Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in each column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data are available can be found in the following:

CANSIM Summary Reference Index (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory (Annual with periodic amendments) – \$30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory (Annual with periodic amendments) – \$10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division

L.O. Stone – Senior Advisor, Population Studies and Statistics, Census

P.N. Triandafillou – Director, Current Economic Analysis Division

J.S. Wells – Director General, System of National Accounts (Current) Branch

M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch

N. Cholette – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review*, Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 9, Table 1 – Farm cash receipts

The series that previously appeared as quarterly series will now appear as monthly series.

Section 13, Table 11 – Federal government budgetary revenues

The two components of personal income tax that previously appeared have been combined with this issue.

National Income and Expenditure Accounts

First Quarter 1978 — Advance Information

Gross National Product, seasonally adjusted at annual rates, increased 2.3 per cent in the first quarter of 1978 to a level of \$222.3 billion; measured in real terms, GNP advanced 0.7 per cent. This real growth was the result of a further improvement in the balance of merchandise trade and renewed strength in personal expenditure and government current expenditure offsetting lower gross capital formation, and is a continuation of the pattern of fairly mild quarterly growth rates that the economy has exhibited since the first quarter of 1976. Prices, as measured by the GNE implicit price index, rose by 1.6 per cent compared with an increase of 0.9 per cent in the fourth quarter of 1977, leaving prices in the first quarter of 1978 6.6 per cent above their level in the first quarter of the previous year.

Gross fixed capital formation, which was a major contributor to the relatively slow growth of 1977, increased fractionally in the first quarter. With prices rising 2.4 per cent, the volume of fixed investment fell by 2.0 per cent, as the result of significant drops in both government and business investment. This was the second consecutive quarterly decline in business investment, and left real business capital formation at its lowest level in three years. The weak performance of business investment is consistent with the low levels of capacity utilization in most industries since 1975.

The External Sector

Exports of goods and services rose 4.8 per cent in the first quarter, while total imports were up 3.3 per cent, leading to a \$728 million improvement in the balance. The increase of \$792 millions in real net exports was a notable source of growth. The improvement occurred entirely in the merchandise trade account as the non-merchandise deficit, particularly for travel, continued to increase.

The improvement in the merchandise trade surplus appears to have been partly the result of special circumstances in the U.S. economy and weak domestic demand in Canada rather than an improvement in Canada's competitive position. The

increase in the current value of exports originated largely in crude and fabricated metals, coal, industrial machinery and barley. There were reductions in trucks, wheat, iron ore, and wood pulp. These movements, combined with extremely large declines in imports of coal, motor vehicle parts and petroleum, suggest that a substantial part of Canada's improved trade balance in the first quarter can be ascribed to stockpiling of copper and nickel in anticipation of price increases in these goods, and to the U.S. coal strike.

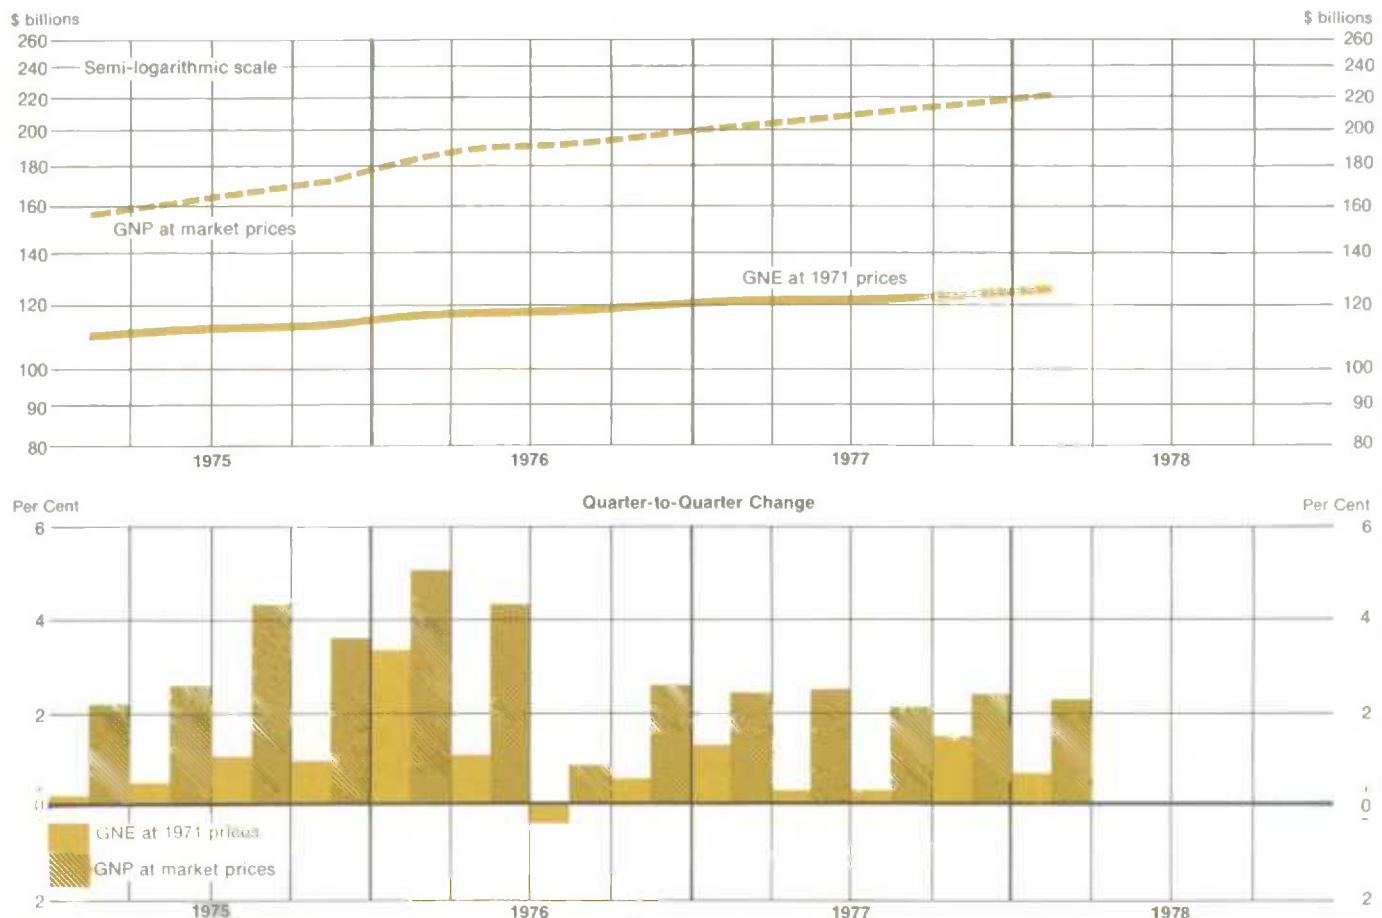

Personal Expenditure

Personal expenditure on goods and services increased 3.0 per cent in the first quarter. In real terms, personal expenditure grew 1.2 per cent, as increases in durables and services offset marginal changes in semi-durables and non-durables consumption. Spending on durables rebounded from a decline in the fourth quarter to post a 4.3 per cent gain in the first due to widespread increases, most notably in furniture, household appliances and motor vehicle sales. The 0.7 per cent decline in semi-durables was the result of marginal growth in clothing and declines in footwear and household furnishings. Continued rapid price increases contributed to the unchanged level of spending on non-durables as weak expenditure on food and non-alcoholic beverages and tobacco offset rising purchases of alcoholic beverages and gasoline. Services rose 1.4 per cent with the most significant increases in net travel expenditure abroad and purchased transportation.

Fixed Capital Formation

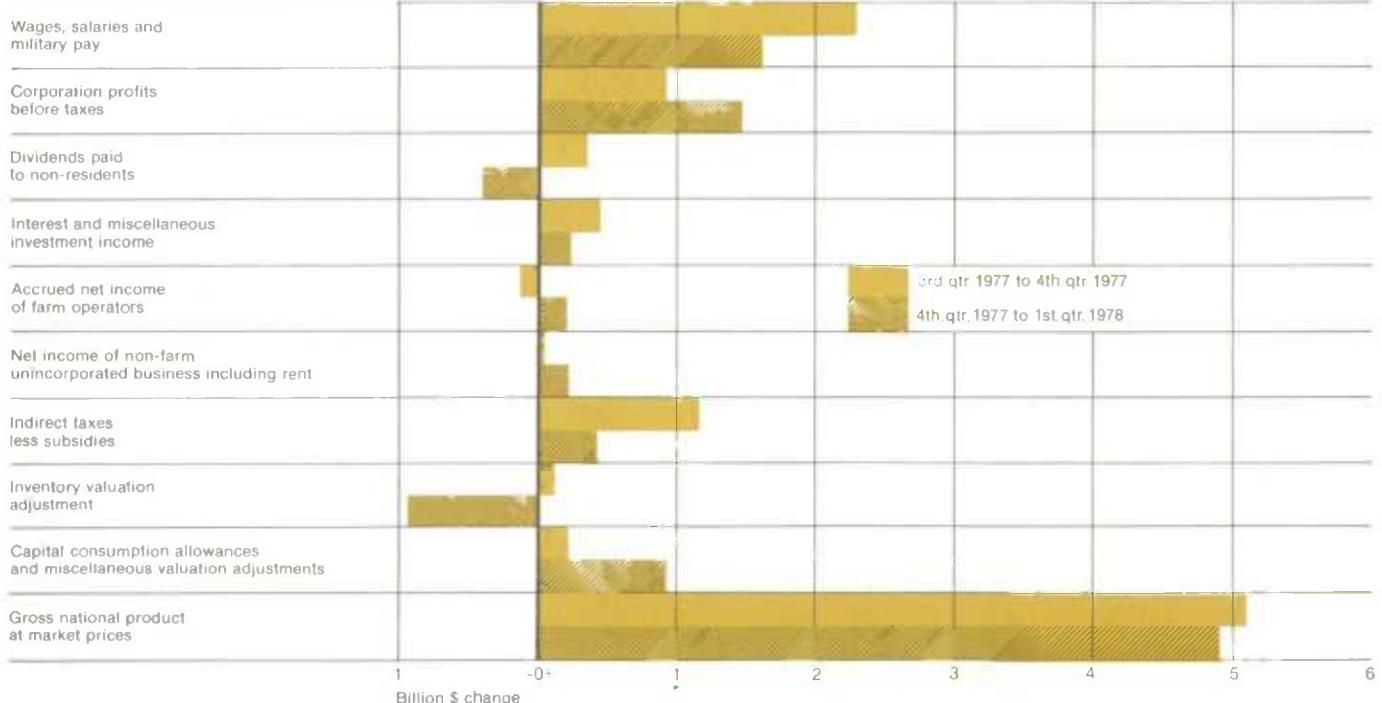

The 2.0 per cent fall in the volume of total gross fixed capital formation was the product of a 2.4 per cent decline in government investment and a further 1.9 per cent slide in business investment. The decline in government investment largely originated in reduced non-residential construction. Within business investment, non-residential construction edged up 0.7 per cent, while machinery and equipment fell 3.7 per cent; this left business investment in plant

Gross National Product, seasonally adjusted at annual rates, increased 2.3% in the first quarter of 1978 to a level of \$222.3 billion; measured in real terms, GNP increased 0.7%.

Wages, salaries and supplementary labour income rose 1.3 percent. This represents a continuation of the moderate rate of growth of labour income which began in 1977. Corporation profits before taxes increased 6.3%. Most other major components of GNP, except dividends paid to non-residents, showed moderate increases over last period.

Quarterly changes in GNP and components

All quarterly data adjusted for seasonal variation and at annual rates.

and equipment 1.7 per cent below the level in the fourth quarter. The 2.5 per cent decline in residential construction, which may surprise some in view of the first quarter increase in housing starts, was the result of a rise in work-put-in-place being outweighed by overall weakness in other construction expenditure categories.

Inventory Investment

The value of physical change in inventories in real terms swung \$556 million to a liquidation of \$380 million in the first quarter, largely as a result of a \$592 million downswing in business non-farm inventories from the fourth quarter. Within the non-farm sector, wholesale trade stocks were liquidated after considerable accumulation in the fourth quarter. Additional decumulations also occurred in the mining sector, partly due to increased exports of mining products. These swings more than offset some increased accumulation in manufacturing stocks.

Incomes

Wages, salaries and supplementary labour income rose 1.3 per cent. This represents a continuation of the moderate rate of growth of labour income, which began in 1977. The increase in labour income, together with rises in net income of farm operators from farm production, net income of unincorporated business including rent, and a deceleration in gov-

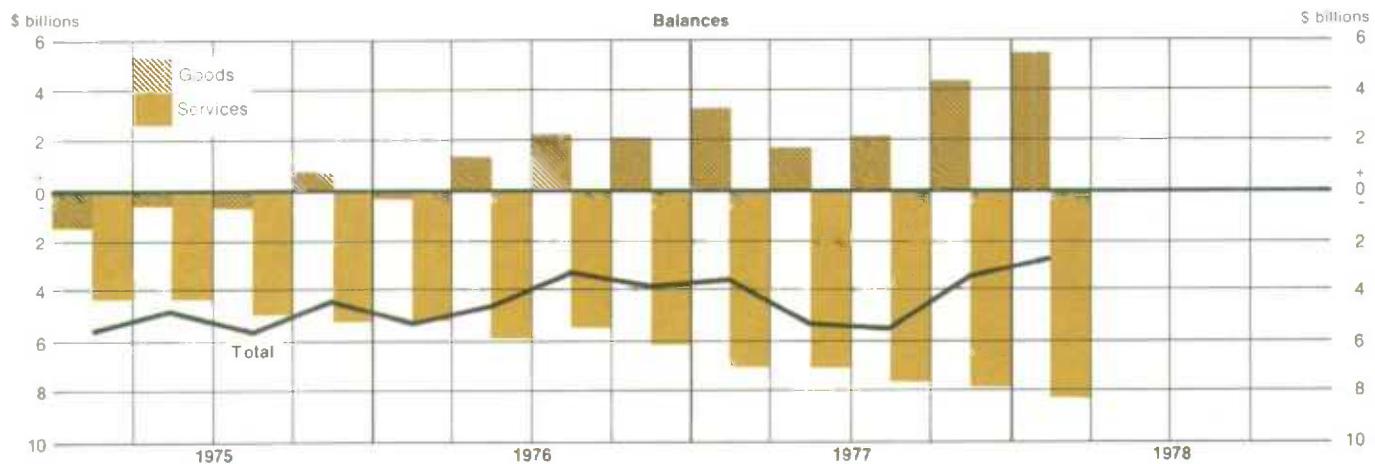

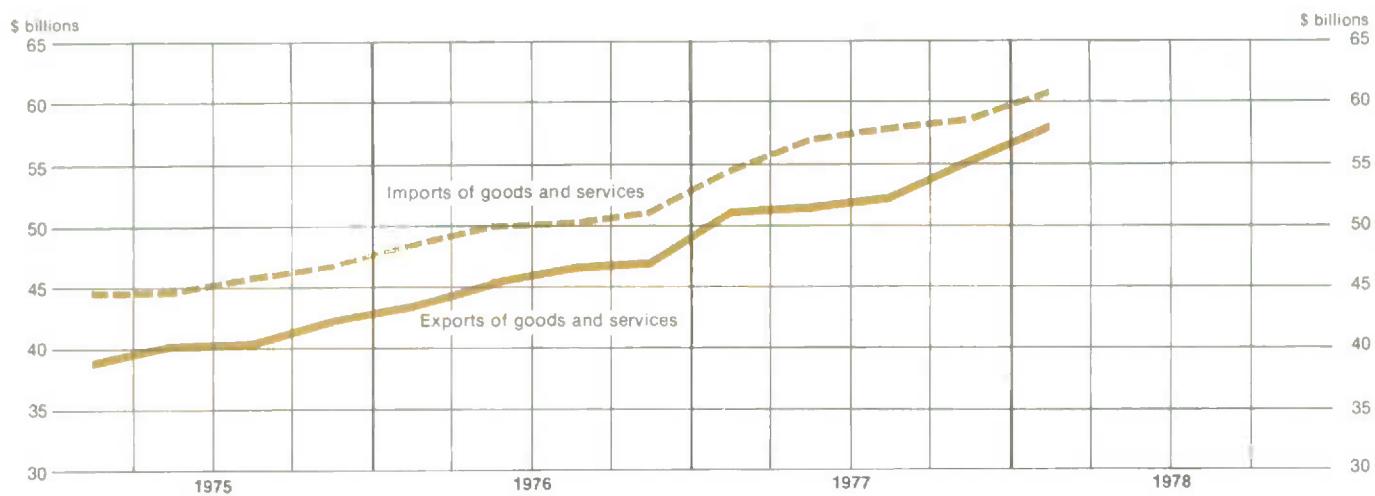

ernment transfers to persons, combined to slow the growth of personal income to 1.8 per cent. A 2.8 per cent fall in personal income taxes, reflecting the federal income tax reduction in January and February, helped to increase personal disposable income 2.2 per cent. With personal expenditure on goods and services expanding at a 3.0 per cent rate of growth, the personal savings rate fell to 10.8 per cent from 11.5 per cent in the fourth quarter.

Corporation profits before taxes rose 6.3 per cent in the first quarter. This was the result of increased profits in mining, trade, finance, insurance and real estate industrial groups.

The Government Sector

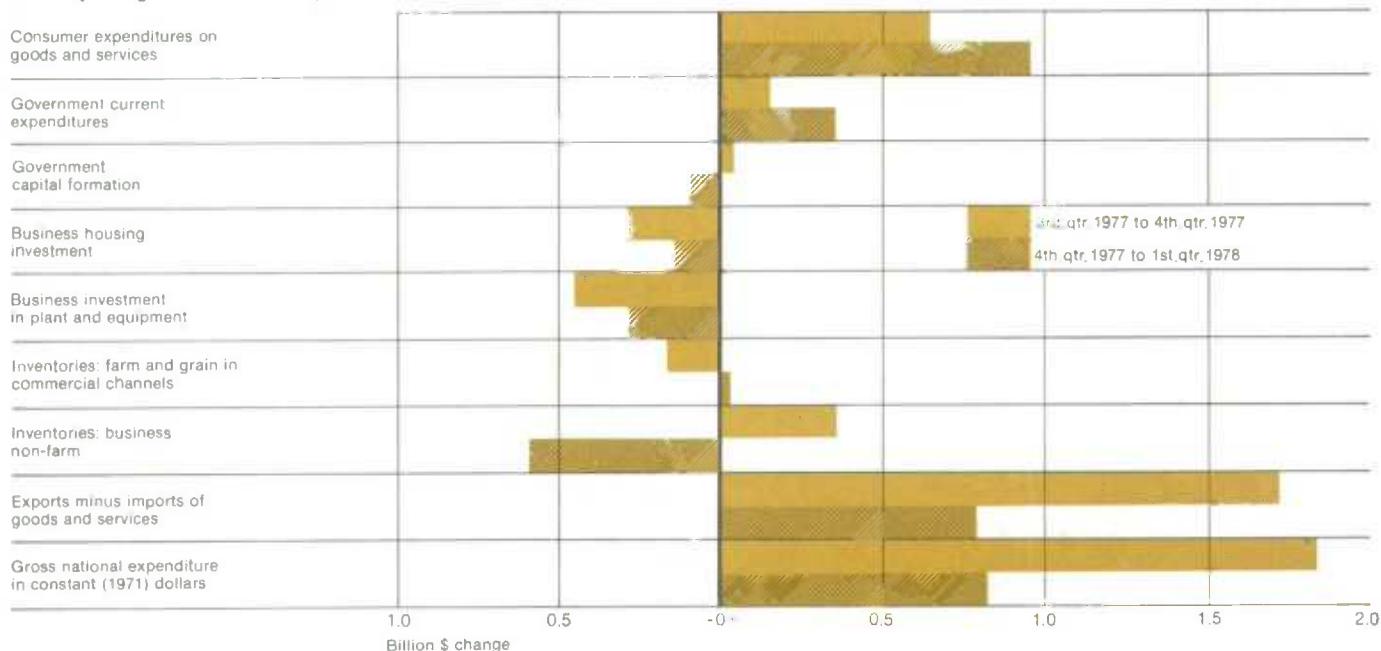

Total revenues of all levels of government combined (excluding intergovernmental transfers) rose by 2.4 per cent in the first quarter. All categories of revenue increased with the exception of personal direct taxes, which declined 1.2 per cent, due to the federal income tax reduction in January and February. Total expenditures of all levels of government increased 3.5 per cent in the quarter with the largest increase in current expenditure on goods and services, particularly at the federal and provincial levels. Because total revenues did not increase as rapidly as expenditures, the deficit of the government sector, on a national accounts basis, widened from \$7.9 billion in the fourth quarter to \$9.0 billion in the first quarter.

Exports rose 4.8% during the first quarter of 1978, a slightly smaller growth than the 5.5% fourth quarter increase. Imports advanced 3.3%, leaving a \$2.7 billion deficit in the trade of goods and services. This was a \$0.7 billion improvement over the 4th quarter deficit of \$3.5 billion.

Improved personal expenditure on goods and services, stronger government current expenditures, and export growth more than offset negative growth in business and government investments.

Quarterly changes in GNE and components in constant (1971) dollars

All quarterly data adjusted for seasonal variation and at annual rates.

Table 1. National Income and Gross National Product, by Quarters, 1977 and 1978

Change in other farm-held inventories	-268	588	-184	-424	-72	-836				
Grain in commercial channels	-116	-196	-328	-180	-205	344				

¹ Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication *National Income and Expenditure Accounts, Third Quarter 1977* (Catalogue 13-001).² Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.³ Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.⁴ The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)⁵ In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

Gross National Expenditure in 1971 dollars ¹	121,612	122,024	122,388	124,220	122,561	125,048				
Final domestic demand	127,000	126,876	126,996	127,112	126,996	127,892				

¹ The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

Some Characteristics of Full-time University Teachers, 1956-57 to 1977-78

Dr. Max von Zur-Muehlen*

Since 1956-57 Statistics Canada has regularly gathered detailed information about full-time university teachers, biennially at first, and annually after 1966-67. This article represents a statistical overview of some characteristics (age, sex, rank, qualifications and teaching discipline) of these teachers, and covers the 22 years between 1956-57 and 1977-78. Because Canadian universities are now entering an era of limited growth, a review of the past may put future trends in perspective.¹

Data in the first three tables trace the increase of faculty at 46 institutions by province; the following three tables break this information down by eight teaching fields and 47 disciplines. The subsequent tables give national data for selected years - the proportion of females, rank distribution, average age, and doctoral qualifications by discipline.

Table 1 reveals the remarkable and unprecedented growth of the number of teachers, in the sixties and early seventies. The total in the 46 universities rose from 5,463 in 1959-60 to an estimated 30,567 in 1977-78, almost a sixfold increase. In 1959-60 the 30 to 50 "other institutions" accounted for only 463 teachers, many of them in the three military colleges. This group grew to 1,498 in 1974-75, and declined to 1,350 in 1977-78, including over 600 from Ryerson Polytechnical Institute.

For several years, notably from the mid-sixties to the early seventies, the ranks of teachers swelled by more than 2,000 annually. This rapid increase is exemplified by Memorial where faculty increased from 63 in 1959-60 to 805 in 1977-78. Teaching staff at many other institutions grew tenfold during these 19 years, and none of the institutions in Table 1 failed to at least double its full-time faculty.

Expansion at French-speaking universities was particularly rapid, and most Ontario universities experi-

enced six- to tenfold increases. Furthermore, six of Ontario's sixteen universities did not exist in 1959-60. The staff at one of the new institutions, York, grew from 12 to around 1,000. By 1974-75, Ontario universities alone had more than twice as many teachers (11,078) as there had been in all Canada 16 years before. Faculty growth in the Western Provinces proceeded at a similar rate. At the University of Manitoba they increased from 301 to 1,249; the University of Saskatchewan (including Regina), from 284 to 1,353; Alberta, from 396 to 1,620, and British Columbia, from 594 to 1,971.

Growth rates in Nova Scotia and New Brunswick were slower. However, in these two provinces, the faculties at universities like Dalhousie, St. Mary's and Moncton increased as rapidly as the national trend.

Table 2 shows the percentage distribution of university teachers among institutions and provinces in selected years.

The concentration of faculty increased in Ontario, Quebec, Alberta, and Newfoundland (Memorial), and declined in the other provinces. Between 1959-60 and 1977-78 Ontario's share rose slightly (from 34.7 per cent to 36.4 per cent) and Quebec's from 19.2 per cent to 21.8 per cent. Together McGill and the University of Toronto represented 22.5 per cent of all university teachers in 1959-60; by 1977-78 this declined to 11.8 per cent, as other universities had grown more quickly. Memorial's share, which had been 1.1 per cent, increased to 2.5 per cent. The universities in Nova Scotia experienced a gradual drop: 5.8 per cent to 4.7 per cent; a smaller decrease occurred in New Brunswick: 3.6 per cent to 3.2 per cent. Manitoba, Saskatchewan and British Columbia underwent a decline in contrast to Alberta, where the percentage of teachers rose from 6.7 per cent to 8.7 per cent of Canada's total. On average,

* Dr. Max von Zur-Muehlen is Research and Special Projects Coordinator of the Institutional and Public Finance Statistics Branch Statistics Canada.

¹ The data in this article are derived from the university teachers file of Statistics Canada, which covers only full-time faculty. Occasionally, to achieve consistency, estimates have been utilized, particularly for the discipline breakdown. Affiliated and federated institutions are reported under their parent university.

the "other institutions" accounted for 3 per cent to 4 per cent, a proportion that has remained stable in recent years.

Table 3 shows growth of the number of teachers as an index, using 1967-68, the year in which the Federal-Provincial Fiscal Arrangements Act was instituted, as a base of 100. The index rose to 191 in 1977-78, but with considerable provincial and institutional variation.

Gains were greatest during the late sixties, and have levelled off since 1972-73. Although the faculty of some Ontario universities has doubled or tripled since 1967-68, the province's index stood at 185 in 1977-78, slightly below the national average. The number in Quebec's French-speaking universities increased more rapidly than in the English-speaking institutions. Except for Alberta, the Western provinces experienced slower than average growth.

Table 4 indicates growth in the number of full-time teachers in every field and discipline, but more in some than others. Thus, classics teachers (Latin, Greek, Hebrew and classical studies) increased from 119 in 1956-57 to only 260 in 1976-77. In contrast, the number of history teachers burgeoned from 125 to 1,063. Most other disciplines of the humanities experienced a similar rise. For example, teachers of Spanish increased from 9 to 150, and of English from 253 to 1,374. Numbers in the humanities have levelled off or even declined slightly since the early seventies, as enrolment shifted toward the social sciences. Anthropology teachers increased from 9 in 1956-57 to 388 in 1976-77; sociology teachers from 32 to 917, and psychology teachers from 88 to 1,376. An outstanding feature of the early seventies has been continued growth in applied subjects such as commerce and business administration where the faculty rose from 923 in 1971-72 to 1,490 in 1976-77; law from 428 to 582, and social work, from 274 to 352.

The number of teachers in agriculture did not rise so rapidly from 243 in 1956-57 to 457 in 1976-77. However, some formerly classified under agriculture may have been reclassified under another biological science. The number of teachers of chemical and electrical engineering increased sixfold from 38 to 228, and from 74 to 476, respectively; but in civil engineering the number increased only from 152 to 384. The greatest increase in the physical sciences was among teachers of chemistry: from 334 in 1956-57 to 1,016 in 1969-70, but their numbers have since levelled off.

Although all faculties expanded during the 21 years, shifts among individual disciplines have been marked (Table 5). A discernable trend reflects the more rapid growth of the social science faculties in rela-

tion to some other disciplines. The proportion of classics teachers declined from 2.4 per cent of the total in 1956-57 to 0.8 per cent in 1976-77; agriculture, from 4.9 per cent to 1.4 per cent, and chemistry, from 6.5 per cent to 2.9 per cent. The percentage of teachers in all engineering disciplines has declined from 11.6 per cent to 7.5 per cent. In contrast, some social science disciplines doubled, tripled and even quadrupled their representation e.g., commerce and business administration (2.2 per cent to 4.7 per cent) geography (0.8 per cent to 2.1 per cent), psychology (1.8 per cent to 4.3 per cent), and anthropology and sociology (0.9 per cent to 4.7 per cent).

An index using 1967-68 as a base of 100 illustrates the growth pattern in each discipline more clearly (Table 6). Between 1967-68 and 1976-77 the index rose from 100.0 to 189.6 with considerable variation among disciplines. For example, by 1976-77 several had topped 200: education (250.1), music (234.0), social work (268.7), and geology (217.3). In contrast, classics declined (97.7 per cent), and English and chemistry reached only 121.6 and 108.7. Overall, the social sciences advanced to 223.0, compared with 145.4 for the humanities and 154.2 for the physical sciences.

University teaching has long been the preserve of males. In 1958-59 only 10.7 per cent were female, a proportion that increased to 14.4 per cent in 1976-77 (Table 7). The percentage of women teaching in traditional "female" fields (education and nursing) has declined since 1958-59, although they still constitute more than one-fifth of each. In fine and applied arts the proportion of women increased slightly to 20.4 per cent. Their representation on humanities and the social science faculties has grown substantially from 9.7 per cent and 7.8 per cent to 17.1 per cent and 12.4 per cent. Over the years, the percentage of females on science, excluding health and biological sciences, has been small (1.0 per cent in engineering and 3.7 per cent in the physical sciences in 1976-77).

Although the average age of university teachers varies among fields, the group as a whole has aged slowly. In 1958-59, the average was 38.9; by 1976-77 it had risen only to 41.4 (Table 8). The oldest teachers were in the humanities (42.7), health sciences (42.4), and engineering (42.5); the youngest in the social sciences (39.4) and physical sciences (40.9).

The age structure of university teachers is related to their rank distribution (Table 9). In 1958-59, 1963-64, and 1968-69 assistant professors were the modal group. However, the proportion at this rank

fell from 36.6 per cent in 1968-69 to 27.6 per cent in 1976-77. To some extent, shifts in rank distribution parallel growing numbers, particularly during the mid-sixties, when many assistant professors were hired. In 1958-59, 49.8 per cent were at the two senior levels (full professor and associate professor); this declined to 44.8 per cent in 1968-69, but rose again to 59.4 per cent in 1976-77. The increase occurred as the assistant professors of the mid-sixties were promoted through the associate to the full professor level, especially in expanding fields such as education, fine and applied arts, humanities and social sciences. In the sciences about 70 per cent were at these ranks in 1976-77.

Table 10 shows doctoral qualifications for five selected years, by field and discipline. The overall proportion increased from 41.7 per cent in 1958-59 to 49.4 per cent in 1968-69 and to 60.0 per cent in 1976-77. Qualifications varied substantially among disciplines, reflecting the distinction between theoretical and applied fields for in many of the latter a Ph.D. is not a teaching prerequisite. In 1976-77 an average of 84.6 per cent of the teachers in the physical sciences had doctorates, ranging from 80.5 per cent in mathematics to 91.0 per cent in chemistry. Proportions were low in applied disciplines like nursing (5.4 per cent), architecture (10.1 per cent), fine and applied arts (20.8 per cent), law (18.1 per cent), and dentistry (22.3 per cent).

The percentage of teachers with doctorates had increased considerably in some disciplines. For example, in 1958-59, 11.8 per cent in commerce and business administration held Ph.D.'s; this increased to 41.5 per cent by 1976-77. Since a

sizeable number of teachers are still completing their studies, the proportion of doctorates in most disciplines is expected to continue to grow.

The expansion of full-time teachers has subsided, although during the last few years universities have still added about 1,000 new positions per annum. This has happened primarily in "applied" disciplines such as business administration and mass media studies. Numbers in other disciplines have levelled off, and in a few, such as chemistry and English, have declined.

One consequence of the growth during the late sixties and early seventies has been an increasing proportion of full-time faculty at the two senior ranks (full and associate professors). A concomitant feature has been a rather moderate increase in the average age. As a result of this young age structure, few replacement positions will be opened by retirement and death over the next few years. The proportion of female teachers has increased gradually, but with substantial variations by discipline. The qualifications of university faculty, as measured by doctorates, have improved even during the period of rapid expansion. In many disciplines more than three-quarters of the teachers have doctorates.

The purpose of this article was to provide consistent historical series of some characteristics of full-time university teachers. Other variables such as country of first degree, citizenship, previous employment pattern and salary have not been analyzed here, although this information might provide further insight into one of the major components of university education.

Observations

1976 Census Publication Programme

Results of the 1976 Census of Canada began appearing in printed bulletin format in mid 1977 and will continue to be produced for the next 18 months before the publication programme is complete. It will require some 140 plus bulletins to tell the complete story of data collected from the 1976 Census ranging all the way from pure administrative procedures to basic population counts for Canada, the Provinces and municipalities, to information concerning the quality of data produced, with details of errors inherent in that data. The following provides a brief description of the publication programme of the most recent census with some indication as to when it will become available.

The Regular Volume Series. This series is similar in many respects to the published bulletins of past censuses, however there are some differences. The 1976 Census has implemented a certain number of improvements which the reader will find helpful in the interpretation of the data. All bulletins include statements on basic measures of data quality, with specific reference to response rates, coverage error and the total standard error. A number of bulletins have been designed to incorporate a compendium of the most widely used population and housing data. They cover such geographic areas as the Census Tracts in the larger urban areas (50,000 population and over), Provincial Census Tracts, in the remainder of the country, municipalities of 5,000 population and over, Census Metropolitan Areas, and the 282 new federal electoral districts based upon the 1976 Representation Order and upon which the next general election of Canada will be based. Bulletins have been made more attractive, with a distinctive cover design, the addition of colour into the graphs and charts, and the introduction as well of coloured thematic maps.

Ten Volumes incorporate all the bulletins of the Regular Volume series.

They are as follows:

Volume	No. of Bulletins	Title
1	12	Geographic Distributions
2	9	Demographic Characteristics
3	11	Dwelling and Households
4	6	Families
5	9	Labour Force Activity
6	32	Census Tracts
7	8	Provincial Census Tracts
8	6	Supplementary Reports: Geographic and Demographic
9	6	Supplementary Reports: Housing and Families
10	8	Supplementary Reports: Economic Characteristics

For details on listing of individual bulletins see *Statistics Canada Catalogue Supplement, 11-204/1/77*.

Geographic distributions have been available since the summer of 1977. This series will be completed during the first half of 1979.

Enumeration Area Reference Lists

The Enumeration Area Reference Lists of the 1976 Census establish the linkage amongst the various geographic areas of census data collection and presentation – thus "geostatistical areas".

Enumeration Areas by number are shown in 11 bulletins as follows. They have been available since summer 1977.

1. Census Subdivisions (Municipalities) Atlantic Provinces
2. Census Subdivisions (Municipalities) Quebec
3. Census Subdivisions (Municipalities) Ontario
4. Census Subdivisions (Municipalities) Western Provinces and the Territories

5. Census Tracts
6. Provincial Census Tracts – Atlantic Provinces
7. Provincial Census Tracts – Quebec
8. Provincial Census Tracts – Ontario
9. Provincial Census Tracts – Western Provinces and the Territories
10. Components of Census Metropolitan Areas and Census Agglomerations
11. Urban Areas by Census Division (Counties, Regional Municipalities, Regional Districts, etc.)

1976 Census Research Series

Popular, descriptive type of studies covering major subject matter areas will be undertaken. The series will be entitled Canadians 1976. The first to be released will be "The Elderly" and will appear in the fall of 1978. Subsequent studies will concentrate on such topics as "The Cities", "Women in the Labour Force" or "The Family". They will be approximately 25 pages in length, interspersed with appealing and appropriate illustrations, photographs, captions and summary tables. They will highlight major issues of public interest and generate increased awareness of data from the Census of Canada.

1976 – Quality of Data Series

This is a new series in which all information relating to the quality of the 1976 Census data will be presented. There will be two sub series. The first entitled "Source of Error" will contain five bulletins, each dealing with a particular type or source of error. They are (1) coverage, (2) response, (3) processing, (4) the effect of edit and imputation, (5) error introduced by sampling and weighting. They will contain a description of the census operations relevant to the particular error source, and will present the results of studies carried out to measure the error. These bulletins will be released in the January to July period of 1979. The second sub series entitled "Content Studies" will contain seven bulletins each dealing with a specific subject matter area: (1) basic demographic (age, sex, marital status), (2) mother tongue, (3) households and families, (4) housing, (5) education, (6) labour force activity and (7) mobility. The bulletins will provide background information on the relevant variable, i.e. historical comparability in concepts or definitions, procedures used to collect and process the data. Major findings of the evaluation study will be highlighted along with the fundamental measures of data quality. They will be released in the period September 1979 to March 1980.

The Administrative Report

Every Census since 1931 has produced an Administrative Report and the 1976 Census will be no exception. It describes all facets of the Census from its very early planning to its legal obligations. A major format change from previous censuses has been introduced. The Report will appear in four parts, so that information can be made available as currently as possible.

- | | |
|--------|--|
| Part 1 | will describe the 1976 Census Publicity campaign, the public relations programme, and the Field collection procedures. |
| Part 2 | will describe the processing procedures as well as the budgetary details. |
| Part 3 | will describe in detail the tabulation and publication programme as well as the census data dissemination program, and an outline of the complete evaluation programme. |
| Part 4 | called a Supplement, will provide a reproduction of all 1976 Census forms, the reasons for each question on the questionnaire, organization charts and pertinent sections of the Statistics Act outlining the legality and authority for the Census. |

The first three parts of the Administrative Report will be published in the October 1978 to March 1979 period while Part 4 (Supplement should be available by the end of 1979).

Additional information on the 1976 Census publication programme can be obtained from D.R. Bradley (613-994-5869), Census Characteristics Division, Statistics Canada, Ottawa K1A 0T6.

Printed bulletins can be ordered from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. □

The Book That Says It All – About Canada

The 1978 edition of Statistics Canada's annual showpiece publication – *The Canada Handbook* – is now available in the bookstores. In 365 pages, the *Handbook* describes the physical environment, outlines recent social, cultural and economic developments and summarizes government services. Information is provided by divisions of Statistics Canada, other government departments and outside authors who specialize in subject areas that government agencies cannot cover. Articles are superbly illustrated by 250 photographs, 244 of them in full colour.

The 1978 *Canada Handbook* (Catalogue no. 11-203E) is available by mail from Printing and Publishing, Supply and Services Canada, and Publications Distribution, Statistics Canada, Ottawa K1A 0T6. The book will also be widely available in retail bookstores across the country, priced at \$3.75. □

The Economic Value of Household Work

Estimating the Value of Household Work in Canada, 1971 (Catalogue no. 13-566, Price: \$1.05) a study undertaken by Professor Oli Hawrylyshyn of Queen's University and sponsored by Statistics Canada, is now available. The study describes the potential for measuring the economic value of household work and delineates the theoretical and methodological

foundations for such evaluation. The paper contains various estimates for household work in 1971, and analyzes their statistical quality. This publication continues the exploration into the measurement of economic non-market activities begun with the report *A Review of Recent Proposals for Modifying and Extending the Measure of GNP* (Catalogue no. 13-588, Price: \$1.05).

Inquiries about this publication should be addressed to H.J. Adler (613-992-4571), Office of the Senior Advisor on Integration, Statistics Canada, Ottawa K1A 0T6.

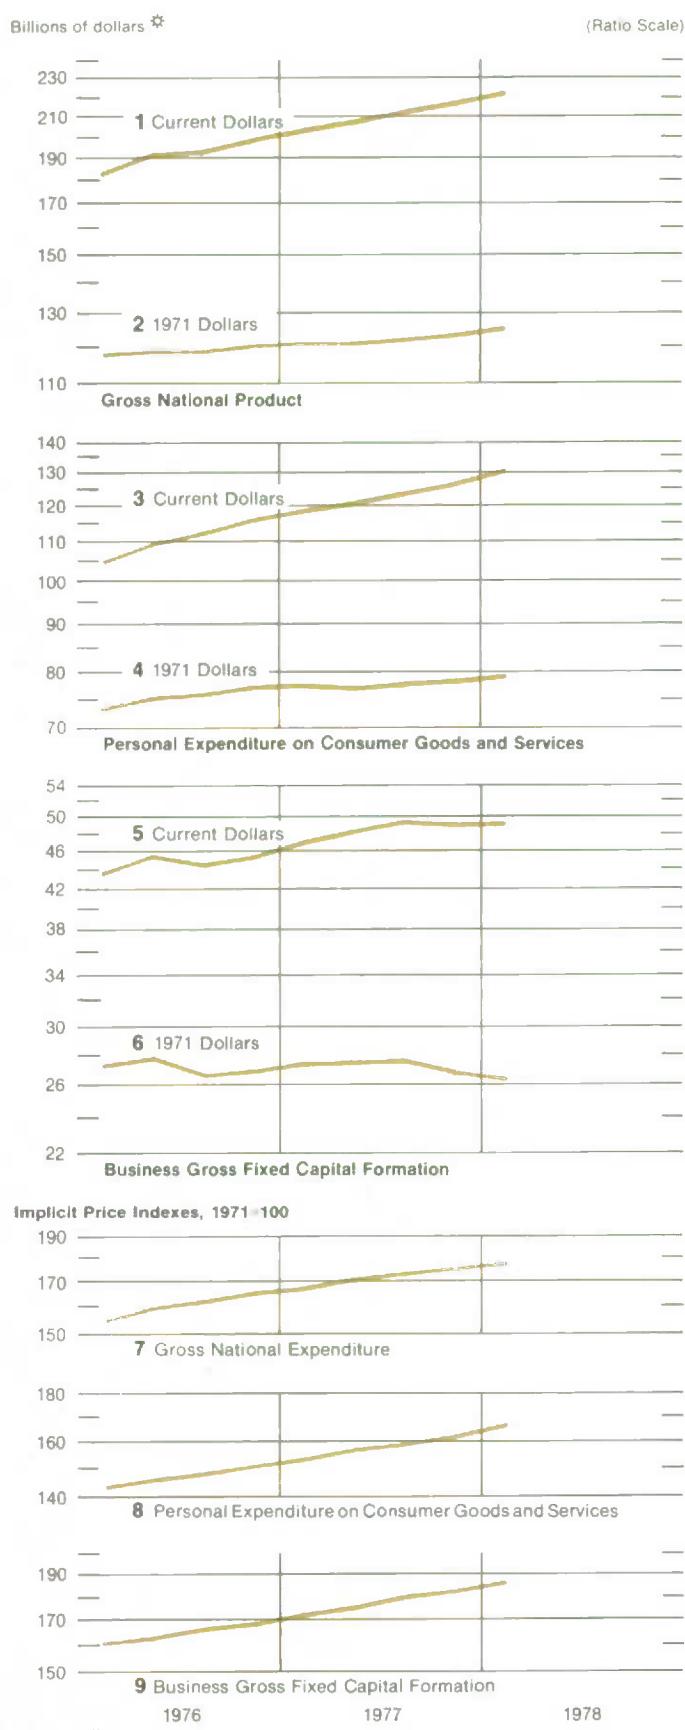

Estimating the Value of Household Works in Canada, 1971 (Catalogue no. 13-566, Price: \$1.05) can be obtained from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. ■

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. The counts for the year 1975 are provisional while those for the succeeding years are estimates. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

¹Excludes profits (net of losses) of government business enterprises

²Includes the withholding tax applicable to this item.

³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government.

⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures.

⁵Includes net income of independent professional practitioners.

⁶See footnote 4, Table 1.2.

¹Includes defence expenditures
²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure.
³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets.
⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1).
⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance.

²Tax liabilities.

³Withholding taxes.

⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. ²Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. ³Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

¹In calculating time lost, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. ²The industry groups from January 1973 forward are based on the 1970 Standard Industrial Classification. ³The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The statistics for individual industries exclude strikes and lockouts involving fewer than 3 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities.

⁴Excludes domestic service.

¹The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

¹See footnote 1 and source in Table 11. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 10. ³In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

⁴Except machinery and transportation equipment industries.

¹The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products, knitting mills, printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ³Total manufacturing inventory owned by manufacturers including warehouse stocks. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

¹Because the supplementary classification for automotive products consist of industries which are also included in the appropriate economic use group this series is inclusive of those aggregated for the Canada total. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Section 6-Table 5

July 1978

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned												Inventories held: raw materials																	
	Consumer goods			Construction materials and components			Other intermediate goods & supplies			Supplementary classification: automotive products			Consumer goods			Machinery and equipment	Construction materials and components			Other intermediate goods and supplies		Export based industries								
	Non-durable		Durable	Machinery and equipment											Machinery and equipment

¹Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. ²Intended for cigarettes.

³Includes pipe, plug, chewing, twist, snuff etc. ⁴Sales to wholesalers, retailers and institutions which are subject to excise duty. ⁵Includes sales for ships' air stores, armories of Canada and for export. ⁶End of period.

¹100 cu ft of solid wood, pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

A				572										

¹Barrels of 35 Canadian gallons ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Source: Refined Petroleum Products (45-004), Statistics Canada.

1A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²The above table covers all sales to users and includes sales by manufacturers through their dealers and agents as well as the sales of importers made directly to users. Even though sales are to users, i.e. farmers, values are stated at the dealer's net buying price or at wholesale price.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²Farm share only of motor vehicles. ³In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. ⁴In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

¹Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. ²Includes case and bulk. ³As at end of period. Last month is preliminary. ⁴Exclusive of Newfoundland; includes hatching eggs.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. ²Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. ³Includes baking and frying oils and fats. ⁴Includes stocks held by manufacturers and other warehouses. ⁵Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. ⁶Includes solid coated bulk packages and novelties.

Note: Components may not add to totals because of rounding.

¹Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. ²Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. ³Personal cash loans of up to \$1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. ⁴Personal cash loans over \$1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. ⁵Includes bank-sponsored credit card balances. ⁶The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. ⁷Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. ⁸Bills due for non-commercial use of telephones, gas and electric power. ⁹Personal cash loans only.

¹Column numbers refer to tables 3 and 4 section 11.²Includes special transaction-trade, not shown separately.³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months.⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors. Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

¹Column numbers refer to tables 3 and 4, section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes wood pulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. ¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage.

Note: Components may not add to totals because rounding. ¹This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. ²Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allowance for the take-over of Nova Scotia Light & Power common shares.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts. Sources: Department of Finance.
