Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200, 990-8203) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — \$75.00 Canada, \$90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Director General, Methodology Branch

A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

The following series was terminated and has been removed with this issue: "Primary Production of Ferro-Alloys" (D2310).

Monthly or quarterly data may not add to totals due to rounding.

The Small Area Data Program: Focusing on Canada's Diversity

by Mary Fraser *

Since Confederation, Canada's population has multiplied sixfold, and the nation has grown to 10 million square kilometres. Canada is now a modern mosaic of economic, social and demographic contrasts, a complex environment for the operations of both public and private organizations. Data are needed to allow governments to tailor policies and programs to local requirements. There has also been an increase in private sector requirements for subprovincial statistics that will permit informed decisions on site location, marketing and administration.

The Census of Population provides social and economic data for small areas. However, the census is taken only every five years and many organizations require more frequent information that will allow them to track local changes as they occur. In addition, public and private sector researchers, program analysts and administrators have called for easier access to "small area" data, and have identified new data needs to fill key information gaps.

Statistics Canada's Small Area Data Program (SADP) is a national focal point for answering these challenges. Funded in July 1983, the SADP has already made major gains in improving the organization, accessibility and scope of statistics for subprovincial areas. By the end of fiscal year 1985-86, the Program's final developmental year,

the SADP will have established a framework to support the future development and provision of small area data.

A Comprehensive, Interdisciplinary Approach
The Small Area Data Program is a comprehensive approach to meeting the requirements of data users. Thus, the SADP involves Statistics Canada specialists from various fields, including electronic data management, communications, geographic systems, administrative data development, and marketing. This team provides an agency-wide focus for identifying existing small area data, supporting data development projects, and investigating new ways to organize and present subprovincial statistics.

As the SADP gathers momentum, its scope is extending beyond Statistics Canada. Program personnel are canvassing small area data users across Canada to determine their requirements. The SADP is also creating an ever-widening forum for the exchange of ideas, technologies, and, when possible, statistical information, between Statistics Canada and other suppliers of small area data.

Statistics on a Geographic Basis

Organizing the wealth of existing subprovincial data on a geographic basis is one of the Small Area Data Program's first priorities. Statistics now available include geographically detailed information from the successive Censuses of Population and Censuses of Agriculture, and data from the annual Census of Manufactures. Administrative records yield a variety of small area statistics. In addition, various sample

* Mary Fraser is a Public Relations Officer in the Communications Division

surveys, such as the Labour Force Survey and the Survey of Employment, Payrolls and Hours, produce monthly or annual information for certain subprovincial areas.

Many users need a wide array of data to probe the complex interrelationships between social, demographic and economic trends at local levels. However, they are usually faced with several major stumbling-blocks.

Most statistics are organized, not for particular geographic areas, but according to subject matter for various, often incompatible, geographic levels. Furthermore, most small area information from Statistics Canada and other data suppliers is scattered over different data bases. Users must spend considerable time and resources identifying and obtaining existing subprovincial data sets on topics of interest. Moreover, bringing these statistics together for a particular geographic area requires considerable knowledge of the diverse concepts and definitions involved. Sometimes, existing small area data information is overlooked, resulting in expensive duplication of data collection efforts.

The Small Area Data Program will also attempt to serve users requiring information organized according to subject matter. However, emphasis is on the packaging and presentation of small area data on a geographic basis. During the past two years, the Program released two products reflecting this approach.

Social, Demographic and Economic Area Profiles

Profiles of all 282 Federal Electoral Districts (FED), released in May 1984, drew together a wide array of social, economic and demographic data for each FED. These included census statistics, as well as data on manufacturing, the labour force, transportation and construction, justice and education. The tables were accompanied by narrative text, maps, charts and graphs, and a detailed list of sources and notes.

In February 1985, the Small Area Data Program published a reference publication entitled *Canada, the Provinces and the Territories: A Statistical Profile*. This publication allows quick comparisons between the provinces, the territories and Canada as a whole, on topics that range from economic structure to social institutions and target groups. Although this publication focuses on the provinces, rather than subprovincial areas, its presentation accords with the SADP's emphasis on packaging

social, demographic and economic statistics and indicators for particular areas.

Products for 1985-86 Include Conversion File, Data Base

In May 1985, the SADP released the Canada Conversion File, which allows the geographical linkage of postal codes and standard geographical areas such as Census Divisions. The File will help the SADP to generate statistics for user-defined areas from the census and from administrative files, and will greatly increase the potential of records containing addresses with postal codes as a tool for describing small areas. It will also help users interpret or reaggregate statistics, and allow them to define areas for direct mail campaigns.

During the 1985-86 fiscal year, the SADP will also introduce the small area data base. This service will be available through the CANSIM Cross-classified System, allowing users to extract a variety of data in an interactive computing environment. On-line access to the indicators contained in Canada, the Provinces and the Territories, as well as Census of Population and Census of Agriculture data for Census Divisions and Federal Electoral Districts, is already available.

As the SAD-CANSIM-Cross-classified data base develops, the SADP will attempt to fill the needs of users requiring data on user-specified areas. However, the initial focus of the Program is on organizing and disseminating data for the geographic levels of the Standard Geographical Classification (SGC).*

By the end of the 1985-86 fiscal year, the new data base will be able to provide users with an array of social, demographic and economic data for Census Divisions, Census Subdivisions, Census Metropolitan Areas** and also for Federal Electoral Districts. One-page fact sheets will be produced to illustrate the data available for each area.

* The Standard Geographical Classification (SGC) provides a standard set of geographic codes for the provinces and territories, census divisions and census subdivisions, aiding the linkage and exchange of data among different files. Census divisions are large subprovincial areas that correspond, when possible, to local administrative areas such as counties, regional districts, regional municipalities. Census divisions are divided into census subdivisions, which also follow administrative boundaries, such as municipal boundaries, when these are present.

** A Census Metropolitan Area (CMA) is an urbanized core with a population of 100,000 or more, containing whole census subdivisions.

The SAD-CANSIM-Cross-classified data base will be gradually extended to encompass additional data at different geographical levels. New data from Statistics Canada, and from sources outside the agency, will be entered as soon as they become available.

Like the SADP's other products and services, the data base will evolve in response to user requirements.

The SADP has co-operated with the Statistics Canada Regional Office in Toronto, local federal departments and the Ontario provincial government, to create a prototype for a regional small area data service for microcomputers. This service, called the **Federal Ontario Small Area Data Service (FOSADS)** has been designed for IBM-PC or compatible systems. As FOSADS develops, the service will be offered to clientele outside the federal government, as well as in other provinces.

Inventory to Aid Data Identification

In the fall of 1985, the SADP will publish the first version of a Small Area Data Inventory, (SADI). This inventory will allow both sophisticated and novice researchers to quickly identify subprovincial data sources for their area of interest.

SADI will provide a reference to Statistics Canada's published small area data, and also to the agency's wide range of unpublished data, subject to confidentiality considerations. Users will be able to identify which data are available for standard geostatistical areas such as Census Divisions, Census Metropolitan Areas and Federal Electoral Districts, and for other areas, including unincorporated places, school districts, police districts and labour force economic regions. Data will also be referenced by major subject matter areas, such as education, manufacturing and the labour force.

Like SADP's data base, the Small Area Data Inventory will evolve in response to user requirements and will be expanded to include new sources. An extended and updated version of SADI is scheduled for publication in March 1986.

Filling Key Information Gaps

Besides organizing small area data on a geographic basis and streamlining its dissemination, the SADP is working to fill small area information gaps identified by major users.

To do this, it is relying primarily on the further development of administrative records and statistical modelling techniques, and the exploitation of existing surveys.

Administrative records, which provide annual, quarterly and sometimes monthly information, are a particularly rich potential source of new small area statistics. Traditionally, data derived from these records had focused primarily on such domains as education, public finance, imports and exports and vital statistics. But, more recently, administrative records have been used to generate small area information on Canadians, their families and their households, and on business.

Similarly, there have been dramatic advances in the ability to create small area data through statistical modelling techniques, which use existing information to produce new statistics on an area of interest. Furthermore, new small area data estimates can sometimes be produced from existing surveys.

Generating new small area data using any of these methods requires months, sometimes years of developmental work. However, all three techniques can produce timely new information with no increase in response burden, while protecting respondent confidentiality.

To speed the availability of key new data sets, the Small Area Data Program has helped divisions throughout Statistics Canada to carry on with existing data development projects and to initiate new ones.

The SADP's Labour Market Data Development Project, for example, is working on various ways to extend Statistics Canada's array of small area labour market measures. Monthly unemployment insurance records have already been used to produce unemployment insurance beneficiaries/population ratios for Census Divisions and Federal Electoral Districts. The SADP is now probing ways to produce further labour market information, including employment and unemployment measures for Census Divisions, using administrative records, existing surveys and statistical modelling techniques. It is also looking for ways to generate labour market indicators for user-defined areas.

Improved business statistics for small areas are an urgent priority for many users. The SADP is attempting to develop basic business statistics — wages, salaries and total revenue — by size, class and industry, for Census Divisions.

Population estimates for subprovincial areas are an important planning tool for all levels of government. They are also required to create key indicators, such as rates or per capita incidence, on such topics as births, health facilities and unemployment. Statistics Canada has already developed techniques to produce annual estimates for Census Divisions and Census Metropolitan Areas. The SADP has extended these initiatives to produce population data by age groupings and sex at the Census Division level for 1983. Further activities will focus on using new sources of data to produce population data for user-specified small areas.

Annual family income data by province and region, derived from Statistics Canada's annual Survey of Consumer Finance, has long been a key indicator of the well-being of Canadians. The SADP is now developing means to provide this information for Census Divisions and other subprovincial areas using administrative records.

A Framework to Answer Future Needs

During the past two years, the SADP team has been working with colleagues throughout Statistics Canada, and with federal, provincial and territorial government departments, to meet today's most important data needs. Yet when the SADP developmental stage ends in March 1986, many important tasks will remain.

Prototypes for products and services will require constant refinement to reflect changing user requirements. New subprovincial information will be needed on topics such as land use, agriculture, commodity flows and housing. In addition, there will be an ever-growing need for information on user-specified areas — administrative or ecological zones, areas in the far North, communities within towns or cities and marketing areas.

More fundamentally, the SADP will continue to provide a focus for examining basic concepts and assumptions associated with small area data. For what areas should data be provided? What data should be available for each of these kinds of areas? In what formats should small area statistics be presented? These questions will be answered through ongoing consultation with data users, and through studies such as the one commissioned in 1984 to examine the feasibility of developing Economic Geographic Regions.

The SADP is a unique resource dedicated to answering some very challenging statistical problems. The open exchange of ideas is essential to maintaining the momentum of its developmental stage. The SADP would thus welcome feedback on its current projects from data users and suppliers, and suggestions for future directions.

For further information, please contact: Gustave Goldmann (613-990-9915)

Observations

Self-Employment in Canada

While the number of paid workers decreased dramatically during the recession (down 375,000 between 1981 and 1982), the number of self-employed workers actually increased (+27,000). Furthermore, the growth rate for the self-employed exceeded that of paid workers throughout the 1979 to 1984 period. A recently published Research Paper, entitled *Self-Employment in Canada*, contains two articles which examine Labour Force Survey (LFS) data on the self-employed from 1979 to 1984, with particular emphasis on the recessionary and post-recessionary periods.

The first article provides an overview of self-employment between 1979 and 1984, based on annual average data. Definitional and conceptual issues related to the measurement of self-employment are addressed, followed by a review of trends in the number of self-employed over this period.

Statistics Canada's regular series on the self-employed exclude owners of incorporated businesses. For National Accounts and other purposes such individuals are considered to be paid workers, a convention of long standing among statistical agencies throughout the world. However, for studying labour market behaviour, and in terms of using a classification which conforms to the general understanding of what constitutes self-employment, the distinction between incorporated and unincorporated businesses has been set aside in the present analysis, and all working owners of a business have been treated as self-employed. The impact on the estimated level of self-employment is fairly significant, the net result being an increase of 42% in 1984.

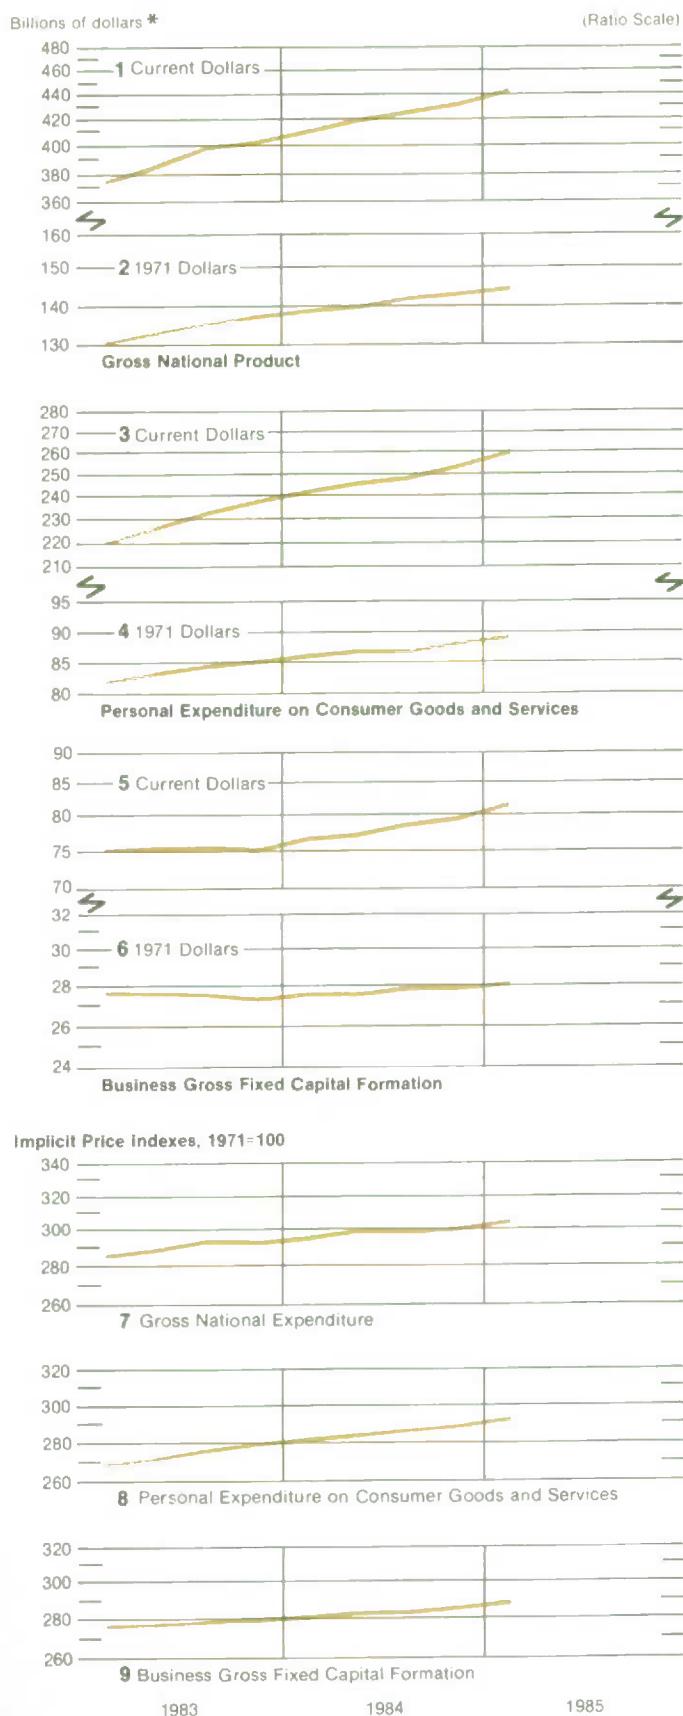

The second article comprises a statistical profile of the self-employed worker in 1984, based on industry, age and sex, followed by a description and explanation of the changes that occurred in the size and composition of this group during and after the recession.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancées and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes the interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. ⁵Includes smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁶Includes net income of independent professional practitioners. ⁷See footnote 4, Table 1.2.

¹Includes profits (net of losses) of government business enterprises. The seasonally adjusted data includes an arbitrary element. ²Includes the interest and miscellaneous investment income of government. ³Includes the value of physical change in farm inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁴Includes net income of independent professional practitioners. ⁵See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

^aIncludes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ^bTax liabilities. ^cWithholding taxes. ^dThe quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

^aThese weights, provided as a general guide, show the relative importance of the major components of the CPI. They are based on expenditure values derived from quantities and prices of year 1982. ^bIncludes water, fuel and electricity, and traveller accommodation. ^cExcludes water, fuel and electricity.

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

Section 6 · Manufacturing

- 68 1. Total Inventories, Shipments and Orders in Manufacturing
- 69 2. Manufacturing Shipments by Industry
- 71 3. Manufacturing Inventories by Industry
- 73 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 74 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 75 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 76 7. Tobacco and Beverages
- 77 9. Footwear
- 78 10. Production of Sawn Lumber
- 78 11. Pulpwood, Wood Pulp and Newsprint
- 79 12. Primary Iron and Steel
- 80 13. New Motor Vehicles
- 81 14. Production of Motor Vehicles in Canada
- 82 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1980 standard industrial classification (million dollars)¹

Year and month	Shipments ²	New orders received during month ³	Unfilled orders at end of month	Inventory at end of month					Ratio of inventories owned to shipments	
				Owned ⁴	Held but not owned	All inventory held				
						Total	Raw materials	Goods in process	Finished goods

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars)/concluded

Year and month	Non-durable goods (concl.)			Durable goods industries										
	Refined petroleum and coal products	Chemical and chemical products	Total	Furniture and fixture			Primary metal	Fabri- cated metal products		Machinery	Trans- portation equipment	Electrical & electronic products	Non- metallic mineral products	Other mfg.
				Wood

'Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

Year and month	Shipments ¹								Unfilled orders at end of month

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.²Gross new production by field less field flared and waste.³Includes crude oil, condensate and pentanes.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002). Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision.

²The major groups include additional components than the selected ones shown.

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973–December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Note. Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

^aThis series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. ^bSeasonally adjusted data for Saskatchewan is not available.
