Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — \$75.00 Canada, \$90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- E. Boyko — Director, Electronic Data Dissemination Division
- G.J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario. K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Gross Domestic Product

Third Quarter 1986

Gross domestic product at market prices grew by 1.5% to a level of \$509.4 billion, seasonally adjusted at annual rates, in the third quarter. After allowing for price changes, real GDP expanded by 0.3%, following growth of 0.6% and 0.8% in the first and second quarters respectively.

The growth in real GDP reflected a sharp gain in final domestic demand, spearheaded by higher household spending, and increased exports, up 0.3% in volume. Most of the increase, however, was met by higher imports and a decline in inventory accumulation. Output in the goods producing industries declined for the second consecutive quarter while output in the service producing industries continued to rise.

Components of Demand

Consumer demand for goods and services continued to accelerate, rising 1.8% in volume in the third quarter. Purchases of goods jumped by 2.2%, fuelled by a 4.5% increase in durable goods. New car and truck sales rose 10.6%, while outlays for furniture and appliances also strengthened in line with the gain in housing. Spending on semi- and non-durable goods rose by about 1%, while consumption of services rose at the same rate as in the second quarter (1.4%). The sharp increase in demand for motor vehicles was met by a rundown of motor vehicles inventories.

Investment in housing grew by 3.9% in volume. The increase was led by sharply higher transfer costs on sales of existing homes, along with further gains in new construction. The concentration of higher housing demand in central Canada, where price increases have been relatively higher than in the rest of Canada, led to a 3.4% increase in the implicit price index for housing.

Business investment in plant and equipment decreased by 1.3% in volume, following a drop of 3.9% in the second quarter. Outlays for machinery and equipment rose by 3%, after marginal gains in the first half of the year. Increased spending on transportation equipment accounted for much of the upturn. Expenditures on non-residential construction decreased by 6.8%, after a 9% drop last quarter. A sharp drop in spending on exploration and development for oil and gas was concentrated early in the quarter.

Total non-farm inventories recorded a sharply reduced rate of accumulation in the third quarter, up \$3.5 billion compared to \$5.0 billion in the second. The slowdown was largely attributed to the rundown in motor vehicle stocks at the retail and wholesale level in line with strong final demand and a decline in domestic production. In addition, there were large decumulations of lumber inventories at the manufacturing and wholesale level. This coincides with strong domestic demand for lumber products as a result of the increase in residential construction and lower production at the sawmills (attributable to strike activity during the quarter).

Growth in real merchandise imports was widespread. In particular, there was a large increase recorded in refined petroleum products. Smaller, but widespread, gains of imports of household goods were in line with strong personal spending. The 2.7% increase in real merchandise exports accompanied a pick-up in growth in the U.S. economy. On the service side, travel receipts increased sharply reflecting the effect of EXPO 86.

Production by Industry

On an industry basis, virtually all of the growth in the third quarter originated among the service pro-

ducing industries, as was the case in the second quarter. In both the second and third quarters, goods producing industries posted declines in output, marking the first occasion in the current expansion that consecutive quarterly output decreases were recorded.

Most of the growth in the third quarter occurred in those community, business and personal service industries particularly affected by EXPO 86, as well as in wholesale and retail trade, in line with the strength in final domestic demand. The most notable output declines were recorded in the mining, manufacturing and non-residential construction industries.

Components of Income

Both labour income and corporate profits rose about 1% in the third quarter. These gains in income were partly offset by a sharp drop in net farm income. The weakness in farm income slowed the growth of personal income, while disposable income was virtu-

ally unchanged in the quarter. Together with the sharp gain in personal spending, the personal savings rate dropped from 11.6% to 9.1% in the quarter, its lowest level since 1974.

The government sector deficit, on a national accounts basis, decreased \$6.4 billion to a seasonally adjusted rate of \$22.2 billion in the third quarter. Revenues advanced 2.7%, due to higher returns from personal direct taxes and indirect taxes. Total expenditures declined slightly as increases in spending on goods and services and transfers to persons were more than offset by lower outlays for agricultural subsidies from the irregularly high second quarter level, and for interest on the public debt.

Available on CANSIM: matrices 6701-6741, 6641-6642.

A printout containing all tables is also available on the day of release from the Income and Expenditure Accounts Division (\$35/\$140).

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. 1. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

¹Includes military pay and allowances. ²These aggregates differ from those shown in earlier publications in that they are on a "domestic" basis and thus include interest and dividends paid to non-residents and exclude interest and dividends received from non-residents. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. An adjustment has been made to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board. Book value of inventories is deflated to remove the effect of price changes and the derived physical change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. ⁵See footnote 3, Table 1.2.

¹Includes outlay on new durable assets such as building and highway construction by governments other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ²Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ³The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment (shown in Table 1.1). ⁴See footnote 4, Table 1.1. ⁵Excludes investment income received from non-residents. ⁶Excludes investment income paid to non-residents.

¹The period 1961-1986 was deflated in three time periods 1961-1971; 1971-1981, 1981-1986 with price indexes based on 1961, 1971 and 1981 respectively. The prices were then linked arithmetically at the major group, component and total levels to the 1981 base. The linking process produced residual differences between the sum of the linked groups and linked aggregates. These differences are shown as adjusting entries. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

¹The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted tax series. ²Includes capital consumption allowances. ³Includes net purchase of existing non-financial assets.

¹These implicit price indexes derived by dividing the value figures in current dollars by the constant dollar figures, are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data for seasonality and therefore may be used as indicators of price changes. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Year and month	Non-durable goods industries												
	Total shipments	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

¹Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark./concluded

End of period and month	Non-durable goods (concl.)			Durable goods industries								
	Refined petroleum and coal products	Chemical and chemical products	Total	Wood	Furniture and fixture	Primary metal	Fabricated metal products	Machinery	Transportation equipment	Electrical & electronic products	Non-metallic mineral products	Other mfg.

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January, 1984. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of all imports and exports.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. Source: *Railway Operating Statistics (52-003)*, Statistics Canada.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allowance for the take-over of Nova Scotia Light & Power common shares.
