## **Data in Many Forms . .**

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## **How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

### **CANSIM Division**

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(992-4734)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — \$60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory*, Catalogue 12-569 — \$15 Canada, \$18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## **Editorial Board**

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Acting Assistant Chief Statistician, Economic Statistics Field  
R.E. Drover — Director, Business, Provincial and Municipal Relations Division  
B.J. Lynch — Director General, Business Statistics  
R. Platek — Director, Methodology Division  
M. Podehl — Director, CANSIM Division  
G.J. Brackstone — Director General, Methods Development Branch

A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division  
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census  
P.N. Triandafillou — Director, Industry Product Division  
— Director General, System of National Accounts and Analysis Branch  
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## **Subscriptions**

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

### Section 5 — Table 3: Construction price statistics

Five series have been deleted in Residential building construction input price index. One new quarterly series has been added with this issue, total machinery and equipment price index.

The official time base for the construction union wage rate index has been converted from 1971 = 100 to 1981 = 100.

## Gross National Product

### Fourth Quarter and Preliminary Annual 1983 Advance Information

Gross National Product rose 1.0% in the fourth quarter of 1983 to a level of \$400.6 billion, seasonally adjusted at annual rates. Combined with virtually no change in the level of overall prices, real GNP rose 0.9%. Although this represented a slowing from the average rates of increase of 1.9% recorded in the first three quarters, the recovery phase of the business cycle was virtually completed as real GNP reached 99.7% of its peak level of the second quarter of 1981.

For the year as a whole, Gross National Product rose 9.0% to a level of \$388.7 billion. After allowing for an increase of 5.8% in the overall implicit deflator, real GNP rose 3.0% in the year. This followed a decline of 4.4% in real activity in 1982.

The recovery of economic activity in 1983 was broadly based with major contributions from a sharply lower rate of inventory decumulation, a 3.1% increase in real personal expenditure, a 9.0% recovery in the volume of merchandise exports, and a 27.6% increase in residential construction activity. Continued weakness in business investment in plant and equipment was the major restraining factor. A sharp reduction in inflation was evident as the overall implicit deflator rose 5.8% compared to 10.1% in 1982.

The swing in non-farm business inventories of \$3.3 billion (which was the result of a decline in stocks of \$3.4 billion in 1982 and virtually no change in 1983) was the equivalent of 83% of the increase in real GNP. The year was characterized by continued declines in stocks in the first two quarters and a resumption of inventory investment in the latter half of the year. Declining short term interest costs associated with holding inventories was a major factor in the improvement of the profitability of firms in the year. The moderate recovery of stocks in the latter half of the year despite the more rapid improvement in final demand, probably indicated an attempt on the part of firms to keep associated interest costs low.

The recovery of personal expenditures was concentrated in the interest-rate sensitive components

as purchases of durables rose 10.7% in volume (most notably passenger cars, furniture and appliances) relative to the 1.6% increase in other expenditures. The underlying weakness in most categories of consumer spending is likely a result of weak income growth. Personal disposable income grew only 5.1% in 1983 in nominal terms. This was the second consecutive year in which disposable income did not grow as fast as the implicit deflator for personal expenditure, leaving real personal disposable income slightly below 1981 levels.

Residential construction, the other major interest-rate sensitive component of the economy, recovered sharply in the first half of the year, rising 38% in volume from the fourth quarter of 1982 to the second quarter of 1983. This corresponded to a drop in the 5 year conventional mortgage rate from 15.0% to 13.1% and the impact of the Canadian Home Ownership Stimulation Program. Activity declined in the latter half of the year following the end of the program in May and the leveling off of mortgage rates.

Strength in export demand (up 6.6% in current dollars) corresponded to a recovery of economic activity in the United States, which proceeded with a similar momentum to that in Canada. Import demand also picked up in 1983 (up 7.6% in current dollars) in conjunction with improved demand in the Canadian economy. This left the nominal merchandise trade surplus down only \$297 million from the record \$18.3 billion surplus recorded in 1982, and total net exports in a surplus for the second consecutive year.

Business investment in plant and equipment continued to decline in 1983, down 12.2% in real terms compared to a drop of 11.2% in 1982. Despite the sharp improvement in profits in the year, (corporate profits before taxes rose 53% in 1983) corporate balance sheets had not fully recovered as debt to equity ratios remained high and liquidity ratios low. Capacity utilization rates in manufacturing increased with the recovery in activity but by the third quarter still remained 10 percentage points below pre-recession levels. Preliminary results of the Department of Regional and Industrial Expansion survey of investment intentions

of large firms indicate that the weakness may continue into 1984.

Labour income continued to slow despite the upturn in employment for the year, rising 5.6% in 1983 following a 7.4% increase in 1982. Paid-worker employment rose 0.5%, following a 3.6% decline in the previous year. The implied sharp slowdown in average earnings in 1983 was due to a combination of lower wage increases in the year and a shift in the composition of employment to a higher proportion of part-time workers.

This slowdown in labour income growth was a major source of the weakness in personal income in the year. Consistent with the high levels of spending on durable goods, the flow of savings was reduced such that the personal savings fell from 15.1% of personal disposable income in 1982 to 12.9% in 1983.

The total government sector deficit rose to a level of \$22.7 billion on a national accounts basis, an increase of \$3.8 billion in 1983 following an increase of \$15.1 billion recorded in 1982. Total expenditures slowed to an increase of 10.0% following an increase of 16.4% in 1982, largely due to slower growth in wages and salaries, transfer payments and interest on the public debt. Government revenues rose at a slightly faster rate than in 1982, up 8.7%, largely due to the increase in corporate tax liabilities.

#### **Fourth Quarter Detail**

The major source of growth in real activity in the fourth quarter was the strong performance of merchandise exports, up 8.5% in volume following an increase of 1.2% in the third quarter. This largely reflected buoyant final domestic demand in the United States, which has risen on average 1.3% per quarter throughout the year of 1983. The slowing of the recovery in Canada in the fourth quarter was largely attributable to weak final domestic demand. Residential construction and business investment in plant and equipment declined at accelerated rates in the fourth quarter, and the recovery of consumer expenditure slowed. Concurrently with the slowing of final domestic demand, paid-worker employment decelerated to an increase of 0.5% from 1.2% in the third quarter. The pace of inventory investment continued at moderate rates in the quarter despite the sharp recovery in the volume of sales of goods since the fourth quarter of 1982. The acceleration of export demand was widespread across commodity groups with the largest increase recorded in exports of motor vehicle products. Import demand slowed in the fourth quarter so that the nominal merchandise trade balance rose \$2.4 billion to a level of

\$18.4 billion at annual rates. With virtually no change in the non-merchandise deficit, net exports recorded a \$0.4 billion surplus, after a \$1.7 billion deficit in the third quarter.

The volume of personal expenditures rose 0.8% in the fourth quarter, a slight deceleration from the 1.3% increase recorded in the third. Demand for automobiles was the major source of strength and purchases of durable goods have surpassed pre-recession levels. When automobiles are excluded, personal expenditure on goods was unchanged in the fourth quarter (compared to an increase of 1.0% when they are included), indicating that Christmas spending was relatively sluggish in 1983. Personal expenditure on services continued to grow at moderate rates, up 0.6% in the quarter.

Business fixed investment fell 4.3% in volume in the fourth quarter following a decline of 1.5% in the third. Residential investment dropped 11.9% as new housing construction activity continued to decline following the rapid pace of the recovery recorded in the first half of 1983. The drop in construction was reinforced by declines in the volume of alterations and real estate commissions. Renewed weakness was recorded for business investment in plant and equipment in the fourth quarter. Investment in machinery and equipment fell slightly in volume following two quarters of increases. This largely reflected a slowing demand for industrial machinery and equipment as expenditures on commercial vehicles remained strong. Non-residential construction continued to decline in the fourth quarter, down a further 3.4% in real terms.

Inventory investment continued at moderate rates in the fourth quarter with accumulations recorded for virtually all industry groups. As mentioned above, the rate of inventory investment has been very sluggish to date, relative to the recovery in demand. This slow rate of inventory investment may continue into early 1984 given the most recent business conditions survey where the majority of manufacturers judged inventory levels to be "about right", despite the low stock-to-sales ratio.

The overall implicit deflator was virtually unchanged in the fourth quarter. Much of the deceleration, however, was due to weight shifts within inventories rather than price changes. The implicit deflator for GNE excluding inventories rose 0.6% relative to the 0.7% increase recorded in the third quarter. This is more reflective of the stabilization evident in other aggregate measures of inflation in the fourth quarter.

Labour income growth decelerated in tandem with employment growth in the fourth quarter, rising only 0.9%, following an increase of 2.3% in the previous quarter. The slowing was attributable to declines in the forestry, mining and construction industries due to lower employment. The personal savings rate dropped to 12.3% in the fourth quarter, a rate more reflective of the savings flows for the year. The savings rate was irregularly high in the third quarter due to the delay of personal income tax refunds this year.

The growth of corporate profits also slowed in the fourth quarter rising only 4.2% relative to average increases of 14.5% in the previous four quarters. While the increases in the previous quarters had been largely due to a combination of rising sales and declining interest costs, the increase in the fourth quarter was mainly attributable to higher sales. Lower profit increases were most evident in retail and wholesale trade industries, while the largest increase was recorded in the automobile industry.

In 1983 Gross National Product at market prices rose 9.0% to a level of \$388.7 billion. After allowing for price increases real GNP rose 3.0% following a decline of 4.4% in 1982.

Gross National Product at market prices, seasonally adjusted at annual rates rose to a level of \$400.6 billion in the fourth quarter of 1983, an increase of 1.0%. In real terms the growth was 0.9%.

Wages, salaries and supplementary labour income and military pay and allowances increased 5.6% in 1983 compared to a 7.5% growth in 1982. Corporation profits before taxes showed a strong 52.8% increase following a decline of 36.1% in the previous year, while interest and miscellaneous investment income had increases of 6.7% and 5.2% in 1982 and 1983.

Note: All quarterly data adjusted for seasonal variation and at annual rates

In 1983 exports and imports of goods and services rose 6.6% and 7.6% respectively resulting in a drop in the surplus on goods and services from \$1.6 billion in 1982 to \$0.7 billion in 1983.

In the fourth quarter of 1983, exports of goods and services advanced 7.6% while imports rose 5.6%. The merchandise trade surplus increased by \$2.4 billion to a level of \$18.4 billion.

A sharply lower rate of inventory decumulation, a 3.1% increase in real personal expenditure, a 9.0% recovery in the volume of merchandise exports and a 27.6% increase in residential construction activity were the major contributors to the recovery of economic activity in 1983.

Note: All quarterly data adjusted for seasonal variation and at annual rates

<sup>1</sup>In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. <sup>2</sup>Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). <sup>3</sup>Deflated by the Consumer Price Index. <sup>4</sup>Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

- 14    1. Population by Province
- 14    2. Immigration to Canada, by Country of Last Permanent Residence
- 15    3. Immigration to Canada, by Province of (Intended) Destination
- 15    4. Immigration to Canada, by (Intended) Occupational Group
- 16    5. Births, by Province
- 16    6. Deaths, by Province
- 16    7. Marriages, by Province

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census, see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. <sup>2</sup>Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. <sup>3</sup>Includes logging, fishing, trapping and hunting. <sup>4</sup>Includes mechanical and construction. <sup>5</sup>Includes a small number in non-specified occupations. <sup>6</sup>Beginning with 1978 includes fiancées and fiancées. <sup>7</sup>Does not include students entering Canada on students' visas.

<sup>8</sup>Includes also retired persons, elderly dependents, and other unspecified persons.

## Section 3 · System of National Accounts

- 1. Income and Expenditure Accounts**
  - 18 1.1 National Income and Gross National Product
  - 18 1.2 Gross National Expenditure
  - 19 1.3 Gross National Expenditure, Constant Dollars
  - 19 1.4 Sources of Personal Income
  - 20 1.5 Disposition of Personal Income
  - 20 1.6 Sources and Disposition of Gross Saving
  - 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
  - 25 1.8 Implicit Price Indexes, Gross National Expenditure
  - 25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost
- 2. Domestic Product by Industry**
  - 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
  - 27 2.2 Gross Domestic Product by Industry of Origin, Monthly
- 3. Balance of International Payments**
  - 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
  - 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
  - 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

<sup>1</sup>Excludes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2.

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). <sup>5</sup>See footnote 4, Table 1.1.

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Tax liabilities. <sup>3</sup>Withholding taxes. <sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

<sup>1</sup>These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

Year and quarter	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non- residents	Investment income paid to non- residents	Gross domestic product at factor cost	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non- residents	Investment income paid to non- residents	Gross domestic product at factor cost

**2—Domestic Product by Industry**

Table 2.2: Gross domestic product by industry of origin, monthly volume indexes (1971 = 100), based on the 1970 standard industrial classification/continued

Year and month	Manufacturing industries										Transportation, communication and other utilities			
	Metal fabricating ind. (ex mach & transp. equip. ind.)	Machin- eries ind. (ex electrical machinery)	Trans- portation equipment industries	Electrical products industries	Non- metallic mineral products industries	Petroleum and coal products industries	Chemical and chem. products industries	Mis- cel- laneous manufac- turing industries	Construction industry	Total	Transp.	Storage	Commun.

<sup>1</sup>The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. <sup>2</sup>The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

<sup>1</sup>Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. <sup>2</sup>The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. <sup>3</sup>The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. <sup>4</sup>The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. <sup>5</sup>Includes publishing and allied industries. <sup>6</sup>Includes storage and communication industries.

<sup>1</sup>These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1978.<sup>2</sup>For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, Concepts and Procedures, updating based on 1973 expenditures," cat. 62-553, occasional.

Table 3: Construction price indexes

Year and month	Residential building construction input (1971 = 100)			Non-residential building construction inputs (1971 = 100)			Machinery and equipment price index (1971 = 100)	Construction union wage rate index (1981 = 100)					
	Canada			Canada				Basic wage rate	Basic including pay sup- plements

## Section 6 · Manufacturing

- 68      1. Total Inventories, Shipments and Orders in Manufacturing
- 69      2. Manufacturing Shipments by Industry
- 71      3. Manufacturing Inventories by Industry
- 73      4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 74      5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 75      6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 76      7. Tobacco and Beverages
- 76      8. Rubber
- 77      9. Footwear
- 78      10. Production of Sawn Lumber
- 78      11. Pulpwood, Wood Pulp and Newsprint
- 79      12. Primary Iron and Steel
- 80      13. New Motor Vehicles
- 81      14. Production of Motor Vehicles in Canada
- 82      15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments <sup>2</sup>	New orders received during month <sup>3</sup>	Unfilled orders at end of month	Inventory at end of month					Ratio of inventories owned to shipments	
				All inventory held						
				Owned <sup>4</sup>	Held but not owned	Total	Raw materials	Goods in process	Finished products

<sup>1</sup>Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. <sup>2</sup>Shipments of goods manufactured within the establishments. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations. <sup>4</sup>Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

<sup>1</sup>Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned						Inventories held: raw materials							
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export-based industries	Supplementary classification: automotive products

<sup>1</sup>Data compiled according to the Steel Distribution Index revised January, 1964. <sup>2</sup>Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>3</sup>Excluding shipments for re-processing at maker's own plant. <sup>4</sup>Data compiled as submitted by the steel producers according to the steel industry distribution code.

<sup>1</sup>Gas types are included. <sup>2</sup>Includes producers' shipments for export. <sup>3</sup>In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. <sup>4</sup>End of period. <sup>5</sup>Electric and other. <sup>6</sup>Excludes apartment type machines. <sup>7</sup>Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. <sup>2</sup>Includes crude oil, condensate and petane.plus <sup>3</sup>Gross new production by field less field flared and waste.

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. <sup>2</sup>1977 and 1978 price indexes are subject to revision. <sup>3</sup>1978 price indexes are subject to revision. <sup>4</sup>Farm share only of motor vehicles. <sup>5</sup>The major groups include additional components than the selected ones shown.

<sup>1</sup>Column numbers refer to Tables 3 and 4, Section 11. <sup>2</sup>The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. <sup>3</sup>Includes special transaction-trade, not shown separately. <sup>4</sup>Includes scrap. <sup>5</sup>Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp. Drilling, excavating and mining (68) now include oil and gas field machinery. Mechanical power transmission equipment (72) now exclude special industry machinery.

## **Section 12 • Transportation**

- 116 1. Carloadings of Revenue Freight
- 117 2. Operating Statistics of Canadian Railways
- 118 3. Operating Statistics of Canadian Pipelines

Table 1: Carloadings of revenue freight on Canadian railways<sup>1</sup> (thousand cars)

Year and month	Total railway revenue freight loadings (carload and non-carload) ('000 metric tonnes)		Total revenue cars loaded (carload only)	Farm products and food						Mine products			
	Unadj.	S A		Wheat	Other grain and grain products	Fresh fruits and vegeta- bles	Other agri- culture products	Animals and their products	Prepared food products	Iron ore and concen- trates	Other metal ores and concen- trates	Potash	Coal, sand, cement and other mine products

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

<sup>1</sup>This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time.

<sup>2</sup>Seasonally adjusted data for Saskatchewan is not available.

<sup>1</sup>This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments.

<sup>2</sup>Beginning in December 1973, this category includes oil export tax.

<sup>3</sup>March includes supplementary payments arising from the closing of the accounts.
