Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory — \$60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$16.70 Canada, \$20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Dровер — Director, Corporate Assignments Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
M. Podehl — Director, CANSIM Division
G.J. Brackstone — Director General, Methodology Branch

A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Senior Advisor, Population Studies and Statistics
P.N. Triandafilou — Director, Agriculture Statistics Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation,

are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Monthly or quarterly data may not add to totals due to rounding.

Financial Activity in Canada

Second Quarter 1984

In line with only moderate growth of the production of goods and services in the second quarter, final demand for conventional credit market instruments remained restrained. The non-financial domestic sectors of the Canadian economy raised \$16.8 billion in the period, representing 16.4% of Gross National Expenditure, compared with 17% in the previous quarter and 15.8% in the second quarter of 1983.

General government (Sectors X and XI) were the principal borrowers, accounting for almost half of the funds raised on these markets, while households were also important borrowers, raising one third. While this situation was somewhat similar to the second quarter of 1983 when households and government more than accounted for all the funds raised on conventional markets, it was something of a reversal from the previous quarter which had been marked by a notable increase in activity on financial markets by non-financial private corporations.

It would appear that the drop in the amount of external funds raised by non-financial private corporations on these markets, from \$5.1 billion in the first quarter to \$2 billion in the second, was attributable to a number of factors. Internally generated funds were able to generate almost all the capital acquisition costs: gross fixed capital formation was \$1.5 billion higher than the previous quarter but inventories held dropped moderately, (compared with a very rapid accumulation in the first quarter) which almost balanced the record net savings and capital consumption allowances. The continuing relative weakness of fixed capital formation by these corporations — amounting to only 9.9% of GNE, compared to 13.9% in the second quarter of 1981 — would appear to be related to their low capacity utilisation rates, on the one hand, and to their need to restore their debt: equity ratios to a more historic norm. To that end, net share issues amounted to \$1.5 billion. An additional aspect of the gradual

movement to healthier balance sheets was the lengthening of debt schedules, as long-term debt — mortgages and bonds — raised \$1.3 billion, while bank debt, mostly a short-term instrument, was paid down by \$1.7 billion.

With the federal government's financing requirement continuing to grow, reaching \$8.2 billion in the quarter under review, the Government of Canada remained the single largest borrower on financial markets. Net issues of Treasury bills amounted to \$5 billion, up from \$2.7 billion in the previous quarter and \$4.2 billion in the second quarter of 1983. The Treasury bills sales went, in fair measure, to refinancing \$2.4 billion in redemption of Canada Savings Bonds. This latter figure was almost twice the redemptions of the first quarter. It would appear that the household sector was largely exchanging holdings of the one instrument for the other, innovations in financial markets making it easier for persons to buy bills. Net issues of Canadian dollar marketable bonds produced \$2.3 billion, up from \$2.0 billion in the previous quarter. The emphasis on Treasury bill financing reduced the average term to maturity of the Government of Canada debt (excluding Canada Savings Bonds) from five years and five months at the end of March to five years and four months at the end of June. Of the gross new issues of the federal government's marketable bonds denominated in Canadian dollars, 42% had maturities of five years or less, while only 29% had maturities of longer than twenty years, down from one third in the previous quarter.

The federal government's financing needs were also met in part through operations on the foreign exchange markets. Foreign currency borrowings amounted to U.S. \$500 million in borrowings from non-resident banks, 300 million Swiss franc loan and 700 million Swiss franc bonds, together amounting to \$1.2 billion. While these funds were used in part to

refinance a maturing Deutschemark bond, the balance was transferred to the Exchange Fund Account. To the extent that these funds were used to acquire Canadian dollars on foreign exchange markets they would have represented a source of funds to the Government of Canada's Consolidated Revenue Fund.

Households raised \$6.0 billion in net new funds from conventional credit markets. Most of these funds were from consumer credit (\$1.8 billion) and mortgages (\$3.3 billion). There is an element of seasonality in household borrowings, particularly for consumer credit; therefore, although this represented a two fold increase over the first quarter, it is practically identical to the borrowings in the same quarter of 1983. This relative strength in consumer credit is a little surprising in view of the slowing in auto purchases which typically is a major determinant of the movements in consumer credit. Mortgage financing was about the average for the previous five quarters, but it was \$900 million lower than the second quarter of 1983 when government programs prompted increased borrowing.

Following the late March weakness vis-a-vis its United States counterpart, the value of the Canadian dollar continued to fall in April and May before dropping sharply in June to touch a record low of 75.77 cents U.S. Low inflation, strong growth and a relatively restrained monetary policy by the Federal Reserve Board helped make attractive holdings of United States dollar instruments. Yields on short-term instruments rose over one percentage point, while longer-term instruments demonstrated an even greater increase. As a result, despite rises in interest rates in Canada, there were periods during the quarter when the uncovered differential on thirty day commercial paper moved in favour of investing in the United States. By the end of the quarter, this differential showed about 40 basis points in Canada's favour. Yields in Canada on shorter term instruments rose by more than those on longer term, indicating that ex-

change rate considerations appeared to be the major influence on rates.

The Bank of Canada acquired \$900 million of Government of Canada Treasury bills during June, leading to a net acquisition of \$465 million over the quarter. Without these purchases, interest rates would have risen more. At the end of June, yields on 90-day commercial paper were 12.1%, slightly lower than 91-day Treasury bills.

In contrast, the chartered banks sold \$615 million in Government of Canada Treasury bills, the third successive quarter in which they have reduced their holdings, bringing the cumulative sale to \$3.5 billion. However, with Canadian dollar deposit liabilities growing (for only the second of the last ten quarters), and loans resuming their net repayments, the chartered banks tended to apply these funds to their subsidiaries and branches abroad. Since the peak of loan demand at the end of 1981, \$17.2 billion have been repaid, representing 13% of the amount outstanding at that time. The reduction of the banks' loans outstanding is largely attributable to non-financial private corporations' restructuring their balance sheets. At the end of June, the banks' excess secondary reserve ratio stood at 5.45, down from 5.60 in March, and well below the peak of 7.17 recorded in September, 1983.

The personal savings rate rose in the second quarter, partly as a result of the settlement of the strike in the forestry industry in British Columbia, as well as tax refunds' being mailed earlier than in 1983. Households tended to place their discretionary funds in deposits payable at a fixed date at banks, in term deposits at near banks, and into Treasury bills and short-term paper, while redeeming \$2.4 billion in Canada Savings Bonds. With \$1.3 billion redeemed in the first quarter, over 40% of the net issue of this instrument acquired in the fourth quarter 1983 have been encashed.

The Financial Market Summary Table compresses the abundance of detail presented in the Financial Flows sector tables by aggregating sectors and by deleting non-market instruments such as trade credit and claims on associated enterprises. The table also provides a useful approximation to final borrowing via financial markets (i.e., the organized markets for security issues and negotiated loans) and avoids double counting of the intermediary borrowing and re-lending of financial institutions. Line 5 (Total Borrowing by Domestic Non-Financial Sectors) provides the unduplicated total which serves as a simple summary statistic of domestic credit market activity. The addition of the Rest of the World and Financial Institutions (lines 6 and 8) completes the system and consequently line 9 (Total Funds Raised = Total Funds Supplied) reflects the basic identity that the change in liabilities, summed across sectors, for an instrument or instruments equals the change in assets, summed across sectors, for the same instrument or instruments. Further discussion of the table is contained in an article published in Financial Flow Accounts, Second Quarter 1976 and in the Canadian Statistical Review, March 1977.

- (1) Since Sector XII, Social Security Funds, has been consolidated with General Government, the holdings by the Funds of Provincial and Federal Government bond debt are netted out. The asset bond figure (category 2420) for Sector XII is subtracted from the sum of the liability bond figure for Sectors X (Federal Government) plus XI (Provincial and Local Governments and Hospitals).
- (2) Separate figures for the share liabilities of the Rest of the World (Sector XIII) are not available but since Foreign Investments (category 3530) consists mostly of shares, it is classified to Stocks.
- (3) The Stock figure included in Sector I and II is the true residual of category 3520, i.e., it is the sum of category 3520 (the stock liability) less the sum of category 2520 (the stock asset) for sectors III through XIII. This procedure is necessary to ensure the balance between total funds supplied and raised in line 9. In the main Financial Flows Matrix the sum across sectors of corporate claims plus stocks on the liability side equals the sum of the two on the asset side; however, stocks alone do not balance because stocks on the liability side include shares issued to associated enterprises (included in corporate claims on the asset side).

Observations

Women in the Work World

In 1981, for the first time in Canadian history, more than 50 per cent of women 15 years of age or older were either working or looking for work. *WOMEN IN THE WORK WORLD* describes various characteristics of the 4.5 million women who were part of the labour force at the time of the last Census.

It may come as no surprise to find that the highest participation rate was found among women who were single, and that the greatest increases in participation since 1971 were among married women. However, it may be a surprise that 56 per cent of mothers whose children were all between the ages of 2 and 5 were also in the labour force.

The surge of women in their early twenties into the labour force was almost as strong among married women as among singles. Getting married did not mean staying out of the work force as it did for most women a generation ago. However, while their numbers increased dramatically, women still earn less than men at every educational and age level.

Whether they live in a rural area or in a large urban centre, Canadian women are much more apt to be in the labour force if they have high school or post-secondary education. In 1981, over three-quarters of female university graduates were in the labour market;

in contrast, this was true of only one-quarter of women who now attained a level of grade 9 or more.

WOMEN IN THE WORK WORLD focuses on many of the major demographic and socio-economic characteristics of the working woman, including her age, marital status, education and province of residence. The section on women's participation in selected occupations and their average employment income (compared with that of men) will be of particular interest to all levels of government, and those involved with labour force studies and career guidance. Educators in the fields of socio-economic studies, commerce, and Canadian studies will find this report a useful tool.

As part of the Census Content Series, this publication is written in non-technical language and is enhanced by many tables and charts.

You can purchase your copy of *WOMEN IN THE WORK WORLD* (Catalogue No. 99-940; \$5.50 in Canada, \$6.60 elsewhere) by sending a cheque or money order payable to: the Receiver General for Canada, to Publication Sales and Services, Statistics Canada, Ottawa, Ontario K1A 0T6.

¹As of the first of each month. Quarterly and annual data from 1951 to April 1, 1981 are intercensal estimates; final postcensal estimates from July 1, 1981 to April 1, 1982; updated postcensal estimates from July 1, 1982 to October 1, 1983 and preliminary postcensal estimates for January 1984. For an explanation of population estimates methodology and data sources see catalogue (91-201) and (91-001). ²These estimates have been modified due to a revision in the number of births for January to December 1983.

Sources: Quarterly Estimates of Population for Canada and Provinces (91-001), Annual Estimates of Population for Canada and Provinces at June 1st (91-201).

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

^aIncludes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ^bTax liabilities ^cWithholding taxes. *The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

Year and quarter	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non- residents	Investment income paid to non- residents	Gross domestic product at factor cost	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non- residents	Investment income paid to non- residents	Gross domestic product at factor cost

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

Section 6 · Manufacturing

- 68 1. Total Inventories, Shipments and Orders in Manufacturing
- 69 2. Manufacturing Shipments by Industry
- 71 3. Manufacturing Inventories by Industry
- 73 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 74 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 75 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 76 7. Tobacco and Beverages
- 76 8. Rubber
- 77 9. Footwear
- 78 10. Production of Sawn Lumber
- 78 11. Pulpwood, Wood Pulp and Newsprint
- 79 12. Primary Iron and Steel
- 80 13. New Motor Vehicles
- 81 14. Production of Motor Vehicles in Canada
- 82 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)¹

Annual average and month	Shipments ²	New orders received during month ³	Unfilled orders at end of month	Inventory at end of month							Ratio of inventories owned to shipments	
				Owned ⁴	Held but not owned	All inventory held			Total	Raw materials	Goods in process	
						Total	Raw materials	Goods in process	Finished products

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. plus.²Gross new production by field less field flared and waste.

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

³Includes crude oil, condensate and pentanes

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Source: Housing Starts and Completions (64-002), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision.

²The major groups include additional components than the selected ones shown.

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

¹This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres, however, this comparison may not remain valid through time.

²Seasonally adjusted data for Saskatchewan is not available.
