CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française, *Revue Statistique du Canada*, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other DBS publications:

- ... figures not available
- ... figures not appropriate or not applicable
- nil or zero.
- amount too small to be expressed
- † advance estimates
- p preliminary figures
- r revised figures
- x confidential to meet secrecy requirements
of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 2. Tables 5, 6 and 7 – Births, Deaths and Marriages, by Province

These have been revised for 1969.

Section 3, Table 3-1. – Financial Flows Matrix

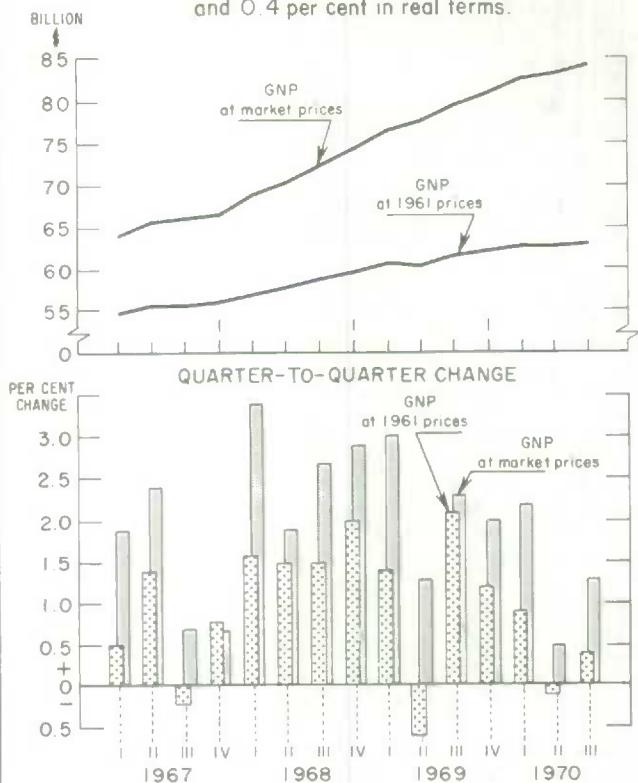

The National Income and Expenditure Accounts revisions result in some conceptional and statistical changes to the Financial Flows Accounts. Revised data of The Financial Flows Accounts are not comparable with those of earlier periods which do not reflect these changes. For detail of these revisions see "National Income and Expenditure Accounts, 1926-1968", Catalogue No. 13-531. Financial Flow Matrices in this issue reflect the revisions of the National Income and Expenditure Accounts for the years 1968 and 1969 and the first and second quarter 1970.

A new publication of the historical quarterly series for all sector and category tables, and annual matrices covering the first quarter 1962 onwards, is expected to be released by 1971.

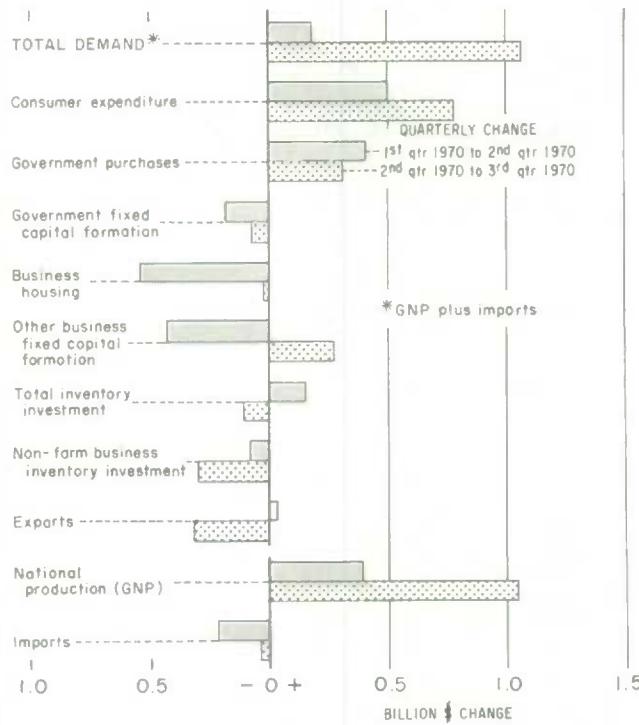

Section 10, Table 6 – Consumer Credit

Commencing in September 1970 "Sales finance companies" and "Consumer loan companies" have been combined under "Instalment financing". The new series, "Instalment financing", will be incorporated in the January 1971 issue of this Review.

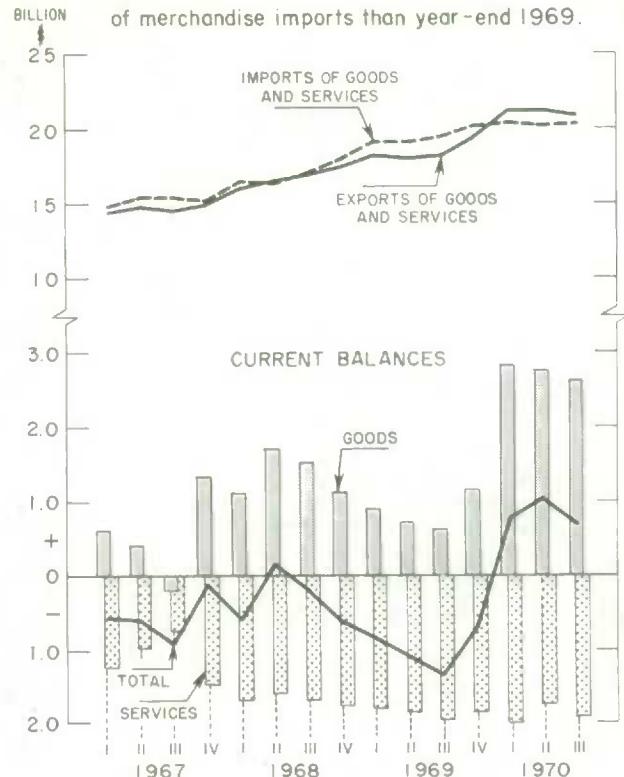

In the third quarter GNP rose 1.3 per cent at market prices and 0.4 per cent in real terms.

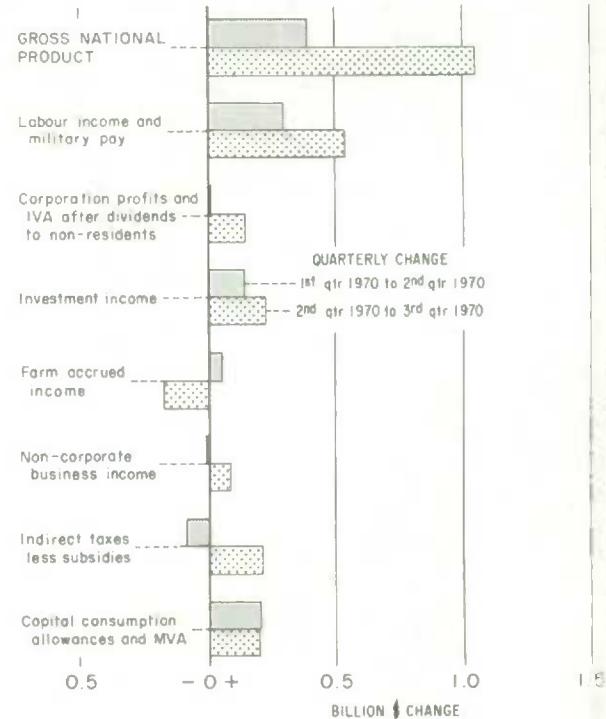

Total demand* rose \$1.1 billion or 1 per cent, with a change from a decline to a gain in fixed business capital spending and a further rise in consumer spending.

The first three consecutive quarterly surpluses on current account since 1952 resulted from higher levels of merchandise exports and lower levels of merchandise imports than year-end 1969.

The faster rise in GNP was accompanied by gains in labour income and corporation profits.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS THIRD QUARTER, 1970

Preliminary estimates of the National Income and Expenditure Accounts indicate some modest improvement in activity in the third quarter, while also confirming that in recent months the Canadian economy has been traversing a period of adjustment characterized by slow growth in production, a lack of any sustained dynamic demand factor, and high rates of unemployment. There were indications at the end of the quarter and again in October of a pick-up in employment, which was reflected in a drop in the seasonally adjusted unemployment rate to 6.6 per cent in October from the peak 6.9 per cent rate in the previous month. A feature of the third quarter, no doubt partly due to the slow pace of the economy in 1970 and also to the appreciation of the Canadian dollar, was the lessening in the rate of increase of most measures of price movements, especially in the area of consumer spending.

The value of aggregate production, seasonally adjusted at annual rates, rose by \$1.0 billion in the third quarter to reach a level of \$84.1 billion. This represented a percentage increase of 1.3 per cent, markedly up from the small increase of half a per cent in the second quarter but well below the average quarterly rate of increase of around 2.2 per cent experienced in the last few years. After taking account of rising prices, the gain in the volume of production amounted to 0.4 per cent. This compares with a marginal constant dollar decline of 0.1 per cent in the second quarter and with a 0.9 per cent increase in the first quarter.

The implicit GNE deflator rose by 0.9 per cent, an apparent acceleration over the 0.5 per cent increase shown in the second quarter. However, because this overall measure reflects weight shifts as between the various categories of final demand as well as price changes in individual goods and services, it is not always a useful yardstick of price movement over short periods when significant shifts in the composition of demand are taking place. In fact, virtually all other measures of price performance continued to show only a relatively modest advance through the third quarter. The implicit GNE deflator is particularly sensitive to inventory changes, which can display quite irregular movements in both their value of physical change and in their implicit prices. This has in fact occurred in recent quarters. Excluding inventories the implicit index decelerated in the third quarter from 0.9 to 0.6 per cent.

The acceleration in economic expansion in the third quarter appeared more due to a modest recovery in total fixed capital formation after two consecutive declines (the \$1.1 billion drop in the second quarter being particularly severe), than to notable strength in any major component of demand. Consumer expenditure on goods and services, the other sector that showed persisting weakness in the first half of the year, rose somewhat faster in the third quarter and made the major contribution to total demand.

However, the largest percentage gain occurred in government expenditure on goods and services which, with a 2.0 per cent increase, continued to be an important source of support to the economy. Offsetting these increases to some extent, exports of goods and services fell by \$312 million from the very high level of over \$21.1 billion achieved during the first quarter and maintained through the second quarter. Inventory investment also fell, entirely as a result of a substantial decumulation in the farm component.

Business fixed capital formation has been the most sluggish sector of the economy this year, declining by \$424 million in the first quarter and sliding downward by a further \$964 million in the second quarter, when all three components, residential construction, non-residential construction and machinery and equipment shared in the fall. In spite of a moderate gain of \$264 million in the third quarter, spending in this sector for the first nine months of the year was still running at a level considerably lower than the anticipations for 1970 as reported in the mid-year survey of business intentions. This quarter's reversal of the declining trend was entirely due to a sharp turnaround in machinery and equipment spending. The gain in this component of \$292 million, or 5.8 per cent, was the largest since the first quarter of 1968. Both residential and non-residential construction continued to fall in the quarter, though very marginally. Related indicators suggest some strength in construction in future months. This is most evident in residential construction, which has experienced a sharp recovery of new starts in recent months, especially of low income housing and of apartment buildings, after continual declines since the beginning of 1969.

Domestic markets for consumer goods and services continued to display hesitancy in the third quarter. Total personal expenditure rose by a moderate 1.6 per cent, compared with 1.0 per cent in the second quarter and with a marginal decline in the beginning quarter of the year. However, much of the third quarter acceleration was due to the services item "net expenditure abroad", which consists mostly of Canadian travel expenditure abroad (also reflected in imports) less foreign travel expenditure in Canada (reflected in exports). The former increased this quarter, while the latter declined, leaving a large increase in net expenditure abroad. On a domestic basis, total personal expenditure rose only slightly faster in the third quarter than in the second quarter, 1.1 per cent versus 0.9 per cent. It is noteworthy that purchases of durable goods failed to accelerate even though these expenditures are still running at a level almost 7 per cent lower than in the fourth quarter of 1969. This quarter they posted a gain of 1.6 per cent (almost entirely due to increased car purchases) compared with a 3.2 per cent gain in the second quarter. In the first quarter they had fallen by 11.0 per cent.

After displaying exceptional strength in the last quarter of 1969 and in the first quarter of this year, exports levelled off in the second quarter and weakened a little in the third. The decline of 1.5 per cent was entirely caused by lower merchandise exports to the United States and the United Kingdom; service exports rose by 2.2 per cent, largely due to higher interest and dividends receipts. Merchandise imports also declined in the quarter, by 1.8 per cent, in spite of an increase in imports of machinery and equipment. Increased service imports, paced by travel payments, offset the decline in merchandise, leaving total imports only marginally higher than in the second quarter. The net result of external transactions was to lower the surplus with non-residents, on a national accounts basis, from \$1,056 million to \$720 million.

The continuing slack in business activity was reflected on the income side in a modest increase in wages and salaries of 1.2 per cent and in a 1.1 per cent increase in corporation profits. The percentage increase in wages and salaries, though twice the second quarter rate of 0.6 per cent, was nevertheless a very low rate of increase for this series which has very seldom experienced quarterly gains of less than 2.0 per cent in recent years. The small rise in profits followed a 4.9 per cent drop in the second quarter. Largely sustained by sharply increased transfer payments from government, up 8.7 per cent, personal income rose by 1.5 per cent compared to 1.0 per cent in the second quarter. Personal income taxes and other deductions showed practically no change; as a result personal disposable income, which had fallen by 0.5 per cent in the previous quarter, rose by close to 2.0 per cent this quarter.

With the results obtained so far this year it is possible to venture cautious guesses of economic performance for the year as a whole. Thus, if the seasonally adjusted fourth quarter remained at the third quarter level, current dollar GNP would rise by 6.3 per cent in 1970 over 1969. With a 1 per cent rise, the annual advance would be of 6.6 per cent. Similar assumptions concerning the fourth quarter in constant dollars would yield annual rates of real growth of 2.7 per cent and of 3.0 per cent. Although these rates of increase are hypothetical they do point to a very marked deceleration in economic expansion for the year as a whole. In 1969, GNP rose by 10.0 per cent in current dollars and by about half this increase in volume.

Price Movements

The revised estimates¹ of the implicit price index for Gross National Expenditure excluding inventories reveal a more discernible price trend than previously published estimates. After a slow-

¹ Revised estimates for 1969 and 1970 are the result of a change in the technique of seasonally adjusting the constant dollar series. The new technique was employed in order to derive the best possible estimates of both seasonally adjusted constant dollars aggregates and components, and of implicit prices in the current period.

down in the third quarter of 1969, price increases remained approximately constant until the third quarter of this year, when a deceleration was again noted, from 0.9 to 0.6 per cent. While conceptually different, other more conventional base-weighted price indexes, the Consumer Price Index, the Industry Selling Price Indexes and the General Wholesale Price Index, also showed price moderation in the quarter.

One of the more interesting price developments in the quarter was the levelling in the implicit price of personal expenditure, after increases of 0.6 per cent in the second quarter and of 1.5 per cent in the first quarter. This remarkable slowdown was entirely due to declines in the prices of the goods categories, as services showed a sizable price rise of 0.9 per cent. Lower prices of imports resulting from the appreciation of the Canadian dollar following the freeing of the exchange rate, contributed to the decline in goods prices. Within durable goods, price declines were especially notable in furniture and household equipment, and recreational equipment. The price decline in semi-durables was centered in clothing and footwear and accessories, while that in non-durables was dominated by falling food prices. In services, price rises were widespread.

The implicit price index of business gross fixed capital formation decelerated sharply in the third quarter. The current rise of 0.2 per cent compares with rises of between 0.7 and 0.8 per cent in the last four quarters. Easing in the rates of increase of both labour and materials costs contributed to the deceleration in the price for construction. Machinery and equipment, which has a large import content, registered a decline of 0.3 per cent.

Price movements in the external sector were obviously affected by the freeing of the exchange rate last June. The implicit price index for imports of goods and services fell by 1.0 per cent. As has already been noted, this decline was reflected in the prices of goods purchased by the various sectors of the economy, and in particular in the prices of goods purchased by persons and of machinery and equipment purchased by businesses. The price of exports remained unchanged in the quarter. The implicit price of merchandise exports declined, largely because of changes in the composition of export demand, but this was offset by generally increasing prices of service exports.

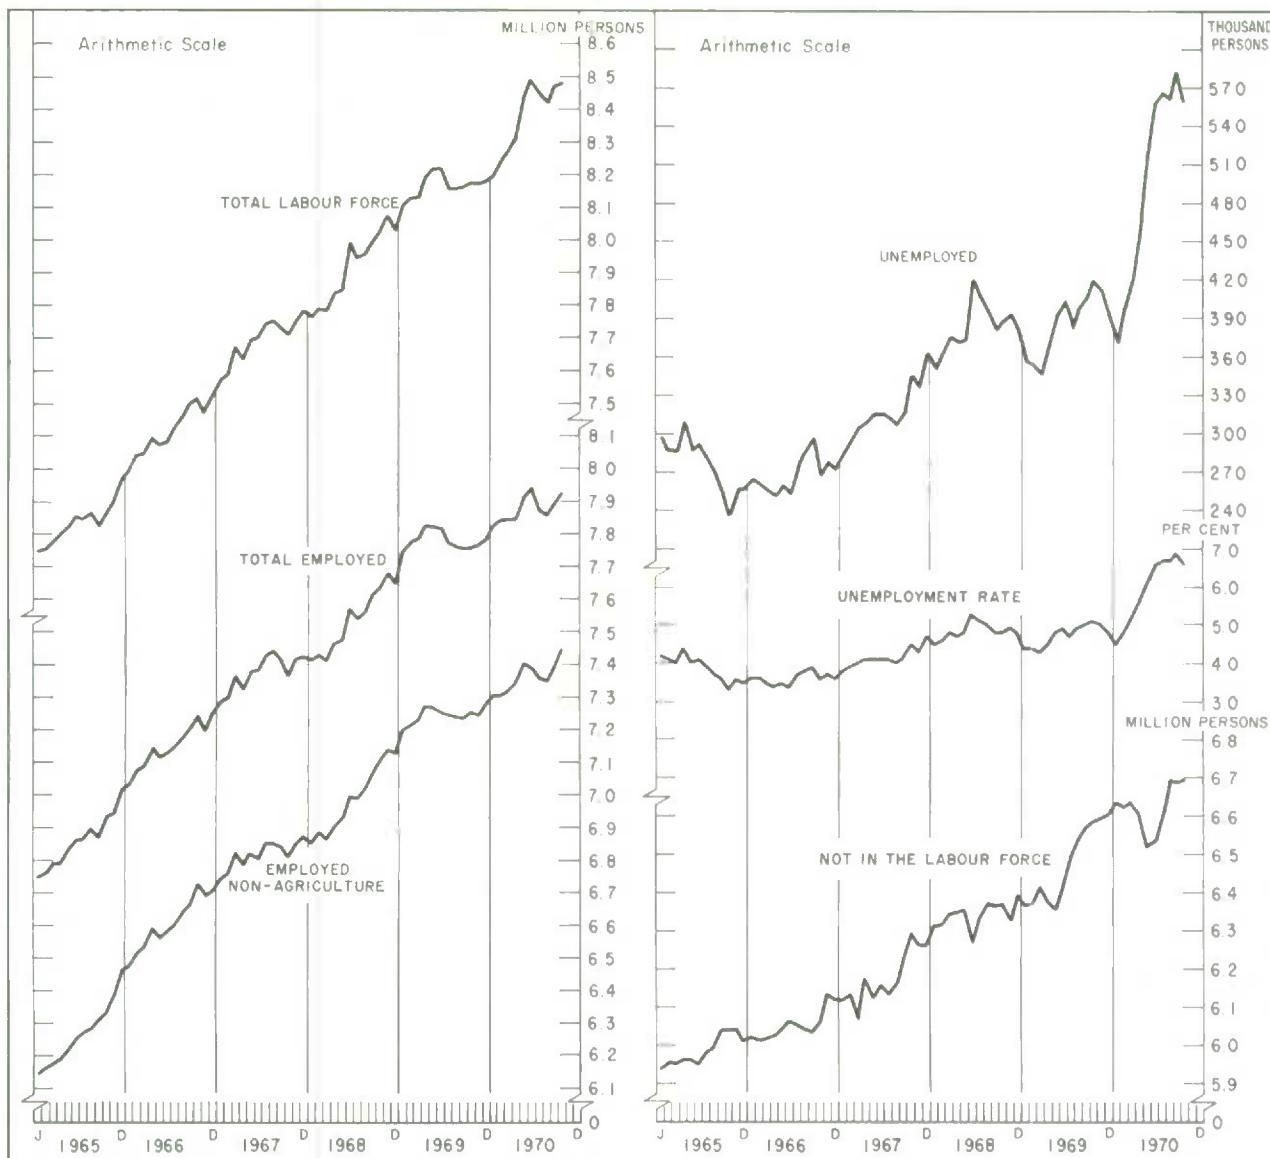

The Components of Demand

Personal Expenditure on Consumer Goods and Services

Consumer expenditure on goods and services advanced 1.6 per cent to a level of \$49,408 million seasonally adjusted at annual rates. Although consumer expenditure continued to recover after contracting by 0.1 per cent in the first quarter, its rate of advance was still modest when compared with advances scored in 1968 and 1969.

LABOUR FORCE (More detail in Section 4, Table 3)

TOTAL LABOUR FORCE AND TOTAL EMPLOYED INCREASED 0.1 PER CENT AND 0.4 PER CENT, RESPECTIVELY, IN OCTOBER, WHILE UNEMPLOYED DECLINED 4.1 PER CENT. THE UNEMPLOYMENT RATE FELL FROM 6.9 PER CENT TO 6.6 PER CENT, THE FIRST MONTHLY REDUCTION IN 1970.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for with-drawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts, Third Quarter 1970 (D.B.S. 13-001).

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. ⁴The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts, Third Quarter 1970 (D.B.S. 13-001).

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

¹A minus sign except for official monetary movements, indicates an outflow of capital from Canada. ²Includes guaranteed issues. ³Bank balances and other short-term funds abroad (excluding official reserves). ⁴Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between direct measurements of current and capital accounts. ⁵Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.

Table 1: wages and salaries, by province based on the 1960 standard industrial classification (million dollars)

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error.
²The labour force as a percentage of the population 14 years of age and over.
³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. ³Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages.³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total.⁴Includes miscellaneous manufacturing industries.⁵Includes also the storage and communication industries.

*Revised monthly data will be available later.

¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. *Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.*

¹The data for the current year are subject to revision. ²Includes gold. ³Consists of general wholesale index less animal products and vegetable products component groups. ⁴Consists of iron products and non-ferrous metals products component groups less gold. ⁵These two series comprise the general wholesale index. ⁶Excludes gold.

¹Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. ²These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴Annual figures for inventories and unfilled orders are end of December values. Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". Source: Footwear Statistics (33-002), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. ⁵Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. Source: Primary Iron and Steel (41-001), D.B.S.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. ³Excl. of NFLD. Western grain prices used in the construction of the Index prior to Aug. 1, 1967 are final. From Aug. 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. ⁵Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective January 1969, as a % of the price of 100 lbs. live hog, Index 100. ⁶Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. ⁷Quotations refer to steers all weights. ⁸Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. ¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months.
³Includes baking and frying oils and fats.
⁴Includes stocks held by manufacturers and other warehouses.
⁵Includes fresh sausage, frankfurters, weiners and all other sausage.
⁶Includes solid, coated, bulk, packages and novelties.
⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source:** Retail Trade (63-005), D.B.S.

Table 1: value of retail trade by type of business and province, based on the 1960 standard industrial classification—concluded

¹Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandise and Service Establishments. ²Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968, 1969 and 1970 figures are not comparable with the data of previous years.

¹Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also Credit Statistics (61-004). ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in instalments. Amounts shown include interest and other unearned income finance charges. ⁶The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. ⁷Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), D. B. S.

¹Column numbers refer to tables 3 and 4, section 11. ²Includes special transaction-trade, not shown separately. ³Includes scrap. ⁴The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), D. B. S.

¹Monthly averages for years 1967 and 1968 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. These groups covered all air carriers with gross annual flying revenues of over \$100,000 prior to January 1969 and over \$150,000 during 1969. Figures for 1970 include only the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-air) normally account for approximately 95 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ³United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. ⁴Cargo includes air freight and express but excludes mail and excess baggage. Source: Civil Aviation (51-001), D.B.S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Note: The implicit price indexes vary from estimates published in the first and second quarter 1970 publications due to a change in the method of seasonally adjusting the constant dollar estimates.

Durable goods advanced 1.6 per cent after an advance of 3.2 per cent in the second quarter. New and used automobiles was the only group to show a noticeable increase, of 4.6 per cent. Both new and used cars showed increases, of 4.2 per cent and 6.6 per cent respectively. Though the rise in new cars followed a larger rise of 11.3 per cent in the second quarter, the increases of the last two periods represented only a partial recovery of somewhat less than half of the ground lost in the steep 25.0 per cent first quarter decline. It is of interest that the increase in used cars occurred after two consecutive declines. Other components showed little change, except furniture, fixtures and floor coverings, which fell by 2.0 per cent.

Semi-durable goods declined by 2.2 per cent, its third decline in the 1969-70 period. The decline was confined to the clothing and footwear group

which fell by over 4.5 per cent; it came on top of very small advances during 1970. Men's and boys' clothing, and women's and children's clothing both declined; the former by just under 6 per cent; the latter by just over 4 per cent. Expenditures on personal accessories increased by over 4 per cent.

Consumer expenditures on non-durable goods rose by 2.2 per cent after a low gain of only 0.1 per cent in the second quarter. Fuel and utilities advanced by over 5.0 per cent, the largest increase in this component since the third quarter of 1968. Within this group over 7 per cent in heating fuels was considerably above the pace set during 1969. Gas also increased sharply, by over 12 per cent. Expenditure on alcoholic beverages advanced over 2 per cent while expenditures on tobacco showed no change. Partially offsetting these advances was a just under 4 per cent decline in non-durable household supplies.

The 2.0 per cent rise in consumer expenditure on services was the largest since the third quarter of 1969. The impact of the divergent movements as between foreign travel payments, which increased, and travel receipts, which declined, on the "net expenditure abroad" component has already been noted. Excluding the rise in this item, services rose by 0.8 per cent. Strong advances were in expenditures on personally operated transportation, and on shelter. Household services also increased. Purchased transportation expenditures declined fractionally.

Gross Fixed Capital Formation

Investment outlays rose by \$196 million or 1.2 per cent over the second quarter level to \$16,064 million, on a seasonally adjusted basis. The expansion in demand for fixed capital goods resulted from an increase of \$248 million in machinery and equipment outlays more than offsetting small declines of \$12 million and \$40 million in residential and non-residential construction outlays. Business fixed capital formation rose by 2 per cent, while government fell by 2.3 per cent.

In the business sector, non-residential construction investment was almost unchanged, while machinery and equipment investment climbed by \$292 million. The sluggishness in construction excluding housing occurred in the building component as outlays on engineering projects rose somewhat. Increased demand for machinery and equipment was reflected in a rise in domestic shipments and in imports of industrial machinery and communication equipment.

The decline in business residential housing noted in the first half of the year was almost arrested this quarter. A sharp increase in apartment unit starts during the quarter contributed marginally to the value of apartment investment, being offset by the weight of the diminished backlog of apartments started in the first half of the year and under construction during the quarter.

For the first nine months of 1970, business capital outlays were running 4.9 per cent below the like period of 1969. Housing was off 10.4 per cent, non-residential construction 1.4 per cent and machinery and equipment 4.2 per cent.

The low rate of activity in the residential sector this year is highlighted by statistics of housing construction. Over the first three quarters of 1970, housing units started totalled 119,153 and units completed 129,114. Comparable totals for 1969 were 161,273 and 140,215 respectively. Again, units under construction at the end of September this year amounted to 124,765 compared with 145,036 last year. Starts, which were running at an annual rate of 186,000 in the fourth quarter of 1969 dipped to 166,200 in the first quarter and down further to 136,600 in the second quarter. However, they rebounded to 185,800 in the third quarter. Under the stimulus of a further injection of federal funds for direct lending in low-rental housing, starts are expected to range between 180,000 and 185,000 for 1970 as a whole.

Non-farm Business Inventories

Accumulation of non-farm business inventories in the third quarter of 1970, seasonally adjusted, amounted to \$828 million as compared to one of

Value of Physical Change in Non-farm Business Inventories

Seasonally adjusted at annual rates

	1970		
	1 Q	2 Q	3 Q
			millions of dollars
Manufacturing	452	- 152	24
Durable goods.....	268	- 200	- 84
Non-durable goods	184	48	108
Wholesale trade	156	36	204
Retail trade	- 96	560	404
"Other" industries	96	92	196
Totals	608	536	828

\$536 million in the previous quarter. Nearly 50 per cent of the total accumulation occurred in the stocks of retailers, while wholesalers contributed about 25 per cent. Manufacturers' contribution to the present quarter accumulation was a very moderate one.

Though small, the accumulation in manufacturing inventories represented a sharp swing after the \$152 million liquidation which occurred in the second quarter. Most stocks of durables were again depleted in the third quarter, but at a lower rate than in the second quarter. One notable exception was provided by the transportation goods-producing industries, which showed a substantial accumulation. The reverse was true of non-durables, where the only liquidations were those which occurred in the stocks of the tobacco and of the printing industries. By level of processing, there was a sizable build-up of goods-in-process, a moderate one of finished goods and no change in raw materials.

The accumulation in wholesale trade was almost entirely in non-durables, which showed a substantial increase in the rate of investment over the second quarter. Almost all of the build-up was accounted for by increases in the stocks of groceries and drugs, as offsetting movements left other

non-durables unchanged. In durables, the marginal increase in stocks followed a substantial liquidation in the second quarter. Within this group, there was a shift in the stocks of construction materials, especially wood, from a substantial liquidation last quarter to a sizable accumulation this quarter. Conversely, there was a sharp decline in the stocks of industrial and transportation equipment and supplies, after a large build-up in the previous period.

More than 60 per cent of the increase in stocks of retail trade took place in durable goods, where it was concentrated in motor vehicle dealers, who experienced a second consecutive large increase in stocks. In the non-durable trades, the more notable increases occurred in the stocks of government liquor stores and of food stores.

Exports and Imports of Goods and Services

Preliminary results for the third quarter indicate that the balance on current account on a national accounts basis, moved from a surplus of \$1,056 million at annual rates to a surplus of \$720 million. The merchandise surplus dropped by \$140 million to \$2,636 million, while the non-merchandise deficit widened by \$196 million to \$1,916 million.

Transactions with Non-Residents

Seasonally Adjusted at Annual Rates

(National Accounts Basis)

	Exports			Imports		
	2 Q '70	3 Q '70	Per cent change	2 Q '70	3 Q '70	Per cent change
	millions of dollars			millions of dollars		
Goods.....	17,064	16,664	- 2.3	14,288	14,028	- 1.8
Services.....	4,084	4,172	2.2	5,804	6,088	4.9
Totals	21,148	20,836	- 1.5	20,092	20,116	0.1

The main factors in the higher deficit on services were lower receipts and higher payments for travel and higher official contributions. The drop in the surplus on merchandise trade resulted from a fall of \$400 million at annual rates in receipts offsetting a fall of \$260 million in payments. The drop in merchandise exports was entirely due to a sizable decline in sales to the United States and to a smaller decline in sales to the United Kingdom. Exports to other countries rose in the quarter. Imports purchases were maintained from Britain but were lower from other overseas suppliers and American sources.

Taking the first nine months as a whole, buoyant export demand has provided the major support to the Canadian economy so far this year. Merchandise exports rose by 15.6 per cent over the comparable period of 1969. Although export gains were recorded over a wide range of commodities, the most notable increases were in the sales of wheat, nickel, copper and crude petroleum. Interestingly, the bulk of the increase this year was directed to markets other than the United States, even though the latter country accounts for close to three-fourths of Canadian exports. (Merchandise exports to the United States rose by 6.2 per cent.)

In contrast to exports, merchandise imports rose by a modest 2.4 per cent. Declining machinery and equipment capital spending, as well as slow growth in consumer demand contributed to the sluggishness of imports. In particular, imports of transportation and communication equipment fell over the period.

These trade developments resulted in a spectacular increase in the surplus on merchandise account from \$586 million in the first three quarters of 1969¹ to \$2,029 million so far this year. Although there was a slight deterioration in non-merchandise trade, due mainly to higher interest and dividends payments, the overall current account balance with non-residents, on a national accounts basis, swung from a deficit of \$725 million to a surplus of \$678 million — the first overall surplus for a comparable time period since 1952.

The Government Sector

Total current expenditures of all levels of government combined, excluding inter-governmental transfers, rose by \$828 million or just over 3 per cent in the third quarter. The largest absolute increase took place in transfer payments to persons with the increase equally divided between the federal and provincial levels. The main cause of the rise at the federal level was higher unemployment insurance benefits; at the provincial level most of the increase was in higher grants for post-secondary education and in a miscellaneous group of payments. Outlays on current goods and services rose by about half as much as transfers to persons with sharp increases at the provincial and local levels offset by a decline in federal expenditures. Transfer payments to non-residents also rose during the quarter. Subsidy payments declined at the federal level from the high rate of the second quarter. The other expenditure categories showed little change.

Total revenues of all governments rose slightly during the quarter, by about 1 per cent. Most categories showed little change, but this masked offsetting movements at the individual levels of government. Revenue from federal personal income taxes rose while provincial personal income tax revenues declined. Similarly, federal indirect taxation revenues increased, mainly from excise taxes and customs import duties; at the provincial level, revenues from this source declined. Government investment income rose, the largest part of the increase taking place at the federal level.

As a result of expenditures rising more sharply than revenues the surplus, on a national accounts basis and seasonally adjusted at annual rates, of the government sector as a whole fell from a rate of

\$1,800 million in the second quarter to a rate of \$1,240 million in the third quarter.

In the first nine months of 1970, total government current expenditure, excluding inter-governmental transfers, rose by almost 15 per cent. The major portion of the increase was in expenditure on goods and services, due largely to higher wage and salary payments and to the extension of the Medicare program. Government capital expenditures were virtually unchanged. Total revenues of all governments rose by almost 10 per cent with over half of the rise taking place in revenue from personal income taxes, particularly at the federal level. As a result of expenditures rising more rapidly than revenues, the surplus, on a national accounts basis, of the government sector was about \$500 million lower than the surplus recorded in the first nine months of 1969.

The Components of Income

Labour Income

The modest increase of 1.2 per cent in labour income represented an improvement over the unusually low increase of 0.6 per cent in the second quarter. The acceleration was due to a renewed rise in the goods-producing industries, of 0.8 per cent, after a decline in the second quarter. Wages and salaries in the service-producing industries decelerated in the quarter to a rate of 1.4 per cent, compared with 1.7 per cent last quarter. In the last two quarters, wages and salaries in both the goods-producing and the service-producing industries have displayed considerable weakness as compared with average performance in previous periods. This slowdown appears mainly due to lower increases in employment or, in some industries, to actual declines.

Wages and salaries in manufacturing, where employment has been declining in recent months, continued to rise very slowly, by 0.4 per cent compared with 0.7 per cent in the second quarter. A higher incidence of labour disputes this quarter also contributed to the slowdown. Construction rose by 2.4 per cent, after a sharp fall in the second quarter of 6.8 per cent largely due to strikes. The primary industries showed an increase of 0.4 per cent. Within that group, increases in fishing and trapping, up 2.1 per cent, and in mining, up 2.3 per cent, offset a 5.5 per cent decline in forestry.

Within the service-producing industries, all groups showed increases. Transportation, communication and utilities rose by 0.4 per cent, trade by 0.7 per cent, finance by 2.0 per cent, and public administration by 0.9 per cent. Within service, which advanced by 2.6 per cent, non-commercial service rose by 3.8 per cent and commercial services by 0.4 per cent.

¹ See revised balance of payments estimates, revision note on page 116.

Corporation Profits

Preliminary estimate of corporation profits indicate a slight increase of 1.1 per cent in the third quarter. Profits had declined sharply in the third quarter of 1969. Since then, except for a temporary spurt in the first quarter of this year, they have fluctuated between the relatively narrow limits of \$7.5 and \$7.8 billion. For the first nine months of this year, profits were 4.5 per cent below their level for the comparable period of 1969. Gross profits, which include depreciation charges, have shown a relatively flat trend since the first quarter of 1969.

Net Income of Unincorporated Business

Accrued net income of farm operators from farm production declined by almost 12 per cent in the quarter to a rate of \$1,276 million. An increase in the value of grain production and higher government subsidy payments were more than offset by a decline in the value of livestock production.

Net income of non-farm unincorporated business including rent rose by about 2 per cent in the quarter. The largest increase took place in net income of the construction industry; the other industry groupings showed little change.

Real Domestic Product

Real Domestic Product at factor cost³ rose by 0.6 per cent in the third quarter of this year, following a slight decrease in the second quarter, and an increase of 0.5 per cent in the first quarter. The second quarter was dampened by the construction and the manufacturing industries, with strikes affecting the output of the construction industry, while the first quarter was affected by recoveries in the production of nickel-copper from the previous year's strikes. The mild upturn in the third quarter originated mainly with the trade series — predominantly wholesale sales of grain in August and July. Mining also rose significantly in the quarter, based on increases in miscellaneous metal mining and crude petroleum and natural gas, as did transportation, storage and communication, based on rail and water shipments of grain products to world markets and continued advances in air and pipeline transport. These and other increases more than offset the second quarterly decrease for manufacturing, that was mainly the result of the September strike in the motor vehicle manufacturing industry, and the pulp and paper strikes in British Columbia in August and September.

³ It should be noted that the movements described here may not always coincide with the constant price Gross National Expenditure data in the quarterly national income and expenditure accounts, due to conceptual and statistical differences.

REVISION NOTE

The Balance of Payments Division revised data for 1968 and 1969. Revised figures are shown in "Quarterly Estimates of the Canadian Balance of International Payments Second Quarter 1970", DBS 67-001. These revisions have not been incorporated in the National Accounts. They are shown below on a National Accounts Basis.

umber

Title and Description

- 1-003F *Revue Statistique du Canada*, mensuel.
This is the French edition of the Canadian Statistical Review.

Canadian Statistical Review Supplements

- 1-004 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by the DBS and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

- 1-206 *Annual Supplement to the Canadian Statistical Review*—Price \$1. (Free to *Canadian Statistical Review* subscribers).

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

CANSIM Manuals and other Publications*

- *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free.

- 12-530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price \$1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval Manual" (available in French, cat. N° 12-530F)

Title and Description

CANSIM Manuals and other Publications (Cont'd)

- *12-531 *CANSIM: Users' Manual for Data Retrieval and Manipulation* (Occasional)—Price \$1.50

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported (available in French, cat. N° 12-531F).

— *CANSIM: Summary Reference Index*—Free on request.

This index represents a key to the contents of CANSIM, the Canadian Socio-economic Information Management System, and is the first step in location and ordering time series from the system.

— *CANSIM Series Directory*—(Order by matrix number. Purchaser pays nominal charge to cover the cost of reproduction).

This directory contains titles and other descriptive detail for all series in the matrix. It is used in conjunction with the *CANSIM Manual for Data Retrieval and Manipulation* (12-531) to order series from DBS. May be ordered for specified matrix numbers.

This Review, the above and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont., or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
DBS, Ottawa.

*Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, DBS.
