and Stability of Exports and Imports.
Progress Report on CANSIM.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 10th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements
of the Statistics Act.

MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section I, Table 3, Section 4, Table 12 and 13 – Employment Indexes

The seasonally adjusted employment indexes have been revised from 1961 to date and incorporated in this issue. Historical revisions are available in Catalogue 72-206, *Seasonally Adjusted Index Numbers of Employment*.

Section 3, Table 3 – Financial Flows Matrix

Data for the first quarter 1972 and supplementary revised tables covering first quarter 1971 and annual 1970 and 1971 were published in the September issue of this publication.

Publications of Interest

Canadian Statistical Review, Historical Summary 1970, Catalogue 11-505, Occasional (to be released in December 1972). This publication contains annual data for series published in the monthly Review. All the tables include 1970, some 1971, and extend back to 1926, or as far back as available.

Canadian System of Government Financial Management Statistics, Catalogue No. 68-506, Occasional. This publication is a comprehensive background paper to financial statistics on government issued by the Government's Division of Statistics Canada. Its purpose is to facilitate and promote analysis of government financial transactions by describing the scope and limitation of the data currently available for this purpose.

Statistical Profiles of Educational Staff in Community Colleges, Catalogue 81-227, Annual. The present report is the first in a series, to be published annually, presenting information on teachers and administrators at community colleges and similar institutions across Canada.

The Years to 1980, the 9th Annual Review of the Economic Council of Canada, now is available in government bookstores across the country (Catalogue EC21-1/1972, Price \$2.50). The Review is based largely on the use of CANDIDE (Canadian Disaggregated Interdepartmental Econometric project) to trace growth prospects through the 1970's. Also released by the Council is a set of staff papers supporting the Review, (EC21-1/1972-1, \$3.50) and a 17-page brochure of annotated charts, entitled *A View of the Years to 1980*.

PROGRESS REPORT ON CANSIM

M. Lennox*

Introduction

CANSIM is the name of the Statistics Canada computerized economic time series data bank and its supporting software. It is an information management system designed to serve econometricians and other research economists and also current analysis economists. The system is particularly suited to a central statistical agency like Statistics Canada, which produces perhaps 75% of all Canadian economic statistics. Since the beginning of the CANSIM project 5 years ago, delegates to international statistical conferences from many countries, including Britain, Australia, and Sweden have followed it with interest. Even though the subject was not on the formal agenda of such conferences it has almost invariably been brought up for informal discussion by representatives of countries eager to know how the concept of CANSIM was developing in actual use. Sweden's central statistical agency has introduced a similar system under the name of SWESIM which drew heavily on programming and software provided by Statistics Canada.

The overall system design was described in an *Introduction to CANSIM* published in 1969.¹ Briefly, plans called for staged development over 3 to 5 years of a fully integrated data storage, retrieval and manipulative capability, and a potentially very large data base to be held entirely in direct access memory. A possible exponential data base growth was envisaged, in step with the automation of data surveys in Statistics Canada.

In 1969, when services were first offered, the Data Entry and Housekeeping systems were operational together with an interim, very limited retrieval capability which produced rough tables and created data tapes to serve as input to an existing manipulative package. The system was then resident in-house at Statistics Canada on an IBM 360/65 with the data base stored on 2314 disk packs, operating in batch mode, overnight.

This report describes changes which have occurred since 1969, progress made, and services available now that the system is on-line at the federal government Computer Services Bureau.

Developments Since 1969

Program development, automation, and data base expansion progressed less rapidly than anticipated. However, the sophistication of data users

* Miss Lennox is Chief of the General Time Series Staff, Statistics Canada. This report was presented at the Annual Meeting of the American Statistical Association held in Montreal, Canada, August 14-17, 1972.

¹ *Introduction to CANSIM*, Mary Lennox and T.J. Vandernoot, *Canadian Statistical Review*, March 1969, Statistics Canada.

accelerated, and with it, demands for fast access to both data and manipulative software. These demands have increasingly been satisfied by commercial computer service bureaus which offer time-sharing services in conjunction with data available on a special tape created from CANSIM.² When we consider that this tape is created once per month, and that current information is entered into CANSIM daily, we can appreciate the extent to which a user will tolerate a substantial loss of timeliness for fast and easy access to data and manipulative programs.

Data Entry

Changes to the Data Entry program were made for the on-line operation:

For additional security, the entire base is encoded (scrambled). It is possible to "freeze" a series against retrievals. This allows for the entry and verification of data prior to release, for major revisions, etc.

This program is scheduled for major overhaul next year. It is hoped to reduce substantially storage requirements and to incorporate features suited to an interactive time-sharing system.

Retrievals

The CANSIM system now includes a full-scale retrieval capability. Available options listed in Table 1 offer control of the series and number of observations retrieved, choice of a variety of formats, and optional use of two identification numbering systems. A rename option replaces the MASSAGER number carried on some outputs by any 8-character name provided. Another feature soon to be added is an inquiry as to the most recent reference date on the base, and the date when that information was added. Diagram 1 shows a schematic of the Retrieval program depicting decisions and actions taken.

Data Manipulation

The retrieval program will retrieve data for manipulation on a random access device or on tape. Data manipulative capability is provided by three program packages and the U.S. Bureau of the Census X-11 seasonal adjustment programs. Brief descriptions are given in Appendix 1 of MASSAGER, MATOP and FANTOM. There has as yet been no progress on Phase III of CANSIM, which covers the development of integrated data manipulative capability, possibly in an interactive, time-sharing system.

TRADE WITH JAPAN, 1961-71: GROWTH AND STABILITY OF EXPORTS AND IMPORTS

W.M. MacLeod*

Introduction

Trans-Pacific trade, long important to Canada, grew significantly from 1961 to 1971. Recent expansion of government and private activities with countries around the Pacific Rim has emphasized the idea of Canada as a Pacific nation. The purpose of this article is to draw attention to changes that have taken place since 1961 in Canada's two-way merchandise trade with Japan, by far Canada's most important Pacific Rim trading partner after the United States. The rapid growth in this trade is illustrated in Chart 1.

Aspects of Canadian-Japanese trade are set out in three tables which show (1) the relative size of trade flows for Pacific Rim countries; (2) the commodity pattern of Canada's two-way trade with Japan; and (3) measures of trend, growth rates, acceleration in growth rates of trend, and measures of stability of growth. A description of methods used for these measures is contained in the technical note.

Like Canada, Japan has found in the United States both its major source of imports and its major export market. Demand changes in the United States are quickly reflected in the export industries of both countries and both have accordingly made efforts to reduce this dependence by diversification of trade. This has stimulated an increasing level of Canadian-Japanese trade. Table 1 shows the profile of trade development over the past decade among the developed countries of the Pacific Rim and the emerging nations of Southeast Asia and Latin America.¹ Despite the importance of a number of commodities exported by Canada, it is evident that this country's overall market share of Japanese imports is still small, and that, in addition to Western Europe, other Pacific countries are also important suppliers.

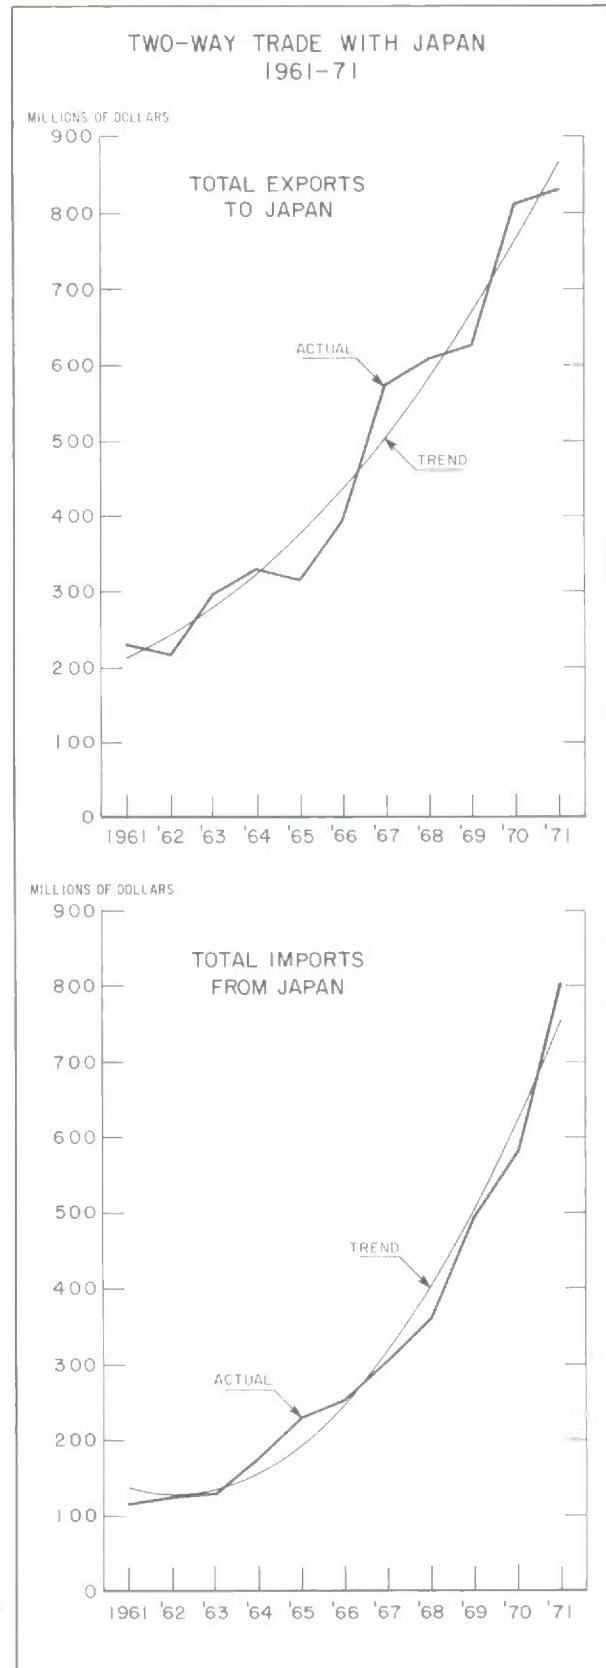

Table 2 and Chart 2 show the estimated impact of Canadian trade with Japan on the growth and stability of Canadian exports from 1961 to 1971 (based on the country and commodity detail contained in Table 3). The trend and variations in trend over the last 11 years of trade are presented both for the aggregate and for different commodity sectors and divisions. In addition, the trend and deviations from trend are shown for Canadian sales and purchases in total and by trading area. Comparison of relative growth rates for countries and commodity groups are shown in Chart 2.

Of particular interest is the 13.7% growth rate in Canadian exports to Japan which has approximated that of sales to the United States (13.6%). However, this growth rate has surpassed by a wide margin that to the European Common Market coun-

* Mr. MacLeod is Chief, Research and Analysis Section, External Trade Division, Statistics Canada.

¹ Bank of Nova Scotia, *Monthly Review*, Nov. 1968.

CHART - I

tries (9.7%). Crude and fabricated materials, contributing \$37 and \$21 million respectively, largely accounted for the \$65 million of annual trend growth. Within these commodity groupings, \$40 million was accounted for by metal ores, wood fabricated materials including lumber and veneers, pulp and non-ferrous metals such as copper, aluminum, nickel, lead and zinc.

The 19.1% annual growth rate of Japanese exports to Canada (from the modest 1961 level of \$117 million) is even more noteworthy—greatly exceeding the rate for other suppliers. The annual rate of trend growth, estimated at \$62 million, can be largely attributed to end products (\$42 million) supplemented by \$18 million in fabricated materials. Within these commodity groupings, \$33 million was spent on road motor vehicles including automotive products and motorcycles, communication and related equipment (television and radio sets and phonographs) and personal and household goods (clothing, sporting equipment, and home furnishing), while \$16 million was added by fabricated textiles and steel materials.

There is no necessary connection between growth and the acceleration of growth shown in columns 4 and 5 in dollars and rates, respectively. Growth can be decreasing, steady, or increasing. What was the experience of the 1960's with respect to Canadian-Japanese trade? Over the period examined, the growth rate for Canadian exports accelerated fairly vigorously, i.e., at 1.75% annually. However, this rate was less significant than for exports to the European Common Market, and in sharp contrast to the deceleration in the rate of trend growth for exports to the United Kingdom, and to Commonwealth and Preference countries. Of \$8.3 million acceleration of growth in exports to Japan, crude materials contributed almost \$7.7 million with metal ores contributing some \$4 million.

The remarkable speeding up of the rate of growth of imports from Japan may not be surprising information. Approximately three quarters of the \$16 million of annual trend acceleration was confined to end products, in response to the increasing demand for automotive and motorcycle products, and communication and related equipment.

Cyclical fluctuations in Canadian exports, measured in column 6, have been more pronounced with Japan than with other trading areas except for the European Common Market, where the demand for Canadian products might have widely differing fluctuations. The cyclical behaviour of Canadian exports to Japan, however, was not closely related with overall Canadian exports, as measured by a correlation coefficient of only .38. Consequently, the weighted Japanese contribution to short-run fluctuations in total Canadian exports was reduced to 5%, or \$15 million out of \$308 million (column

9). Three fifths of cyclical fluctuations in export sales to Japan were accounted for by ores, lumber and other wood fabricated materials. As might be expected, Canadian export earnings from end-products were highly unstable, with cyclical fluctuations amounting to 78% of average export values. However, because this group of exports moved almost independently of the total exports to Japan, its contribution was insignificant.

Cyclical fluctuations in imports from Japan were equally volatile. The negative correlation of their movement with total imports to Canada offset or damped cyclical fluctuations in imports from other trading areas. Fabricated materials and end-products, specifically iron and steel materials and road motor vehicles, accounted for most of the Japanese export cyclical fluctuations.

The Changing Commodity Pattern of Exports and Imports

Tables 3A and 3B provide commodity detail of Canadian-Japanese trade. In 1971, nearly 20% of Canadian exports were from the food, beverage and tobacco section of commodities; 55% from crude or basic materials including flaxseed and rapeseed, minerals and fuels; and 22% from materials requiring more processing such as lumber, pulp, chemicals, and non-ferrous metals. These tables indicate that Japanese demand has shifted over the period, with 20% more of total purchases from Canada taken in the form of crude materials than in 1961, and 22% less in the form of food products like wheat. A large part of this change in the pattern of exports occurred in the early 1960's.

The share of total imports from Japan last year taken by food, beverages and tobacco was less than 3%, down from the 6% at the beginning of the period. The share taken by fabricated materials including iron and steel and metal basic products, textile and chemical products, was 31% in 1971, unchanged from 1961, but lower than the 40% to 44% of requirements taken between 1963 and 1965. The share of the total imports of end-products in 1971 was 65%, close to that of the previous three years but up from the 50% to 59% share of the years 1961 to 1967. This change in the share of end-products imported reflects growing business demand for transportation equipment and machinery, and consumer demand for cars, motorcycles, clothing and other items.

Conclusion

This paper has focused on the measure of growth and stability of exports and imports in trade with Japan. Trend growth of exports and imports has been linked with crude and fabricated materials for the former and with end products for the latter. Export and import instability has been associated with crude and fabricated materials for the former

LABOUR FORCE (More detail in Section 4, Table 3)

Between August and September, employment declined while unemployment increased. The unemployment rate for September was 7.1.

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

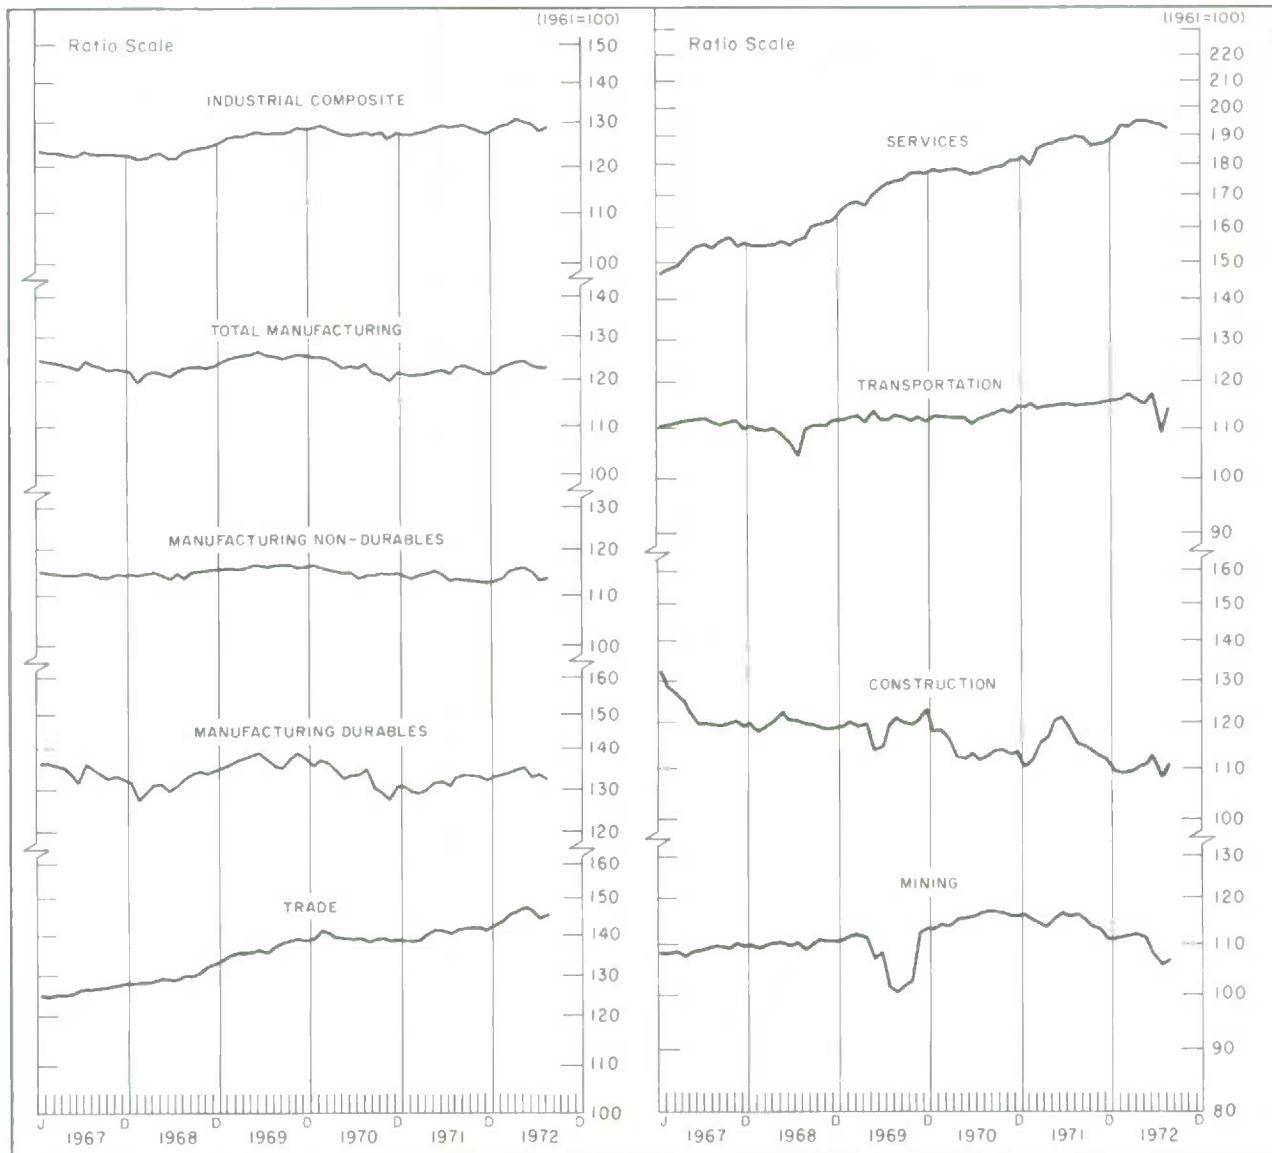

The seasonally adjusted index of industrial production decreased by 0.8% in August to 192.3 from 193.8 in July which has been revised down slightly from 193.9. The manufacturing, mining and electric power, gas and water divisions all declined with manufacturing contributing more than half. Within manufacturing declines were widespread. The output of durable goods declined by 1.0%, while non-durables recorded only a 0.4% decrease.

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

A reversal in trend in seasonally adjusted retail sales for August was evident in a 0.7% decrease in total sales from the previous month following declines in all except five of the eighteen trade groups. The most notable declines were in jewellery stores (-8.1%) and family clothing stores (-7.4%). The largest gain registered was that of fuel dealers whose sales increased by 3.8%.

EXPORTS AND IMPORTS (More detail in Section 11, Tables 1 and 2)

Exports for the third quarter of 1972 totalled \$4,634 million, down \$340 million from the second quarter. The U.S., U.K., and Rest of World contributions were -\$226, -\$99 and -\$15 million. Imports at \$4,632 million for the second quarter were \$31 million higher. The U.S., U.K. and Rest of World contributions were \$10, -\$41 and \$62 million.

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

Preliminary estimates indicate a quickened tempo of economic activity in the second quarter, stimulated by strong final domestic demand, particularly consumer expenditure, and by net exports. GNP rose by 3.0 per cent in current dollars and by 2.1 per cent in constant 1961 dollars.

PRICES (More detail in Section 5; 13; respective Tables 2, 3 & 4; 8.)¹

The Consumer Price Index rose 0.4% between August and September mainly because of a 0.7% advance in food prices; food prices have usually decreased between these two months in recent years.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. ¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. *Source: National Income and Expenditure Accounts (13-001), Statistics Canada.*

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. ⁵The difference between the value of physical change and the change in book value is called the inventory valuation adjustment (as shown in Table 1.1). ⁶See footnote 4, Table 1.1. *Source: National Income and Expenditure Accounts (13-001), Statistics Canada.*

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error.
²The labour force as a percentage of the population 14 years of age and over.
³The unemployed as a percentage of the labour force.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below.²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

¹Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. ²These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. ³The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. ⁴Indexes for Quebec City and Thunder Bay are on the (1969 = 100) base.

Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	shipments ¹	new orders received during month ²	unfilled orders at end of month	owned ³	inventory at end of month				ratio of inventories owned to shipments	
					held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". ¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood.
 Production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²Total pulp production.

"Mill shipments destined for export." Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included.²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities.³Includes appliances and utensils.⁴Excluding shipments for re-processing at maker's own plant.⁵Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry.

¹Production plus imports less re-exports, minus exports.²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past.

Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries.³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used.⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Source: Refined Petroleum Products (45-004), Statistics Canada.

adjusted for seasonal variation											

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Part Arthur (Thunderbay City). ¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. ²From January 1972 includes Yukon and the North West Territories. ¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1970 and 1971 price indexes are subject to revision. ³1971 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. Sources: Retail Trade (63-005), Statistics Canada.

November, 1972

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sole finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, usually made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Till December 1970 data for only oil companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁸Bills due for residential/domestic use of telephones, gas and electric power.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately.

³The annual index, being calculated

separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ²Includes traffic interchanged between Canadian railways.

Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Includes Class 1 carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. ²Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues.

³Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services.

Sources: Motor Carriers-Freight (53-005) quarterly, Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and do not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Trade with Japan, 1961-71: Growth and Stability of Exports and Imports (Continued from page 6)

CHART - 2

and with fabricated materials and end-products for the latter. Massell in a recent study of 55 countries developed a theoretical model (hypothesis) relating intercountry differences to several structural variables.² He found countries deriving a large percentage of export earnings from food had less export instability than those heavily dependent on raw materials or manufactures, which emphasized the importance of shifts in foreign demand as a source of export instability. The important regional impact of these changes, particularly in Western Canada, and considerations about possible trade developments in the 1970's can be examined elsewhere. Prof. Hay³ has written:

"...this is not a song of unparalleled optimism on future trade prospects. Our analysis does not lead us to follow those who argue that Japan will be "number one in 2001"; nevertheless, the reader will surely gather that Canadian-Japanese trade has features, even within view, that are quite startling in their variety and magnitude. These trade opportunities are enormous for both partners . . .".

One can add that the shift to high technology-based industries in Japan may bring about changes in their imports as Japanese industries call for more semi-manufactured products rather than unprocessed materials. If Canada successfully competes in this business, the 1970 trade trends will differ sharply from those examined for the last decade.

Technical Note on Denton Method Used in Calculating Measures of Growth and Stability Contained in Table 2

Growth and stability of export receipts and import purchases in this trade are measured by a simple regression analysis involving: (1) fitting a line of trend to a number of series; (2) measuring first and second derivatives or differences along this trend line to determine growth and acceleration or retardation of growth; (3) measuring the spread between the trend and actual export or import values to ascertain stability of growth; and (4) determining the contribution of components to the total.⁴ Growth and stability of Japanese trade is related to Canada's overall trade, and commodity groups are identified that are associated with these changes.

³ Hay, Keith A.J. *Japan: Challenge and Opportunity for Canadian Industry*, Private Planning Association of Canada, Montreal, 1971.

⁴ Denton, Frank T. "Some Techniques for Analyzing a Set of Time Series Subject to A Linear Restriction", *Journal of the American Statistical Association*, June 1963, Vol. 58, 513-518.

1. Trend and Rate of Growth

The regression fitted to the data was:

$$Y = b_0 + b_1 t + b_2 t^2$$

where Y refers to exports or imports, and t to time in years.

For convenience, t was set equal to zero at the mid-point of the period, 1966. Calculation of the values of b_0 , b_1 , and b_2 yielded trend values for 1961 ($t = -5$) and each succeeding year. To determine growth rates, it should be noted that both differences and derivatives express rates for change over time, the former as averages during whole periods (see Chart 1), and the latter instantaneously. Growth and fluctuations in growth can be generated by either—differences yielding small jumps once per period and derivatives yielding continuous change. One can take the first derivative with respect to time of the fitted trend line at the middle of the period, i.e., b_1 , or the mean first difference along the trend line to define the rate of trend growth. The ratio of either of these to average exports or imports will yield the average relative growth rate.

2. Acceleration of Trend (Actual \$) and Relative Percentage Rate of Acceleration of Trend

Utilizing the estimates of trend and rate of growth, acceleration or retardation of growth can then be determined by the second derivative of the fitted trend line with respect to time, i.e., $2 b_2$, or the mean of the second differences along the trend line (the first difference of first differences). One should stress that acceleration of exports or imports has no necessary connection with the rate of growth of exports or imports since the magnitude of the second derivative of a function at any point is quite independent of the first derivative. The relative rate of trend acceleration is taken by the ratio of trend acceleration to average exports or imports.

3. Stability of Export Earnings, or Import Payments

The standard error of the residuals of the fitted trend line is taken as a measure of stability of export earnings or import payments. Ratios of these standard errors to average exports or imports provide suitable relative measures of variation in individual series.

4. Contribution of Components to the Total

Trend growth and trend acceleration of the individual series sum to the values for the total series. In these cases, contribution of a part to a total is straightforward. However, the standard error of a total is not the simple sum of the standard errors of its parts. Fortunately, if the standard errors of the parts are weighted by their correlation coefficients with the total, the weighted standard errors of the parts will sum to the standard error of the total. The contribution to the stability of total export receipts or import purchases can then be defined by these weighted standard errors.

Statistics on Use

A statistical package is produced automatically as part of the retrieval package. The computer records such data as: the number of times each series is accessed, and for what type of retrieval output; whether retrieval is by the owner of the series or by other users; the period for which the data are retrieved, by decade; whether or not the retrieval was successful, etc. This information will be a valuable guide to future development. At present, the system is both a research project and a functioning on-line system. All data fed into the computer are stored on-line, instantly accessible, in accordance with the perception of CANSIM's creators that it should provide as rapid and complete a service as possible. By analyzing the access information provided by CANSIM's statistical package, it will become possible to determine empirically which data are in greatest demand and, should capacity limitations emerge, which series should be held on-line and which transferred to tape or other storage.

Table Formatting

A minimum table formatting capability will shortly be available which will interface with a local service bureau specializing in photo-composition.

Data Bank Contents

The CANSIM base has grown from 7,000 series in 1969 to 28,000 as of August 1972. It contains economic time series which originate for the most part in Statistics Canada. Historical data are included from 1946 wherever possible. Automation of data updates has so far been accomplished for the monthly Labour Force and Employment surveys; Manufacturing Shipments, Inventories and Orders; the Income and Expenditure Accounts and the Indexes of Real Domestic Product.

Directories

The *Summary Reference Index*,³ which gives matrix (or table) numbers, is the key to the *CANSIM Series Directory*⁴ and so to the CANSIM data bank. In Appendices 2 and 3 are given the explanatory foreword of the Index, and a sample Series Directory. Both the Index and the Directory are reprinted annually and updated by monthly supplements.

CANSIM NEWS FLASH

A new service has been introduced for the benefit of customers with terminals. The CANSIM NEWS FLASH is an information file stored on-line which provides daily information on series updated.

³ CANSIM *Summary Reference Index*, annual and monthly supplements, free on request to General Time Series Staff, Statistics Canada.

⁴ CANSIM *Series Directory*, annual \$10.00, with monthly supplements \$15.00 per year.

Inquiries Directory

Responsibility for the quality and confidentiality of series rests with the data supplying division or other source. An Inquiries Directory is now available which provides the names and telephone numbers of officers to whom inquiries may be directed.

Services Available

The CANSIM data base, system programs and supplementary manipulative packages are, for the present, resident on-line at the federal government Computer Services Bureau to which federal and other government departments and agencies have access. It is hoped that, on the basis of experience gained with this limited market, it will be possible to formulate plans for providing similar service to non-government customers within the next few months. In the interim, Statistics Canada provides data retrieval service on request to government or other customers. Orders are normally executed within 24 hours.

Charges

CANSIM charges to non-government customers remain at 15 cents per series per retrieval, on printouts or on customer-supplied tapes. The \$25.00 minimum charge is unchanged for tapes but has been reduced to \$5.00 for printouts. A special reduced rate has been introduced for orders of 1,000 or more series, made up of computer costs plus 50%.

Customers using CANSIM directly via terminals or over the counter pay the Computer Services Bureau for computer costs and pay a CANSIM charge to Statistics Canada. The CANSIM charge (now 10%) is levied as a percentage of computer charges related to the Data Entry, Retrieval and Housekeeping programs.

Users Manual Revised

The *CANSIM Users Manual for Retrieval and Manipulation*⁵ is currently being revised to incorporate options and formats available in the new retrieval program.

Conclusion

The first two phases of CANSIM development of data entry and retrieval have now been completed and experience is being gained with providing service on-line. The data base growth, although substantial, has fallen short of expectations and has proven to be closely linked to the rate of survey automation in the bureau. Customers now appear to demand not only machine-readable data but access to data and software in an interactive, time-sharing system. We are preparing to move into Phase III development which will attempt to meet these demands.

⁵ CANSIM: *Users Manual for Retrieval and Manipulation*, Statistics Canada Catalogue 12-531 (1972). Price \$1.50.

Table 1. Summary of Retrieval Output Formats and Options

(a) Retrieval Formats

1. MASSAGER: Serves as input to DATABANK-MASSAGER programs operational on an IBM system/360. Available in either single or double precision and may be created on tape, disk, or cards.
2. UTILITY: A file in the general purpose format of Statistics Canada. Serves as input to MASSAGER, FANTOM, MATOP, X-11 Seasonal Adjustment, GROPE (plotter) and to any utility program where the input may be described by a format card. May be created on tape or disk.
3. PUBLICATION: A file containing data and all information stored for the series retrieved. It is intended for use with report generating programs for automating publications. May be created on tape or disk.
4. RANDOM: A randomly accessible file for use as input to the MASSAGER program with random access feature. Available in either single or double precision.
5. TABLE: A printout of series in columns. Matrix title, matrix notes, series titles, and footnotes are included.

6. DISPLAY: A printout of one series per page with data in rows. Includes matrix title and notes, series titles, footnotes and source.
7. RE-ENTRY: An output in Entry format to re-create the matrix header, series header, and data points. May be created on tape, disk or cards.

(b) Retrieval Options

1. Retrieve data by CANSIM or MASSAGER identifier.
2. Request pre-edit (diagnostic edit) of retrieval command cards.
3. Override to accept errors and continue a job.
4. Retrieve all series in a range of matrices.
5. Retrieve specified series in a range of matrices.
6. Specify time period to be retrieved.
7. Control the number of data columns per page in Table Format (up to a maximum of seven).
8. Change MASSAGER identifier on output (RENAME).

APPENDIX 1

Supplementary Programs Available for Use with Data Retrieved from CANSIM

1. DATABANK

The DATABANK program is designed to store and maintain a large number of economic time series on a **single** magnetic tape. Generally, this restricts the number of series that can be handled efficiently to about 10,000. The program allows for the addition, deletion and editing of any series. The data can also be listed, indexed and copied onto other tapes. In other words, the program performs those operations which fall into the general class of file maintenance. The system is designed to work with any data which is arranged or arrangeable in a time series format.

include simple operations on a single series (column) such as square roots, logarithms, etc., and complex operations on several variables or columns such as multiple regressions, plots, etc.

3. MATOP

The MATOP program was originally written in Statistics Canada. Other versions have since been developed with added features. It accepts input from tapes from CANSIM, DATABANK tapes, or from cards. The data may be entered in memory as columns, rows or as a matrix. The program carries out mathematical and statistical manipulations of data.

2. MASSAGER

The MASSAGER program carries out statistical manipulations of data, accepts input from the DATABANK tape, from the CANSIM tape (MASSAGER format), or from cards.

Retrieved series are arrayed as columns in core storage and by a sequence of "commands" the columns are manipulated as desired. The commands

4. FANTOM

This package of pre-coded sub-routines serves basically the same purpose as MATOP. It has been rewritten with free form English language commands. Other features have been included which add flexibility. One important simplification is the manner in which the user must reserve core.

Relationship of CANSIM to the DATABANK-MASSAGER Programs

In 1966 Statistics Canada agreed to develop and maintain a time series data bank and, to this end, to assume responsibility for the DATABANK and MASSAGER programs which had been developed at the Economic Council of Canada. These two programs were to be modified for the IBM System/360 model 65 then being installed at the federal computer service bureau; meanwhile, preparations were made for loading of the first data block containing all series published in the monthly *Canadian Statistical Review*.

In 1967, when the decision was taken to develop a fully-integrated data storage, retrieval and manipulative system (CANSIM), priority was given to developing capability for efficient, frequent handling of a large number of time series. During development of the data entry program, use of the DATABANK program was continued. In 1968, pending development of a full CANSIM retrieval system and integrated manipulative capability, the Bank of Canada assumed responsibility for the DATABANK-MASSAGER programs. In order to make data available to the public, the pre-CANSIM master tape was copied and sold. After the base was transferred from DATABANK to CANSIM, simulated DATABANK master tapes were created from CANSIM, containing data in the *Canadian Statistical Review*, plus some supplementary series. This was the origin of the present CANSIM "Retrieve in Massager format"

and of the now widely used *Canadian Statistical Review* Public (Standard) tape.

The present status of the DATABANK-MASSAGER programs in relation to CANSIM is as follows:

- (i) Both programs are included in the set of supplementary programs available with the CANSIM system.
- (ii) Two available CANSIM tape formats, the UTILITY and the MASSAGER format, serve as input to the MASSAGER program for data manipulation.
- (iii) These programs are frequently recommended when inquiries are received from customers wishing to establish private data banks. Given access to a suitable computer installation, these programs can be used in conjunction with data purchased from CANSIM to store and maintain private series, and to carry out data manipulation.

The version of the programs now in the CANSIM program set is that maintained by the Bank of Canada and available at nominal cost through COMPUTEL, Ottawa. It is possible that a revised standard version will eventually be maintained and distributed by Statistics Canada. If so, it will be available for the IBM System/360, the Univac 1108, and the CDC 6600, and will remain in the public domain.

APPENDIX 2

CANSIM (Canadian Socio-Economic Information Management System)

Foreword

This *Summary Reference Index*¹ represents a key to the contents of CANSIM, the Statistics Canada computerized time series data bank, and is the first step in locating and ordering time series from the system.² The Table of Contents lists those publications for which data are now stored in the data bank in full or in large part. For each publication, in turn, there is a modified table of con-

tents which gives for each data set in the data bank its CANSIM matrix identification number or numbers. A "matrix" in CANSIM is roughly equivalent to a "table" and contains a number of related time series. Additional sets of series will be stored in CANSIM as time and resources permit. Availability of new data blocks will be announced periodically in the *Statistics Canada Daily*.

As the initial step in ordering data which is stored in CANSIM, the user locates in this index the general area of interest, and then the specific matrices. The CANSIM matrix numbers at the right of the page are then used to locate the data set in the Series Directory. The Series Directory lists the matrices sequentially by matrix number, and provides for each a descriptive title, data source, a matrix note and a list of the titles and other descriptive details for all included series (see sample).

To order series the CANSIM matrix and series identifiers are required. The data requisitioning process is described in detail in the *CANSIM Users Manual* (Item C below).

Inquiries may be directed to:
CANSIM Users Service,
General Time Series Staff,
Statistics Canada,
Ottawa, K1A 0Z8

CANSIM SERIES DIRECTORY (Sample)

SECURITY LEVELS

"PUBLIC"(2) published or publishable series.

"SECURE" series, cannot be retrieved without the approval of the responsible agency.

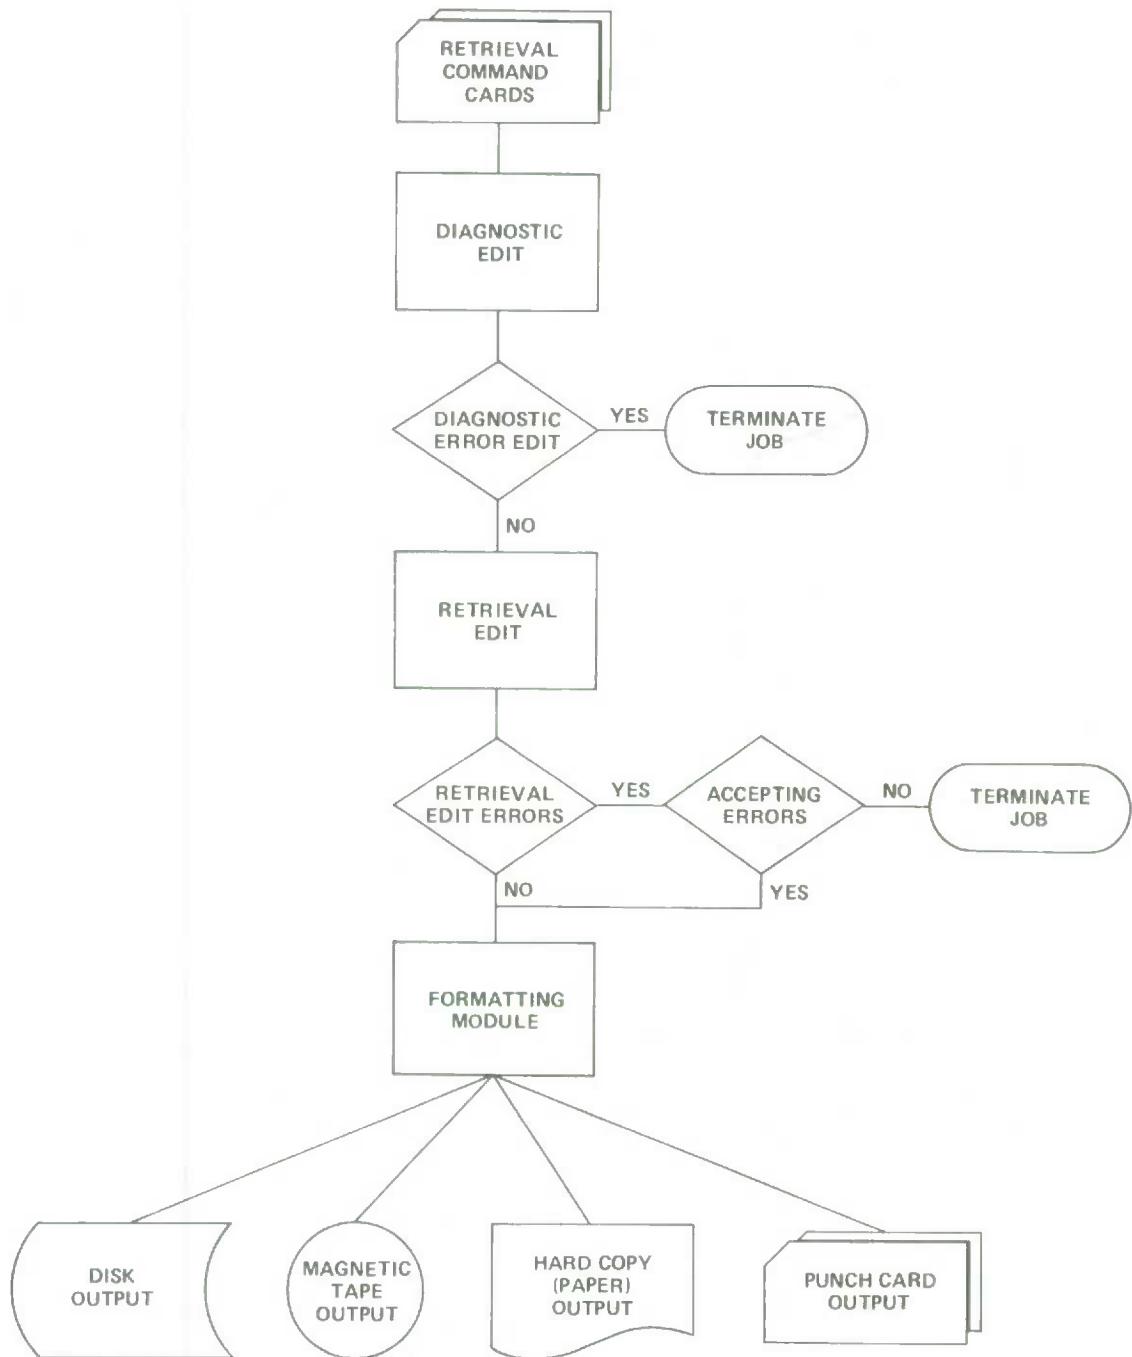

DATABANK number(1)

Starting date of series in the base (year, month, day)

- (1) The CANSIM identification number (Matrix and series number), or the DATABANK identification number may be used to order series from CANSIM. The DATABANK number is used to manipulate data retrieved from CANSIM in MASSAGER, UTILITY, or RANDOM format. For detailed explanation see CANSIM Users Manual for Data Retrieval and Manipulation, Statistics Canada Catalogue No. 12-531 (revised, 1972).
- (2) A list is available on request of PART-SEC series. These are PUBLIC series which contain one or more secured data points.

CANSIM Retrieval

SCHEMATIC DEPICTING DECISIONS AND ACTIONS TAKEN

May 1, 1972

Other Publications of the General Time Series Staff

Publication number	Title and Description	Publication number	Title and Description
11-003F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the Canadian Statistical Review.		CANSIM Manuals and other Publications (Cont'd)
11-004	Canadian Statistical Review Supplements <i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers.	*12-531	<i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1972 edition—Price \$1.50
	Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Canadian Statistical Review</i> . Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).		Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, cat. 12-531F).
11-206	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1.00 (Free to <i>Canadian Statistical Review</i> subscribers.)	—	CANSIM: Summary Reference Index (Annual, with monthly amendments)—Free on request. This index summarizes data available from CANSIM and provides matrix identifiers. Order by title, from General Time Series Staff.
	Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).	—	CANSIM: Series Directory (Annual, with monthly amendments)—Price \$10.00 plus \$5.00 for amendments. The CANSIM <i>Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title, from General Time Series Staff.
	CANSIM Manuals and other Publications*		
—	<i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i> —Free on request. Order by title, from General Time Series Staff.		
*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.00		
	This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval manual" (available in French, pub. N° 12-530F).		

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa.

*Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada.
