The National Nutrition Survey

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer print-outs. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section I are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 1, Table 6 - Value of Building Permits

Data for this table are revised for the years 1969, 1970 and 1971. Data for January to March 1972 will appear in the June issue.

Section 2, Table 1 - Population

Data for the year 1971 are revised to include the incorporation of information from the 1971 Census.

Section 3, Table 3.1 - Financial Flows Matrix

Data for the fourth quarter 1971 are published in the present issue of the Review. Supplementary tables covering revised fourth quarter 1970 and for the years 1970 and 1971 appear on pages 114 to 119 of this issue.

Section 6, Table 15 - Primary Iron and Steel

The annual 1969 data on *Net Shipments of Steel Shapes to Consuming Industries* include information for 4 months for which monthly data could not be provided because of strikes in the industry.

Section 11, Tables 1 to 4 - Trade of Canada

Data in this section incorporate all revisions made by the data source as of April 1972. The seasonally adjusted series are subject to further revision.

PUBLICATIONS OF INTEREST

Income Distributions by Size in Canada 1969. Catalogue 13-544 Occasional.

Federal Government Expenditures on the Human Sciences. Fiscal 1969-70, Catalogue 13-545 Occasional. This publication begins a comprehensive statistical series on activities in the field of social sciences and humanities.

Series published in the Canadian Statistical Review form part of larger data blocks which are available in machine readable form for use on computers, or in printouts, from the Statistics Canada computerized time series bank (CANSIM). For all series in the data bank, current and revised data are entered immediately on release. Approximately the 10th of each month a special Canadian Statistical Review public tape is created which contains historical and current data for all series in the Review, plus some supplementary series.

Inquiries concerning either this Review or CANSIM may be directed to the General Time Series Staff, Statistics Canada.

THE NATIONAL NUTRITION SURVEY (NUTRITION CANADA)

E.M. Carson and M.S. Nargundkar*

I. Introduction

The National Nutrition Survey, "Nutrition Canada", is the first survey of its type to be carried out on a national basis in Canada. The survey is being conducted by the Food and Drug Directorate of the Department of National Health and Welfare in cooperation with the health departments in the ten provinces. The purpose of the survey is to study the dietary patterns and to evaluate the nutritional value of food ingested by persons living in Canada. Smaller studies in subject matter areas encompassed by the survey have been conducted in selected segments of the Canadian population, for example, studies of dental health of school children, and a nutrition study of Canadian Eskimos. During the course of such studies, and through related research, experts began to uncover evidence indicating the appearance of nutritional disorders in the Canadian population.

Improvements in food marketing facilities brought about by modern technology have resulted in changes in the patterns and varieties of foods commonly ingested by Canadians. Also, many of the food products available on the market today contain additives such as preservatives, artificial flavours and artificial colours. These substances may have harmful effects on health if they are consumed in large quantities over an extended period of time.

Although government health authorities are aware of nutritional disorders and the possible consequences on health resulting from changing patterns of food consumption, very little data was available to indicate the extent of the problems or reflect the amount of change that has occurred. Hence, the Nutrition Canada Survey was developed (i) to evaluate the dietary habits of Canadians, (ii) to determine the types of foods ingested by Canadians and the nutritional value of the foods, and (iii) to study the types of nutritional disorders occurring and the extent to which they may prevail. These findings will be correlated with geographical location, income level, age and sex to provide information for the planning of health and nutrition programs in Canada.

It may be noted that since the Nutrition Survey was begun, Nutrition Canada has become a series of surveys. The first and largest of these is the household survey, of which the sample design and some aspects of the survey methodology are described here. In addition, surveys of Indians, Eskimos, and the non-native northern population are being conducted. A survey of youth travelling in Canada is planned for the summer months.

II. Planning

The Food and Drug Directorate of the Department of National Health and Welfare studies the composition of foods sold in Canada and writes regulations which are used in controlling the use of food additives. Hence it was at the Directorate that the initial steps towards conducting a survey of this nature were taken.

The first step was to initiate a study to determine the feasibility of conducting a nutrition survey on a national scale. The provincial governments were contacted to determine the extent of their interest and possible participation in terms of data requirements and the use of provincial health clinic facilities. This study resulted in the establishment of guidelines for the survey, including a recommendation to form expert groups in five areas pertinent to the survey. The five areas were:

- (i) survey methodology,
- (ii) dietary information,
- (iii) clinical examination and anthropometric measurements,
- (iv) biochemical parameters, and
- (v) dental examination.

The members of these groups were chosen from federal and provincial government departments and universities.

Statistics Canada was approached to assist in the development of the survey methodology. The Special Surveys Development Staff of Statistics Canada participated in preparing the survey methodology guidelines and developed the sample design. The Field Division of Statistics Canada have been carrying out the field work required to select the sample for the Nutrition Canada Survey.

A pilot survey was conducted in June 1970 in four areas, two urban and two rural, at Guelph, Ontario. The pilot survey was designed to test all aspects of the field methodology; sample selection, training programs, publicity, clinic interviews and examinations. The pilot study was the first attempt to amalgamate all parts of the survey methodology and as a test study proved extremely valuable. On the basis of experience gained during this pilot survey, the methodology was modified and the plans for the survey were revised. The survey field work began in the province of Ontario in September 1970.

III. Sample Design

The following guidelines were established for the development of the sample design:

- (i) The survey should cover the non-institutional, non-native population of the ten provinces.
- (ii) Estimates of characteristics should be available for five regions, namely, Atlantic, Quebec, Ontario, Prairies and Pacific.
- (iii) Stratification variables should be:
 - (a) Type of area, namely metropolitan, non-metropolitan urban centres, and other non-metropolitan areas. Patterns of food ingested, types of foods available, and nutritional values of the available foods were expected to vary with the type of area.

* Miss Carson is a statistician and Mr. Nargundkar is Chief of the Special Projects Section, of Special Surveys Development Staff, Methodology and Systems Branch, Statistics Canada.

- (b) Income level, namely low income and other income. It was expected that the type of food ingested by the members of Canadian families would be related to their income level.
- (c) Age and sex. Ten age-sex groups are considered.

Sex	Years of age
Males and females	0- 4
Males and females	5- 9
Males	10- 19
Females	10- 19
Males	20- 39
Females	20- 39
Males	40- 64
Females	40- 64
Males	65 +
Females	65 +

Age and sex are used as post-stratification variables to classify persons before the final stage of selection. Age and sex factors are important because particular nutritional disorders tend to occur more frequently among persons of particular age-sex groups. In addition, nutritional needs of persons vary for different ages and sexes. Hence, for the first national survey of nutrition it was desirable to include in the sample persons distributed across all ages and both sexes.

- (d) Family types. Four family types were defined to be used as post-stratification variables for one half of the sample. Family types were considered for inclusion in the survey because it was felt that the dietary habits and other nutritional characteristics vary with family type. For example, the nutritional characteristics of a person living alone would likely differ from the nutritional characteristics of a member of a family with children. The pilot survey revealed extreme operational difficulties in applying this variable, and it was discarded before the Nutrition Canada Survey began.
- (iv) Cost, time, and the scale of operations called for the survey to be conducted over a two-year period during which time the seasonal variation in characteristics could be observed. To estimate this variation, it was proposed that the survey be conducted twice in each region, at two different times of the year. A year is divided roughly into two seasons, summer and winter. Each season corresponds to the portion of the year during which the effects of seasonal food habits could be expected to persist.

Using these guidelines and the operational constraints, the following sample design was developed for the Nutrition Canada household survey. The Nutrition Canada sample is a stratified, three stage probability sample. The first stage sampling units are 1966 Census Enumeration Areas (EAs), second stage units are households within selected EAs and the third stage units are persons within selected households.

IV. Survey Frame

The frame of the survey was defined as the civilian, non-institutional population of the ten provinces of Canada. This includes all persons in the ten provinces except persons living (i) in prisons, hospitals, etc., (ii) in hotels and motels, (iii) on Indian reservations and crownland, (iv) on military bases, camps, etc., and (v) in foreign diplomatic premises.

Operationally it is not feasible to carry out the survey in remote areas of the ten provinces. The remote areas are those which are not easily accessible by road and/or do not have facilities to set up a survey clinic or to accommodate the twenty-member clinic team. It is difficult to identify all such areas in Canada in advance in order to exclude them from the frame. Hence, these areas are included in the frame. When such an area is selected, however, it is replaced by a similar area which is accessible for the operation.

This does introduce a bias in the survey data. However, as the population living in such remote area is relatively small, the bias is small and can be tolerated when compared with the cost, time and other resources required either to identify all remote areas and remove them from the frame or to make special provisions for conducting the survey in those areas.

V. Stratification

The most recent data available for stratification were the 1961 and 1966 Census data. These data were limited in various ways. The 1961 Census income data, collected on a sample basis, were almost 10 years out of date. Even the 1966 data used to stratify by population density could not give information about demolished or expanded areas. Further, using data from two Censuses meant that the boundaries of enumeration areas and census tracts, for which the data were tabulated, were not always the same.

With these constraints in mind, 1966 Census tracts, municipalities or townships were used as units of stratification. The 1966 Census population counts were used for stratification by types of area within regions. The income information from the 1961 Census data was used to stratify the types of area further by income levels. In other words, the ten provinces were grouped into five regions:

- Atlantic Region (Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick)
- Quebec
- Ontario
- Prairies (Manitoba, Saskatchewan, Alberta)
- Pacific (British Columbia)

Each region was then divided into three area types (i) metropolitan areas, (ii) non-metropolitan areas with population over 5,000 persons, and (iii) the remaining non-metropolitan areas.

Within each population density stratum, areas were stratified into two income strata on the basis of income levels/family size defined below:

- (1) Areas with average income less than the defined level for the average family size were classified as low income areas.

Average family size	Defined income level per annum for stratification
1	\$1,500
2	2,500
3	3,000
4	3,500

With increments of \$500 for each additional person.

- (2) Areas that did not fall in category (1) were classified as other income areas. Having stratified census tracts or municipalities into one of the six basic strata, the enumeration areas which made up the larger areas were classified as belonging to that stratum.

VI. Sample Size and Sample Allocation

The choice of the sample size emerged from consideration of several factors. As very little was known about the nutritional characteristics of the population, determination of the sample size could not be made rigorously on the basis of statistical criteria.

The first stage sampling units were to be EAs, and thus the determination of an overall sample size was influenced by the number of persons that could be included in the sample from each EA. It was estimated, on the basis of length of interviews and clinic team composition, that the efficient operation of a clinic would require a total of 50 persons daily, at the clinic centre. Thus, the number of persons selected from an EA had to be a multiple of 50 as the clinic cannot be moved from one place to another within a working day. The average size of an EA is 500 persons (about 150 households). Considering the age-sex distribution of the enumeration areas and the age-sex distribution required for the sample from each EA, (namely an equal number of persons from each age-sex group), it was determined that the sample size for each EA would be 50 persons.

The choice of EAs as first stage sampling units was based on the following considerations:

- (i) an area used as a first stage sampling unit should be compact to minimize the travelling cost of enumerators, and allow for the transportation of persons to the survey clinic,
- (ii) the number and the distribution by age and sex of persons living in an area used as a first stage sampling unit should be known, and
- (iii) the area should not be so large as to produce a cluster effect at the first stage of selection. At

the same time it must be large enough to provide the required 50 persons, 5 from each of the 10 age-sex groups, for a survey clinic.

Consideration was then given to the number of EAs to be selected. When the survey was conceived, it was proposed that one half of the EAs selected for the survey would be controlled to obtain a sample of persons from 10 age-sex groups and the other half to obtain a sample of families of four types. To estimate the seasonal variation, two matched samples, one summer and the other winter should be selected. To give proportionate representation to three types of areas, the number of EAs to be allocated should be approximately proportional to the size of the three types of areas within a region. Another consideration was to allocate an equal number of EAs to each of the five regions. Finally, of course, another factor influencing the choice of the sample size was the cost of the survey.

The sample size was determined in the following way: Number of EAs allocated to a type of area stratum = (types of income sub-strata within a type of area) × (types of control, namely age-sex and family types) × (number of seasonal samples) = 2 × 2 × 2 = 8. Now the approximate proportion of population in three types of area in each region is 5:3:2. Hence, 80 EAs [(5 × 8) + (3 × 8) + (2 × 8)], were allocated to each region or 400 EAs for Canada. Of the 80 areas to be surveyed in each region, 40 were allocated to the metropolitan areas of the region, 24 to non-metropolitan urban areas with population greater than 5,000 persons and 16 to the remaining non-metropolitan areas.

This gives the sample size of 400 × 50 = 20,000 persons or 4,000 from each region.

To have the desired allocation of EAs to all provinces within the Atlantic and Prairie regions and to all metropolitan areas in Canada some minor modifications were made. The final allocation of EAs to the 10 provinces for one season is given in Table 1.

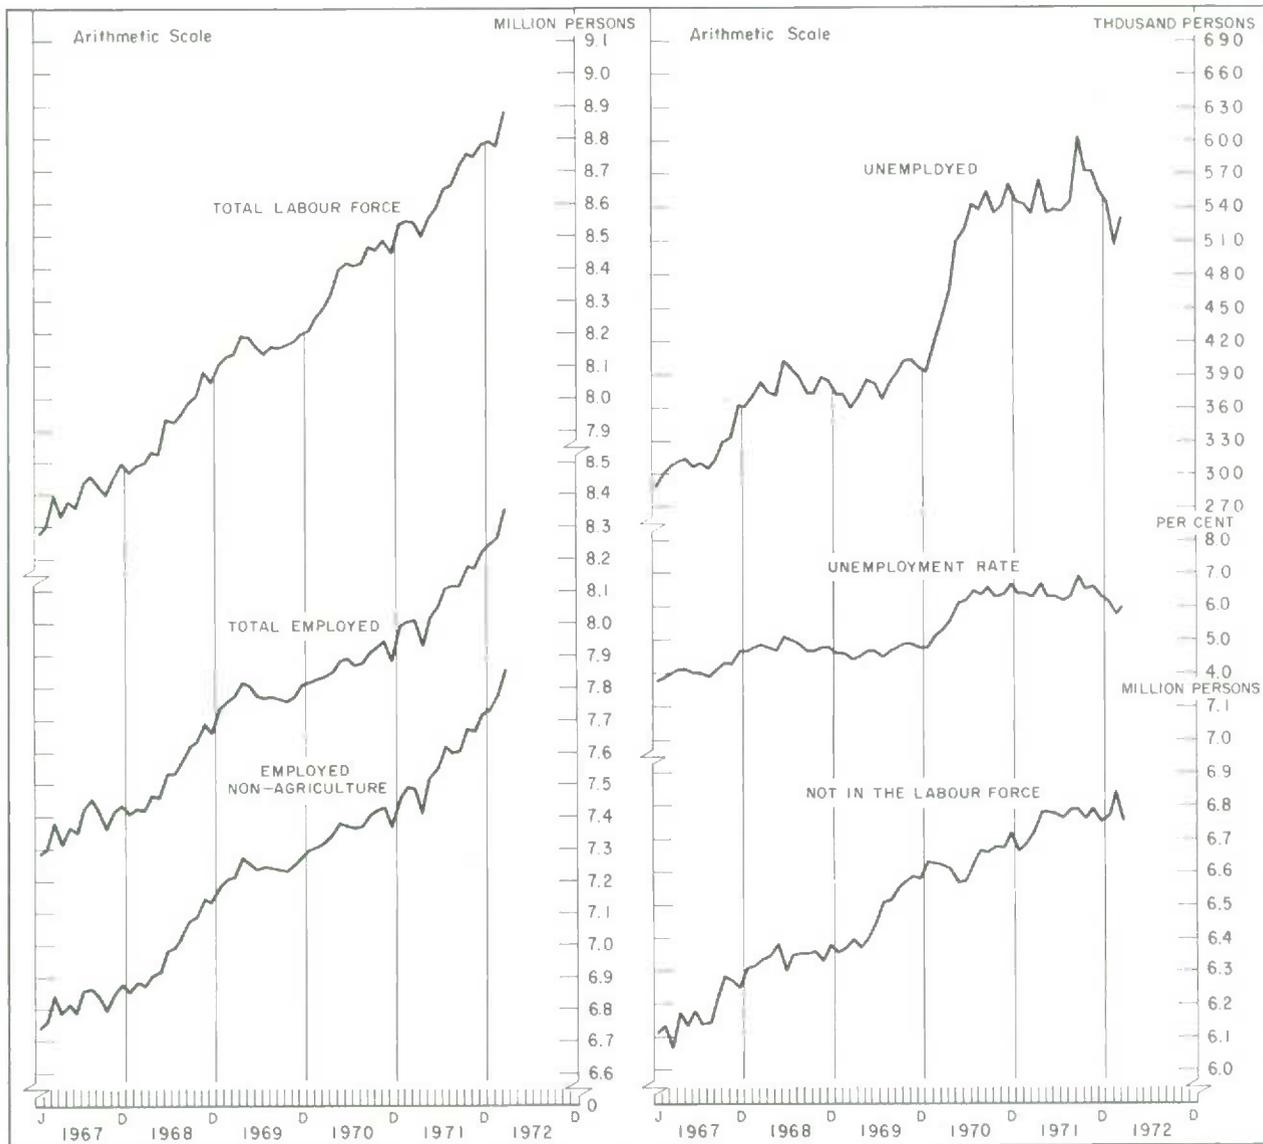

VII. Sample Selection Procedure and Field Operation

For the survey, Canada is divided into 5 regions, each region is stratified into 6 basic strata as described above, and the required number of EAs are selected from each stratum.

Selection of enumeration areas, the first stage sampling units, was carried out by Statistics Canada before the field operation began. From each stratum an independent sample of EA's was selected with probability proportional to the 1966 population of the EA. One half the selected areas were assigned randomly to the summer sample; the remainder to the winter sample.

LABOUR FORCE (More detail in Section 4, Table 3)

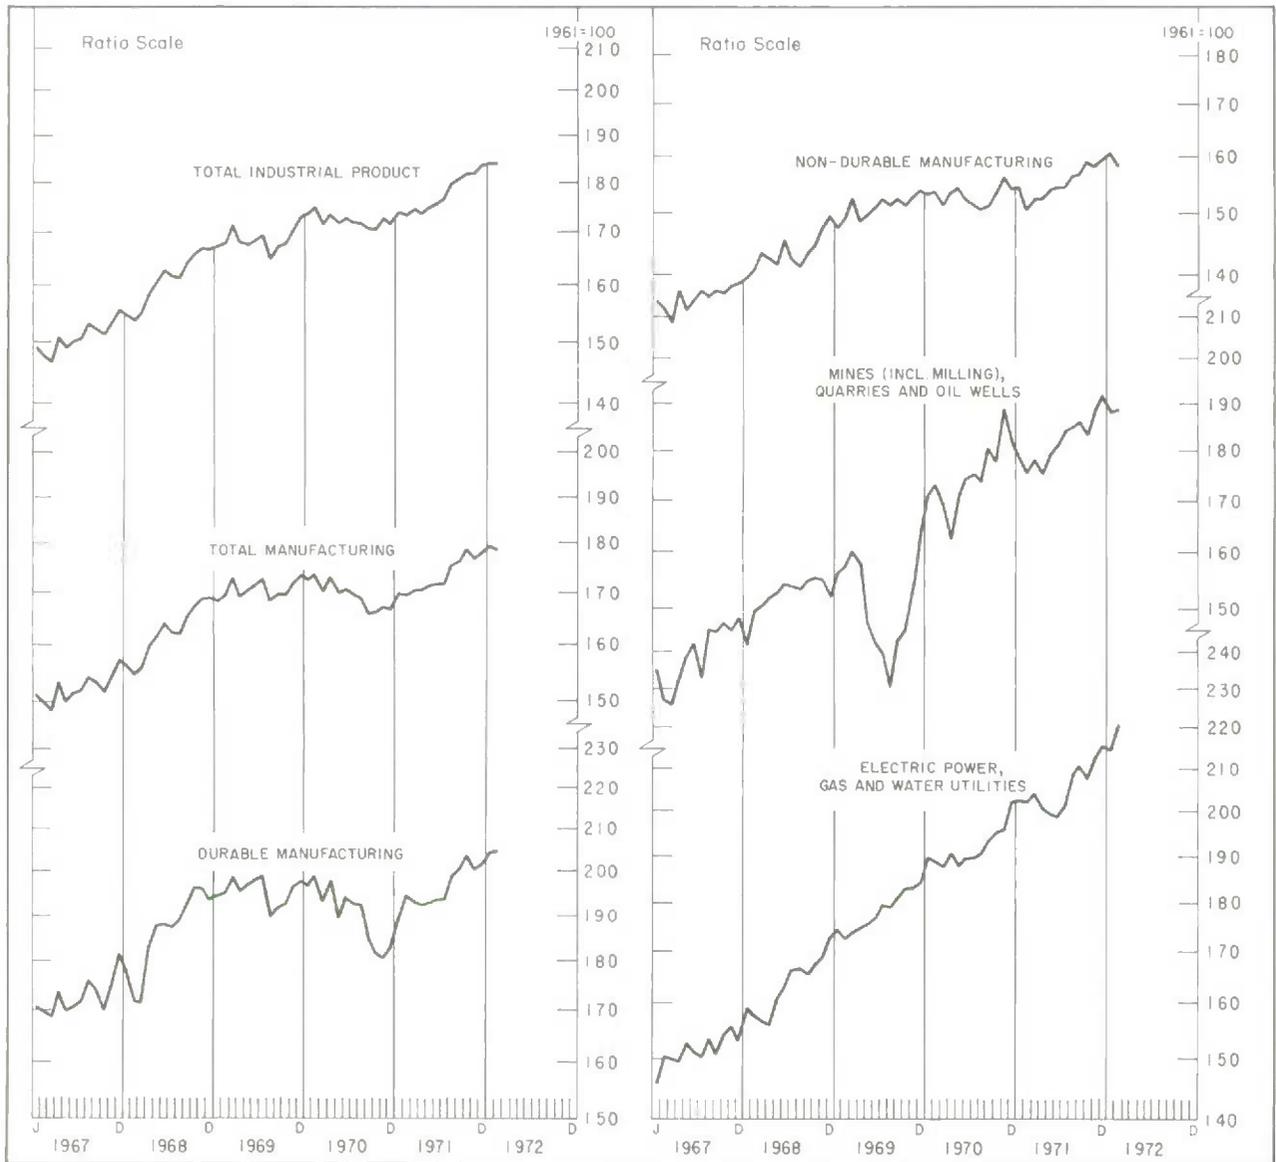

From February to March, the unemployment rate edged up to 6.0% from 5.8% while employment increased by 1.0%.

M. C. D.	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
	thousands				per cent	thousands

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

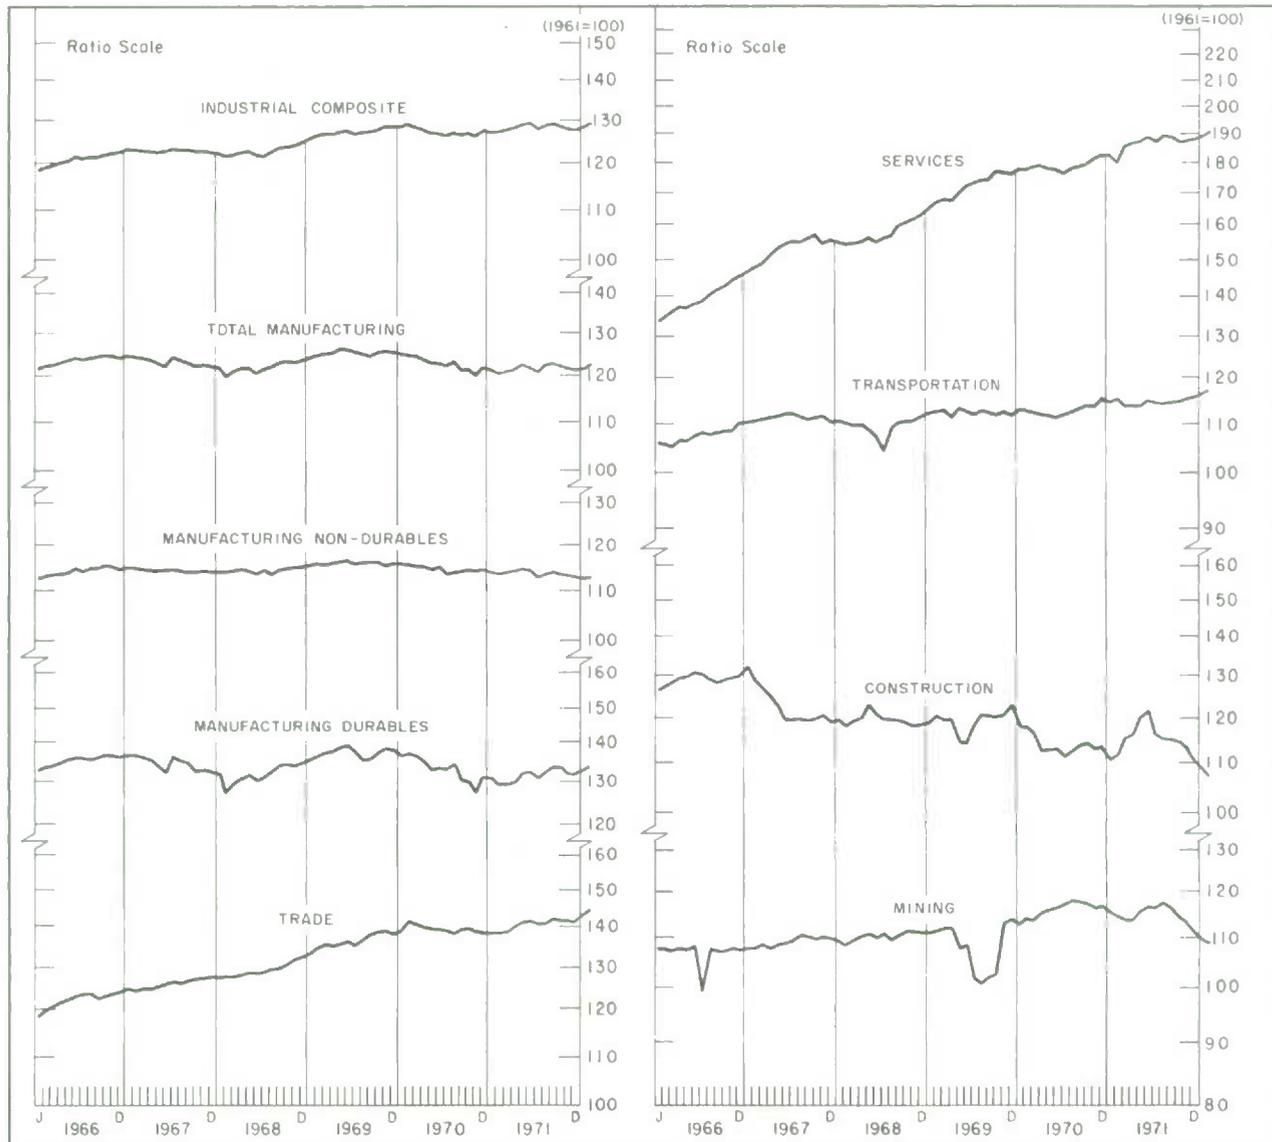

The seasonally adjusted index of industrial production remained unchanged in february from the downward revised level of 183.9 in January. The mining industry and utilities registered increases. The decrease in manufacturing output originated with the non-durable goods industries.

		(1961=100)					
		total industrial production (1961=100)	manufacturing (1961=100)			mines (incl. milling), quarries & oil wells	electric power, gas & water utilities
			total	durables	non-durables		
1970	J	172.0	169.5	192.3	151.4	174.7	189.8

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

Retail sales in February recorded an increase of 1.1% in the seasonally adjusted data above the January 1972 levels. Fuel dealers recorded the largest increase from the previous month (25.0%) with the remaining trades ranging between +4.9% (for service stations and garages) and -3.7% (for furniture, T.V. radio and appliance stores).

Neither North American nor overseas manufactured passenger cars showed an appreciable change in seasonally adjusted sales from January to February 1972. Overseas cars, however, show a much sharper percent increase over February 1971 than North American cars. Commercial vehicles recorded a 9% increase over January 1972 and a 55% increase over February 1971.

EXPORTS AND IMPORTS (More detail in Section 11, Tables 1 and 2)

Exports for the first quarter 1972 totalled \$4544 million, up \$12 million from the fourth quarter 1971. Shipments to the U.S. rose \$240 million, but exports to the U.K. and rest of the world fell by \$83 million and \$145 million. Imports at \$4434 million were \$263 million higher. U.S., U.K., and rest of the World contributions were \$31, \$13 and \$219 millions.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1 Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹Receipts and payments in this summary are Balance of Payments data. They are consistent with Gross National Expenditure concepts after adjusting for withholding tax additions and revisions not yet reflected in the National Income and Expenditure accounts. ²Trade of Canada figures with certain valuation and timing adjustments appropriate for Balance of Payments.

¹A minus sign except for official monetary movements, indicates an outflow of capital from Canada. ²Includes guaranteed issues. ³Bank balances and other short-term funds abroad (excluding official reserves). ⁴Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. ⁵Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force (71-001), Statistics Canada.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. Source: The Labour Force (71-001), Statistics Canada.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. ¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping, non-commercial services, plywood households, public administration and defence. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below.²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. ²These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. ³The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. ⁴Indexes for Quebec City and Thunder Bay are on the (1969=100) base. Source: Prices and Price Indexes (62-002), Statistics Canada.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

year and month	total shipments	non-durable	durable	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". Source: Footwear Statistics (33-002), Statistics Canada.

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant. ⁵Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. Source: Primary Iron and Steel (41-001), Statistics Canada.

¹Production plus imports less re-exports, minus exports. ²Data for 1969, 1970 and 1971, have been revised and are shown here for the first time. Full details will be shown in *New Motor Vehicle Sales, 1971* (Cat. no. 63-208). ³Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). ¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1970 and 1971 price indexes are subject to revision. ³1971 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Monthly totals for current years are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. ²Includes also seaweeds and other species such as whales, worms etc.

³Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. ⁴Total holdings (all forms) of frozen fish commencing October 1969 excludes freshwater species.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. ²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. Source: Retail Trade (63-005), Statistics Canada.

Table 1: value of retail trade by type of business and province, based on the 1960 standard industrial classification - concluded

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁸Bills due for residential/domestic use of telephones, gas and electric power. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

Table 1: carloadings of revenue freight on Canadian railways¹ (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	mine products														
			farm products and food						iron and concentrates					coal, sand, cement and other mine products		forest products	
			wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash ²	and other mine products	lumber and plywood	pulpwood	other forest products

¹Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ²Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in January 1970 i.e. 1969 and previous dates do not include Nordair. Source: Civil Aviation (51-001), Statistics Canada.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002) Quarterly, Statistics Canada.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. ¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). ³As of April 1, 1969 Industry and Trade and Commerce are combined. ⁴Under the Technical and Vocational Training Assistance Act. ⁵Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁶Includes treatment and rehabilitation services.

Sources: Canada Gazette and Dept. of Finance.

*Data for April 1971 to February 1972 are shown only where there is continuity from fiscal year 1970-71.

*March 1970 figures are preliminary in that they do not include supplementary accounts.

Within a selected area, the sampling ratio for households was calculated to allow for the selection of the required number of people from the age-sex group which occurred least often in the area in 1966, in order to satisfy the restriction that equal numbers of persons from all age-sex groups be surveyed in each area. With experience it became possible to place minimum and maximum limits on the number of households expected to be selected in an area. It was found that with an expected sample size of more than 45 households, the sample of persons was likely to adequately satisfy the sample restrictions. With an expected sample size of more than 90 households the cost of this portion of the field operation became unacceptable, especially in light of the fact that some age-sex groups would still not meet the sample requirements. Hence, the sampling ratios for households are determined basically from the 1966 age-sex distribution but are modified to produce an expected sample size for households in the range 45-90.

The first stage of the field operation, listing of households and sample selection of persons, is carried out by the Statistics Canada Regional Offices. For a selected enumeration area, an interviewer is provided with a map of the area, a control booklet in which she records the addresses of all households located within the boundaries of the area and household cards on which she records the name, age and sex of all persons residing in selected households.

The interviewer is required to record in the control booklet the addresses of all households within the boundaries of the selected area. Each address is recorded beside a listing number. Listing numbers for selected households have been determined in advance by the sampling intervals and are marked accordingly.

When the interviewer reaches a selected household, she enters and records on a household membership card the age, sex and identification information for each person in that household. It is from the persons listed in this way that the survey sample of persons is selected.

At the regional office the persons living in the selected households are stratified into the ten defined age-sex groups. From each group a random sample of the required size is drawn. A list of the selected people, together with their addresses, telephone numbers, and other information useful to the survey Advance Party Interviewers is prepared.

The Advance Party Interviewers are trained interviewers who carry out the second stage of field operations, working about one to one and one-half weeks ahead of the survey clinic team.

Essentially their duties are twofold:

- (i) to explain the survey to the selected persons, enlist their co-operation, and arrange appointments for their interviews and examinations with the clinic team, and
- (ii) to conduct a short household interview to collect basic socio-economic data about the selected persons and basic information on food facilities, food buying, and food preparation habits of the household.

The interviewers receive the list of selected persons they are to interview from the Statistics Canada Regional Office. In some areas the interviewer is accompanied by the Public Health Nurse who can introduce her in the household and may be instrumental in gaining the co-operation of the selected persons.

The third stage of the field operation is the survey clinic interviews. The composition of the clinic team is such that 12 persons can be interviewed during a two-hour period. Ordinarily, two sessions are held each afternoon and two each evening, however, the schedule is flexible enough to accommodate the patterns within the community being surveyed.

The persons who have agreed to take part in the survey are provided with transportation to and from the survey clinic. Participants undergo a dietary interview, medical history, dental and medical examinations, anthropometric measurement and collection of blood and urine samples.

It is apparent that the Nutrition Canada Survey demands a great deal of the respondents, and this would be expected to be reflected in the response rates. Non-response can occur at any of the three stages of the field operation, and various features have been introduced to adjust for and control the amount of non-response. Sampling ratios and sample sizes have been adjusted on the basis of the expected response rates at each stage. The complete field operation in each area is carried out within a three-week period. This reduces the amount of non-response due to mobility and also helps to maintain the interest of selected persons right up to the time of the clinic interviews.

The selection procedure described above permits the calculation of the probability of selection of each person in the sample. This allows for the calculation of survey estimates and estimates of the sampling variability.

The field work for the survey will be completed in September 1972. Data processing and analysis are being carried out by the Food and Drug Directorate. Some preliminary findings are expected to be released later this year. However, the main body of the data collected will not be available until 1973.

TABLE 1. Allocation of Enumeration Areas to One Season for Nutrition Canada Household Survey

Region	Metropolitan		Non-metropolitan				Total
			Urban areas		Other areas		
	Low income	Other income	Low income	Other income	Low income	Other income	
Quebec	10	10	6	6	4	4	40
Ontario	10	10	6	6	4	4	40
Pacific	10	10	6	6	4	4	40
Atlantic Region:							
Newfoundland	2	2	2	2	2	2	12
Prince Edward Island	0	0	2	2	2	2	8
Nova Scotia	2	2	2	2	2	2	12
New Brunswick	2	2	2	2	2	2	12
Prairie Region:							
Manitoba	2	2	2	2	2	2	12

Alberta	2	2	2	2	2	2	12

Other Publications of the General Time Series Staff

- | Publication number | Title and Description |
|--------------------|--|
| 11-003F | <p><i>Revue Statistique du Canada</i>, mensuel.
This is the French edition of the Canadian Statistical Review.</p> <p style="text-align: center;">Canadian Statistical Review Supplements</p> |
| 11-004 | <p><i>Weekly Supplement to the Canadian Statistical Review</i>—Free to <i>Canadian Statistical Review</i> subscribers.</p> <p>Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Canadian Statistical Review</i>. Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).</p> |
| 11-206 | <p><i>Annual Supplement to the Canadian Statistical Review</i>—Price \$1.00 (Free to <i>Canadian Statistical Review</i> subscribers.)</p> <p>Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i>. The series extend back to 1946 or as far back as the data are available (Bilingual).</p> <p style="text-align: center;">CANSIM Manuals and other Publications*</p> <p>— <i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i>—Free on request.
Order by title, from General Time Series Staff.</p> |
| *12-530 | <p><i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.00</p> <p>This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval manual" (available in French, pub. N° 12-530F).</p> |

- | Publication number | Title and Description |
|--|--|
| CANSIM Manuals and other Publications (Cont'd) | |
| *12-531 | <p><i>CANSIM: Users' Manual for Data Retrieval and Manipulation</i> (Occasional)—Price \$1.50</p> <p>Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported (available in French, pub. N° 12-531F).</p> <p>— <i>CANSIM: Summary Reference Index</i> (Annual, with monthly amendments)—Free on request.
This index summarizes data available from CANSIM and provides matrix identifiers.
Order by title, from General Time Series Staff.</p> <p>— <i>CANSIM: Series Directory</i> (Annual, with monthly amendments)—Price \$10.00 plus \$5.00 for amendments.</p> <p>The <i>CANSIM Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada.
Order by title, from General Time Series Staff.</p> |
