves that such a design is operationally feasible, the new sample will be in use by mid-1969. There is also a continuing effort to improve timeliness, by producing early estimates for all of Canada for store types (based on smaller coverage than the provincial estimates) and publishing these in the **Daily Bulletin** some two weeks before the full monthly report.

The Census of Merchandising is now not decennial but quinquennial. The first quinquennial Census is for the year 1966. This is a somewhat simplified

Census, omitting some detailed questions. The Census was planned to provide quickly, benchmark measures of total employment, payroll and sales or revenue, by store type (or kind of business), by trades, and by a maximum number of small geographical units. Advance reports, giving basic geographical analysis, by kind of business, will be released in March or April 1968. All other reports in the census series will be published during that year.

An annual survey of wholesale trade which will give principal statistics for about 150 kinds of business and six types of operation for the five regions of Canada is under development. In a few months the initial bulletin in this program will be published, containing wholesale trade statistics for 1964 and 1965.

Further, in each quinquennial Census year, the annual **wholesale** trade survey will be considered as occurring within a total census effort, so that all trade data may be as comprehensive and closely related as possible. For example, in the census year 1966, the annual wholesale trade survey has been expanded to provide standard census statistics for the provinces, principal cities, towns, counties and census divisions, and a special series of census-type reports is planned. The first report should be printed by July 1968, with the remainder to be published during the year.

The new survey of voluntary groups of grocery and combination stores for the year 1963, 1964 and 1965 was carried out in 1967. It is anticipated that a companion study, on voluntary chains in non-food kinds of business (i.e., drug stores, hardware stores and automobile accessories dealers), for the year 1964 and 1965, will be available by the first quarter of 1968.

The results of a survey of Advertising Expenditures in Canada for 1965, (Catalogue No. 63-512) will be available shortly. The last comprehensive survey was for 1954. As in the 1954 survey, ratios of total advertising expenditures to sales will be calculated for about two hundred manufacturing, wholesale, retail and service industries. A feature of the 1965 survey will be a tabulation of external advertising expenditures by advertising medium, by industry. From now on it is the intention of DBS to repeat this survey every five years.

The first three-year cycle of a survey of retail operating results is nearing completion. The food trades were surveyed for 1963 and reports published. The general merchandise, clothing, hardware, furniture and appliance trades were surveyed for 1964 and publication is proceeding. The automotive, drug, fuel, tobacco, jewellery and remaining trades were surveyed for 1965 and bulletins will begin to appear in a few months. Another cycle began in 1967 with a survey of the food trades for 1966.

To meet new demands for statistics arising from rapid changes in the structure and technology of agriculture, increasing attention is being given to more specialised and sophisticated method of data collection and processing such as random sampling, probability sampling frames, delineation of more homogeneous strata within the farm universe, etc. Work is continuing in application of "objective yield measurements" to obtain pre-harvest production estimates for apples in British Columbia, and winter wheat, sour cherries, peaches and grapes in Ontario. Probability sampling of area segments was experimentally introduced.

New surveys were begun on the production of forage crop seeds, on areas and yields of the principal processing vegetables, on the value of hair and fur seal pelts, and on the quantities of frozen vegetables held in commercial storage facilities for re-manufacture. An index of physical inputs for the agricultural industry is under way. Estimates for crop acreages and livestock numbers for the years 1962 to 1965 are being revised according to the benchmark data from the 1966 Census of Agriculture. A master list of farm operators, and the addressing of survey questionnaires have been computerized completely.

The Sampling and Survey Research Division undertook four projects in 1967 analysing the coverage and content errors of the 1966 Census of Population and Agriculture (1) to estimate the number of **persons** not enumerated, by province as well as by broad age groups, (2) to estimate the under - and over - enumeration of **households** and the content error, (3) to enumerate a sample of area segments and farms within these segments by specially trained enumerators, using detailed questionnaires, and compare the results with those of the Census of Agriculture, and (4) to determine whether persons who move a few months prior to the Census are more likely to be missed than the rest of the population.

In September 1967, the census test of the self-enumeration procedure mentioned in last year's note was carried out in London, Ontario. The main purpose of the test was to determine the feasibility of implementing this census technique in future Canadian censuses. In preparation for the 1971 Census, research was carried out to produce proposals for a new system of census divisions in Saskatchewan.

The Health and Welfare Division arranged to have a question about contacts with physicians placed on the monthly labour force schedule on three occasions six months apart. The results will be summarized by age, sex, area and type of contact, and will be published in special reports.

A survey of salaries of graduate nurses employed in the public general and allied special hospitals of Canada was conducted in the spring of 1967. Nurses

were classified by employment category, educational qualifications, whether registered or not registered, and also whether a member of a religious order or not. This was the first salary survey conducted by the Dominion Bureau of Statistics on an employment group in hospitals. Publication of the results is planned.

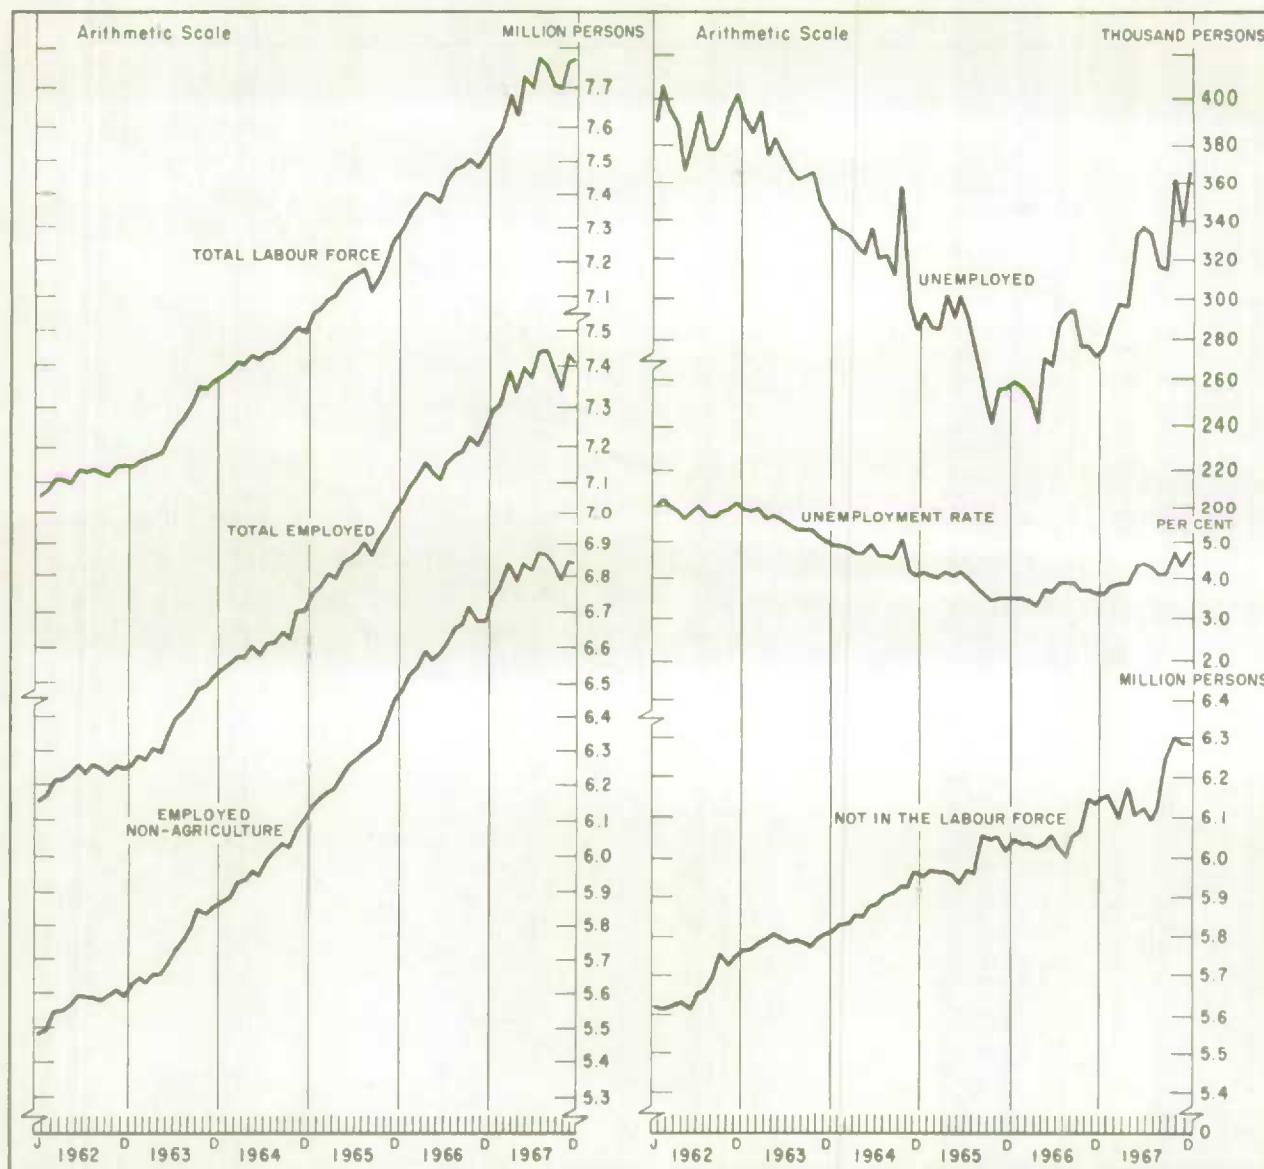

A separate section in the Health and Welfare Division was set up in April 1967 to deal with mental morbidity statistics. Reporting of patients admitted to institutions treating mental disorders has been considerably extended. Tabulations to be included in annual mental health publications have been expanded to include sections devoted to each type of institution, detailed length of stay tables, and aggregate days utilized by various groups of patients; demographic variables, such as marital

status, are considered in greater detail or specificity. Further improvements are planned, such as analyses of first admission in terms of length of stay and other variables.

The complete computerization of annual processing of data pertaining to births, deaths, marriages, and stillbirths was initiated during 1967. Historical data from 1950 will be compiled. The Vital Statistics Council for Canada, made up of representatives of provincial registration authorities and the Bureau, is expected to complete during 1968 its review of statistical, administrative, and legal uses of items on present birth, marriage, and death registration forms. Vital record linkage by computer technique is being explored as an alternative to adding items of a social or demographic character to the present provincial records.

LABOUR FORCE (More detail in Table 19)

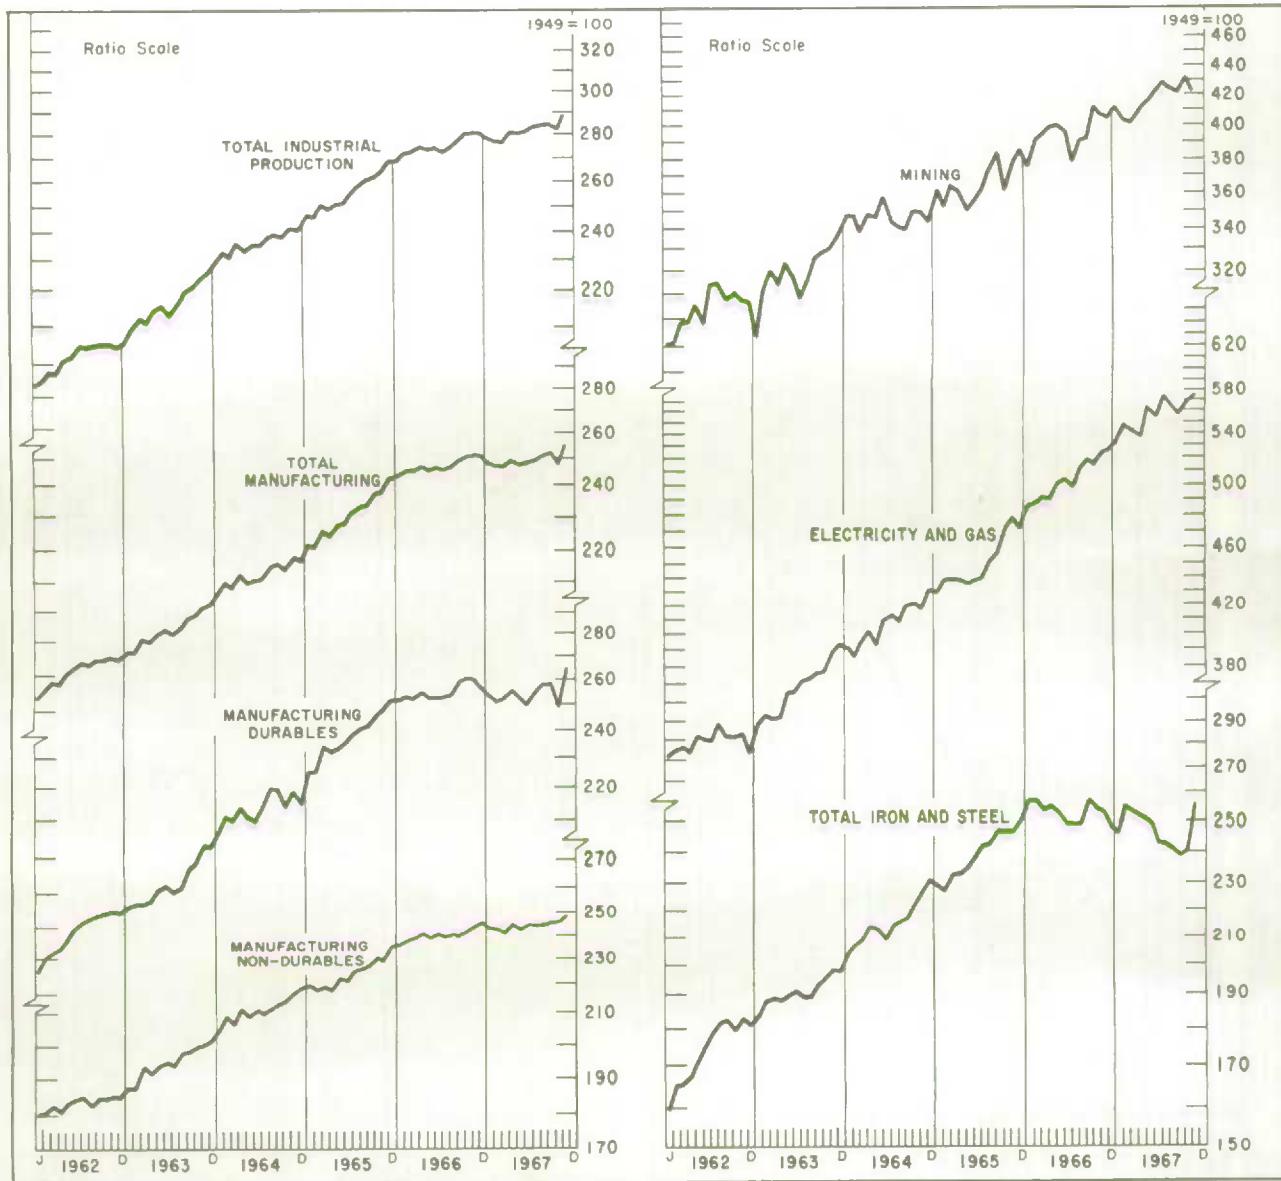

EMPLOYMENT DECLINED IN DECEMBER WHILE UNEMPLOYMENT INCREASED. TOTAL LABOUR FORCE WAS VIRTUALLY UNCHANGED. UNEMPLOYMENT WAS 4.7 PER CENT OF THE LABOUR FORCE.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Sources: Quarterly Bulletin, Department of Manpower and Immigration.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate.

Sources at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹The unemployed as a percentage of the labour force for each region. Due to weighting differences, a simple average of the regional rates will not give the seasonally adjusted Canada rate on page S-1, nor the unadjusted Canada rate in table 19. Source: The Labour Force, (71-001) D.B.S.

Table 25: not in the labour force by region¹ (thousands of persons)

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

*Revised monthly data will be available later.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Production of tobacco products, as indicated by the sale of excise duty stamps. ²Includes smoking and chewing tobacco. ³Includes smoking, chewing and twist tobacco. ⁴Stocks of redried domestic and imported leaf at end of quarter. ⁵The production of beer is shown in thousand barrels of 25 gallons each. ⁶Includes bottling of imported liquors. Excludes rebottling and intra-industry transfers. ⁷End of period; spirit stock balance remaining in bond for all Canada plus distillery stock in process of being manufactured.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ³Customs exports. ⁴Mill shipments destined for export.

¹Data on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included.²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
¹Includes crude oil, condensate and pentanes plus.
²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes.
³Gross new production by field less field flared and waste, Canadian sources only.
⁴By gas utilities, Canadian sources only.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Source: Refined Petroleum Products (45-004), D. B. S.

Revised '66 - means 1966 is revised only.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. ²Planks and boards, flooring and square timber. ³Hollow blocks including fireproofing and load-bearing tile. ⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. ⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e., farmers, values are stated at wholesale prices, i.e., cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁶Quotations refer to steers of all weights. ⁷Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001). D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.

¹Monthly totals for current years are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

²Includes also seaweeds and other species such as whales, worms etc.

³Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s., and fishery foods and feeds n.e.s.

⁴Total holdings (all farms) of fresh and smoked frozen fish. Sources: Monthly Review of Canadian Fisheries Statistics (24-002), Trade of Canada, Exports (65-004), D.B.S.

¹Department store stocks at end of period at selling value. The series on "total sales, all departments" is a revised series based on the results of the 1961 Census of Merchandising and Service Establishments, (see also column 5, Table 85). The departmental breakdown for the months prior to January 1967 has not been adjusted to the new basis. The stock series at the total level and by component for the period prior to 1967 are based on the 1951 Census. Sources: Department Store Sales and Stocks (63-002), D.B.S.

¹The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. ²Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

Source: Trade of Canada, Imports (65-007), D.B.S.

¹Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors.

^aThe definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ^bAs is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ^cIncludes also the furniture and furnishings industry. ^dIncludes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ^eIncludes tobacco products, leather and miscellaneous manufacturing industries. ^fIncludes also storage and communication industries. ^gIncludes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

¹This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loans and advances, or from accumulations on annuity, pension and insurance funds. ²For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1967-68. Figures are rounded and may not add to totals. ³March includes supplementary payments arising from the closing of the accounts.
