Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — \$75.00 Canada, \$90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Assistant Chief Statistician, Informatics and Methodology Field

A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 5: Table 1 — Industry selling price indexes, selected industries (1971=100).

The Industry selling price indexes have been revised to a 1981 base year. Please note that we have restructured this table and that a new selection of series are available with this issue. (Pages 58-62).

Monthly or quarterly data may not add to totals due to rounding.

Section 5: Table 4 — Raw materials price indexes (1977=100).

The Raw materials price indexes have been revised to a 1981 base year. Please note that a new selection of series are available with this issue. (Pages 65-66).

THE UNRECORDED ECONOMY: CONCEPTS, APPROACH AND PRELIMINARY ESTIMATES FOR CANADA, 1981*

Seymour Berger
National Accounts
Development Division

I

Concern has been expressed that there may be a parallel economy which eludes statistical coverage and is not included in Gross National Product (GNP).¹ A wide variety of names have been used to describe activities of this parallel economy. A partial list would include: underground, irregular, subterranean, clandestine, unreported, informal, cash, black, twilight, gray, shadow, marginal, dual, and second.

For reasons outlined later, these activities in this study have been called the unrecorded economy. This term emphasizes that activities in the unrecorded economy are not reported to or recorded by government and, therefore, may not always enter into the calculation of GNP.

The need to have a measure of the unrecorded economy arises in large part from the possibility that the existence of a "sizeable" unrecorded economy relative to the regular economy could have important economic and social policy implications. Indeed, any policy action that must depend on reliable statistics or accurate perceptions of economic

and social conditions relating to employment and unemployment, income distribution, or consumption and savings can be adversely affected. Because many unrecorded activities involve tax evasion, loss of public revenue is also an important implication.

The difficulty which arises with measuring the unrecorded economy is that individuals who are involved in it wish to remain undetected. Resort, therefore, must be made to certain indirect techniques which as Tanzi has stated "...provide, at best, broad indications of trends and of orders of magnitude because they are sensitive to the assumptions made....".² Measures of the unrecorded economy accordingly should be interpreted with great caution.

Estimates of the unrecorded economy are presented both for the income and expenditure sides of the National Accounts for 1981, because census and time budget data used to derive the income side estimate are only available for this one year. The study covers only domestic aspects of the unrecorded economy. Its international dimension is currently under review as a separate issue. No attempt is made here also to estimate tax losses to government as a result of the unrecorded economy.

The remainder of the article is set out as follows: Section II provides a selected review of the literature on the unrecorded economy; Section III catalogues some economic activities commonly associated with the unrecorded economy, sorts those activities

* I am indebted to Hans J. Adler for numerous verbal and written exchanges, and to Stewart Wells, Barbara Clift and Kishori Lal for their comments at various stages of this article. Carol S. Carson of the U.S. Bureau of Economic Analysis also had valuable input. I would further like to thank Mary E. Scott and Nicole Devochelle for typing the manuscript. Needless to say, all errors of omission and commission are the responsibility of the author.

which should be estimated for production purposes, defines the unrecorded economy and discusses issues arising from the definition; Section IV measures the unrecorded economy from the income side of the National Accounts; Section V provides the expenditure side estimate; and Section VI concludes the article.

II

This section reviews some of the principal methodologies which have been employed to estimate the unrecorded economy.

Monetary Approaches

The monetary approaches assume that transactions in the unrecorded economy are paid mainly cash. The basic methodology, therefore, is to measure the unrecorded economy by either analyzing changes in the ratio of cash and demand deposits (Gutmann³), or the share of high denomination bills to the total volume of bills in circulation⁴, or the relation between cash in circulation to total transactions in the economy (Feige⁵). A more sophisticated version of the monetary approach investigates the relation between changes in the personal tax burden expressed in terms of marginal tax rates and changes in currency-deposit ratios (Tanzi⁶).

The monetary approaches give, in general, high estimates of the size of the unrecorded economy. For the U.S., Gutmann shows that the share of the unrecorded economy was 10 per cent in 1976 and over 13 per cent in 1979. Feige's estimates reveal that it amounted to 19 per cent in 1976 and increased to over 28 per cent in 1979. Tanzi finds an unrecorded economy of between 8 and 12 per cent of GNP. In Canada, Mirus and Smith⁷ estimate the unrecorded economy for 1976 according to the approach of Gutmann as 14 per cent, according to Feige as 22 per cent, and according to Tanzi in the range of 5 to 8 per cent of GNP.

In the U.K., application of the Gutmann approach by Dilnot and Morris⁸ shows a decline in the unrecorded economy from 19 per cent in 1968 to 8 per cent in 1970. In Australia, where Gutmann's method was applied, unrecorded activity was estimated to account for 10 per cent of GNP during the 1978-79 period.⁹ Klovland¹⁰ has shown that results obtained using Gutmann's method will vary considerably according to the choice of base period and hypothesis put forward respecting the velocity of money. According to the hypothesis selected in relation to these aggregates, the results vary from 6 to 16 per

cent of GNP for Norway in 1978, and 7-17 per cent for Sweden. In Austria, its application demonstrates that no conclusions can be formed about the size of the unrecorded economy. Analysis also reveals that the personal tax burden is not a reliable explanatory variable for currency-deposit ratios (Mooslechner¹¹).

National Accounts Approaches

One of the ways to measure the unrecorded economy is to compare GNP derived from the income and expenditure sides of the National Accounts. Although both approaches should conceptually give similar results, in practice, however, the methods of calculation show discrepancies that may provide an estimate of the unrecorded economy. In the U.K., for example, the expenditure side historically has always been higher than the income side by about 2 and 3 per cent of Gross Domestic Product (GDP). Accordingly, the Central Statistical Office has always increased the income side measure by this percentage to account for unrecorded income. Its view is that "the expenditure estimate of GDP is regarded as an unbiased estimate of the value of all transactions apart from some illegal, immoral or sensitive items. In contrast, the income measure is dependent to a large extent on income supplied from the Inland Revenue and it is possible that the levels of reported income may fall short of true income levels..."¹².

In the U.S., the National Income and Product Accounts incorporate a set of adjustments to correct for taxpayers' misreporting. While these adjustments do not distinguish between misreporting due to taxpayers' errors and misinterpretation and that related to various forms of tax evasion, it appears that most misreporting relates to the unrecorded economy. There are, however, certain estimates which are based on non-tax sources where there may be some understatement due to the unrecorded economy, e.g. residential additions and alterations, food expenditure. Carson¹³ undertook an extensive review of these non-tax sources to identify series that might be understated. Where sources were shown to provide incomplete coverage, sensitivity analysis (0 to 50 per cent) was applied to determine the potential range of understatement. Carson's analysis shows that an unrecorded economy could have amounted to between 0.6 and 2.9 per cent on the income side and between 0 and 0.3 per cent on the expenditure side of GNP in 1977.¹⁴

Direct Survey Approaches

In these approaches, individuals are interviewed and asked whether they have actively participated in the

unrecorded economy either as buyers or sellers. An example of this approach is the study of Smith, Moyer and Trzicinski¹⁵ undertaken in the U.S.. Questions about purchases from informal suppliers were included within a set of questions that are customarily asked in the monthly Survey of Consumer Attitudes. Purchasers rather than sellers were surveyed, because it was felt that they would be less reluctant to respond to questions about unrecorded activities. Results show that \$42 billion — or 1.5 per cent of GNP — was purchased from informal suppliers in 1981; this amount is viewed as an upper limit. The goods and services supplied ranged widely, although home repairs plus food accounted for about one-half.

Inferential Approaches

In these approaches, attention is focussed only on those sectors of the economy where unrecorded activity is likely. Franz¹⁶, in Austria, for example, estimates unrecorded labour income by identifying those occupations where individuals have the greatest opportunity to work on an unrecorded basis, e.g. carpenters, plumbers. Franz's universe also includes crude estimates for employed and unemployed working in secondary occupations different from their primary occupations, as well as individuals not counted in the labour force (homemakers, retired individuals). The results (which also include concealed income of the self-employed) indicate an unrecorded economy of about 4 per cent of GDP in 1976. Rose follows a somewhat similar approach to estimate the possible lower and upper limits of the unrecorded labour force in the U.K..¹⁷ Estimates range from a low of 4 to a high of 7 per cent in 1984.

III

The list below presents some economic activities commonly associated with the unrecorded economy. It is, with additions and alterations, based primarily on Carson's¹⁸ work.

1. employees working "off the books" for employers so that wages are not reported to statistical, tax and other authorities
2. earnings from tips that are not, or are only partially reported to authorities
3. covert rentals
4. "skimming", i.e. owners pocketing some part of receipts of legitimate business enterprises not reported as income

5. earnings from economic activities carried out without acquiring the pertinent licenses, permits e.g. contractor building addition to a house without a permit and not declaring income
6. selling homegrown produce, or homemade items, or personal services that provide income that is not reported
7. barter
8. unpaid work of homemakers
9. hobbies
10. volunteer work
11. unreported capital gains arising from the sale of assets
12. smuggling
13. illegal gambling
14. trade in illegal drugs
15. illegal prostitution
16. theft, including theft from businesses by shoplifters and employees

While the list covers a wide array of disparate economic activities ranging from unrecorded transactions of wage earners to undeclared income of criminals and unpaid work of homemakers, concern here is only with the measurement of those particular unrecorded activities which conform to the same principles by which the estimate of GNP is made in the Canadian System of National Accounts, i.e. the activities must constitute economic production giving rise to goods and services which are, by and large, exchanged for money in the market economy; and furthermore, activities or production of such goods and services must not be prohibited by law.

One of the ways of measuring economic production is to sum factor incomes generated in production. Thus, for example, unrecorded wages earned by employees working "off the books" for employers (example 1) are factor income which should be measured. By contrast, undeclared capital gains (example 11) (like reported capital gains) earned from the sale of assets are excluded from GNP, because they are derived only from a change in the distribution or redistribution of property from one transactor to another.

Because the National Accounts definition of production encompasses goods and services that are exchanged for money, the unrecorded economy (like the recorded economy) excludes non-market pro-

duction such as homemakers' work (example 8). An estimate of homemakers' work in Canada has been prepared by Statistics Canada.¹⁹ Leisure activities such as hobbies and volunteer work (examples 9 and 10) are also not considered. It should be pointed out parenthetically that the Canadian GNP includes a few transactions which, although they do not take place in the market place, have values imputed to them. Two examples are farm output consumed on the farm and owner occupied rents.

Since the Canadian System of National Accounts definition of economic production excludes all criminal activities (items 12 to 16 inclusively), these, too, have not been estimated.²⁰

Summarizing, then, only activities numbered 1 to 6 inclusively on the list fulfill the three conditions specified — namely, that unrecorded activities constitute production, are market exchanged and legal. Barter (example 7) represents a separate problem which is elaborated upon below.

Definition

On the basis of the preceding discussion, the unrecorded economy is defined as that portion of market production which is missing from GNP, because earnings from legal economic activities are misreported, or not reported, as required, to statistical, tax, customs, employment and immigration and other authorities. It is the records of these authorities that constitute the major sources of National Accounts estimates.

With respect to this definition, however, as Carson²¹ has pointed out, it is impossible to separate misreporting due to ignorance of the reporting requirement and unintentional reporting errors from intentional misreporting. Furthermore, while the Canadian System of National Accounts attempts to adjust GNP for measurement errors arising from poor survey coverage, it is possible that some activities remain unrecorded only because of their newness, e.g. growth of child care in private residences.

The definition also draws a distinction between unrecorded legal production and production arising from activity prohibited by law. This distinction, however, is not clear-cut in practice. One of the reasons is that unrecorded legal activity such as working "off the books" means that income taxes are being evaded or some regulation such as the requirement to have a building permit is being flouted. Looked at from this perspective, all unrecorded economic activity is to some extent tainted with a degree of ille-

gality. In addition, certain pursuits such as prostitution are borderline cases which could be classified either as legal or criminal activities. An estimate was not made for prostitution in this study.

Barter is an activity on the list sometimes classified in the unrecorded economy. The only value of barter that should be estimated, however, is that which is restricted to the market exchange of newly created production, i.e. newly created goods for newly created goods, newly created goods for services, or services for services. Exchanges of previously produced goods should, of course, not be included in GNP (except perhaps for a valuation of the services that facilitated the exchange). It is also difficult to know precisely where to draw the boundary line between non-market and market exchanges. Some transactions, such as occasional exchanges between neighbors seem to belong to the non-market economy and others, such as when one party advertises through an exchange to fine the other, seem to belong in the market economy, but in between there is a gray area.

It may also be noted that barter undertaken between corporations is included in GNP in corporation profits before taxes. Also, newly produced goods exchanged in barter transactions are sometimes already measured in GNP. Any agricultural products exchanged, for example, between farmers such as wheat for corn have already been included in the estimates of agricultural production; agricultural output in the Canadian GNP is based on production and price. Thus, to count these types of barter transactions would be to double count in the context of the National Accounts. Lastly, despite some impression that unreported exchanges of services for services are widespread, e.g. dentist and house painter trading services and not reporting as income the value of services received, because the information costs to effectuate such exchanges are very high, it is hard to imagine that exchanges of services for services are anything more than infrequent transactions. The existence of a highly developed money and credit economy such as ours would further appear to make exchanges of services for services limited phenomena. For all these reasons, barter is set aside here.

IV

This section presents the income side estimate of the unrecorded economy for 1981. It should, however, be realized that GNP measured from the income side may not be as greatly understated as is sometimes believed. First, there are several in-

stances where the Canadian System of National Accounts, based on its own internal review and analysis, adjusts particular components of GNP upwards to account for undercoverage where it is believed that records do not reflect total value of transactions. Second, it may also be noted that evasion of taxes from unrecorded activities does not necessarily mean that earnings from these transactions are excluded from production, because tax data are only one of the many sources used to estimate GNP.

Estimates are presented for unrecorded wages, concealed net income of unincorporated business and concealed corporation profits. Rental income, and interest and miscellaneous investment income are considered to be reasonably complete. The reasons for the belief that these latter two categories are covered are discussed after the presentation of the estimates for each of the first three components of GNP mentioned above. It may also be noted that estimates for each of these components of national income are taken to be mutually exclusive; that is, no attempt was made to account for the impact of unrecorded activities in any one category on the other categories of national income.

1. Unrecorded Wages

Factors Determining Work in the Unrecorded Economy
The chief motivations for working in the unrecorded economy are to earn additional income and save income and other taxes; people may also decide to work "off the books" to conceal part of their earnings to lower financial obligations such as alimony payments or for some other legally inspired reason. There may also be non-monetary reasons such as the desire to acquire additional skills which prompt people to work in the unrecorded economy.

On the other side of most transactions, financial benefits also accrue to households from hiring individuals on an "off-the-books" basis. Since presumably some tax savings are passed on to purchasers, charges are likely to be lower than they otherwise would be in the regular market. This proposition, of course, rests on the assumption that the relative productivity of individuals working "off the books" is not significantly different than those performing the same task in the regular market.

The financial motivations of the business employer to hire an individual "off the books" are somewhat more complex. An employer would employ people "off the books" only if the financial advantage from lower wages were to outweigh benefits of hiring labour at market wages and declaring this for tax pur-

poses. However, if an employer were skimming, it might also be prudent to hire labour "off the books".

A business employer might also hire individuals on an unrecorded basis to escape restrictions imposed by collective agreements, to avoid payment of overtime, to circumvent safety laws, to meet the demands of peak periods and to employ illegal immigrants.

The above discussion indicates that while there are incentives to hire labour "off the books", two important constraints in a modern economy, however, may limit this activity. First, many of the goods and services produced require complicated technology; and second, they are often produced in large scale and bureaucratic organizations. (Quite often, these two conditions characterize the same organization). It is unlikely that in these organizations either "off-the-books" employment or skimming can take place to any substantial degree.

What groups in the population provide the manpower of the unrecorded economy? Also, what sectors of the economy employ (demand) unrecorded labour? The following paragraphs attempt to answer these questions. We start with the supply of unrecorded labour.

Supply of Unrecorded Labour

Statistics Canada divides the population into two categories for labour statistics purposes: (i) individuals in the labour force; and (ii) those not in the labour force. The first category is divided into two further subcategories: employed and unemployed; the second category comprises individuals who are not in the labour force such as homemakers, retired and individuals. It was assumed that individuals in any one of these categories have the potential to work in the unrecorded economy in their primary market occupations. (In the case of those not in the labour force, it is their last primary occupations). In addition, although Statistics Canada does not estimate the number of illegal immigrants in Canada, they, too, may be working in the unrecorded economy, although statistically they would not be in either of the above categories. These four categories together are taken to constitute the total supply of unrecorded labour.

Individuals falling into the first three categories have further been classified in two broad groups: unrecorded employees and independent wage earners. The first group includes individuals hired as unrecorded employees and paid wages "off the books".

The second group encompasses individuals who, because of their specialized occupational skills, be it plumbing, catering or bookkeeping, are hired directly by both consumers and businesses, commonly on a contract or per job basis. Illegal immigrants, because of their small numbers are all considered unrecorded employees. These four categories which comprise the supply of unrecorded labour are presented below.

Supply of Unrecorded Labour

Category 1.	Employed and working in the unrecorded economy as unrecorded employees and independent wage earners in their primary occupations
Category 2.	Unemployed and working in primary occupations as unrecorded employees and independent wage earners
Category 3.	Not in the labour force and working in last primary occupations as unrecorded employees and independent wage earners
Category 4.	Illegal immigrants working as unrecorded employees

It is important to note that unrecorded wage earners and independent wage earners are taken to be mutually exclusive groups. This means that for computational purposes, individuals are assumed to be spending time working in the unrecorded economy only in one group. While this assumption may lead to a misstatement of the estimate of the number of individuals working in either group, the total number of individuals, however, estimated to be working in the unrecorded economy would not be affected.

Demand for Unrecorded Labour

The government sector does not employ labour "off the books" and as pointed out, transactions of the non-resident sector are not considered. Therefore, the two sectors where unrecorded labour may be in demand are in the business and personal sectors. The latter sector is most likely to hire independent wage earners. Forty occupations selected from the *Standard Occupational Classification, 1980*, (SOC) at the four digit level were taken as being representative of occupations where individuals are likely to be in demand for independent work.²² These SOC's, together with examples of unrecorded activities which might be undertaken, appear in Table 1 of the

Appendix. This table also presents the estimates of annual unrecorded wages earned in each of these occupations in 1981. The methods used to derive these estimates and data sources are described later in the article.

With respect to the business sector, demand is likely to be industry specific and centered on businesses with a small number of employees. The close personal contacts between employers and employees in small businesses set conditions propitious for employment of unrecorded labour. Establishments employing 20 employees or less are the lowest industry grouping for which employment data are available in Statistics Canada. These establishments constitute the universe of small businesses for these estimates.

The following *Standard Industrial Classification* (SIC) groups (Major Division Groups) were selected as those industries in which small businesses (i.e. as defined as 20 employees or less) might because of the characteristics of their activity hire labour on a unrecorded basis.²³

Manufacturing
Construction
Trade
Community, Business and Personal Services

There is a high opportunity for labour to work "off the books" in these industries as many of the commodities produced do not require large capital investment and, therefore, may be furnished by small businesses. By contrast, there is small opportunity of "off-the-books" employment by businesses in industries such as *Mines and Quarries*, *Transportation, Communication and Other Utilities*, and *Finance, Insurance and Real Estate* which are usually large scale and capital intensive.

Because of the multiplicity of surveys used to estimate employment, finances and output, and methodology used to estimate gross and net income in *Agriculture*, it is unlikely that there is significant unrecorded labour in this industry, perhaps with the exception of employment of illegal immigrants. The same is true for *Forestry, Fishing and Trapping*. *Public Administration and Defence* was excluded, because as noted, the Government sector does not employ unrecorded labour.

Small businesses in the selected industries are also more likely to employ unrecorded labour with occupational skills directly related to production or routine administrative and clerical skills rather than, for

instance, occupations of a managerial nature. The latter occupational groups, therefore, have been excluded from this estimate. Occupations demanded are also likely to vary by industry, because of the different commodities produced. Thus, in *Manufacturing*, there is likely to be demand for unrecorded labour in two digit SOC's such as machinery, fabricating and assembling occupations, whereas in *Trade*, the need is likely for sales and clerical occupations. The occupation/industrial cross-classification as well as the breakdown of total unrecorded wages in 1981 are presented in Table 2 of the Appendix. Details of these calculations and data sources are also described later in the article.

Occupations were selected at the two digit SOC level to obtain the largest coverage possible. It should be pointed out, however, that estimates derived of unrecorded employees at the two digit SOC level also encompass some of the four digit SOC's selected where individuals are assumed to be working as independent wage earners. To ensure that these individuals are not counted twice — once in the estimate of unrecorded employees and again as independent wage earners, the estimated number of independent wage earners was reduced to take into account this possibility of double counting.

It is also important to note that individuals falling into the universe as either independent wage earners or unrecorded employees are not only restricted to those counted as employed in the regular market, but also includes those who are unemployed and those not in the labour force (if they held one of the selected occupations during the past five years).

To recapitulate, the number of individuals working in the unrecorded economy was established by first identifying potential sources of unrecorded labour and then focussing on sectors of the economy where this unrecorded labour would be employed. On the supply side, four categories were taken to comprise the supply of unrecorded labour: employed, unemployed, not in the labour force and illegal immigrants. Individuals in the first three categories were further divided into two groups: unrecorded employees and independent wage earners. Illegal immigrants were all taken to be unrecorded employees. On the demand side, only the personal and business sectors were assumed to employ labour "off the books". The personal sector hires mainly independent wage earners. Forty occupations at the four digit SOC level were taken as being representative of occupations where individuals are likely to be in demand for independent work. With respect to the business sector, demand for unrecorded labour was assumed to be industry specific.

focussing on *Manufacturing, Construction, Trade, and Community, Business and Personal Services*. It was further assumed that only small businesses (defined as establishments with 20 employees or less) in these industries employ unrecorded employees, and only with occupations which are directly related to production or for routine administrative matters.

The simplified example presented below illustrates how the boundary of the universe of unrecorded labour was drawn. Although the example is cast in terms of those who are counted as employed, it could easily have been presented using either the unemployed or individuals not in the labour force without change in basic approach. It should also be pointed out that several assumptions are made in the example purely for illustrative purposes, and should not be confused with those made to derive actual estimates presented later in the study.

In the example, three industries are considered: *Manufacturing, Construction, and Public Administration and Defence*. The total number of employees classified by occupation at both the two and four digit SOC levels in these industries is set below. (In *Manufacturing* and *Construction*, the four digit SOC's are bracketed to indicate that they are a sub-category of the two digit SOC's).

Example	Number of Employees
Manufacturing	
Product Fabricating, Assembly and Repairing Occupations (Major Group 85) (Motor Vehicle Mechanics (8581))	1,000 (100)
Construction	
Construction Trades Occupations (Major Group 87) (Brick and Stone Masons and Tile Setters (8782))	1,000 (100)
Public Administration and Defence	
Motor Vehicle Mechanics (8581)	25
Brick and Stone Masons and Tile Setters (8782)	5

In this example, as in the derivation of the actual estimates, only small businesses in *Manufacturing* and *Construction* hire employees "off the books" in two occupations: Product Fabricating, Assembly and Repairing Occupations in *Manufacturing* and Construction Trades Occupations in the *Construction Industry*. For the purposes of the example, two important assumptions are made. First, it is assumed

that small businesses in both *Manufacturing* and *Construction* employ 10 per cent of the total number of employees in these two industries. This means that 200 of these employees are working on an unrecorded basis — 100 ($1000 \times .10$) in Product Fabricating, Assembly and Repairing Occupations, and 100 ($1000 \times .10$) in Construction Trades Occupations. The second assumption is that there is a strict proportionality between individuals in four and two digit SOC's. Thus, of the 100 employees working "off the books" in Product, Fabricating, Assembly and Repairing Occupations, 10 employees must be Motor Vehicle Mechanics; a further 10 employees must be Brick and Stone Masons and Tile Setters. The remaining 90 Motor Vehicle Mechanics who are not working as unrecorded employees in *Manufacturing* thus are all taken to be independent wage earners. The same assumption applies for the 90 employees in Brick and Stone Masons and Tile Setters in *Construction*. The 25 Motor Vehicle Mechanics and 5 Brick and Stone Masons and Tile Setters employed in *Public Administration and Defence* are also taken to be working as independent wage earners. This brings the total number of employees who are working as independent wage earners in these two occupations to 210 individuals — 115 as Motor Vehicle Mechanics and 95 as Brick and Stone Masons and Tile Setters.

The total number of individuals working in the unrecorded economy is presented below.

Unrecorded Employees			
Product Fabricating, Assembly and Repairing Occupations		100	
Construction Trades	100	200	
Independent Wage Earners			
Motor Vehicle Mechanics	115		
Brick and Stone Masons and Tile Setters	95	210	
Total Number of Unrecorded Labourers		410	

One of the limitations of this approach is that it rests on the assumption that individuals who declare one of the occupations selected as their primary employment are only considered to be working in the unrecorded economy in that capacity. It is possible, for example, that people who do not declare these occupations as their primary employment in the regular market may also work in the unrecorded economy in one of the selected occupations, e.g. fireman working as carpenter. While these individuals are not accounted for, the estimate derived for the number of individuals working in the unrecorded

economy is probably still on the high side, because of the assumption that *all* individuals who fall into the defined universe are assumed to be working in the unrecorded economy. In truth, it is more likely that only some part of this population is working on an "off-the-books" basis, and only for short periods of time. This has been confirmed to some extent by research in the U.S. which suggests that work in the unrecorded economy is usually part-time and only intended to supplement regular income during periods of hardship, not to substitute for regular employment.²⁴

Unrecorded Wages: Method of Calculation and Data Sources

Now that the limit of the universe of the potential number of individuals working as unrecorded labour has been established, it remains to estimate unrecorded wages. Estimates are presented in Table 1A on page xv. The detailed methodology and data sources used to make these estimates are outlined in the following paragraphs.

The formula used to calculate unrecorded wages for each category in Table 1A is presented below.

Formula

Unrecorded Earnings = (A) Number of Individuals Working in the Unrecorded Economy X (B) Hours Worked per Week X (C) Average Hourly Unrecorded Wage X (D) Weeks Worked Per Annum.

(A) Number of Individuals Working in the Unrecorded Economy

Category 1. Employed and working in primary market occupations in the unrecorded economy

This category includes individuals who are counted as employed in labour statistics, and who, in addition, are assumed to be working as unrecorded employees or independent wage earners in their primary market occupations as delineated by the SOC-SIC cross-classification and the forty, four digit SOC's selected. Industrial and occupational data were derived from the 1981 Census. The number of employees working in establishments with 20 employees or less was furnished by the Labour Division of Statistics Canada.

Category 2. Unemployed and working in primary market occupations

This category includes individuals who are counted as unemployed in labour statistics and are working during their period of unemployment in their primary occupations as either unrecorded employees or in-

dependent wage earners. They work in the same industrial and occupational groupings outlined in category 1 above. Industrial and occupational data were derived from the 1981 Census.

Category 3. Not in the labour force and working in last primary market occupations

Individuals not in the labour force were included in the universe if the last industries and occupations in which they worked were the same as the industrial and occupational grouping selected in category 1 above. These data were derived from the 1981 Census and compilations provided by the Labour Division of Statistics Canada.

Category 4. Illegal immigrants

Canada Employment and Immigration estimates that the population of illegal immigrants in Canada was about 50,000 in 1981. As this estimate includes women and children who may be at home, it was assumed that 50 per cent or 25,000 of this population is working. (It was also assumed that illegal immigrants work mainly in selected SIC's such as *Agriculture, Construction, and Community, Business and Personal Services*). Furthermore, because illegal immigrants are a small group in Canada, it was decided to treat them as unrecorded employees.

(B) Hours Worked per Week in the Unrecorded Economy
The *Canadian Time Use Pilot Study* undertaken by Statistics Canada in 1981 shows that approximately 2.5 hours per weekday or 13 hours per week (2.5 X 5) were spent in second jobs by people who had second jobs. Therefore, it was assumed that this was also time spent in the unrecorded economy. Thirteen hours a week were also used for hours worked per week by the unemployed and those not in the labour force. Since evidence from the U.S.²⁵ suggests that work in the unrecorded economy is usually part-time, thirteen hours for these two groups also appears to be a reasonable assumption. For illegal immigrants, it was assumed that they work the same number of hours as their legally employed counterparts in those industries where illegal immigrants may be working, i.e. *Agriculture, Construction and Community, Business and Personal Services*. Average hours worked per week are published by the Labour Division of Statistics Canada in *Employment, Earnings and Hours*, Catalogue No. 72-002.

(C) Average Hourly Wages for Working in the Unrecorded Economy

The starting point for the calculation of average hourly wages for all those working in the unrecorded economy, except illegal immigrants, was the

recorded gross hourly wage rate earned by employees in the selected SOC/SIC grouping and in each of the forty, four digit SOC's.

For reasons already noted, individuals working in the unrecorded economy are employed at wage rates below those prevailing in the regular market. The assumption made was that the unrecorded hourly wage rate lies somewhere between the recorded gross and net hourly take-home pay earned, as any amount between this range affords the worker the opportunity to evade some marginal income and other taxes. Therefore, seventy per cent of the recorded gross hourly wage rate for the selected occupations was taken as an approximation for unrecorded hourly compensation. Wage data were derived from the 1981 Census.²⁶

Illegal immigrants were assumed to be working for 90 per cent of the average of the hourly minimum wage rates of Quebec and Ontario in 1981 to account for income tax and other tax savings.

(D) Weeks Worked per Annum in the Unrecorded Economy

Category 1. Employed and working in primary market occupations in the unrecorded economy

Weeks worked per annum in the unrecorded economy in this category were assumed to be equal to weeks worked by employed individuals in the same industries and occupations in the regular market. These data were derived from the 1981 Census.

Category 2. Unemployed and working in primary market occupations

The whole period of unemployment was taken as a proxy for the number of weeks worked by unrecorded labour. Duration of unemployment by industry and occupation were obtained from special compilations provided by the Labour Force Survey Division of Statistics Canada.

Category 3. Not in the labour force and working in last primary market occupations

Weeks worked by individuals not in the labour force were assumed to be equal to that worked by employed individuals in the same industrial and occupational groups in the regular market place. These data were derived from the 1981 Census.

Category 4. Illegal immigrants

Weeks worked by illegal immigrants were taken to be equal to weeks worked by the employed labour force working in the same industries in the regular market place. Weeks worked by industry are published in *Employment, Earnings and Hours*, Catalogue No. 72-002.

Table 1A below sets out the estimate of unrecorded wages. These estimates are compared to aggregate wages, salaries, and supplementary labour income and GNP for 1981 in Table 1B. The impact of the omission of unrecorded wages represented 4.0 per cent of wages, and salaries and supplementary labour income. Unrecorded wages represented 2.3 per cent of recorded GNP in 1981.

TABLE 1A. Unrecorded Wages and Selected Macroeconomic Aggregates, 1981

Unrecorded Wages			
Individuals Working in the Unrecorded Economy	(\$ millions)		
	Employees	Independent Wage Earners	Total
Category 1 Employed and working	3,083	3,157	6,240
Category 2 Counted as unemployed and working	131	93	224
Category 3 Not in the labour force	383	889	1,272
Category 4 Illegal immigrants	115	—	115
Total Unrecorded Wages (1+2+3+4)	3,712	4,139	7,851
 Recorded			
Wages, salaries and supplementary labour income	194,075		
Gross National Product at market prices	339,797		

TABLE 1B. Unrecorded Wages as a Percentage of Selected (Recorded) Macroeconomic Aggregates 1981

	per cent
1. Unrecorded wages as a percentage of wages, salaries and supplementary labour income	4.0
Employees	1.9
Independent wage earners	2.1
2. Total unrecorded wages as a percentage of GNP at market prices	2.3

2. Concealed Net Income of Unincorporated Business

We now turn to the estimate of net income that unincorporated businesses may be concealing from public authorities as a result of selling commodities "off the books" or skimming.

Unincorporated businesses with annual sales of \$500,000 or less are considered, on average, representative of firms whose owners may be skimming some part of their legitimate business receipts. It is believed that this sales limit adequately captures the typical unrecorded transactions such as "off-the-books" work done by small contractors and independent artisans, skimming by proprietors of small retail shops and restaurants. These enterprises are small enough to permit direct contact between owners and their customers and workers, and do not have the need for sophisticated book-keeping requirements of larger businesses.²⁷

Manufacturing, Construction, Trade, Community, Business and Personal Services were also selected as the industries where owners of unincorporated businesses have the greatest opportunity to conceal income. While for labour, the opportunities for unrecorded activities in these industries were narrowed down on the basis of occupations, the determination of opportunities for skimming and "off-the-books" work for small businesses was based on specific industry subcategories. For example, in *Manufacturing*, it was assumed that skimming would most likely occur in small clothing manufacturers; in *Trade*, wholesalers of food, apparel and dry goods, lumber and building materials and so on were included; and in *Community, Business and Personal Services*, shoe repair, restaurants and activities such as catering and entertainment were selected. The industries selected are presented in Table 3 of the Appendix.

The concealed net income of unincorporated businesses for each of the above industries was determined by first finding out from tax data provided by the Business Register Division of Statistics Canada the share of total sales of unincorporated businesses by industry with sales of \$500,000 or less per annum in 1981. The percentage derived from these tax data was then applied to published National Accounts figures of net income of unincorporated business to estimate net income of small businesses on a National Accounts basis. It was then assumed that net income of small businesses may be understated by as much as 25 per cent due to

the unrecorded economy. While this percentage will obviously overstate net income in cases where mis-reporting is slight, and understate in entire businesses which are not being recorded, 25 per cent, on average, probably sets an outer limit.

Published estimates for *Agriculture, and Forestry, Fishing and Trapping* appear to be reasonably complete. In *Agriculture*, net income from farm production covers the universe, because sales of farm output are based on estimates of production, acreage under cultivation and price per product. In *Forestry, Fishing and Trapping*, net income of unincorporated businesses is also based on total production and price.

Table 2A shows the potential concealed income of unincorporated business by industry.

TABLE 2A. Concealed Net Income of Unincorporated Business by Industry, 1981

	(\$ millions)
Manufacturing	42
Construction	335
Trade	282
Community, Business and Personal Services	1,191
Total	1,850

Table 2B indicates that concealed net income of unincorporated business may have represented 11.5 per cent of unincorporated business income in 1981. Its omission may also have represented 0.5 per cent of GNP in the same year.²⁸

TABLE 2B. Concealed Net Income of Unincorporated Business and as a Percentage of (Recorded) Unincorporated Net Business Income and GNP, 1981

	(\$ millions)
1. Concealed net income of unincorporated business	1,850
2. Net income of unincorporated business (including farm income)	16,146
3. GNP at market prices	339,797
4. Concealed net income of unincorporated business as a percentage of net income of unincorporated business (including farm income)	11.5
5. Concealed net income of unincorporated business as a percentage of GNP at market prices	0.5

3. Concealed Corporation Profits

The estimate of concealed corporation profits followed the same approach to obtain the concealed net income of unincorporated business. Small incorporated businesses were defined as having sales of \$500,000 or less per annum. Table 3A presents estimates of concealed corporation profits by industry.

TABLE 3A. Concealed Corporation Profits by Industry, 1981

	(\$ millions)
Manufacturing	119
Construction	49
Trade	111
Community, Business and Personal Services	154
Total	433

Table 3B shows that concealed corporation profits may have represented 1.3 per cent of corporation profits before taxes and 0.1 per cent of GNP in the same year.

TABLE 3B. Concealed Corporation Profits and as a Percentage of (Recorded) Corporation Profits Before Taxes and GNP, 1981

	(\$ millions)
1. Concealed corporation profits	433
2. Corporation profits before taxes	32,606
3. GNP at market prices	339,797
4. Concealed corporation profits as a percentage of corporation profits before taxes	1.3
5. Concealed corporation profits as a percentage of GNP	0.1

Incorporated businesses with sales of \$500,000 per annum or less for 1981 were derived from tax data provided by the Business Register Division of Statistics Canada.

We now turn the discussion to the last two categories of GNP — rental income, and interest and miscellaneous investment income mentioned at the beginning of the discussion of the income side.

4. Rental Income

Although some suspicion exists that there may be a large unrecorded economy in residential rental income, e.g. key money accepted by landlords in a

tight rental market, covert rentals etc., the estimate of residential rental income does not depend on landlord reporting. Rental income is based on the number of dwelling units (Construction Division) and average annual rent paid by tenants (Labour Force Survey). The difference between gross and net rental income consists of expenses such as mortgage interest payments and repairs calculated from a wide variety of sources. Unrecorded activity in any of these latter outlays, therefore, would have the effect of reducing the estimate of net rental income in GNP. Net rental income in this study was not adjusted downward to take account of an unrecorded economy in any of these expenses.

5. Interest and Miscellaneous Investment Income

Interest and miscellaneous investment income is composed of interest income of persons and government investment income. For obvious reasons, it is not possible that government investment income is understated. Since the greater part of interest income of persons is estimated residually from business and government records, an understatement due to the unrecorded economy is also impossible. Interest income received from other sources by individuals e.g. from private mortgage interest income is estimated independently in the Canadian National Accounts and is taken to be complete.

Table 4 below sums estimates of unrecorded wages, concealed net income of unincorporated business, and concealed corporation profits. It reveals that these three components may have represented 2.9 per cent of GNP in 1981.

TABLE 4. Unrecorded Economy and as a Percentage of (Recorded) GNP, 1981

	(\$ millions)	as a percentage of GNP at market prices*
1. Unrecorded wages	7.851	2.3
2. Concealed net income of unincorporated business	1.850	0.6
3. Concealed corporation profits	433	0.1
4. Unrecorded economy (1+2+3)	10.134	2.9

* Does not add to total because of rounding

Another way to measure the unrecorded economy is to estimate it from the expenditure side of the National Accounts. As with the approach used on the income side, attention is focussed on those particular areas where an unrecorded activity is most likely to take place. On the expenditure side, this is likely to occur only in specific categories of personal expenditure on goods and services and business gross fixed capital formation.²⁹ For similar reasons as outlined in detail on the income side, these categories are likely to comprise purchases by persons and small businesses (annual sales of \$500,000 or less) from independent wage earners and small enterprises. Personal expenditure on consumer goods and services and business gross fixed capital formation were, therefore, examined in detail from this point of view. Thus, for example, data of outlays of alcoholic beverages provided by provincial governments to Statistics Canada were considered as complete. Likewise, transportation purchased from a public transit authority can be taken as complete, because it is sold through government agencies and other large scale carriers. Transportation purchased from small private carriers, however, may be understated.

There are, however, reasons for believing that Gross National Expenditure (GNE) may not be greatly understated. In personal expenditure on goods and services, for example, some commodity outlays have been adjusted upwards by the National Accounts by between 12 and 13 per cent in 1981 to account for undercoverage. Therefore, even if sales were misreported in original sources, they still may be included in GNE. Also, in those instances where expenditure estimates are derived from surveys of buyers, buyers are likely to be less reluctant to respond to questions about unrecorded purchases than sellers; and lastly, part of concealed income likely finds its way back into recorded expenditure through purchases.

1. Personal Expenditure on Goods and Services

In the Canadian National Accounts, underreporting in personal expenditure on goods and services due to the unrecorded economy can arise from understatement of sales by businesses as well as from the mis- or nonreporting of outlays made outside business establishments such as babysitting and domestic services. For purposes of making some of the estimates on the expenditure side, small businessmen are assumed to be skimming some portion of

reported sales. The share of total sales accounted for by small businesses was determined from tax data provided by the Business Register Division. This percentage was then applied to published National Accounts expenditure estimates to determine possible purchases from small businesses. A rough test of sensitivity (0 to 50 per cent) was applied to this latter estimate to ascertain the possible lower and upper limits by which particular expenditure series may be understated. For outlays such as babysitting, the sensitivity test was simply applied to the National Accounts estimates of the identified series. In one series, residential construction, the estimate was made by comparing family expenditure data with National Accounts' estimates. Results are presented in Table 5 at the end of the section.

Food, beverages and tobacco

Starting with food and non-alcoholic beverages outlays, unrecorded expenditure can arise from two sources: "off-the-books" food sales in retail grocery stores and sales of food made outside these establishments such as at market gardens and roadside stands. The latter component is included in personal expenditure as an independently estimated item. It amounted to some \$700 million in 1981 and is considered to be a reasonably complete estimate. Unrecorded food sales thus most likely occur in small, owner-run stores where purchases are made in cash and proprietors can skim. Based on Business Register Division tax data, stores with sales of \$500,000 or less accounted for about 11 per cent of total food sales in 1981. Applying this percentage to food outlays as measured in the National Accounts shows that such operations may have comprised some \$3,000 million of sales in 1981. Thus, to estimate the possible range of unrecorded economy here, sensitivity analysis of 0 to 50 per cent was applied to this estimate and results presented in Table 5 indicate a possible range of unrecorded food outlays of between \$154 and \$1,542 million.

Clothing and footwear

Some sales made by small retailers of men's, women's and babies' clothing and footwear are paid for by cash. Calculations indicate that small retailers, as we have defined them, accounted for about 25 per cent of all retail sales of clothing and footwear, or \$3,160 million of all expenditure on clothing and footwear in 1981. Sensitivity analysis was applied only to the estimated share of clothing and footwear sales made by small clothing retailers. The results presented in Table 5 show a possible range of between \$158 and \$1,580 million. This estimate is also taken to include sales made by artisans at craft fairs. Since a separate estimate of total outlays for

clothing repairs and alterations is in GNE, it is deemed to include activities carried out by independent wage earners.

Furniture, furnishings, household equipment and operation

These items include a wide range of durable products from furniture and appliances to garden tools and supplies. It also consists of outlays on semi-durable goods such as notions, smallware, lamps, fixtures and accessories, non-durable household furnishings such as flowers and services such as babysitting. It is in flowers, babysitting and outlays for domestic services that estimates are believed to be understated due to the unrecorded economy.

Owners of florist shops, landscapers and gardeners, for example, may be misreporting since these small enterprises may do large cash sales, and have skills which can be sold independently. They account for about 75 per cent of total flower store sales, or about \$334 million. The results of sensitivity analysis in Table 5 show that misreporting due to unrecorded flower sales may range from \$17 to \$167 million. Also, while this expenditure category contains explicit estimates for outlays on babysitting, there is, however, concern that the growth of child care outside the home and unregistered day-care centers in private residences may not now be captured. Based on National Accounts estimates, sensitivity analysis shows that unrecorded expenditure on babysitting may range from \$7 to \$65 million.³⁰ With respect to outlays on domestics, according to the sensitivity analysis undertaken, their range of under-statement may be from \$32 to \$318 million.

Transportation and communication

As pointed out earlier, many transportation services are sold by government or large private enterprises. The same is true for communication outlays. Recorded expenditure on new passenger cars may be taken as complete. With respect to the subcategory, auto repair and maintenance, however, it is believed that there is private vehicle servicing and repair of motor vehicles. Sensitivity analysis shows that it could range from \$66 to \$658 million. Outlays on taxis (including tips) are obtained from the Family Expenditure Survey and, therefore, are taken as complete.

Recreation, entertainment, education and cultural services

Most outlays in recreation, sporting and camping equipment would be properly recorded, e.g. outlays on television sets, cable television and outlays on pari mutuels, lotteries and government recreation. In

educational and cultural services, estimates for fees received by institutions and private schools are also deemed complete. Private tutoring is not considered to be a significant activity today, given the specialized nature of modern-day public education, i.e. separate streams for students with different abilities. Other outlays in recreation, educational and cultural services such as outlays on golf, tennis and music lessons and other entertainment, however, may be substantially underreported, bearing in mind that the value of these transactions is usually small and payment is mostly made in cash. They are estimated to range from \$77 to \$773 million in 1981.

Personal goods and services

The subcategories, jewellery, watches and repairs may contain misreporting by small jewellers and artisans at craft fairs. The results of our sensitivity analysis show that underreporting here could range from \$59 to \$590 million. There may also be some unrecorded activity in personal care and restaurants and hotels. Proprietors of hair styling shops for men and women usually do a large cash business which may not be fully reported. The same applies for meals purchased in small restaurants. The unrecorded economy for both these items of expenditure is estimated to range from \$45 to \$448 million, and \$146 to \$1,461 million respectively in 1981. It should be noted that tips to hairstylists and waiters are included in GNE estimates for these items, and they are, therefore, also included in the above range of figures.

2. Business Gross Fixed Capital Formation

Business gross fixed capital formation includes: (i) residential construction, (ii) non-residential construction and (iii) machinery and equipment. All three categories include an estimate both for work-put-in-place for new construction and capital alterations and improvements.

The main sources of data employed to calculate residential construction, the Canada Mortgage and Housing Corporation's monthly starts and completions survey and the Statistics Canada Building Permits survey render the work-put-in-place for new residential construction complete.

Capital improvements, i.e. alterations and improvements are also included in new residential

construction estimates. Although a special adjustment for unrecorded activity is already included in GNE, recent growth in renovating and converting older houses may make this adjustment insufficient.

A comparison of preliminary Family Expenditure Survey data for 1982 and GNE estimates for capital improvements indicates that there may be an under-coverage of some \$3,000 million. This estimate has been taken as the maximum estimate of the potential unrecorded economy in capital improvements.³¹

The second category of business gross fixed capital formation, non-residential construction, consists of five main activities: (i) building, (ii) highways, bridges and streets, (iii) railway, (iv) energy and (v) other engineering such as docks, canals and waterworks. Virtually all data necessary to construct estimates of non-residential construction in GNE are derived from *Private and Public Investment in Canada, Outlook and Regional Estimates* which is considered to be reasonably complete. However, for the usual reasons already noted, it may be that unrecorded activity is taking place in renovation of small commercial buildings. Our sensitivity analysis shows that it could range from \$53 to \$529 million in category (i) above.

Machinery and equipment outlays include heavy equipment such as aircraft, railway rolling stock and so on. It is unlikely that there is an unrecorded economy here.

3. Other

With the exception of the estimate made for unrecorded capital improvements — residential, this category constitutes an arbitrary addition of 10 per cent to the sum of the estimates made in unrecorded personal expenditure and business gross fixed capital formation to account for any outlays missing in the sensitivity analysis.

Table 5 summarizes the estimates prepared for the unrecorded economy from the expenditure side of the National Accounts. It is interesting to note that even with a 50 per cent across-the-board increase for the items identified, together with the estimates for capital improvements, GNE would be understated only by \$11,912 million, or 3.5 per cent as a result of the unrecorded economy in these components.

TABLE 5. Sensitivity of GNE Due to Unrecorded Economy

	Assuming Understatement of			
	5 per cent	15 per cent	25 per cent	50 per cent
	(\$ MILLIONS)

Total Understatement	3,892	5,672	7,458	11,912
Percentage of GNE	1.2	1.7	2.2	3.5

VI

The unrecorded economy has been estimated both from the income and expenditure sides of the Canadian National Accounts. It would clearly be unwise to claim that the estimates have pinpointed accurately all unrecorded transactions, and, therefore, are of the same quality as other GNP and GNE published figures. There is indeed much scope for argument about many of the assumptions underlying these calculations.

The approach used to measure the unrecorded economy nonetheless provides some rough estimates of the order of magnitude of the unrecorded economy in Canada. It should also be recalled that on this basis GNP is estimated to be understated by between 2.9 and 3.5 per cent. Furthermore, it is hard to conceive how estimates could be much higher, given that the Government sector and large private and public corporations play such important roles in the economy. Estimates for the unrecorded economy made here for Canada also appear to be of the same general order of magnitude as some recent official National Accounts figures now appearing in the U.S. and U.K.

APPENDIX

TABLE 1. Annual Earnings of Independent Wage Earners, 1981 (\$)

SOC — 4 Digit Level	(1)	(2)	(3)	(4)	Examples of Unrecorded Activity
	Employed	Unemployed	Not in the Labour Force	Average ^a	
1171 Accountants, Auditors and Other Financial Officials	4,538	2,174	4,996	4,510	Income tax returns, bookkeeping etc.
2141 Architects	5,373	1,955	4,904	5,261	Design for home renovations
2792 Fine Arts Teachers NEC e.g. arts, music, violin	3,753	1,309	3,430	3,548	Private art, music lessons, etc.
3157 Denturists	3,502	1,231	5,328	4,616	Preparing of dental plates and bridges
3315 Photographers and Camera Operators	3,646	1,150	2,581	3,434	Photographer at weddings, parties, etc.
3332 Musicians and Singers	5,123	1,773	3,324	4,622	Private performances for parties, weddings, etc.
3370 Coaches, Trainers and Instructors in Sports and Recreation e.g. golf instructors, tennis etc.	2,817	1,046	2,628	2,563	Private lessons
3371 Referees and Related Officials	3,945	1,742	807	2,734	Refereeing of private sports, events e.g. make-up baseball, football matches, etc.
4131 Bookkeepers and Accounting Clerks	2,946	1,141	2,947	2,873	Income tax returns, private bookkeeping, etc.
6123 Bartenders	1,916	790	1,708	1,751	Unrecorded earnings and tips from private parties, e.g. weddings
6125 Food and Beverage Service Occupations	1,450	673	1,603	1,464	Private parties, e.g. weddings
6143 Barbers, Hairdressers and Related Occupations, e.g. comedicians, facial operators	1,994	781	1,691	1,724	Work in private nursing homes, hospitals, homes, etc.
6144 Guides	1,193	744	1,593	1,276	Private tours, fishing expeditions
6147 Child-care occupation	894	445	3,759	1,843	Day-care centres in private homes
6191 Janitors, Charworkers and Cleaners	2,445	966	1,796	2,171	Cleaning of households
7195 Nursery and Related Workers	1,062	739	882	853	Private gardening
8213 Baking, Confectionary, Baking-related Occupations	2,662	1,114	2,942	2,681	Baking for private parties
8533 Electrical and Related Equipment, Installing and Repairing Occupations, NEC, e.g. automobile, electrician, stove, vacuum and dishwasher repairers	4,167	1,639	4,480	4,117	Repairing of household appliances

TABLE 1. Annual Earnings of Independent Wage Earners 1981 (\$)/concluded

SOC — 4 Digit Level	(1)	(2)	(3)	(4)	Examples of Unrecorded Activity
	Employed	Unemployed	Not in the Labour Force	Average [*]	
8537 Radio and Television Repairers	3,183	1,275	4,095	3,207	Repairing of household radios and television sets
8541 Cabinet and Wood Furniture Makers	2,513	1,074	3,427	2,551	Manufacturing and vending of custom-made furniture
8551 Patternmaking, Marking and Cutting Occupations: Textile, Fur and Leather Products	2,546	1,044	2,932	2,577	Manufacturing, vending and repairing of garments and coats
8553 Tailors and Dressmakers	2,319	967	2,718	2,385	Repairing, making and vending of clothing
8555 Furriers	2,921	1,211	2,949	2,748	Repairing, manufacturing and vending of fur products
8557 Milliners, Hat and Cap Makers	1,722	815	2,891	2,138	Manufacturing and vending of ribbon, hats, etc.
8561 Shoemaking and Repairing Occupations	1,920	812	2,653	2,035	Repairing shoes, leather goods, etc.
8562 Upholsterers	2,674	1,100	3,227	2,664	Repairing furniture
8581 Motor Vehicle Mechanics and Repairers	3,224	1,295	3,880	3,188	Repairing cars, trucks, etc.
8587 Watch and Clock Repairers	3,352	1,305	3,745	3,376	Repairing watches and clocks
8589 Other Mechanics and Repairers, e.g. bicycle mechanics, locksmiths	3,471	1,416	3,998	3,426	Repairing bicycles, installing home locks, etc.
8591 Jewellery and Silverware Fabricating, Assembling and Repairing Occupations	2,895	1,406	3,054	2,782	Manufacturing, repairing and vending of jewellery, e.g. custom jewellery
8595 Painting and Decorating Occupations	2,982	1,241	3,538	2,878	Home decorating and painting
8781 Carpenters and Related Occupations	3,157	1,261	3,093	3,024	Building decks, additions, etc.
8782 Brick and Stone Masons and Tile Setters	3,464	1,400	3,111	3,323	Installing ceramic tiles; mosaic floors, terra-cotta masonry
8783 Concrete Finishing and Related Occupations	3,536	1,446	3,188	3,413	Building terraces, grouting, etc.
8784 Plasterers and Related Occupations	3,357	1,345	2,910	3,210	Plastering in homes, installing insulation, etc.
8785 Painters, Paperhangers and Related Occupations	2,746	1,161	2,974	2,668	Home renovations, wall papering, etc.
8786 Insulating Occupations Construction	2,861	1,457	1,999	2,706	Installing air conditioning, insulation, etc. in private homes
8787 Roofing, Waterproofing and Related Occupations	3,029	1,454	2,782	2,878	Installation and weather stripping and caulking in private homes
8791 Pipefitting, Plumbing and Related Occupations	4,251	1,553	3,071	3,994	Repairing and maintenance of pipes in private homes
8795 Glaziers	3,096	1,156	2,747	2,740	Installing windows in private homes

^{*} Sum of total unrecorded earnings of categories 1, 2 and 3 divided by the total of the number of individuals in all three categories.

TABLE 2* Unrecorded Wages by Occupation/Industry

SIC 2 Digit SOC	MANUFACTURING	CONSTRUCTION	TRADE	COMMUNITY BUSINESS AND PERSONAL SERVICES
(\$ Millions)				
Major Group 41 Clerical and Related Occupations			521	
Major Group 51 Sales Occupations			780	66
Major Group 61 Service Occupations			48	918
Major Group 83 Machining and Related Occupations	109	55		
Major Group 85 Product Fabricating, Assembling and Repairing Occupations	216	59		
Major Group 87 Construction Trades Occupations	34	732		
Major Group 93 Material Handling and Related Occupations. N.E.C.	49	19

* Does not add to total of unrecorded wages of employees in Table 1A on page XV because of exclusion of illegal immigrants and rounding.

TABLE 3 Industry Major Groups

Manufacturing
Leather Tanneries
Shoe Factories
Luggage, Handbag and Small Leather Goods Manufacturers
Carpet, Matt and Rug Industry
Men's Clothing Industries
Women's Clothing Industries
Children's Clothing Industry
Fur Goods Industry
Foundation Garment Industry
Miscellaneous Clothing Industries
Construction
Building Construction
Special Trade Constructors
Trade
Wholesalers
Wholesalers of General Merchandise
Wholesalers of Food
Wholesalers of Drugs and Toilet Preparations
Wholesalers of Apparel and Dry Goods
Wholesalers of Motor Vehicles and Accessories
Wholesalers of Hardware, Plumbing and Heating
Wholesalers of Lumber and Building Materials
Wholesalers of Scrap and Waste Materials
Retailers
Food Stores
General Merchandise Stores
Tire, Battery and Accessories Stores
Motor Vehicle Dealers
Motor Vehicle Repair Shops
Shoe Stores
Men's Clothing Stores
Women's Clothing Stores
Clothing and Dry Good Stores, n.e.s.
Household Furniture and Appliance Stores
Radio, Television and Appliance Stores
Drug Stores
Book and Stationary Stores
Florist's Shops
Jewellery Stores
Watch and Jewellery Stores
Liquor, Wine and Beer Stores
Tabacconists
Retail Stores, n.e.s.
Community, Business and Personal Services
Kindergartens and Nursery Schools
Bowling Alleys and Billiard Parlours
Shoe Repair Shops
Barber and Beauty Shops
Self Service Laundries and Cleaners
Miscellaneous Personal Services
Lodging Houses and Residential Clubs
Restaurants, Caterers and Taverns
Photographic Services, n.e.s.
Miscellaneous Repair Shops
Services to Buildings and Dwellings

END NOTES

1. Carol S. Carson provides synopses of several important articles in this area in "The Underground Economy: An Introduction", *Survey of Current Business*, 64 May and July 1984, pp. 21-37 and 106-118.

11. See Kerrick Macafee, "A Glimpse of the Hidden Economy in the National Accounts", *Economic Trends*, No. 316, February 1980, pp. 81-87.
Op. cit.
12. Denison also evaluates sources to compile National Income and Product Accounts estimates to determine their possible understatement due to the unrecorded economy. Denison concludes that GNP in the National Income and Product Accounts fully reflects the value of all transactions in the U.S. economy. Edward F. Denison, "Is Growth Understated Because of the Underground Economy? Employment Ratios Suggest Not", *The Review of Income and Wealth*, Series 28, Number 1, March 1982, pp. 1-16.
13. James D. Smith, Jerry Moyer and Eileen Trzcinski, "The Measurement of Selected Income Flows in Informal Markets". The study was summarized in *Income Tax Compliance Research Estimates for 1973-1981* and in papers by the study's authors. Quoted in Carson, *op. cit.*
14. A. Franz, "Estimates of the Hidden Economy in Austria on the Basis of Official Statistics", unpublished paper presented at the International Association for the Review of Income and Wealth Conference, Luxembourg, August 21-27, 1983.
15. R. Rose "Getting by in the Three Economies: The Resources of the Official, Unofficial and Domestic Economies", *Studies in Public Policy*, November, pp. 2-39, No. 110, Centre for the Study of Public Policy, University of Strathclyde, Glasgow, 1983.

18. *Op. cit.*, pp. 21-22.
See Oli Hawrylyshyn, *Estimating the Value of Household Work in Canada*, 1971, Statistics Canada, Cat. 13-566E, Occasional, June 1978 and J.S. Swinamer "The Value of Household Work in Canada, 1981", *Canadian Statistical Review*, March 1985, Statistics Canada, Publication Cat. 11-003E.
19. It should be noted that while the United Nations System of National Accounts (UNSNA) in 1968 (ST/STAT/Ser.F/2/Rev.3) does not refer to the treatment of criminal activities, previous UNSNA's (ST/STAT/Ser.F/2/Rev.1), 1960 and (ST/STAT/Ser.F/2/Rev.2), 1964 included criminal activities in production. Recent meetings of UN National Accounts experts, however, have recommended that it might be desirable to include criminal activities as a below-the-line item every four to five years.
20. *Op. cit.*, p.24.
21. The Standard Occupational Classification categorizes occupations at three different levels. A two digit SOC generally encompasses a broad occupational field such as *Service Occupations* (61). A three digit SOC, on the other hand, further sub-divides a two digit SOC into smaller groups such as *Food and Beverage Preparation and Related Service Occupations* (612). Finally, a four digit SOC refers to a specific occupation such as *Bartenders* (6123).
22. An SIC group is defined as a group of operating units, e.g. establishments engaged in the same or similar kind of economic activity. The term industry is used in its broadest sense to include all economic activity from primary industries such as agriculture to the rendering of services and the various levels of government. The SIC also provides a more disaggregated grouping at the two and three digit levels.
23. Louis A. Ferman, Louise E. Berndt and Elaine Selo, "Analysis of the Irregular Economy: Cash Flow in the Informal Sector (A Summary Report)", unpublished report to the Bureau of Employment and Training, Michigan Department of Labour, March 1978, quoted in Barry Mofelsky — "America's Underground Economy," in V. Tanzi ed. *op. cit.* Chapter 3 p. 67. Contrary to the expectations of many writers in this field who see the unrecorded economy as the alternative to formal employment unrecorded work emerges from this study as typically a complement to formal work. Workers would frequently find unrecorded employment, because of low formal wages or because of the intense dissatisfaction with their work, but not because of the lack of any sort of formal job. Unrecorded workers who were formally unemployed were in a minority. Although this study was limited only to a random sample of Detroit households so the results need not necessarily throw light on behaviour outside that city, they nevertheless do give us some feel for the characteristics of work in the unrecorded economy.
24. *Ibid.*
25. In order to calculate the average hourly wage for the SOC/SIC cross-classification and the forty-four digit SOC's respectively, an estimate was required for hours worked per week and weeks worked per year. However, because the 1981 Census only provides ranges for hours and weeks worked at this level of industrial and occupational detail, mid-points of the ranges selected were taken as proxies for averages.
26. It should be recalled that the estimate of "off-the-books" wages of unrecorded employees was based on establishments with 20 employees or less. While it is not possible to estimate the annual sales of these establishments, rough calculations make it appear unlikely that they would amount to more than \$500,000 in annual sales.
27. Another way to estimate the concealed income of the self-employed is to compare their expenditure with those individuals who are employed at the same income levels. This was the approach undertaken by Andrew Dilnot and C. N. Morris in Tanzi ed. *op. cit.*, Chapter 10, pp. 163-169. The approach is based on the contention that businessmen have more opportunities to conceal income from public authorities, and that this additional unrecorded income finds its way back into recorded expenditure. A comparison of the expenditure of the self-employed and employed for the same incomes (normalized by family size, age, etc.) revealed that the self-employed, on average, had higher recorded outlays. The difference in expenditure between the self-employed and employed was taken as a proxy for concealed income. Analysis of Canadian consumer income and expenditure data did not demonstrate that the self-employed have higher outlays than employed individuals with the same annual income.
28. Data on personal expenditure on goods and services and business gross fixed capital formation are published in *National Income and Expenditure Accounts*, Statistics Canada, Cat. 13-001.
29. Outlays on child care are currently being investigated for the forthcoming historical revision of the Canadian System of National Accounts.
30. Capital improvements are also being investigated for the historical revision.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers/administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

¹Excludes profits (net of losses) of government business enterprises ²Includes the withholding tax applicable to this item ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given to the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

^aIncludes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ^bTax liabilities. ^cWithholding taxes. ^dThe quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ^aThe total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ^bIncludes publishing and allied industries. ^cIncludes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity.

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. no. 62-553, occasional.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark./concluded

End of period and month	Non-durable goods (concl.)				Durable goods industries						
	Refined petroleum and coal products	Chemical and chemical products	Total	Furniture and fixture	Primary metal	Fabricated metal products	Machinery	Transportation equipment	Electrical & electronic products	Non-metallic mineral products	
				Wood							Other mfgng.

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.²Gross new production by field less field flared and waste.

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

³Includes crude oil, condensate and pentanes

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.
