Canadian Statistical Review

Cette revue est disponible en édition française. *Revue Statistique du Canada*, no du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movement and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- amount too small to be expressed
- nil or zero.
- † advance estimates.
- c correction
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements
of the Statistics Act.

MCD months for cyclical dominance (see above).

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 10, Table I – Value of Retail Trade

This table will not be updated with this issue. Shortly, data from a new survey will replace it. The new survey will be available historically from 1971 and be based on the 1970 Standard Industrial Classification.

REBASING TO 1971

A note on Statistics Canada's major rebasing program is featured in this month's OBSERVATIONS. See page 116.

1975 CAPITAL SPENDING INTENTIONS

A recent Statistics Canada report, *Private and Public Investment in Canada, Outlook 1975*,¹ presents the 1975 capital spending intentions for all sectors of the economy. This article is extracted from the report.

The capital spending estimates cover total outlays for construction and for the acquisition of producers' machinery and equipment by Canadian businesses, institutions and governments, together with expenditures for housing. In all, about 24,000 establishments were surveyed for their investment intentions.

Information on capital spending intentions provides a useful indication of market conditions both in the economy at large and in particular industries. Since such expenditures account for a large and relatively variable proportion of gross national expenditures, the size and content of the investment program provides significant information about demands to be placed upon the productive capacities of the economy during the period covered by the survey. In addition, information on the relative size of the capital expenditures program planned, both in total and for individual industries, gives an indication of the views management hold on prospective market demands in relation to present productive capacity.

Appraisal of the 1975 Capital Expenditures Program

Capital spending in Canada during 1975 by all sectors of the economy is expected to reach \$36,881 million. This total represents a 13.7 per cent increase from the 1974 level of \$32,451 million. These estimates are in current dollars and reflect the level of planned intended outlays by respondents at the time of filing of their completed questionnaires between November 1974 and January 1975.

Capital outlays for new construction are expected to reach \$23,080 million in 1975, an increase of 12.6 per cent from the 1974 program of \$20,498 million. The previous rates of increase for new construction were 20.9 per cent and 17.2 per cent, achieved in 1974 and 1973 respectively. The reduced strength in this activity in 1975, compared with gains during 1974, results mainly from a 3.7 per cent decline expected in residential construction based upon a level of 210,000 starts during 1975. Non-residential construction on the other hand is registering an increase of 21.0 per cent from 1974.

¹ *Private and Public Investment in Canada, Outlook 1975*, Catalogue 61-205, Annual, April 1975, was prepared by the Statistics Canada Construction Division. More information about this topic may be obtained from the Construction Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (Telephone: 613-994-9546). Copies of the report may be ordered from Publications Distribution at the same address.

Acquisition of new machinery and equipment during 1975 is expected to amount to \$13,802 million, 15.5 per cent more than the 1974 total of \$11,953 million. Further appraisal of machinery purchases during 1973 and 1974 showed the 1974 spending to be 6.0 per cent higher than indicated at mid-year and 23.7 per cent more than 1973.

The business group (the first nine sectors in Table 1) expects capital outlays of \$23,567 million, 18.1 per cent higher than the \$19,952 million last year, while capital spending by institutions and government departments is estimated at \$6,600 million in 1975, an increase of 19.5 per cent from 1974.

Utilities contribute the largest advance in the business sector for 1975. The total of \$7,663 million is 25.3 per cent above the 1974 level of \$6,116 million, resulting mainly from expanding capital programs of electric power, telephone, railway and urban transit systems.

Plans for capital outlays in manufacturing also indicate substantial strength in a number of industry groups in 1975 for a resultant overall gain of 22.3 per cent over 1974. The most notable groups in this expansion are chemical products, including heavy water plants, primary metals and paper mills. A number of the manufacturing groups, such as food and beverages, transportation equipment and wood products, show lower intended capital spending for 1975 than the high levels achieved in 1974.

In the remaining industries of the business sector, some moderation of the rate of capital spending is indicated. The strength of the trade-finance-commercial group shown last year is not being carried forward into 1975 to the same degree. Acquisition of capital equipment for leasing to others and construction of facilities for the Olympics contribute to the moderate strength in commercial services, but outlays for hotels and for retail stores are expected to be lower in 1975. The primary industries group is registering a gain of 16.3 per cent in the agriculture and fishing total, and 14.0 per cent in the petroleum and gas group, where tar sands developments added significantly to the total of capital outlays. Metal mining capital outlays are expected to increase by 13.1 per cent in 1975.

In the social capital group (items 10 and 11 in Table 1) excluding housing, institutions are reporting an expected 16.4 per cent gain over 1974, slightly less than the 17.3 per cent addition registered in 1974. Increases are indicated for both hospitals and for educational installations. The three levels of government show an increase of 20.4 per cent in 1975 compared with a 24.1 per cent addition to capital spending in the preceding year. The provincial governments' increase of \$406

TABLE 1. Summary by Sectors, Canada, 1973 to 1975¹

¹1973 – final estimates; 1974 – estimates subject to revision; 1975 – intentions.

million is the largest portion of the year-over-year gain and almost the same in percentage terms as the increase for the federal government.

Repair Expenditures

Total non-capitalized repair expenditures for existing structures and machinery are estimated at \$9,688 million in 1975, a growth of 12.1 per cent over the \$8,644 million in 1974. This percentage gain is the same for repairs to structures (\$4,168 million) and for repairs to machinery and equipment (\$5,519 million). Addition of the expenditures for repairs to those of capital spending on new structures represents a total potential construction activity of \$27,248 million, 12.5 per cent above the 1974 level. The addition of acquisition of new machinery to non-capitalized repair amounts to \$19,321 million, a gain of 14.4 per cent from 1974.

Capital and Repair Expenditures by Provinces and Territories

The expenditures shown for each province or territory represent the value of construction work put in place and the value of machinery and equipment acquired for use within the province or territory (Table 2). Such expenditures represent gross additions to the capital stock of the province or territory, and are a reflection of economic activity in that area. However, the actual production of these assets may generate its major employment and income-giving effects in other regions. For example, the spending of millions of dollars on plants and equipment in western Canada may generate considerable activity in machinery industries in Ontario and Quebec as well as construction activity in the western provinces.

It should be appreciated that there are statistical difficulties in making a precise geographic allocation of past or anticipated investment since many business firms operate in several provinces and neither record nor plan their capital expenditures geographically. As a result, it has been necessary to use approximate breakdowns in many cases. Such is the situation for investment in railway rolling stock, ships, aircraft and certain other items.

The degree of detail provided by province is dependent to some extent on the validity of methods used to obtain provincial estimates and also on limitations imposed by the Statistics Act. These restrictions have particular relevance for the smaller provinces and for the territories.

Comparison of provincial totals of intended capital spending in 1975 with 1974 shows the following pattern of increases: Saskatchewan, 22.0 per cent; Alberta, 16.9 per cent; Ontario, 15.6 per cent; New Brunswick, 14.5 per cent; Quebec, 13.8 per cent; British Columbia, 10.1 per cent; Manitoba, 9.1 per cent; Newfoundland, 4.9 per

cent; Nova Scotia, 3.9 per cent. Decreases are shown for Prince Edward Island (5.8 per cent) and for the Yukon and Northwest Territories (7.5 per cent). In each instance, the current dollar year-over-year change shows less strength than was shown in the comparison of 1974 with 1973.

A 7.4 per cent gain in 1975 for the Atlantic Region results mainly from higher intended capital outlays in institutions and governments and by utilities. A lower total in manufacturing is attributable, in large part, to the attainment of the peak in construction in a number of large projects during 1974, particularly in Nova Scotia and in New Brunswick. In the other industries, real estate development in non-residential buildings is up by 22.6 per cent but the housing sector is not expected to reach the 1974 current dollar total in the region. Primary industries reflect a 5.0 per cent increase for the region but, in real terms, this percentage likely represents a small decline.

In the province of Quebec, an overall increase of 13.8 per cent in 1975 represents gains in most sectors except in housing where the level is expected to be 4.8 per cent lower than in 1974. A major source of strength for manufacturing is in the primary metals and chemical products groups while electric power generations adds significantly to the 37.1 per cent of capital expansion in utilities. The public sector shows an advance of 15.3 per cent compared with 21.5 per cent in 1974.

Considerable strength in manufacturing is shown for Ontario during 1975 in a 45.9 per cent increase from 1974. Chemical products, primary metals, oil refineries, non-metallic minerals and paper products are the main groups contributing to the higher 1975 level. In utilities, added electric power plant construction is expected to constitute most of the gain of \$388 million — an 18.4 per cent increase from 1974. The trade-finance-commercial group registers marginal or no change going into the current year. In housing and social capital, the residential construction is expected to be 3.4 per cent less than last year's total, but social capital by institutions and governments, on the other hand, shows a gain of 19.7 per cent.

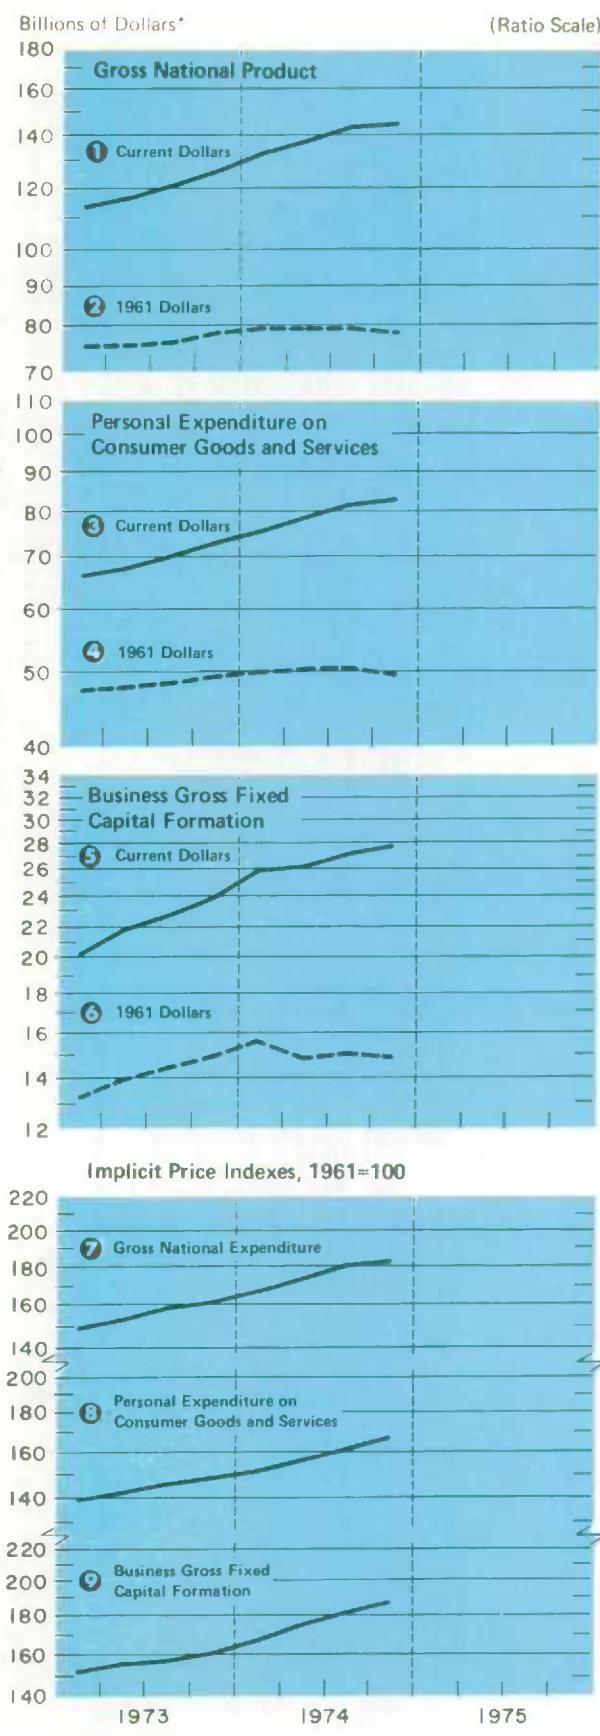

The 16.2 per cent addition in the Prairie Region results mainly from strong gains in utilities (31.2 per cent), in primary industries (23.2 per cent), and in the public sector (21.2 per cent). Manufacturing for the region shows little or no change regionally or provincially from 1974. The trade-finance-commercial group is moderately increasing at 3.5 per cent, and housing is expected to be down by 4.6 per cent. Provincially, within the region, the rates of expansion for utilities and for institutions and governments are the most pronounced in Saskatchewan. Capital spending in the primary industries shows the largest increase in Alberta, partly as a result of the tar sands development.

TABLE 2. Summary of Provinces and Territories, 1973 to 1975^{1,2}

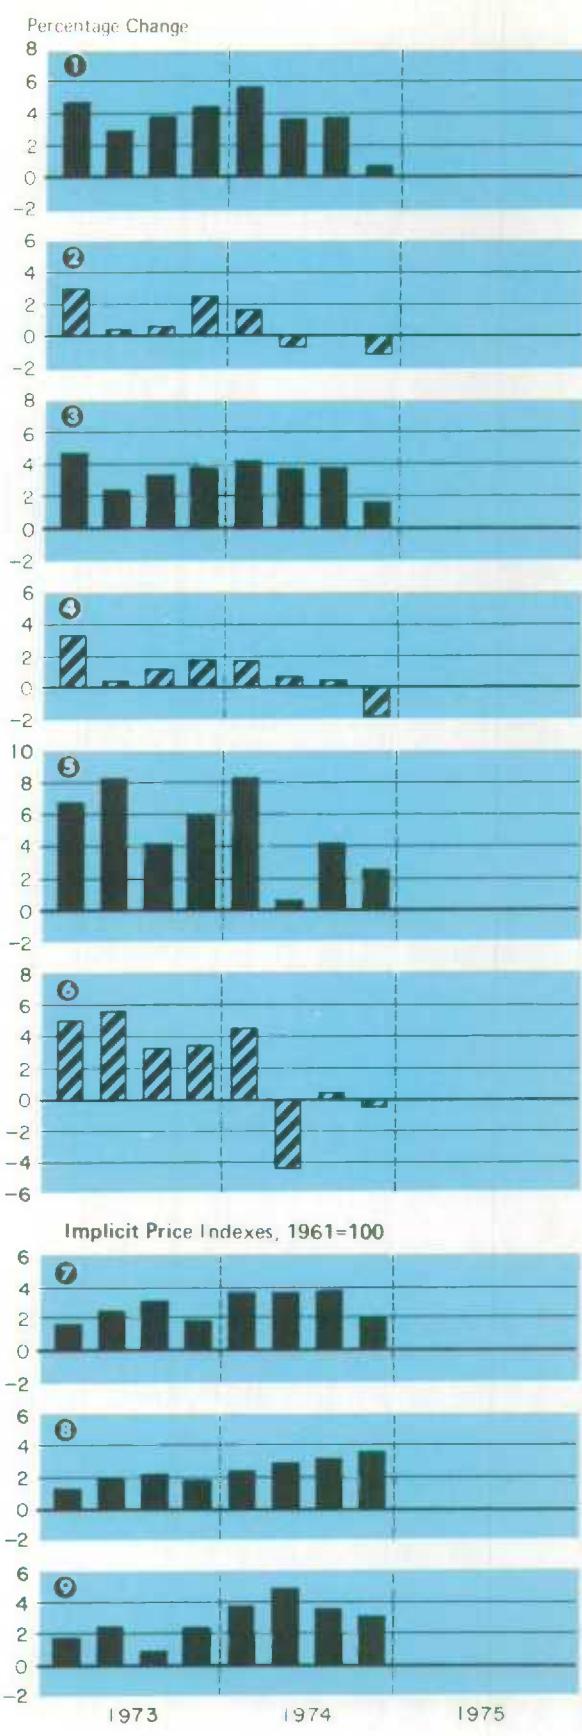

Item		Capital expenditures			Repair expenditures			Capital and repair expenditures

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Manpower and Immigration.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance.²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes.⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹In calculating time lost, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. ³The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. ⁵Includes miscellaneous manufacturing industries. ⁶Includes publishing and allied industries. ⁷Includes storage and communication industries. Source: Research Bulletin, Labour Canada.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment Earnings and Hours (72-002), Statistics Canada.

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence. Source: Employment Earnings and Hours (72-002), Statistics Canada.

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment Earnings and Hours (72-002), Statistics Canada.

¹Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. ²The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. ³Includes constant weighted food component. ⁴These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. ⁵Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. Source: Prices and Price Indexes (62-002), Statistics Canada.

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments ¹	inventory at end of month									ratio of inventories owned to shipments	
		new orders received during month ²	unfilled orders at end of month	owned ³	held but not owned	all inventory held						
						total	raw materials	goods in process	finished products

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included.

²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities.

³Includes appliances and utensils.

⁴Excluding shipments for re-processing at maker's own plant.

¹Production plus imports less re-exports, minus exports. ²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. ²Includes crude oil, condensate and pentanes plus. ³Gross new production by field less field flared and waste. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. ¹⁰Source: Refined Petroleum Products (45-004), Statistics Canada.

¹In 1975, approximately 1,600 municipalities are being surveyed.

²This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous year's operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cast to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1972 and 1973 price indexes are subject to revision. ³1973 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

^aCustoms exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
^bProduction is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ^cIncludes baking and frying oils and fats. ^dIncludes stocks held by manufacturers and other warehouses. ^eIncludes fresh sausage, frankfurters, weiners and all other sausage. ^fIncludes solid, coated, bulk, packages and novelties. ^gThe quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001), Monthly Report, Meat and Meat Preparations, Statistics Canada.

¹Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. ²Includes Yukon and North West Territories.

Source: Retail

Note: Components may not add to totals because of rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit.
²Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges.
³Personal cash loans of up to \$1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges.
⁴Personal cash loans over \$1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges.
⁵Includes bank-sponsored credit card balances.
⁶The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form.
⁷Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies.
⁸Bills due for non-commercial use of telephones, gas and electric power.
⁹Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form.
¹⁰Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Source: Trade of Canada Imports (65-007), Statistics Canada.

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. ²The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. Source: Railway Operating Statistics (52-003), Statistics Canada.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nardair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.

NOTE: Components may not add to totals because of rounding. **1**This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. **2**Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source:** Cheques Cashed in Clearing Centres (61-001), Statistics Canada.

Note: Components may not add to totals due to partial revisions.

*End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allallowance for the take-over of Nova Scotia Light & Power common shares. Source: Bank of Canada Review.

OBSERVATIONS

Rebasing to 1971

Because of structural changes that occur in the economy it is necessary to change periodically the base year of index numbers and constant dollar time series: 1971 was selected about three years ago because it is ten years more current and because there were no major disruptions or developments during that year that would disqualify it. The data to convert many of the major series became available only recently and as a result Statistics Canada will proceed during 1975 with the conversion of most of its index numbers and constant dollar time series from a base of $1961 = 100$ to $1971 = 100$.

There are basically three kinds of activities that will occur under the general heading of rebasing:

(1) Time Rebasing

Series are arithmetically converted to $1971 = 100$ by dividing by 1971 values. There is no effect on rates of change in any series rebased this way. Series which are aggregated from component base-weighted series will show different rates of change over time because there is an implicit weight change but, in practice, the magnitude of such differences is usually quite small.

(2) Time and Weight Rebasing

Series are arithmetically linked as in time rebasing, and 1971 weights are introduced explicitly at the component level. This could have the most substantial effect on comparative rates of change, depending on the magnitude of the changes in weighting patterns.

(3) Specification Changes

In some cases, rebasing offers an opportunity to introduce changes that have been pending for some time. These include classification changes, degree of primary disaggregation, introduction of more representative price quotations and other "housekeeping" changes.

The projected schedule is as follows.

External Trade Division — Price and quantity indexes will be time- and weight-rebased for publication during June or July. At the same time, there will be a substantial expansion in the degree of disaggregation, upgrading of price series used, and existing Paasche volume indexes will be replaced by Laspeyre indexes. These changes will bring Canada in line with most other countries and remove most of the existing discrepancies between series published by the External Trade Division and Gross National Product and Balance of Payments Divisions.

Prices Division — The Consumer Price Index will be time-rebased only, since it already incorporates 1967 expenditure patterns (1969 in the case of detailed food expenditure patterns). Industry Selling Price Indexes will be time- and weight-rebased. Publication is planned for July or August.

Industry Product Division — All indexes will be time-rebased and will also incorporate new weights and a number of specification changes. Owing to the size of this particular program, it will not be completed before the end of 1975. As a consequence, the normal spring (1975) revision of 3 to 4 years of data will not be made.

Gross National Product Division — All series will be time-rebased. Since the Gross National Product Division produces no primary price series of its own, weight changes will be incorporated to the extent that they are available at that time from supplying Divisions (basically Prices and External Trade). There will also be a number of specification changes, especially in fixed capital, inventories, external trade and, to a lesser extent, in government current expenditures. It is expected that all price indexes and constant dollar values will be presented on a $1971 = 100$ base in the first quarter publication in June 1975.¹

Labour Division — Complete plans for re-basing Labour Division series are still under discussion.

An article on the theoretical background and an analysis of the effects of this major rebasing will be featured in the August issue of the *Canadian Statistical Review*.

The Current Annual Rate of Change in the Consumer Price Index

The notion of current annual rate of change in the Consumer Price Index is a frequently misunderstood one. Confusion arises because there are many different ways of calculating rate-of-change measures for a time series such as the CPI.

Perhaps the most commonly used measure has been the rate of change between corresponding months one year apart. This is not entirely valid as an indicator of the current trend because it does not take into account adequately the events of the most recent period. A more appropriate representation of the current annual rate of change can be derived by taking the growth rate

¹ *National Income and Expenditure Accounts*, Catalogue 13-001, quarterly. Usually, publication of National Accounts data for the first quarter of any year is published in June of that year.

compounded over the preceding three months and raising it to an annual rate, using seasonally adjusted data. The three-months span for averaging purposes is long enough to reduce the effect of irregular distortions in the data, yet it is short enough to be representative of the current trend in the CPI.

The comparison of the current month's CPI with the CPI for the corresponding month one year earlier is a valid measure of change for a number of purposes (including escalation of transfer payments and wage contracts) but this comparison may not reflect the current annual rate of inflation. Also, when price changes are accelerating, this particular measure tends to underestimate the current rate of inflation, and when price changes decelerate, it exaggerates what is currently happening.

The Prices Division of Statistics Canada have published a full explanation of the various ways of computing annual rates of change in the CPI and the appropriate uses for each measure. See "A Note on the Current Annual Rate of Change in the Consumer Price Index", in *Retail Prices and Living Costs* (Catalogue 62-005) Volume 4, Number 4, April 1975. Copies are available from Publications Distribution, Statistics Canada, Ottawa, Ontario, K1A 0T6.

More information can be obtained from Mr. Hannett, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0V5 (613-994-5850).

New Housing Price Statistics

In January 1975, the Prices Division released New Housing Price Indexes. These indexes are estimates of

the change in the selling prices of new houses in six metropolitan areas (Montreal, Ottawa/Hull, Toronto, Winnipeg, Calgary, Edmonton). They are base-weighted (Laspeyres-type) indexes of builders' selling prices measuring pure price change for work put-in-place and land, for new residential construction. Prices include the dwelling structure, land and services to land if these are not provided separately by the municipality, but they exclude legal fees, provincial land transfer tax and similar costs to the buyer for property acquisition. The indexes include only single unit houses except for Toronto and Ottawa/Hull where single, semi-detached and row condominium units are priced.

These New Housing Price Indexes are not comparable with the "Housing" component of the Consumer Price Index which measures the changes in the cost of such elements in the consumer budget as household operation and shelter.

The accompanying table presents the price indexes since January 1974.

The series starts with 1971 data, and current indexes are published in *Construction Price Statistics, Monthly Bulletin*, (Catalogue 62-007) and *Construction Price Statistics, Quarterly Report* (Catalogue 62-008). Both publications may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ontario, K1A 0T6.

More information on the New Housing Price Indexes is available from R. Lowe, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0V5 (613-994-9387).

New Housing Price Indexes, 1971 = 100

1975:						
January		169.8	173.3			184.0
February		169.8	173.3			184.5

¹ These indexes include single detached, semi-detached and row condominium houses. Indexes for all other areas include single detached houses only.

1975 Capital Spending Intentions — (*Continued from page 7*)

In British Columbia, total capital outlays in 1975 are expected to increase by 10.1 per cent from 1974. Spending for social capital by institutions and governments is showing the largest gain at 23.6 per cent followed by utilities at 21.2 per cent. In manufacturing, reductions in capital programs of wood and chemical products offset in part increases for oil refineries, primary metals, non-metallic minerals and paper products, resulting in an increase of 9.2 per cent from the preceding year. The trade-finance-commercial group is expected to advance by 8.4 per cent, while housing and primary industries are estimated to decrease by 2.5 per cent and 1.9 per cent respectively.

The Territories' decrease of 7.5 per cent reflects a decline of 11.2 per cent for the primary industries group and lower spending by utilities. The gain of 19.6 per cent for institutions and governments was not large enough to offset reductions in capital spending by the other industries.

Capital and Repair Expenditures by Metropolitan Areas — Manufacturing

The expenditures are shown here for 14 of the largest metropolitan areas of Canada for manufacturing only (Table 3). Capital and repair expenditures are not available for all other sectors which are surveyed only at the provincial or territorial level. Statistics for some

individual manufacturing industries are also provided for Montreal, Toronto and Vancouver in the main report.

The degree of detail released for manufacturing by metropolitan areas is limited because of the confidentiality clauses of the Statistics Act.

Business and Social Capital

Table 4 presents a regrouping of the various S.I.C. industries included in Table 1 into the categories of Business Capital and Social Capital. A supplementary sheet identifying the individual industries included in each item is available on request from the Construction Division.

Private and Public

Data on the total capital and repair expenditures for Canada divided into Private (non-government) and Public (government) categories are presented in Table 5.

The Public category includes government enterprises for municipal, provincial and federal governments, municipal hospitals and schools, provincial hospitals, schools and universities, federal government housing, and government departments' expenditures for the three levels. For additional details, see the footnotes at the bottom of Table 5.

TABLE 3. Summary of Metropolitan Areas — Manufacturing, 1973 to 1975^{1, 2}

¹ 1973 – final estimates; 1974 – estimates subject to revision; 1975 – intentions.² These categories cover, in general, government-owned establishments whose principal source of revenue is derived from the provision of goods and services to the public.³ The total for federal government departments includes data for departmental crown corporations and excludes data for proprietary crown corporations which are all classified as enterprises. Agency crown corporations, on the other hand, are provisionally classified in part to enterprises and the remainder to government departments. Estimates for government departments are meant to reflect the capital outlays likely to be achieved and therefore could differ from other series representing stated intentions of capital spending, particularly for municipalities.⁴ These categories include provincial hospitals, schools and universities, municipal hospitals and schools and federal government housing.

Other Publications of the Current Economic Analysis Division

Publication number	Title and Description	Publication number	Title and Description
11-003F <i>Revue Statistique du Canada</i> , mensuel.	This is the French edition of the <i>Canadian Statistical Review</i> .		CANSIM Manuals and other Publications (Cont'd)
11-004 <i>Weekly Supplement to the Canadian Statistical Review</i> —Free to <i>Canadian Statistical Review</i> subscribers.	Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the <i>Canadian Statistical Review</i> . Designed to keep users of the <i>Review</i> closely informed of the most recent changes in the major statistical series (Bilingual).	*12-530 <i>CANSIM: Operational Manual for Data Entry</i> (Occasional)—Price \$1.40	This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)
11-206 <i>Annual Supplement to the Canadian Statistical Review</i> —Price \$1.40 (Free to <i>Canadian Statistical Review</i> subscribers.)	Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the <i>Canadian Statistical Review</i> . The series extend back to 1946 or as far back as the data are available (Bilingual).	*12-531 <i>CANSIM: Users Manual for Data Retrieval and Manipulation</i> (Occasional) 1973 edition—Price \$2.10	Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)
11-505 <i>Canadian Statistical Review—Historical Summary 1970</i> , E. and F. Price \$1.50 (Free to <i>Canadian Statistical Review</i> subscribers)	This publication replaces the <i>Historical Summary</i> 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly <i>Canadian Statistical Review</i> (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the <i>Review</i> . All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.	— <i>CANSIM: Summary Reference Index</i> (Annual, with periodic amendments) 1974 edition—Free on request.	This index summarizes data available from CANSIM and provides matrix identifiers. Order by title from CANSIM.
		— <i>CANSIM: Series Directory</i> (Annual, with periodic amendments) 1974 edition—Price \$15.00, or \$20.00 with amendment service.	The CANSIM <i>Series Directory</i> contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the <i>Summary Reference Index</i> and <i>CANSIM Manual for Data Retrieval and Manipulation</i> (12-531) to order series from Statistics Canada. Order by title from CANSIM.
			— This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. For further information, direct inquiries to:
			Canadian Statistical Review, R. H. Coats Tower, 23 M, Statistics Canada, Ottawa, K1A 0T6.

*Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada.
