CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada n° 11-003F au catalogue.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. Annual figures are also available from CANSIM, more information can be found in the *CANSIM Summary Reference Index* and the *CANSIM Series Directory*. Both the documents are available directly from CANSIM staff.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- amount too small to be expressed.
- nil or zero.
- † advance estimates.
- c correction
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- MCD months for cyclical dominance (see above).

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 3, Table 1.7 — Income and Expenditure Accounts

The series personal direct taxes — local, CANSIM numbers 40061 and 40299, have been deleted with this issue at the request of the source.

Section 3, Table 2 — Indexes of Real Domestic Product by Industry

Users should note that the Indexes of Real Domestic Product by industry are on a 1971 weight and reference base and follow the 1970 Standard Industrial Classification (SIC). Monthly, quarterly and annual data for the period 1971 to date are available on CANSIM in the following matrices: Monthly — 1122; Quarterly — 1123; Annual — 1124. These data will also appear in the publication *Real Domestic Product by Industry (1971 = 100) (61-213)* for the period 1971-74 and in the October 1975 issue and subsequent issues of *Indexes of Real Domestic Product by Industry (61-005)* for 1975.

Section 5, Table 3 — Other Price Indexes

With this issue the Canadian farm products series have been rebased from 1935-39 = 100 to a 1971 base. Series on the 1935-39 base will continue to be available from CANSIM although they will not be updated and the series on the 1971 base can be found under the new CANSIM numbers listed.

This Review and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General for Canada. PILOT PROJECT ON STATISTICS OF CORPORATE TAKEOVERS IN THE CANADIAN ECONOMY, 1970 - 1971

Questions regarding the extent and importance of company takeover activity in Canada frequently go unanswered because of the lack of statistical studies in this area.¹ This shortcoming is not an oversight on the part of statisticians but a reflection of the difficulties, both at the practical and the conceptual level, in the construction of series that would help answer some of the questions.

This article represents the results of an exploratory probe made by the Multinational Enterprises Section into the feasibility of constructing a statistical series on company takeovers, using material already available. It is intended that this work lay the foundation for subsequent development and possible regular publication of statistics in this area. If the latter should prove feasible, the results would assist research in the areas of industry rationalisation, monopoly power and the dynamics of industry concentration, although it must be recognized that this information constitutes only one part of the picture. It should also be recognized that the focus of the note is not especially on foreign takeover activity and to the extent that figures on takeovers of Canadian corporations by foreigners are given, it presents only one side of the picture. It does not identify the takeover of previously foreign-controlled Canadian corporations by Canadians. Takeovers of corporations located outside Canada are omitted from the tables.

Before describing the sources and methods used in constructing the series and the qualifications that need to be attached to the figures, a brief summary of the statistical results of the study follows.

Statistical Results

Data have been assembled initially for two 12-month periods, covering takeovers which occurred in

¹ One such study of the takeover of Canadian firms between 1945 - 61 was prepared for the Economic Council of Canada by Grant L. Reuber and Frank Roseman and published in 1969 by the Council as Special Study No. 10.

1970 and 1971. For these two periods corporation takeover activity has been isolated and an attempt has been made to provide a profile of both the acquired companies and the acquiring businesses.

In 1970 the 422 corporations acquired had average sales of \$2.4 million and the 377 corporations acquired in 1971 averaged sales of \$3.0 million. The average sales of corporations undertaking the acquisitions were \$25.9 million and \$40.9 million in 1970 and 1971; however, these figures relate only to acquiring corporations incorporated in Canada and exclude foreign-based corporations.

In both years the numbers of corporations taken over were fairly equally divided in number between those acquired by Canadian-controlled corporations and those foreign controlled. Overall the average sales of those companies acquired by Canadian-controlled corporations were slightly higher.

In 1970 and 1971 the largest number of takeovers occurred in the manufacturing industry, accounting for 41 per cent and 34 per cent respectively of the total acquisitions and representing assets valued at \$417 million in 1970 and \$362 million in 1971. The average profits of manufacturing corporations taken over in 1970 were \$153 thousand with a lower average profit picture for those taken over by U.S.-controlled corporations than for Canadian and other foreign-controlled acquiring companies. In 1971 average profits were slightly higher at \$187 thousand.

In terms of asset size there were nine corporations acquired in 1970 with assets over \$25 million and seven in 1971. The asset size group within which corporate acquisitions were most frequent was the \$1 - 5 million group, with 145 and 136 takeovers in 1970 and 1971 respectively. It should be noted that in 1970 the average assets of corporations acquired in the finance industry

are somewhat distorted by the takeover by a Canadian-controlled corporation of a single large institution. This single transaction also affects the totals significantly.

Financial data are available only for those acquiring corporations based in Canada. In both the years the average asset size, sales and profits of foreign-controlled companies were generally about three times greater than for the Canadian-controlled corporations.

In most cases the frequency of takeovers by the acquiring corporations for a single year was limited to one, although cases of two and three acquisitions by one corporation were not uncommon. At the extreme end of the frequency distribution, two U.S. based corporations acquired eight and 13 corporations respectively in 1970, and in 1971 one Canadian controlled and one U.S.-controlled company based in Canada each acquired seven corporations.

Because of the wide variation in some of the figures embodied in the attached tables and the limited number of corporations in certain industries and size distributions the averages given should be regarded with caution. The relatively greater stability of assets and sales make comparisons between 1970 and 1971 more meaningful than for profits, which exhibit much greater volatility. Between 1970 and 1971 both total corporate sales and assets grew by 10 per cent, while net profits before taxes rose by 20 per cent.

Sources and Methods

The following section describes the methods used in the study, the sources of basic data and notes certain qualifications attaching to the results. Suggestions are also made regarding future work in this field.

First, it should be emphasized that the series represent corporate takeover activity in Canada, i.e., a change in control of a corporate legal entity. The acquiring party need not necessarily be another corporation but only in the case where a corporation changes hands would the acquisition be reflected in the series that are presented. The latter restriction was to a large extent predetermined by the availability of raw data. Business combinations may occur in several forms, including outright purchase of assets or operations, or amalgamation in which two or more firms merge, giving up their previous identities. In this study only corporate takeovers have been considered, in which one firm, maintaining its own identity, acquires other firms which may or may not lose their identity. Another quantitatively important type of takeover activity is the divisional acquisition and spinoff, whereby only a part of the physical assets or activities of a legal entity are involved in the transaction. With the increasing size and diversification of companies it is to be expected that often a company will wish to spinoff certain of its activities that are unprofitable or no longer fit its business strategy due to changing management or competitive conditions. It

has not been possible in this developmental study to quantify such types of takeover-like activity but this is one of the research avenues open in any future work in this area. In the study by Reuber and Roseman such divisional acquisitions were found to represent, in terms of numbers, 15 per cent of acquisitions by foreign and 6 per cent of acquisitions by Canadian-controlled companies.

A change in control is considered to have taken place when majority interest in a company changed from one party to another. This usually involved acquisition of 50 per cent or more of voting stock of another company, or acquisition of less than 50 per cent of voting stock of another company where (i) other information shows that the purchase will bring acquirer's share up to more than 50 per cent, or (ii) effective control was publicly acknowledged to have passed to acquirer with less than 50 per cent. It is realized though that the statistical notion of control is at best an imprecise one so that the series may count some companies as having been taken over, through acquisition of voting rights, when in fact they were effectively controlled previously by the acquiring party through a minority share ownership. On the other hand the series does not include majority-owned subsidiaries of companies taken over due to the resource limitations placed on the project, and to this extent takeover activity has been understated. It should be noted that in the case of the series on assets of acquired companies, these will include investment in affiliates. The series includes joint ventures which changed to wholly or majority-owned corporations, but excludes purchases of unincorporated businesses, including foreign branch operations.

Despite the above shortcomings in the series, the results are judged to represent a reasonable first step towards measuring takeover activity. Almost certainly all large takeovers were accounted for. The most serious shortcomings include the omission of information on acquisitions other than through changes in share ownership, including divisional spinoffs, and the lack of information on the majority-owned subsidiaries of companies taken over. Both these limitations require further examination – the former is probably not amenable to easy solution; whereas the latter is.

Three basic sources were used in the difficult task of identifying takeovers and the names of the corporate entities involved: (i) the register maintained by the Department of Consumer and Corporate Affairs (CCA) of all press reported takeovers, (ii) the records maintained from information collected under the Corporations and Labour Unions Returns Act on changes in ownership, and (iii) the annual Census of Manufactures in Canada special question on ownership changes. Supplementary information for checking takeovers included the Financial Post Corporation Service card index and the Standard and Poor's directory.

Certain problems were encountered in using the basic source material, including exemption from reporting under CALURA by companies with assets not in excess of \$1/4 million or gross revenues not in excess of \$1/2 million during the reporting period and the lack of an independent means of assessing the completeness of the CCA register. These factors may account for some underestimation of takeovers involving small companies; the number of these would however be relatively more important than any of the financial variables associated with them. It was also discovered that the CCA register contained some reported takeovers which in fact could not be substantiated or which occurred in another year.

Having identified both the acquired companies and the acquiring parties, the two groups were then subdivided by country of control using CALURA ownership information. It should be recognized that the CALURA information is based primarily on the country of control of the first foreign parent. Acquired corporations were identified as having been taken over by a Canadian-controlled company, a U.S.-controlled company, or by a company controlled elsewhere. Tables are not provided which subdivide acquired companies on the basis of where they were controlled prior to their having been taken over. It is recognized that for many purposes this information would be of value and subsequent work should attempt to draw this distinction.

In general it is the acquiring corporation which has been used to determine country of control. In certain cases where the takeover was by a non-corporate entity it has been assigned to the country of residence of the individual. In cases of takeovers by foreign based corporations it has been assumed that control rests in the country of residence of the acquiring corporation.

In matching identified companies and specific financial data, the compilations were restricted to numbers of companies and three economic variables — total assets, sales and profits. The data presented in the tables cover only the year in which the takeover took place. The definitions of the financial items are those used in CALURA annual reports.² Profits

comprise net earnings from operations plus investment income and net capital gains, less allowances for amortization, depreciation and depletion but before provisions for income tax or declaration of dividends. The assets item includes cash, marketable securities, accounts receivable, inventories, fixed assets, investments in affiliated companies and other assets. "Sales" represents gross revenues from non-financial operations except in the case of financial corporations where the figure represents income derived from both financial and non-financial sources.

Unfortunately, in the case of acquiring companies resident outside Canada, it was not possible to assemble financial data comparable to that available for Canadian resident companies. Because of both the problem of access and comparability, financial data for this group of companies are not provided. Future development work should examine the possibility of deriving information from foreign published sources, such as the Securities and Exchange Commission in the United States or various directories and registers such as Moody's or Standard and Poor's.

Data are not available on the terms, method or purchase price associated with the takeover. These remain important gaps in the statistics.³ However, short of a special survey of the companies involved, it would be impossible to assemble this information.

The data are presented at the major industry division level, largely for reasons of confidentiality; even so, some cells in the tables have had to be suppressed. The groupings follow those used in the CALURA report and are based on the 1960 Standard Industrial Classification. It should be noted that this classification standard has been revised and updated as of 1970, but this revision had virtually no impact at the broader levels of aggregation.

As noted in the introduction, this article represents only an exploratory probe into the relatively uncharted waters of takeover activity but it is hoped that it has pointed the way to further work and has opened up certain new vistas in the field.

² Annual report under the *Corporations and Labour Unions Returns Act (CALURA) 1971, Part I*, Catalogue 61-210, Statistics Canada, Ottawa.

³ To the extent that takeovers involve capital transfers from abroad these are, however, captured within the balance of payments.

TABLE 1. Canadian Corporations Acquired by Corporations¹ Controlled . . .

Industry of acquired corporation		In Canada	In United States ²	In all other countries ²	Total
Agriculture, forestry, fishing and trapping	1970	x	x	x	x
	1971	3	x	x	4

OBSERVATIONS

Appointments

There have been three new appointments in User Advisory Services Division:

Mr. Bill Pawluck, who was Regional Advisor, St. John's, Newfoundland, has been appointed Regional Advisor, Halifax, Nova Scotia effective January 15, 1976. Ms. Cathy MacNutt will replace Bill Pawluck in Halifax while he is on language training.

Mr. David Courtney has been appointed as the new Regional Advisor for St. John's, Newfoundland, effective January 12, 1976.

Mr. André Gallant, has been appointed Head, Central Inquiries in Ottawa, effective January 19, 1976.

Canadian Provincial Economic Accounts

In a country as large and diverse as Canada, comprehensive regional statistics are crucially important to both public and private policymakers. In the public sphere, tax-sharing agreements, industrial development grants and subsidy programs are all influenced by regional economic conditions. The private sector is similarly affected. Decisions about locating new plants, expanding existing facilities and other aspects of market development depend on economic conditions and prospects. Provincial income and expenditure accounts comprise the core of the regional data base that is required in these activities.

At the recent conference of Commonwealth Statisticians, Statistics Canada presented a paper summarizing its current research program to develop a set of Canadian provincial economic accounts.

As early as 1946, Statistics Canada (then the Dominion Bureau of Statistics) included in its first national accounts publication a provincial breakdown of labour income and net income of unincorporated business. In 1949, the provincial details of total personal income and its major components were incorporated in the official statistical publications.

Between the years 1950 to 1972, further extensions of the provincial dimension were largely prevented by conceptual and statistical problems. In 1957 and 1967 provisional estimates for the income side of the accounts were prepared on a provincial basis, but on both occasions the estimates were not released "as they were not judged to be of sufficient reliability".¹ Interest in provincial accounts grew rapidly during this period, however, and in the absence of relevant data from Statistics Canada, some provinces and federal departments undertook to produce their own. The Atlantic Provinces, through the medium of the Atlantic Provinces Economic Council, were among the first to do so.

Initially, estimates of Gross Provincial Product were based on personal income statistics by province, as published by Statistics Canada, plus fairly primitive estimates of profits, interest, capital consumption allowances and indirect taxes less subsidies. Provincial accounts of a more sophisticated nature have appeared in recent years. Ontario has produced two sets of income and expenditure accounts using both the national and the domestic concepts. A number of provinces have published provincial accounts on a domestic basis and other provinces are in the process of doing so. The degree of refinement and disaggregation is, however, non-uniform and varies in quality from province to province.

The sharp rise in demand for consistent sub-national data that could in a practical sense be compiled only at a central statistical agency led Statistics Canada to the conclusion that it must revive and expand its efforts to provide a complete set of provincial economic accounts on a regular basis. In a report to a Federal-Provincial Conference on Economic Statistics in 1973, this was announced as a matter of policy. In order to benefit from the considerable experience already acquired by provincial statisticians, it was decided to make the project a joint federal-provincial undertaking.

¹ H.J. Adler, "Approaches to Regional Economic Accounting in Canada", *The Review of Income and Wealth*, June 1970, p. 187.

For the achievement of these objectives, Statistics Canada is in the process of estimating, in conjunction with the provinces, provincial Gross Domestic Product figures using both the sum of incomes and sum of expenditures approaches. These provincial and national series are calculated by breaking down (often referred to as "building down") national aggregates in order to ensure interprovincial comparability and consistency with the national totals, at a suitable level of disaggregation.

The preparation of this system of provincial accounts has required considerable effort not only in searching for, and assembling the massive set of available data, but also in defining new methods of allocating provincially, national series and in resolving conceptual problems. Estimates for most of these figures have already been tabulated for the years 1961 to 1971 and presented to the provinces and territories for discussion.

For more detailed information please contact Joël Diena, project leader, Gross National Product Division, Statistics Canada (613-995-0611).

Job Search Patterns in Canada

Job Search Patterns in Canada, by David E. Gower (Catalogue 71-525E, Occasional) is one of the Special Labour Force Studies. This study used data from a supplemental attached to the October 1971 Labour Force Survey to study the patterns of job search and job success of persons in the labour market.

It begins by reviewing the role of job search in labour market theory, and then presents an overview of the job search population, pointing out the concentration of searchers among younger people and among persons with lower levels of skill.

The circumstances of people at the point of entry into job search were examined, and the general con-

clusion arrived at that older searchers were more likely to be searching involuntarily than younger ones.

The outcome of the job searches was studied. Younger searchers and prime-age males were observed to have much better success than others, measured by three different criteria; length of search, outcome of search, and amount of unemployment during search.

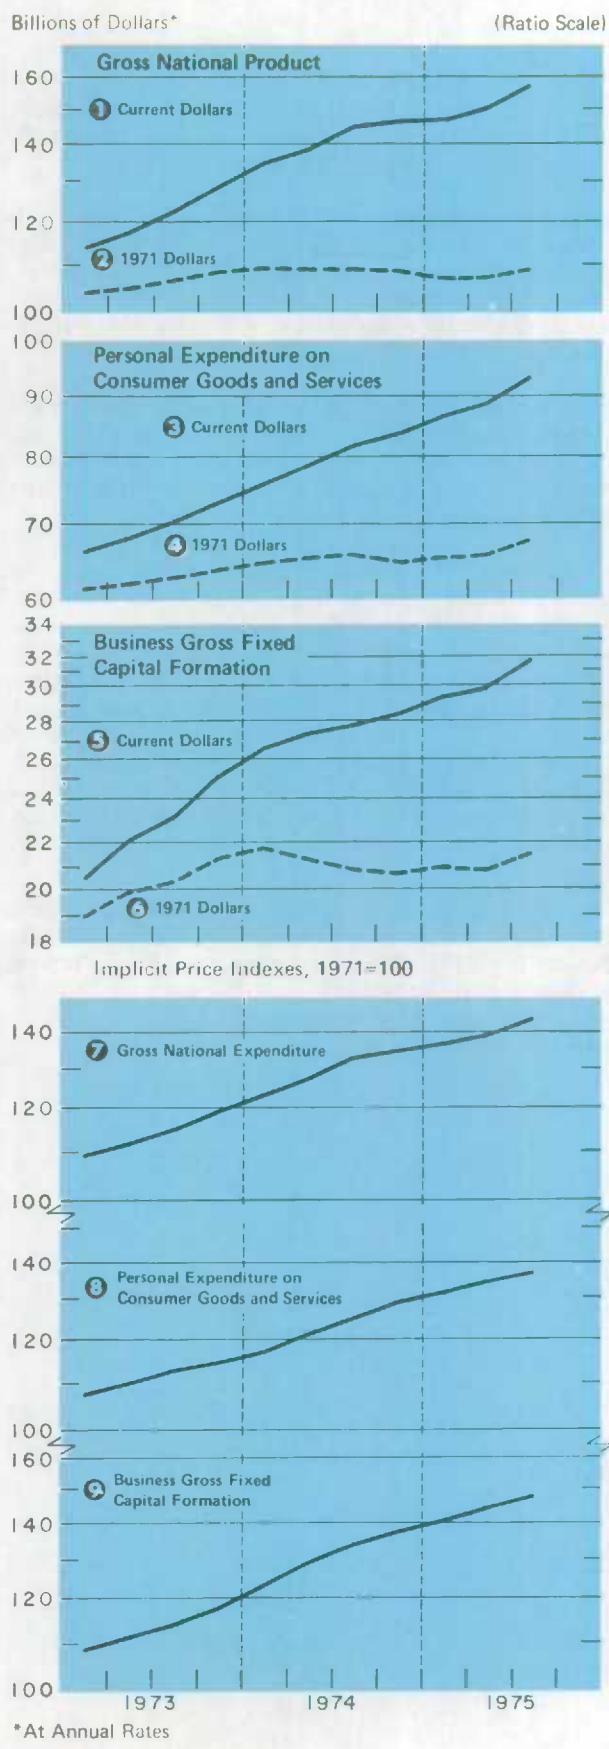

The relationship between education and search success was examined. While education seemed to be an advantage to younger job searchers, for older searchers it made little difference. This finding accentuated the general impression that older searchers are severely disadvantaged in the labour market.

A check was made in the data to see if prolonged unemployment caused workers to lower their job expectations. Using acceptance of a part-time or temporary job as a criterion, evidence was found that such lowering does take place.

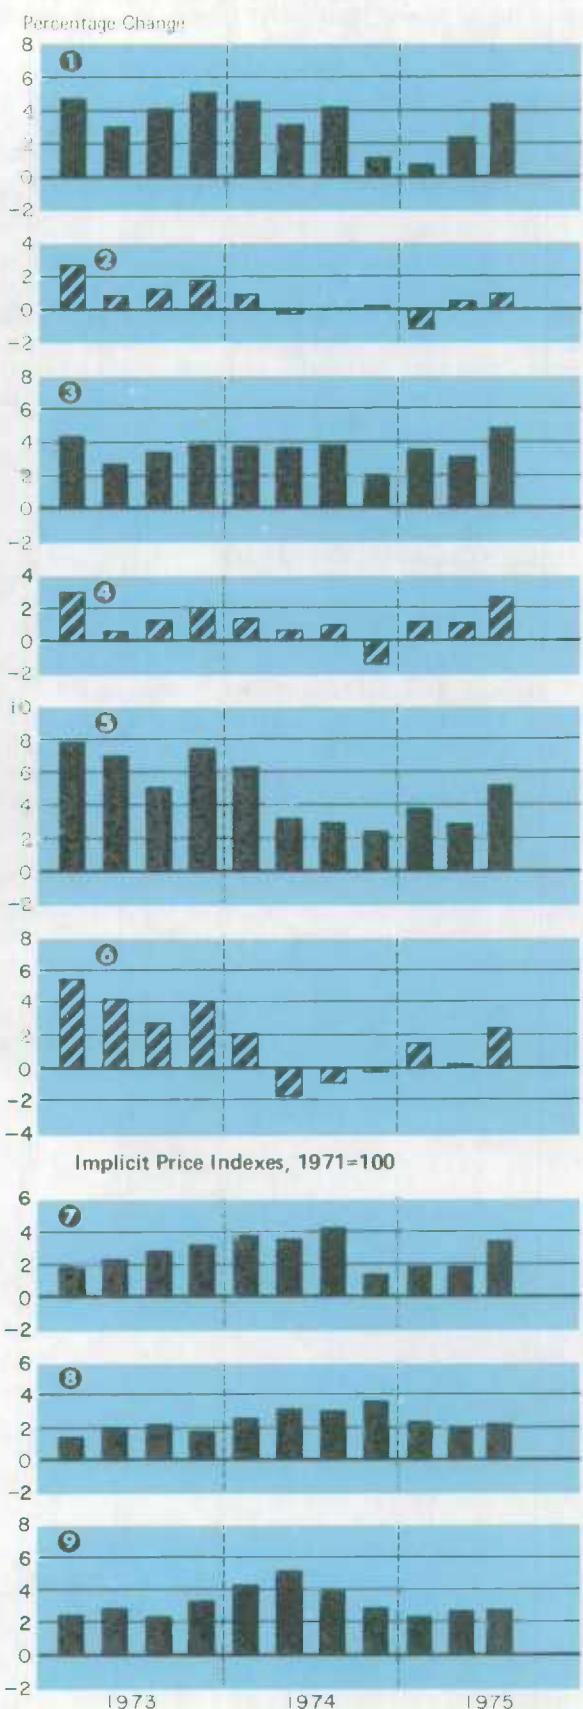

Finally, the choice of search method and the intensity of use were examined. While it was found that there was a positive relationship between search effort and success, interpretation of this was complicated by the fact that the same groups that showed the highest search effort are the same groups who proved to have favourable search outcomes: the young and better educated. The study concludes, therefore, that it is not possible to isolate search effort from such personal factors as age and education in determining precisely what causes success or failure in job search.

More information on this study is available from David Gower, Labour Force Survey Division, Statistics Canada (613-992-1358). Copies of *Job Search Patterns in Canada* may be ordered from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, K1A 0T6 (Price: \$1.05).

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

* Figures show events allocated to actual month or year of occurrence. Subsequent data are for month in which registrations are filed, and for these months Canada total excludes the Yukon and Northwest Territories. ¹Births and deaths are exclusive of still births. Source: Vital Statistics (84-001), Statistics Canada.

I – Income and expenditure accounts

Table 1.1: national income and gross national product (millions of dollars)

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. For source see Table 1.9.

¹The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. ²Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. ¹In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. ³The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. ⁵Includes miscellaneous manufacturing industries. ⁶Includes publishing and allied industries. ⁷Includes storage and communication industries. Source: Research Bulletin, Labour Canada.

¹See footnote 1 and source in Table 10. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ⁴Except machinery and transportation equipment industries.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. Source: Employment Earnings and Hours (72-002), Statistics Canada.

¹These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. ²Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: manufacturing inventories¹ by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total inventories owned	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. ²Intended for cigarettes. ³Prior to March 1973 included smoking, chewing and twist. From March 1973 on, includes tobacco intended for pipe smoking only. ⁴Includes sales to wholesalers or retailers. ⁵Subject to Excise Tax. ⁶Includes sales for ships' stores and for export. ⁷End of period. Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Production and Disposition of Tobacco Products Monthly (32-022), Statistics Canada; and Department of National Revenue.

¹Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. ⁴Excluding shipments for re-processing at maker's own plant.

Source: Primary Iron and Steel (41-001), Statistics Canada.

Table 16: new motor vehicles

¹Production plus imports less re-exports, minus exports. manufacturers and distributors) was based on "actual cost to purchase" (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, 1963.

²Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by "order" rather than the suggested list price as in the past. Sources: Motor Vehicle Shipments (65-007), Exports (65-004), Statistics Canada.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.

²Includes crude oil, condensate and pentanes plus.

³Gross new production by field less field flared and waste. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbine fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. ¹⁰Source: Refined Petroleum Products (45-004), Statistics Canada.

¹Includes copper fine in ore, ingots, bars, billets, rods, strips, sheets and tubing.
²Includes ingots, bars and billets.
³Includes nickel in matte or speiss, oxide and fine.
⁴Includes lead in ore and in pigs.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. ²Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. ³Shipments by principal manufacturers. Total domestic shipments are somewhat higher. ⁴Production for these items. As reported by principal manufacturers. Total production is somewhat higher. ⁵Building contractors, public and utility construction and structural steel fabricators. Sources: Peeler Lags, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Productian, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Quarterly Shipments of Flush Type Doors (wood) by Canadian Manufacturers (35-004), Hardbaord (36-001), Rigid Insulating Baord (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Stoves and Furnaces (41-005), Steel Wire and Specified Wire Products (41-006), Domestic Refrigerators and Freezers (43-001), Cement (44-001), Concrete Products (44-002), Gypsum Products (44-003), Mineral Wool (44-004), Products made from Canadian Clay (44-005), Asphalt Roofing (45-001), Sales of Paints, Varnishes, and Lacquers (46-001), Statistics Canada.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1973 and 1974 price indexes are subject to revision.

³1974 price indexes are subject to revision. ⁴Form share only of motor vehicles. ⁵In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁶In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage. ⁶Includes solid, coated, bulk, packages and novelties. ⁷The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

Note: Components may not add to totals due to rounding and partial revisions.
¹Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds.
²Includes loans on the security of household property.
³Not available on a monthly basis.
⁴Includes loans to finance companies which are affiliates of retail merchandisers.
⁵Religious, educational, health and welfare institutions.
⁶Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies.

Note: Components may not add to totals because of rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. ²Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. ³Personal cash loans of up to \$1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁴Personal cash loans over \$1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. ⁵Includes bank-sponsored credit card balances. ⁶The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. ⁸Bills due for non-commercial use of telephones, gas and electric power. ⁹Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality; this series is repeated in the unadjusted form. Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.

¹Column numbers refer to tables 3 and 4 section 11. ²Includes special transaction-trade, not shown separately.

³The annual index, being calculated

separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. Source: Trade of Canada, Exports (65-004), Statistics Canada.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. Sources: Trade of Canada Imports (65-007), Statistics Canada.

Table 1: carloadings of revenue freight on Canadian railways¹ (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) (*'000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products				
	unadj.	S. A.		wheat	other grain and grain products	fresh fruits and vege- tables	other agri- culture products	animals and their products	prepared food products	iron ore and concen- trates	other metal ores and concen- trates	potash	coal, sand, cement and other mine products

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. Source: Railway Operating Statistics (52-003), Statistics Canada.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage. Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.

NOTE: Components may not add to totals because rounding. **¹**This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined.

²Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. ⁵Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. ⁶Stocks included in the mining index are far producing mines. ⁷Source: Prices and Price Indexes (62-002), Statistics Canada.

¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts. Sources: The Canada Gazette and Dept. of Finance.
