Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Electronic Data Dissemination Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(420-3027)
Ottawa	(951-8116)	Calgary	(292-6717)
Toronto	(973-6586)	Vancouver	(666-3691)
Sturgeon Falls	(753-4888)		

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831

Statistics Statistique
Canada Canada

Ottawa, Canada

December, 1987

Dear Reader:

Beginning in January, 1988, we will be introducing the **Canadian Economic Observer**. This new monthly publication incorporates the best and most widely used features from the **Canadian Statistical Review**, **Current Economic Indicators**, **Quarterly Economic Summary** and **Quarterly Economic Summary: Statistical Supplement**.

The result is an attractive and timely monthly publication that will continue to supply you with the analysis and data you need, as well as providing a gateway to keep you abreast of developments in Statistics Canada's coverage and analysis of economic statistics.

In January, we will be sending you the first issue of the **Canadian Economic Observer** in lieu of the January issue of the **Canadian Statistical Review**. You will also be receiving additional information in December about the **Canadian Economic Observer** and about how we will be converting your current subscription(s) to this new publication.

We are confident that you will find the **Canadian Economic Observer** to be an improved source of economic information, and we encourage you to send us any comments or suggestions which you may have about our new publication.

Sincerely,

Albert Meguerditchian
Director
International and Financial
Economics Division

Statistics Canada

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1987 — \$100.00 Canada, \$120.00 other countries

This Directory is an essential instrument for any regular user of the CANSIM Main Base.

The Directory includes:

- a full list of series on the Base, with both matrix /series and databank identifiers,
- an alphabetical subject index with corresponding matrix numbers,
- a list of subject matter contacts,
- and much other useful information.

A subscription to the 1987 Directory includes notification of any changes to the Base, on a quarterly basis.

Another valuable tool for CANSIM users is the 1987 CANSIM Main Base Cross Reference between Databank Identifiers and Matrix and Series Numbers — \$25.00 Canada, \$30.00 other countries.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
E. Boyko — Director, Electronic Data Dissemination Division
G.J. Brackstone — Director General, Methodology Branch

A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Industry Division
K. Lal — Director General, System of National Accounts Branch
P. Schlievert — A/Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: Electronic Data Dissemination Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

HIGHLIGHTS OF THE PUBLIC SECTOR MARKET STUDY, 1983

BY

Yusuf Siddiqi, P.S.K. Murty, and Joel Diena*

I. Introduction

This paper is the outcome of a special study sponsored by Supply and Services Canada to measure the size and structure of the public sector market for the year 1983. Similar studies were completed previously for the years 1974 and 1979. The main purpose of this paper is to highlight the results of the 1983 study; it is not intended either to replace the analytical report produced by Supply and Services Canada or to duplicate the conclusions in that report.

In this paper, the public sector market refers to purchases of all goods and services by: the government sector (federal, provincial and municipal governments, and public hospitals), universities, and government business enterprises (federal, provincial and local). These purchases include expenditures both for current operations and for capital formation, as defined in the System of National Accounts. Transfer payments and subsidies which, by definition, are not purchases of goods and services, are not included here.

Furthermore, it should be noted that:

- (i) In the System of National Accounts, the current and capital purchases of the government sector and universities, and the capital purchases of government business enterprises, are all treated as final expenditures (i.e. final demand) while the current purchases of government business enterprises are treated as intermediate purchases.

- (ii) Although the goods purchased for resale (GPRS) have been counted here as intermediate purchases of the government business enterprises, in the System of National Accounts these purchases are netted out against sales revenues.

Thus, the total outlays by the public sector cannot be compared directly with gross domestic expenditure by government, because the inclusion of intermediate purchases and GPRS introduces an element of double counting in the former. Also, for the same reasons, the assessment of the public sector's size in relation to the rest of the economy would be inappropriate.

The public sector market study was undertaken to answer the following questions:

1. What was the total dollar value of the public sector's purchases of goods and services?
2. What specific commodities comprised these purchases?
3. Were the purchased commodities imports (foreign production) or the results of domestic production? (In this context, the term imports refers to the direct import content only, and excludes imports embodied in domestically produced goods.)
4. Which domestic industries produced the commodities purchased by the public sector?
5. What was the provincial distribution of the public sector's spending on goods and services?

* Yusuf Siddiqi is Assistant Director of the Input-Output Division; P.S.K. Murty is Chief of Public Sector, Input-Output Division; and Joel Diena is Chief of Provincial Accounts, Income and Expenditure Division of Statistics Canada.

As in the two previous studies, the conceptual and statistical framework of the System of National Accounts in general, and of the Input-Output Accounts in particular, was used for the collection and organization of the required data base. The System of National Accounts provides an over-all framework for studying the economy, and consists of several interrelated sub-systems such as the Income and Expenditure Accounts, Input-Output Accounts, Gross Domestic Product by Industry, Balance of International Payments, Financial Flow Accounts and Balance Sheets. The Input-Output Accounts provide, among other things, details on goods and services which are called "commodities".¹ Since the primary objective of this project was to measure the size and structure of the public sector's purchases of commodities, and the industries supplying them, the Input-Output sub-system was the most appropriate choice for carrying out this work.

The conceptual and statistical framework, sources of data, methods of estimation, and presentation of statistical tabulations are described in a separate document *Size and Structure of the Public Sector Market, 1983: Sources and Methods*.²

The public sector, as indicated earlier, consists of three main segments: (a) the government sector (three levels of government: federal, provincial and municipal) and public hospitals; (b) universities; and (c) government business enterprises (federal, provincial and local). In 1983, these segments covered a total of 23,097 institutions — 4,835 municipalities, 1,124 hospitals, 809 government business enterprises, 15,906 educational institutions, and 423 federal and provincial special funds — in addition to the federal and provincial government departments. For the purpose of data collection, the three main segments were organized into 28 categories, which were further aggregated into the following 8 summary groups as requested by the sponsoring department:

- (1) Federal government (includes defence and other federal)
- (2) Provincial government
- (3) Municipal government (includes education and other municipal)

- (4) Hospitals
- (5) Universities
- (6) Federal government business enterprises
- (7) Provincial government business enterprises
- (8) Local government business enterprises

The summary results which follow are presented in the context of these 8 summary groups.

II. Summary Results

1. In 1983, the public sector's expenditures in current dollars both for current operations and for capital formation amounted to \$173,460 million compared to \$111,493 million in 1979. The government sector accounted for the largest portion of expenditures, followed by government business enterprises and then by universities, as reflected in Table I.

The expenditures of the government business enterprises between 1979 and 1983 showed an increase of \$20,423 million (see Table II). However, this segment's share of the total public sector's outlays dropped from 37.8% to 36.1% producing a corresponding increase in the government sector's share. It should be noted that universities maintained their 3.5% share from 1979 to 1983.

2. Over the four year period, public sector expenditures increased by \$61,967 million or 55.6%, which translates to 11.7% per year. The annual increase for the three component segments, namely, government sector, universities, and government enterprises was 12.5%, 11.5% and 10.3% respectively as shown in Table II.³

3. Of the \$39,421 million increase in the government sector's expenditures, provincial and municipal governments accounted for the bulk, with an increase of \$25,380 million over the four year period. The changes in expenditures by each of the 8 summary groups are shown in Table III.

4. Within the government sector (see Table IV), the municipal governments had the largest expenditures at \$38,928 million or 22.4% of the public sector's outlays in 1983. In the government business enterprises group, provincial government enterprises

3. It should be noted that although this paper presents highlights of the 1983 study, in order to provide some perspectives, the results of the 1979 study have been included. However, two qualifications must be borne in mind when comparing these two studies. First, the source data for 1983 reflected the changes due to the recent historical revision of the Canadian System of National Accounts. Secondly, the government business enterprises segment had changes in coverage due to shifts in ownership.

1. See Chapter 1 on the Accounting Framework in the *Input-Output Structure of the Canadian Economy, 1971-79*, Statistics Canada, Ottawa, Catalogue 15-201, p. 9.

2. *Size and Structure of the Public Sector Market, 1983: Sources and Methods* by P.S.K. Murty, Input-Output Division, Statistics Canada, Ottawa, September 1987.

(see also Charts I, II and III)				
Segment	1979		1983	
	\$ Million	Percent Share	\$ Million	Percent Share
(i) Government Sector	65,413	58.7	104,834	60.4
(ii) Universities	3,898	3.5	6,021	3.5
(iii) Government Business Enterprises	42,182	37.8	62,605	36.1
Total	111,493	100.0	173,460	100.0

* Details in all tables may not add to total due to rounding.

Table II: Change in Public Sector Expenditures by Segment Between 1979 and 1983

	\$ Million	Change	
		% growth	Annual growth %
(i) Government Sector	39,421	60.3	12.5
(ii) Universities	2,123	54.5	11.5
(iii) Government Business Enterprises	20,423	48.4	10.3
Total	61,967	55.6	11.7

Table III: Change in Public Sector Expenditures Between 1979 and 1983 by Summary Group

Summary Group	Change in Expenditures \$ Million	Growth %	Growth Annual Rate %
A. Government Sector			
Federal	7,969	55.4	11.6
Provincial	11,579	68.8	14.0
Municipal	13,801	54.9	11.5
Hospitals	6,072	66.9	13.7
Total Government Sector	39,421	60.3	12.5
B. Universities	2,123	54.5	11.5
C. Government Business Enterprises			
Federal	8,426	54.0	11.4
Provincial	9,691	41.6	9.1
Local	2,306	70.0	14.2
Total Government Business Enterprises	20,423	48.4	10.3
Total Public Sector	61,967	55.6	11.7

recorded the largest outlay at \$32,962 million or 19.0% of the total public sector. Purchases by these two groups combined, amounted to \$71,890 million or over 40% of the total public sector. Provincial governments' expenditures formed the next largest segment, at \$28,399 million or 16.4%. As can be seen, the three largest segments: municipal governments, provincial governments, and provincial government enterprises, accounted for almost 60% of the total public sector's expenditures.

The outlays of federal government and federal government business enterprises amounted to \$46,399 million or 26.8%. Hospitals, universities, and local government business enterprises accounted for the remainder, with a combined expenditure of \$26,772 million or 15.4%.

5. The public sector's expenditures and population for 1983 are compared by province in Table V.

Table IV: Public Sector Expenditures: Totals and Shares by Summary Group, 1979 and 1983 (See Chart IV)

	1979		1983	
	\$ Million	% Share	\$ Million	% Share

Newfoundland	2,216	1,348	3,564	2.2	1.9	2.1	2.3
Prince Edward Island	408	252	660	0.4	0.3	0.4	0.5
Nova Scotia	3,739	2,721	6,460	3.7	3.7	3.7	3.5
New Brunswick	2,722	1,795	4,517	2.7	2.5	2.6	2.8
Québec	26,238	15,778	42,016	26.0	21.8	24.2	26.2
Ontario	32,718	22,094	54,812	32.4	30.5	31.6	35.5
Manitoba	4,623	3,417	8,040	4.6	4.7	4.6	4.2
Saskatchewan	4,710	5,700	10,411	4.7	7.9	6.0	4.0
Alberta	11,322	9,769	21,092	11.2	13.5	12.2	9.4
British Columbia	11,484	7,591	19,075	11.3	10.5	11.0	11.3
Yukon	198	216	413	0.2	0.3	0.2	0.1
Northwest Territories	413	412	824	0.4	0.5	0.5	0.2
Abroad	200	1,376	1,576	0.2	1.9	0.9	0.0
Canada	100,991	72,469	173,460	100.0	100.0	100.0	100.0

Saskatchewan and Alberta recorded significantly high shares of expenditures in relation to their population proportions, due mainly to the grain activities in the two provinces and petroleum mining operations in Alberta. Ontario's lower proportion of expenditures to population was partly caused by the shift of Canada Development Corporation and its subsidiaries to the private sector.⁷

6. Of the total public sector's expenditures in 1983, outlays on other commodities accounted for \$72,469 million as shown below in Table VI. It is interesting to note that the combined total of other commodities and indirect taxes (items (e) and (b))

4. Primary inputs in the Input-Output Accounts include:
- commodity 596 Commodity indirect taxes
 - commodity 597 Subsidies (negative)
 - commodity 598 Non-commodity indirect taxes
 - commodity 599 Wages and Salaries
 - commodity 600 Supplementary labour income
 - commodity 601 Net income of unincorporated business
 - commodity 602 Operating surplus, which includes profits or losses, net interest paid (interest paid less interest received), and depreciation.

In this study, operating surplus (commodity 602) and subsidies (negative) (commodity 597) were combined to eliminate most of the negative entries for analysis.

5. Other commodities include: intermediate goods and services, goods purchased for resale, and final goods and services
6. *Canadian Statistical Review*, April 1985, Statistics Canada, Ottawa, p. 14.
7. See also *Federal Government Enterprises Finance, 1981*, Statistics Canada, Ottawa, Catalogue 61-203, p. 9.

below) was \$76,807 million which was almost the same level as the wages, salaries and supplementary labour income.

Table VI: Total Public Sector Expenditures by Component, 1983

	\$ Million	% Share
(a) Wages, salaries, and supplementary labour income	77,568	44.7
(b) Indirect taxes	4,338	2.5
(c) Operating surplus including net income	19,085	11.0
(d) Sub-total Primary inputs	100,991	58.2
(e) Other commodities	72,469	41.8
Total expenditures [(d) + (e)]	173,460	100.0

7. The public sector's expenditures on other commodities, which amounted to \$72,469 million in 1983, consisted of imports and domestically produced commodities. The term "domestic production" as used here represents production within Canada, irrespective of province. Thus, when a provincial breakdown is shown, "domestic purchases" consist of those purchases supplied either from within the province or from other provinces, but not from abroad. The share of imports in the public sector's purchases declined slightly between 1979 and 1983. (See Table VII).

Table VII: Public Sector Expenditures on Other Commodities: Estimated Imports and Domestically Produced Commodities, 1979 and 1983

	1979		1983	
	\$ Million	% Share	\$ Million	% Share
Estimated Imports ⁸	7,581	17.1	11,760	16.2
Estimated purchases from domestic production	36,642	82.9	60,709	83.8
Total	44,223	100.0	72,469	100.0

8. The "other commodities" category of \$72,469 million has been further sub-divided into (a) manufactured goods, (b) other goods and (c) services⁹ as shown below.

Of the domestic portion of other commodities, which amounted to \$60,709 million, the services component was almost as large as the combined total of manufactured goods and other goods.

Table VIII: Public Sector Purchases of Other Commodities, 1983

	Imports col (1)	Domestic col (2)	Total col (3)	Import Content col (4) = $\frac{\text{col}(1) \times 100}{\text{col}(3)}$
	\$ Million			
Other Commodities				
(a) Manufactured Goods	8,863	16,962	25,825	34.3%
(b) Other Goods	1,261	13,954	15,215	8.3%
(c) Services	1,636	29,793	31,429	5.2%
Total Other Commodities	11,760	60,709	72,469	16.2%

9. The domestic and foreign (import) composition of the goods and services purchased by the 8 summary groups is shown in Tables IX and X. There is considerable variation among the groups in the import content of purchases. Federal (which includes defence), hospitals, universities and provincial government business enterprises showed above average levels of import content of manufactured goods. This largely reflects imports of equipment for their operations. In the case of "other goods", provincial government business enterprises recorded the

highest import content, reflecting large imports of coal by the electric power industry.

10. As already mentioned, the domestic purchases in 1983 amounted to \$60,709 million (Table VII). Of this amount, the government services (commodity 595) was \$1,032 million and the balance of \$59,677 million was purchased from the business sector.¹⁰ These purchases were routed to the producing industries using the market share assumption of the Input-Output Accounts. The Small level aggregation¹¹ of the industries which supplied the commodities to the 8 summary groups of the public sector is shown in Table XI.

8. The limitation of the import calculation has been dealt with on page 32 in the document on Sources and Methods referred to earlier.

9. The grouping of commodities into manufactured goods, other goods, and services was done by assigning the commodities to their primary producers. Manufactured goods consist of commodities 52-521 while other goods consist of commodities 1-51, 522-529, 546, 548, 549, 580-582, 584, 588-593. Services consist of commodities 530-545, 547, 550-579, 583, 585-586, 594 and 595.

See *The Input-Output Structure of the Canadian Economy, 1971-79*, Catalogue 15-201-E, "Size and Structure of the Public Sector Market, 1979", *Canadian Statistical Review*, December 1983, Statistics Canada, Ottawa, p. xiv.

10. These values are presented in the Canada Summary Tables in Appendix I.

11. For detailed definition of Link, Medium and Small aggregations, see Appendix C of *Input-Output Structure of the Canadian Economy, 1971-79*, op. cit.

11. Data on primary inputs and other commodities by province are shown in the Summary Tables attached. (See Appendix II).

III. Summary and Conclusions:

In summary, a special data base, extensive in scope, was developed for the public sector study, based on the concepts of the System of National Accounts. The main results of the study are presented in the attached Summary Tables. (Appendices I & II).

In conclusion, this complex project required considerable expertise in data gathering, consistent classification, data processing, and analysis of tabula-

tions. As mentioned in the document on Sources and Methods, actual data on commodity imports of the public sector were not available. Therefore, imports were estimated by using the national import coefficients of the Input-Output Accounts. It is felt that a special study would be appropriate to determine the import content of the public sector's purchases.

In the course of the research, several data gaps and problems were encountered. These gaps were filled with estimates, but a continuing program of research and development is essential in this area, to obtain a more solid data base for further studies.

Income and Expenditure Accounts

Third Quarter 1987

Gross Domestic Product rose 1.8% in the third quarter to a level, seasonally adjusted at annual rates, of \$558.6 billion. After allowing for price increases, this represents a gain of 1.1% in real GDP, compared to 1.5% in each of the first two quarters of the year. Higher domestic demand again led growth and was partly met by higher imports.

In real terms, domestic demand grew at a rapid rate for the third consecutive quarter, up 1.7%. Consumer spending continued to rise steadily, while business investment in plant and equipment accelerated. Housing demand slowed from the frenetic pace of recent quarters. Exports and imports both increased after declines in the second quarter despite continued sluggishness in the auto industry. On an industry basis, growth was led by a 1.7% gain for goods-producing industries, notably mining and manufacturing, while services grew by 1.1%.

Components of Demand

Consumer spending expanded by 1.3% in volume and contributed almost three-quarters of the overall increase in GDP. Higher spending on goods, up 1.5%, accompanied a gain of 1.1% for services. Outlays for durable goods eased to 2.4% growth, compared to 5.1% last quarter, as demand for autos and furniture and appliances decelerated. Spending on semi- and non-durable goods grew by over 1%.

Investment in residential construction slowed to 2.8% growth from around 5% in each of the two preceding quarters. The slowdown was evident in all components. The quarterly growth of new housing construction fell from 9.7% to 5.5%, as housing starts slowed during the quarter. Outlays for altera-

tions and improvements also grew more slowly. The resale market for homes declined, as a dampening of demand in central Canada more than offset a further recovery in Western Canada.

Business investment in plant and equipment continued to post strong growth in the third quarter. The 5% gain in volume was slightly faster than in the previous two quarters. Business investment was 14% above the level of a year ago, the largest gain in the current expansion. Outlays for machinery and equipment rose sharply, up 6.4% in the quarter, reflecting higher imports. Spending on non-residential construction rose a further 2.8%, comparable to the gains in the previous two quarters.

The volume of exports rose by 0.7%, following a slight decline in the second quarter. The gain in exports originated in crude materials and in end products, with particularly large gains in office machinery, natural gas and refined petroleum products.

These increases offset a sharp decline in wheat exports and continued low export levels for motor vehicles and related products. Exports of services also continued to decline, reflecting lower tourist receipts and sales of business services.

Real imports rose by 3.7% in the third quarter, after a slight decline in the second. There were large increases in machinery and equipment and in crude petroleum. Imports of automotive products continued to decline, as domestic auto production and inventories were cut back.

Real non-farm business inventories rose by \$536 million in the third quarter; the rate of inventory accumulation has lagged behind sales growth for the last four quarters. The third quarter increase in

stocks was confined to the wholesale industry, at a time of rising imports. In manufacturing, raw material and finished goods inventories fell while the retail industry recorded widespread declines.

The rate of increase in the overall Implicit Price Index for GDP remained at a moderate 0.7%. Prices for machinery and equipment, particularly the imported components, continued to decline and there was also a slackening in new housing prices. Export prices rose 0.7%, the first rise after seven consecutive quarterly declines. The gain was led by rising export prices for most crude and fabricated materials, and food products other than wheat.

Production by Industry

On an industry basis, most of the third quarter growth in the goods-producing industries originated with mining and manufacturing. Mining output increased 5.9% in the third quarter due to higher production levels for crude petroleum and natural gas, to meet export demand, as well as increased activity in services related to mineral extraction. Within manufacturing, significant output increases were recorded in wood products, primary metals, fabricated metal products and electrical and electronic products.

The most significant output increases among service-producing industries occurred in financial institutions and in wholesale trade, due to increased sales of industrial and farm machinery and equipment.

Components of Income

Wages, salaries, and supplementary labour income rose by 1.4% in the third quarter. The gain was evenly distributed between the goods- and services-producing industries. A slowdown in employment growth checked the overall increase in labour income. The growth in personal income slowed considerably, largely reflecting irregular movements in net farm income caused by the timing of subsidy payments. With personal spending up 2.3%, the savings rate fell from 9.1% to 8.0%.

Corporate profits before taxes rose by 4.6%, the fourth consecutive quarter of strong growth. The mining industry led the third quarter increase, reflecting higher prices. Manufacturers of metal, wood, and paper products also posted large quarterly gains.

Total revenues of the government sector edged up by 1.2%, as lower direct taxes from persons offset a large increase in indirect taxes. Total expenditure rose only slightly with a large drop in farm subsidy payments offsetting increases elsewhere. As a result, the overall deficit of the government sector, on a national accounts basis and seasonally adjusted at annual rates, narrowed from \$23.9 billion in the second quarter to \$21.9 billion in the third.

Real Gross Domestic Product at Factor Cost, by Industry

(seasonally adjusted data)

September 1987

Monthly Overview

Gross Domestic Product at factor cost, in 1981 prices, increased 0.6% in September following gains of 0.7% in August and 0.1% in July. Goods-producing industries increased 0.8% in September, while services-producing industries advanced 0.5%.

GDP has grown quite steadily throughout 1987, and in September stood 4.9% above the corresponding month in 1986.

Goods-producing Industries

The September growth in goods-producing industries resulted mainly from a significant increase in manufacturing, while moderate output declines were recorded in public utilities, agriculture, forestry, mining and construction. Manufacturing output advanced 2.0% in September following a 1.1% gain in August. The September increase was the largest monthly gain in manufacturing since last December.

About 75% of the manufacturing growth this month was due to increased output by producers of durable goods, particularly transportation equipment, electrical products, primary metals, machinery and wood products. Motor vehicle production increased significantly in September, as it had in August. Following decreases in July and August, automobile exports rose about 25% in September, the largest month-to-month increase in over 5 1/2 years. The growth in output of electrical products was mostly due to increased production of office, store and business machines. The advance in primary metals output originated in smelting and refining of copper, nickel, lead and zinc. The wood

products gain was due entirely to increased lumber production and coincided with substantially increased lumber exports during the month.

Output of non-durable manufacturing industries rose 1.2% in September, following a 0.9% decline in August. Most of the September growth originated in the paper and allied products industry where both newsprint and woodpulp production recorded gains. Exports of newsprint and woodpulp grew substantially in September.

The most significant declines during September occurred in crude petroleum and natural gas production, and residential construction. Residential construction activity declined 2.3%, marking the first monthly decrease since last January.

Services-producing Industries

Growth in transportation, storage, communication, wholesale trade, and retail trade industries accounted for most of the September gain among services-producing industries.

The largest increase during September was in transportation, where output of railway transport rebounded sharply following a one-week nationwide disruption of railway services in August.

Output of wholesale trade increased 2.5% in September, marking the fourth consecutive month of growth. Increased sales of petroleum products, industrial machinery and equipment, motor vehicles and farm machinery accounted for most of the

growth. The most significant decline in the month occurred in the finance, insurance and real estate industry, primarily due to a decrease in the resale housing market.

Users should note that monthly estimates have been revised back to January 1987 to incorporate revised data.

Quarterly Estimates of the Canadian Balance of International Payments

Third Quarter 1987

Highlights

The current account deficit, on a seasonally adjusted basis, increased sharply, reaching its third highest level on record. This resulted from both a narrowing in the merchandise trade surplus and a higher net payment of dividends. The lower trade surplus resulted from a significant increase in imports; exports increased moderately. The increase in imports was largely attributable to machinery and equipment and was in line with domestic demand for capital goods.

Among capital transactions, which are not seasonally adjusted, foreign portfolio investment in Canadian stocks set a new record for the third consecutive quarter. Net foreign investment in Canadian bonds and short-term paper was at its highest point this year. Among claims on non-residents, there were build-ups in official international reserves and in non-bank deposits abroad of foreign currencies. The Canadian dollar appreciated vis-à-vis the United States dollar and other major currencies in the current quarter.

Current Account, Seasonally Adjusted

The major quarterly features were:

- A rise of about \$900 million in the current account deficit to \$2.6 billion. The merchandise trade surplus decreased by almost half a billion dollars to \$2.8 billion, while the customary deficit in non-merchandise transactions widened by some \$400 million to \$5.4 billion.
- An increase of over 3% (\$869 million) in merchandise imports to \$28.3 billion following

declines in the previous two quarters. Higher purchases from abroad of machinery and equipment more than offset decreases in automotive imports.

- An increase of about 1.3% (\$408 million) in merchandise exports to \$31.1 billion. Gains were recorded in forestry and energy products as well as in machinery and equipment. Wheat exports fell significantly.
- A deficit of \$4.5 billion on the investment income account, \$314 million higher than for the previous quarter. Primarily, this increase was the result of several larger dividend payments in the manufacturing sector, while a drop in dividend income reflected the timing of several large dividends during the previous quarter.

Current and Capital Accounts, Not Seasonally adjusted

The main quarterly features were:

- A deficit in the current account of \$1 billion, compared to a deficit of \$740 million in the third quarter of 1986. The bulk of the increase stemmed from a higher deficit in the investment income account. This was largely offset by a sharp increase in the merchandise trade surplus from its low level of 1986.
- In the capital account, among liabilities to non-residents, a continuation of large foreign portfolio investments in Canadian stocks, a trend which began early in the year. Net foreign

investment in Canadian stocks reached a new high of \$2.8 billion in the current quarter, bringing the net investment for the year to date to \$8 billion.

- A substantial increase in the net inflow from foreign investment in Canadian bonds and short-term paper to \$2.7 billion and \$0.9 billion, respectively. There was renewed interest in Canadian securities following a widening of yield differentials in favour of the Canadian markets.
- A net outflow of \$896 million for Canadian direct investment abroad, down from \$1.5 billion in the previous quarter. Net investment in affiliated enterprises, which is normally the dominant contributor to direct investment abroad, was negligible in the current quarter. The net investment resulted from several transactions associated with the acquisition of enterprises abroad.

- Among claims on non-residents, a net outflow of \$1.4 billion, resulting from a buildup in official international reserves, in contrast to a substantial reduction in the previous quarter.
- A net outflow of \$1.4 billion to increase non-bank holdings of deposits and other short-term investments abroad. These funds were channelled largely into the United States and, to a lesser extent, the United Kingdom.
- A statistical discrepancy (the balancing item between the recorded estimates of the current and capital accounts) equivalent to a net debit of \$2 billion.
- A 1.6% appreciation in the closing rate of the Canadian dollar vis-à-vis the United States dollar. The Canadian dollar also strengthened against all of the other major currencies.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. 1. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

¹Includes military pay and allowances. ²These aggregates differ from those shown in earlier publications in that they are on a "domestic" basis and thus include interest and dividends paid to non-residents and exclude interest and dividends received from non-residents. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. An adjustment has been made to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board. Book value of inventories is deflated to remove the effect of price changes and the derived physical change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. ⁵See footnote 3, Table 1.2.

¹Includes outlay on new durable assets such as building and highway construction by governments other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ²Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ³The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment (shown in Table 1.1). ⁴See footnote 4, Table 1.1. ⁵Excludes investment income received from non-residents. ⁶Excludes investment income paid to non-residents.

¹The period 1961-1986 was deflated in three time periods 1961-1971, 1971-1981, 1981-1986 with price indexes based on 1961, 1971 and 1981 respectively. The prices were then linked arithmetically at the major group, component and total levels to the 1981 base. The linking process produced residual differences between the sum of the linked groups and linked aggregates. These differences are shown as adjusting entries. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹These implicit price indexes derived by dividing the value figures in current dollars by the constant dollar figures, are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data for seasonality and therefore may be used as indicators of price changes. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹ A minus sign denotes an outflow of capital resulting from an increase in claims on non-residents or a decrease in liabilities to non-residents. ² Excludes reinvested earnings. ³ When the banks' foreign currency position (booked in Canada) with non-residents is a net asset, series is classified as part of Canadian claims to non-residents.

Note: Components may not add to totals due to rounding.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity.

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

Section 6 - Manufacturing

74	1.	Total Inventories, Shipments and Orders in Manufacturing
75	2.	Manufacturing Shipments by Industry
77	3.	Manufacturing Inventories by Industry
79	4.	Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
80	5.	Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
81	6.	Estimated Value of Goods in Process and finished Products by Economic Use Classification
82	7.	Tobacco and Beverages
83	9.	Footwear
84	10.	Production of Sawn Lumber
84	11.	Pulpwood, Wood Pulp and Newsprint
85	12.	Primary Iron and Steel
86	13.	New Motor Vehicles
87	14.	Production of Motor Vehicles in Canada
88	15.	Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1980 standard industrial classification (million dollars)¹. Projected from 1982 Census of Manufactures benchmark.

Year and month	Inventory at end of month									Ratio of inventories owned to shipments
	Shipments ²	New orders received during month ³	Unfilled orders at end of month	Owned ⁴	Held but not owned	All inventory held				
						Total	Raw materials	Goods in process	Finished goods

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Year and month	Non-durable goods industries												Paper and allied products	Printing publishing and allied
	Total shipments	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001). Statistics Canada.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Non-durable goods industries														
End of period and month	Total inventories owned											Paper and allied products	Printing publishing and allied	
		Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

End of period and month	Inventories owned				Inventories held: Total			Inventories held: raw materials						
	Consumer goods	Capital goods	Construction materials and components	Supplementary classification: automotive products	Consumer goods	Intermediate goods and supplies	Export-oriented industries	Consumer goods		Capital goods	Construction materials and components	Intermediate goods and supplies	Export-oriented industries	Supplementary classification: automotive products

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of all imports and exports.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.
