Expenditure Accounts,  
1st Quarter 1973

## Canadian Statistical Review

*Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.*

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 10th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

*Selected Economic Indicators* appearing in the Section I are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

\* \* \* \* \*

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for *Selected Economic Indicators*, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

## SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

## NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

### Section 5, Table 3 – Other Price Indexes

The series *Thirty Industrial Materials Price Index* has been deleted at the request of the data source. In its place, they recommend the use of the *Total Industry Selling Price Index* which appears in Table 1 of this Section.

### Section 8, Table 8 – Dwelling Units, Under Construction, centres 10,000 and over

This table is introduced with this issue.

### Section 12, Table 2 – Operating Statistics of Canadian Railways

The monthly *Railway Operating Statistics* survey and the monthly report, Catalogue 52-003 has undergone certain modifications. Commencing with January, 1973, it includes only data for six major railways operating in Canada instead of the previous 24. Additionally, some detail has been eliminated and the format changed to reflect more cumulative data. Revenue ton-miles and passenger-miles are still available but tons carried and passengers carried have been discontinued.

*The Annual Summary Report*, Catalogue 52-206 will be discontinued following issuance of the 1972 report.

### Publication of Interest

*Canada 1973* Catalogue 11-203, \$2. The colourfully illustrated, 350-page Statistics Canada Handbook, reviewing the nation's social and economic progress, now is available through Information Canada, some bookstores or from Statistics Canada.

*Canadian International Trade Classification – Numeric Index*, Catalogue 12-544, \$2.50. This reference manual was developed jointly by the Department of National Revenue, Customs & Excise and the External Trade Division of Statistics Canada. It lists the Commodity Code headings of the C.I.T.C. in numeric sequence, and is designed to help importers or their customs brokers determine the right commodity code for their goods when completing customs form B3. An introduction to the numeric index, together with a guide to its use, is also included.

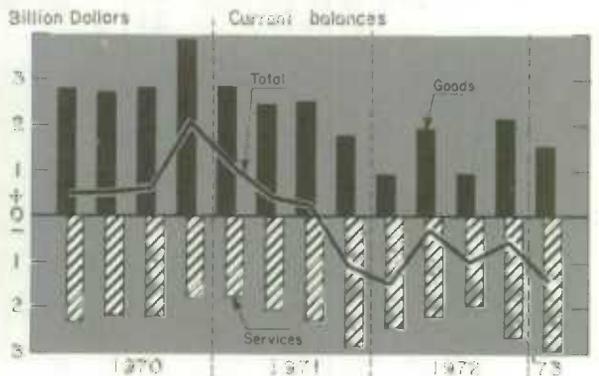

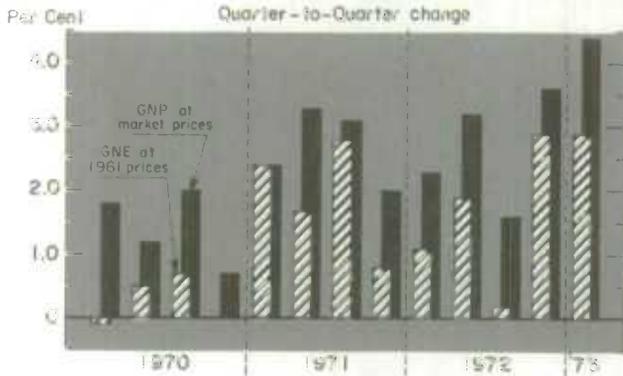

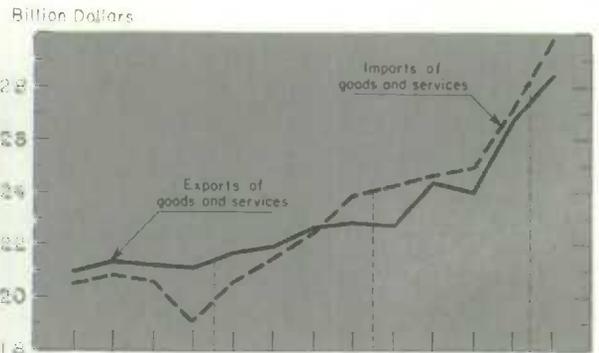

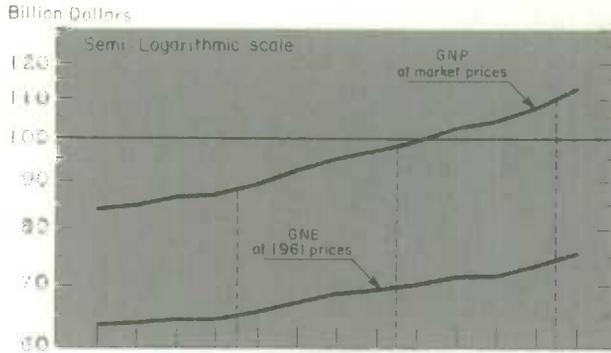

*Capital Stocks and Flows, 1926 to 1971 – CANSIM Data*: Annual estimates of stocks and flows and related estimates of fixed non-residential capital in Canada are available from CANSIM as time-series for 1926 to 1971, based on the 1960 revision of the Standard Industrial Classification, by major industries and detailed types of assets. This data is available only in computer printout form or on magnetic tape.

For further information, contact Mr. P. Koumanakos (613-994-5601), Chief, National Wealth and Capital Stock Section, Statistics Canada, Ottawa, K1A 0T6. To order any data from CANSIM on magnetic tape or computer printouts, contact Miss Mary Lennox (613-995-7406), Chief, General Time Series Staff, Statistics Canada, Ottawa, K1A 0Z8.

*Directory of Museums, Art Galleries and Related Institutions, 1972* Catalogue 81-554, \$1.50. Open-to-the-public museums, art galleries, observatories, planetariums, archives, botanical gardens, zoos and historic sites throughout Canada are listed by location in this directory. It briefly covers such practical information as most interesting features and exhibits, public participation programs and visiting hours. The statistical report was published by Statistics Canada under the title *Museums, Art Galleries and Related Institutions, 1970* Catalogue 81-553.

GNP at market prices rose 4.4 per cent in the first quarter of 1973 to a level of \$112.6 billion; in 1961 prices the rise was 2.9 per cent.

Imports rose considerably faster than exports, 9.4 per cent compared with 6.3 per cent, resulting in a sharp deterioration of \$880 million in the balance of transactions in goods and services

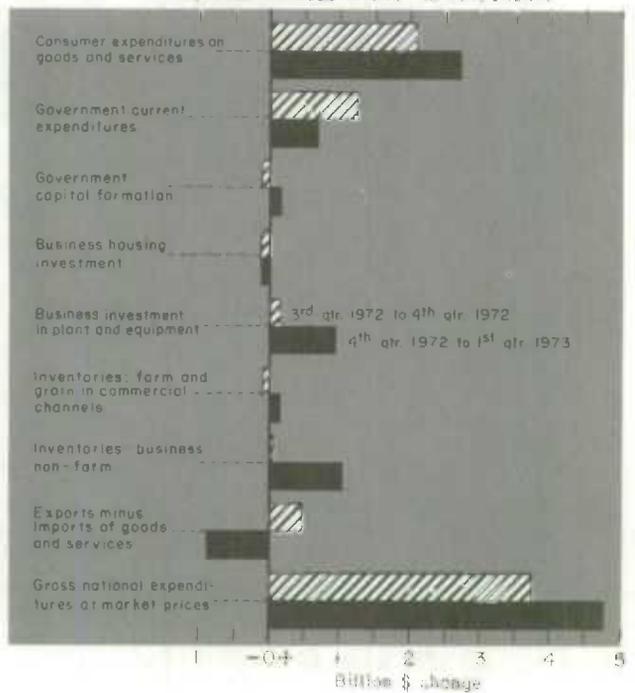

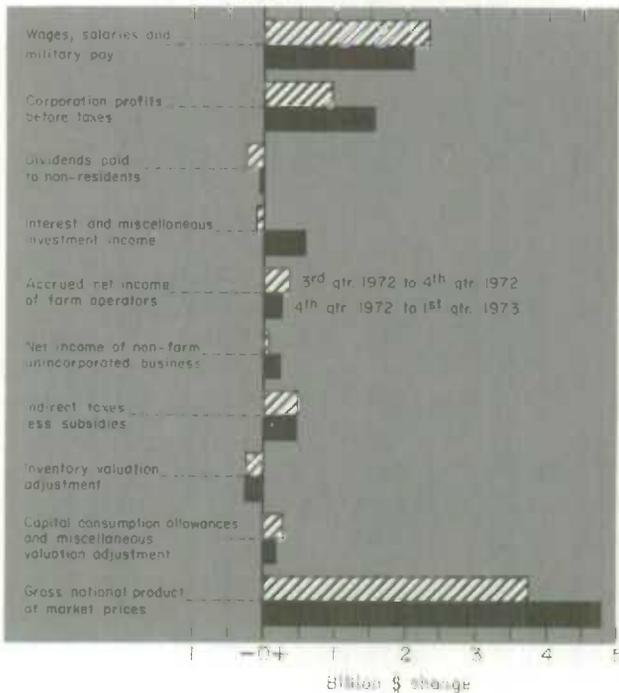

Highlighting the income side was an unusually sharp 13 per cent increase in corporation profits on top of an already large 9 per cent gain in the previous quarter.

The gain in consumer outlays of 4.3 per cent was the largest in 21 years. Another striking feature of demand was the billion dollar increase in business inventory investment.

QUARTERLY CHANGES IN GNP AND COMPONENTS

QUARTERLY CHANGES IN GNE AND COMPONENTS

All data seasonally adjusted at annual rates

## NATIONAL INCOME AND EXPENDITURE ACCOUNTS FIRST QUARTER 1973

The Canadian economy continued to expand strongly in the first quarter of 1973. Preliminary estimates indicate a notable acceleration in consumer spending, after an already exceptional growth in the fourth quarter of 1972, a sharp pick-up in the rate of business inventory investment and continuing acceleration in corporation profits. The strength of the economy was also evident in large employment increases, resulting in a marked fall in the unemployment rate from 6.7% in the fourth quarter to 5.9% in the first quarter of this year. The fast pace of activity was accompanied by increased price pressure, particularly in prices of food and of many industrial commodities.

Gross national Product at market prices rose by \$4.8 billion to reach a level of \$112.6 billion, seasonally adjusted at annual rates. In percentage terms this amounted to a 4.4% increase. This gain, one of the largest ever recorded, came on the heels of an already exceptionally strong 3.6% increase in the revised fourth quarter of 1972. The acceleration was, however, entirely due to price increases; the overall implicit price index rose twice as fast as in the previous quarter, 1.5% compared with 0.7%. In volume terms GNP showed the same increase of 2.9% as in the revised previous quarter. (Revisions introduced in this report had the effect of raising the growth rate in 1972 from 5.5% to 5.8%. In the quarterly data the largest revision made to 1972 was in the fourth quarter, which originally showed a 2.6% real rate of growth.)

Developments in the Canadian economy in the first quarter bear much resemblance to the experience in the United States in the same period. In the latter country, however, large increases in business inventory investment and in fixed capital formation were already underway early in 1972. In the first quarter, of 1973, the rate of inventory investment declined in the United States, possibly reflecting increasing difficulties in maintaining production in line with sharply increasing new orders.

The strength of demand in the first quarter was widespread. In particular, components which traditionally display strong cyclical variations, durable consumer goods, business investment in non-farm inventories and in fixed capital formation all rose at rapid rates. Taken together these components advanced by almost 10%. In the fixed capital formation sector, the gain of 7% in business investment in plant and equipment was the largest increase since the last quarter of 1965. The survey of investment intentions indicates a planned increase of more than 13% for the year as a whole. In the external sector, although both exports and imports rose strongly, the latter outpaced the former, as a large part of the increase in domestic demand was met by foreign suppliers.

Paced by outlays on durable goods, especially automobiles, consumer expenditure on goods and services rose by \$2.7 billion bringing the level of such outlays to \$65.6 billion. The gain of 4.3%, the largest in 21 years, constituted a further acceleration after gains of 3.4% in the fourth quarter and of 2.2 per cent in the third quarter. Measured in constant dollars, consumer expenditure rose by an impressive 3%.

Increased consumer spending in the first quarter was most pronounced in the goods categories, which showed accelerated rises and accounted for over three fourths of the overall increase. Spending on durable goods rose by close to a billion dollars, or a remarkable 10%. This was almost twice the rate of increase in the previous quarter. Although most of this jump was due to spending on new and used automobiles, up 18% and 11% respectively, there were widespread increases in other components, the most spectacular being an 11% rise in spending in the furniture group. In the other goods categories, spending on semi-durable goods, such as clothing and footwear and miscellaneous household furnishings, rose by 4.4% and spending on non-durable goods rose by 3.6%. However, the rise in outlays on non-durable goods was almost entirely due to rising prices, especially of food. In terms of volume, there was only a marginal gain in this category.

The surge in consumer spending, which was also evidenced by a sharp rise in consumer credit balances outstanding, was accompanied by a fall in personal saving and in the personal saving ratio (personal saving as a proportion of personal disposable income) from 7.1% in the fourth quarter to 5.1% in the first quarter. Growth in personal disposable income in the quarter, up by only 2.1%, was dampened by a very large \$1.5 billion rise in personal direct taxes. Part of the increase in taxes was caused by irregularly low first quarter refunds, which were associated with the delay in the passage of legislation concerning the income tax measures introduced in mid-1972. Because of these unusual movements in taxes and personal disposable income, it cannot be assumed at this stage that the fall in the saving ratio reflects a changed spending pattern on the part of consumers.

A feature of demand in the quarter was a billion dollar increase in the rate of non-farm inventory investment, from an accumulation of \$664 million in the fourth quarter to one of \$1,684 million in the first quarter. Although each of the three major industry levels, manufacturing, wholesale and retail trade showed accumulations in excess of \$500 million the increased rate of investment was concentrated in manufacturing and in wholesale trade.

Stocks of manufacturing industries, which showed a turnaround of \$800 million from a deple-

tion of \$228 million in the fourth quarter to an accumulation of \$572 million in the first quarter, contributed 80% to the overall increase in the rate of business non-farm inventory investment. Sizable increases in investment occurred in the stocks of wood processing industry and of the food industry. An interesting aspect of the first quarter accumulation was the record increase in the stocks of raw materials. In spite of the large first quarter accumulation, stocks failed to keep pace with shipments resulting in a further decline in the stock-to-shipments ratio.

In wholesale trade, the increased accumulation from \$52 million in the fourth quarter to \$676 million in the first quarter was largely concentrated in industrial transportation equipment and automotive parts. Stocks of food dealers and of petroleum dealers also rose at accelerated rates. In retail trade, the accumulation of \$592 million was somewhat larger than that of \$548 million in the fourth quarter. Stocks of motor vehicle dealers rose at half the rate of the fourth quarter, and liquor stores experienced a sharp depletion.

Business investment in plant and equipment also experienced a sharp upturn in the beginning months of 1973. The rise of 7.1%—was the largest in many years and in sharp contrast with the sluggish performance during 1972—took the level of such expenditures to over \$14 billion. Increases were notable in both non-residential construction and in machinery and equipment. In the latter category, the increase in investment in motor vehicles of over 20% was remarkable.

Investment in housing, on the other hand, declined for a second consecutive quarter, by about 2%. The fall was entirely concentrated in the construction of apartment buildings and other multiple structures as spending on single dwellings rose by almost 3%. Spending on housing had boomed for over two years before slowing down in the fourth quarter of 1972. The level of such spending, however, remains high. At about \$5.4 billion, it stands 62% above the trough in the second quarter of 1970.

Continuing fast pace of activity characterized the external sector. Though both exports and imports of goods and services registered large increases, imports rose considerably faster than exports, 9.4% compared with 6.3%, resulting in a sharp deterioration of \$880 million in the balance of transactions in goods and services from a deficit of \$504 million to one of \$1,384 million. The widening of the overall deficit was the result of a \$584 million drop in the merchandise surplus and a \$296 million increase in the non-merchandise deficit, where increased travel expenditure by Canadians was an important factor.

The pervasive strength of merchandise imports in the quarter, up 10.7% compared with 8.5% in the fourth quarter, reflected the unusually strong do-

mestic demand. Gains were especially notable in automotive products and investment goods. By country of origin, the rise in merchandise imports was quite general but most pronounced in percentage terms from Japan and countries of the European Community. Merchandise exports rose by 7.1%, after a spectacular 14.1% rise in the fourth quarter. The first quarter gain was concentrated in exports to the United States and Japan; exports to other countries declined on balance.

Highlighting the income side was an unusually sharp increase in corporation profits. Preliminary estimates indicate a gain of around 13% on top of an already large 9% increase in the fourth quarter. Corporation profits have been increasing at sizable rates since the beginning of 1971. In that period, the proportion of corporation profits to GNP has risen from a depressed level of less than 9% to a level of 11.8%, comparable with that which prevailed in the mid-sixties.

Labour income, the major component on the income side, accounting for about 55% of GNP, rose by 3.5%. The fourth quarter increase was 4.0%. However, the apparent deceleration was due to the fact that the fourth quarter rate of increase was unusually large owing to a rebound from the strike affected third quarter as well as to unusually large retroactive payments. In the first quarter, wages and salaries grew faster in the goods-producing industries, 3.6%, than in the service-producing industries, 3.2%—a reversal of the usual pattern. Manufacturing wages and salaries rose by 3.5%, about the same rate as in the previous quarter, with employment gains contributing significantly to the rise. In the service-producing industries, significant increases were recorded in trade, in commercial services and in finance, insurance and real estate.

### Price Movements

Price acceleration was a feature of the first quarter. The implicit price index for GNP rose by 1.5% compared with 0.7% in the fourth quarter. Price increases in each of the first three quarters of 1972 had been around 1.3%. All major components of domestic demand showed price acceleration. However, prices of imports rose substantially faster than prices of Canadian production, partly as a consequence of the revaluation of the currencies of most of our major trading partners in February, especially Japan and countries of the European Community.

The implicit price index for personal expenditure was up 1.2%, compared with a 1.0% increase in the fourth quarter. This larger rate of increase was attributable to a surge in the prices of non-durable goods, most notably food. The price of personal expenditure was dampened by a decline in durable goods prices. This was due to the continuing effect of the adjustment introduced into the fourth quarter

to remove from the price index of automobiles the price rises due to specification changes such as mandatory safety and pollution devices recently introduced.

Prices for business gross fixed capital formation rose by 1.4%—about the same rate as the quarterly increases registered in the past year. The implicit price for residential construction rose by 1.7% compared with 2.2% in the fourth quarter. This considerable easing was due to a slowdown in the rate of increase of the wage rate component. Prices in non-residential construction on the other hand accelerated. In both residential and non-residential construction, materials prices continued to rise steeply. The acceleration in the rate of increase of the implicit price index for machinery and equipment reflected both increasing import and domestic prices.

In the external sector, export prices accelerated again in the first quarter. The implicit price index rose by 2.9% compared with 2.6% in the fourth quarter. In 1972, prior to the fourth quarter, the export implicit price index had shown moderate movements. The first quarter price advance was led by a sharp increase in the food and beverage group. Prices of crude and fabricated materials also rose substantially, most notably prices for lumber, copper and woodpulp. Import prices surged in the quarter, partly a reflection of sharp price acceleration in the United States following the partial removal of price controls in that country. The rise of 3.4% in the index compares with a rise of 1.3% in the fourth quarter. All of the acceleration was due to the merchandise component which rose by 4.0%. Particularly large increases were registered in prices of food, feed, and beverages, coal and petroleum products.

#### **The Government Sector—First Quarter, 1973**

Total revenues of all governments combined, excluding inter-governmental transfers and season-

ally adjusted at annual rates, rose sharply in the quarter, by almost 8%, reflecting strong economic growth and irregular factors. The largest absolute increase was in personal direct taxes which showed a gain of \$1,460 million, concentrated in federal personal income taxes. Part of the rise was caused by irregularly low first quarter refunds, which were associated with the delay in the passage of legislation for the income tax measures introduced in mid-1972. Large increases also took place in indirect taxes and in corporate tax liabilities. The major factors in the former increase were higher returns from sales taxes at the federal and provincial levels and from property taxes at the local level.

Total expenditures of all levels of government combined rose by almost 4% in the first quarter. Although spending on all categories increased, the most notable rises occurred in outlays on goods and services and on subsidies. There were higher expenditures on current and capital goods and services at all levels of government, but three quarters of the gain took place at the provincial level. The increase in subsidies was concentrated at the federal level where large payments were made under the National Transportation Act. Transfer payments to persons rose modestly in the quarter as a decrease at the federal level, associated with a decline in unemployment benefits paid, partially offset increases at the other levels.

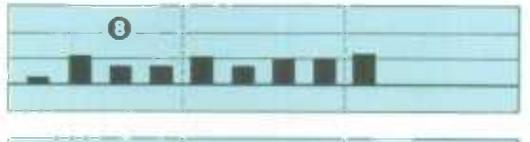

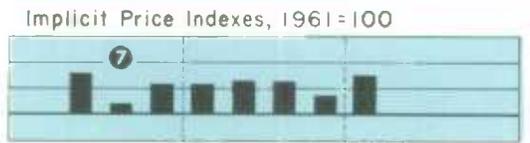

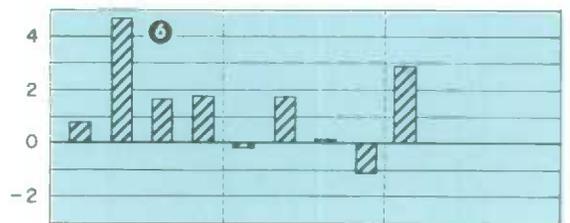

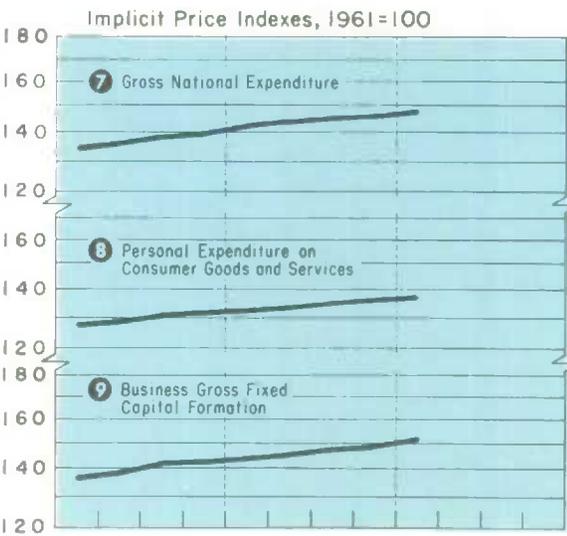

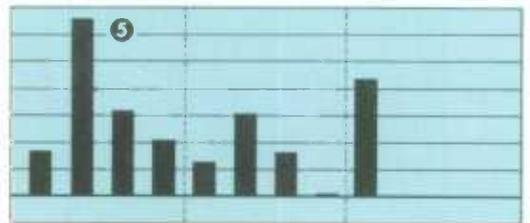

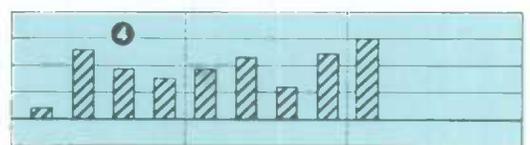

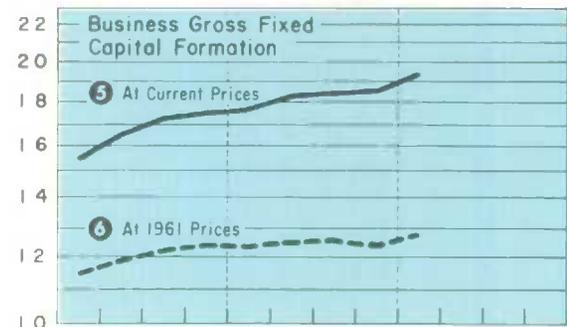

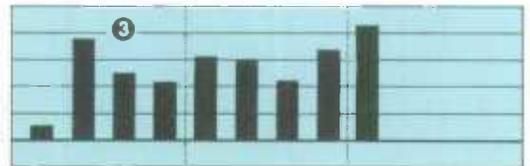

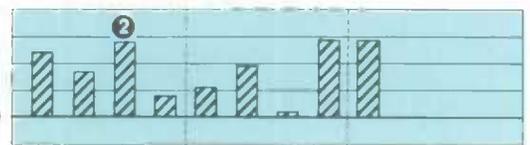

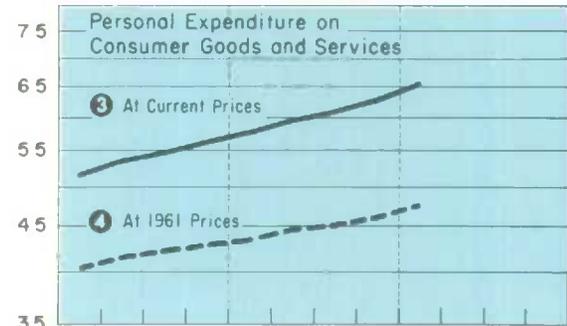

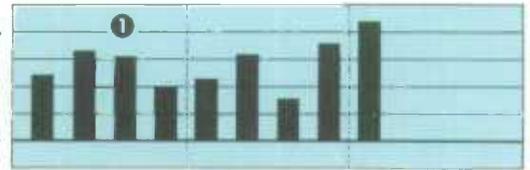

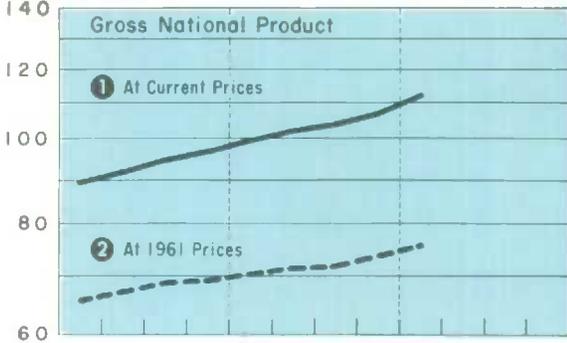

With revenues increasing at double the rate of expenditures, the government sector, on a national accounts basis, moved from a deficit of \$752 million in the fourth quarter of 1972 to a surplus of \$824 million in the first quarter of 1973. Most of this change resulted from the movement at the federal level, which registered a deficit of \$468 million in the fourth quarter compared with a surplus of \$1,044 million in the first quarter, and can, in fact, be attributed to an irregularly high rate of increase in revenues.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. <sup>1</sup>Excludes profits (net of losses) of government business enterprises. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). <sup>5</sup>See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. <sup>3</sup>Withholding taxes. <sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

<sup>1</sup>These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

Table 1.9: relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

<sup>1</sup>A minus sign except for official monetary movements, indicates an outflow of capital from Canada. <sup>2</sup>Includes guaranteed issues. <sup>3</sup>Bank balances and other short-term funds abroad (excluding official reserves). <sup>4</sup>Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measures of current, capital and reserve movements and embodies all unidentified transactions. <sup>5</sup>Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement.

<sup>1</sup>The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). <sup>2</sup>The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Cologogue No. 71-001.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. <sup>3</sup>The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>4</sup>Includes miscellaneous manufacturing industries. <sup>5</sup>Includes also publishing and allied industries. <sup>6</sup>Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

<sup>1</sup>The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. <sup>1</sup>Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. <sup>2</sup>These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. <sup>3</sup>The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. <sup>4</sup>Indexes for Quebec City and Thunder Bay are on the (1969=100) base. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	inventory at end of month									ratio of inventories owned to shipments
	shipments <sup>1</sup>	new orders received during month <sup>2</sup>	unfilled orders at end of month	owned <sup>3</sup>	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>3</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments<sup>1</sup> by industry based on the 1960 standard industrial classification (million dollars)

annual average and month	total shipments	non-durable	durable	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: manufacturing inventories<sup>1</sup> by industry based on the 1960 standard industrial classification (million dollars)

annual average and month	total inventories owned	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

<sup>1</sup>Total inventories owned by manufacturers including warehouse stocks.  
Statistics Canada.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001).

Table 4: estimated value of shipments and unfulfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

annual average and month	shipments							unfulfilled orders at end of month							
	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

<sup>1</sup>Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". <sup>1</sup>Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), Statistics Canada.

<sup>1</sup>Production plus imports less re-exports, minus exports.<sup>2</sup>Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past.

Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field less field flared and waste. <sup>4</sup>By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

Note: Components may not add to totals due to rounding differences. <sup>1</sup>The data are collected for 1,400 municipalities and individual figures are available on request. <sup>2</sup>Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Part Arthur (Thunderbay City). <sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. <sup>2</sup>From January 1972 includes Yukon and the North West Territories. <sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. <sup>2</sup>1970 and 1971 price indexes are subject to revision. <sup>3</sup>1971 price indexes are subject to revision. <sup>4</sup>Farm share only of motor vehicles. <sup>5</sup>In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. <sup>6</sup>In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

<sup>1</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.  
<sup>2</sup>Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. <sup>3</sup>Includes baking and frying oils and fats. <sup>4</sup>Includes stocks held by manufacturers and other warehouses. <sup>5</sup>Includes fresh sausage, frankfurters, wieners and all other sausage. <sup>6</sup>Includes solid, coated, bulk, packages and novelties. <sup>7</sup>The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

<sup>1</sup>Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. <sup>2</sup>Includes Yukon and North West Territories. Source: Retail Trade (63-005), Statistics Canada.

Note: Components may not add to totals due to rounding.

<sup>1</sup>Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. <sup>2</sup>Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. <sup>3</sup>Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. <sup>4</sup>Personal cash loans of up to \$1,500, usually made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. <sup>5</sup>Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. <sup>6</sup>The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. <sup>7</sup>Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. <sup>8</sup>Bills due for residential/domestic use of telephones, gas and electric power. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

<sup>1</sup>Column numbers refer to tables 3 and 4 section 11. <sup>2</sup>Includes special transaction-trade, not shown separately. <sup>3</sup>The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. <sup>4</sup>Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

<sup>1</sup>Column numbers refer to tables 3 and 4, section 11. <sup>2</sup>The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. <sup>3</sup>Includes special transaction-trade, not shown separately. <sup>4</sup>Includes scrap. <sup>5</sup>Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

<sup>1</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. <sup>2</sup>Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. <sup>3</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Sources: Motor Carriers-Freight (53-005) quarterly, Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, Statistics Canada.

<sup>1</sup>Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. <sup>2</sup>Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada. Air Carrier Financial Statements (51-206) Statistics Canada.

<sup>1</sup>The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. <sup>2</sup>The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. <sup>3</sup>Combines the industrials, utilities and finance common stocks. <sup>4</sup>Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. <sup>5</sup>Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. <sup>6</sup>Stocks included in the mining index are for producing mines. Source: Prices and Price Indexes (62-002), Statistics Canada.

<sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ## Other Publications of the General Time Series Staff

Publication number	Title and Description	Publication number	Title and Description
11-003F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the Canadian Statistical Review.		
	<b>Canadian Statistical Review Supplements</b>		
11-004	<i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers.  Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Canadian Statistical Review</i> . Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).		
11-206	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1.00 (Free to <i>Canadian Statistical Review</i> subscribers.)  Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).		
	<b>CANSIM Manuals and other Publications*</b>		
	— <i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i> —Free on request. Order by title, from General Time Series Staff.		
*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.00  This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval manual" (available in French, pub. N° 12-530F).		
		<b>CANSIM Manuals and other Publications (Cont'd)</b>	
*12-531	<i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1972 edition—Price \$1.50  Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, cat. 12-531F).		
	— <i>CANSIM: Summary Reference Index</i> (Annual, with periodic amendments) 1972 edition—Free on request. This index summarizes data available from CANSIM and provides matrix identifiers. Order by title, from General Time Series Staff.		
	— <i>CANSIM: Series Directory</i> (Annual, with periodic amendments) 1972 edition—Price \$15.00 or \$20.00 with amendment service.  The <i>CANSIM Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title, from General Time Series Staff.		
			—————
			This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:
			General Time Series Staff, Statistics Canada, Ottawa.

\*Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada
