Expenditure Accounts
1st Quarter 1971

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover. *Selected Economic Indicators* appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other DBS publications:

- ... figures not available
- ... figures not appropriate or not applicable
- nil or zero.
- amount too small to be expressed.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements
of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3. Table 3.1 – Financial Flows Matrix

The National Income and Expenditure Accounts revisions result in some conceptional and statistical changes to the Financial Flows Accounts. Revised data for the Financial Flows Accounts are not comparable with those of earlier periods which do not reflect these changes. For details of these revisions see National Income and Expenditure Accounts, 1926-68. Financial Flows Matrices in this issue reflect the revisions of the National Income and Expenditure Accounts for 1968, 1969 and 1970.

A new publication of the historical quarterly series for all sector and category tables, and annual matrices covering the first quarter 1962 onwards, is expected to be released in 1971.

Data for the fourth quarter 1970 are published in the present issue of the Review. Supplementary tables covering revised fourth quarter 1969, annual 1969 and 1970 appear on pages 116-121 of this issue.

Section 3. Table 4.1-4.3 – Balance of International payments.

Data for the first quarter 1971 will appear in the Weekly Supplement of this Review dated June 24th.

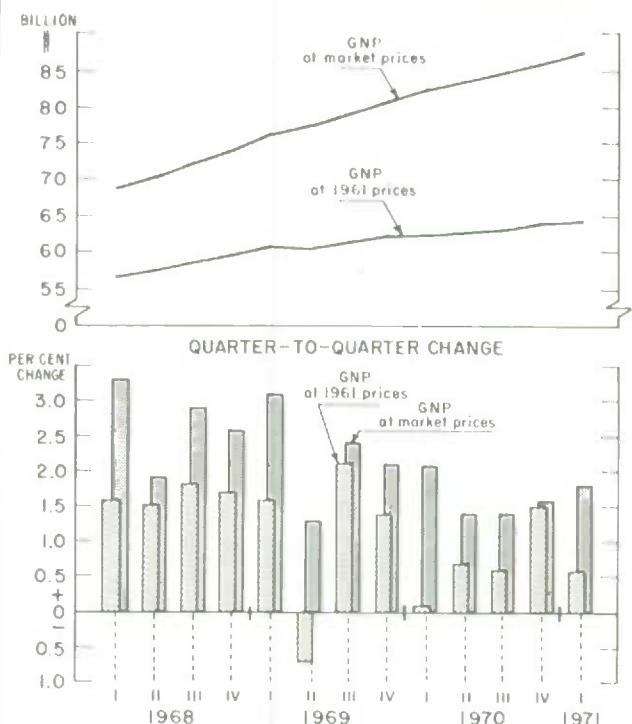

Section 4. Tables 1, 13, 14, 16-19 – Employment Indexes

February and March 1971 data for these tables of Section 4 are not currently available. It is expected that this information will be contained in the next issue of this publication.

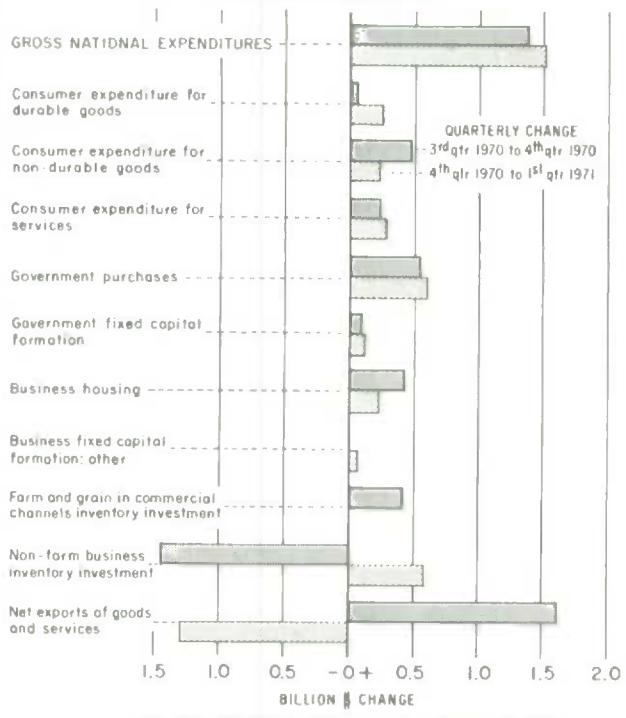

Section 12. Table 4 – Operating Statistics of Air Carriers in Canada

The series Revenue Passengers Carried by Foreign Carriers has been deleted from this table because current data are no longer available.

GNP at market prices rose 1.7 per cent to reach \$87.9 billion. Real GNP seems to have lost momentum; it moved at .6 percent against fourth's quarter 1.5 per cent to a level of \$64.6 billion.

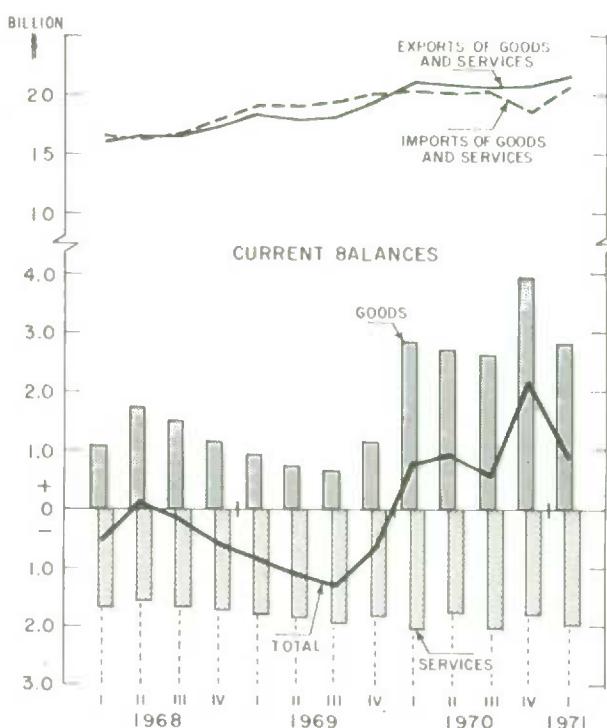

Notable contributions made by consumer purchases of durables and by government purchases more than offset a very large fall in net exports of goods and services. The swing in non-farm business inventories although large, accompanied a nominal accumulation.

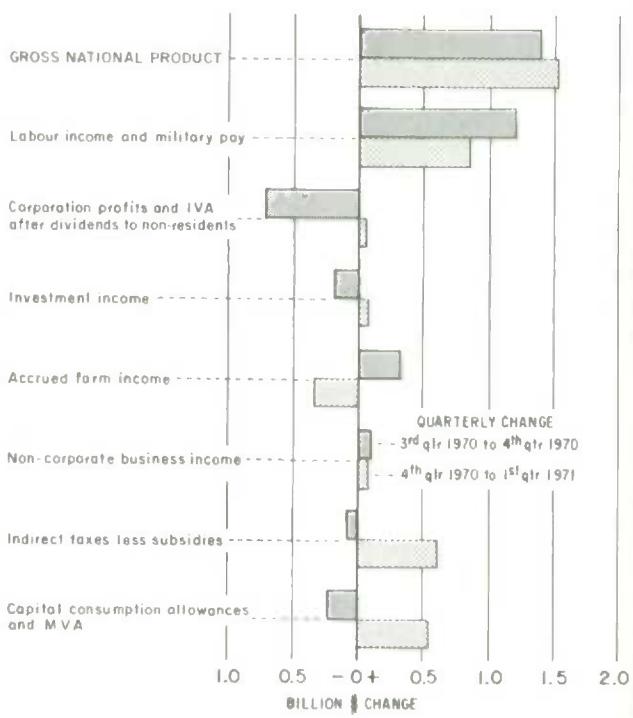

ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES.

Reversed movements on both goods and services balances, more particularly on goods, resulted in a reduced surplus, from \$2196 million in the fourth quarter to \$896 million in the first.

Labour income, indirect taxes and capital consumption allowances are the components that contributed the most to the rise in GNP

**NATIONAL INCOME AND EXPENDITURE ACCOUNTS,
FIRST QUARTER, 1971**

A rather mixed picture emerges from a reading of preliminary estimates of the National Income and Expenditure Accounts for the first quarter of 1971. The preliminary fourth quarter 1970 estimates of Gross National Product in real terms suggested a renewed strong pace of activity, which appeared remarkable in view of the loss of production due to the automobile strike. This rate of expansion was apparently not maintained in the first quarter, despite the post-strike recovery in the automobile industry. On the other hand, domestic demand accelerated sharply in the quarter, but most of this increased demand was met by imports rather than by domestic production.

Gross National Product at market prices, seasonally adjusted at annual rates, rose by 1.8 per cent to reach \$87.9 billion, compared with a rise of 1.6 per cent in the fourth quarter. However, most of this gain reflected higher prices, as the implicit price deflator for GNP, which had remained practically unchanged in the fourth quarter, rose by 1.1 per cent in the first quarter. After adjusting for price changes, constant dollar GNP rose by 0.6 per cent in the first quarter compared with a rise of 1.5 per cent in the fourth quarter. (There are indications at the moment of issuing this report that the first estimates of the balance of external transactions incorporated here might be revised upward; if these indications are confirmed, they will result in a somewhat higher GNP estimate.)

Domestic demand, that is the demand for goods and services by Canadian residents whether on goods and services produced in Canada or abroad, was very strong in the first quarter, showing a rise of 3.3 per cent compared with a decline of 0.3 per cent in the fourth quarter. Much of the rise in domestic demand was due to increased spending on products of the North-American automobile industry, including a rebuilding of the stocks of motor vehicle dealers, as normal supplies of these products became available again upon termination of strikes in the industry. Demand for other goods and services also appears to have increased at a faster rate in the quarter. This was reflected in increases in most expenditure components as well as in increased imports of both automotive and other products. However, due to the higher import content of domestic demand in the quarter, which was only partially offset by increased exports, the value of Canadian production rose by much less than domestic demand.

Quarterly changes in Gross National Expenditure in the fourth and first quarters were dominated by swings in the balance of transactions in goods and services with non-residents. In the fourth quarter the balance (on a revised basis) rose by \$1.5 billion as compared to the previous quarter to reach an unprecedented surplus of \$2.1 billion. It then fell back sharply in the first quarter by \$1.2 billion

to a level of \$0.9 billion. These swings in the overall balance originated in the merchandise account and were attributable to two effects reinforcing each other. First, the automobile strikes had a greater impact on Canada's automotive imports than on its automotive exports and this led to a sharp improvement in the balance of trade in these products in the fourth quarter and to a subsequent sharp deterioration in the first quarter. (It may be noted that the gain in net exports of automotive products (exports less imports) in the fourth quarter was more than offset by declines in inventories and in other final expenditure components.) Second, there were similar swings in the balance of transactions in other than automotive products due to increases in such exports in the fourth quarter, while imports remained flat, and to flat exports in the first quarter while imports rose.

The major strength in private demand was shown by household expenditure on durable goods and by new residential construction. The relative buoyancy of this demand may have been partly due to generally easier credit conditions in recent months.

The increase in consumer spending on durable goods of 4.5 per cent was one of the largest in recent years. Much of this gain was in expenditure on new automobiles, up by nearly 15 per cent from the strike-affected fourth quarter. However, spending on other durable goods also rose quite strongly, particularly on home furnishings (for example furniture and carpets), and household appliances—goods which are partly associated with new housing. The gains made by these two categories of 6.5 per cent and of 8.2 per cent respectively were well above their quarterly increases in the last two years.

Consumer spending on other than durable goods was rather sluggish, especially in volume terms. Expenditures on semi-durable goods showed a rise of only 0.5 per cent after an unusually strong 5.1 per cent gain in the fourth quarter. Women's and children's clothing were the only items in that group to show significant increases. Spending on non-durable goods decelerated, particularly in volume terms, largely because of declines in alcoholic beverages. Services showed an estimated 1.4 per cent rise, but in real terms also registered a smaller than usual rate of advance. The relatively slow pace of advance of these categories of consumer expenditure offset the large gain shown by durable goods, so that although total personal expenditure on consumer goods and services made approximately the same current dollar gain of 1.5 per cent as in the previous two quarters, it showed a volume deceleration; the constant dollar increase of 1.0 per cent compared with gains of 1.6 per cent in the fourth quarter and of 1.3 per cent in the third quarter of 1970.

Expenditure on new housing rose by 5.6 per cent. Although this increase was much smaller than the 12.7 per cent gain shown in the fourth quarter, when the sector benefited from the high level of starts in the latter part of 1970, the current increase was nevertheless sizable. Most of the gain in new residential construction was attributable to work carried over and especially to completions, which rose by nearly 10 per cent. An unusually severe winter in many parts of Canada may have contributed to the lower level of starts of residential structures in the quarter. They slowed from an annual rate of 256,000 units in the fourth quarter to a rate of 203,800 units in the first quarter. In April starts rebounded to an annual rate of 253,100 units.

The government sector was another area of support to economic activity. Government current expenditure on goods and services rose by 3.6 per cent with all three levels of government showing substantial increases. The most notable gains were shown by wages and salaries and by provincial medicare expenditure. Government fixed capital formation rose by 3.2 per cent, with the major part of the increased outlays due to highway construction by provincial governments. Other government payments, especially transfer payments to persons at the provincial level, also rose substantially. With total outlays outpacing the growth in revenues, the surplus of the government sector as a whole, on a national accounts basis and seasonally adjusted at annual rates, fell from \$660 million in the fourth quarter to \$184 million in the first quarter.

Fixed capital formation by businesses was weak in the quarter. Investment in plant and equipment rose by 0.6 per cent with all of the increase in spending on non-residential construction, which was up by 1.3 per cent. There was no change in the rate of investment in machinery and equipment. After discounting accelerated price rises this quarter in both non-residential construction (where there were renewed sharp increases in costs of materials) and in machinery and equipment, plant and equipment spending in real terms fell by 0.7 per cent. Though the survey of business intentions indicates very little stimulus from machinery and equipment spending this year, partly because manufacturing industries are expected to show a decline in their investment outlays, it does suggest some strength in non-residential construction for most other industries and especially utilities; the intended percentage increase in spending on business non-residential construction in 1971 of close to 10 per cent is approximately the same rate as was realized in 1970.

Business non-farm inventories, which had been depleted by \$652 million in the fourth quarter, registered a nominal increase of \$36 million in the first quarter, despite a substantial accumulation in the stocks of retail trade entirely accounted for by

the rebuilding of motor vehicle inventories. Depletions were most marked in manufacturing, where they were concentrated in the stocks of durables, particularly electrical goods. This reduction in manufacturers durable goods inventories may have resulted in part from the strength of consumer demand for such goods in the quarter. With new orders running ahead of shipments, the period ended with an increased backlog of unfilled orders.

On the income side a notable gain was shown by corporation profits, up by about 10 per cent. However, this gain, in large part due to resumption of normal production in the automobile industry, apparently did not fully reverse a decline of around 11.5 per cent in the strike-affected fourth quarter. Apart from the fourth quarter, profits were at their lowest level since the second quarter of 1968. (Because corporation profits estimates are very preliminary, no industrial detail is yet available.)

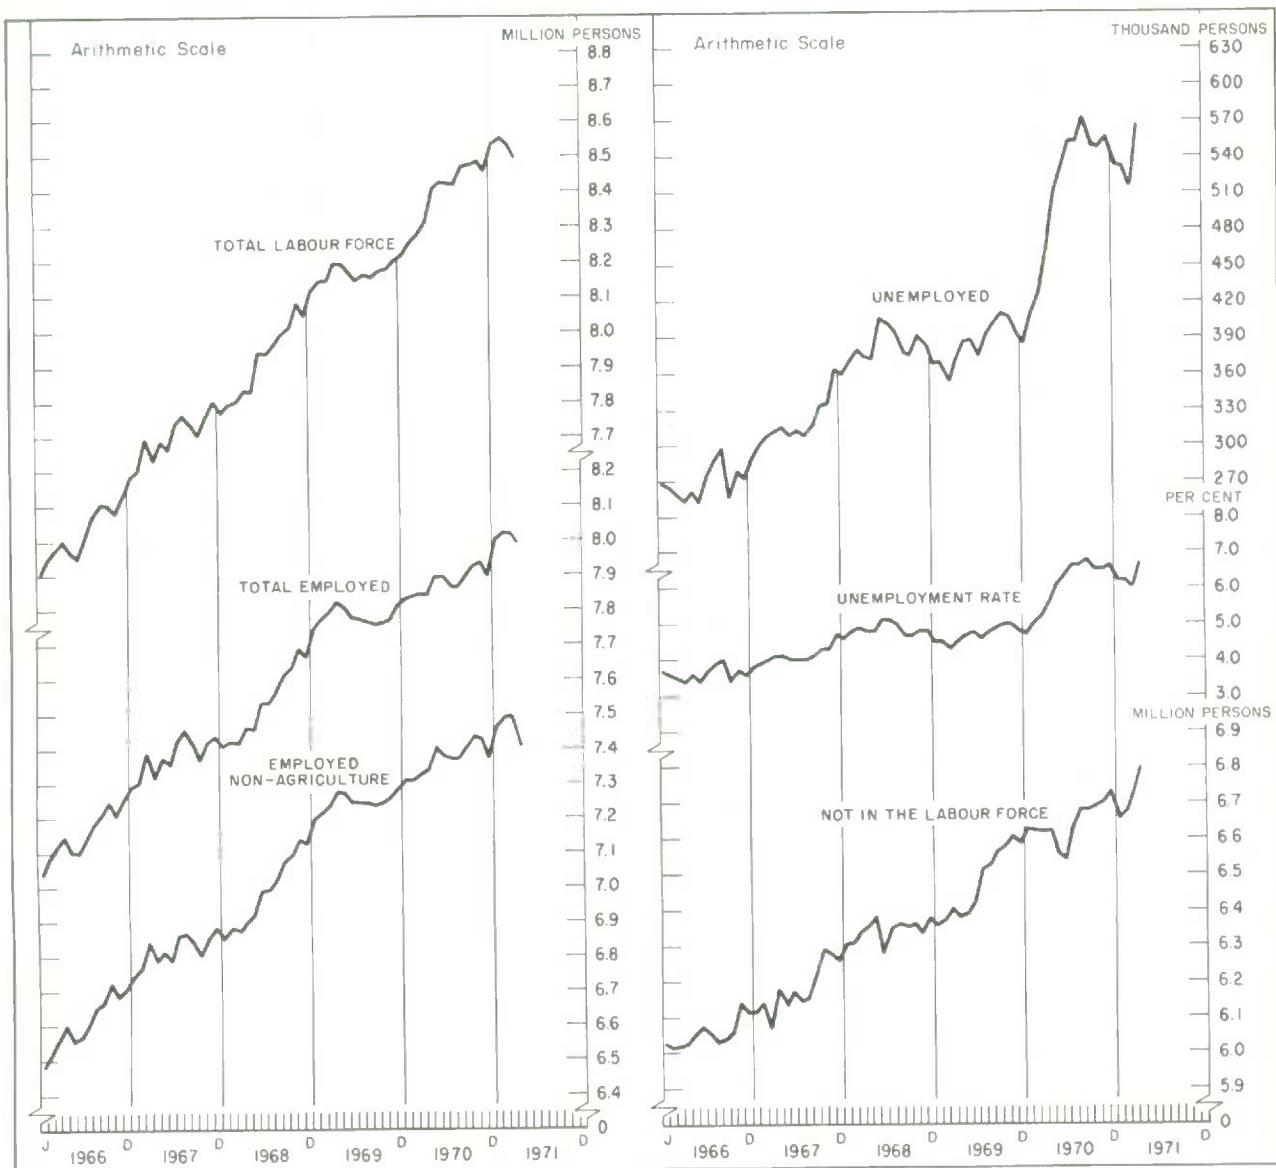

Wages, salaries and supplementary labour income rose by 1.8 per cent in the first quarter compared with 2.4 per cent in the fourth quarter. The first quarter gain was approximately the same as the average quarterly rate of increase during 1970. Wages and salaries in the goods-producing industries went up by 2.0 per cent and accounted for about 40 per cent of the total increase. Most of this gain occurred in manufacturing, which was up by 3.0 per cent. The recovery of production in the automobile industry was of course a factor behind this strong increase. In the service-producing industries, sizable gains in finance and in commercial and non-commercial services were somewhat offset by smaller than usual gains in transportation, communications and other utilities and in trade.

Other income components frequently display quite volatile changes. On balance their movements dampened the growth in national income in the first quarter. In particular, accrued net income of farm operators from farm production fell by 23.5 per cent. Although the value of grain production was virtually unchanged (an increase in the estimated value of the new crop offsetting a decline in the profits of the Canadian Wheat Board), both the value of livestock production and cash returns from other products declined in the quarter. Dividends paid to non-residents (a negative entry) rebounded sharply by 28 per cent from a low fourth quarter level. The inventory valuation adjustment registered a large negative figure of \$448 million in the first quarter compared with minus \$32 million in the fourth quarter. (The inventory valuation adjustment is an entry designed to eliminate from the income side capital gains or losses in inventories; when inventory prices are rising, the entry is negative, when they are falling, it is positive.)

Partly due to a sharp increase in transfer payments to persons, up 6.1 per cent personal income made a further sizable gain in the first quarter of 2.1 per cent. The fourth quarter gain

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

GROSS NATIONAL PRODUCT IN CURRENT DOLLARS ROSE BY 1.7 PER CENT IN THE FIRST QUARTER — APPROXIMATELY THE SAME PERCENTAGE GAIN AS IN THE FOURTH QUARTER OF 1970. HOWEVER, THE 0.5 PER CENT GAIN IN CONSTANT DOLLAR GNP WAS CONSIDERABLY SMALLER THAN THAT OF 1.5 PER CENT SHOWN IN THE FORTH QUARTER. THE SLOWED PACE OF ACTIVITY IN REAL TERMS OCCURRED DESPITE A POST-STRIKE RECOVERY IN THE AUTOMOBILE INDUSTRY.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancées or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. ⁴The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts, Fourth Quarter 1970 (D. B. S. 13-001).

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance.
²Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968.
³Withholding taxes.
⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.
For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹A minus sign except for official monetary movements, indicates an outflow of capital from Canada. ²Includes guaranteed issues. ³Bank balances and other short-term funds abroad (excluding official reserves). ⁴Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between direct measurements of current and capital accounts. ⁵Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.

¹See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. Seasonally adjusted data for the five regions, are usually different from the totals given on page 7.

²Canada totals, obtained by summing the data for the five regions. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages.³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total.⁴Includes miscellaneous manufacturing industries.⁵Includes also the storage and communication industries.

¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below.²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

¹Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. ²These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Annual figures for inventories and unfilled orders are end of December values. ⁴Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". Sources: Footwear Statistics (33-002), D. B. S.

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D. B. S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ³Excluding shipments for re-processing at maker's own plant. ⁴Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. Source: Primary Iron and Steel (41-001), D.B.S.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. ¹⁰Source: Refined Petroleum Products (45-004), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. ³Excl. of NFLD. Western grain prices used in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. ⁵Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective January 1969, as a % of the price of 100 lbs. live hog, Index 100. ⁶Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. ⁷Quotations refer to steers all weights. ⁸Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, D. B. S.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Sources:** Retail Trade (63-005), D.B.S.

¹ Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also Credit Statistics (61-004). ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 13.5 per cent. ⁴Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. ⁵Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁶Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁷The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. ⁸Beginning in January 1971, the Other Personal Cash Loans and Installment financing components do not include interest and other unearned income finance charges. Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.

¹Column numbers refer to tables 3 and 4 section 11.²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months.³Includes special transaction-trade, not shown separately.⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), D. B. S.

¹Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ²Monthly averages for 1968 and 1969 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ³Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.

¹Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers.

²Cargo includes air freight and express but excludes mail and excess baggage.

Note: Nordair was put into Financial Level II (from III) in January 1970 i.e. 1969 and previous dates do not include Nordair.

¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and new group contracts. ²Total new settled-for ordinary sales in Canada. ³1969 data only are revised. Total sales figure does not include sales for Northwest Territories. ⁴Under new or amended contracts.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002) Quarterly, D. B. S.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. ¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). ³As of April 1, 1969 Industry and Trade and Commerce are combined. ⁴Under the Technical and Vocational Training Assistance Act. ⁵Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁶Includes treatment and rehabilitation services.

Sources: Canada Gazette and Dept. of Finance.

was 2.4 per cent, but the average quarterly gain during 1970 was notably smaller. With income taxes and other transfers to government rising by a moderate 1.6 per cent, personal disposable income also rose notably for a second consecutive quarter — up by 2.3 per cent in the fourth quarter and by 2.2 per cent in the first quarter. Because personal expenditure did not advance as rapidly as personal disposable income, the personal saving ratio (personal saving as a proportion of personal disposable income) rose further to 8.1 per cent in the first quarter. This ratio has been rising since the second quarter of 1970, when it was 6.8 per cent.

Price Movements

The rise in the implicit price index for Gross National Expenditure accelerated sharply in the first quarter of 1971. The rise of 1.1 per cent — the largest since the first quarter of 1970 — compared with a 0.1 per cent increase in the fourth quarter. It may be noted, however, that the overall price deflator reflects shifting weights among the components of gross national expenditure as well as price changes of individual items. Such weight

shifts have been sizable in both the fourth and first quarters, especially with respect to the external trade sector. An alternative price measure with fixed weights based on the fourth quarter composition of Gross National Expenditure would have shown a lesser price increase.

As is shown in the following table, price rises occurred in practically all categories of demand. The implicit price index for personal expenditure on consumer goods and services, which has been remarkably stable in recent periods, rose by a moderate 0.5 per cent in the first quarter. This increase was mostly due to a sharp rise in the durable goods price index component, which was affected by substantial increases in the prices of new and used automobiles. A small rise in the non-durable goods implicit price index of 0.3 per cent followed declines in the preceding two quarters. The services implicit price index rose at about the same rate as in recent periods. The only component price index of personal expenditure on consumer goods and services to show a decline was that for semi-durable goods, entirely because of falling prices of clothing and footwear.

Gross National Expenditure	2.0	0.6	0.8	0.1	1.1
Gross National Expenditure excluding value of physical change in inventories	1.4	0.8	0.8	0.4	1.1

¹ Implicit price indexes are currently weighted (Paasche) and therefore reflect changes in expenditure patterns as well as price changes of individual items.

Although the implicit price index for business gross fixed capital formation as a whole showed the same price rise of 1.4 per cent as in the previous quarter, there were significant changes in its components. The price index for machinery and equipment showed an acceleration from a rise of 0.3 per cent in the fourth quarter to a rise of 1.0 per cent in the first quarter. Construction price indexes continued to rise at sizable rates. The wage components showed somewhat smaller rises in both residential and in non-residential construction, but the materials price indexes, which had shown price moderation in recent periods, rose sharply in the first quarter.

The appreciation of the Canadian dollar had no doubt been an important factor behind the smaller than usual increases in the implicit price index for exports and the declines in that for imports in the second half of 1970. By the beginning of 1971, most of the effects of the appreciation may have been incorporated in the trade price structure; both the exports and the imports implicit price indexes rose in the first quarter, though at very moderate rates. However, the rise in the implicit index for import prices was considerably dampened by an unusually large weight shift as between service imports and merchandise imports, as the value of transactions in the latter, which has the lower price index, rose very strongly in the quarter. The components of the implicit price index for imports show a 0.8 per cent increase for merchandise and 0.3 per cent increase for services.

The Government Sector

Total revenues of all levels of government combined (excluding inter-governmental transfers) rose by 3.0 per cent in the first quarter of 1971.

Much of the increase took place in revenues from indirect taxes, particularly at the provincial and local government levels where revenues from sales taxes, gasoline taxes and property taxes were considerably higher. Revenues from personal direct taxes rose by over \$200 million, with the increase concentrated at the provincial level and in contributions to the Canada Pension Plan. Returns from corporate direct taxes also rose, by \$160 million.

Total expenditures of all levels of government combined increased by over 4.5 per cent in the quarter. About half of the rise was in government current spending on goods and services with higher medicare expenditures and wages and salaries being major factors in the increase. Transfer payments to persons also rose substantially in the quarter, particularly at the provincial level.

As a result of expenditures increasing more rapidly than revenues, the surplus of the government sector as a whole, on a National Accounts basis and seasonally adjusted at annual rates, fell from a rate of \$660 million in the fourth quarter to a rate of \$84 million in the first quarter. The most dramatic shift took place at the federal level which moved from a deficit of \$60 million in the fourth quarter to a deficit of \$1,096 million in the first quarter, the major factor in this swing being a sharp increase in transfer payments to the provincial governments. On the other hand, the deficit of \$552 million at the provincial level in the fourth quarter moved to a surplus of \$36 million in the first quarter, reflecting the irregularly high payments from the federal government and partially offsetting the movement in the federal deficit. The combined surplus of the other levels of government showed little change.

This is the French edition of the Canadian Statistical Review.

Canadian Statistical Review Supplements

04 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by the DBS and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

06 *Annual Supplement to the Canadian Statistical Review*—Price \$1. (Free to *Canadian Statistical Review* subscribers).

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

CANSIM Manuals and other Publications*

— *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free.

530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price \$1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval manual" (available in French, cat. N° 12-530F).

Title and Description	Catalogue number	Title and Description

CANSIM Manuals and other Publications (Cont'd)

*12-531 *CANSIM: Users' Manual for Data Retrieval and Manipulation* (Occasional)—Price \$1.50

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported (available in French, cat. N° 12-531F).

— *CANSIM: Summary Reference Index*—Free on request.

This index represents a key to the contents of CANSIM, the Canadian Socio-economic Information Management System, and is the first step in location and ordering time series from the system.

CANSIM Series Directory

The CANSIM Series Directory has been produced as at October 14, 1970, and contains some 24,000 series and matrix titles, and descriptive detail of series stored in CANSIM. It is used in conjunction with the CANSIM Manual for Data Retrieval and Manipulation (12-531) to order series from DBS. Cost of the complete Series Directory is \$10.00. Monthly amendments (changes, additions, deletions, etc.) can be made available to users for an additional charge of \$5.00 for 11 amendments. (November 1970 to September 1971 inclusive).

This Review, the above and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont., or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
DBS, Ottawa.

Announcements to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, DBS.
