Job Vacancy Survey
Observations

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movement and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- ... figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- c correction
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 4, Table 7 – Job Vacancy Rates

Three additional tables with data from the Job Vacancy Survey have been added to this issue. These data are expected to be available from CANSIM in July 1975. At that time, CANSIM identification numbers will be added to the tables.

JOB VACANCY SURVEY*

This issue of the *Canadian Statistical Review* introduces three new tables with data selected from the Job Vacancy Survey (JVS). (See pages 49 and 50.)

The CSR tables present information on total job vacancies, vacancies for full-time jobs, vacancies for full-time job unfilled for at least a month and job vacancy rates, by province and calendar quarter. These data are only a selection. The Labour Division also produces job vacancy data classified by economic regions, provinces, some metropolitan areas, industry divisions and, 2-, 3- and 4-digit CCDO (Canadian Classification and Dictionary of Occupations) occupational breakdowns. Most of these data will be available from CANSIM¹ by July 1975.

Background to the JVS

In its *First Annual Review* of 1964, the Economic Council of Canada observed that "the lack of comprehensive data on job vacancies makes labour market analysis . . . virtually impossible."² In 1966, when the new Department of Manpower and Immigration began to implement its manpower policies, the only available statistical data on labour demand were the employers' orders registered with Canada Manpower Centres. As this series recorded only a fraction of all vacant jobs, the development of more comprehensive job vacancy data was essential.

Developmental Work

In 1966, the then Dominion Bureau of Statistics and the Department of Manpower and Immigration conducted a pilot survey in seven Ontario areas. This pilot project survey yielded valuable information, which subsequently influenced the design and operation of the Job Vacancy Survey. The two most important facts discovered were that:

- (1) formal records from which an accurate count of job vacancies can be made seldom exist in any but the smallest firms and establishments and
- (2) responsibility for and knowledge of recruitment and hiring within large companies is frequently dispersed, both occupationally and geographically.

It was thus evident that accurate information on job vacancies could only be obtained from a respondent engaged in, or closely associated with, a centre of recruiting activity in the firm or enterprise. This conclusion resulted in the implementation in late 1967 of the

profile survey, which delineated "job vacancy reporting units" as the response points in an enterprise. These special reporting units were to report job vacancy information with maximum reliability and minimum administrative inconvenience.

In the first half of 1968, the testing and evaluating of concepts, definitions and procedures of the survey were carried out. The final design of mail and interview questionnaires, as well as the preparation of detailed procedure manuals, was completed in the second half of 1968. The first computerized mailing took place in October 1968.

A master file containing specially-created job vacancy reporting units was completed in the first half of 1969 using as input the Dominion Bureau of Statistics lists of large (ES1) and small (ES2) establishments. In August, 1969, this master file contained all industrial and service sectors with the exclusion of agriculture, fishing and trapping, households, education, health and welfare, religious institutions, federal, provincial and municipal governments. First experimental tabulations were produced by the end of 1969. In the spring of 1970, the JVS master file, containing about 136,000 reporting units (now including institutions and public sectors), was completed and the survey had reached full intended coverage.

Starting in January 1970, various interim tabulations were produced for internal analytical uses of the Department of Manpower and Immigration, which was then the sponsor of the survey. The first detailed release of job vacancy data – *Summary Report on Job Vacancies* – was published jointly by the Department of Manpower and Immigration and Statistics Canada on December 23, 1971, covering the period from the third quarter of 1970 to the third quarter of 1971. The first publication of the job vacancy series in the present format (*Quarterly Report on Job Vacancies*, Catalogue 71-002) was released in July 1972. By then, the production and financing of the Job Vacancy Survey had become the sole responsibility of Statistics Canada.

Concept of a Job Vacancy

The job vacancy definition chosen for the survey evolved in part from an attempt to have some formal symmetry with labour supply measures – if an unemployed worker is one who has not worked during the reference period and is actively seeking a job, then by analogy, a vacant job is one which has not been occupied as of the reference period and is actively seeking a worker. The core of the job vacancy definition is thus current recruiting activity.

This definitional condition – coupled with the lack of formal records on job vacancies within

* This article was prepared by Mr. J.A. Boucek, Assistant Chief, Job Vacancy Survey, Labour Division, Statistics Canada.

¹ CANSIM is a registered trade mark of Statistics Canada.

² Economic Council of Canada, *First Annual Review, Economic Goals for Canada to 1970*, December 1964, Ottawa, p. 178.

firms – necessitated an interview phase (a sub-sample) to find out the nature and date of recruiting activity for each vacancy reported. The strict application of the activity criteria is an essential element in securing a stable and consistent measure. It also means that the information must be obtained from a respondent engaged in or close to a centre of recruiting activity in the firm.

This problem of recalling of activity by the respondent (resulting in the very tight scheduling of follow-up interviews – within two weeks of response) played a role in the second element in the definition, namely the time dimension of the word “vacant”. Formal symmetry with the supply measure (i.e., one week for definition of an unemployed worker) was sacrificed to overcome the recall problem. Thus, a job must have been vacant for the full reference day in order to qualify as a valid job vacancy.

The third definitional element is that of “externality”. Employers must be seeking workers from outside, or at least must not be restricted to workers from inside the firm. The measure of vacancies relates, therefore, to the external labour market.

A related definitional problem concerns the treatment of vacant jobs being held for workers on lay-off subject to definite recall. These are excluded in the Job Vacancy Survey on several grounds, namely that they do not satisfy either the activity or externality criteria.

In summary, the definition of job vacancy is:

1. A job that was vacant for the full reference day;
2. for which some specific recruiting action was undertaken during a specified time period;
3. that was open to workers from outside the establishment.

Several additional items of information are also requested; job location (if different from mailing address of the reporting unit); full-time vacancies; vacancies for which recruiting action has been undertaken at some time in both the four weeks preceding the reference day and the four weeks preceding that (jobs vacant one month ago) and pay rates for full-time jobs. The “jobs vacant one month or more” provide some guidance to the “duration mix” of demand – a crucial series for potential analytical work.

Operational and Sampling Aspect³

The Job Vacancy Survey is one of the more complex statistical surveys undertaken on a regular basis by Statistics Canada. Because data are collected by both

³ For more detailed information on operational and methodological aspects of the survey, see Technical Appendix, *Canadian Job Vacancy Survey, 1972*, Catalogue 71-521, Statistics Canada.

mail and interview twice a month, the organization of the survey requires a very tight and strict scheduling of the various operations. Each fortnightly mail-out covers approximately 43,000 reporting units.

During each bi-monthly cycle, interviews begin about a week after the reference day and continue for about 10 days, during which period about 1,000 personal interviews and more than 2,000 telephone interviews are carried out by the field personnel in eight Statistics Canada regional offices. All mail and interview questionnaires are then processed at the head office on a continuous basis.

The master file from which the 43,000 reporting units are drawn contains more than 150,000 job vacancy reporting units and is itself a sample drawn from a central file (Business Register) of about 590,000 active reference units. The master file is computer-maintained and all sampling as well as sample maintenance and up-dating is done by computer. The maintenance of the current reporting structure (profiles) of large organizations is an important element in controlling the quality of the survey.

The JVS master file is sampled on a rotating basis such that representative data are available over any period of three consecutive months. For this reason, data are tabulated and released on a quarterly basis. For operational reasons, the sample is divided into twice-monthly segments, each of which has its own reference date. This spreading of reference dates facilitates efficient use of available manpower resources.

The population of job vacancy reporting units is stratified on the basis of size, industry and location. The mail sample is also stratified by response class (mail respondents with vacancies, mail respondents with no vacancies, and non-respondents) prior to the interview phase to allow follow-up interviews of non-respondents from which an unbiased estimate of vacancies among non-respondents is obtained.

Publication of Data

Selection of publishable groups is based on the reliability of data which, in turn, is dependent on the size of the estimates. If at least two thirds of the estimates in a series are 500 or more, all the estimates in that series will be published, including those less than 500. Because of their lower reliability, users should treat estimates below 500 with appropriate caution. In each *Quarterly Report on Job Vacancies* (Catalogue 71-002) there is a more detailed description of sampling and non-sampling error, as well as a graphic representation of standard deviation (a statistical measure of sampling errors). For any level of estimate, the per cent standard deviation can be obtained from the graph.

Uses of Job Vacancies Data

In general, job vacancy statistics provide much needed economic intelligence on the demand side of the labour equation and are used as inputs to programs of the Department of Manpower and Immigration and other departments, and directly by the public.

The Job Vacancy Survey yields current labour demand information (about six weeks old) about fairly detailed occupations for economic regions, larger provinces and some metropolitan areas. It must be emphasized that these statistics are entirely inappropriate for central placement operations, which must match, almost immediately, specific jobs with suitable candidates.

Although the Job Vacancy Survey was not designed to produce data for placement purposes, it does provide quarterly aggregated data indicating trends in occupational, regional and industrial categories, which serve as leading indicators for in-depth manpower analytical studies. In this way, the job vacancy data can be used as a supporting tool for placement and counselling by federal and provincial manpower agencies.

The Job Vacancy Survey provides statistical series which reflect the estimate of the total stock of job vacancies at quarterly intervals and, with varying degrees of accuracy, for different levels of occupational, regional and industrial detail.

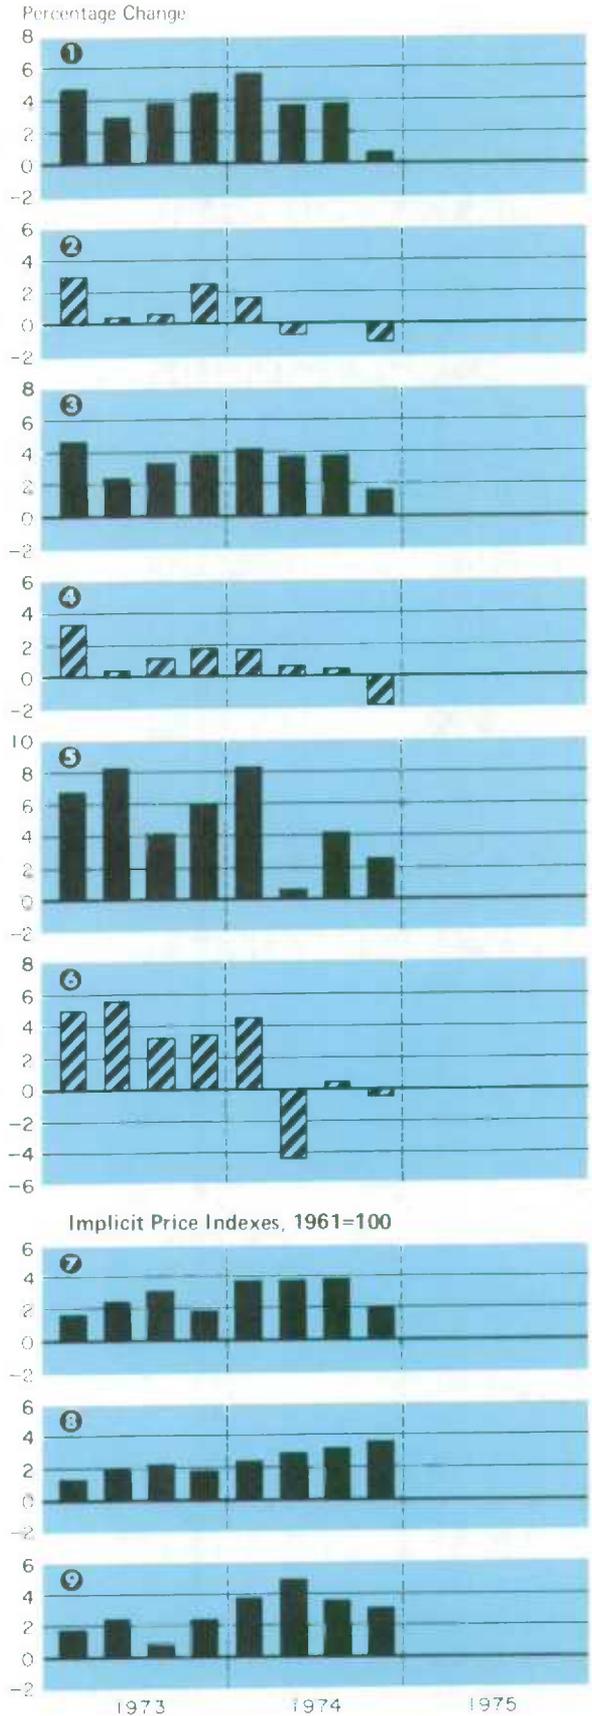

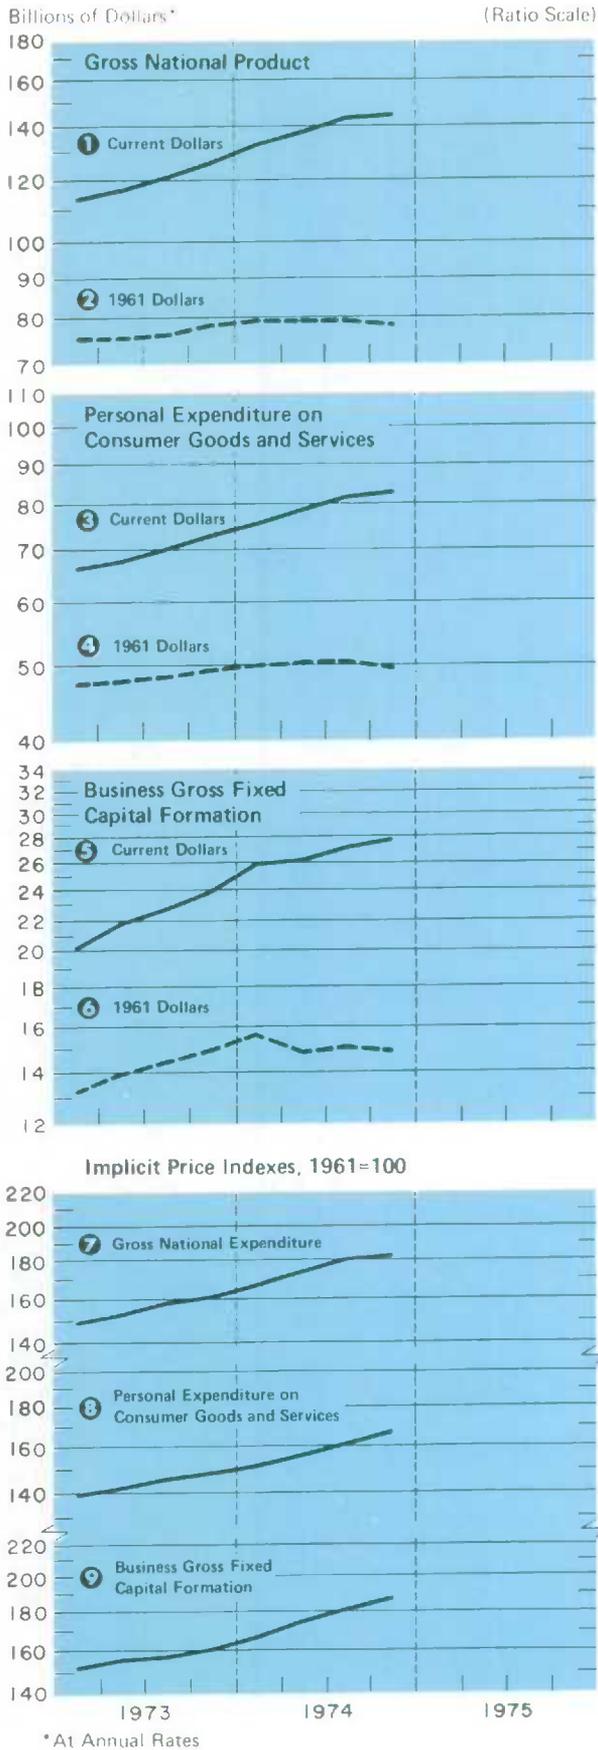

The survey is a relatively young survey and further experience is needed in developing job vacancy data analysis. The vacancy data can be used as an indicator of economic conditions and in this context, may be applied to short-term economic forecasting.

As the survey becomes established, its role in analysis and policy-making in the labour market will increase. The availability of enough data to observe longer-term trends in vacancies, more finely disaggregated series based on yearly averages, pay rates for the vacant jobs, and seasonal adjustment of the historical data are all factors which will enhance the Job Vacancy Survey's usefulness.

There is one area where job vacancy data must be used with utmost caution; that is, the relationships between unemployment data and job vacancy data. These relationships are often being examined to measure various economic phenomena such as the degree of structural imbalance in the labour market. Also, attempts are being made to extend Phillips' Curve analysis, restricted until now to the "unemployment-price trade-off", with the use of job vacancy data. It is important that the labour market analyst be aware of conceptual and other differences between Labour Force Survey unemployment data and job vacancy series. Some of these differences are examined in "A Note on Job Vacancy and Unemployment Statistics", published in the *Quarterly Report on Job Vacancies* 4th Quarter, 1972.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time lost, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. ³The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. ⁵Includes miscellaneous manufacturing industries. ⁶Includes publishing and allied industries. ⁷Includes storage and communication industries. Source: Research Bulletin, Labour Canada.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment Earnings and Hours (72-002), Statistics Canada.

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: *Employment Earnings and Hours (72-002)*, Statistics Canada.

¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C. P. I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	inventory at end of month									
	shipments ¹	new orders received during month ²	unfilled orders at end of month		held but not owned	all inventory held				ratio of inventories owned to shipments
			owned ³	total		raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: manufacturing inventories¹ by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total inventories owned	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing of maker's own plant.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stack and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. ²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories. Source: Retail Trade (63-005), Statistics Canada.

Note: Components may not add to totals because of rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit.

²Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges.

³Personal cash loans of up to \$1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges.

⁴Personal cash loans over \$1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. ⁵Includes bank-sponsored credit card balances.

⁶The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. ⁷Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies.

⁸Bills due for non-commercial use of telephones, gas and electric power. ⁹Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. ²The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. Source: Railway Operating Statistics (52-003), Statistics Canada.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada; Air Carrier Financial Statements (51-206) Statistics Canada.

NOTE: Components may not add to totals because rounding. ¹This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. ²Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. Source: Cheques Cashied in Clearing Centres (61-001), Statistics Canada.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allowance for the take-over of Nova Scotia Light & Power common shares. ¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are for producing mines. Source: Prices and Price Indexes (62-002), Statistics Canada.

OBSERVATIONS

Reconciliation of Canada-United States Balance of Payments Statistics, 1973

A report is now available presenting the results of the reconciliation of the 1973 current account bilateral balances between Canada and the United States as published in the balance of payments statistics of the two countries. The report incorporates the reconciliation of separately published trade data for 1973. It also outlines the conceptual framework adopted for the study, explains the nature of the discrepancies, and discusses the future incorporation of adjustments in the published data.

Copies of the report are available from the Balance of Payments Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6. Readers wishing more detailed information may contact D.K. McAlister, Director of that Division (613-995-0743).

1973-74 Statistics on Travel, Tourism and Outdoor Recreation

Statistics Canada recently released a report, presenting data gathered from various sources, on the many aspects of travel and recreation. Chapters on subjects such as socio-economic influences on travel, Canadian domestic travel, international travel trends, Canadian employment, and equipment and services in travel and outdoor recreations are included.

Copies of *Travel, Tourism and Outdoor Recreation, 1973 and 1974* (Catalogue 66-202) are available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6. Cost is \$1.50.

Metric Conversion

Canada's upcoming change to metric units will affect Statistics Canada, and users of bureau data, in many ways. A program has been set up at Statistics Canada to co-ordinate the planning for and implementation of all metric conversion activities.

Mr. Jack MacKinnon, former Chief of the Foods, Beverages and Textiles Section of the Manufacturing and Primary Industry Division, has been appointed Co-ordinator of Metric Conversion and may be contacted for more information on the program. His address is Room 786, General Purpose Bldg., Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0V6 (613-996-6519).

Crime Index

The Statistics Canada Judicial Division has constructed a Crime Index for Canada for use in comparing crime levels in Canada and the United States. The Canadian measure is based on the seven Crime Index Offences used in the United States index. Neither index is intended to indicate the nature and extent of the total crime situation but only to show comparative levels within Canada and the U.S. and between the two countries.

The seven crimes used in constructing the Canadian index are (1) murder and manslaughter, (2) rape, (3) robbery, (4) wounding and attempted murder, (5) breaking and entering, (6) theft and (7) theft - motor vehicles. For all offences except murder, attempted crimes are included with the committed crimes of the same category. The classification of crimes is not exactly the same in Canada and the U.S., but the same types of crimes have been included in the indexes of the two countries.

Crime Index Offence Rates, Canada and the United States, 1973

Canada	Rate	United States	Rate
Total Crime Index	3,463.5	Total Crime Index	4,116.4
Murder and manslaughter	2.4	Murder and non-negligent manslaughter	9.3
Rape	7.2	Forcible rape	24.3
Robbery	59.6	Robbery	182.4
Wounding and attempted murder	10.7	Aggravated assault	198.4
Breaking and entering	896.3	Burglary	1,210.8
Theft	2,163.3	Larceny - Theft	2,051.2
Theft - Motor vehicles	324.0	Auto theft	440.1
Provincial/Territorial range:		State range:

Low	2,353.3	Low	2,308.1

The total crime index for Canada for 1973 was 3,463.5. This means that 3,463.5 crimes (of the seven types included in the index) were committed per 100,000 people in Canada. This compares with a rate of 4,116.4 in the U.S. The U.S. rate is higher in all categories except theft. The Yukon and Northwest Territories had a higher index rate than any province in Canada.

The Judicial Division stresses the need for caution in using these rates to make direct city-to-city comparisons. More appropriate use of these data is in determin-

ing deviations from national, provincial or state rates; in comparing cities in similar population groups; or where possible, in comparing states/provinces with similar socio-economic conditions.

Detailed information on the Crime Index Offence Rates is available in the Service Bulletin, *Law Enforcement, Judicial and Correctional Statistics*, Vol. 3, No. 1. Readers may also contact Frank A. Morrow, Judicial Division, Statistics Canada, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0Z5 (613-995-0855).

Other Publications of the General Time Series Staff

Publication number	Title and Description
11-003F	<i>Revue Statistique du Canada</i> , mensuel. This is the French edition of the <i>Canadian Statistical Review</i> .

Canadian Statistical Review Supplements

11-004	<i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers.
--------	--

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

11-206	<i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1.40 (Free to <i>Canadian Statistical Review</i> subscribers.)
--------	---

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

11-505	<i>Canadian Statistical Review—Historical Summary 1970</i> , E. and F. Price \$1.50 (Free to <i>Canadian Statistical Review</i> subscribers)
--------	--

This publication replaces the *Historical Summary 1963* (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review*. All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

CANSIM Manuals and other Publications*

- *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free on request. Order by title from General Time Series Staff.
- *CANSIM: Progress Report*—Free on request. Order by title from General Time Series Staff.

CANSIM Manuals and other Publications (Cont'd)

*12-530	<i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.40
---------	--

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)

*12-531	<i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1973 edition—Price \$2.10
---------	--

Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)

- *CANSIM: Summary Reference Index* (Annual, with periodic amendments) 1974 edition—Free on request.

This index summarizes data available from CANSIM and provides matrix identifiers.

Order by title from General Time Series Staff.

- *CANSIM: Series Directory* (Annual, with periodic amendments) 1974 edition—Price \$15.00, or \$20.00 with amendment service.

The *CANSIM Series Directory* contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the *Summary Reference Index* and *CANSIM Manual for Data Retrieval and Manipulation* (12-531) to order series from Statistics Canada.

Order by title from General Time Series Staff.

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
R. H. Coats Tower,
Statistics Canada,
Ottawa, K1A 0T6.

*Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada.
