CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada n° 11-003F au catalogue.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. Annual figures are also available from CANSIM, more information can be found in the *CANSIM Summary Reference Index* and the *CANSIM Series Directory*. Both the documents are available directly from CANSIM staff.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

.. figures not available.

... figures not appropriate or not applicable.

-- amount too small to be expressed.

— nil or zero.

† advance estimates.

c correction

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

MCD months for cyclical dominance (see above).

Statistics Canada should be credited when republishing all or any part of this document.

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 3, Table 3.1 – Financial Flows

The most recent quarter of data will no longer appear on page 36 and 37 each month. Instead it will be reported at the end of the publication.

Section 5, Table 4 – Consumer Price Index

With this issue these indexes have been time-rebased from 1961 = 100 and 1969 = 100 to 1971 = 100. Further information can be obtained from Prices Division, Statistics Canada.

Annual Supplement to the Canadian Statistical Review – 1974

The Annual Supplement for 1974 is now available. It contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

This document (Catalogue 11-206) may be ordered from Publications Distribution, Statistics Canada. Free to *Canadian Statistical Review* subscribers.

CONVERSION OF THE CANADIAN GRAIN INDUSTRY TO THE METRIC SYSTEM

E.E. Baxter*

Background

The Canadian grain industry will convert to the metric system on February 1, 1977. The conversion operation is being planned and co-ordinated by a special committee of the Canada Grains Council. The committee's area of interest extends from the initial producer delivery – including permit books and grain delivery quotas where they apply – through the main handling system to either export or domestic consumption. In the domestic system, the Canada Grains Council and the conversion committee will be dealing with the conversion of the grain input for flour mills, maltsters, feed manufacturers and oil crushers. Although some of these users will have other conversion programs, the February 1977 date will be a major influence. The Council and its committee answer to the National Metric Commission in a broad sense but because of the early date, the plans and procedures are largely of Council design.

The areas of greatest concern to agricultural statisticians are:

- the conversion of historical statistics
- the transition period of dual statistics (imperial and metric)
- statistical reporting procedures and forms.

Current Situation

There are several committees and organizations involved in the preparation for conversion. Some of

these and their activities in the areas of statistics and forms are listed here.

Committees

(a) Canada Grains Council Metric Conversion Committee

This committee is responsible for overall co-ordination.

(b) Special Interest Group of the Grain Industry

This group is undertaking research and planning to convert records, documents and information systems within the industry to metric units. Emphasis is on converting the accounting and EDP systems.

(c) Canadian Grain Commission Internal Metric Committee

The CGC Committee is analyzing changes required to reporting forms when metric changeover occurs. (More important to the overall conversion process, the Grain Commission will be supervising the conversion of scales.)

(d) Canadian Wheat Board Internal Metric Committee

This group is also investigating the internal changes which will be necessary for the Canadian Wheat Board.

Other Organizations

(a) Canadian Grain Commission, Economics and Statistics Division

The Division has published several statistical reports and documents, produced by computer, with both pounds, or bushels, and metric tonnes on them

* Mr. E.E. Baxter, Executive Director of the Canadian Grain Commission, is now also serving as Chairman of the Canada Grains Council Metric Conversion Committee. This article is taken from a speech made by Mr. Baxter to the Federal-Provincial Committee on Agricultural Statistics, Ottawa, March 11, 1975.

(*Daily Traffic Reports* – Thunder Bay and Vancouver, and Canadian Grain Commission certificates). In addition, the last three issues of the annual publications, *Exports of Canadian Grain* and *Visible Grain Supplies and Disposition*, (as well as all the annual statements) have been converted to metric units in separate metric editions. Exports statistics have been converted to the metric system as far back as the 1946 - 47 crop year.

(b) Canadian Wheat Board Market Co-ordination

The statistical appendices to the CWB annual reports have been converted to metric units back to 1949 - 50.

(c) Statistics Canada

The bureau is now in the process of updating its handbook on Field Crops¹ and converting to metric units. It will be a dual publication, one column in imperial units, the next in metric units.

(d) Provincial Agricultural Statistical Offices

Several have published their most recent yearbooks with some tables in both imperial and metric units. The most comprehensive such yearbook was from the Manitoba Department of Agriculture in which all tables in imperial units were also printed in metric units.

In general, the committees involved in metric conversion do not overlap in their activities because of the co-ordination of the Grains Council and because of the fact that several committee members sit on more than one committee.

However, in the area of conversion of statistics and forms, so far there has been little co-ordination and there has been some duplication of effort as the summary of the progress to date has probably indicated.

One illustration is in the conversion of historical statistics. Most of the organizations mentioned have converted several historical statistics (many of them the same ones) to metric units, but no standard procedures or conversion rates have been adopted. For example, the Economics and Statistics Division of the Canadian Grain Commission converted several publications using conversion rates of 5 digits. However, when converting figures of hundreds of millions of bushels, inaccuracies arose (the errors were less than 1/1000 of 1 per cent) so they are now using an 8-digit conversion rate (confirmed by the Metric Commission).

Another example is the experience of the Market Co-ordination Group of the Canadian Wheat Board. This group used an 8-digit conversion rate to convert more

¹ *Handbook of Agricultural Statistics, Part 1 – Field Crops*, Catalogue 21-507, Occasional, 1975, Statistics Canada, Ottawa.

than 20 years of historical statistics. However the rate was slightly wrong. They used 1 tonne=2,204.6223 pounds rather than the accepted rate of 1 tonne=2,204.6226 pounds.

Some Questions to be Settled in Converting Historical Statistics

These examples show that there are some questions to be settled before proceeding with a full-scale conversion of all the historical statistics to metric units.

- (a) What are the correct conversion rates and conversion procedures?
- (b) How many significant digits are necessary? This is especially pertinent with production and farm stock figures which are generally in thousands or millions of bushels. For example, to say that 600,000,000 bushels = 16,329,196 metric tonnes would make the metric conversion seem more accurate than the original bushel estimate.
- (c) Should imperial and metric statistics appear in the same or separate publications?
- (d) What units to use? How to spell them (for example, tonne)?
- (e) Who will convert which statistics?

These questions should be resolved soon, but the big question is "by whom"? (My feeling is that either the Grains Council Metric Conversion Committee or Statistics Canada should take on the responsibility of establishing a committee and/or co-ordinator to resolve these questions and serve as a central co-ordinator and authority to reduce the confusion and duplication of effort in this area.)

Reporting Procedures and Forms

Of ultimately greater concern, of course, are the reporting procedures and forms to be used after conversion takes place. This problem should be the simplest for the Canadian Grain Commission as its reports come from the licensed elevator system. These respondents will be quite familiar with the metric system since their scales and internal accounting system will be in metric units. Neither is the problem of converting the Commission's statistical reporting forms foreseen as being a formidable task. In most cases, it will involve simply changing column headings, although, of course, some redesigning of forms will be necessary.

The problems of the statistical agencies who receive information directly from farmers will certainly be more difficult because farmers, at first, will be less familiar with metric units. Here, I am thinking of surveys such as Statistics Canada's semi-annual agricultural surveys and the crop reporting surveys in which questionnaires are sent directly to farmers. However, we should not under-estimate the speed with which farmers

will be able to make the switch to metric units for they will soon start to think metric when they start getting paid by the tonne.

It would seem that there will be three alternatives regarding statistical questionnaires on grain that are sent to farmers.

- (1) The questionnaires could ask for imperial units only and the conversion could be done in Ottawa or wherever the data is processed.
- (2) The questionnaires could have spaces for both the imperial and the metric units and could ask for one or the other or both, similar to some farm survey questionnaires currently used in Quebec, where crop area may be reported in either acres or arpents.
- (3) The surveys could ask for metric units only.

Eventually, of course, the third alternative will have to be used.

There are two complications to the farm questionnaires. First, the farmer will have to start thinking in hectares as well as tonnes (or will he?) whereas most of the industry will not be concerned with the measurement of land area.

The second problem is especially pertinent to yield and farm stock estimates. Farmers now tend to think in volume bushels and not weighted bushels. This is to be expected as farmers don't know the weight of the grain until it is delivered to an elevator. The capacity of a hopper or a granary is constant for all grains when measured in volume bushels.

After conversion, a farmer will have to start thinking of his standard 2,000-bushel granary as a 54-tonne granary of wheat, a 31-tonne granary of oats, and a 44-tonne granary of barley.

Of course, this will take time, but probably less time than we might expect because, as mentioned earlier, it will be to the farmer's financial advantage to think metric.

As with the question of converting historical statistics, the problem of statistical forms and reporting procedures should be discussed and resolved by some central standards authority, possibly the same one dealing with the questions of historical statistics.

I think we all realize that this planning and co-ordination will have to take place soon. Hopefully, that will be one of the recommendations of the secretariat of this conference. February 1977 is fast approaching.

OBSERVATIONS

Education Statistics

To mark the opening of the school year, we present a summary review of new publications from the Education Division.

Education in Canada, A Statistical Review for 1971 - 72 and 1972 - 73

Statistics on all levels of Canadian education for 1971 - 72 and 1972 - 73 have been assembled in the second annual edition of *Education in Canada*. It is designed to provide a review of major educational statistics for Canada and the provinces, which have been collected by the Education, Science and Culture Division.

Detailed 1971 - 72 and 1972 - 73 breakdowns are shown for institutions, teachers, enrolment, graduates, and expenditures. As well as basic numerical counts and cross-tabulations, data are given on topics such as teachers' salaries and qualifications, enrolment ratios and retention rates, citizenship of graduate students, field of specialization in which degrees are granted, and education expenditures in relation to other socio-economic indicators.

Retrospective summary tables display time series for the most important variables since 1960 - 61.

Education in Canada, A Statistical Review for 1971 - 72 and 1972 - 73 (Catalogue 81-229, Annual), is available from Publications Distribution, Statistics Canada.

Financial Statistics of Education, 1969 and 1970

Expenditures on education increased 289 per cent from 1950 to 1960, and 350 per cent between 1960 and 1970. The rise was greatest at the post-secondary level

where amounts grew by 395 per cent during the 1950s and 810 per cent in the next decade. By 1970, the education bill totalled \$7.7 billion.

As a percentage of the Gross National Product, education spending soared from 2.4 per cent in 1950 to 9.0 per cent in 1970. Education accounted for 22.2 per cent (\$7 billion) of all 1970 government expenditures in Canada. This compares with 20.4 in Japan, 17.9 in the United States, and 12.8 per cent in the U.S.S.R. Canada's public expenditure of \$1,058 per pupil ranked second to the United States' \$1,075 during the same year.

Financial Statistics of Education, 1969 and 1970 (Catalogue 81-208, Annual), is a continuation of *Survey of Education Finance*. It provides detailed and comprehensive 1969 and 1970 data for all levels of education, and a historical review from 1950. The format has been revised, and a brief comparison with nine other countries is included.

Copies may be obtained from Publications Distribution, Statistics Canada.

Continuing Education, Elementary-Secondary, 1972 - 73

In 1972 - 73, 569,760 students enrolled in 931,746 continuing or adult education courses, almost 22,000 more students than two years earlier. However, the national participation rate at this level of instruction fell from 41.6 to 41.3 per 1,000 population over the same period. Participation was highest in British Columbia (73.2) and lowest in Newfoundland (16.5).

Registration in non-credit courses increased 26.6 per cent since 1970 - 71, while credit course registration declined 21.4 per cent. Home arts accounted for 22.4

per cent in the non-credit category, followed by fine arts and crafts (16.2 per cent), and recreation (9.7 per cent). More than 60 per cent of the credit registrations were in academic courses, grades 9 to 12; another 21.9 per cent were in business and vocational courses.

Continuing Education, Elementary-Secondary, 1972 - 73 (Catalogue 81-224), is the fourth in an annual series that presents enrolment data and commentary on school board adult education classes and correspondence study offered by the provincial Departments of Education. Tables and charts display the number of students and registrations by province and by type of course.

The report is available from Publications Distribution, Statistics Canada.

Minority and Second Language Education, Elementary and Secondary Levels

In 1970, federal-provincial agreements established two language-teaching programmes. The objectives were first to ensure that English and French Canadians have the opportunity to educate their children in their own language, and secondly to give students of the majority language group in each province the chance to learn, as a second language, the other official language. Figures and analysis of the operation of the programmes are presented in a service bulletin from the Education, Science and Culture Division - *Minority and Second Language Education, Elementary and Secondary Levels* (Catalogue 81-001, Vol. 4, No. 4).

By 1974-75, nearly one and a half million students in all provinces except Quebec were learning French as a second language, or about 40 per cent of those eligible to do so. More than 820,000 Quebec students were learning English - about 66 per cent of the eligible enrolment. However, proportions varied by level and by province. At the elementary level, all provinces where French is the second language recorded increases in participation rates over 1970-71, while decreases were significant at the secondary level.

The number studying in French outside Quebec was 184,000, which represented about 80 per cent and 70 per cent of the French population of elementary and secondary school age, respectively. In Quebec, almost 230,000 students were taught in English. This accounted for 16 per cent of Quebec's total school population, although in absolute numbers it was 25 per cent larger than the enrolment of French students in French school in all other provinces combined. The 1974-75 elementary participation index in the nine provinces dropped 5 points from 1970-71, while at the secondary level, it rose 15 points.

Tables and charts show provincial breakdowns for enrolment, participation rates and indices, level of instruction, and number of schools offering these

programmes. Data are given for 1970-71, 1973-74, and 1974-75.

The bulletin may be obtained from Publications Distribution, Statistics Canada.

Advance Statistics of Education, 1975 - 76

Advance Statistics of Education is published annually before the start of the school year. Statistics on enrolment, teachers, institutions, degrees, and finance are given for Canada and the provinces. The ninth edition presents a time series from 1973-74 to 1976-77 for provincial figures, and to 1977-78 for most national figures. It contains actual data for 1973-74, preliminary statistics for 1974-75, estimates for 1975-76, and forecast for 1976-77 and 1977-78.

Estimates for 1975-76 indicate university enrolment will rise about 3.5 per cent and college enrolment 4.4 per cent, while the number of elementary and secondary students continues to decline.

University enrolment will be about 363,000 and college enrolment 220,000. The number of full-time teachers in these institutions is estimated at 47,700, up 1,300 or 2.9 per cent over 1974-75.

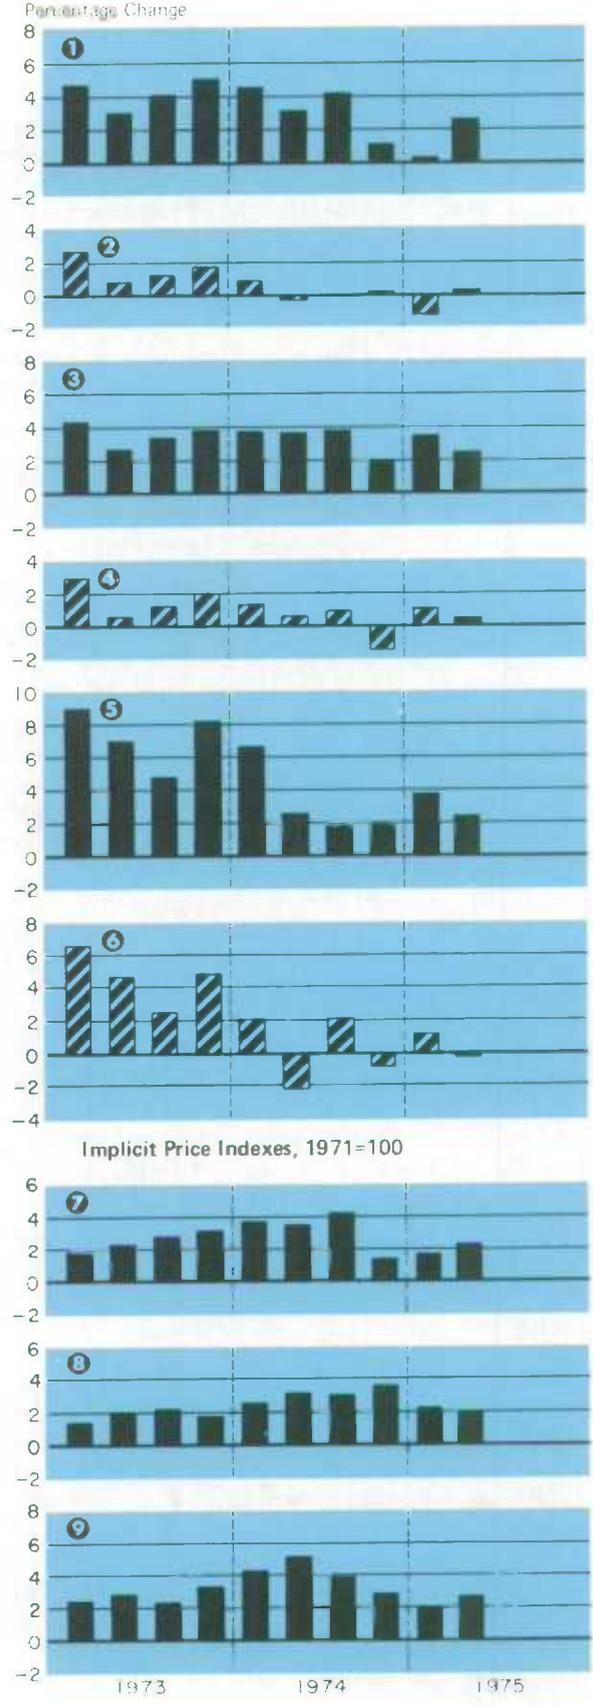

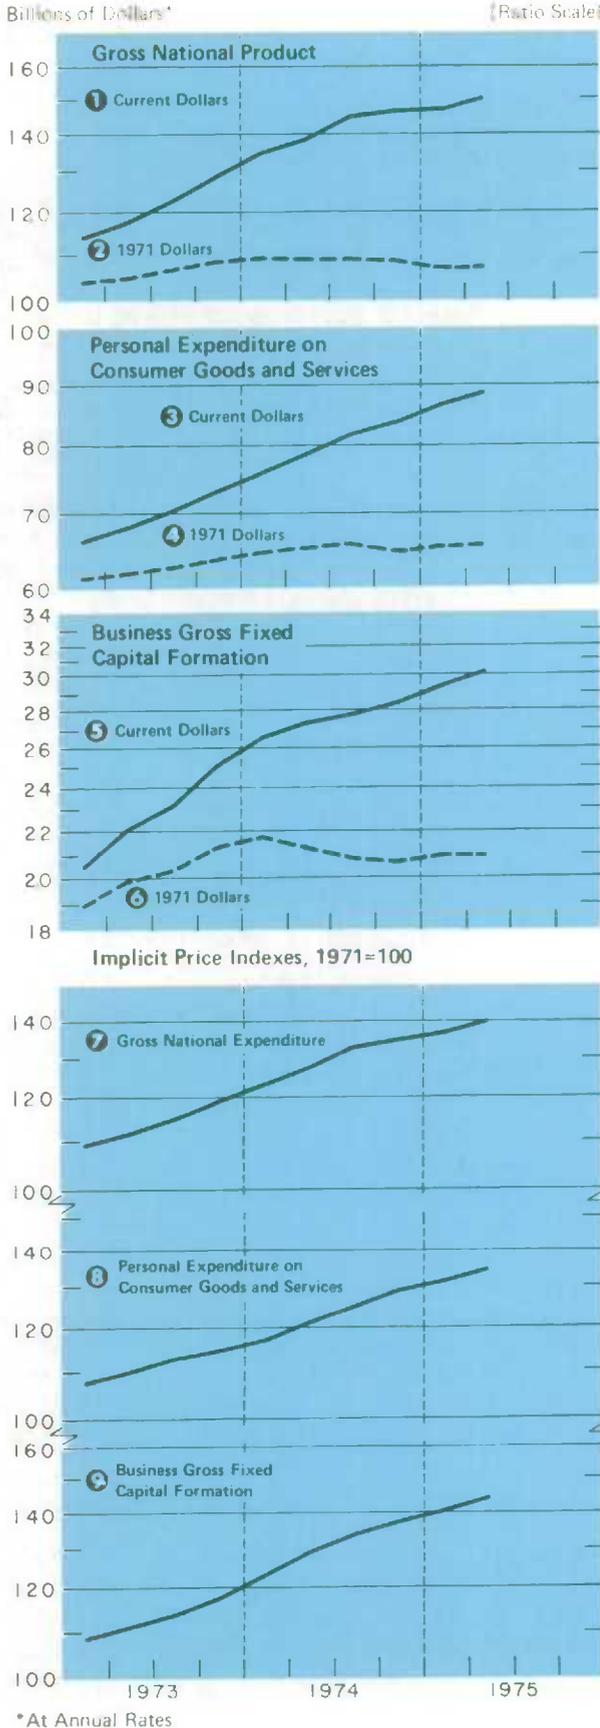

Elementary-secondary enrolment is expected to drop 1.3 per cent to 5.5 million from 5.6 million in 1974-75, reflecting the low birth rate of the last decade. Full-time teaching staff will be about 271,800, down 800 from 1974-75.

The total national expenditure for 1975-76 is estimated at \$12.2 billion, 15.5 per cent more than a year earlier. But spending on education as a percentage of personal income and the Gross National Product has declined since 1971, despite the increased amount.

A special section outlines school-age population projections to 2001. Because enrolment is closely related to the size of the young population, changes in their numbers will affect all aspects of education. The post-war baby-boom was followed by a sharp decline in fertility and births. But even if fertility remains low, the number of births will increase when the baby-boom children reach reproductive age. The result is steep curves in the size of the three school-age population groups: 6-13, 14-17, and 18-24 (see Chart page 122).

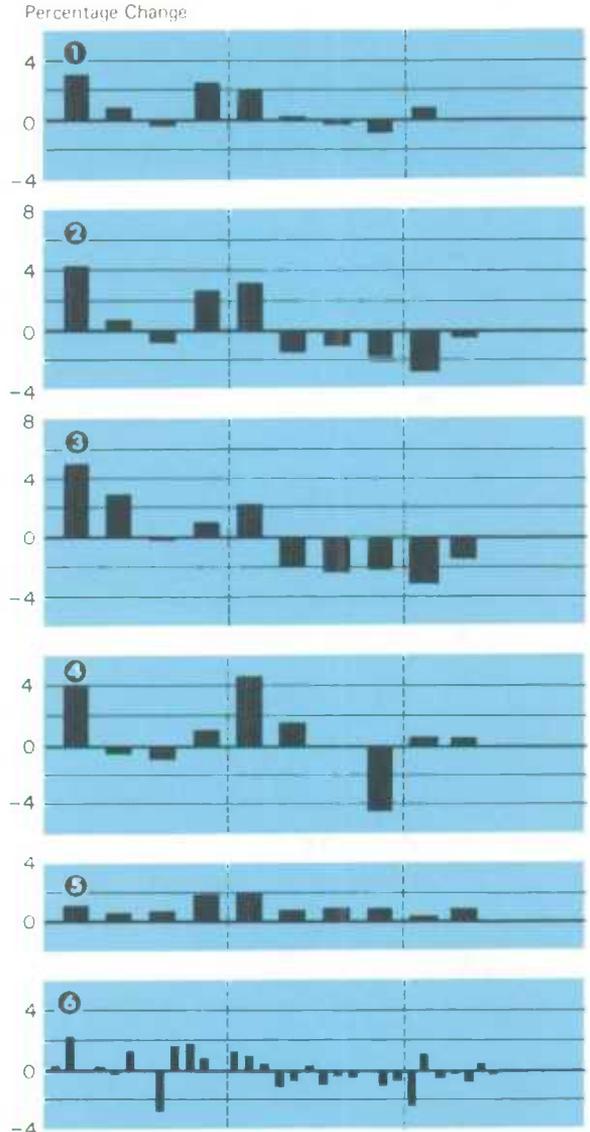

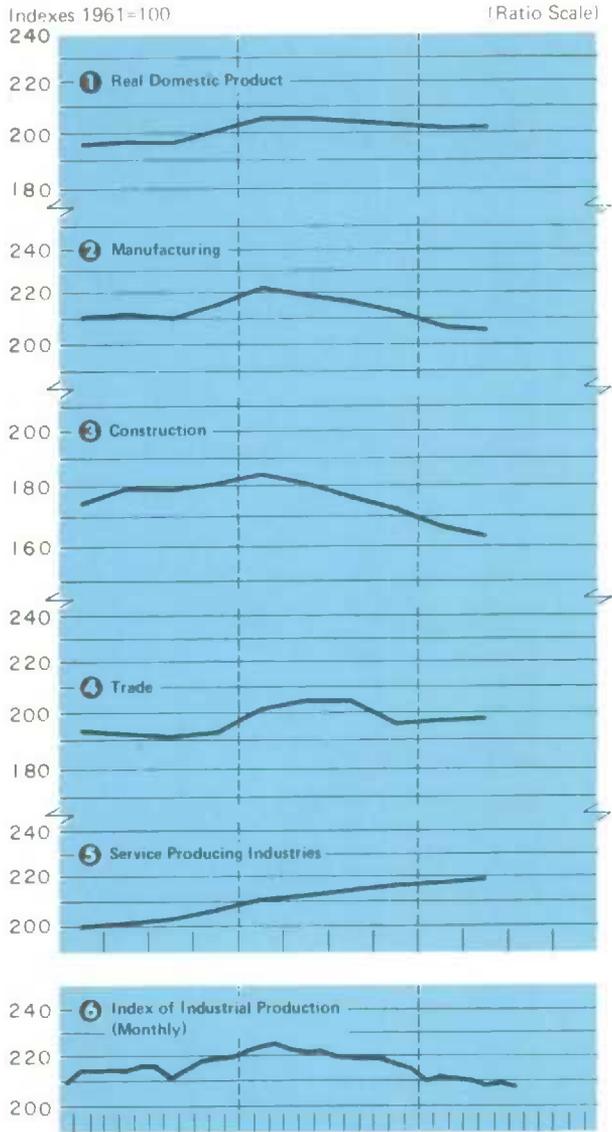

Enrolment is expected to mirror these trends. By 2001, there will be a net gain over present numbers at all levels of education, but this gain will be preceded by a drastic drop. The extent of the enrolment ups and downs will differ by region and within regions. Moreover, the declines and increases will also vary by grade. This poses potential problems as the education system attempts to adapt to these changes.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

See footnotes, Table 3.

*In addition to the selected Labour Force information published here, there are approximately 2,100 Labour Force series available on CANSIM. The series provide basic labour force characteristics, by geographic area, age, sex and marital status.

Table 4: selected series by sex and main age group (thousands of persons)

¹A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. ²Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.

¹In calculating time lost, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. ³The number of man-days is calculated by multiplying the number of workers involved in a work stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. ⁵Includes miscellaneous manufacturing industries. ⁶Includes publishing and allied industries. ⁷Includes storage and communication industries. Source: Research Bulletin, Labour Canada.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment Earnings and Hours (72-002), Statistics Canada. These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

¹See footnote 1 and source in Table 10. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ³Except machinery and transportation equipment industries.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment Earnings and Hours (72-002), Statistics Canada.

¹These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. ²Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	inventory at end of month									
	shipments ¹	new orders received during month ²	unfilled orders at end of month	all inventory held						ratio of inventories owned to shipments
				owned ³	held but not owned	total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values, except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant.

Source: Primary Iron and Steel (41-001), Statistics Canada.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. ²Includes crude oil, condensate and pentanes plus. ³Gross new production by field less field flared and waste. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002), Statistics Canada.

¹In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleaved species. ²Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. ³Shipments by principal manufacturers. Total domestic shipments are somewhat higher. ⁴Production for these items. As reported by principal manufacturers. Total production is somewhat higher. ⁵Building contractors, public and utility construction and structural steel fabricators. Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Quarterly Shipments of Flush Type Doors (wood) by Canadian Manufacturers (35-004), Hardboard (36-001), Rigid Insulation Board (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Stoves and Furnaces (41-005), Steel Wire (41-006), and Specified Wire Products (41-006), Domestic Refrigerators and Freezers (43-001), Cement (44-001), Concrete Products (44-002), Gypsum Products (44-003), Mineral Wool (44-004), Products made from Canadian Clay (44-005), Asphalt Roofing (45-001), Sales of Paints, Varnishes, and Lacquers (46-001), Statistics Canada.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1973 and 1974 price indexes are subject to revision. ³1974 price indexes are subject to revision. ⁴Form share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.

²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

Note: Components may not add to totals because of rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit.

²Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges.

³Personal cash loans of up to \$1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges.

⁴Personal cash loans over \$1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. ⁵Includes bank-sponsored credit card balances.

⁶The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. ⁷Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies.

⁸Bills due for non-commercial use of telephones, gas and electric power. ⁹Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. ²The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. Source: Railway Operating Statistics (52-003), Statistics Canada.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.

NOTE: Components may not add to totals because rounding. ¹This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. ²Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. ¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. Source: Prices and Price Indexes (62-002), Statistics Canada.

¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts. Labour costs in Canada *Manufacturing, 1971*

The Special Surveys Section, Labour Division of Statistics Canada and the Surveys Division, Economics and Research Branch of the Canada Department of Labour conducted a joint national survey on labour costs in Canada in the Manufacturing industry. It was the third survey of this nature, and it was based on data for the calendar year 1971; the previous survey referred to 1968.

The survey coverage was determined so as to produce data that would be compatible with the monthly Survey of Payrolls conducted by Statistics Canada and the Working Conditions Survey of the Canada Department of Labour. For this purpose, 13,000 establishments employing 20 or more persons in at least one month in the year 1971 were covered by the survey. It is estimated that 90 per cent of all employees in the Manufacturing industry are working for the larger firms covered.

This report contains information regarding the composition of the total wage package which will enable the reader to appreciate the significance of the so-called "fringe benefits". This item is a matter of major interest for those involved in collective bargaining. The opposite chart shows the composition of the total wage package for all employees in Manufacturing industry.

The data also show the differences in the composition and the value of labour costs for both categories of workers in Manufacturing industry: salaried employees comprise managerial, professional and clerical workers;

wage-earners are other employees such as production, maintenance, shipping and warehousing staffs. Some tables detail the labour costs by province and by type of establishment. Elsewhere, the results of the 1971 survey are summarized with those of 1968.

For those interested in the significance of labour costs in areas other than the manufacturing industries, the series *Labour costs in Canada* comprises reports on other industries.

To obtain a copy of *Labour costs in Canada, Manufacturing, 1971* (Catalogue 72-612), please contact Publications Distribution, Statistics Canada.

Tuberculosis statistics *Institutional Facilities, Services and Finance, 1973*

Modern methods for the treatment of tuberculosis require less hospital care than in the past and as a result fewer beds. This is clearly shown by data presented in the publication *Tuberculosis Statistics*, prepared by the Hospitals Section, Health Division, Statistics Canada. The results published here refer to the year 1973 and allow comparisons with previous years.

The number of tuberculosis institutions decreased by 14 per cent from 22 in 1972 to 19 in 1973; however, the percentage occupancy based on rated bed capacity was only 57.6 per cent in 1972.

Despite the price increases for medical services and facilities, the 1973 operating expenses of reporting public sanatoria represented 80 per cent of the total reported for 1972.

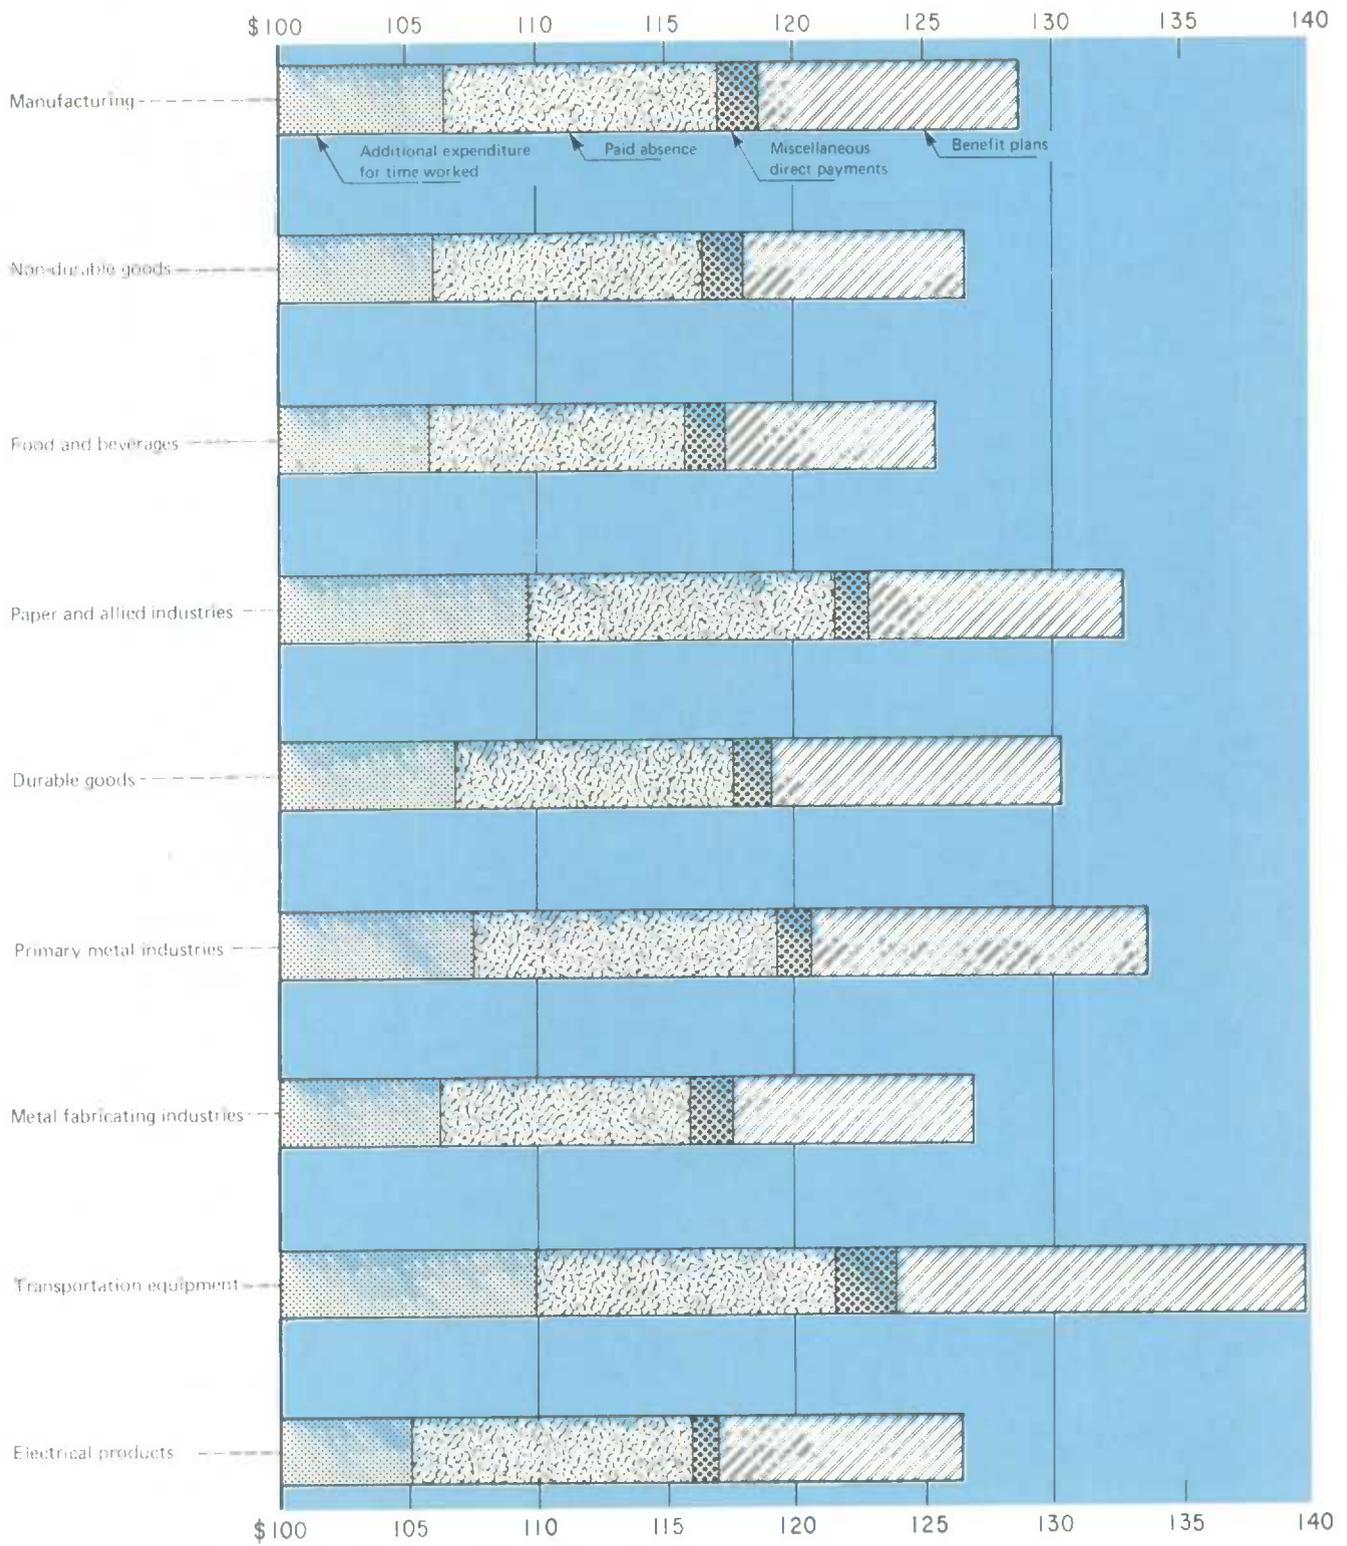

In the following table, the distribution of operating expenses for 1973 are compared with the corresponding figures for 1972.

Operating Expense, by Services, Public Sanatoria, Canada, 1972 - 1973

Service	1972		1973	
	Total amount	Percentage	Total amount	Percentage
Nursing services	3,799,663	28.7	2,878,172	27.3
Special services	1,907,097	14.4	1,589,228	15.1
Educational services	149,344	1.1	139,069	1.3

**Air passenger origin and destination
Canada - United-States Report, 1974**

This large annual report recently released is made possible as a result of an agreement between Canada and the United States to exchange data from their respective surveys on the origin and destination (O & D statistics) of air passengers who come from a U.S. or a Canadian city and cross the border either inbound or outbound.

The scheduled carriers participating in the Canadian survey were: Air Canada, C.P. Air, Eastern Provincial Airways, Nordair, Pacific Western Airlines, Québecair and Transair. All certified air carriers except helicopters and intra-Alaskan carriers were participants in the U.S. survey.

The itineraries of the return trips are broken into single direction components, as a rule at the farthest point from the origin. Thus, for an itinerary Montreal - Chicago - Denver - Los Angeles - Toronto - Montreal, the portions Montreal - Los Angeles and Los Angeles - Montreal will be used. If a portion of a trip is outside U.S. and Canada, the last point of origin or destination on Canadian or U.S. territory is used. The Appendix provides tables of statistical data on the transborder portions of international itineraries.

Origin and destination statistics, although they do not take into account potential stopovers during the journey are used extensively by airlines, airports, manufacturers of aircraft and aircraft engines, consultants and research organizations, chambers of commerce, hotels, travel organizations, government aviation authorities and other government departments and agencies. Such organizations make use of O & D statistics for: route planning and development, general economic analyses in air transportation including forecasting, airport planning, sales administration and travel promotion, schedule planning, airline investment analyses, development of new aircraft engine designs, airways planning and studies in tourism and travel.

Furthermore the O & D statistics in this report may be used to indicate the relative community of interest between Canadian and United States centres.

For a copy of *Air passenger origin and destination, Canada - United States Report, 1974*, (Catalogue 51-205), please contact Publications Distribution, Statistics Canada.

Appointment

Mr. Stuart Wells, formerly Associate Director General of the System of National Accounts (Current) has been appointed Director General of this branch.

Mr. S. Wells taught at Brock University, prior to joining Statistics Canada as Director of the Econometrics Research Division.
