ARTICLE:

A Brief Guide to Statistics
Related to Foreign
Ownership in Canada.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 4, Table 6 – Activities of the Unemployment Insurance Commission

This table has been restructured to present current unemployment insurance data. Two new series have been introduced, insured population (D 1248) and average weekly payment (D 1249).

Section 7, Table 6 and 7 – Metals and Non-metallic Minerals

At the request of the source, four new series have been introduced with this issue. The new series are Molybdenum: production (D 2608) and exports (D 2610); Potash (D 2607) and Uranium (D 2609) production.

Financial Flow Accounts

Quarterly financial flow accounts from 1962 to the second quarter of 1973 now are available in machine-readable form from CANSIM. For further information on methodology and concepts, order the quarterly *Financial Flows Accounts* (13-001, \$1/\$4) or contact Mr. J.D. Randall (613-992-8340), Financial Flows and Multinational Enterprises Division, Statistics Canada, Ottawa K1A 0Z8. For data on magnetic tape or computer printouts, contact Mrs. Gina Pilozzi (613-995-7406), General Time Series Staff, Statistics Canada, Ottawa K1A 0T6.

For 1962 to 1969, the data incorporates conceptual and statistical revisions. For the period 1970 to the second quarter 1973, the data were compiled on a revised national income and expenditure basis and consequently were not subject to large revisions. Financial flows data also will be available shortly in printed form for the 1962-69 period on the revised basis.

J.D. Randall*

Introduction

This article has been prepared to aid those using statistics in the field of foreign ownership in Canada.¹ The need for such a guide arises for a number of reasons, the most important of which are: (i) relevant information is spread throughout a number of different publications; (ii) the range of statistics available is not always widely known; and (iii) differences in coverage and concept of similarly titled series, designed for different purposes, can lead to the inappropriate use of the available statistics. This guide is not for the specialist but rather for the interested reader who wants to know in general terms what is available and where it may be found. It does not deal with such conceptual issues as "what constitutes control", about which books have been written, nor does it dwell on inadequacies of the statistics in terms of coverage or timeliness, problems of vital concern to the practising statistician.

The basic Canadian source documents for statistics on the extent of foreign ownership of Canadian assets, industrial ownership or control by non-residents, and the scope of non-resident activities in controlled industries are:

- (i) *Canada's International Investment Position*, Catalogue 67-202 (annual),
- (ii) Annual reports on corporations making returns under the Corporations and Labour Unions Returns Act. Catalogue 61-210,
- (iii) *Intercorporate Ownership*, Catalogue 61-512 (occasional),
- (iv) *Canadian Balance of International Payments*, Catalogues 67-001 (quarterly) and 67-201 (annual).
- (v) *Foreign-owned Subsidiaries in Canada*.

The above reports are prepared in Statistics Canada with the exception of item (v), which is released on an occasional basis by the Department of Industry, Trade and Commerce.² The objective of this guide is to explain what is available in each of these reports and to attach some qualifications to the statistics they contain.

In addition to these Canadian publications, a considerable body of statistics covering United States investment in Canada and the operations of U.S. subsidiaries and affiliates in Canada is available from U.S. source documents. The main ones are:

- (i) *U.S. Direct Investments Abroad, 1966*, U.S. Department of Commerce,
- (ii) *Survey of Current Business*, various issues, U.S. Department of Commerce,
- (iii) *Multinational Corporations - Studies on U.S. Foreign Investment*, U.S. Department of Commerce,

* Mr. Randall is Director of the Financial Flows and Multinational Enterprise Division in Statistics Canada.

¹ The terms "foreign" and "non-resident" are used synonymously in this note.

² The most recent statistics relating to reports referred to in (i) Catalogue 67-202 and (iv) Catalogues 67-001 and 67-201 may be "advance" released in the *Statistics Canada Daily*, Catalogue 11-001.

(iv) *Special Survey of U.S. Multinational Corporations, 1971*, U.S. Department of Commerce.

Although these publications provide useful supplementary data, differences in concepts and definitions frequently yield figures of a different magnitude from those compiled in Canada. An international group of experts working under the auspices of the International Monetary Fund are presently attempting to produce widely acceptable standard definitions and concepts relating to direct investment.

In order to use the statistics available on foreign ownership, it is necessary to distinguish the various characteristics of the series. There are, in fact, five broad aspects of foreign ownership covered by the Canadian reports: (i) the **overall value** of Canadian financial liabilities to foreigners, (ii) the **relative importance** of foreign ownership measured as a proportion of the total long-term capital employed in important sectors of the Canadian economy, (iii) the **proportion** of total issued share capital owned by non-residents in Canadian industries, (iv) the **extent of control** over Canadian industrial activity and real assets through share capital ownership, and (v) the **operations and financial flows** related to large foreign-controlled subsidiaries. Illustrative numerical examples are presented in an appendix to this note as a guide to these five types of data.

The following sections deal with the nature of the information set out in the five basic reports listed at the beginning.

International Investment

Canada's International Investment Position reports contain comprehensive estimates of Canada's liabilities to non-residents. Estimates of liabilities in the form of direct investment, portfolio investment, and a miscellaneous group including real estate, mortgages, etc. are available separately; together they comprise total foreign long-term investment in Canada.³ The geographical ownership of long-term investment is available for the United States and for the United Kingdom separately, and all other countries as a group.

This set of statistics was designed primarily to answer questions relating to the value of financial claims that foreigners hold against Canada, the form of the claim, the holder of the claim and the debtor in Canada. It then became of considerable interest to be able to answer questions pertaining to the size of these claims in relation to some overall Canadian figures, and ownership statistics were developed on the basis of the ratio of foreign

³ The distinction between foreign direct and portfolio investment rests primarily on whether the investors' participation in the enterprise gives the right to exercise significant control in management decisions. If in fact this control does exist, as generally evidenced by the level of share ownership, the investment is regarded as direct investment. If control does not exist, the investment is regarded as portfolio. The extent of share ownership which qualifies investment as direct investment is defined statistically as 50 per cent or more of equity owned in a single foreign country, 25 per cent owned by single investor abroad or 75 per cent in total owned abroad. Investment in branch operations is automatically treated as direct investment.

to Canadian ownership of long-term capital employed in major sectors of Canadian economic activity. Depending largely on the degree of share ownership, ratios were also developed showing the extent of foreign control over long-term capital employed in Canada (long-term capital including long-term debt, value of capital stock issued and surplus accounts). The concept of long-term capital employed may be equated, in a very general way, with net fixed assets plus working capital and some readers may find it easier to think of it in these terms.

Assets	
Current assets	100
Net fixed assets	900
Long-term financial assets	10
Total	1,010
Liabilities	
Current liabilities	50
Long-term debt	400
Capital stock	450
Surplus	110
Total	1,010

Long-term debt (400)+ Capital stock (450)+ Surplus (110)- Long-term financial assets (10)= Long-term capital employed (950)= Net fixed assets (900)+ Working capital (current assets less current liabilities) (50).

The control ratios mentioned previously, and control statistics in subsequent references, are determined by the equity holding of the parent or non-resident direct investors, and are not necessarily indicative of the degree of control exerted over the subsidiary. No official statistics exist which quantify the concept of control in terms of the autonomy of the subsidiary, or Canadian firm, to make financial decisions, export policy, pricing policy, production planning or personnel policy decisions, etc.

Considerable detail is published on direct investment in Canada by country of control and the industry to which investment is classified. An assessment of the form of direct investment, whether net inflows of capital from parent, undistributed earnings, or other factors affecting the value of direct investment, including financial transactions abroad with other than the country in which control resides, revaluations and reclassifications, is provided. The gross flows of capital between parent and subsidiaries related to direct investment in Canada are published for transactions with the United States. The level of direct investment in foreign-controlled Canadian enterprises as well as separate portfolio investment, is provided so that estimates of the degree of leverage—capital controlled by foreign-controlled enterprises—is available.

Foreign portfolio investment estimates are subdivided into the type of debtor, (e.g., the different levels of government, and corporations) and the currency of payments. As with direct investment, country and industry breakdowns are available. Canadian liabilities, other than long-term, including non-residents' holdings of Canadian dollars, Canadian treasury bills held abroad, Canadian Government demand liabilities and money market-type obligations are also included in the international investment estimates.

Supplementary information is provided on the number of Canadian concerns with foreign ownership elements and, as noted above, the extent of foreign ownership and control, expressed as a proportion of the total long-term capital employed is given, by industry, for the U.S., U.K., and all other foreign countries.

A considerable body of information is published on the flows of payments to non-residents arising from their investments in Canada, including dividends paid, profits of unincorporated branches of foreign corporations and interest paid on funded debt.

CALURA (Corporations and Labour Unions Returns Act)

The CALURA reports contain the most detailed picture of share ownership by non-residents in Canadian industries. For each of 33 major industry groups, the size of the industry with different degrees of non-resident share ownership is given. The share ownership size groupings range from less than 5 per cent non-resident owned to 95 per cent and more non-resident-owned. The statistics are designed essentially to throw light on the extent of foreign participation in Canadian industry through share ownership, with the size of industries being measured in terms of number of corporations, assets, equity, sales and profits.

The degree-of-share-ownership series should not be interpreted to mean that foreign ownership extends over the variables used to measure the size of the industry: it simply indicates that non-residents own "x" proportion of issued share capital in "y" industry, of "z" size in term of assets, sales, etc. However, a separate body of statistics in the report provides series in which there is an assumption of foreign control of Canadian industry when non-resident ownership of share capital is more than 50 per cent. In these tables, the measures of assets, equity, sales, profits do in fact indicate the size of elements of the Canadian economy falling under the control of non-residents.

It is important to retain a clear distinction between ownership references in the International Investment sense and in CALURA usage. In the former, it refers generally to foreign ownership of all financial claims including bonds, loans, share capital, as well as a portion of net worth attributable to non-residents on the basis of their share

holdings. In the latter, ownership relates **only** to foreign ownership of issued share capital. Statistics classified according to varying degrees of foreign ownership of share capital in the CALURA report reflect the overall size of Canadian industry with different degrees of foreign-owned share capital.

The differences between the concept of control used in the two publications are much less marked, although each report measures different phenomena of the economy or industry under control of non-residents. In the case of international investment, the extent of control is measured by the capital employed in Canada (long-term debt plus net worth); in CALURA, by assets, equity, sales, etc. The relative importance of these to the total Canadian economy or industry may vary and there is no reason why, within limits, they should not. Put simply, there is no reason to expect that the various dimensions of a single house expressed as a proportion of aggregate dimensions for all houses on a street will be the same. For example, it may represent 5 per cent of total rooms, 10 per cent of total square footage, 7 per cent of total cubic capacity, or 2 per cent of total numbers living in homes on the street.

The CALURA report provides considerable industrial detail, by asset size of companies and on the distribution of taxable income by province, according to whether the companies are foreign- or Canadian-controlled. In general, the CALURA publications break down the main series on foreign control between the United States and all other countries, although for certain selected series, data for the United Kingdom are also presented separately.

A review of this nature, providing only an overview of main statistical series available, of necessity omits reference to special statements and occasional tables which may be mined from the two reports. One or two examples may serve to illustrate the point.

The International Investment report provides, among others, special tables on foreign investment in segments of the financial industry, and changes in the number of Canadian concerns in which foreign capital is invested. It also includes data on long-term funded debt, owned in Canada and abroad, classified to the debtor (e.g., provinces, railways, etc.) and whether payable in Canadian or foreign currencies.

The CALURA report includes information on capital cost allowances and depreciation charged by foreign- and Canadian-controlled corporations, on average asset size of foreign- and Canadian-controlled corporations, and on detailed type of payments to non-residents by Canadian corporations controlled in the United States and other foreign countries.

It is useful to indicate some differences arising from the source material used in compiling the

International Investment and CALURA reports, in addition to those differences referred to earlier in definitions of ownership and measures of control.

- (i) The CALURA series are based on individual corporation returns whereas the International Investment series deal with Canada-consolidated statements for enterprises. The latter concept eliminates certain intercorporate items between Canadian parent companies and their subsidiaries in Canada.
- (ii) In the CALURA series, the corporation is used as the unit for industrial classification, whereas the enterprise (the family of related companies) is used in the International Investment series. Differences in industry statistics arising from this may be particularly acute in fine industry breakdowns because of the diversified conglomerate enterprises, and in areas where enterprises reflect large-scale vertical integration.
- (iii) The CALURA series exempts certain important groups of companies on the basis of their relatively small size, or by reason of their reporting under regulatory legislation.⁴ Specifically, the Act exempts corporations with gross revenues during the reporting period of \$.5 million or less, and assets of \$.25 million or less. An attempt is made to build up the series to a complete coverage (through inclusion of Act "exempt" companies) but in certain cases, the ownership of issued capital shares is not available to permit accurate allocation on the basis of degree of foreign ownership.

Intercorporate Ownership

This report, compiled from returns under CALURA requiring corporations to give the name and address of each corporation owning 10 per cent or more of any class of issued shares, groups together, into ownership complexes, corporations which have common ownership. Basically, the report enables the user to establish for any reporting corporation (i) which other corporations own a significant proportion of its shares; (ii) whether it in turn owns a significant proportion of shares in another corporation; and (iii) what other companies are linked to it through significant shareholdings. It does not reveal whether individuals are significant shareholders, nor does it provide an exhaustive list of relationships because of the omission of some CALURA reporting exemptions, and the break in the chain beyond the first link abroad.

More specifically, each separate complex begins with a corporation that holds 10 per cent or

⁴ Such legislation covers banking, insurance, trust and loan companies, much of the communications and transportation industry, and other federally regulated companies. For more detail, see the CALURA reports.

more of the voting shares of a reporting company but which itself has no corporate shareholder with a holding of 10 per cent or more. The list then traces other reporting corporations which have more than 10 per cent of their shares held either by the originally listed holding companies, or another holding company, and proceeds also to show those reporting companies which in turn are also holding companies. In this way, an ownership complex is built up which, where relevant, provides the links up to the first foreign company which holds more than 10 per cent of the shares.

The holding companies are identified as to the country of the mailing address of the head office, which is assumed to be the country of incorporation of the company, and the percentage of shares that they hold in the reporting company is given. In many cases, the same corporation will appear in a number of unrelated complexes and, in this case, the holding corporation's main complex is identified by cross reference.

The listings do not cover many exempt corporations which, in general, are those providing information under Canadian Government regulatory legislation, government-owned, non-profit organizations, or those below the specified reporting size for CALURA.

Work is now proceeding to overcome problems of updating such a listing to take into account current changes in ownership positions. The relationships now provided in the reports are based on company fiscal years which means that the structures are not all recorded at a single point in time and tend to reflect positions two to three years behind the current time period.

Canada's Balance of International Payments

Quarterly and annual reports in this series, although not providing statistics on the level of foreign claims on Canada, or on the extent of foreign control of Canadian industry, do provide insights on international capital flows associated with foreign ownership in Canada.

The principal series related to foreign ownership are:

- (i) the net capital inflow of direct investment from controlling interests for the establishment of the new concerns, the acquisition of controlling interest in existing concerns and the extension of long-term capital by parent companies to their subsidiaries;
- (ii) portfolio investment by non-residents in Canadian securities; and,
- (iii) the investment income flows of interest and dividends to non-residents attributable to their ownership of claims on Canada.

An important difference between the net flow of foreign direct investment recorded in the balance of payments and the changes in the level of direct

investment recorded in the international investment position should be noted. The balance of payments records **only** net capital inflows from the controlling interest abroad, whereas changes in the book value levels of direct investment involve undistributed earnings attributable to foreign direct investors in Canada, revaluations, reclassifications and other accounting type adjustments. Also included in the international investment definition of direct investment is the investment by others from the country of control, which, in the balance of payments, is regarded as portfolio investment. Consideration is being given to resolving this latter anomaly in the definition.

Foreign-owned Subsidiaries in Canada

These occasional reports published by the Department of Industry, Trade and Commerce are based on quarterly and annual reports of operations and financing submitted by the larger foreign-owned subsidiaries under the survey requirements arising from government policy set out in *Some Guiding Principles of Good Corporate Behaviour*.⁵

The survey is voluntary and covers non-financial companies incorporated in Canada with assets of more than \$5 million and whose voting stock is more than 50 per cent held by a non-resident corporation. The reports, many of which are based on consolidated operations of a number of affiliated firms, are received from more than 300 respondents and cover about 1,000 firms. Although it is clear that results of this survey are far from comprehensive — it is estimated that they cover about one-quarter of sales of all non-financial, non-government corporations in Canada, and over one-half of all business of non-financial corporations in Canada that are more than 50 per cent foreign-owned — they do provide insights into the operations and financing of foreign-controlled subsidiaries not available elsewhere.

The principal addition to knowledge is in the break out of transactions between the subsidiary in Canada and its parent company and affiliates abroad, by eleven major industry groupings. The data provided on this basis include merchandise imports and exports, payments of interest, royalties, managerial and administrative fees and charges for research and development. Information not readily available elsewhere is also provided on the source of funds from parents and affiliates in the form of advances, receivables and sale of equity and from other foreign sources in the form of bank and other short-term loans, bonds and debentures, other long-term debt and equity sales.

The country detail is limited in the series dealing with current international transactions to those with the United States and other foreign

⁵ *Some Guiding Principles of Good Corporate Behaviour*, letter from the Honorable R.H. Winters, Minister of Trade and Commerce to Subsidiaries in Canada of Foreign Companies, Tabled in the House of Commons, March 31, 1966.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

Table 1.9: relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

year and quarter	gross national product at market prices	deduct:		add:		gross national product at market prices	gross national product at market prices	deduct:		add:		gross domestic product at factor cost
		residual error of estimate	indirect taxes less subsidies	investment income received from non-residents	investment income paid to non-residents			residual error of estimate	indirect taxes less subsidies	investment income received from non-residents	investment income paid to non-residents

¹A minus sign, except for official monetary movements, indicates an outflow of capital from Canada. ²Includes guaranteed issues. ³Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measures of current, capital and reserve movements and embodies all unidentified transactions. ⁴Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. Sources for above tables: Quarterly Estimates of the Canadian Balance of International Payments (67-001), The Canadian Balance of International Payments (67-201) Annual, and Security Transactions with Non-Residents (67-002) monthly, Statistics Canada.

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers: the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.

¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	inventory at end of month									
	shipments ¹	new orders received during month ²	unfilled orders of end of month	owned ³	held but not owned	all inventory held				ratio of inventories owned to shipments
						total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: manufacturing shipments¹ by industry based on the 1960 standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Total inventories owned by manufacturers including warehouse stocks.
Statistics Canada.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001).

Table 4: estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

annual average and month	shipments							unfilled orders at end of month							
	consumer goods		machinery and equipment	con- struction materials and components	other intermediate goods and supplies	export-based industries	supplemen- tary clas- sification: auto- motive products	consumer goods		machinery and equipment	con- struction materials and components	other inter- mediate goods and supplies	export-based industries	supplemen- tary clas- sification: auto- motive products

¹Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". Source: Footwear Statistics (33-002), Statistics Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field less field flared and waste. ⁴By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and camingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. Source: Building Permits (64-001), Statistics Canada.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Milk equivalents of cottage cheese are not included in the monthly figures but are included in the monthly averages. ²Includes case and bulk. ³As at end of period. Last month is preliminary. ⁴Includes butter and cheese imported and in (railway) transit through June 30, 1968. ⁵Exclusive of Newfoundland; includes hatching eggs. Sources: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Poultry Products (32-009), Production of Eggs (23-003), Statistics Canada.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories. Source: Retail Trade (63-005), Statistics Canada.

Note: Components may not add to totals due to rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. ²Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. ³Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges; for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. ⁴Personal cash loans of up to \$1,500, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁵Personal cash loans of over \$1,500, usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. ⁶The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. ⁸Bills due for residential/domestic use of telephones, gas and electric power. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes waadpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

Table 1: carloadings of revenue freight on Canadian railways¹ (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) ('000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products				
	unadj.	S. A.		wheat	other grain and grain products	fresh fruits and vegetables	other agri-culture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash ²	coal, sand, cement and other mine products

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973 only 6 major railways (accounting for 95% or more of the total operating revenues) are shown. ²Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.

¹Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada; Air Carrier Financial Statements (51-206) Statistics Canada.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. ¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Figures are rounded and may not add to totals shown.

¹For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1972-73. Source: The Canada Gazette.

countries, although transactions of the reporting corporations by country of control separate the United Kingdom from all other foreign countries.

Much of the material in the I.T.C. report presents balance of payments and international investment type information for this particular cross-section of foreign-controlled subsidiaries, e.g., current international transactions, capital flows and level of liabilities to residents of foreign countries. It is, of course, not reconcilable with these other series principally for reasons of coverage, but also because of the adoption, in some cases, of different definitions and groupings of transactions and industries. Because of the limited nature of the survey, the ratios presented may be of greater value for analytical purposes than the absolute dollar amounts.

The introduction to the most recent report provides the following summary of its data content and purpose.⁶

"The operational data consist primarily of revenue derived from the sale of goods and services and of expenditure on goods and services, categorized in each case between domestic and foreign transactions. These data provide a qualitative base for the examination of sales performance in both domestic and export markets and of the degree of the respondents' reliance on foreign as opposed to domestic sourcing for the procurement of goods and services. In addition, the data indicate the extent of reliance of the reporting corporations on parents and affiliates as a market and source of supply.

⁶ *Foreign-owned Subsidiaries in Canada, 1949-1969*, Department of Industry, Trade and Commerce, Information Canada, 1972, Ottawa.

Information is also provided by industry groups which permits industry by industry comparisons both in terms of nature of transactions and changes occurring over time. . . .

The financial information collected in the survey pertains mainly to sources of funds divided between internal generation within the company and those obtained externally, with the latter again divided between Canadian and foreign sources, and to earnings and their disposition. These data permit examination of shifts between foreign and domestic sources of financing, the proportions of net profit paid out as dividends, and other relationships which facilitate assessment of the role of an important segment of international companies operating in Canada."

Conclusions

As a consequence of the brevity of this article, references have been omitted to special ad hoc statistics which have appeared from time to time in various reports. Also, in an attempt to concentrate on providing an overview of statistics available, reference to detailed definitions, refinements and technical adjustments to the figures have been omitted. Despite these shortcomings, it is hoped that the reader will find the above guide useful in providing a starting point for a journey. A journey which will take him through an area touching on almost all aspects of the Canadian economy, covering both financial and production statistics, strewn with conceptual and definitional problems, partly uncharted and having an international dimension not common to the majority of statistical aggregations!

APPENDIX

To use the statistics available on foreign ownership, it is necessary to distinguish the various characteristics of the series. There are in fact five broad aspects of foreign ownership covered by the figures. (The statistics in the examples are drawn from the latest released figures at the time of writing.)

(i) The **overall value** of Canadian financial liabilities to foreigners, which can be summarized simply as the book value of foreign investment in Canada of the following types:

Canada's liabilities	1970
	billions of dollars
Direct investment	25.5
Government bonds	7.9
Other portfolio investment	7.4
Miscellaneous investment	2.7
Foreign long-term investment in Canada	43.6
Non-resident equity in Canadian assets abroad	2.8
Official Special Drawing Rights liabilities	0.1
Total long-term liabilities	46.5
Non-resident holdings of Canadian dollars	0.8
Short-term debt	2.8
Total	50.1

Source: *Quarterly Estimates of the Canadian Balance of International Payments*, Catalogue 67-001, First Quarter 1972, Statistics Canada.

(ii) The **relative importance** of foreign-owned investment measured as a proportion of the total Canadian and foreign long-term capital employed in important sectors of the Canadian economy

Ownership ratios	1969
	billions of dollars
Total long-term capital employed in Canada in non-financial industries ¹	85.0
Long-term capital investment owned by non-residents	29.9
Non-resident ownership ratio	35 %

¹ Includes funded debt, other long-term debt, capital stock and surplus less investment in securities and affiliates.

Source: *Statistics Canada Daily*, October 16, 1973, Catalogue 11-001.

(iii) The **proportion** of issued share capital owned by non-residents and the total size of industry falling within each of the groupings of degree of foreign share ownership:

Non-financial industries – 1970

Degree of foreign ownership of share capital	Total size of industry			
	Assets	Equity	Sales	Profits
	billions of dollars			
Percentages:				
0 - 4.9	62.2	23.8	54.7	2.6
5 - 24.9	20.0	9.4	11.3	1.1
.
75 - 94.9	12.5	7.3	10.2	0.8
95 - 100	32.4	14.9	29.7	1.8

Source: *Corporations and Labour Unions Returns Act, 1970, Part I – Corporations*, Catalogue 61-210, Statistics Canada.

(iv) The extent of **control** over various elements of Canadian industrial activity as determined generally by a more than 50% ownership of issued share capital:

Non-financial industries¹

	Assets		Profits		Capital employed ²	
	billions of dollars	%	billions of dollars	%	billions of dollars	%
Foreign-controlled	48.8	36	3.4	45	30.2	36
Canadian-controlled	80.0	58	3.7	50	54.8	64
Non-allocable	7.8	6	0.4	5	—	—
Total	136.6	100	7.5	100	85.0	100

¹ 1970 figures for assets and profits are from CALURA: 1969 figures for capital employed are from International Investment Position.

² The proportion of total capital employed in Canada **owned**, or the proportion **controlled**, by non-residents does not differ greatly at the total non-financial industry level. In smaller industry groupings, however, it may differ significantly: in railways, capital employed **owned** by non-residents amounts to 17%, whereas capital employed **controlled** by non-residents is equivalent to only 2% of the total.

Sources: *Statistics Canada Daily*, October 16, 1973, Catalogue 11-001. *Corporations and Labour Unions Returns Act, 1970, Part I—Corporations*, Catalogue 61-210, Statistics Canada.

(v) The **operations and financial flows** of large foreign-owned subsidiaries and their transactions with parents and affiliates, of which the following are a **selected** sample:

Item	1969
	million dollars
Total sales	24,500
Exports, total	6,300
Exports, to parents and affiliates abroad	4,500
Total merchandise purchased	14,800
Merchandise purchased abroad	5,700
Merchandise imports from parents and affiliates abroad	4,300
Funds from parents and affiliates abroad	- 38
Funds from abroad during 1969 other than parents or affiliates	118
Bank loans during 1969	- 21
Bonds and debentures	115
Outstanding level of debt to residents of all foreign countries	5,800
Due parents and affiliates	1,900
Paid in capital by parents and affiliates	2,900
Bonds and debentures	500

Other Publications of the General Time Series Staff

Publication number	Title and Description	Publication number	Title and Description
11-003F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the <i>Canadian Statistical Review</i> .	CANSIM Manuals and other Publications (Cont'd)	
	Canadian Statistical Review Supplements	*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.00 This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)
11-004	<i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers. Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Canadian Statistical Review</i> . Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).	*12-531	<i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1973 edition—Price \$1.50 Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)
11-206	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$.75 (Free to <i>Canadian Statistical Review</i> subscribers). Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).	—	<i>CANSIM: Summary Reference Index</i> (Annual, with periodic amendments) 1973 edition—Free on request. This index summarizes data available from CANSIM and provides matrix identifiers. Order by title from General Time Series Staff.
11-505	<i>Canadian Statistical Review—Historical Summary 1970</i> , E. and F. Price \$1.50 (Free to <i>Canadian Statistical Review</i> subscribers) This publication replaces the <i>Historical Summary 1963</i> (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly <i>Canadian Statistical Review</i> (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the <i>Review</i> . All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.	—	<i>CANSIM: Series Directory</i> (Annual, with periodic amendments) 1973 edition—Price \$15.00, or \$20.00 with amendment service. The <i>CANSIM Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title from General Time Series Staff.
	CANSIM Manuals and other Publications*	—————	
—	<i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i> —Free on request. Order by title from General Time Series Staff.	This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada.
