## Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available on print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

### Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variance.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

\* \* \* \* \*

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

## SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

<b>NOTE TO USERS</b>			
This section is used to announce changes in tables of the <i>Canadian Statistical Review</i> and in related CANSIM series.			
<b>Section 5, Table 3 – Other price indexes</b>			
The price indexes of residential building materials (1961=100) have been replaced by new monthly price indexes (1971=100) for inputs of labour and materials for single detached residential construction. At present, only three summary indexes are shown in Table 3; however, Prices Division also produces residential building construction input indexes by main trades and by geographic regions. These indexes are on CANSIM and published in <i>Construction Price Statistics Monthly Bulletin</i> , Catalogue 62-007.			
For more information on historical continuity with the previous index, see <i>Construction Price Statistics, Service Bulletin</i> , Catalogue 62-006, Volume 1, No. 7, February 1973.			
<b>Section 6, Table 10 – Raw hides, skins and finished leather</b>			
The series "Receipts of sheep and lamb skins" (D 2146) has been deleted with this issue. The series, however, will continue to be available in CANSIM.			
<b>Section 6, Table 18 – Radio and television receiving sets</b>			
Two series "Home set radio receivers" (D 2406) and "Auto radio receivers" (D 2408) have been deleted with this issue at the request of the source but will continue to be available from CANSIM.			
<b>Section 10, Table 6 – Consumer credit balances outstanding</b>			
The new category "trust and mortgage companies" (D 652362 and D 652363) has been added to Table 6. The series include only personal loans made by these institutions. The data for trust and mortgage companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality.			
The series, "subtotal quarterly reporters" (D 3455 and D 3453) have been deleted from Table 6 in the <i>Canadian Statistical Review</i> , but up-to-date information for this category will still be available from CANSIM.			
<b>Section 13, Table 10 – Commercial failures and liabilities</b>			
This table has been deleted with this issue at the request of the source. These series will continue to be available from CANSIM.			

## NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

### **Section 5, Table 3 – Other price indexes**

The price indexes of residential building materials (1961=100) have been replaced by new monthly price indexes (1971=100) for inputs of labour and materials for single detached residential construction. At present, only three summary indexes are shown in Table 3; however, Prices Division also produces residential building construction input indexes by main trades and by geographic regions. These indexes are on CANSIM and published in *Construction Price Statistics Monthly Bulletin*, Catalogue 62-007.

For more information on historical continuity with the previous index, see *Construction Price Statistics, Service Bulletin*, Catalogue 62-006, Volume 1, No. 7, February 1973.

### **Section 6, Table 10 – Raw hides, skins and finished leather**

The series "Receipts of sheep and lamb skins" (D 2146) has been deleted with this issue. The series, however, will continue to be available in CANSIM.

### **Section 6, Table 18 – Radio and television receiving sets**

Two series "Home set radio receivers" (D 2406) and "Auto radio receivers" (D 2408) have been deleted with this issue at the request of the source but will continue to be available from CANSIM.

### **Section 10, Table 6 – Consumer credit balances outstanding**

The new category "trust and mortgage companies" (D 652362 and D 652363) has been added to Table 6. The series include only personal loans made by these institutions. The data for trust and mortgage companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality.

The series, "subtotal quarterly reporters" (D 3455 and D 3453) have been deleted from Table 6 in the *Canadian Statistical Review*, but up-to-date information for this category will still be available from CANSIM.

### **Section 13, Table 10 – Commercial failures and liabilities**

This table has been deleted with this issue at the request of the source. These series will continue to be available from CANSIM.

## PERSPECTIVE CANADA

H. J. Adler\*

Statistics Canada has just published *Perspective Canada*, a compendium of some of the major social statistical time series available in Canada. These series are not social indicators as such because there is as yet no consensus on how to define social indicators. It may very well turn out that, at least for the time being, social indicators are simply those statistics which, by constant use in analysis and reference, are perceived as barometers of social change.

As the 1960's drew to a close, commitment to the single-minded pursuit of economic growth began to lessen in western societies. Policy makers and social scientists, as well as the media, commented increasingly on the "quality of life". The gist of this commentary was that there are several dimensions of individual and social well-being that need more attention by decision makers and statisticians. As we move through the 1970's, the demands are growing for a broad conception of the non-economic aspects of our life. Statistics Canada is moving on several fronts to make its statistical system increasingly responsive to these new demands. One facet of this activity resulted in *Perspective Canada*.

Acknowledging that this publication is partly a response to growing public concern about the quality of life in Canada, it is appropriate to inquire as to its "message". This question is raised to make clear that statistics cannot, in principle, provide direct answers. In the first instance, a direct answer should be based on an assessment of the network of criteria for quality-of-life measurements that would be valid for most Canadians. In addition, one would need to know the relative importance of these criteria. Canada has yet to have a representative national inventory on this matter. Until one is conducted and shown to be reasonably accurate, it is best to leave Canadians to judge for themselves. *Perspective Canada* is issued in the belief that whatever an individual's criteria for assessing the quality of life, and however that quality is judged, it will be concerned with some questions for which the information in this compendium is relevant.

It is a statistical portrait of the Canadian people, their activities, and their environments. Like all portraits, it reflects selectivity by the artist in the choice of themes and in the views from which various features are to be shown. Also, as the artist is limited to the tools available, so this portrait must be limited by the statistics currently at our disposal.

The presentation of a portrait often implies that there is some sense in which the artist sees the object of the portrait as a whole — something more than a mere collection of parts. The artist sees some interrelations among the parts, an organization or structure composed of the parts, which are integral to his image of the

whole. Canadian society is the whole about which this portrait is concerned. In spite of the diversity of its peoples and its geography, Canada is organized by a common political system, a substantial degree of integration of regional economies, a fairly uniform system of laws, and even large elements of commonality in cultural heritage. The integrative forces of national institutions, transport networks, and markets are the clearly visible aspects, even though they are accompanied by major cultural variations associated with the diverse origins of the Canadian peoples. Furthermore, although the related political tensions may seem at various times to prove a strain to Canada as a whole, they have also spurred constant creativity in the political institutions that seek to strengthen the bonds among Canadian regions and take account of minority interests.

The information in *Perspective Canada* should help the reader to make his own assessments of how Canada has been managing to deal with important social problems. To facilitate this appraisal, the following themes in relation to Canadian social concerns have been emphasized: population and family, health, schooling, the use of time, work, income, consumption, quality of the environment, housing, bilingualism, the native peoples, cultural diversity, and criminal justice.

The original aim of the authors was to concentrate the data on the "results" of the various social processes in question. In most cases, this turned out to be impossible, not only because much of the material does not lend itself to this treatment, but mainly because there is a general paucity of operational concepts to measure "results". Many of the statistics, particularly those referring to health, education and justice, deal with inputs, costs, or means.

In numerous instances, of course, many more detailed data exist than were used. The authors have tried to illustrate the concerns with broad and summary information.

For the reader who wishes to pursue particular subjects in greater depth, and to the extent existing data permit, the statistical sources for each chapter have been listed and there are also short reading lists of mainly Canadian material. It should be stressed that the reading lists do not aim for rigorous academic completeness, but merely list writings that the reader can use as a first step toward increasing his knowledge of each subject.

The areas of concern which have been selected for inclusion are those that focus on the individual, are social rather than economic in content, and can be at least minimally quantified. Excluded, therefore, are such problems as national identity, constitutional issues, alienation, inflation, or foreign control of industry. The truly fundamental problems of personal being, such as the spiritual life, love, and friendship, are obviously outside the domain of numerical calculation.

\* Mr. Adler is the Senior Advisor on Integration for Statistics Canada.

In life, concerns cannot be compartmentalized. They are interconnected and interrelated. Thus a healthy individual, other things being equal, will gain more from the educational process than a sick person. Members of one disadvantaged group such as low-income recipients frequently also find themselves among the less fortunate from the point of view of housing, justice, and the environment. Access to the benefits of publicly-supported museums and theatres is obviously circumscribed by geographical limits. In emphasizing the distributional aspects, by region, income, education or other variables, the report shows some of the interrelationships of the various concerns. These instances, however, are illustrative only, for it is impossible to deal with them exhaustively.

### Highlights

The chapters on population growth and family formation provide the essential framework of information within which the broad social concerns are described.

Without health, work cannot be carried out effectively or meaningfully, leisure time cannot be enjoyed, education is difficult to acquire and, for some disabilities, even the highest level of income is insufficient recompense. Thus, if there is one fundamental concern, it is health — mental and physical. Statistically, however, health is measured mainly by its absence, and the data therefore deal with the prevalence of illness, the availability and accessibility of protective services, the external factors influencing health, and some of the costs of maintaining it.

Education, almost to the same degree as health, is a prerequisite for modern life. Personal enjoyment and fulfillment are generally assumed to be improved by education. The labour market demands a skilled work force and democracy presupposes a literate electorate. The acquisition and provision of education for personal development and economic, political and cultural participation are thus both personal and societal concerns.

The allocation of time between rest and work, effort and relaxation, is an ancient concern — one which has found formal expression in both temporal and spiritual injunctions. Industrialization and specialization both of the work and recreational aspects of man's time have only heightened this concern. Associations, governments, businesses and religious institutions all endeavour to influence, allocate and legislate our use of time. The data pertaining to leisure and rest are not too plentiful, but that portion of time spent in paid work can be amply illustrated by statistics. The concern with work is, of course, broader than merely how long we perform it. The worthwhileness of work, both from a monetary and social point of view, touches most of us deeply. Although, as usual, economic data pertaining to hours of work, pay, availability of employment and characteristics of the labour force predominate, statistics on the social aspects in terms of labour relations are not

entirely lacking. Quantification of work satisfaction, on the other hand, is scarce because a good deal of both conceptual and statistical work remains to be done.

For many people, a satisfactory income, and its concomitant command over goods and services, is probably next to health in order of importance. Changes in levels of income, however, are often dependent on health, the education attainments and skills of the working population, and the opportunities for gainful employment. Therefore, it is only after having dealt with these other aspects of the human condition that we focus on the level of income, its distribution between income classes of the population, its regional disparities, its basic sources as well as its final disposition on consumer goods and services, taxes and savings.

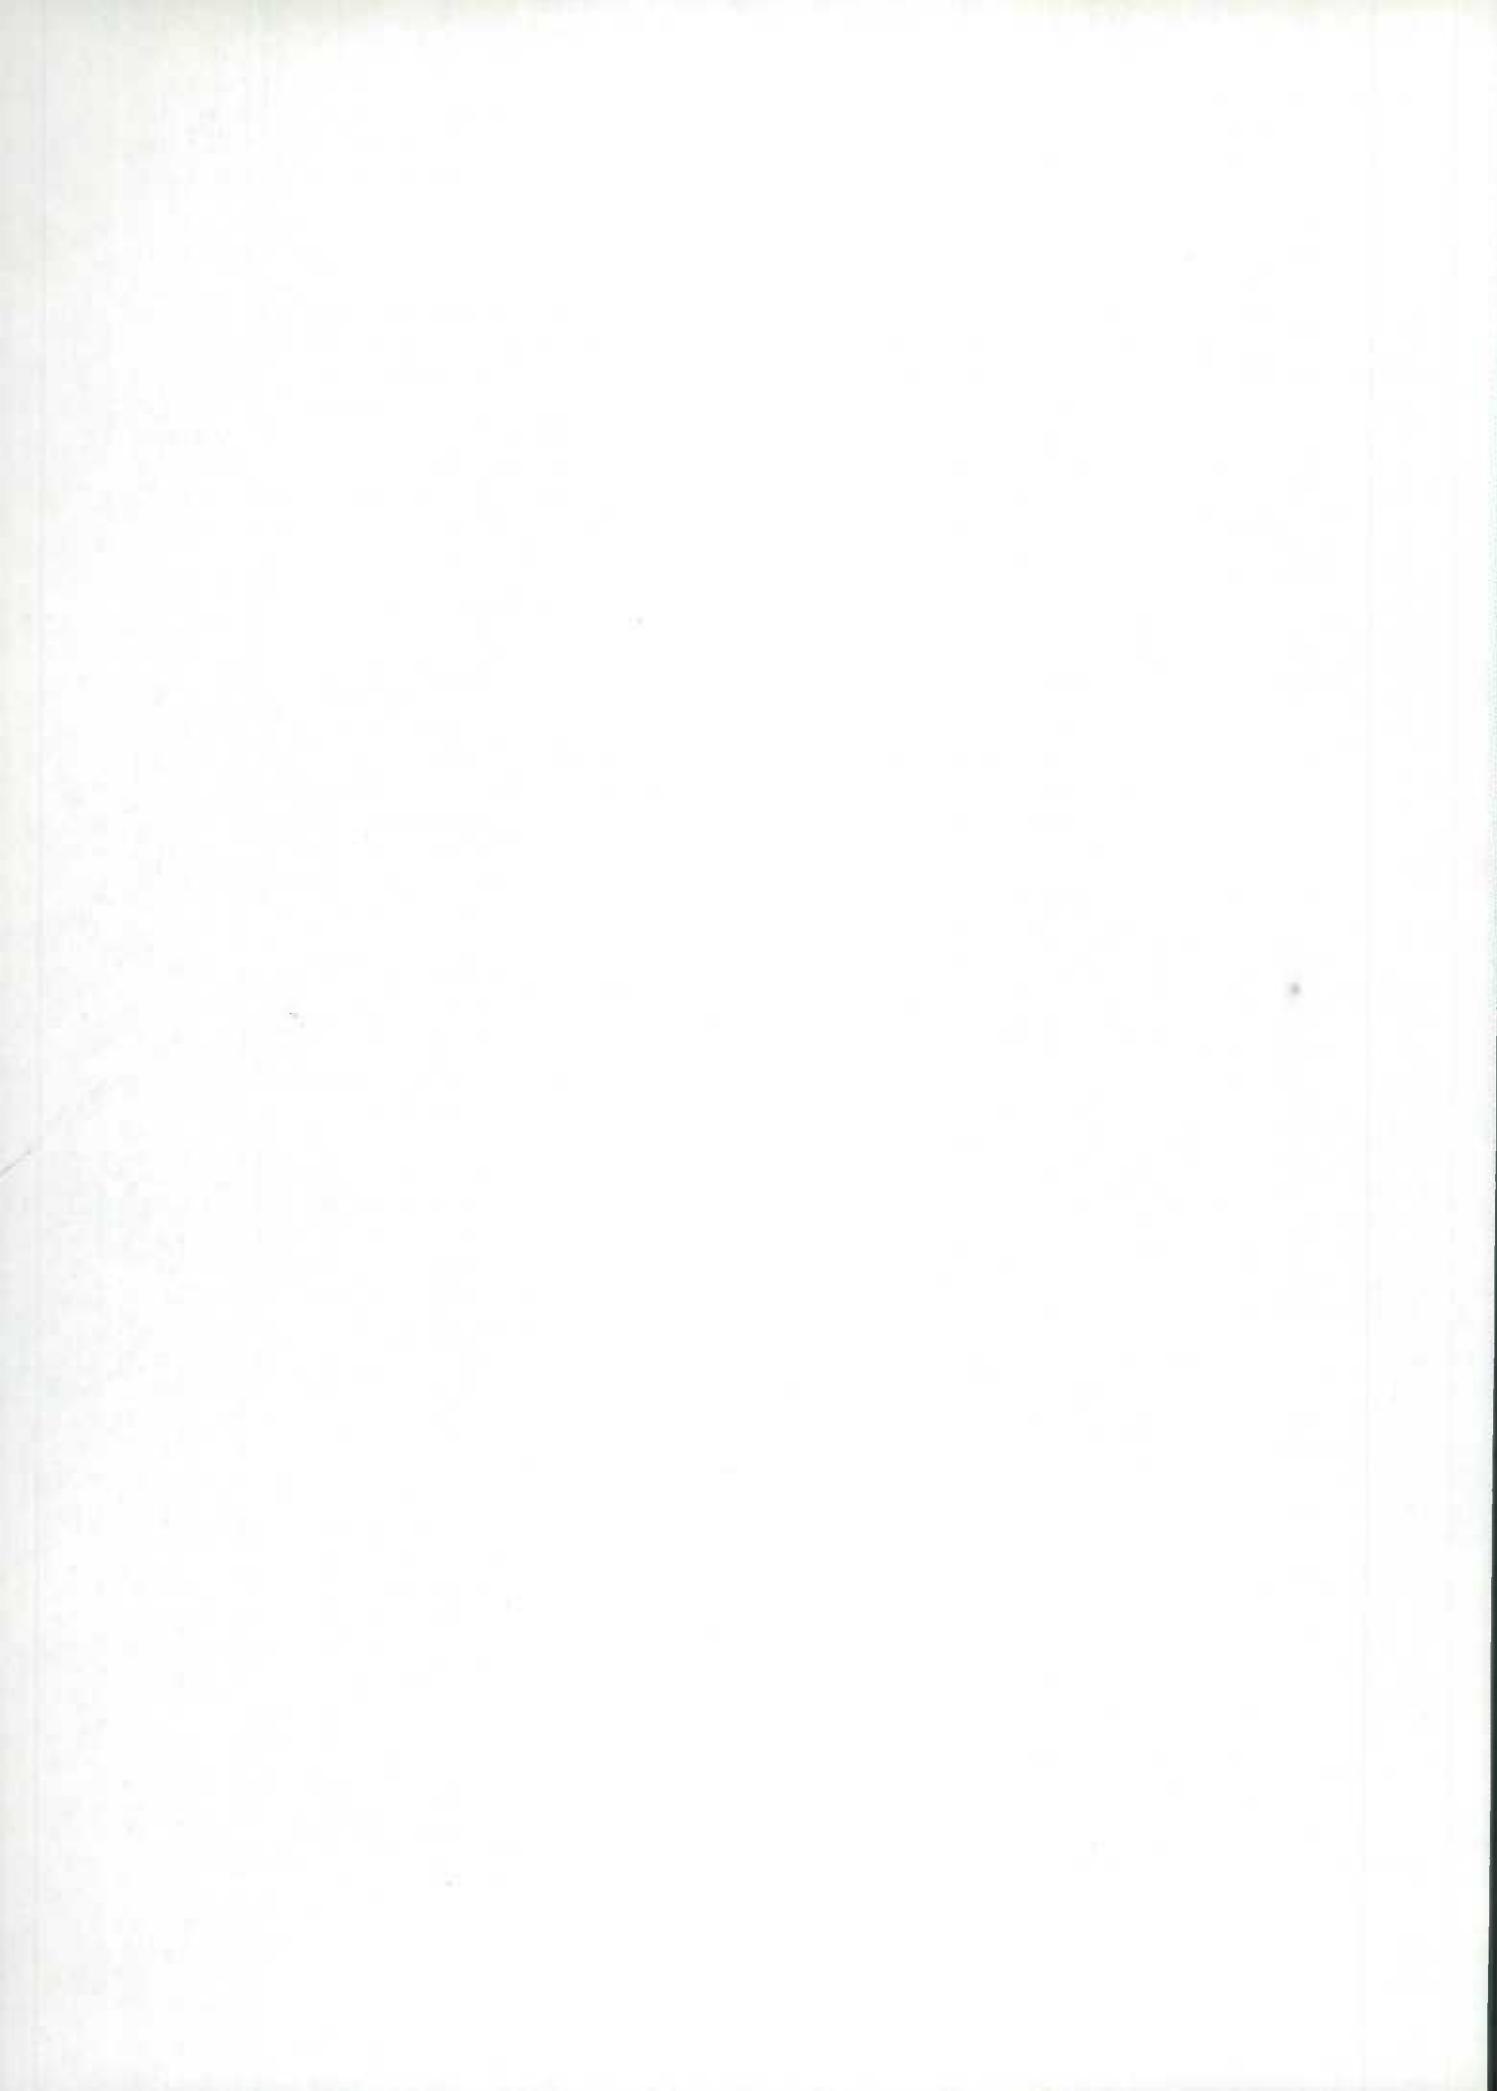

Although the problems in health, education and the allocation of time have always, within certain limits, been subject to human influences and manipulations, the external environment was for a long time considered as both a given datum and limitless in its extent. We now know, however, that it is neither. It is very much subject to human violation — and hence to human control. The degrees of violation and control are still largely subjects of research. While many natural phenomena are quantifiable and have indeed been measured, much work remains to be done in this area.

The problem of the adequacy, availability and equitable distribution of shelter has been of long-run human concern, but preoccupation of governments with housing, particularly with aid to individuals for its acquisition, and with official encouragement for home ownership, are of more recent origin.

In addition to the physical external environment that influences the lifestyle of individuals, there are also social environmental factors that are part of the existing surroundings and which impinge on our daily lives. The question of language rights and their exercise as well as some other specific Canadian concerns are, we believe, currently pertinent Canadian issues. Thus chapters deal with bilingualism, native peoples and multiculturalism. The presence or absence of personal safety and free enjoyment of life and property are the concern of the chapter on criminal justice.

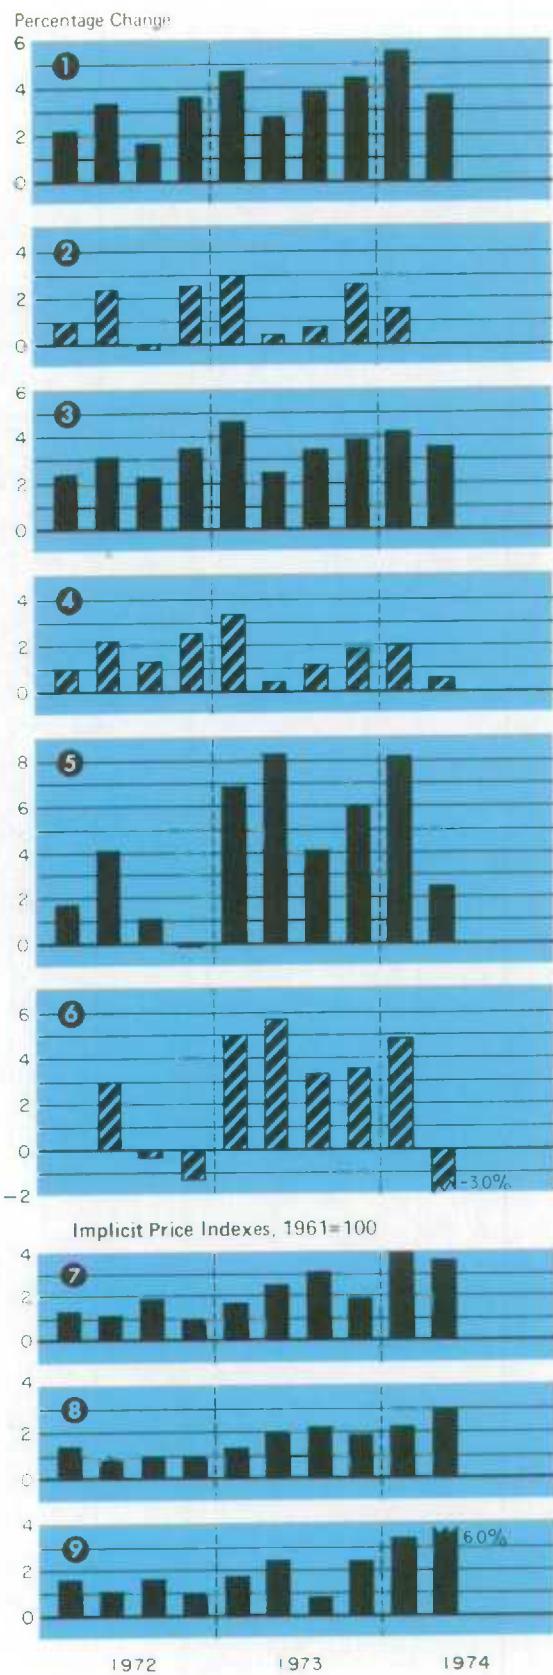

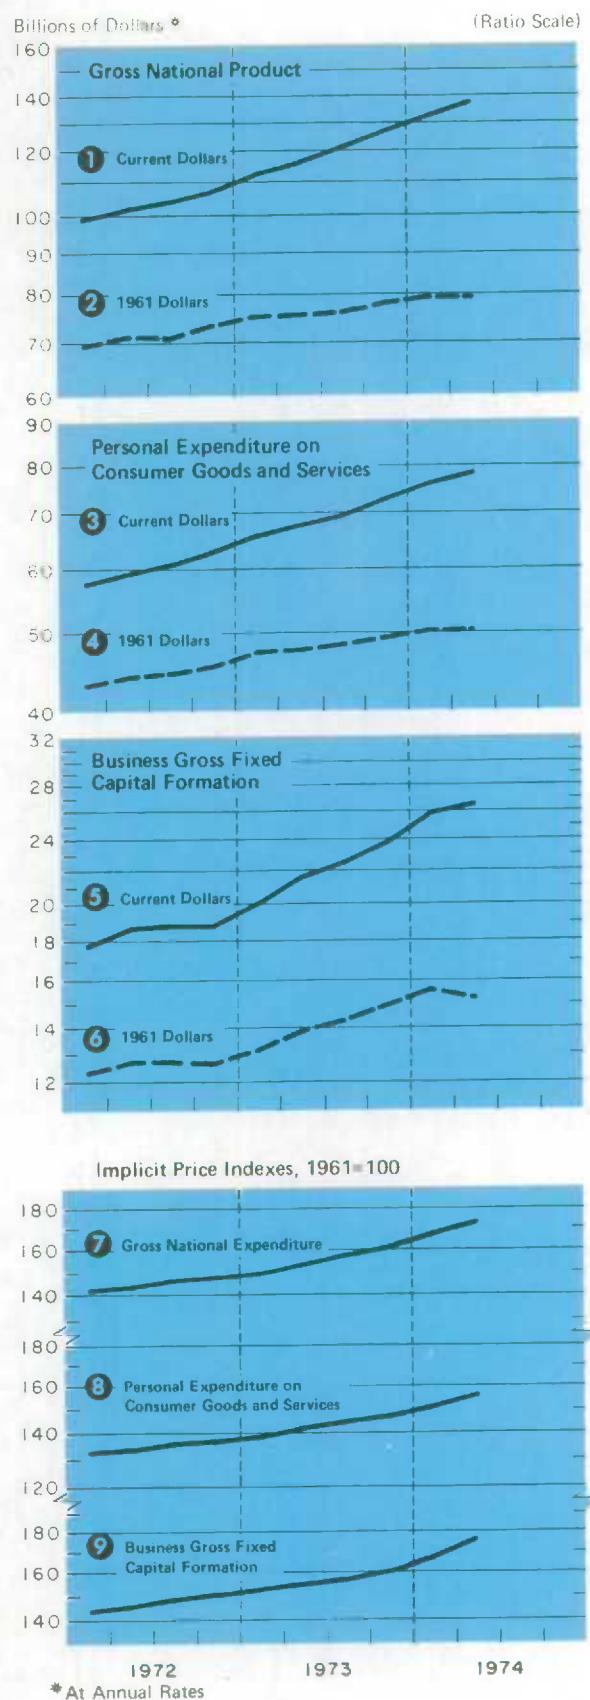

*Perspective Canada was prepared in the Office of the Senior Advisor on Integration with assistance from other groups in Statistics Canada, and other federal government departments. Readers may direct comments and questions on the report to H. J. Adler, Senior Advisor on Integration, Statistics Canada, R. H. Coats Tower, Tunney's Pasture, Ottawa, Ontario (613-992-4571).*

*Copies of Perspective Canada (Catalogue 11-507, Price \$6.75) may be ordered from Publications Distributions, Statistics Canada, Ottawa, K1A 0T6, or from Information Canada, Ottawa.*

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

<sup>1</sup>Excludes profits (net of losses) of government business enterprises. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). <sup>5</sup>See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>This item differs from column 6, table 1.1 by excluding the adjustment which has been made to take account of the accrued earnings arising out of the operations of the Canadian Wheat Board and the Canadian Co-Operative Wheat Producers.

<sup>2</sup>Includes all interest on the public debt paid by government to persons.

<sup>3</sup>Charitable contributions and bad debts.

For source see table 1.9.

<sup>1</sup>Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. <sup>3</sup>Withholding taxes.

<sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

<sup>1</sup>These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

<sup>1</sup>The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). <sup>2</sup>The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

See footnotes, Table 3.

\*In addition to the selected Labour Force information published here, there are approximately 2,100 Labour Force series available on CANSIM. The series provide basic labour force characteristics, by geographic area, age, sex and marital status.

Table 4: selected series by sex and main age group (thousands of persons)

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers: the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, they also will be shown in the total. <sup>3</sup>Includes miscellaneous manufacturing industries. <sup>4</sup>Includes also publishing and allied industries. <sup>5</sup>Includes also the storage and communication industries.

<sup>1</sup>The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. <sup>3</sup>Includes storage, electric power, gas and water utilities. <sup>4</sup>Excludes domestic service.

<sup>1</sup>See footnote 1 and source in Table 9.

<sup>2</sup>Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 8.

<sup>3</sup>In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

<sup>4</sup>Except machinery and transportation equipment industries.

<sup>1</sup>Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. <sup>2</sup>The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. <sup>3</sup>Includes constant weighted food component. <sup>4</sup>These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. <sup>5</sup>Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments <sup>1</sup>	new orders received during month <sup>2</sup>	unfilled orders at end of month	owned <sup>3</sup>	held but not owned	inventory at end of month				ratio of inventories owned to shipments	
						all inventory held					
						total	raw materials	goods in process	finished products

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these monthly estimate of work put in place has been substituted. <sup>2</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>3</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: manufacturing inventories<sup>1</sup> by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total inventories owned	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification based on the 1970 standard industrial classification (million dollars)

annual average and month	inventories owned												inventories held: raw materials					supplementary classification: automotive products	
	consumer goods		construction materials and components		other intermediate goods and supplies		supplementary classification: automotive non-products		consumer goods		machinery and equipment		construction materials and components		other intermediate goods and supplies		export-based industries		
	non-durable	durable	machinery and equipment	and components	goods and supplies	based industries	automotive non-products	durable	durable	machinery and equipment	and components	goods and supplies	and components	supplies	based industries	auto-motive products

<sup>1</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. <sup>2</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>3</sup>Customs exports.

<sup>4</sup>Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

October, 1974

<sup>1</sup>Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. <sup>4</sup>Excluding shipments for re-processing at maker's own plant.

<sup>1</sup>Production plus imports less re-exports, minus exports.<sup>2</sup>Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past.

<sup>1</sup>Gas types are included. <sup>2</sup>Includes producers' shipments for export. <sup>3</sup>In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. <sup>4</sup>End of period. <sup>5</sup>Electric and other. <sup>6</sup>Excludes apartment type machines.

<sup>7</sup>Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field less field flared and waste. <sup>4</sup>By gas utilities, does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

<sup>1</sup>Barrels of 35 Canadian gallons. <sup>2</sup>Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. <sup>3</sup>Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. <sup>4</sup>Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. <sup>5</sup>Includes inventories at end of period being held at gas plants and in storage caverns. <sup>6</sup>Includes stove oil, kerosene. <sup>7</sup>Includes aviation gasoline and aviation turbo fuel. <sup>8</sup>Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. <sup>9</sup>Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. <sup>1</sup>The data are collected for 1,400 municipalities and individual figures are available on request. <sup>2</sup>Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. Sources: Building Permits (64-001), Statistics Canada.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Sources: Building Permits (64-001), Statistics Canada.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: New Residential Construction (64-002), Statistics Canada.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers paper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009). Statistics Canada.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. <sup>2</sup>1972 and 1973 price indexes are subject to revision. <sup>3</sup>1973 price indexes are subject to revision. <sup>4</sup>Farm share only of motor vehicles. <sup>5</sup>In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. <sup>6</sup>In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

<sup>1</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.  
<sup>2</sup>Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months.  
<sup>3</sup>Includes baking and frying oils and fats.  
<sup>4</sup>Includes stocks held by manufacturers and other warehouses.  
<sup>5</sup>Includes fresh sausage, frankfurters, weiners and all other sausage.  
<sup>6</sup>Includes solid, coated, bulk, packages and novelties.  
<sup>7</sup>The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

<sup>1</sup>Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years.

<sup>2</sup>Includes Yukon and North West Territories.

Source: Retail Trade (63-005), Statistics Canada.

Note: Components may not add to totals because of rounding.

<sup>1</sup>Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. <sup>2</sup>Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. <sup>3</sup>Personal cash loans of up to \$1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. <sup>4</sup>Personal cash loans over \$1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. <sup>5</sup>Includes bank-sponsored credit card balances. <sup>6</sup>The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. <sup>7</sup>Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. <sup>8</sup>Bills due for non-commercial use of telephones, gas and electric power. <sup>9</sup>Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality; this series is repeated in the unadjusted form. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Department of Insurance.

<sup>1</sup>Column numbers refer to tables 3 and 4 section 11. <sup>2</sup>Includes special transaction-trade, not shown separately. <sup>3</sup>The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. <sup>4</sup>Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

<sup>1</sup>Column numbers refer to tables 3 and 4, section 11. <sup>2</sup>The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. <sup>3</sup>Includes special transaction-trade, not shown separately. <sup>4</sup>Includes scrap. Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

Table 1: carloadings of revenue freight on Canadian railways<sup>1</sup> (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) ('000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products			
	unadj.	S.A.		wheat	other grain and grain products	fresh fruits and vege- tables	other agri- culture products	animals and their products	prepared food products	iron ore and concen- trates	other metal ores and concen- trates	potash	coal, sand, cement and other mine products

<sup>1</sup>Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. <sup>2</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>3</sup>Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.

<sup>1</sup>The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. <sup>2</sup>The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. <sup>3</sup>Combines the industrials, utilities and finance common stocks. <sup>4</sup>Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. <sup>5</sup>Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. <sup>6</sup>Stocks included in the mining index are for producing mines.

## OBSERVATIONS

### Micro-Data Release Under the Revised Statistics Act

With the passage of the revised Statistics Act in 1971, Statistics Canada was able, for the first time, to contemplate the possibility of making micro-data available to users, provided that the data cannot be associated with a particular respondent. Micro-data, in this context, is defined as a set of social or economic characteristics derived from a particular survey unit, for example, individual, household, etc. Such data has come to be regarded as increasingly important in recent years for uses such as micro-simulation which relies on preserving associations between an extensive group of characteristics.

The bureau has ascertained that micro-data can be released to users without violating confidentiality provided the following requirements are met.<sup>1</sup>

The first, and most obvious, requirement is the complete suppression of all explicitly identifying information such as name, address, etc.

A second requirement is that the data must relate to only a small sample of a much larger population and, generally, one for which no complete frame exists, at least outside the bureau.

A third requirement is that the characteristics presented, in micro-data form, for any survey unit must be limited in range. More precisely, the extent to which characteristics tend to identify survey units is a function not only of the precision with which characteristics are measured but also of the extent to which characteristics relate to broadly different aspects of the economic or social status of the survey unit.

Finally, unusual characteristics, or combinations of characteristics which are unusual, must be masked either by suppression or by grouping to broader classes.

It has proved possible to meet these requirements for certain data derived from surveys and censuses of individuals and households without a substantial distortion of such data.

For data relating to individuals and households, the most radical suppression has been the dropping of detailed area codes. Beyond this, some severe regrouping

<sup>1</sup> These requirements for providing micro-data differ somewhat from those used by U.S. agencies, including the Bureau of the Census. A study dealing with legal and policy aspects of informational privacy and access to micro-data sponsored by the Ford Foundation is now being carried out by Messrs. Hanis and Flaherty of the University of Western Ontario. The study will include a comparison of the practices with respect to micro-data release for a number of developed countries including Canada. Statistics Canada may wish to review its longer term policy in respect of micro-data preparation and release when the results of this study are available.

of particular characteristics has been necessary, notably those characteristics initially coded to a detailed level, such as industry of employment and occupation.

The most useful sources of micro-data relating to individuals, households and families are the monthly Labour Force Survey, the biennial full-scale Survey of Consumer Finance and the 1971 Census of Population micro-data from each of these sources are planned for release in the near future.

### Labour Force Survey

At the Conference on the Labour Force Survey held in October 1973, a paper was distributed which dealt with the bureau's intentions regarding the release of micro-data derived from the Labour Force Survey including the enumerated special questions. It was indicated at that time that Statistics Canada would begin to provide micro-data from this source to users on a regular basis in the Spring of 1974. Unfortunately, a number of unanticipated delays have been encountered but data from this source will be available shortly. Enquiries about the specific months for which data are available, the contents of data sets and costs should be addressed to:

Mr. B. Petrie,  
Labour Force Survey Division,  
Statistics Canada,  
Tunneys Pasture,  
Ottawa, Ontario.  
K1A 0T6

### Consumer Finance

Data from the 1972 Survey of Consumer Finance are now available. Because of the complexity of these data, the Consumer Income and Expenditure Division, responsible for providing user support, may have to limit distribution of these data, at least in the short term. Enquiries should be directed to:

Miss A. Stead,  
Consumer Income and Expenditure Division,  
Statistics Canada,  
Tunney's Pasture,  
Ottawa, Ontario.  
K1A 0T6

### Census

The bureau plans to produce a number of micro-data sets from the 1971 Census of Population based on a sample of approximately one per cent of returns. It is anticipated that three such samples will be prepared relating to individuals, households and families respectively. If an evaluation proves that useful data can be provided without any danger of a breach of confidentiality, micro-data from the 1971 Census may be made available during the period late 1974 to early 1976. The sample pertaining to individuals would be the

first to be released. Further information on developments of Census micro-data will appear in later editions of the *Canadian Statistical Review*.

Would-be users are advised that, in all cases, terms of sale will be by contract with individual users and will limit both secondary distribution of data and access to support services. Further constraints will apply in respect of attribution and publication. Costs will be related to complexity and size of market and will vary from approximately \$100 to more than \$1,000.

#### Co-ordinating Centre for Statistics on Computer/Communications

Dr. Sylvia Ostry, Chief Statistician of Canada, announced on July 9, 1974 the creation of a Statistical Co-ordinating Centre within Statistics Canada for statistics on computer/communications. At the same time, she appointed Mr. F.W. Emmerson, Co-ordinator, Financial Statistics, to assume responsibility for the Centre. He will be assisted by Miss Stella Gianetto of his staff.

The objective of the Centre is to improve the availability and use of data on computer/communications. (Computer/communications is a term used to describe the areas in which computers are used in combination with communication networks.) To achieve this objective, the Statistical Co-ordinating Centre proposes to:

- Assemble information on computer/communications now collected by Statistics Canada and by others.
- Serve as a central point from which potential users of information on computer/communications can receive assistance and advice on the information available.
- Work with the Secretariat of the Federal Interdepartmental Committee on Computer/Communications on the determination of user needs, on the priorities to be attached to them, and on how best to satisfy them.
- Work with other federal government departments, with provincial governments and with business, to draw on their knowledge in this field and to keep them informed of developments.

No new surveys are planned by Statistics Canada in the field of computer/communications, but it is expected that more effective use will be made of the information gathered in existing surveys.

Considerable effort will be put into the development of lists and classifications. This will make it possible to bring together information from various sources and put it together in a consistent fashion.

*More information on this topic can be obtained from Mr. F.W. Emmerson and Miss Stella Gianetto, Station A, 25th Floor, R.H. Coats Bldg., Statistics Canada, Ottawa, Ontario, K1A 0T6 (Telephone: 613-992-5984).*

#### Monthly Radio Time Sales Survey

Radio time sales statistics are now available for the first three months of 1974. The Communications Section of Statistics Canada started a monthly survey of all commercial radio time sales (including those of the CBC) in January 1974, and the first results were published in *Communications* (Catalogue 56-001) Vol. 4, No. 14, August 1974.

Gross and net sales for A.M. and F.M. radio stations are presented in the bulletin. The statistics are also classified into national and local sales.

*Information on this new survey is available from Patrick Crosby, Communications Section, Transportation and Communications Division, Statistics Canada, Ottawa, K1A 0V5 (Telephone 613-996-9274).*

#### Multinational Corporations

In May 1974, a report entitled *The Impact of Multinational Corporations on the Development Process and on International Relations* was released by the United Nations Economic and Social Council. The report was prepared by a "Group of Eminent Persons" appointed by the United Nations Secretary-General. Its contents rest to a considerable degree on hearings of testimony from leading personalities of diverse interests, and on various background papers prepared under the auspices of the United Nations.

The report, which is in three parts, deals first with a general survey of the issues at stake, including the general role and characteristics of Multinational Corporations; secondly, with specific issues and potential problems related to the activities of MNCs; and thirdly, with the supplementary views of individual members of the Group. The first two parts of the report contain many far-reaching recommendations addressed both to home and host countries regarding the treatment of MNCs and the relationship of MNCs and governments.

Of special interest from a statistical and informational viewpoint are the suggestions in the report that, (i) an information and research centre on MNCs should be established for the gathering, analysis and dissemination of information to all interested parties, and (ii) an expert group be convened on international accounting standards to identify information needs, determine how and in what form information should be collected and decide how best it could be used.

A separate chapter on "Information Disclosure and Evaluation", in addition to the above suggestions, recommends the disclosure of principal terms of agreements between governments and MNCs to the proposed information and research centre, and suggests that,

through the machinery for formulating and implementing government policies toward MNCs, procedures be devised for collection of information about their performance.

The report and its recommendations are presently being analysed and considered by UN member countries.

**The Impact of Multinational Corporations on the Development Process and on International Relations, United Nations, New York, 1974. Catalogue 74.II.A.5. Price: \$10. Canadian purchasers may order this report from Information Canada, Ottawa. It is available to other subscribers from their authorized United Nations bookstores.**

#### New Construction Prices Reports

The publication *Construction Price Statistics Service Bulletin* (Catalogue 62-006) is being discontinued this month. It is being replaced by two new publications, (*Construction Price Statistics Monthly Bulletin* (Catalogue 62-007) the first issue of which will be published at the end of October, and *Construction Price Statistics*

*Quarterly Report* (Catalogue 62-008) to be first issued at the end of November.

Both publications will contain the statistics that have up to now been released in the service bulletin, and both will be sent to subscribers for the balance of their subscription to publication, Catalogue 62-006.

The new publications will assist in the use of construction price statistics. Timely release is provided in the monthly publication wherein all construction price statistics are released in summary form. No detail is provided in this publication except for the monthly input indexes of building construction. Full detail can be obtained from the quarterly publication.

Feature articles will be released from time to time, the same article appearing in both the monthly and quarterly publications.

More information about these publications may be obtained from L.J. Seary, Capital Expenditures Prices Section, Prices Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (Telephone 613-996-2565).

Publication number	Title and Description	Publication number	Title and Description
11-003F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the <i>Canadian Statistical Review</i> .		<b>CANSIM Manuals and other Publications (Cont'd)</b>
11-004	<b>Canadian Statistical Review Supplements</b>	*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.40
	Weekly Supplement to the Canadian Statistical Review—Free to Canadian Statistical Review subscribers.		This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)
	Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Canadian Statistical Review</i> . Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).	*12-531	<i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1973 edition—Price \$2.10
11-206	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1.40 (Free to Canadian Statistical Review subscribers.)		Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)
	Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).	—	<b>CANSIM: Summary Reference Index</b> (Annual, with periodic amendments) 1973 edition—Free on request.
11-505	<i>Canadian Statistical Review—Historical Summary 1970</i> , E. and F. Price \$1.50 (Free to Canadian Statistical Review subscribers)		This index summarizes data available from CANSIM and provides matrix identifiers. Order by title from General Time Series Staff.
	This publication replaces the <i>Historical Summary</i> 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly <i>Canadian Statistical Review</i> (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the <i>Review</i> . All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.	—	<b>CANSIM: Series Directory</b> (Annual, with periodic amendments) 1973 edition—Price \$15.00, or \$20.00 with amendment service.
			The CANSIM Series Directory contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title from General Time Series Staff.
	<b>CANSIM Manuals and other Publications*</b>		
—	<i>CANSIM: An Introduction to the Canadian Socio-economic Information Management System</i> —Free on request. Order by title from General Time Series Staff.		
—	<i>CANSIM: Progress Report</i> —Free on request. Order by title from General Time Series Staff.
