Expenditure Accounts,
2nd Quarter 1971

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer print-outs. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for *Selected Economic Indicators*, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Table 3.1 – Financial Flow Matrix

The National Income and Expenditure Accounts revisions result in some conceptual and statistical changes to the Financial Flow Accounts. Revised data for the Financial Flow Accounts are not comparable with those of earlier periods which do not reflect these changes. For details of these revisions see National Income and Expenditure Accounts, 1926-68.

A new publication of the historical quarterly series for all sector and category tables, and annual matrices covering the first quarter 1962 onwards, is expected to be released in 1972.

Data for the first quarter 1971 are published in the present issue of the Review. Supplementary tables covering revised first quarter 1970 and annual 1970 appear on pages 116-119 of this issue.

Section 8, Table 8 – Domestic Shipments of Building Materials

This table has been completely restructured.

Introduced with this issue, Table 8 provides information on domestic shipments for a selected list of building materials. The former table containing production and export information for building materials will continue to be updated in the CANSIM data base. Historical series for the new table are being prepared for entry into CANSIM at an early date.

CANSIM BULLETIN

The following two CANSIM reference documents are scheduled for October 1971 release:

1. Summary Reference Index – Free on request

This index summarizes data available from CANSIM and provides matrix identifiers. Formerly published on a quarterly basis, the index will henceforth be released annually with monthly or quarterly amendments as required.

2. Series Directory – \$10.00 per copy or \$15.00 with amendment service

This directory provides descriptive detail for series in each matrix, including the first data available.

Inquiries should be directed to the

Recent publication of interest: *Industrial Corporations – Financial Statistics*, Catalogue 61-003, Quarterly.

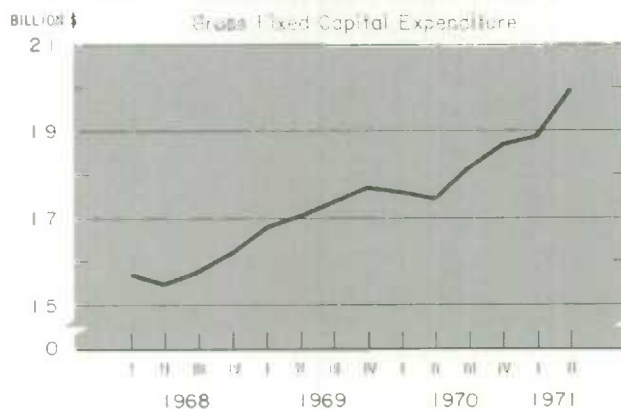

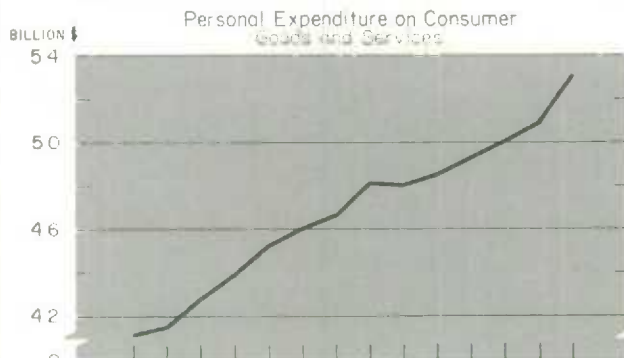

Beginning with the first quarter 1971, this publication was expanded to include for each industry an additional two pages of selected seasonally adjusted data and two pages of financial analysis based on raw and seasonally adjusted data. The financial analysis includes for each industry: Liquidity analysis, cash flow analysis, profitability analysis, rate of return on invested capital and various other financial ratios and percentages.

Further information may be obtained from Business Finance Division, Statistics Canada, telephone 613-994-0622.

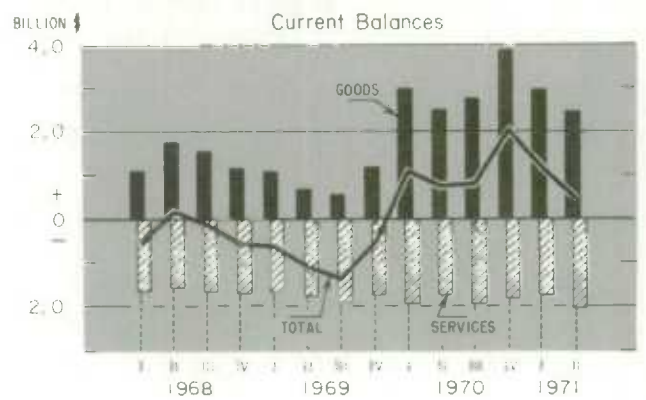

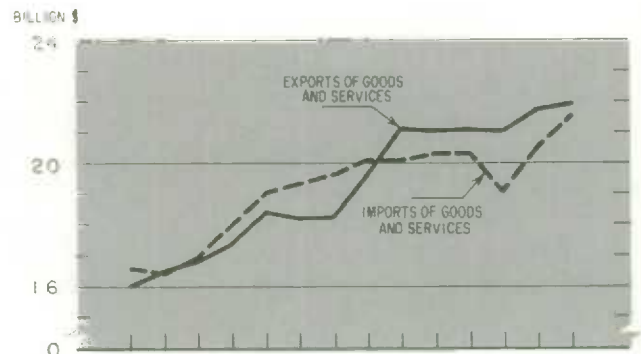

GNP at market prices rose 3.3 per cent, real GNP 2.1 per cent...

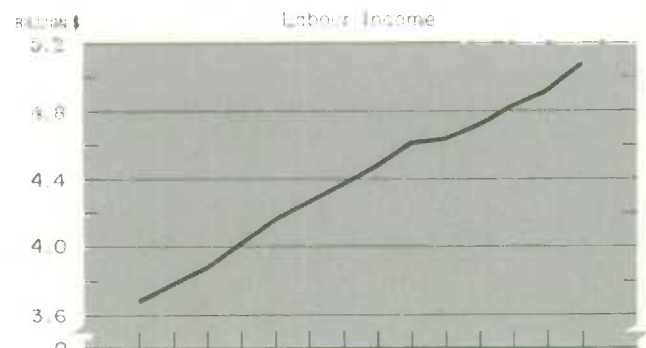

...and reflecting a strong resurgence of both consumer goods and services and fixed capital expenditures...

...despite the smallest of the six consecutive surpluses with non-residents recorded since the beginning of 1970...

...along with higher labour income and profits.

ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS, SECOND QUARTER, 1971

Preliminary estimates of the National Income and Expenditure Accounts indicate a quarterly gain in GNP during the spring of 1971 which is among the best experienced in recent years. Though the sharp acceleration in economic activity was mostly due to a remarkable upsurge in the sales of a wide range of consumer goods, capital spending on both housing and plant and equipment also rose strongly. However, possibly in part because of the taking up of slack in the economy, the fast pace of growth was not accompanied by an improvement in the rate of unemployment—seasonally adjusted it stood at 6.5 per cent during the second quarter compared with 6.2 per cent in the first quarter.

The aggregate market value of Canada's production of goods and services rose by 3.3 per cent, or by almost \$3 billion, to reach a level of \$91 billion, seasonally adjusted at annual rates. A percentage increase in GNP of similar magnitude was last experienced in the first quarter of 1969. The second quarter increase confirms and sharply accentuates the accelerating trend in aggregate demand evidenced in the previous two quarters. Even though the implicit price deflator showed an acceleration in the second quarter, as did most price measures, deflated GNP, that is its value measured in 1961 prices, rose by a very sizable 2.1 per cent.

The results obtained so far this year reveal a marked improvement in production over most of 1970. The second quarter real gain of 2.1 per cent was much larger than any gain in 1970. Also, the first quarter original estimate of real growth of 0.6 per cent has now been raised to one of 1.2 per cent. This doubling of the first quarter real growth rate resulted from a 0.2 per cent upward revision in current dollar GNP estimate and from substantial downward revisions in implicit price indexes for exports and for gross fixed capital formation which had the effect of lowering the movement of the overall implicit deflator by 0.4 percentage points, from an estimated price increase of 1.1 per cent down to one of 0.7 per cent. It thus appears that in real terms GNP has grown at an average quarterly rate of 1.7 per cent during the first half of 1971. This compares with a quarterly rate of real growth of 1.1 per cent during the second half of 1970 and with a quarterly rate of 0.7 per cent from the fourth quarter 1969 to the fourth quarter 1970.

Consumer and Government Demand for Goods and Services

Spending by consumers provided by far the greatest source of strength in the second quarter. While personal expenditure on consumer goods and services account for 58.0 per cent of GNP, they contributed 74.0 per cent of the second quarter increase. Although consumer expenditure had picked up some momentum in recent quarters as compared with the low levels of such expenditure in the first half of 1970, the second quarter rise of 4.3 per cent

substantially surpasses earlier increases and is in fact the largest recorded in many years. An interesting feature of this rise was its pervasiveness, as all major categories of spending except services posted unusually large gains. The strength of consumer spending was a reflection of widespread gains in the sales of retail trade, in particular of motor vehicle dealers, of department stores, of clothing and shoe stores and of furniture and appliance stores.

The strong resurgence in consumer buying was most evident in durable goods, which showed a 9.4 per cent rise in expenditure on top of an already substantial 4.3 per cent rise in the first quarter. The value of new car purchases rose by the same rate of 15.0 per cent as in the first quarter—possibly still reflecting some pent-up demand resulting from last winter's automobile strike. Net expenditure on used cars also rose very sharply, by 18.0 per cent. Expenditure on durable goods other than new and used automobiles rose by 3.6 per cent, with the largest gains being shown by expenditure on home appliances and on recreation equipment, which each rose by 7.0 per cent. Among semi-durable goods, which showed a 5.2 per cent increase in expenditure, the most notable gains were made in the outlays on clothing and footwear, up 5.0 per cent, and on such items as household textiles, china and silverware, up 9.0 per cent. The increased spending on non-durable goods of 4.8 per cent was very widespread and accounted for over 40 per cent of the increase in total personal expenditure. A large part of the increase was accounted for by sharply rising prices, especially of foods. In volume terms, purchases of non-durable goods rose by 2.5 per cent. By contrast with the other categories of personal expenditure, the rise in outlays on services of 2.0 per cent was not particularly strong.

Current government expenditure on goods and services rose by 3.3 per cent, or approximately at the same rate as aggregate demand on the country's production. Most of the increase consisted in higher wage payments, particularly at the federal level, where large retroactive payments were made. Government outlays on fixed capital formation rose by 6.1 per cent with virtually all of the increase taking place at the federal and provincial levels.

Capital Formation

Increased investment on all the major types of fixed capital formation was an important contributing factor to the second quarter expansion. Outlays on new housing continued to rise at about the same rate of 4.5 per cent as in the first quarter. In contrast with the previous few quarters, when the value of work put in place on multi-family dwellings exceeded that on single family dwellings, all of the gain in the second quarter was in the latter. The current cyclical upswing in the housing sector, which started in the second half of 1970 has now

pushed this type of investment to a level almost 28 per cent above its low point in the second quarter of 1970. Most related indicators point to continued strength in this sector during 1971. In particular, housing starts, which had fallen in the first quarter, rose again significantly in recent months.

After showing practically no change in the previous two quarters, business investment in plant and equipment rose by 6.0 per cent in the second quarter. The strength in outlays appeared fairly balanced as between non-residential construction, up 5.4 per cent, and machinery and equipment, up 6.6 per cent. In non-residential construction the most notable gain was in building construction, but engineering construction other than railways also rose. The increase in machinery and equipment was centered in commercial and passenger vehicles and in farm implements. It may be noted here that the mid-year survey of business investment intentions raised the earlier stated investment intentions for the year as a whole on plant and equipment from a 6 per cent increase to one of close to 9 per cent. In percentage terms, the change in intentions was most marked in machinery and equipment, which now shows an intended investment for the year of 4.5 per cent instead of 2.5 per cent as stated in the earlier survey.

In the face of the gathering strength of final sales, investment in non-farm business inventories did not contribute to demand. The large fourth quarter liquidation of \$652 million was not followed by any significant accumulation in either of the first two quarters of 1971—a small accumulation of \$40 million in the first quarter was followed by a marginal depletion in the second quarter. Continued sizable depletions in the manufacturing industries offset inventory investment in retail trade, mostly by motor vehicle dealers, and in wholesale trade. The depletions in manufacturing were very widespread in both durable and non-durable goods. In view of the low levels of current stock-to-shipments and stock-to-sales ratios and of the relatively high number of new and unfilled orders in recent months, an inventory build-up is a potential source of strength in demand.

Transactions with Non-residents

The strong pace of expansion in the second quarter was reflected in a further substantial rise in merchandise imports. They rose by 5.8 per cent, after a 13.5 per cent rise in the first quarter, when the rebound in automotive trade after the fourth quarter automobile strike was a special factor. The buoyancy of import demand so far this year is in sharp contrast with its sluggishness throughout 1970. Though import gains in the second quarter were fairly widespread, imports of fabricated steel materials and of transportation and communication equipment rose most strongly. Merchandise exports rose by 2.0 per cent over their high first quarter level. The most notable gains were made in the exports of automotive products, of lumber and of other building materials.

With merchandise imports rising by substantially more than merchandise exports, the surplus on merchandise transactions (on a national accounts basis) fell by about 500 million dollars, from \$2,936 million down to \$2,440 million. Largely due to a sharp increase in travel payments, the deficit in the service account rose by \$244 million. The net result of decline in the merchandise surplus and of the increase in the service deficit was to lower the overall balance on transactions with non-residents in goods and services from \$1,156 million to \$416 million.

Incomes

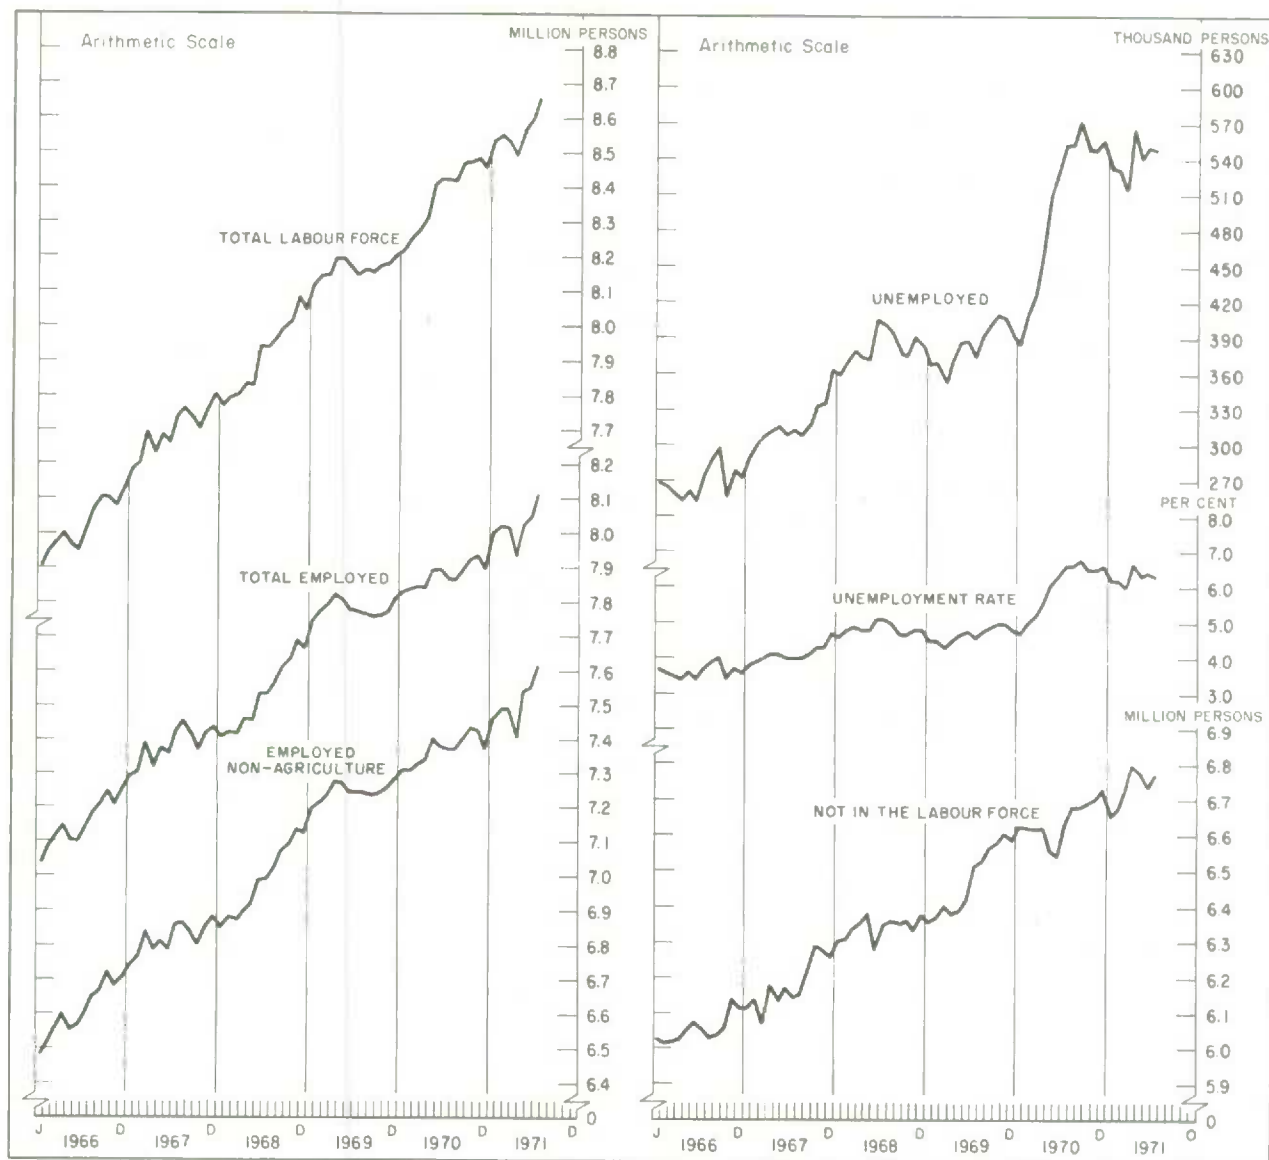

The sharp second quarter gain in production was mirrored on the income side by a sharp acceleration in the rate of increase of labour income and by a continuing sizable recovery in corporation profits. The increase in labour income of 3.2 per cent was the largest recorded since the first quarter of 1969. Wages and salaries in the service-producing industries rose by 3.5 per cent almost twice their first quarter rate of increase, and accounted for about two thirds of the total gain; in the goods-producing industries they rose by 2.8 per cent, compared with 2.2 per cent in the first quarter. The faster growth of wages and salaries in the service-producing industries than in total labour income was mostly due to sharp rises in non-commercial services, particularly education, and in public administration, where large retroactive payments were made. In the goods-producing industries, wages and salaries in construction advanced most markedly.

Preliminary estimates of corporation profits before taxes indicate an increase of about 8 per cent in the second quarter—about the same as in the first quarter. Though industrial detail is not yet available, it seems clear that profits in some industries in trade, particularly motor vehicle dealers, rose sizably. Rising by 16.0 per cent in the first two quarters of 1971, corporation profits have recovered all the ground lost in 1970 and are now only about 4 per cent below their peak level recorded in the first quarter of 1969. (However, the share of corporation profits in GNP is still significantly lower than in years prior to 1970; it is now 8.6 per cent as compared with 10.0 per cent in 1969 and 10.4 per cent in 1968.) Undistributed corporation profits rose by 10 per cent in the first quarter and by 13 per cent in the second quarter.

Personal income grew by 2.8 per cent as compared with 2.2 per cent in the first quarter. In contrast with the first quarter, transfer payments to persons did not contribute on balance to personal income growth in the second quarter. Because of sizable increases in direct taxes there was no acceleration in personal disposable income, which rose at the same rate of 2.3 per cent as in the first quarter. With consumer expenditure on consumer goods and services rising almost twice as fast as personal disposable income, personal saving fell very sharply, as did the saving ratio (personal saving as a proportion of personal disposable income) which was down from 8.1 to 6.3 per cent.

LABOUR FORCE (More detail in Section 4, Table 3)

IN JULY, EMPLOYMENT ROSE 0.8 PER CENT WHILE UNEMPLOYMENT DECLINED 0.5 PER CENT. THE UNEMPLOYMENT RATE FELL FROM 6.4 TO ITS MAY LEVEL OF 6.3 PER CENT.

M. C. D.	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

A REMARKABLE UPSURGE IN CONSUMER OUTLAYS ON GOODS AND SERVICES, UP 4.3 PER CENT, AND A QUICKENED PACE OF SPENDING ON BUSINESS GROSS FIXED CAPITAL FORMATION PUSHED UP THE GROSS NATIONAL PRODUCT IN THE SECOND QUARTER BY ALMOST 3 BILLION DOLLARS, OR 3.3 PER CENT, TO REACH A LEVEL OF 91 BILLION DOLLARS. IN PHYSICAL VOLUME THE GROWTH IN PRODUCTION OF 2.1 PER CENT WAS MUCH LARGER THAN ANY EXPERIENCED SINCE 1969. THE STRONG GAIN IN PRODUCTION WAS REFLECTED ON THE INCOME SIDE BY A SHARP ACCELERATION IN THE RATE OF INCREASE OF LABOUR INCOME AND BY A CONTINUING SIZABLE RECOVERY IN CORPORATION PROFITS.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts, Second Quarter 1971 (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. ⁴The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts, Second Quarter 1971 (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance.

²Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968.

³Withholding taxes.

⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹A minus sign except for official monetary movements, indicates an outflow of capital from Canada. ²Includes guaranteed issues. ³Bank balances and other short-term funds abroad (excluding official reserves). ⁴Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between direct measurements of current and capital accounts. ⁵Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force (71-001), Statistics Canada.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force (71-001), Statistics Canada.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries.

¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. ¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping and public administration and defence. Source: *Employment and Average Weekly Wages and Salaries (72-002)*, Statistics Canada.

¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ¹Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. ²These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. Indexes for Quebec City and Thunder Bay (1969=100) are released each month in Statistics Canada Daily (Statistics Canada Catalogue No. 11-001). Source: Prices and Price Indexes (62-002), Statistics Canada.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Annual figures for inventories and unfilled orders are end of December values. ⁴Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Total inventories owned by manufacturers including warehouse stocks.
Statistics Canada.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001).

Table 4: estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

years and months	shipments					unfilled orders at end of month								
	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification based on the 1960 standard industrial classification (million dollars)

end of period	inventories owned							inventories held: raw materials						
	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". Source: Footwear Statistics (33-002), Statistics Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant. ⁵Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. Source: Primary Iron and Steel (41-001), Statistics Canada.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentones plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Part Arthur (Thunderbay City). ¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), Statistics Canada.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. ³Excl. of NFLD. Western grain prices used in the construction of the index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ⁴The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. ⁵Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective January 1969, as a % of the price of 100 lbs. live hog, Index 100. ⁶Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. ⁷Quotations refer to steers all weights. ⁸Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. ¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage.
⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. ¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. Sources: Retail Trade (63-005), Statistics Canada.

¹ Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also Credit Statistics (61-004).

² Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³ Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 13.5 per cent. ⁴ Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. ⁵ Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁶ Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁷ The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. ⁸ Beginning in January 1971, the Other Personal Cash Loans and instalment financing components do not include interest and other unearned income finance charges.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ²Monthly averages for 1968 and 1969 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ³Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in January 1970 i.e. 1969 and previous dates do not include Nordair. Source: Civil Aviation (51-001), Statistics Canada.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002) Quarterly, Statistics Canada.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. ¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). ³As of April 1, 1969 Industry and Trade and Commerce are combined. ⁴Under the Technical and Vocational Training Assistance Act. ⁵Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁶Includes treatment and rehabilitation services.

*Data for April to June are shown only where there is continuity from fiscal year 1970-71. This table is currently being revised.

Price Movements

The implicit price index for GNP rose by 1.2 per cent in the quarter, a more rapid pace than displayed in the previous four quarters. All major components showed sizable advances, except the implicit price index for exports which showed practically no change over the revised first quarter level.

In personal expenditure, the pattern of declining food prices, established since mid-1970 was sharply reversed in this quarter. Food prices rose over 3 per cent contributing the main impetus behind the overall 1.3 per cent increase in the implicit price index for personal expenditure. Other non-durable price indexes advanced at much lower rates than the food component. The durable goods index rose a moderate 0.5 per cent, due to an increase in auto prices, as most other components showed offsetting movement, but generally little price change. Prices of clothing and footwear were responsible for the 0.9 per cent increase in the implicit price index for semi-durables. Upward movements occurred in almost all service components.

The implicit price index for business gross fixed capital formation climbed 1.1 per cent, up from the revised 0.8 per cent of the first quarter. The acceleration was due to sharp rises in the non-residential construction and in the machinery and equipment components, which rose by 1.8 and 1.1 per cent respectively. The rise in the non-residential component was largely attributable to a very sharp rise in the price of labour in engineering construction (other than highways and railways), but materials prices also rose sharply. In residential construction, the rise of 0.6 per cent was mostly due to increasing materials prices. Very notable accelerations in the prices of lumber and of steel were major factors in the increases in materials prices in both residential and non-residential construction.

After showing a fall of 0.9 per cent in the first quarter, the implicit price index for exports levelled in the second quarter. (It may be noted that the implicit price index for exports was revised downward for the first quarter; the original estimate showed a 0.2 per cent rise.) The implicit price index for imports, on the other hand, showed a marked acceleration, from a 0.4 per cent increase in the first quarter to a 1.2 per cent increase in the second quarter.

¹ Implicit price indexes are currently weighted (Paasche) and therefore reflect changes in expenditure patterns as well as price changes of individual items.

The Government Sector

Seasonally adjusted at annual rates, total expenditure of all levels of government combined (excluding inter-governmental transfers) rose by almost 2 per cent in the quarter. The major factor in the increase was higher outlays on goods and services. Current spending rose by over 3 per cent and was associated with higher wage payments, particularly at the federal level where a large retroactive payment was made. The gain in capital spending—over 6.5 per cent—took place at the federal and provincial levels.

Transfer payments to persons remained unchanged in the quarter. Higher federal transfers were due mainly to higher Old Age Security payments, resulting from the legislation change introduced at the beginning of April, and unemployment insurance benefits, but these were offset by a sharp decline in provincial transfers to post-secondary educational institutions. Movements in the other

expenditure categories were minor and largely offsetting.

The increase in total revenues of all levels of government combined was greater than that in total expenditures—over 4 per cent, with the largest portion accounted for by higher returns from direct taxation. As a result, the surplus, on a national accounts basis, of the government sector as a whole more than doubled during the quarter, moving from a rate of \$520 million in the first quarter to a rate of \$1,296 million. Most of the change occurred at the federal level, which moved from a deficit of \$1,092 million to a deficit of \$520 million, part of the change reflecting a sharp decline in transfers to provincial governments from the irregularly high first quarter rate. At the provincial level, this, coupled with a sharp increase in transfers to local governments, resulted in little change in the provincial surplus. The surplus of the Canada and Quebec Pension Plans rose during the quarter.

Other Publications of the General Time Series Staff

Catalogue number	Title and Description
1-0031F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the Canadian Statistical Review.

Canadian Statistical Review Supplements

1-004	<i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers.
-------	--

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

1-206	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1. (Free to <i>Canadian Statistical Review</i> subscribers).
-------	---

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

CANSIM Manuals and other Publications*

—	<i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i> —Free.
*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval manual" (available in French, cat. No 12-530F).

Catalogue number	Title and Description
------------------	-----------------------

CANSIM Manuals and other Publications (Cont'd)

*12-531	<i>CANSIM: Users' Manual for Data Retrieval and Manipulation</i> (Occasional)—Price \$1.50
---------	--

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported (available in French, cat. No 12-531F).

—	<i>CANSIM: Summary Reference Index</i> —Free on request.
---	--

This index represents a key to the contents of CANSIM, the Canadian Socio-economic Information Management System, and is the first step in locating and ordering time series from the system.

CANSIM Series Directory

The CANSIM Series Directory has been produced as at October 14, 1970, and contains some 24,000 series and matrix titles, and descriptive detail of series stored in CANSIM. It is used in conjunction with the CANSIM Manual for Data Retrieval and Manipulation (12-531) to order series from Statistics Canada. Cost of the complete Series Directory is \$10.00. Monthly amendments (changes, additions, deletions, etc.) can be made available to users for an additional charge of \$5.00 for 11 amendments. (November 1970 to September 1971 inclusive).

This Review, the above and other publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., or from Information Canada, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa.

*Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada.
