## Canadian Statistical Review

*Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.*

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer print-outs. For additional information, see inside back cover.

*Selected Economic Indicators* appearing in the Section I are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

\* \* \* \* \*

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

## SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

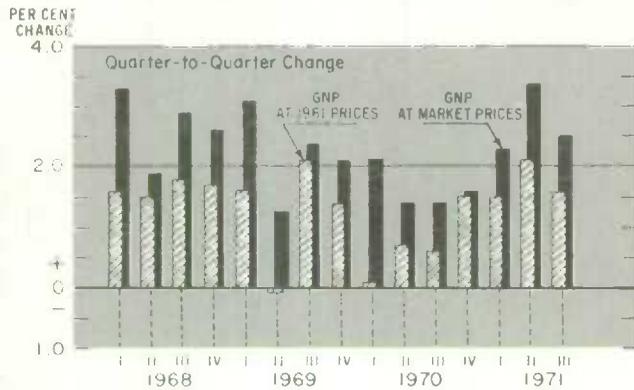

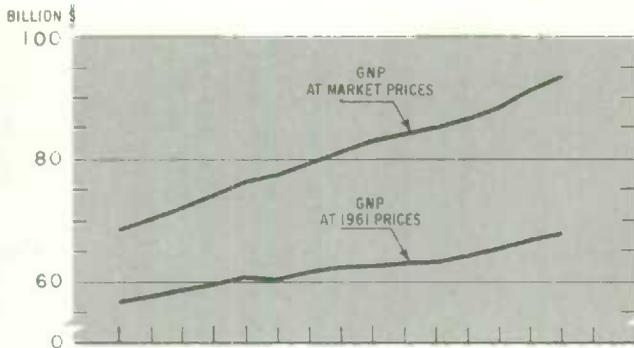

- .. figures not available
- ... figures not appropriate or not applicable
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

9. Stock Exchange Statistics .....	110
10. Commercial Failures and Liabilities .....	110
11. Government Revenues .....	111
12. Government Expenditures .....	111

**NOTE TO USERS**

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:  
Annual data have been removed from some tables of the review. They will be replaced in the January 1972 issue.

**Section 3, Table 3.1 - Financial Flows**

Supplementary Financial Flows Matrices for the second quarter 1970 and six months ended June 30, 1970 and 1971 were published in the November issue of this publication.

**Section 5, Table 4 - Consumer Price Index**

Monthly consumer price indexes for Quebec City and Thunder Bay from January 1970 are now included in this table. It should be noted that the time base for these two indexes is 1969, instead of 1961 which is the time base for all other regional city indexes. Explanatory notes on the construction of the indexes for Quebec City and Thunder Bay are available from Retail Prices Section, Prices Division of Statistics Canada.

**Section 9, Table 5 - Selected Agriculture Price Indexes (Farm Input Price Index, 1961 = 100)**

The Farm Input Price Index replaces one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The new price index replaces the Composite Index Exclusive of Living Component from 1961 forward. The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Farm Input Price Indexes measure through time changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Total and component price indexes for Eastern, Western, and all Canada, are calculated quarterly and annually on a 1961 = 100 time base.

Price Indexes from 1961 to the third quarter 1971, weighting diagrams, and a detailed description of concepts, methods and data sources are contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and are reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. Current price indexes are published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-004, and in the monthly publication, *Prices and Price Indexes*, Catalogue No. 62-002.

Total and selected component price indexes for Canada from 1969 to the third quarter 1971 are published in the present issue of the Review.

**Section 9, Table 9 - Manufactured Food**

Data on "shipments" have been deleted from this table; for margarine "stocks, end of period" and for salad oils "production" figures have been introduced instead. Further information concerning these changes can be obtained from the Foods, Beverages and Textiles Section of the Manufacturing and Primary Industries Division, Statistics Canada.

**Section 9, Table 10 - Sugar**

Data for production of refined granulated, yellow and brown sugar are no longer available. These two series have been deleted and replaced by beet and cane sugar production.

**RECENT PUBLICATION OF INTEREST**

*Canada's International Investment Position, 1926 to 1967* (aggregate series on Canada's assets and liabilities together with detailed series on assets extended to 1969), Catalogue No. 67-202, Statistics Canada.

**NATIONAL INCOME AND EXPENDITURE ACCOUNTS,  
THIRD QUARTER 1971**

Preliminary results of the National Income and Expenditure Accounts for the third quarter of 1971 indicate a continuation of the pattern of substantial gains in production evident since the fourth quarter of 1970. A feature of the third quarter was a sharp pick-up in the industrial sector, particularly noticeable in the indicators of production. The very sizable increase in the number of jobs created in the third quarter was not reflected in a significant decline in the unemployment rate because of an unusually rapid growth in the labour force. Aggregate measures of price movements rose at about the same rate as in the second quarter, although there were some sharp rises, especially in the prices of certain construction materials.

Gross National Product, seasonally adjusted at annual rates, rose by \$2.3 billion to reach a level of \$93.7 billion. This gain was somewhat larger than that realized in the first quarter of \$2.0 billion, but considerably smaller than the \$3.0 billion increase in the very strong second quarter. (It may be noted that revisions of a number of series, in particular labour income, fixed capital formation and value of physical change in both farm and non-farm inventories<sup>1</sup> had the net effect of raising the first and second quarter GNP estimates by \$304 million and \$380 million respectively.) In percentage terms, GNP rose by 2.5% in the third quarter, after rising by 3.4% in the second quarter and by 2.3% in the first quarter. After removing that part of the increase in the value of goods and services that reflected higher prices rather than volume increases, GNP rose by 1.6% in the third quarter. This was the fourth consecutive quarter showing sizable gain in real output.

By the end of the third quarter, the Canadian economy had been expanding at a sizable rate for about a year. GNP was 10.2% larger in the third quarter 1971 than in the third quarter of 1970. The real growth during the same period amounted to 6.9%. A nine months comparison also shows an acceleration in economic growth. In the first nine months of 1971, GNP was 8.7% larger in value and 5.3% larger in volume than in the comparable period in 1970. This compares with GNP increases for 1970 over 1969 of 7.5% in value, and of 3.3% in volume. The assumption that there would occur no further output gain this year would yield a real growth of 5.6%; if output grew by 1.0% in the fourth quarter, the increase for the year as a whole would be 5.9%. For the year as a whole, it also appears likely that the rate of increase of the implicit price index for GNP will show a deceleration from the rates of increase of 4.1% for 1970 and of 4.7% for 1969.

<sup>1</sup> In the farm sector, the 1971 value of the new crop is now estimated to be \$1,356 million, based on the November estimate of production. This compares with a figure of \$1,108 million estimated at the time of the second quarter and based upon preliminary estimates of crop acreage.

Personal expenditure on consumer goods and services provided a major stimulus to demand, though to a smaller extent than in the previous quarter. After surging forward by \$2,144 million in the second quarter (4.2%), consumer spending rose by an additional \$1,068 million (2.0%) in the third quarter, reaching a level of \$54,168 million. Not unexpectedly, in view of the very large 5.7% rise in expenditure on goods in the second quarter, the third quarter rise in consumer spending was much more pronounced in services, up 3.1%, than in goods, up 1.4%. Within goods, spending on durable items continued to pace the advance. Expenditure on furniture and house furnishings rose particularly sharply in the third quarter, by 6.5%, no doubt largely reflecting the very high level of housing completions in that quarter. Spending on new automobiles rose by 2.5%; in each of the two previous quarters this component had risen by around 15%, providing the bulk of the increased outlays on durable goods. (These spectacular gains partly reflected the satisfaction of a backlog of demand due to the prolonged strike of a major producer in the fourth quarter.) Expenditure on household appliances also rose, and that on most other durable goods generally showed some modest additional gains over their high second quarter level. Outlays on semi-durable goods were unchanged, a 5.4% increase in semi-durable household furnishings (items such as china and kitchen utensils) being offset by declines in articles of clothing. In the non-durable goods category, which showed a rise in outlays of 1.6%, the major increases were shown by fuel and electricity, up 2.3%, and by food, up 1.5% after a rise of 2.9% in the previous quarter.

The acceleration in the rate of spending on services (the third quarter rise of 3.1% compares with increases generally below 2.0% in recent previous quarters) was largely due to a sizable increase in Canadian tourists' expenditure abroad. On a domestic basis, that is excluding the expenditures made by Canadian residents abroad but including the expenditures of foreign residents in Canada, the rise in service outlays was 2.3%. Among other service components, notable gains occurred in spending on restaurant meals, on lodging in hotels and motels, on legal and financial services and on shelter.

Government current expenditure on goods and services rose at an accelerated pace in the third quarter. The rise of \$624 million represented a percentage increase of 3.5% compared with a 2.7% increase in the second quarter. All of the increased spending occurred at the provincial and local levels of government, which were up by 12.2% and 5.8% respectively, as federal government spending, which had risen sharply in the first half of the year, declined by 6.7% in the quarter. In contrast to current expenditure on goods and services, government outlays on fixed capital formation

showed practically no change in the third quarter. By level of government, fixed capital outlays declined at the federal and provincial levels but rose at the municipal level.

Business residential construction rose by 9.6%. This sector has been strongly and continually expanding since the third quarter of 1970. The third quarter rise of \$404 million brings the level of this investment to \$4,632 million, more than 40% above its trough in the second quarter of 1970. Because of sharp increases in the prices of certain construction materials, especially lumber, in the third quarter, probably reflecting mounting demand pressures, the gain in volume of 6.3%, though considerable, was substantially less than the gain in value. In the second and third quarters, the emphasis was on the construction of single units, which showed rises of over 15% in each quarter. This was a reversal of the previous tendency towards proportionately much larger outlays on multiple than on single units. The high levels of starts in the months up to October, the sustained demand for mortgage funds, and the federal government commitment of more funds for housing announced in the October mini-budget, make it appear likely that the level of outlays will be approximately maintained in the fourth quarter. As a consequence, the rise in expenditure on residential construction will probably rise by over 20% in 1971.

In contrast to the sustained growth displayed by housing outlays, business spending on plant and equipment did not grow significantly in the third quarter. Very preliminary estimates indicate an increase of 0.4%, entirely due to a modest increase of 1.2% in spending on machinery and equipment as spending on non-residential construction declined slightly. However, it must be noted that growth of these business outlays had apparently been extremely large in the second quarter. (In volume terms investment in machinery and equipment in the third quarter remained flat and that on non-residential construction fell by 2.3%.) Within non-residential construction, building construction registered an increase, but this was more than offset by a decline in engineering construction (other than highways and railways), which had risen particularly sharply in the second quarter. In machinery and equipment, the increase in investment reflected mostly increased imports of non-farm machinery.

A notable development in the third quarter was the build-up in non-farm business inventories which amounted to \$228 million (seasonally adjusted at annual rates). In the light of more complete information, the second quarter figure, which originally showed practically no change in the value of physical stocks, has now been revised to show a \$540 million depletion, partly in industrial machinery, which showed large increases in sales in the second quarter. The resultant swing of \$768 million from a depletion to an accumulation was a major contributing factor to the third quarter expansion.

The build-up occurred entirely at the retail trade level, as stocks in manufacturing and in wholesale continued to decline. The accumulation in retail trade, which was reflected in sharp increases in shipments in the quarter while sales rises were moderate, was widespread, but most notable in durable goods, where it was almost entirely due to increases in the stocks of motor vehicle dealers. Stocks in manufacturing had declined by successively larger amounts in the first three quarters of 1971. However, whereas previous declines appeared largely due to sluggish production failing to keep up with rising demand, the decline in the third quarter occurred despite substantial rises in manufacturing production, yet insufficient to meet the very large increase in shipments. New orders rose even faster than shipments and as a result the quarter ended with a greater backlog of unfilled orders than in the second quarter. The stock-to-shipments ratio fell sharply from 1.98 in the second quarter to an historically very low level of 1.91.

As in the first two quarters of the year, the net effect of current transactions in the external sector was again a source of weakness. The third quarter decline in the balance of trade in goods and services of \$524 million, on a national accounts basis, which was of the same magnitude as in the second quarter, caused a swing from an overall surplus of \$464 million to a small deficit of \$60 million. This was the first deficit since the fourth quarter of 1969. Although exports continued to rise quite sharply, imports, especially of non-merchandise items, rose faster, leading to declines in both the merchandise and the non-merchandise balances. On the basis of preliminary information, it is not possible to ascertain whether the new economic measures announced in mid-August by the United States government had an impact on the volume and composition of Canadian exports to the United States in the third quarter.

In the merchandise account, the surplus fell by \$212 million to \$2,208 million as a gain of \$328 million in exports was more than offset by a rise of \$540 million in imports. (The decline in the balance was centered on trade with the United States; exports to that country fell while imports rose sharply.) In percentage terms, merchandise exports rose by 1.8%, after rises of 2.1% in the second quarter and of 4.1% in the first quarter. Wheat, wheat flour, lumber and other building materials and automotive products (except automobiles) registered the best gains. The bulk of the export gain was directed to the United Kingdom, Japan and Latin America, as exports to the United States fell slightly and exports to the European Economic Community fell sizably. Merchandise imports rose by 3.5%. Although large increases were recorded in imports from all major trading partners, in particular from the United Kingdom, up 10.8%, imports from the United States, up 5.3%, contributed over three fourths of the total increase. The increase in imports was widespread. In the non-merchandise account the deficit widened in the third quarter by \$312 million to \$2,268

## AN INTEGRATED EDUCATION INFORMATION SYSTEM DEVELOPMENT

Yvon Fortin, Ross Grenier, Eve Kassirer\*

### Objectives of the Information System

Among the goals of the Education Division of Statistics Canada, none ranks higher than the creation of a fully integrated computerized total education information system. Such an information system could be considered analagous to a hologram, a picture which, when viewed from different perspectives, reveals additional characteristics of the subject or phenomenon under observation. In times of rapid social change it is important for all members of society to be aware of the array of developments occurring in its principal institutions, including education which is the full-time activity of nearly seven million Canadians. A national education information system can serve this purpose.

A wide range of questions can be addressed to a total information system or to its sub-systems, such as: What is the magnitude of interprovincial student mobility? At what levels of education? What distinguishes the mobile student from his peers? In what programs and courses of study are registrations dropping? Which are increasing? What expansion of educational resources has taken place, and where? Is existing expansion adequate? Is the mix of educational output appropriate to our needs? What skills and talents are needed by our teachers to meet these kaleidoscopic changes? At what cost? Are Canadians receiving full value for the percentage of their tax dollar devoted to education?

These, and a host of other related questions, are continually being asked by education planners in their effort to give direction to Canada's education and her social goals. In this effort, the most valuable commodity needed is comparable, timely and current education data. Precisely with this in mind, the Education Division of Statistics Canada is collaborating with education officials in Canada to develop a nation-wide integrated computerized education information system. The objective of this developing system is to create an accessible data base of fundamental elements at the greatest and most meaningful disaggregated level on students, teaching staff, finance and facilities, at the elementary, secondary and tertiary levels. Common concepts, classifications and definitions will link these sub-systems. This two-tiered system will report back to suppliers of data and at the same time disseminate integrated data to the public. The computerized system will facilitate the flow of immediate, detailed data by province, region and institution.

### Developments

1. A general conceptual framework of the total system has been formulated, but will continually be refined to articulate the changing empirical elements in specific education structures in Canada. Details and levels of integration will only become known once a complete cross-section of Canadian education

officials has been consulted. The need for such a national information system was recognized by the Council of Ministers of Education in the early stages of its existence. Substantial forward strides were made by the Ministers' Information Sub-Committee under the able direction of Dr. R.W. Jackson, Director of the Ontario Institute of Studies in Education. Since 1969, the work initiated by this group has been carried on by the Education Division of Statistics Canada.

2. In conjunction with educational institutions, provincial governments and other suppliers of data, Statistics Canada is developing classifications and specific socio-economic items to be collected; standardized definitions and concepts of items; and standardized terminology. Above all, the practicality of such a system is dependent on the comparability of information at various levels of aggregation, in which common definitions have been employed.

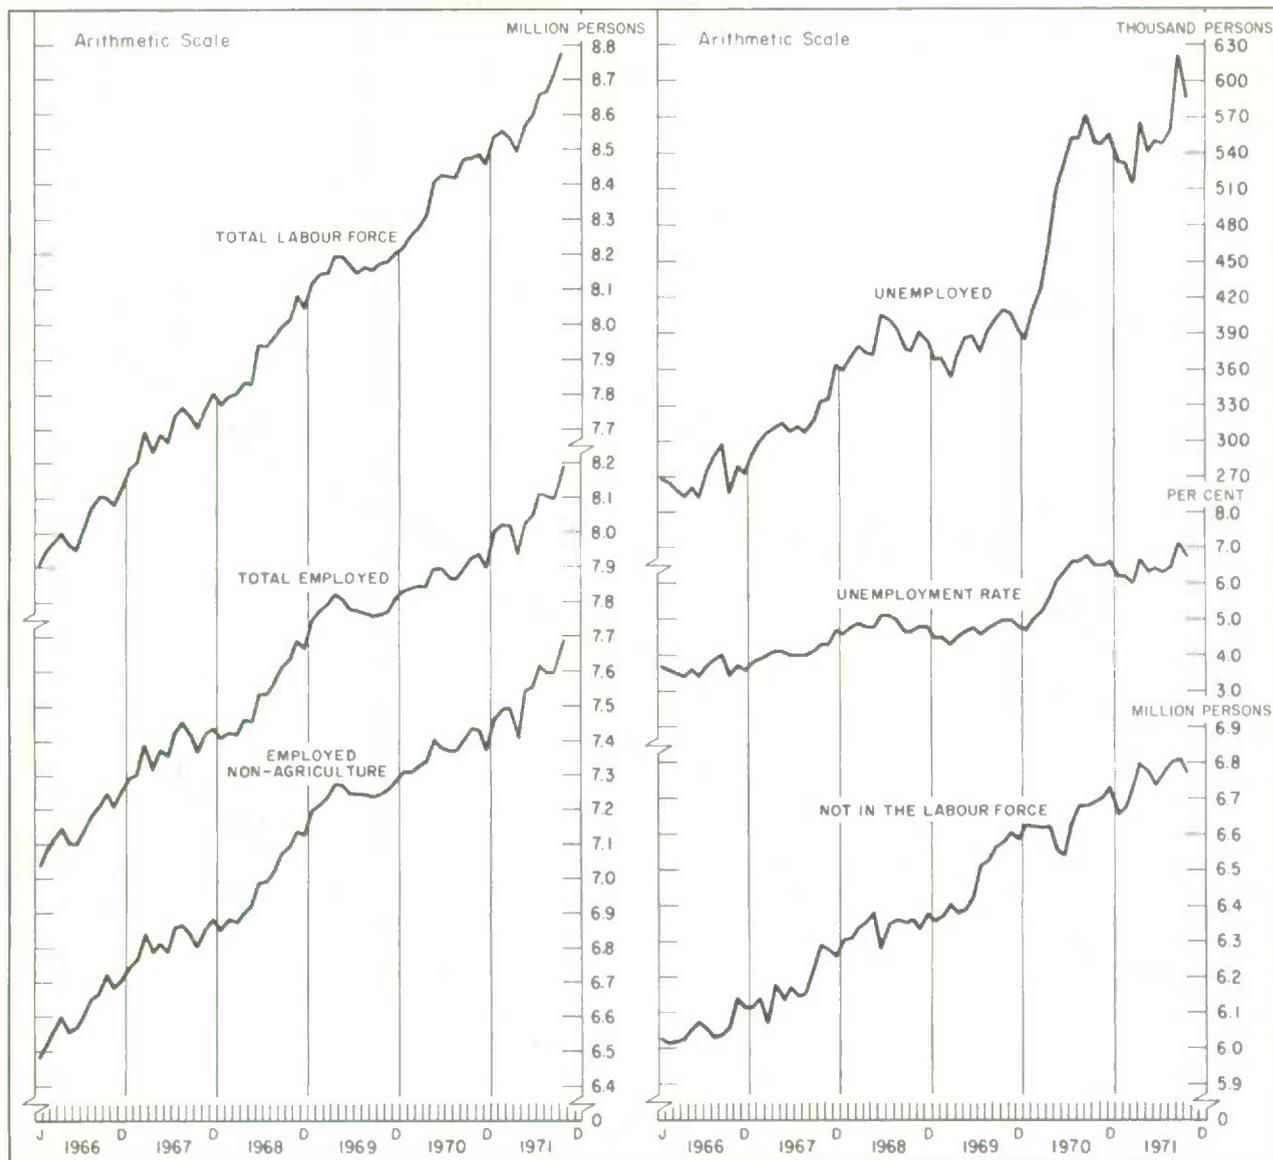

3. The procedure selected is to approach the various levels of education, step by step, beginning with the university, and concentrating on one sub-system in each region. A solid start has been made at the university level in the Atlantic provinces. In collaboration with the Atlantic Association of University Business Officers, Statistics Canada has been working for the past year toward the creation of a comparable financial reporting system for all universities in the Atlantic region. From the beginning, this pilot project has enjoyed close and continuing liaison with the various Grants Commissions. This has resulted in the development of a financial information system which satisfies the needs of the provincial governments as well as the expressed wishes of the universities to share financial information among themselves. A unique and important feature of this new financial reporting system is the breakout of university direct costs on a departmental basis. This will allow for a start to be made on the costing of various programs of study. It is expected that refinements to the system will be made as experience is gained. Over a relatively short period a large amount of data should be generated which will be valuable for policy and for evaluation. Financial officers in other regions will be invited to examine the methodology of this pilot project once the results have been analyzed.

The transmission, storage and retrieval of financial data will make use of computer technology, which, through the creation of classifications, and codes common to enrolment, finance and staff data, will eventually make available a vast body of interrelated data. The possibilities of establishing vital linkages between each of the files are great;

\* Mr. Y. Fortin, Assistant Director; Mr. R. Grenier, Coordinator, Systems and Development; Mrs. E. Kassirer, Chief of Special Studies and Publications of the Education Division.

LABOUR FORCE (More detail in Section 4, Table 3)

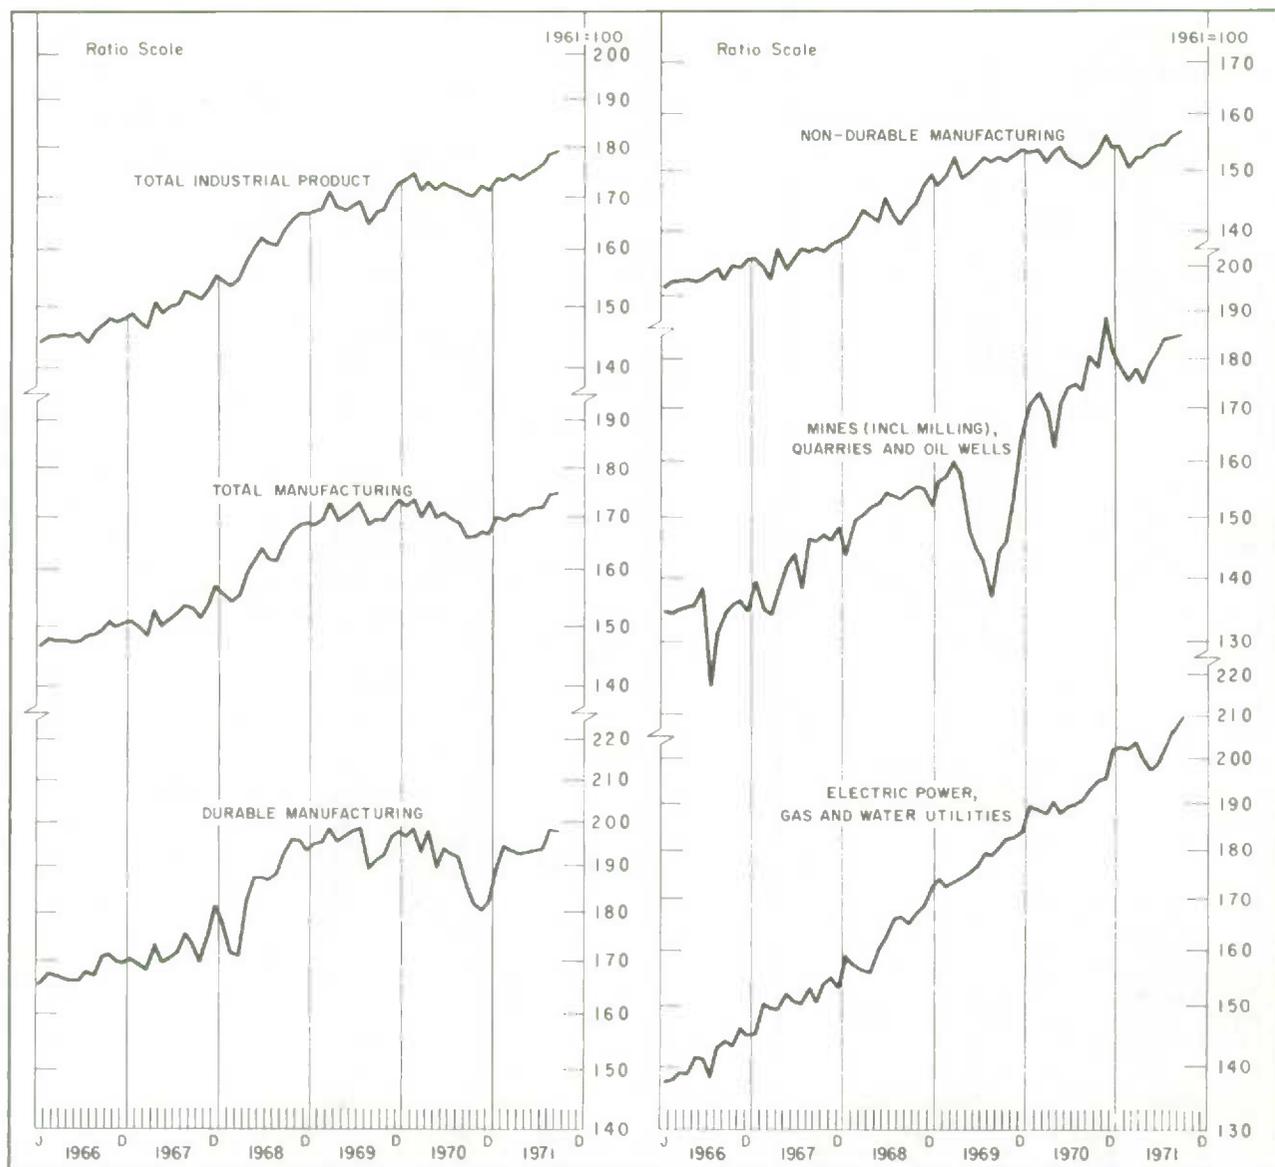

UNEMPLOYMENT RATE IN OCTOBER (6.7%) DROPPED FROM A PEAK OF 7.1% IN SEPTEMBER BUT WAS STILL HIGHER THAN THE AUGUST RATE OF 6.5%. EMPLOYMENT ROSE 1.1%.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
	thousands				per cent	thousands

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

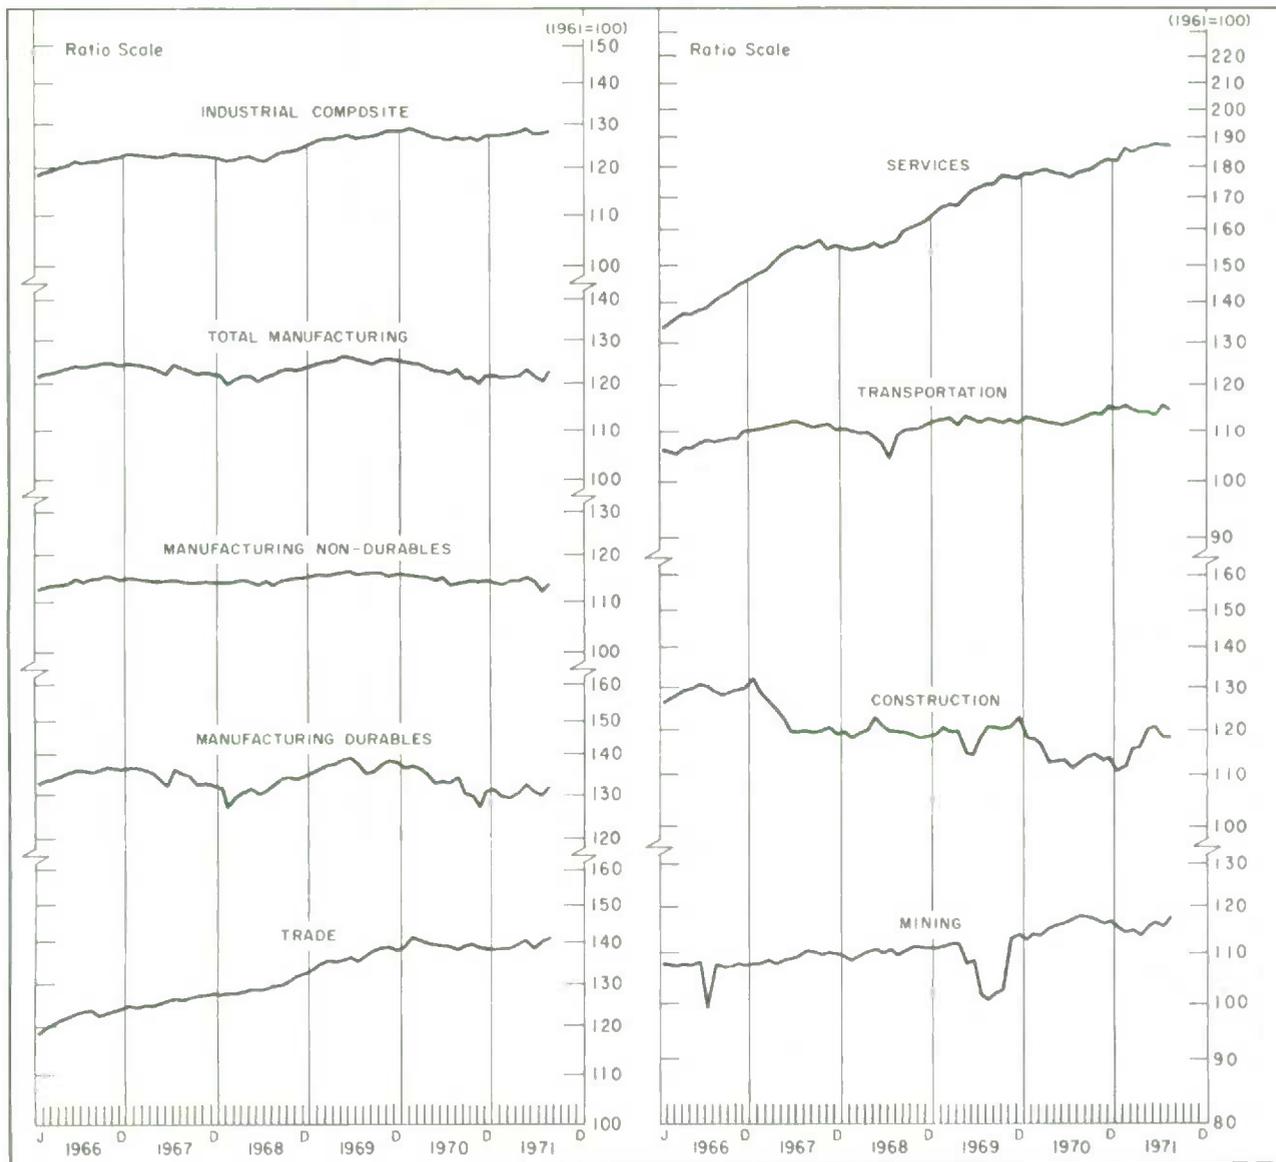

THE SEASONALLY ADJUSTED INDEX OF INDUSTRIAL PRODUCTION INCREASED BY 0.3% IN SEPTEMBER TO A LEVEL OF 179.7 FROM 179.1 IN AUGUST. ALL DIVISIONS CONTRIBUTED TO THE INCREASE. IN MANUFACTURING, NON-DURABLE GOODS OUTPUT INCREASED, WHILE THE PRODUCTION OF DURABLE GOODS DECREASED.

		total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

HELD BY INCREASES IN THE SEASONALLY ADJUSTED RESULTS FOR JEWELLERY STORES, SHOE STORES AND MOTOR VEHICLE DEALERS, TOTAL RETAIL TRADE INCREASED 2.8% ABOVE THE COMPARABLE AUGUST FIGURE. OF THE FOUR TRADES WHICH RECORDED DECREASES, FUEL DEALERS AND WOMEN'S CLOTHING STORES REPORTED DECLINES OF 7.8% AND 1.2% RESPECTIVELY. TOTAL PASSENGER CARS SALES DECLINED 1.4% IN OCTOBER REFLECTING DECLINES OF 2.6% AND 6.9% RESPECTIVELY FOR SALES OF NEW CANADIAN AND U. S. MANUFACTURED AND NEW OVERSEAS MANUFACTURED PASSENGER CARS. TOTAL COMMERCIAL SALES WERE UP 9.9%.

<sup>1</sup>Total of all series available monthly as in column 10, Section 10, Table 6. See footnote 7 and 8 to this table for explanation of discontinuity commencing with January 1970, and January 1971 respectively.

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

THE GROSS NATIONAL PRODUCT SHOWED A FOURTH CONSECUTIVE SIZEABLE GAIN IN THE THIRD QUARTER OF 1971. IT ROSE BY 2.5 PER CENT TO REACH A LEVEL OF \$93.7 BILLION. THE GROWTH IN VOLUME WAS 1.6 PER CENT. CONSUMER SPENDING, GOVERNMENT CURRENT EXPENDITURE ON GOODS AND SERVICES, HOUSING OUTLAYS, AND INVESTMENT IN NON-FARM INVENTORIES WERE THE COMPONENTS OF DEMAND WHICH MOST CONTRIBUTED TO THIS GROWTH. ON THE INCOME SIDE, CORPORATION PROFITS, UP 9.3 PER CENT, CONTINUED TO EXPAND RAPIDLY AND LABOUR INCOME ROSE BY 2.1 PER CENT, AFTER AN UNUSUALLY STRONG 4.0 PER CENT RISE IN THE SECOND QUARTER.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. <sup>1</sup>Excludes profits (net of losses) of government business enterprises. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. <sup>5</sup>The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). <sup>6</sup>See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. <sup>3</sup>Withholding taxes. <sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

<sup>1</sup>These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

Table 1.9: relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification - continued

years and months	durable manufacturing																
	primary metal industries					metal fabricating (ex mach. & transportation equipment)											
	total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, wire & coating products	hardware, tool & cutlery	machinery (except electrical)	transp. equipment				
													total	aircraft and parts	motor vehicles <sup>1</sup>

<sup>1</sup>Receipts and payments in this summary are Balance of Payments data. They are consistent with Gross National Expenditure concepts after adjusting for withholding tax additions and revisions not yet reflected in the National Income and Expenditure accounts.

<sup>2</sup>Trade of Canada figures with certain valuation and timing adjustments appropriate for Balance of Payments.

<sup>1</sup>A minus sign except for official monetary movements, indicates an outflow of capital from Canada. <sup>2</sup>Includes guaranteed issues. <sup>3</sup>Bank balances and other short-term funds abroad (excluding official reserves). <sup>4</sup>Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. <sup>5</sup>Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.

<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>The labour force as a percentage of the population 14 years of age and over. <sup>3</sup>The unemployed as a percentage of the labour force. Source: The Labour Force (71-001), Statistics Canada.

<sup>1</sup>See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force (71-001), Statistics Canada.

<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force (71-001), Statistics Canada.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. <sup>3</sup>The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries.

<sup>1</sup>The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing, trapping and public administration and defence. <sup>3</sup>Includes storage, electric power, gas and water utilities. <sup>4</sup>Excludes domestic service. <sup>1</sup>The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping and public administration and defence. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

Table 14: employment indexes, <sup>1</sup> by manufacturing industry<sup>2</sup> (1961-100), based on the 1960 standard industrial classification

years and months	non-durable manufacturing <sup>3</sup>							durable manufacturing								
	food and beverages	rubber products	leather products	textile products	clothing	paper and allied industries	petroleum and coal products	chemicals and chemical products	wood products	furniture and fixtures	primary metal industries	metal fabricating industries <sup>4</sup>	machinery (ex electrical)	transportation equipment	electrical products	non-metallic mineral products

<sup>1</sup>The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. <sup>1</sup>Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. <sup>2</sup>These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. <sup>3</sup>Indexes for Quebec City and Thunder Bay are on the (1969=100) base. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

years and months	shipments <sup>1</sup>	new orders received during month <sup>2</sup>	unfilled orders at end of month <sup>3</sup>	owned <sup>4</sup>	inventory at end of month					ratio of inventories owned to shipments
					held but not owned	all inventory held			ratio of inventories owned to shipments	
						total	raw materials	goods in process

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>3</sup>Annual figures for inventories and unfilled orders are end of December values. <sup>4</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments<sup>1</sup> by industry based on the 1960 standard industrial classification (million dollars)

years and months	total shipments	non-durable	durable	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

<sup>1</sup>Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". Source: Footwear Statistics (33-002), Statistics Canada.

<sup>1</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. <sup>2</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

<sup>1</sup>Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. <sup>5</sup>Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. Source: Primary Iron and Steel (41-001), Statistics Canada.

<sup>1</sup>Production plus imports less re-exports, minus exports. <sup>2</sup>Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field less field flared and waste. <sup>4</sup>By gas utilities. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

<sup>1</sup>Barrels of 35 Canadian gallons. <sup>2</sup>Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. <sup>3</sup>Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. <sup>4</sup>Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. <sup>5</sup>Includes inventories at end of period being held at gas plants and in storage caverns. <sup>6</sup>Includes stove oil, kerosene and tractor fuel. <sup>7</sup>Includes aviation gasoline and aviation turbo fuel. <sup>8</sup>Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. <sup>9</sup>Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. <sup>1</sup>The data are collected for 1,400 municipalities and individual figures are available on request. <sup>2</sup>Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). <sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: *New Residential Construction (64-002)*, Statistics Canada.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. <sup>2</sup>1970 and 1971 price indexes are subject to revision. <sup>3</sup>1971 price indexes are subject to revision. <sup>4</sup>Farm share only of motor vehicles. <sup>5</sup>In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. <sup>6</sup>In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

Note: The Farm Input Index replaces the Price Index Numbers of Commodities and Services Used by Farmers formerly contained in this table. A brief outline of the change is contained in the Note to Users in this issue.

<sup>1</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.  
<sup>2</sup>Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. <sup>3</sup>Includes baking and frying oils and fats. <sup>4</sup>Includes stocks held by manufacturers and other warehouses. <sup>5</sup>Includes fresh sausage, frankfurters, weiners and all other sausage.  
<sup>6</sup>Includes solid, coated, bulk, packages and novelties. <sup>7</sup>The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

<sup>1</sup>Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. Source: Retail Trade (63-005), Statistics Canada.

## DATA FOR THIS TABLE

ARE

NOT AVAILABLE

<sup>1</sup> Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also *Credit Statistics (61-004)*. <sup>2</sup> Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. <sup>3</sup> Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 13.5 per cent. <sup>4</sup> Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. <sup>5</sup> Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. <sup>6</sup> Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. <sup>7</sup> The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are reported in the unadjusted form. <sup>8</sup> Beginning in January 1971, the Other Personal Cash Loans and Instalment financing components do not include interest and other unearned income finance charges. Sources: *Consumer Credit (61-004)*, Statistics Canada; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.

<sup>1</sup>Column numbers refer to tables 3 and 4 section 11. <sup>2</sup>Includes special transaction-trade, not shown separately. <sup>3</sup>The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. <sup>4</sup>Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

<sup>1</sup>Column numbers refer to tables 3 and 4, section 11. <sup>2</sup>The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. <sup>3</sup>Includes special transaction-trade, not shown separately. <sup>4</sup>Includes scrap. <sup>5</sup>Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

<sup>1</sup>Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. <sup>2</sup>Monthly averages for 1968 and 1969 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>3</sup>Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

<sup>1</sup>Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. <sup>2</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>3</sup>Note: Nordair was put into Financial Level II (from III) in January 1970 i.e. 1969 and previous dates do not include Nordair. Source: Civil Aviation (51-001), Statistics Canada.

<sup>1</sup>Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. <sup>2</sup>Total new settled-for ordinary sales in Canada. Total sales figure does not include sales for Northwest Territories. <sup>3</sup>Under new or amended contracts. <sup>4</sup>Revisions for 1970 are preliminary.

<sup>1</sup>The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. <sup>2</sup>The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. <sup>3</sup>Combines the industrials, utilities and finance common stocks. <sup>4</sup>Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. <sup>5</sup>Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. <sup>6</sup>Stocks included in the mining index are for producing mines. <sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002) Quarterly, Statistics Canada.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. <sup>1</sup>This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. <sup>2</sup>For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates of Reduced Levels" (Col. 22). <sup>3</sup>As of April 1, 1969 Industry and Trade and Commerce are combined. <sup>4</sup>Under the Technical and Vocational Training Assistance Act. <sup>5</sup>Government contributions under the Hospital Insurance and Diagnostic Services Act. <sup>6</sup>Includes treatment and rehabilitation services.

Sources: Canada Gazette and Dept. of Finance.

\*Data for April to September are shown only where there is continuity from fiscal year 1970-71. This table is currently being revised.  
\*March 1970 figures are preliminary in that they do not include supplementary accounts.

million. Service exports rose by 2.9% while service imports rose by a sharp 7.0%, partly due to a rise in payments in the tourist and travel account.

The profile of merchandise trade so far this year is one of substantial expansion, but with a faster growth of imports than in exports. In the first nine months of 1971 merchandise exports were 4.9% greater than in the first nine months of 1970. Most of the strength in exports was from the sale of barley and wheat, and petroleum and natural gas, lumber and other wood building materials and automotive products, and coal and other crude bituminous substances. However, many declines were registered, in particular, in pulpwood and other crude wood materials, in all metallic ores except zinc and nickel, in most non-metallic minerals, in metal fabricated materials (except in iron and steel) and in newsprint. This was a reversal of the pattern of exports in 1970, when most of these commodities had recorded large increases. In merchandise imports, on the other hand, the increase of 7.4% was very broadly based, the only major grouping to show a decline being food, feed, beverages and tobacco, down by 0.5%. By country, the increase in exports to the United States was mainly responsible for the total increase, as exports to the United Kingdom and most of the other countries dropped, while increases in imports were recorded from all major trading partners.

The most notable features on the income side were the continued rapid growth in corporation profits before taxes and the sizable upward revisions of labour income for the first half of the year. Corporation profits, (on a national accounts basis), which had risen by 7.6% in the first quarter and by 10.1% in the second quarter, recorded a third important gain of 9.3% in the third quarter. The third quarter level of corporation profits of \$8,684 million was 14% above that of the third quarter of 1970, and 6.4% above the previous record level of \$8,160 in the first quarter of 1969. Undistributed corporations profits have been rising during 1971 at an even faster rate than profits; they rose by 13.7% in the first quarter, by 16.6% in the second quarter, and by 21.7% in the third quarter.

Revisions have raised the level of labour income by \$204 million in the first quarter and by \$636 million in the second quarter. (By industry groups, the second quarter upward revisions were very widespread.) As a result, the rates of increase of labour income have been raised in both the first and the second quarters, but especially in the latter which now appears to have risen by an exceptionally strong 4.0% instead of 3.2% as first published, and which already contained the effect of unusually large retroactive payments by governments. The rise in the third quarter was of 2.1%, with the principal gains being shown by retail trade, up 3.2%, and by the manufacturing industries, up 1.9%. After a 5.8% increase in the second quarter, wages and salaries in the construction industry declined slightly, partly reflecting labour disputes in the third quarter.

Personal income and personal disposable income showed lower rates of increase in the third quarter than in the first two quarters of the year. This was especially true of personal disposable income, which slowed to a growth of 1.4% after making impressive gains of 4.1% in the second quarter and of 3.0% in the first quarter. In addition to the dampening impact of the slowdown in wages and salaries, after the unusually strong second quarter gain, personal disposable income was also affected by irregularly large personal income taxes in the third quarter. Personal saving apparently fell in the third quarter, as did the saving ratio (personal saving as a proportion of personal disposable income), from 8.6% to 8.0%. However, saving data, being derived residually, is sometimes very unreliable, especially when calculated on the basis of preliminary information. Thus, upward revisions to some income series in the second quarter, particularly of wages and salaries, coupled with downward revisions in income taxes, had the effect of raising the saving estimate for that quarter by almost \$1.5 billion. The saving ratio for the second quarter appears to have remained at approximately the same level as in the first quarter, instead of dropping sharply as first observed.

#### Price Movements

The implicit price index for GNP rose by 0.9% in the third quarter compared with a 1.3% increase in the second quarter. However, the movement of the index was affected by the irregularly high retroactive payments in wages and salaries by governments in the second quarter, because such payments are entirely reflected in the price component and leave real expenditure unchanged. If the effect of these payments were removed from the implicit price index, the rate of increase in the second and third quarters would be approximately the same, at around 1.0%.

The implicit price of personal expenditure rose at a lesser rate than in the second quarter, because of a marked slowdown in the rate of increase shown by the implicit price index for non-durable goods, from 2.2% in the second quarter to 0.7% in the third quarter. This deceleration in the non-durable goods implicit price index was mainly due to the food component, which showed a lower rate of increase following a significant rise in the second quarter. Lower increases were also recorded in the prices of fuel, gas and oil, and reading material. There was, however, an acceleration in the rate of price increase of alcoholic beverages, and of gas and electricity. In semi-durables, the major price increase was shown by clothing and footwear. In the durable goods category, the implicit price index of which rose by a moderate 0.3%, there was a notable deceleration in the rate of increase of the new and used passenger car component, from a 1.4% rise in the second quarter down to a 0.6% rise. The implicit price index for services rose by 1.0%, approximately the same rate as in the previous four quarters.

The acceleration in the rate of increase of the implicit price index for gross fixed capital formation was due to the materials cost component of the residential construction price index, which rose abruptly reflecting demand pressure, especially on lumber, the price of which rose by 6%, and other wood building materials. The impact of the rise in materials prices more than offset a lessening in the rate of increase of the wage rate component, resulting in the sharp climb of the residential implicit price index, from a rise of 0.8% in the previous quarter, to one of 3.0% in the third quarter. By contrast, the price index for non-residential construction rose at a somewhat lower rate in the third quarter than in the second quarter. This was mostly due to the fact that materials prices did not climb as sharply in non-

residential construction, largely because lumber has a smaller weight in that cost index. The implicit price index for machinery and equipment rose by 1.0%, approximately the same rate as in the second quarter.

Both the export and the import implicit price indexes rose at sharply accelerated rates in the third quarter. The 1.7% increase in the export price index reflected sharp jumps in the prices of lumber, nickel, zinc, and of some steel products. The export implicit price index had shown little change in recent previous quarters, except for a 0.9% decline in the first quarter. The price index for imports rose by 2.2%, compared with a 1.2% rise in the second quarter.

<sup>1</sup> Implicit price indexes are currently weighted (Paasche) and therefore reflect changes in expenditure patterns as well as price changes of individual items.

**The Government Sector**

Total current government expenditures of all levels of government combined (excluding intra-governmental transfers) rose by \$1,556 million, 5.3% above the second quarter rate. Higher current spending on goods and services accounted for about one third of the increase. There were notable increases in provincial and local government expenditures on goods and services, although these were partially offset by a decline in federal spending. Capital outlays declined slightly, mainly due to decreases at the federal and provincial levels. A rise equivalent to that in expenditures on goods and services took place in transfer payments to persons. Most of this increase was concentrated at the provincial level where there were higher transfers to post-secondary educational institutions and benevolent associations. All other expenditure categories also showed increases.

Total government revenues of all levels of government combined increased by 4.7%, of \$1,512 million, in the quarter. The greater part of the rise was accounted for by higher returns from personal in-

come taxes at both the federal and provincial levels of government. Other major rises took place in revenues from indirect taxes, investment income and corporate tax liabilities, particularly at the federal level.

With the total revenues and total expenditures of all governments combined rising by approximately the same amounts, the surplus of the government sector, on a national accounts basis and seasonally adjusted at annual rates, showed little change in the quarter. However, sharp movements occurred at the individual levels of government. The federal government moved from a deficit of \$420 million in the second quarter to a surplus of \$240 million in the third quarter. At the provincial level, an unusually sharp increase in transfer payments to local governments reinforced the rise in other expenditures with the result that the surplus of \$96 million in the second quarter became a deficit of \$856 million in the third quarter. The position of local governments, reflecting the notable rise in transfer payments from provincial governments, became a surplus of \$88 million from a deficit of \$220 million in the second quarter.

this will allow for an examination of facets of university education which have been obscured heretofore.

The characteristics of students have been the concern of another pilot project in Ontario where a collaborative data collection system has been developed in the last month with the Department of Colleges and Universities of Ontario. In this case, most of the universities have arranged for the direct transfer of individualized student records consisting of about 40 elements on computer tapes to Statistics Canada.

Preliminary discussions have taken place with western university officials to jointly launch a pilot study on teaching staff. At a later date, possibly in Quebec, the collection of statistics on facilities will be initiated.

These isolated regional sub-systems will eventually be pieced together into one total system. The complete integrated education information system will then be available to all, offering the nation standardized tools for data collection, processing and analysis. With the present high level of cooperation, indications are that by 1973 Canada will have an advanced system of information in the field of higher education.

4. In addition, inroads have already been made at the post-secondary non-university level. In mid-November, 1971, exploratory meetings were held between Statistics Canada and community college officials of the Atlantic provinces, and recently with western officials of community colleges and related institutions, with a view to the development of a student information system along the lines of the university pilot project in Ontario.

5. A system parallel to the above will be established at the elementary and secondary levels, although this has not yet begun.

6. Eventually, comprehensive computerized data files will exist on teachers, students, finance and facilities at all levels of education in Canada. Each file will contain a multitude of socio-economic characteristics, ready to be linked to data in the other files.

### Uses of the Information System

1. Within each type of file useful links can be drawn. For example, since teachers' files cover a range of characteristics which relate to experience, education, salary, specialization etc., relationships between salaries and qualifications, years of experience and mobility, will be available for analysis on a regional and a national basis. The files will permit a study of mobility, supply and demand, and other factors.

The importance of information on the teaching component of the educational enterprise cannot be overstated. Nearly 70% of the total Canadian elementary-secondary cost of \$5.3 billion is teaching cost; some 50% of the total devoted to university education (\$1.6 billion) is teaching cost. On economic planning grounds alone it appears justifiable to commit significant resources to the creation of a complete information base on teachers at all levels of education.

Further, the university teachers' file creates interesting possibilities related to the development of research registers in specialized areas. The expansion of the individual files will make it possible for Statistics Canada to maintain an up-to-date record of research activity by discipline for each of the 26,000 full-time university teachers in Canada. This could prove to be a valuable tool for the researchers themselves and for funding agencies. In addition, it could provide useful information for the rationalization of research activity.

2. Various cross-tabulations of characteristics of teachers, students, and finance will be possible. For example, if there is a trend to an increasing number of students to select mathematics at university one could determine: which courses are most populated; the number, qualifications and salaries of staff teaching those courses; the cost of these courses; and the eventual occupational position and salary of these students.

3. The establishment of a **Ministry of State for Science** indicates a growing national concern about highly qualified manpower, science policy, and research. It is expected that information made available from Statistics Canada's information system will play an important role in policy formulation.

4. In general, education planners and policy-makers in federal, provincial and local governments, school boards, teachers' federations and research institutions will utilize the multi-dimensional information generated by the education information system.

5. Suppliers of data (universities, colleges, governments, schools etc.) will request cross-tabulations and information about their institution, along with comparative data from other similar (but unnamed) institutions across Canada, for their policy making.

6. Citizens' groups, and those in the private sector will request data from this information system. The Canadian public in general is entitled to know all about the nation's education, an activity which occupies one-third of its entire population and requires one-fifth of all tax monies to keep it in operation.

### Effect on the Education Division

Until very recently it was believed that the prime user of education statistics was the researcher, and the collecting, processing and publishing of education data was carried out with this in mind. It is now becoming increasingly clear that there is in fact an array of important disparate users, only one of which is the researcher. A more accurate picture is that the education planner is the prime user of education statistics. His needs for data are obvious: collectively and individually, the education decision-maker is a major determinant of the quantity and quality of education in Canada.

This has influenced the Education Division to outline new objectives and a new orientation, and statistics are now beginning to be collected, processed and transmitted in a form which permits rapid and ready use by planners. The result is the following:

1. New data items are being collected which are needed by planners. Hopefully, gaps in detail in what is being collected and what is needed, will narrow.
2. A computerized nation-wide education information system is steadily being developed to assist major education data users.
3. In addition to presenting education data in tabular form, considerable textual material will increas-

ingly be presented in the form of analysis, commentary and interpretation, made by Statistics Canada. The computerized system will be a major tool in facilitating these changes. No value judgments will be made by Statistics Canada.

4. In addition to disseminating education information through publications, data will be retrieved from computer files to meet specific consumer requests. This information may be forwarded in print-outs, but may also be accompanied by analysis, commentary or interpretation taking the format of a special report. Such a process offers a rapid and tailor-made information flow. Frequently the requester of data may be the institution which initially supplied some of the data to the files. Collaboration of this nature is basic to the improvement of the quantity and quality of available education statistics. Only in this way will the Education Division, a federal agency in Canadian education, be able to provide the service it feels the public deserves.
5. As a federal agency in Canadian education, the Education Division of Statistics Canada will increase its public statements on all aspects of education. Gradually the Division will be able to offer frequent, integrated, concise, and timely general statements in addition to the detailed, historical data it will also continue to produce.

## Other Publications of the General Time Series Staff

Publication number	Title and Description	Publication number	Title and Description
11-003F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the Canadian Statistical Review.		
	<b>Canadian Statistical Review Supplements</b>		
11-004	<i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers.  Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).		
11-206	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1.00 (Free to <i>Canadian Statistical Review</i> subscribers.)  Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).		
	<b>CANSIM Manuals and other Publications*</b>		
—	<i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i> —Free on request. Order by title, from General Time Series Staff.		
*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.00  This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval manual" (available in French, pub. N° 12-530F).		
			<b>CANSIM Manuals and other Publications (Cont'd)</b>
*12-531	<i>CANSIM: Users' Manual for Data Retrieval and Manipulation</i> (Occasional)—Price \$1.50  Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported (available in French, pub. N° 12-531F).		
—	<i>CANSIM: Summary Reference Index</i> (Annual, with monthly amendments)—Free on request. This index summarizes data available from CANSIM and provides matrix identifiers. Order by title, from General Time Series Staff.		
—	<i>CANSIM: Series Directory</i> (Annual, with monthly amendments)—Price \$10.00 plus \$5.00 for amendments.  The <i>CANSIM Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title, from General Time Series Staff.		

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,  
Statistics Canada,  
Ottawa.

\*Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada.
