

# Canadian Statistical Review

November 1969

## ARTICLE:

Publication of 1961  
Input-Output Tables  
for Canada

## SYMBOLS

The following standard symbols are used in this and other DBS publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (See page 8).

### NOTE TO USERS

#### **Reprints and Publications**

Reprints of articles and technical notes are available free on request to the General Time Series Staff, DBS.

A list of other publications available appears on the inside back cover.

#### **About the Tables**

Changes occur from time to time which affect time series published in this Review. For all series included, historical data are included in CANSIM (Canadian Socio-economic Information Management System), which is the DBS computerized time series data bank, and are revised and updated immediately information becomes available. In instances where the continuity of a series is seriously affected by changes such as in the Standard Industrial Classification, CANSIM contains both the unrevised historical data (as a closed file), and the new revised series with its shorter history.

**The MCD – Months for Cyclical Dominance**, shown for seasonally adjusted series, is explained on page 8.

#### **Revised National Income and Expenditure Accounts, 1968 and 1969 (pages 105 - 107)**

DBS recently released the summary results of a complete and comprehensive revision of the National Income and Expenditure Accounts. This revision was carried out at the annual level only; a revision of quarterly estimates is now underway and will not be available for some time. During the interim period, 1968 quarterly data previously published have been restructured into the new framework of the accounts and then adjusted arithmetically to the new annual totals; these revised estimates have been linked forward for the first two quarters of 1969. Data are given for the income and expenditure tables only and for GNE in constant (1961) dollars; a full set of tables will be prepared at the time of the fourth quarter.

#### **Changes in this Issue**

**National Income and Expenditure Accounts (Page S-9).** — Revised seasonally adjusted data arising from the historical revision of the National Income and Expenditure Accounts are presented on page S-9. The series Personal Expenditure on Consumer Goods and Services replaces the Personal Disposal Income series, which is not yet available on a revised basis. Revised annual data from 1964 to 1968 are shown on the graphs, along with the quarterly series from 1968 to date. The annual series were published in the September 17 issue of the Weekly Supplement.

**Employment Indexes (Tables 28 and 29 and Page S-3).** — The seasonally adjusted data for employment indexes have been revised from 1961 to date. Revised data are available on request.

**Average Hourly Earnings and Average Weekly Hours in Manufacturing (Page S-4).** — The seasonally adjusted data for average hourly earnings and average weekly hours have been revised from 1961 to date. Revised data are available on request.

## PUBLICATION OF 1961 INPUT-OUTPUT TABLES FOR CANADA

T. Gigantes\*

### Introduction

Input-Output Accounts contain detailed and comprehensive information on the origin (domestic and imported) of individual commodity groups, and on their disposition to industrial users and to final consumers — persons, governments, industries (on capital account) and non-residents (exports). They also contain the cost structures of individual industries. This information is of interest to businesses, governments and academics concerned with market and industrial analysis. These Accounts are also used as the basis for models of the operation of the economy. The data embodied in a set of Input-Output Accounts describe the structure of demand and of productive activity in a particular year. It has been found that many of these structural relationships have considerable stability even when the conditions under which they were first observed change.

The construction of economic models based on the information contained in Input-Output Accounts rests on the observation that the process of production, in modern technological societies, is roundabout. To produce an automobile, for example, requires the efforts not only of those who are in the automobile industry, but also of those who are concerned with the production of steel, aluminum, rubber, textiles and the myriad of other materials and services which are embodied in automobiles. In turn the production of steel, aluminum, rubber, etc. is only possible if yet other materials and services have been produced and are available. Thus the production of automobiles, and indeed of any other product, implicates a long chain of production which links many of the human, material and technological resources of the economy.

Now if the human, material and service inputs into automobiles are stable in relation to the output of automobiles, and if, in turn, the requirements for producing steel, aluminum, rubber, etc. are stable, and so forth, then through mathematical models based on Input-Output Accounts it is possible to estimate the impact of the (final) demand for automobiles not only on the production of the automobile industry but also on the production of all the other industries which are involved, however indirectly, in the production of automobiles; similar estimates can be made for any other commodity. Input-Output models thus make it possible to study technological interdependence and to trace the propagation of demand through the economic system. Moreover, these models can be formulated so that the incomes and revenues generated by industrial activity in turn determine the level and composition of a large proportion of final demand. In this way, Input-Output models can be made to stimulate the circular flow of economic activity.

Of course, Input-Output models present a simplified account of economic interdependence. Since their inception they have undergone many changes designed to make them more realistic, but it is inevitable that they will continue to be very simple constructs compared to the complexity of economic systems. In this they are not unique; all models of economic behaviour represent a simplification of reality.

Because Input-Output models present economic relations in a highly disaggregated form, they lend themselves to analyses which are not possible with aggregative models, particularly where the interdependence of sectors of the economy is being studied. They have been used throughout the world for a variety of analytical purposes by governments, businesses and universities.

The Dominion Bureau of Statistics has recently published, in two volumes, a set of Canadian Input-Output Tables for the year 1961:

DBS Catalogue No. 15-501 "The Input-Output Structure of the Canadian Economy, 1961 — Volume 1", Price: \$4.00.

DBS Catalogue No. 15-502 "The Input-Output Structure of the Canadian Economy, 1961 — Volume 2", Price: \$3.00.

Volume 1 contains: (a) a description of the conceptual framework of the accounts; (b) a description of some analytical uses; (c) the classification systems for commodities and industries; (d) the Accounts themselves in relatively aggregated form; (e) analytical tables derived from these Accounts.

Volume 2 contains the Input-Output Accounts and the corresponding analytical tables in more detail. (All of the descriptive material relating to the tables in Volume 2 is contained in Volume 1.)

All of these tables are preliminary; they will be published in final form as soon as reconciliation with the revised base period (1961) estimates of the Income and Expenditure Accounts is completed.

These publications carry a general heading, "System of National Accounts", thus formally incorporating Input-Output Accounts as part of such an integrated system in Canada. Chapter 1 of Volume 1 provides a brief outline of the relationship of the Input-Output Accounts to the System of National Accounts and, in particular, to the Income and Expenditure Accounts and the Indexes of Real Domestic Product by Industry.

\* Mr. Gigantes is Co-ordinator of Input-Output Research Development in the Economic Statistics Branch of the Dominion Bureau of Statistics.

## Some Features of the Accounts and Analytical Tables

The Canadian 1961 Input-Output Accounts have features which are not characteristics of conventional Input-Output Accounts. In the latter, both the intermediate inputs of industries and the outputs of industries are shown in a single table, the rows of which contain the flows of the output of each industry to the industries which use this output as an intermediate input, while the columns contain the intermediate inputs of each industry, all measured in dollar values. Such a table is square, i.e., has the same number of rows and columns, both of which are classified by industry.

In the 1961 Canadian Accounts, commodities (goods and non-factor services) are clearly distinguished from industries, the number of commodities being greater than the number of industries. Separate rectangular tables are presented for outputs and inputs. The output table shows the

values of commodities produced by industries; the input table shows the values of commodities used by industries.

The introduction of commodities as a dimension of the system has a number of advantages; industries are portrayed as groupings of establishments which absorb a number of commodity and primary inputs to produce a number of commodity outputs. This formulation of the system poses explicitly a problem which is implicit in conventional Input-Output analysis, namely, the way in which the demand for a commodity is to be distributed among the industries which produce that commodity. The analytical tables based on the Canadian Accounts therefore require, in addition to the traditional production functions, marketing functions which distribute commodity demands to producing industries.

The framework of the 1961 Canadian Accounts is depicted in Diagram 1:

DIAGRAM 1<sup>1</sup>

	Commodities	Industries	Categories of Final Demand
Commodities		1	2
Industries	3		
Imports	4		
Categories of Primary Inputs		5	6

<sup>1</sup> In the context of this diagram, a matrix consists of a rectangular array of dollar value figures. For example, if there are 40 commodities and 16 industries, then Matrix 1 has 40 rows (one for each commodity) and 16 columns (one for each industry).

Matrix 1 contains the values of intermediate commodity inputs of industries. Matrix 2 contains the final uses of commodities classified according to categories of final users. In the recently published preliminary Accounts the classification of categories of final users is highly aggregated. In the final version of the Accounts these categories will be expanded to include the following:

- (a) Personal expenditures on consumer goods and services classified according to the categories of personal expenditure as defined in the Income and Expenditure Accounts.
- (b) Government expenditure classified by two levels of government and by function (e.g., education, health, defence, etc.).

(c) Gross fixed capital formation. (The Bureau is attempting to compile a capital input table for a highly aggregated grouping of industries. It is not clear yet that this attempt will be successful.)

- (d) Value of the physical change in inventories.
- (e) Exports classified by country of area of destination.

For any commodity, the entries in Matrices 1 and 2 of Diagram 1 represent demand. The corresponding supply is contained in Matrices 3 and 4. Matrix 3 contains the value of the domestic production of each commodity classified according to the industry which produces it. Matrix 4 has a single row which contains the competing imports of each commodity.

Matrices 1 and 2 contain the expenditures of industries and categories of final expenditure on commodities. The balance of the expenditures of industries and categories of final expenditure is contained in Matrices 5 and 6. These are expenditures on primary inputs which in the 1961 Canadian Accounts include the following:

- (a) Non competing imports
- (b) Balance of payments adjustment
- (c) Commodity taxes
- (d) Subsidies
- (e) Indirect taxes and government services
- (f) Wages, salaries, and supplementary labour income
- (g) Net income of unincorporated business
- (h) Surplus

The valuation of the commodity entries in all these tables is at producers' prices. However, the relevant matrices of margins have been calculated so that the tables can be expressed at purchaser's prices if required.

The tables have been compiled for 187 industries and 644 commodities. At that level of detail many entries are confidential under the relevant provisions of the Statistics Act. The tables are published at three levels of aggregation involving 16 industries and 40 commodities, 65 industries and 65 commodities (both published in Volume 1) and 110 industries and 197 commodities (published in Volume 2). Arrangements are being made to provide this information to users in machine-readable format upon request.

In addition to the dollar value Accounts and the corresponding coefficient tables, a number of analytical tables are published. These have the same function as conventional Leontief inverses,<sup>1</sup> except that some of them are rectangular. They

---

<sup>1</sup> See W. Leontief, *The Structure of the American Economy, 1919-1939* (2nd edition), Oxford University Press, 1951.

show the direct and indirect effects on industry outputs of a dollar of final demand for each commodity. The direct and indirect effects on primary inputs of a dollar of final demand for each commodity are also published; the direct and indirect effects on commodity outputs can be computed. Thus, these analytical tables can be used to estimate the levels of industry outputs, primary inputs, commodity outputs and, in some cases, the levels of competing imports associated with any given configuration of final demand classified by commodity. Such configuration might, for example, stimulate particular government expenditure policies which are being evaluated or they might represent final demand projections for future periods.

Tables which allow transformation of levels of final demand valued at purchasers' prices to those at producers' prices are also provided.

These analytical tables are based on models which involve two sets of assumptions: that the input coefficients of each industry are stable; that the market shares of industries in the production of each commodity are stable.<sup>2</sup> These are not the only assumptions or models that are possible given the 1961 Canadian Tables; the framework can be used to formulate a variety of models, some of which are discussed in the text of Volume 1.

#### Future Plans

The Bureau intends to continue its programs of compiling and publishing Input-Output Tables and of carrying out research on Input-Output techniques. In the immediate future the Bureau's priorities involve the establishment of automated flows of data to the Input-Output projects so that the time involved in compiling Input-Output Tables can be curtailed. The Bureau is also experimenting with the use of mathematical updating techniques in conjunction with information available annually to set up a routine for updating Input-Output Tables on a regular basis.

---

<sup>2</sup> One set of analytical tables extends this assumption to competing imports which are also assumed to preserve their share of the market.

## CANSIM

(Canadian Socio-economic Information Management System)

CANSIM is a fully computerized time series data bank developed in the DBS. All or any part of the data bank contents (currently some 8000 time series) may be purchased either in machine readable form (magnetic tape, cards) or as a computer print-

out. Details of this service are contained in the various CANSIM documents listed on the inside back cover and in the CANSIM note on page iv of the August 1969 issue.

---

### TECHNICAL NOTES

Presented below is a list of technical notes published in previous issues of the Review.

1. Index of Real Domestic Product (Including the Index of Industrial Production).  
(August 1968)
2. Consumer Price Index. (September 1968)
3. Consumer Price Indexes for Regional Cities. (November 1968)
4. Manufacturing Inventories, Orders and Shipments, Historical Data. (January 1969)
5. Wholesale Trade. (June 1969)
6. Canadian Inter-city Retail Price Differentials. (June 1969)

## SELECTED ECONOMIC INDICATORS

### SEASONAL ADJUSTMENT

A number of important economic time series are presented in unadjusted and seasonally adjusted form in the Canadian Statistical Review. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with

variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

### MCD — MONTHS FOR CYCLICAL DOMINANCE

In seasonally adjusted series, month-to-month changes are often dominated by irregular movements, which may obscure the underlying trend-cycle. The MCD (months for cyclical dominance) in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the

irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth the series. The smoothed series will show the cyclical movements as clearly as series with an MCD of 1.

### SMOOTHING OF SEASONALLY ADJUSTED SERIES

Smoothed data have been used for the graphs of some of the seasonally adjusted series with

MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

## LABOUR FORCE (More detail in Table 19)

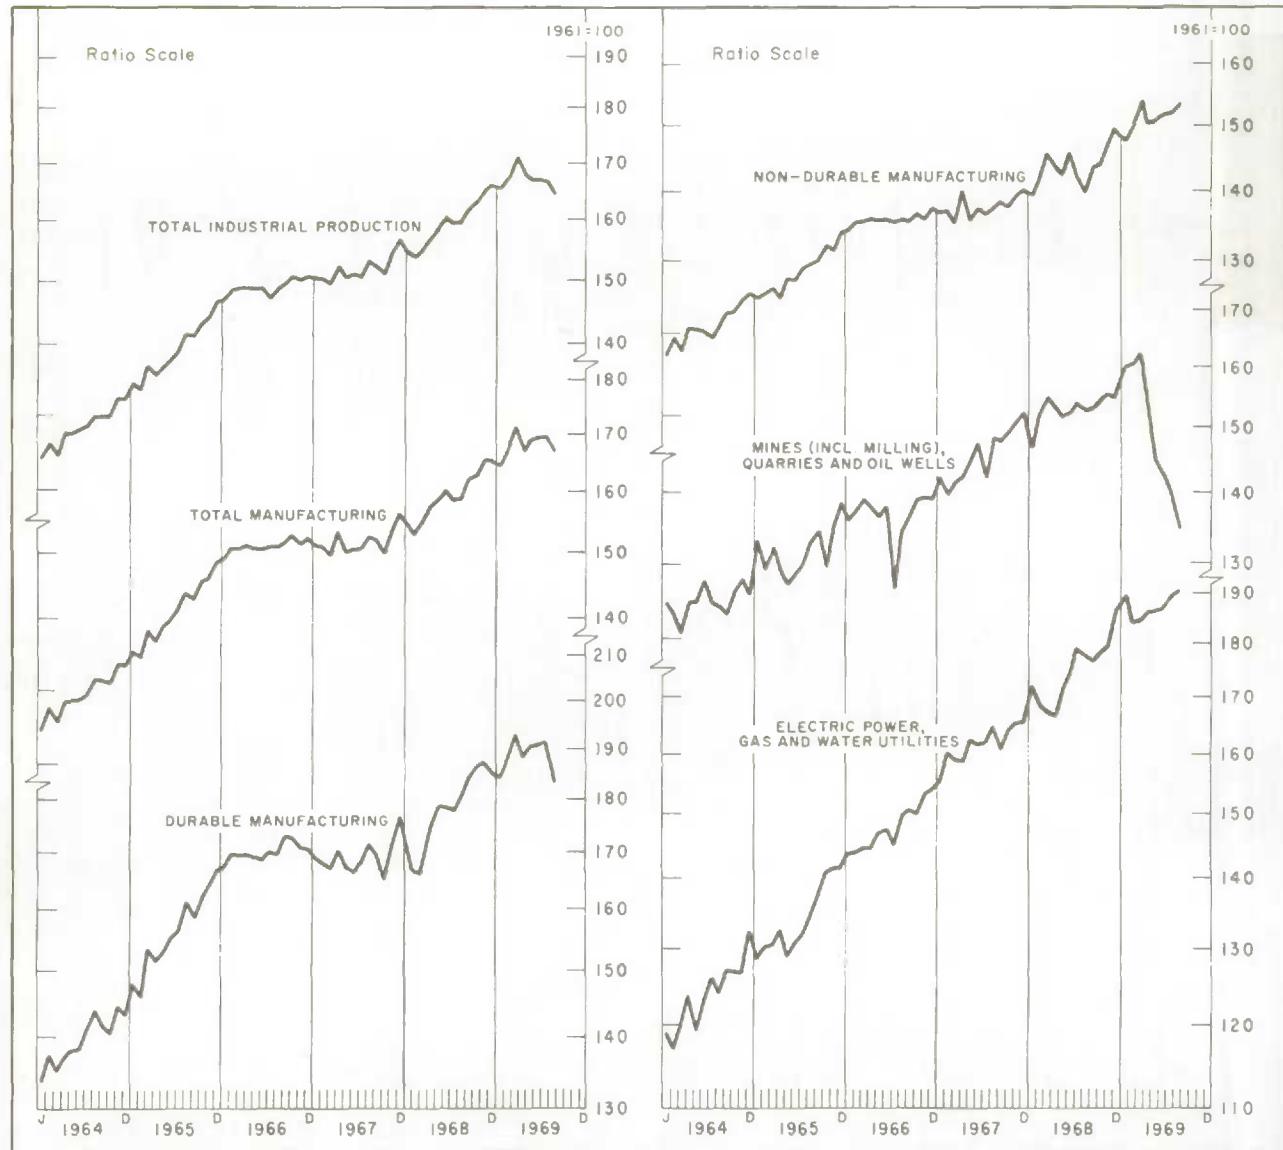

TOTAL LABOUR FORCE AND UNEMPLOYMENT INCREASED IN SEPTEMBER, WHILE EMPLOYMENT WAS UNCHANGED.  
UNEMPLOYMENT WAS 5 PER CENT OF THE LABOUR FORCE.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
	thousands			thousands	per cent	thousands
M.C.D.	2	2	2	2	2	2

## INDUSTRIAL PRODUCTION (More detail in Table 16)

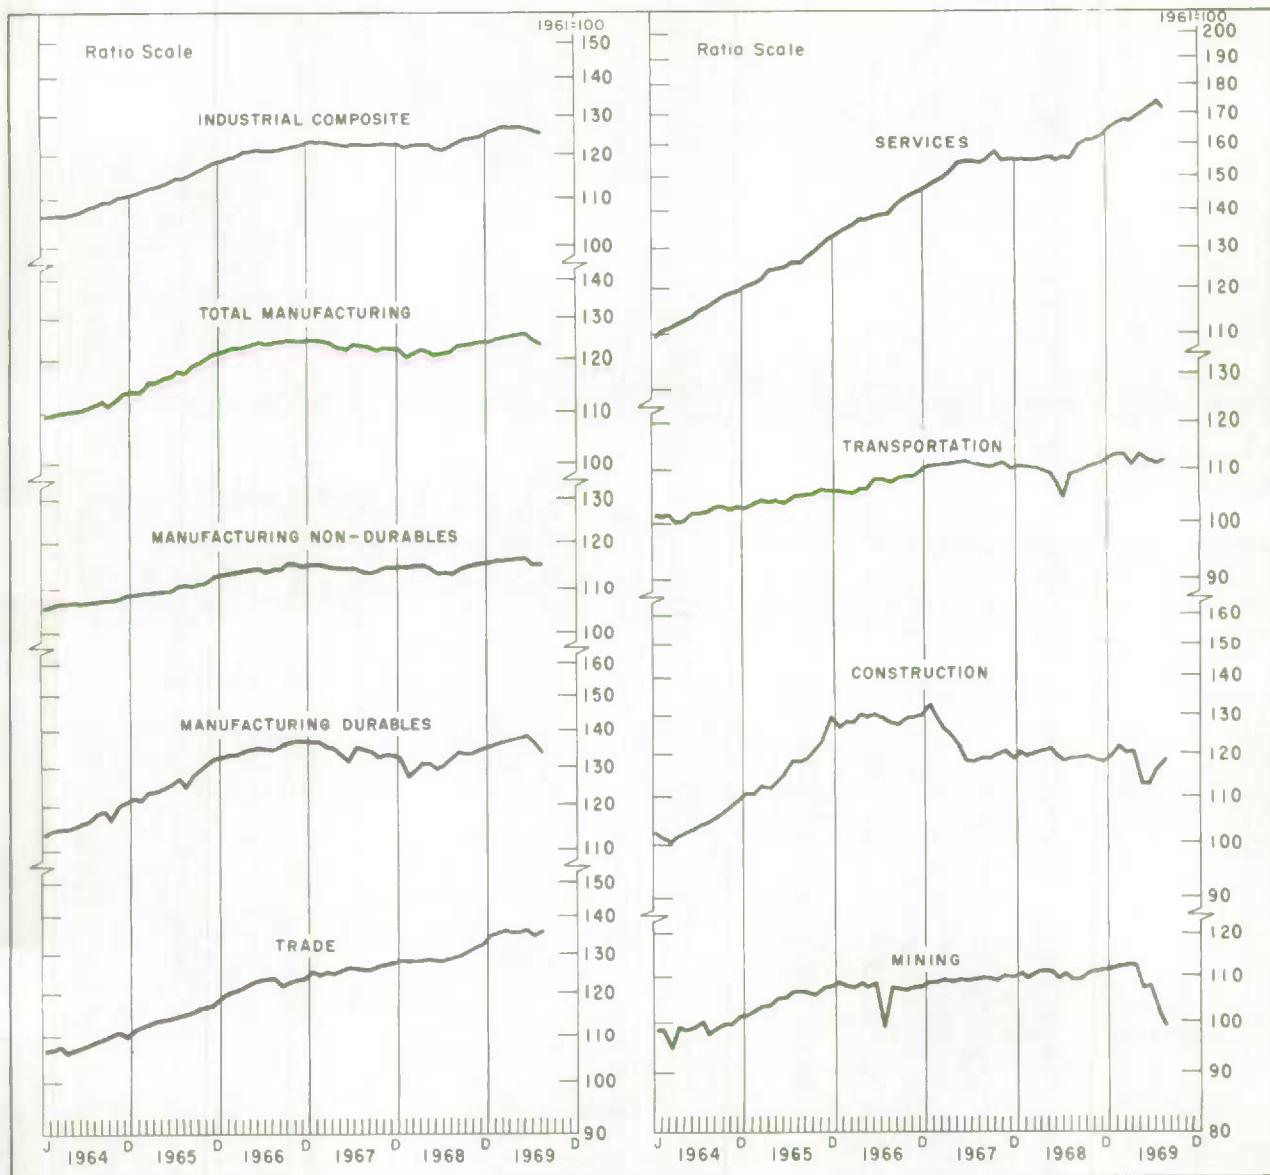

THE INDEX OF INDUSTRIAL PRODUCTION DECLINED IN AUGUST. MANUFACTURING AND MINING DECREASED, WHILE UTILITIES MOVED UP SLIGHTLY. WITHIN MANUFACTURING GAINS IN NON-DURABLES WERE MORE THAN OFFSET BY A DROP IN DURABLES.

	total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)	
		total	durables	non-durables	mines (incl. milling), quarries & oil wells	electric power, gas & water utilities
1968						
J	154.7	154.0	171.4	139.8	147.0	172.2
F	154.2	153.0	166.8	141.7	152.0	168.3
M	156.0	154.9	166.5	145.5	154.6	167.2
A	157.5	157.2	174.5	143.0	153.1	166.8
M	158.8	158.6	178.6	142.3	151.5	171.2

<sup>1</sup>The effect of the delay in the receipt of customs import documents has been adjusted for the period April 1966-July 1967 for total imports, total trade with the United States, the United Kingdom and Other Countries.

## SELECTED MONTHLY SERIES (More detail in Tables 40, 90, 98 and 108)

SHIPMENTS AND ORDERS DECLINED IN AUGUST WITH NEW ORDERS SHOWING THE LARGEST DECREASE. INVENTORIES WERE VIRTUALLY UNCHANGED.  
 IN SEPTEMBER TONS OF RAIL REVENUE LOADED RECOVERED PARTIALLY FROM THE UNUSUAL LOW VALUES IN THE PREVIOUS FOUR MONTHS.  
 IN AUGUST THE VALUE OF CHEQUES CASHED DECLINED FROM THE HIGH JULY VALUE.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. <sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

<sup>2</sup>Includes residual error of estimate.

<sup>3</sup>Revised data arising from the historical revision of the National Income and Expenditure Accounts are presented on pages 105-107 of this issue.

<sup>1</sup>See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force, (71-001) D.B.S.

<sup>1</sup>The unemployed as a percentage of the labour force for each region. Due to weighting differences, a simple average of the regional rates will not give seasonally adjusted Canada rate on page S-1, nor the unadjusted Canada rate in table 19.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.<sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. <sup>3</sup>The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries.

<sup>1</sup>The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing, trapping and public administration and defence. <sup>3</sup>Includes storage, electric power, gas and water utilities. <sup>4</sup>Excludes domestic service. Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.

<sup>1</sup>Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. <sup>2</sup>These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>4</sup>Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders In Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing shipments<sup>1</sup> by industry based on the 1960 standard industrial classification (million dollars)

monthly averages or months	total shipments	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

<sup>1</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>2</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export.

<sup>1</sup>Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. <sup>5</sup>Data on shipments of steel shapes to consuming industries are being withheld pending settlement of strikes in this industry. Source: Primary Iron and Steel (41-001), D.B.S.

<sup>1</sup>Production plus imports less re-exports.    <sup>2</sup>Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past.    Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.

<sup>1</sup>Barrels of 35 Canadian gallons. <sup>2</sup>Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. <sup>3</sup>Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. <sup>4</sup>Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. <sup>5</sup>Includes inventories at end of period being held at gas plants and in storage caverns. <sup>6</sup>Includes stove oil, kerosene and tractor fuel. <sup>7</sup>Includes aviation gasoline and aviation turbo fuel. <sup>8</sup>Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. <sup>9</sup>Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. <sup>10</sup>Sources: Refined Petroleum Products (45-004), D. B. S.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: New Residential Construction (64-002), D. B. S.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

<sup>1</sup>These indexes are available for January, April and August only. <sup>2</sup>Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. <sup>3</sup>Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. <sup>4</sup>Barley No. 1 feed; hogs grade "B" alive. <sup>5</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. Effective January 1969 as a percentage of the price of 110 lbs. live hog. <sup>6</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. <sup>7</sup>Quotations refer to steers of all weights. <sup>8</sup>Grade "B" hogs. Effective January 1969 prices based on index 100, hogs. <sup>1</sup>Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. Sources: Retail Trade (63-005), D.B.S.

Table 85: value of retail trade by type of business and province, based on the 1960 standard industrial classification - concluded

<sup>1</sup>Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. <sup>2</sup>Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 and 1969 figures are not comparable with the data of previous years. Source: Department Store Sales and Stocks (63-002), D. B. S.

<sup>1</sup>Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. <sup>2</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. <sup>3</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D.B.S.

<sup>1</sup>Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. <sup>3</sup>United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. <sup>4</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>5</sup>Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

<sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. <sup>1</sup>The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). <sup>2</sup>As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. <sup>3</sup>Includes also the furniture and furnishings industry. <sup>4</sup>Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. <sup>5</sup>Includes tobacco products, leather and miscellaneous manufacturing industries. <sup>6</sup>Includes also storage and communication industries. <sup>7</sup>Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

<sup>1</sup>The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. <sup>2</sup>The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. <sup>3</sup>Combines the industrials, utilities and finance common stocks. <sup>4</sup>Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. <sup>5</sup>Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. <sup>6</sup>Stocks included in the mining index are for producing mines.

<sup>1</sup>This statement includes only receipts relating to Budgetary Revenue. Excluded are Non-Budgetary Revenues such as Old Age Security Fund Taxes, Prairie Farm Assistance Act Levies, Employer and Employee Contributions to Government Held Funds (Unemployment Insurance, Superannuation etc.), Interest on Government Held Funds, and Taxes collected on behalf of and transferred to Other Governments. <sup>2</sup>For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1967-68. Figures are rounded and may not add to totals. <sup>3</sup>March includes supplementary payments arising from the closing of the accounts.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. <sup>1</sup>This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. <sup>2</sup>Under the Technical and Vocational Training Assistance Act. <sup>3</sup>Government contributions under the Hospital Insurance and Diagnostic Services Act. <sup>4</sup>Includes treatment and rehabilitation services. <sup>5</sup>For comparison purposes, annual figures for 1965-66 and 1966-67 represent "Grants to Universities - Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). <sup>7</sup>As of April 1, 1969 Industry and Trade and Commerce are combined. <sup>1</sup> Includes the withholding tax applicable to this item.<sup>2</sup> Includes an arbitrary smoothing of crop production and standard seasonal adjustments for withdrawals of grain from farm stocks and the change in live-stock items. Because of the arbitrary elements, too precise an interpretation should not be given to the seasonally adjusted figures of accrued net income of farm operators.<sup>3</sup> Includes net income of independent professional practitioners.<sup>4</sup> See Schedule 1, Table B.

10 Non-residential construction .....	4,432	4,420	4,468	4,632	4,488	4,580	4,616		
11 Machinery and equipment .....	5,276	4,856	5,056	5,008	5,049	5,228	5,344		
12 Value of physical change in inventories .....	524	400	768	1,272	741	1,376	720		
13 Government .....	4	24	48	40	29	- 4	12		
Business:									
14 Non-farm .....	284	392	672	544	473	1,004	- 92		
15 Farm and grain in commercial channels <sup>3</sup> .....	236	- 16	48	688	239	376	800		
16 Exports of goods and services <sup>4</sup> .....	16,116	16,692	16,592	17,368	16,692	18,340	17,944		
17 Deduct: Imports of goods and services <sup>4</sup> .....	- 16,644	- 16,484	- 17,012	- 17,844	- 16,996	- 19,016	- 19,024		
18 Residual error of estimate .....	256	528	616	672	544	628	652		
19 Gross national expenditure at market price .....	69,080	70,292	71,920	74,524	71,454	76,576	77,276		

<sup>1</sup> The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table A.)

<sup>2</sup> Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" DBS Catalogue No. 67-001, are for 1968.

Exports .....	3,586	4,290	4,443	4,388	16,707
Imports .....	3,829	4,348	4,149	4,625	16,951

<sup>3</sup> In the seasonally adjusted series, the value of grain production in each quarter is taken as one-fourth of the estimated value of crop production for the year as a whole. All other items in the farm inventories series are seasonally adjusted by standard techniques.

<sup>4</sup> Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" DBS Catalogue No. 67-001, are for 1968:

Exports .....	16,128	16,648	16,576	17,476	16,707
Imports .....	16,580	16,360	16,968	17,896	16,951

<sup>1</sup> The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter prior change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter comparisons based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>2</sup> Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" DBS Catalogue No. 67-001, are for 1968:

Exports..... 3,129     3,727     3,810     3,829     14,495  
Imports ..... 3,380     3,834     3,639     4,082     14,935

\* Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" DBS Catalogue No. 67-001, are for 1968:

Exports..... 14,024     14,436     14,376     15,144     14,495  
Imports ..... 14,684     14,440     14,960     15,656     14,935

Title and Description

### Canadian Statistical Review Supplements

- 11-004 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by the DBS and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series.

- 11-206 *Annual Supplement to the Canadian Statistical Review*—Price \$1. (Free to *Canadian Statistical Review* subscribers).

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series in the "S" section of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available.

### Other Statistical Publications

- 11-503 *Historical Monthly Statistics* (Occasional)—Price \$1.50 (Released January 1964).

Contains monthly statistics extending into the inter-war period or longer for 33 selected series in the fields of prices, industrial production, industrial employment, external trade, retail trade, railway transportation, finance, and commercial failures. For all fields except prices the data include original unadjusted series and their corresponding seasonally adjusted series and seasonal indexes.

### CANSIM Manuals and other Publications

- *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free.

- 12-530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price \$1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval Manual".

Title and Description

### CANSIM Manuals and other Publications (Cont'd)

- 12-531 *CANSIM: Users' Manual for Data Retrieval and Manipulation* (Occasional)—Price \$1.50

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported.

- *CANSIM: Summary Reference Index*—Free on request.

This index represents a key to the contents of CANSIM, the CANSIM Socio-economic Information Management System, and is the first step in location and ordering time series from the system.

- *CANSIM Matrix Directory*—Free on request.

This directory lists in numerical order all matrices (roughly equivalent to a table) stored in CANSIM. Here the user finds for each matrix a title which gives a general description of the series included, the data source and, in some cases, a matrix note providing additional information of importance.

- *CANSIM Series Directory*—(Order by matrix number. Purchaser pays nominal charge to cover the cost of reproduction).

This directory contains titles and other descriptive detail for all series in the matrix. It is used in conjunction with the *CANSIM Manual for Data Retrieval and Manipulation* (12-531) to order series from DBS. May be ordered for specified matrix numbers.

---

This Review, the above and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont., or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,  
DBS, Ottawa.
