NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concepts, composition, comparability, seasonal adjustment methods, benchmark data, etc.

Changes in this issue are as follows:

Table 37 and page S-10: General Wholesale Price Indexes

General Wholesale Price Indexes have been revised for 1968.

Table 51: Primary Textiles

With this issue Table 51 has been completely revised and brought up to date. Changes include the addition of new series and presentation of data at Canada level.

Figures for prior years are under compilation.

Table 85 and page S-5: Retail Trade

Seasonally adjusted data for Retail Trade by store type have been revised for the year 1968. The unadjusted data remain unchanged.

S-6 and S-9 pages: New Residential Construction

The monthly and quarterly seasonally adjusted data on dwelling units started and dwelling units completed for both "centres 10,000 and over", and "all centres" have been revised from 1956 to date.

The seasonally adjusted data on dwelling units under construction have been revised for the entire period 1949 to 1968.

Table 87: Value of Wholesale Trade

Wholesale trade data revised from 1951 forward have been published in "Wholesale Trade", Catalogue No. 63-515, released May 2, 1969. Table 87 will be revised in the June issue of this Review. For the period 1951 to date, revision will reflect results of the 1961 Census of Merchandising. From 1961 to date, the data will also be revised from the 1948 to the 1960 Standard Industrial Classification.

THE DEFICIT ON CURRENT ACCOUNT NARROWED,
AS A SUBSTANTIAL IMPROVEMENT IN THE
MERCHANDISE SURPLUS OUTWEIGHED THE
DETERIORATION IN THE NON-MERCHANDISE BALANCE

HOUSING OUTLAYS IN 1968 INCREASED STRONGLY, 21.2 PER CENT. BUSINESS SPENDING ON PLANT AND EQUIPMENT RECOVERED SOMEWHAT FROM THE LOW FOURTH QUARTER 1967 RATE; FOR THE YEAR HOWEVER IT FELL 3.4 PER CENT

GROSS CORPORATION PROFITS INCREASED MORE RAPIDLY THAN IN 1967 WHILE EXPANSION IN LABOUR INCOME SLOWED SOMEWHAT. THERE WAS CONTINUED PRESSURE ON PRICES; THE IMPLICIT PRICE INDEX OF G.N.P. ROSE BY 3.6 PER CENT, THE SAME RATE AS IN 1967

QUARTERLY DATA, SEASONALLY ADJUSTED, AT ANNUAL RATES

**NATIONAL ACCOUNTS, INCOME AND EXPENDITURE,
FOURTH QUARTER AND PRELIMINARY ANNUAL,
1968**

Annual Review

This report incorporates some revisions to data for the years 1966, 1967 and the first three quarters of 1968. The series affected are Exports of goods and services, Imports of goods and services, Dividends paid to non-residents for the years 1966 and 1967, Business gross capital formation for the year 1967, and most of the series for the first three quarters of 1968.

Strong external demand for Canadian goods coupled with buoyant domestic markets pushed the level of Gross National Product to \$67.4 billion, a rise of 8.5 per cent compared with 6.9 per cent in 1967. This increase is somewhat above the average annual rate of increase of 8.0 per cent for the current expansion period which began in 1961. There was continuing pressure on prices which rose by 3.6 per cent, the same rate as last year. In real terms, Canada's output of goods and services advanced by 4.7 per cent—considerably higher than the 3.1 per cent increase of the preceding year.¹

Although strength was evident throughout 1968, the economy advanced more vigorously in the beginning and closing quarters of the year. In current dollar terms, the strongest advance occurred in the first quarter which rose by over 3.5 per cent. This was followed by a more moderate 2 per cent gain in the second quarter. The pace of activity then accelerated in the third and final quarters, with increases of 2.5 and 3.5 per cent respectively. In contrast to the first three quarters of the year, when demand was dominated by one or a few components, the advance in the fourth quarter displayed a widespread strength. For the year as a whole, the pattern of demand seemed balanced with all sectors continuing on an upward path or, as in the case of business fixed investment and inventories, renewing an uptrend after declines in 1967.

The pull exercised on this year's expansion by the rapid growth of the United States economy was most evident in the demand for Canadian goods and services abroad which climbed by 13.5 per cent. Canada's merchandise exports jumped by 19.5 per cent and the bulk of this increase was directed to the United States. External demand was particularly strong in the first quarter, when it provided the major stimulus to a renewed fast rate of economic

¹ Real Domestic Product at factor cost by industry of origin, an alternative but conceptually somewhat different measure of economic production, shows a 4.2 per cent advance in real terms compared with a 2.7 per cent increase of the preceding year. Among the differences between the two series are market price valuation versus factor cost, the use of national versus domestic boundaries, and the use of different weight-base periods.

activity. Through the year there were sharp rises in the exports of a wide range of commodities. With the exception of motor vehicles and parts, where trade transactions in both directions were exceptionally large, imports tended to lag behind exports—partly because of rather low current rates of investment in machinery and equipment. As a result Canada's merchandise surplus grew from \$0.5 to \$1.3 billion to reach its highest level since 1945. The net gain in merchandise trade was partially offset by a larger deficit in services, because of a return to more normal tourist activity after Centennial year. The overall deficit on a National Accounts basis was reduced by half to \$332 million.

Rising by 8.5 per cent, consumer purchases maintained the high rates of growth of recent years and accounted for nearly half of the increase in total demand. A feature of the year was the renewed consumer interest in durables, which increased by 10 per cent, more than twice the rate of the last two years. This rise was mostly due to sharp increases in car purchases, following two years of sluggish growth. By contrast, non-durables were rather weak; they rose by 6.5 per cent compared with 9 per cent in 1967. Because of strong price increases in this category, the slowdown was even more pronounced in volume terms. With personal expenditures outpacing the growth of personal disposable income, which was slowed down by higher tax collections, the rate of personal saving showed some decline from the very high levels of recent years.

In gross fixed capital formation, impressive gains were achieved in housing, where unprecedented numbers of both starts and completions pushed investment some 20 per cent above the 1967 level. The entrance of the banks into the field of mortgage lending and the introduction of more flexibility in the mortgage rate structure were important factors facilitating the current high level of activity in house building. By contrast, business capital spending on plant and equipment declined by 3.5 per cent; it nevertheless scored moderate quarterly gains and ended the year well above its trough in the last quarter of 1967.

Business added \$479 million to inventories compared with \$189 million in 1967. The major accumulation occurred at the retail level and was about equally divided between durable goods, mostly motor vehicles, and non-durables.

Government expenditure on goods and services continued the deceleration which started in 1967; for the first time since 1964 it rose less rapidly than GNP as a whole. Most of the 1968 rise of 7.5 per cent was attributable to increased spending at the

provincial-municipal level of government and consisted largely of higher wages and capital outlays. With total revenues rising faster than total expenditures, the surplus, on a National Accounts basis, for all levels of government combined, increased from \$157 to \$800 million.

The vigorous performance of the Canadian economy in 1968 was reflected in sharply rising incomes. After declining for two years, corporation profits increased by 17 per cent above their 1967 level. Advances occurred throughout the year, but the fourth quarter leap of over 10 per cent was the most pronounced. Some of the increase was the result of the levelling in capital cost allowances which followed the withdrawal at the end of 1967 of the option to accelerate claims for machinery and equipment. Gross profits (which include these provisions for depreciation) rose by 10 per cent. The improvement in profits was probably facilitated

by the existence of strong demand and price pressures in the United States. In spite of sharply increased tax liabilities, partly due to higher rates of corporate income taxes, undistributed corporation profits also rose to record levels.

The 8.8 per cent increase in labour income was derived mostly from higher average earnings, as rates of pay continued to rise steeply in spite of a continued slowdown in employment. The moderate employment growth of around 2 per cent, most of which was absorbed in the service-producing industries, fell short of the increase in the labour force, causing the unemployment rate to climb from 4.1 to 4.8 per cent. There were indications of good productivity gains this year, especially in the goods-producing industries, where large increases in output were realized with practically unchanged employment levels.

Price Movements

Aggregate price change as measured by the implicit price index of Gross National Expenditure rose by 3.6 per cent in 1968, the same rate of advance as in 1967. Larger increases than in the previous year occurred in all major components except exports; significantly higher import prices—which are reflected in the components of GNE but are subtracted from the aggregate deflator—dampened the overall increase. The following table shows the year-to-year changes in the implicit price indexes of the major components of GNE.

In personal expenditure, a sharp acceleration in the rate of price change in non-durables offset lower rates of increase in durables and services. Among non-durable items, increases of 11.5 and 7.2 per cent in the prices of tobacco and liquor respectively, together with a 3.8 per cent increase in gasoline, oil and grease, were largely the result of higher taxes. Food prices rose by 3.3 per cent after being virtually unchanged in 1967; increases were widespread but most notable in dairy products, fish, fresh fruit, canned vegetables and frozen foods. Modest price increases in furniture and a slight decline in household appliance prices con-

tributed to the smaller increase in the price component of durables; car prices advanced at the same rate as in the previous year. Service prices continued to rise sharply, 4.7 per cent compared

with 5.7 per cent in 1967. Most prominent were the increased costs for medical care, recreation, education and transportation, while rents also rose more strongly.

For the third successive year, strong increases occurred in the implicit price indexes of residential and non-residential construction; labour costs rose by 8 per cent, while the materials component ad-

vanced by 2.7 per cent. Machinery and equipment prices were lower in 1968 as a result of the removal of the federal sales tax on production machinery and equipment in June of 1967.

The Components of Demand

Personal Expenditure

Reflecting particularly strong increases in the first and third quarters, personal expenditure on goods and services reached a level of \$40.9 billion in 1968, an advance of 8.5 per cent from the previous year compared with an increase of some 8 per cent in 1967. Notable features of the pattern of expenditure were a sharply higher rate of advance in durable goods and a much lower rate of increase in non-durable goods than in the previous two years. Price increases accelerated noticeably at the total level, the result of significantly higher prices for non-durables; the rate of price advance eased in both durable goods and services.

Expenditures on durable goods increased by 10 per cent, better than twice the rate of advance in 1966 and 1967. Pacing this rise was a 12.5 per cent increase in purchases of new and used cars which showed no change in 1966 and a 3 per cent

gain in 1967. New car outlays rose more sharply, 16 per cent, with purchases of cars of overseas manufacture increasing by over 50 per cent. Home furnishings and appliances registered increases of 9.5 and 9 per cent respectively, while furniture outlays increased by 2 per cent.

After advances of 9.5 and 9 per cent in 1966 and 1967 respectively, expenditures on non-durable goods rose by 6.5 per cent with price increases accelerating sharply, the advance in real terms was just over 2.5 per cent. Higher outlays for tobacco and liquor were more than offset by price advances; in volume terms, both items declined by about 4 per cent. Food prices, which held virtually steady in 1967, rose by nearly 3.5 per cent; consequently the 5 per cent increase in outlays for food was considerably reduced in real terms. Expenditure on clothing increased at a lower rate than in 1967; with price advances easing noticeably, however, the gain in volume was somewhat larger.

The services aggregate advanced at a higher rate than in the two previous years, 10.5 per cent compared with 9 and 8 per cent respectively in 1966 and 1967. Increases of 10 and 11 per cent were recorded in shelter and medical care, while the household operations and financial services

components rose by more than 8 per cent. Recreation expenditures in Canada declined by 12 per cent from the Expo-bolstered level of 1967. A considerable part of the increased demand for all services was attributable to substantially higher outlays by Canadians travelling abroad.

Personal Expenditure

Total personal expenditure	8.1	8.7	8.2	8.5

Business Gross Fixed Capital Formation

Business gross fixed capital formation, including housing, totalled \$12.8 billion in 1968, an increase of 1 per cent from the level of the previous year. Outlays for new housing registered a sharp 21 per cent advance, while expenditure for machinery and equipment declined 5.5 per cent; outlays for non-residential construction dipped slightly from the 1967 level. The increase in housing was confined to the second and fourth quarters, while advances in expenditure for business plant and equipment from the low level of the final quarter of 1967 occurred in all but the second quarter. These upward trends are expected to continue in 1969; the survey of capital spending intentions anticipates increases of 12.5, 8.5 and 9 per cent respectively in housing, non-residential construction, and machinery and equipment.

Decreases in non-residential construction in 1968 by manufacturers, mining, financial and commercial services more than offset increases by utilities, trade firms and institutions. Spending cuts by farmers and manufacturers were mainly responsible for the decline in machinery and equipment; decreases were widespread within manufacturing, with the largest cutbacks occurring in the paper and transportation equipment industries.

In contrast, outlays for housing registered their largest increase in a decade. Housing starts reached an annual rate of 202,000 units in the first quarter, declined to 174,000 in the third, then rebounded to 231,000 in the fourth; for the year,

starts totalled 197,000 — 20 per cent above the figure for 1967. More than nine tenths of the increase of almost 33,000 units was in multiple dwellings; single family starts rose only by 2,800. The rate of completions rose throughout the year, reaching an annual rate of 182,000 units in the fourth quarter; the total for 1968 was 171,000 units, 14.5 per cent higher than in the previous year. Units under construction at the end of December numbered almost 127,000 compared with 103,000 in December of 1967.

The large increase in housing starts can be attributed to a more flexible system of determining NHA mortgage rates, the special CMHC provision of direct mortgage loans to building beginning in October, and the re-entry of the banks into the field of mortgage lending.

The following table shows the strong demand for mortgage credit and the response in supply in 1968. NHA approved lenders showed the sharpest increase in mortgage lending in 1968 partly because of a change of NHA regulations in February 1968 permitting them to earn current mortgage yields for a term of 15 to 25 years on NHA loans to corporate borrowers for multiple-dwelling projects. The increase in National Housing Act loans accompanied a narrowing in the spread between conventional and NHA mortgage interest rates. The decline in direct lending by Central Mortgage and Housing Corporation mainly affected loans for construction of single-family dwellings.

Investment in Non-farm Business Inventories

Investment in non-farm business inventories showed an accumulation of \$479 million in 1968, compared with the \$189 million accumulation of the previous year. Accumulation occurred in every quarter, with a strong pick-up in the second half of the year.

The strongest investment was by retail trade dealers, in both durable and non-durable goods. Motor vehicle dealers accounted for virtually all the stock build-up in durables, while increases were widespread in non-durables. The stock-to-sales ratio was marginally higher than in 1967, and displayed little change between quarters.

There was moderate accumulation in the stocks of wholesalers, equally divided between durables and non-durables. The average stock-to-sales ratio was virtually the same as in 1967.

In manufacturing, both durable and non-durable goods-producing industries experienced moderate investment; this contrasts with 1967, when stocks of durables were liquidated and non-durables showed a higher rate of accumulation than in 1968. In durables, the build-up was concentrated mainly in the transportation, primary metal, metal fabricating and machinery-producing industries. In non-durables, movements were mixed and generally small. The average stock-to-shipments ratio was lower than in the previous year.

Value of Physical Change in Non-farm Business Inventories

¹ Seasonally adjusted at annual rates.

Exports and Imports of Goods and Services

Canada's exports of goods and services rose to \$16.7 billion in 1968, an increase of 13.5 per cent from the 1967 level. With imports rising at a lesser rate, 10.5 per cent, the deficit on external account (on a National Accounts basis) declined by half to \$332 million. The merchandise trade surplus increased by \$814 million to \$1,295 million, all attributable to an improvement of \$825 million in the balance with the United States. This surplus was partly offset by a deterioration of \$479 million in the non-merchandise deficit.

Reflecting strong gains in the first and fourth quarters, merchandise exports increased by 19.5 per cent in 1968—the largest percentage gain in 17 years. On a "Trade of Canada" basis, over 40 per cent of the \$2.1 billion increase in domestic exports occurred in motor vehicles and parts; metals and minerals contributed around 20 per cent, and lumber and newsprint about 13 per cent. By areas, exports to the United States rose by over \$1.8

billion or 25 per cent, while purchases by the United Kingdom, Japan and the European Economic Community increased by 4, 6 and 11 per cent respectively.

Merchandise imports rose by 13 per cent, with the major increases also occurring in the first and fourth quarters. Motor vehicles and parts accounted for over half the increase, with energy materials and precious metals also showing significant advances. Machinery imports showed a decline, in line with the lower investment program. The United States accounted for over \$1 billion of the total increase in imports of \$1.3 billion, followed by Venezuela, Japan, the European Economic Community and the United Kingdom.

The main element in the larger service deficit was the deterioration of \$435 million in the net balance on tourist and travel transactions. Receipts fell by \$312 million from the Expo-bolstered level of 1967, while payments rose \$123 million.

Exports and Imports of Goods and Services

Percentage change between 1967 and 1968	19.4	12.8		- 6.6	5.7		

The Government Sector

Total revenues of all governments combined in 1968 (excluding intergovernmental transfers) increased by over 13 per cent to \$24,155 million. Total expenditures rose less sharply, by about 11.5 per cent, to a level of \$23,355 million, resulting in an increase in the combined surplus (on a National Accounts basis) from \$157 million in 1967 to \$800 million in 1968.

With the exception of withholding taxes on investment income of non-residents, all revenue components advanced during the year. About half of the increase occurred in revenues from personal and corporate direct taxes which rose by 20 per cent from 1967. The major portion of the increase in this component was at the federal level and was associated with the imposition at the beginning of the year of a 3 per cent surtax on personal and corporate taxes. The increase at the provincial-municipal level also reflected some tax rate changes: the imposition

of a surtax on personal income tax in the province of Quebec and higher hospital insurance premiums in Ontario.

Total indirect tax revenue rose by 8.5 per cent with the increase concentrated at the provincial-municipal level. A large portion of the provincial increase took place in revenues from gasoline and sales taxes; the result of both higher sales and tax rates. Gasoline and fuel oil taxes were increased in seven provinces; the general sales tax was raised in two provinces and the base broadened in four others; also the tobacco tax was raised in five provinces. The gain in property taxes, accounting for most of the rise at the municipal level, was also associated with higher tax rates.

Turning to the expenditure components, the largest increases, about \$1,000 million each, occurred in expenditure on goods and services and

transfer payments to persons. The advance in outlays on goods and services was particularly strong at the provincial-municipal level and was associated with higher wage payments and capital outlays. At the federal level, the increase occurred in non-defence spending; defence expenditures were virtually unchanged.

About two thirds of the increase in transfer payments to persons took place at the provincial-municipal level. Grants to hospitals and educational institutions and payments under the Ontario Residential Property Tax Reduction Act made in the second half of the year were mainly responsible for the rise. At the federal level, the increase was due to the further lowering of the age limit for old age security payments, higher unemployment benefits, (reflecting both higher levels of unemployment and a change in the benefit rates), and to larger adult occupational training grants.

Components of Income

Labour Income

The increase in labour income of 8.5 per cent was slightly less than the 9 per cent gain recorded in 1967. However, the quarterly gains for the two years were quite different, decreasing in 1967 and increasing in 1968. With a moderate employment increase of 2 per cent, most of the gain reflected higher average earnings, thus repeating last year's experience.

In the goods-producing industries average earnings increased at a slightly faster rate than in 1967, while employment remained approximately constant; the overall increase in wages and salaries of 5.5 per cent was slightly lower than in the previous year. Wages and salaries in manufacturing increased by 6.5 per cent, in construction by 2 per cent, and in the primary industries by 4.5 per cent. In manufacturing, average earnings increased at a slightly faster rate than in 1967; employment for 1968 as a whole showed little change, though there were increases in the second half of the year. The relatively lower gains recorded in construction and in the primary industries were the result of lower rates of increase in average earnings and decreases in employment.

Wages and salaries in the service-producing industries increased by about 11 per cent as compared with 12 per cent in 1967. Increases in employment and average earnings were slightly lower than those recorded in 1967. Finance, insurance and real estate showed a marked acceleration, increasing by 12 per cent compared with 8.5 per cent in 1967, while transportation, storage and communication slowed down from a 12.5 per cent increase to 8.5 per cent in 1968. Other industry groups increased at almost the same rates as last year.

Transfer payments from the federal government to provincial and municipal governments increased by \$460 million during the year. The largest increases occurred in payments under the taxation agreements, post-secondary education grants and grants under the Canada Assistance Plan and under the Hospital and Diagnostic Services Act.

With federal government expenditures rising by almost 11 per cent and revenues by 12 per cent, the deficit narrowed somewhat, from \$256 million to \$165 million. At the provincial-municipal level, revenues rose much more sharply than expenditures and resulted in a considerable narrowing of the deficit from \$473 million to \$25 million. The combined surplus of the Canada and Quebec Pension Plans increased from \$886 million in 1967 to \$990 million in 1968.

Corporation Profits

After declines in the preceding two years, net corporation profits advanced 17 per cent to reach a level of \$5.9 billion. Quarterly, profits gathered force from a moderate gain of 2 per cent in the first quarter, to growth rates of 6 and 5 per cent in the second and third quarters, and mounted 10 per cent in the final quarter.

Increases in costs which were a factor in the rather small increments in gross profits in 1966 and 1967 eased in 1968 and this, combined with a relatively strong sales performance in 1968, induced a marked recovery in profits. The pattern of net profits was further influenced by movements in capital consumption allowances in these years. In 1966 and 1967 the small increases in gross profits were more than absorbed by increases in capital consumption allowances of 10 and 6 per cent respectively, while in 1968 a levelling off in these allowances combined with the 10 per cent increase in gross profits to produce the 17 per cent increase. These movements in capital cost allowances relate to the withdrawal in late 1967 of special provisions permitting accelerated write-offs of certain classes of assets.

With few exceptions, profits advances predominated in all industry groups. The mining industry posted a 9 per cent profit improvement, manufacturing 25 per cent, wholesale trade 14 per cent, retail trade 4 per cent, and finance 30 per cent. The exceptions occurred in the utilities group where profits remained unchanged, in the transportation, storage, and communication industry which experienced a 2 per cent drop, and in services, where profits slipped 12 per cent.

Within the manufacturing group, profit mounted in all industries except petroleum and coal which dipped 5 per cent. Brisk rises occurred in the food and beverage, textile, wood, paper, metal, non-metallic mineral and chemical groups, while more modest advances were registered in the rubber, printing, and electrical groups.

Other Investment Income

Rent, interest and miscellaneous investment income rose by 9.5 per cent in 1968 compared with 13 per cent in 1967. Government investment income for all levels combined was higher by \$225 million against a rise of \$336 million in 1967. About 45 per cent of the increase in government investment income came from higher trading profits of government enterprises.

Accrued Net Income of Farm Operators

Accrued net income of farm operators advanced slightly more than 5.5 per cent from the previous year reaching a level of \$1,796 million.

The value of grain production rose largely as a result of an increase in the estimated value of the 1968 crop. Partially offsetting this gain was the unusually low level of profits of the Canadian Wheat Board reflecting in the main, lower exports over the period. The value of livestock production was virtually unchanged from the preceding year. Cash income from the sale of other farm products showed a moderate increase, somewhat lower than the gain in 1967. In this component, the most significant contributions came from dairy products (which include federal subsidies).

As a result of the above increases, the gross income of farm operators rose by over 10 per cent

during the year. However, higher operating expenses dampened the increase somewhat, leading to a 5.5 per cent increase in net income.

Net income of farm operators, which is reflected in personal income, advanced 13 per cent from 1967, due in the main to the record high payments of the Canadian Wheat Board, in respect of the 1966-67 crop year. These payments reached a level of \$359 million compared with \$312 million and \$229 million in 1967 and 1966 respectively.

Net Income of Non-farm Unincorporated Business

Net income of non-farm unincorporated business rose to a level of \$3,422 million, 7 per cent higher than the previous year. Gains were widespread with the most significant advance occurring in construction, which contributed more than one-third of the increase. The service industries and retail trade made somewhat smaller contributions.

Real Domestic Product²

In 1968 real domestic product rose by 4.2 per cent compared with a 2.7 per cent advance in 1967. Although the increase in the output of the domestic economy was widespread, the largest contribution (nearly 30 per cent) came from the manufacturing division, almost equally shared between durables and non-durables. Finance, insurance and real estate; the community, business and personal service industries; and trade each contributed 10 per cent to the increase. Two-thirds of the increase in trade came from retail trade, with sales of department stores and motor vehicle dealers registering the most important increases. Other industries that registered increases were transportation, storage and communication, and construction.

Fourth Quarter 1968

The Canadian economy ended the year on a strong note. A fourth quarter advance of 3.5 per cent carried Gross National Product to the \$70 billion mark, seasonally adjusted at annual rates. After allowing for price rises, the gain in real terms was 2.6 per cent,³ the largest since the first quarter of 1966.

The forces of expansion were widespread. Personal expenditures rose by 2 per cent, with non-durables and services accounting for the entire increase, as sales of cars, the major component in durables, remained practically unchanged after a large increase in the third quarter. Government spending on goods and services advanced by 4 per

cent, compared with rates of increase averaging around 2 per cent in the previous quarters of the year. Turning to investment, there was a forward thrust of building activity in housing—the second this year, the first having occurred in the second quarter. The current rise of 9 per cent was reflected in an unprecedented level of starts as well as a high level of completions. Investment in plant and equipment rose by a moderate 1.5 per cent, entirely the result of sharply increased outlays in non-residential construction, as investment in machinery and equipment declined slightly.

The fourth quarter saw intensified activity in the external sector. There was a sharply renewed expansion in merchandise exports, 6.5 per cent, after a slight decline in the preceding quarter, and a marked acceleration in merchandise imports, 8 per cent from 3 per cent in the preceding quarter. Because a moderate deterioration in the merchandise surplus was almost offset by a narrowing of the

² For further information see "Index of Industrial Production", January 1969, DBS Catalogue No. 61-005.

³ Real Domestic Product at factor cost shows a 2 per cent gain in real terms of the quarter. See footnote¹ on page 1 for explanation of differences between the two measures.

deficit in service transactions, the overall deficit widened only slightly, from \$496 to \$524 million on a National Accounts basis.

The salient features on the income side were the very strong increases in corporation profits and in wages and salaries. A significant part of the unusually large 10 per cent rise in profits was due to a levelling in capital cost allowances; gross profits which include capital cost allowances rose by 6 per cent. The rise in net profits was centered in manufacturing which recorded a 24 per cent increase, with all component groups sharing in the advance. Wages and salaries also made hefty gains, 3.5 per cent, the largest increase since the first quarter of 1966. Widespread employment increases contributed about as much as higher rates of pay to the total wage bill; this was a marked departure from the experience of recent quarters, when higher average earnings were the dominant factor. After six quarters of little change, the 2 per cent pick-up in manufacturing employment was particularly notable. With employment rising a little faster than the labour force, the average unemployment rate for the quarter fell slightly to 4.9 per cent.

Price Movements

The implicit price index for Gross National Expenditure rose by 0.8 per cent compared with an advance of 1.0 per cent in the third quarter. Lower

rates of price increase in gross fixed capital formation and in government expenditure more than offset some acceleration in consumer expenditure and in export prices.

The personal expenditure price index registered an increase of 1.1 per cent, larger than in the previous quarter, with an acceleration in the rate of price increase in goods and a continued high rate of advance in services. Much of the 1.1 per cent advance in the non-durable goods index was attributable to a 1.7 per cent increase in food prices, primarily dairy products, beef and pork. Increases were also recorded in the prices for electricity, women's clothing and auto parts. The durable goods index rose slightly, the result of higher prices for new cars.

Among service items, the largest increases were recorded in transportation, medical care and recreation; rents continued to advance, but at a lower rate than in the previous quarter.

In business gross fixed capital formation, machinery and equipment prices moved up marginally. Prices associated with construction were mixed: they slowed down noticeably in residential but accelerated sharply in non-residential construction. In total, the price index for capital goods rose by 0.7 per cent compared with 0.9 per cent last quarter.

The Components of Demand

Personal expenditure reached a level of \$42.2 billion, seasonally adjusted at annual rates, an increase of 2 per cent from the third quarter. Both non-durable goods and services registered advances, while purchases of durable goods were virtually unchanged after increasing by 8 per cent in the previous quarter.

Expenditure on non-durable goods increased by over 2.5 per cent, with nearly all components contributing to the rise. Advances of 5.5 and 5 per cent respectively occurred in tobacco and alcoholic beverages, while expenditure on energy sources rose by 1 per cent after a large increase in the previous quarter. Both the food and clothing components advanced by 1.5 per cent, considerably more than in the third quarter.

Among the components of durable goods, new and used car purchases increased only slightly after the large 13.5 per cent advance of the previous quarter; purchases of cars of overseas manufacture declined for the first time in seven quarters. Increases of 3 and 4 per cent respectively occurred in home furnishings and furniture, while the appliances and radios series declined by 3.5 per cent after a large rise in the third quarter.

Among components of services, increases of between 2.5 and 3 per cent occurred in recreation, transportation, medical care and household operations. Expenditures for shelter advanced by 1 per cent, less than half the rate of the average increase of the five previous quarters.

The rate of business gross fixed capital formation accelerated recording a 3.1 per cent increase compared with 1.8 per cent in the third quarter. This was entirely the result of sharply increased activity in both residential and non-residential construction, as investment in machinery and equipment declined slightly.

Housing construction paced the advance with a jump of 8.9 per cent, reflecting sharp increases in the number of starts, which rose from an annual rate of 174,000 to 231,000 units, and in completions, which rose from 174,000 to 182,000 units. By the end of December, the carry-over of units under construction amounted to 126,600 units, some 23,900 higher than at the start of the year. Non-residential construction was also very strong. The increase of 3.7 per cent, the largest this year, carried this investment category to its highest level since the first quarter of 1967. By contrast, investment in machinery and equipment fell somewhat, after a 3.6 per cent gain in the preceding quarter.

Business inventories were accumulated at the annual rate of \$552 million, compared with an accumulation of \$680 million in the third quarter. There was substantial investment at all three major industry levels, manufacturing, wholesale trade, and retail trade, but the latter, with a \$324 million investment, contributed over half of the total.

In manufacturing, most of the investment took place in durables, with a particularly sharp build-up in the stocks of metal, metal fabricating and machinery producing industries. Among non-durables, large increases in the stocks of food, tobacco, and petroleum were offset by a marked liquidation in the paper and leather producing industries. The stock-to-ships ratio was higher than that of the previous quarter. With new orders being higher than shipments, the quarter ended with an increased backlog of unfilled orders.

In wholesale trade, the major part of the restocking also took place in durable lines, which represented a shift from a small liquidation in the third quarter. Increases in the stocks of motor vehicle dealers made up the bulk of the sizeable increase in retail trade inventories. The stock-to-sales ratio was higher than in the third quarter for both wholesale and retail trade, though the change was much more pronounced in the former.

Transactions with Non-residents

With exports of goods and services increasing by \$776 million and imports by \$804 million, the balance on current account on a National Accounts basis for the quarter widened from a deficit of \$496 million at annual rates to a deficit of \$524 million. The merchandise surplus dropped from \$1,268 to \$1,144 million, while the non-merchandise deficit narrowed from \$1,764 to \$1,668 million.

The narrowing of the non-merchandise trade deficit is mainly attributable to lower deficits in tourist and travel and in interest and dividends.

Merchandise exports rose by 6.5 per cent from the third quarter level. Increases were marked for forest products, automotive products, chemicals and fertilizers, aircraft and parts. Merchandise imports climbed 8 per cent. Increases were recorded in industrial materials, construction materials, producers' equipment, motor vehicles and parts, other transportation equipment, food and other consumer goods.

The Government Sector

Total revenues of all governments combined (excluding inter-governmental transfers) rose to \$25,836 million at an annual rate in the fourth quarter, 6.5 per cent above the third quarter rate. More than half of the increase occurred in revenues from direct taxation, particularly in personal income taxes levied on rising incomes. Indirect tax revenues also rose sharply during the quarter with the larger increases occurring in federal excise taxes and provincial sales and gasoline taxes. Contributions to social insurance and government pension funds advanced more sharply than usual, resulting from salary increases to federal employees.

Total expenditures of all governments increased by just over 2.5 per cent in the quarter, to \$24,460 million. The major portion of the rise took place in expenditures on goods and services. Federal outlays increased more sharply than those at the provincial-municipal level reflecting, in part, higher wage and salary payments. Transfer payments to the personal sector rose by \$160 million. At the federal level, increases in scholarships and grants and adult occupational training payments were dampened somewhat by a decline in unemployment insurance benefits. The increase in provincial transfers was due mainly to higher grants to educational institutions.

With the increase in revenues more than double the rise in expenditures, the surplus of the government sector as a whole, on a National Accounts basis, increased from \$436 million in the third quarter to \$1,376 million in the fourth. More than half of the change occurred at the provincial-municipal level, where a deficit of \$460 million gave way to a surplus of \$84 million. The federal government moved from a deficit of \$80 million to a surplus of \$248 million while the surplus of the Canada and Quebec Pension Plans increased slightly.

The Components of Income

Total labour income increased by almost 3.5 per cent in the fourth quarter—the largest quarterly gain in almost three years. The service-producing industries advanced by slightly more than 4 per cent, the goods-producing industries by 2.5 per cent.

The 2.5 per cent increase in the goods-producing industries was notably higher than the average quarterly advances in 1967 and in 1968 and accounted for about 30 per cent of the total increase in labour income. Manufacturing registered the largest gain, 3.5 per cent, reflecting employment increases and higher average earnings in about equal proportion. The rise in employment was a reversal of the general trend of declines or little change during the previous six quarters, while the increase in average earnings continued the trend of the last few years. In construction, wages and salaries increased only slightly, while in the primary industries they remained virtually unchanged.

The 4 per cent gain in the service-producing industries was also higher than in the preceding quarters. In transportation, storage, communication and other utilities labour income increased by over 6 per cent, with slightly larger increases in average earnings than in employment. All other industries showed increases of about 4 per cent.

Net corporation profits posted an exceptionally strong 10 per cent rise in the fourth quarter, to a level of \$6.6 billion, seasonally adjusted at annual rates. It was the strongest quarterly advance since the second quarter of 1961. Gross profits also increased strongly, 6 per cent, while capital consumption allowances were virtually unchanged.

The chief momentum in the fourth quarter improvement came from a 24 per cent expansion in manufacturing profits. Movements were mixed in other groups: both wholesale and retail trade maintained advances of 12 and 8 per cent respectively; finance, insurance and real estate increased by 5 per cent and the services group by 8 per cent. Declines were registered in mining, 14 per cent, transportation, storage and communication, 3 per cent, and in utilities, 9 per cent.

All groups within the manufacturing industry displayed higher fourth quarter profit advances. Substantial rises, of over 20 per cent, were experienced in the rubber, textile, wood, paper, printing, metal, electrical and petroleum and coal industries. Lesser gains were made in the food and beverage, non-metallic mineral, and chemical groups.

Rent, interest and miscellaneous investment income rose by \$168 million, or by 3.5 per cent, from the level of the third quarter, on a seasonally adjusted basis at annual rates. The increase was mainly attributable to higher trading profits of government enterprises.

Accrued net income of farm operators rose 6 per cent from the third quarter. With the value of grain production remaining unchanged, the increase was almost entirely due to a sharp rise in the value of livestock production, largely the result of an accumulation in inventories. Partially offsetting this gain was a decline in cash receipts from the sale of other farm products.

Net income of non-farm unincorporated business increased to \$3,536 million, 1.5 per cent above the third quarter level. The gain was almost entirely due to an increase in net income from construction as changes in other industries, notably retail trade and the services, were largely offsetting.

Real Domestic Product⁴

Real Domestic Product, seasonally adjusted, advanced by 2.0 per cent in the final quarter of 1968. This advance, which was the largest since the first quarter of 1966, followed increases of 1.2, 1.4 and 1.0 per cent, respectively, in the first

⁴ For further information see "Index of Industrial Production", January 1969, DBS Catalogue No. 61-005.

three quarters of this year. The goods-producing industries, with an increase of 3.0 per cent, were responsible for over 70 per cent of the total increase.

Manufacturing accounted for nearly one-half of the total advance, the major part of which came from non-durables. For the first time in many years every one of the major groups in non-durables recorded increases, but the most notable occurred in paper and allied industries. In durables the most significant increase took place in sawmills and planing mills which were affected by greater exports of lumber to the United States.

The transportation, storage and communication and the agriculture divisions accounted for close to one third of the total advance. The most significant changes in the former division were a large increase in water transportation in the latter part of the quarter and a large increase in railway transportation (particularly of agricultural products) in the earlier part of the quarter. A substantial increase in the production of livestock was the main reason for the advance in agricultural output.

LABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE AND EMPLOYMENT SHOWED LITTLE CHANGE WHILE UNEMPLOYMENT DECLINED IN MARCH. UNEMPLOYMENT WAS 4.2 PER CENT OF THE LABOUR FORCE.

INDUSTRIAL PRODUCTION (More detail in Table 16)

THE INDEX OF INDUSTRIAL PRODUCTION ROSE 0.7 PER CENT IN FEBRUARY. THE INCREASE VIRTUALLY RETURNED THE INDEX TO ITS DECEMBER 1968 LEVEL. ALL OF THE GAIN WAS DUE TO ADVANCES IN MANUFACTURING, AS BOTH MINING AND UTILITIES DECLINED.

		total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Tables S6 and S5)

TOTAL RETAIL TRADE INCREASED MORE STRONGLY IN FEBRUARY THAN IN THE PREVIOUS TWO MONTHS. NEW MOTOR VEHICLE SALES WERE GENERALLY LOWER IN MARCH. SALES OF OVERSEAS MANUFACTURED PASSENGER CARS DROPPED SUBSTANTIALLY, WHILE DECLINES IN SALES OF CANADIAN AND UNITED STATES MANUFACTURED PASSENGER CARS AND COMMERCIAL VEHICLES WERE LESS PRONOUNCED.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

IN FEBRUARY THE LARGE INCREASE IN THE VALUE OF RESIDENTIAL BUILDING PERMITS, PARTIALLY OFFSET BY THE DECLINE IN NON-RESIDENTIAL PERMITS, RESULTED IN A SLIGHT INCREASE IN TOTAL BUILDING PERMITS.

IN MARCH HOUSING STARTS AND COMPLETIONS DROPPED FROM THE HIGH FEBRUARY LEVELS. THE NUMBER OF UNITS UNDER CONSTRUCTION CONTINUED TO INCREASE.

EXPORTS AND IMPORTS (More detail in Tables 91 and 92)

TOTAL EXPORTS DECLINED IN MARCH MAINLY DUE TO LOWER EXPORTS TO ALL OTHER COUNTRIES, AS EXPORTS TO THE UNITED KINGDOM AND THE UNITED STATES INCREASED.

TOTAL IMPORTS WERE LOWER IN MARCH. HIGHER IMPORTS FROM THE UNITED KINGDOM AND ALL OTHER COUNTRIES WERE MORE THAN OFFSET BY A DROP IN IMPORTS FROM THE UNITED STATES.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Sources: at bottom of Table 14.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force, (71-001) D. B. S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. ²These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴Annual figures for inventories and unfilled orders are end of December values.

Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Total inventories owned by manufacturers including warehouse stocks.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001).

Table 43: estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

months or monthly averages	shipments							unfilled orders at end of month							supplemen- tary clas- sification: auto- motive products
	consumer goods		machinery and equip- ment	con- struction materials and components	other inter- mediate goods and supplies	export- based industries	supplemen- tary clas- sification: automotive products	consumer goods		machinery and equip- ments	con- struction materials and com- ponents	other inter- mediate goods and supplies	export- based industries

¹Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. ²Intended for cigarettes. ³Includes sales to wholesalers or retailers. ⁴Subject to Excise Tax. ⁵Includes sales for ships' stores and for export. ⁶End of period. ⁷Includes smoking, chewing and twist. Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D.B.S.; and Department of National Revenue.

¹Prior to 1964 data are not entirely comparable since they are on a production basis. ²Includes slims and stretch pants. ³Made from woven fabrics: shorts. ⁴Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. Source: Garment Shipments (34-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D. B. S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland, Western grain prices used in the construction of the index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. ¹Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. ²Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 figures are not comparable with the data of previous years. Source: Department Store Sales and Stocks (63-002), D. B. S.

¹The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. ²Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

¹Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. Sources: Price Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.

¹This statement includes only receipts relating to Budgetary Revenue. Excluded are Non-Budgetary Revenues such as Old Age Security Fund Taxes, Prairie Farm Assistance Act Levies, Employer and Employee Contributions to Government Held Funds (Unemployment Insurance, Superannuation etc.), Interest on Government Held Funds, and Taxes collected on behalf of and transferred to Other Governments. ²For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1967-68. Figures are rounded and may not add to totals. ³March includes supplementary payments arising from the closing of the accounts.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. ¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²Under the Technical and Vocational Training Assistance Act. ³Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁴Includes treatment and rehabilitation services. ⁵For comparison purposes, annual figures for 1965-66 and 1966-67 represent "Grants to Universities, Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). Sources: Canada Gazette and Dept. of Finance.
