## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1927.	1928.	1929.	1930.
<b>I. Agricultural and Vegetable Products—con.</b>					
A. MAINLY FOOD—continued.					
Vegetables—					
1	Onions..... \$	53,270	67,262	77,609	71,690
2	Potatoes (except sweet)..... cwt. \$	-	13	-	-
	\$	-	14	-	-
3	Tomatoes, fresh..... bush. \$	10	3	14	82
	\$	51	26	94	560
4	Canned..... lb. \$	7,232	21,659	895	13,617
	\$	822	4,246	165	1,680
5	Sauces and pickles..... gal. \$	173,990	197,931	167,184	142,084
	\$	319,897	354,283	268,929	256,496
	Totals, Vegetables..... \$	374,088	480,179	350,369	332,791
Grains and Farinaceous Products—					
Grains—					
6	Beans..... bush. \$	47,863	22,090	18,367	13,746
	\$	87,395	43,033	60,326	55,071
7	Corn..... bush. \$	199	-	-	54
	\$	261	-	-	161
8	Oats..... bush. \$	11	664	1,276	1,963
	\$	15	1,081	1,731	2,186
9	Rice..... cwt. \$	30,384	2,532	14,036	1,424
	\$	93,612	10,167	44,153	5,773
Milled Products—					
10	Corn meal..... brl. \$	-	-	-	-
	\$	298	197	136	496
11	Wheat flour..... brl. \$	5,230	2,109	1,234	6,471
Prepared Foods and Bakery Products—					
12	Biscuits..... lb. \$	966,232	1,307,412	1,558,495	1,624,113
	\$	134,887	168,714	211,636	228,518
13	Cereal foods, prepared..... \$	18,447	21,951	22,954	16,132
14	Macaroni and vermicelli..... lb. \$	972	1,275	522	794
	\$	116	165	71	83
15	Malt..... lb. \$	59,952	110,068	49,656	22,512
	\$	2,942	6,111	3,152	1,223
16	Sago and tapioca..... lb. \$	19,996	207,031	5,769	29,581
	\$	1,154	6,650	352	1,633
	Totals, Grains and Farinaceous Products <sup>1</sup> ..... \$	532,632	465,924	557,239	608,301
Oils, Vegetable, for Food—					
17	Coco-nut oil, n.o.p..... gal. \$	29,335	28,761	56,290	56,163
	\$	33,113	35,568	61,503	61,972
18	Cotton-seed oil for canning fish..... gal. \$	46,725	58,255	126,965	134,130
	\$	56,415	55,256	110,505	119,577
19	Olive oil, n.o.p..... gal. \$	5,489	1,489	1,354	1,282
	\$	6,846	4,137	2,973	2,534
20	Peanut and soya-bean oil, n.o.p..... gal. \$	2,353	5,813	71,164	77,457
	\$	2,164	5,532	58,714	60,977
	Totals, Oils, Vegetable, for Food <sup>1</sup> ..... \$	100,630	101,650	246,755	289,305
Sugar and Its Products—					
21	Molasses, 56 degrees or less, imported under Preferential tariff..... gal. \$	2,368	-	-	-
	\$	936	-	-	-
22	Sugar, not above No. 16, D.S..... lb. \$	-	47	-	4
	\$	-	200	-	10
23	Sugar, above No. 16, D.S..... lb. \$	2,592	2,300	52	33
	\$	9,799	10,879	580	375
24	Candy (incl. chocolate)..... lb. \$	3,791,853	3,219,645	3,299,540	3,515,176
	\$	960,973	684,296	683,525	633,820
	Totals, Sugar, etc. <sup>1</sup> ..... \$	1,114,495	832,817	749,056	727,555
Tea, Coffee, Cocoa and Spices—					
Cocoa—					
25	Cocoa beans, not roasted or ground..... cwt. \$	39,109	40,218	15,736	19,963
	\$	526,357	603,106	190,736	204,747
26	Cocoa butter..... lb. \$	493,798	262,252	282,135	337,348
	\$	180,535	100,909	97,787	103,281
27	Other..... \$	49,004	16,180	88,156	12,782

<sup>1</sup> Totals include other items not specified.

DETAILED IMPORTS FOR CONSUMPTION

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1927.	1928.	1929.	1930.
<b>V. Iron and Its Products—continued.</b>					
<b>Farm Implements and Machinery—</b>					
1	Cream separators..... No.	235	-	521	-
	\$	7,218	17	11,862	-
2	Other dairy machinery..... \$	1,530	345	739	8,786
3	Harvesters..... No.	-	-	-	-
	\$	-	182	-	-
4	Other harvesting implements..... \$	9,663	10,342	13,736	7,813
<b>Planting and Tillage—</b>					
5	Drills and parts..... No.	1	1	2	-
	\$	444	5,150	267	1,010
6	Ploughs and parts..... \$	708	163	93	176
7	Other planting..... \$	3,265	4,968	4,015	4,255
<b>Seed Separation—</b>					
8	Threshing machine separators..... No.	-	-	-	-
	\$	-	-	-	-
9	Threshing machine separator parts..... \$	1,814	-	1,163	-
10	Traction engines, for farm purposes, not over \$1,400 cash..... No.	-	-	-	13
	\$	-	-	-	9,508
11	Other farm tractors, parts and repairs..... \$	1,178	37	372	65,614
	Totals, Farm Implements and Machinery..... \$	134,458	197,660	141,766	168,502
<b>Hardware and Cutlery—</b>					
12	Cutlery..... \$	714,914	694,000	741,932	675,529
<b>Hardware—</b>					
13	Nails, spikes, tacks, etc..... \$	15,309	13,654	6,611	11,923
14	Needles and pins..... \$	212,714	176,199	205,807	217,158
15	Nuts and bolts..... cwt.	1,180	2,271	4,752	3,980
	\$	7,412	11,433	22,353	19,338
16	Screws..... \$	1,520	1,539	1,329	1,490
	Totals, Hardware and Cutlery <sup>1</sup> ..... \$	1,068,091	1,001,533	1,133,003	1,116,982
<b>Machinery (except Agricultural)—</b>					
17	Sewing machines..... No.	5,964	6,165	11,980	8,335
	\$	115,283	134,493	209,489	134,435
18	Sewing machine parts and attachments..... \$	243,779	155,017	249,397	280,503
19	Washing machines, domestic..... No.	1	1	1	7
	\$	398	57	384	8,628
20	Other household machinery..... \$	370	315	2,286	24
21	Diamond drills and parts..... \$	58,176	68	12,449	29,657
22	Ore crushers, stamp mills, etc..... \$	274,128	252,928	193,015	338,597
23	Rock drills..... No.	11	11	36	88
	\$	7,746	20,871	12,703	88,612
24	Well drilling machinery and equipment..... \$	912	416	2,280	23,191
25	Other mining and metallurgical machinery..... \$	39,208	112,685	109,324	146,313
<b>Office or Business—</b>					
26	Adding machines..... No.	-	4	3	-
	\$	12	237	104	-
27	Typewriters..... No.	9	18	19	195
	\$	363	1,387	1,171	11,302
28	Other office or business..... \$	7,825	3,662	4,873	417
<b>Printing and Bookbinding—</b>					
29	Printing presses..... \$	65,182	119,432	139,945	218,783
30	Typesetting machines..... \$	37	615	15,294	1,107
31	Other printing and bookbinding..... \$	39,883	64,799	53,582	51,291
32	Air compressors..... \$	64,677	57,659	114,849	149,071
33	Coke and gas machinery..... \$	68,017	68,214	291,149	254,564
34	Cranes and derricks..... No.	10	15	4	23
	\$	11,376	95,703	37,733	56,949
35	Logging equipment..... \$	361,414	259,869	83,031	28,367
36	Metal-working machines, n.o.p..... \$	119,736	63,272	119,831	187,419
37	Paper- and pulp-mill machinery..... \$	820,836	1,101,423	343,642	39,892
38	Pumps, power, and parts..... No.	71	89	87	154
	\$	70,377	73,288	66,640	99,192
39	Rolling-mill machines..... \$	1,012	4,122	905	5,106
40	Shovels, steam and electric..... No.	-	1	3	1
	\$	-	8,028	46,510	6,808
41	Textile machinery..... \$	641,419	1,301,995	753,498	911,294
	Totals, Machinery (except Agricultural) <sup>1</sup> ..... \$	4,385,185	5,103,644	3,996,722	4,556,727

<sup>1</sup> Totals include other items not specified.

Kingdom, United States and All Countries, fiscal years 1927-1936—continued.

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1927.	1928.	1929.	1930.
<b>V. Iron and Its Products—concluded.</b>					
1	Springs..... \$	1,760	2,063	491	903
Stamped and Coated Products—					
2	Tin cans..... \$	33,092	42,775	42,873	53,333
3	Other stamped and coated products..... \$	146,100	150,320	182,809	219,513
4	Tools and hand implements..... \$	266,131	272,656	312,845	324,657
Vehicles—					
5	Automobiles, freight..... No.	78	129	98	140
	\$	186,014	270,042	218,300	312,413
6	Automobiles, passenger..... No.	111	56	56	43
	\$	175,468	128,887	119,891	133,733
7	Automobile parts..... \$	69,470	92,297	41,055	52,754
8	Railway cars, all kinds..... No.	48	86	64	157
	\$	2,286	4,789	2,500	10,071
9	Railway cars, parts of..... \$	110,990	43,602	196,421	66,751
	Totals, Vehicles <sup>1</sup> ..... \$	656,448	698,232	778,258	871,671
10	Drums, tanks, cylinders..... \$	34,913	50,726	67,414	85,186
11	Furniture..... \$	19,437	33,789	26,047	35,809
12	Plates, for agricultural implements..... cwt.	153	-	-	-
	\$	355	-	-	-
13	Pumps, hand..... \$	2,512	1,188	735	1,472
14	Stoves..... \$	2,254	2,041	8,641	3,975
15	Valves..... \$	31,470	48,079	55,292	71,952
16	Articles for shipbuilding..... \$	131,546	194,843	193,330	212,532
	Totals, Iron and Its Products <sup>1</sup> ..... \$	15,068,951	17,725,749	18,997,316	21,639,945
<b>VI. Non-Ferrous Metals.</b>					
17	Alumina and bauxite..... cwt.	672	-	-	-
	\$	568	-	-	-
18	Cryolite..... cwt.	-	-	-	-
	\$	-	-	-	-
19	Aluminium ingots, sheets..... lb.	874,093	887,578	801,919	688,409
	\$	229,029	246,183	229,414	190,666
	Totals, Aluminium <sup>1</sup> ..... \$	350,058	356,816	331,966	387,462
Brass—					
20	Scrap..... cwt.	-	487	224	103
	\$	-	6,476	3,132	521
21	Bars and rods..... cwt.	3,472	2,474	3,297	4,446
	\$	51,671	39,202	50,803	76,368
22	Strips, sheets, plates..... cwt.	689	521	1,126	1,894
	\$	14,373	10,831	22,860	43,260
23	Tubing..... lb.	462,373	494,555	652,255	1,065,255
	\$	106,890	114,731	140,539	257,760
24	Wire, plain..... lb.	22,395	29,473	37,322	64,627
	\$	7,066	8,838	11,332	19,826
	Totals, Brass <sup>1</sup> ..... \$	515,589	526,536	647,749	850,231
Copper—					
25	Blocks, pigs, ingots..... cwt.	-	-	-	-
	\$	-	-	-	-
26	Scrap..... cwt.	-	20	710	122
	\$	-	231	9,964	1,504
27	Bars and rods..... cwt.	120	628	52	367
	\$	2,123	6,887	922	7,944
28	Strips, sheets, plates..... cwt.	368	919	2,556	2,978
	\$	9,204	20,150	63,135	77,780
29	Tubing..... lb.	217,460	195,944	266,218	410,977
	\$	50,528	46,195	62,724	115,058
	Totals, Copper <sup>1</sup> ..... \$	191,301	150,582	298,241	489,248
Lead—					
30	Pig and sheets..... lb.	481,631	185,102	395,452	1,090,191
	\$	34,233	11,680	19,236	59,233
31	Other lead..... \$	153,216	172,756	151,710	123,717
Nickel—					
32	Bars, rods, sheets, etc..... lb.	-	368	2,276	191
	\$	-	127	848	85
33	Nickel-plated ware..... \$	155,738	278,975	230,029	279,690
34	Other nickel..... \$	20,027	587,925	139,789	81,998

<sup>1</sup>Totals include other items not specified.

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1927.	1928.	1929.	1930.
<b>VIII. Chemicals and Allied Products.</b>					
1	Acids.....	\$ 111,630	205,953	391,376	449,586
2	Cellulose products.....	\$ 81,105	86,141	91,852	77,648
3	Drugs and medicinal preparations.....	\$ 1,107,817	908,983	1,043,526	981,262
Dyeing and tanning materials—					
4	Coal tar and aniline dyes..... lb.	139,137	105,534	126,035	165,087
	..... \$	87,530	76,013	82,456	88,534
5	Logwood, oka, quebracho extracts..... lb.	410,425	428,316	223,739	255,908
	..... \$	19,275	23,016	13,089	11,365
	Totals, Dyeing and Tanning Materials <sup>1</sup> ..... \$	157,581	138,316	153,008	159,137
6	Explosives.....	\$ 101,958	61,772	58,877	59,803
Fertilizers, n.o.p.—					
7	Potash, muriate of..... cwt.	—	—	3	—
	..... \$	—	—	—	—
8	Soda nitrate..... cwt.	17,870	172	240	1,460
	..... \$	36,994	727	1,233	3,082
9	Superphosphates..... cwt.	—	21,560	100	112
	..... \$	—	9,712	80	50
	Totals, Fertilizers, n.o.p. <sup>1</sup> ..... \$	46,879	26,198	11,986	52,382
Paints, Pigments and Varnishes—					
10	Litharge..... cwt.	7,908	11,620	16,579	20,827
	..... \$	72,290	86,612	111,305	156,173
11	Lead, red..... lb.	645,637	953,070	927,859	1,067,590
	..... \$	58,948	60,956	63,997	80,046
12	Black, carbon..... lb.	—	—	3,250	2,768
	..... \$	—	—	83	48
13	Blacks, other..... lb.	131,518	563,819	387,942	350,890
	..... \$	6,183	22,965	16,242	16,357
14	Lithopone..... lb.	1,155,960	1,416,872	2,032,522	2,555,553
	..... \$	45,852	52,392	78,185	102,087
15	Oxide of cobalt, etc..... lb.	158,748	95,253	115,594	101,527
	..... \$	87,790	60,152	60,290	37,354
16	Oxides, fireproofs..... lb.	1,177,304	1,199,906	1,546,355	1,532,397
	..... \$	126,686	133,304	157,440	152,425

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1927.	1928.	1929.	1930.
<b>VIII. Chemicals and Allied Products—concl.</b>					
Inorganic Chemicals, n.o.p.—concluded.					
1	Potash compounds..... lb.	265,808	553,415	485,508	597,321
	\$	35,268	70,860	67,509	67,667
2	Soda compounds..... lb.	44,134,422	42,488,403	22,631,703	39,785,464
	\$	769,125	726,966	554,519	667,520
3	Acid phosphate..... lb.	94,396	97,974	73,349	60,967
	\$	5,013	5,766	4,425	3,177
	Totals, Inorganic Chemicals, n.o.p. <sup>1</sup> ..... \$	1,062,040	1,125,891	1,148,682	1,339,993
4	Glycerine..... lb.	2,887,815	488,697	943,452	2,997,445
	\$	642,190	89,822	102,469	260,443
	Totals, Chemicals and Allied Products <sup>1</sup> ..... \$	4,907,477	4,422,349	4,963,687	5,428,765
<b>IX. Miscellaneous Commodities.</b>					
Amusement and Sporting Goods—					
5	Films, for motion pictures..... ft.	366,098	1,099,249	1,184,645	553,084
	\$	29,040	89,241	85,990	44,321
6	Toys and dolls..... \$	215,535	239,481	301,274	331,142
7	Other amusement and sporting goods..... \$	98,002	104,085	121,668	147,443
8	Brushes..... \$	139,965	162,266	185,735	237,188
9	Containers..... \$	1,366,864	1,645,947	2,150,539	2,689,481
Household and Personal Equipment—					
10	Boots and shoes, with canvas uppers..... pr.	8,420	6,436	1,286	1,971
	\$	3,166	4,781	1,652	1,855
11	Boots and shoes, with felt uppers..... pr.	353,162	338,255	421,188	279,109
	\$	195,470	199,492	241,206	155,859
12	Buttons..... \$	33,313	31,575	32,811	32,172
13	Combs..... \$	63,844	42,461	43,740	52,726
14	Jewellery..... \$	108,590	131,405	191,045	152,461
15	Pocketbooks, etc..... \$	274,791	373,915	465,400	454,003
16	Refrigerators..... No.	65	3	1	2
	\$	634	456	10	36
17	Tobacco-pipes..... \$	383,073	454,614	325,889	292,365
	Totals, Household, etc. <sup>1</sup> ..... \$	1,615,418	1,802,772	1,788,215	1,710,039
18	Mineral and aerated waters..... \$	9,676	11,075	12,882	14,141
Musical Instruments—					
19	Phonographs and parts..... \$	27,013	20,546	25,875	17,154
20	Other musical instruments..... \$	95,896	68,322	66,605	57,012
21	Scientific and educational equipment..... \$	220,287	269,400	339,232	365,341
22	Ships and materials for, n.o.p..... \$	188,054	994,637	42,804	259,452
23	Vehicles, n.o.p..... \$	39,927	290,961	669,992	751,224
24	Works of art, n.o.p..... \$	239,048	359,400	859,827	899,439
Miscellaneous Imports under Special Conditions—					
25	For army and navy..... \$	24,599	20,068	249,319	37,771
26	Re-imported..... \$	1,210,123	471,836	242,778	264,985
27	For exhibition..... \$	151,847	640,478	112,117	164,837
28	Ex-warehoused, for ships' stores <sup>2</sup> ..... \$	211,409	279,153	237,200	239,367
	Totals, Miscellaneous Imports under Special Conditions <sup>1</sup> ..... \$	1,910,863	1,715,151	1,041,826	833,253
29	Incubators and brooders..... No.	3	3	1	4
	\$	172	464	337	111
30	Pencils, lead..... \$	103,647	105,794	157,512	193,179
31	Precious stones..... \$	250,338	144,531	375,458	438,711
32	Settlers' effects..... \$	1,146,501	1,178,745	760,455	820,544
33	Waste paper, etc..... cwt.	73,796	53,225	16,655	14,933
	\$	168,480	160,035	22,001	26,116
34	Wax, vegetable and mineral, n.o.p..... lb.	45,239	1,596,199	708,041	148,684
	\$	2,400	78,530	32,888	9,164
	Totals, Miscellaneous Commodities <sup>1</sup> ..... \$	8,797,426	10,436,423	10,034,784	10,942,527
	Grand Totals, Imports for Consumption \$	163,939,065	156,435,824	194,041,381	189,179,738

<sup>1</sup> Totals include other items not specified. <sup>2</sup> Exclusive of coal and fuel oil.

Kingdom, United States and All Countries, fiscal years 1927-1930—concluded.

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original form, e.g., cane sugar, tea, rubber, cotton, silk, etc.

**Subsection 10.—Comparison of the Volume of Imports and Exports.**

*NOTE.*—Further information as to the methods adopted in making the following analyses will be found on p. 824 of the Bureau's Annual Report on the Trade of Canada for the fiscal year ended Mar. 31, 1930.

The statistics of the external trade of Canada have not, until lately, been analysed in detail to reveal the physical volume of external trade as well as the dollar value of that trade, and have therefore been somewhat misleading when used to show the physical growth of production and external trade. When, for example, Table I of this chapter is examined, it seems to show stagnation in our external trade between the early '70's and the middle '90's of the last century, and an extremely rapid growth thereafter. Yet we know that the stagnation was partly due to the fall in general prices between the '70's and the middle '90's, while the rapid growth of the last generation is exaggerated by the rise of prices since 1897 and more particularly since 1914. Thus the figures as published give us no true measure of the volume of our external trade, yet it is the volume, rather than the value of the commodities that satisfy human needs, with which the masses of the population are more intimately concerned. Volume is, from many points of view, a more important consideration than value, and it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. This is what is attempted in the following table.

The method adopted for ascertaining the fluctuations in volume has been to take a base year—1926—and to re-value the quantities of each commodity imported or exported in any given year at the average import or export value of that commodity in the standard or base year. Where quantities are not available, the values of items are assumed to have moved in the same direction and in the same proportions as closely related commodities. For this reason the results must not be regarded as of great precision, but since the value of goods not returned by quantity, and of those not comparable over a limited series of years, is small in comparison with the total trade, the amount of error introduced on their account is not considerable. By this method it is comparatively easy to compare the volume of the trade in a particular year with that in a recent year, and the margin of error is fairly small. When, however, a comparison of the volume of trade in a particular year with that of another year ten or more years before is undertaken, the margin of error is very much greater. Certain new commodities have come into existence in the course of the decade, while the qualities of others have been materially changed; further, various new items have been added to the customs classifications, and it is not always possible to say just what customs items of 1930 correspond with those of 1914. For these reasons comparisons with the pre-war fiscal year ended 1914 have been discontinued since 1929. The comparison for 1929 and certain previous years appeared on pp. 581-583 of the 1930 Year Book.

In Table 36 the value and volume of imports and exports respectively for the years 1924, 1925, 1927, 1928, 1929 and 1930 are compared with 1926, for the main groups, with the addition of index numbers showing the movements in declared values, average values, and physical volume. For an analysis in greater detail dealing similarly with sub-groups and principal commodities imported and exported, the reader is referred to pp. 824-837 of the Annual Report on the Trade of Canada for 1930, published by the Dominion Bureau of Statistics.

In the table which follows, the imports and exports respectively for the fiscal years 1924 to 1930 are first shown by main groups at the actual values at which the trade was recorded. The same imports and exports are then shown at the value they would have amounted to if the average price or unit value had been the same in each year as it was in 1926. In other words, the figures on the basis of 1926 average values enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared value of the imports or exports in each year expressed as a percentage of 1926 are then given. This is followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as a percentage of the price in 1926. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1926.

This analysis shows that, while the total declared value of imports was low in 1924 and 1925, increasing steadily to a high point in 1929 with a slight recession in 1930, the physical volume of imports was higher in 1930 than in any other fiscal year, due largely to the steady decline in average value or import prices from a high point in 1924 to the lowest point in 1930. In the case of exports, on the other hand, changes in both volume and value have been much more erratic. Average values or prices of exports were higher in 1930 than 1929 and were at their highest point for the fiscal years given in 1926. Thus the large actual decline in the total value of exports in the fiscal year 1930 as compared with 1929 was entirely due to diminished quantities. Indeed, had it not been for a slight improvement in the average price at which merchandise was exported, the decline in 1930 would have been somewhat greater. The physical volume of exports was greatest in the fiscal years 1926 and 1929 and lowest in 1925. It should be noted that the decline in the physical volume of exports in 1930 was entirely due to the reduced quantities of agricultural and vegetable products and of animals and their products exported. The volume of exports in all other main groups of commodities was maintained at a very high level.

36.—Comparison of the Value and Volume of the External Trade of Canada, by Main Groups, for the fiscal years ended Mar. 31, 1924-1930.

### Section 4.—The Tourist Trade of Canada.<sup>1</sup>

**Tourist Expenditures in Canada.**—In recent years the tourist trade has become an important source of revenue in certain sections of the Dominion, materially affecting the balance of trade. It represents the economic disposition of national assets in which Canada is particularly rich, namely: its picturesque scenery; its invigorating climate; its opportunities for hunting, fishing and boating, as well as for winter sports—for the exploitation of which a considerable capital expenditure has been made on hotel accommodation, improved highways and other attractions. The expenditure of travellers coming to Canada from other countries on business has the same effect, so far as its influence on the balance of trade is concerned, as the export of additional commodities would have. Indeed, in so far as commodities are sold to tourists travelling in the Dominion, our exportable surplus of such commodities is reduced.

It is impossible to obtain a direct record of expenditures of this kind. Moreover, even a rough estimate of the total is extremely difficult to make, visitors to Canada being of all classes, engaging in widely different activities or forms of recreation, remaining for varying periods, with expenditures undoubtedly ranging from very small to very large amounts.

The tourists who enter Canada may be divided into three classes:—(a) those coming in *via* ocean ports; (b) those entering from the United States in automobiles; (c) those entering from the United States by rail or steamer. In 1929 these classes are estimated, according to recently revised figures, to have expended in Canada \$13,794,000, \$215,577,000 and about \$78,500,000 respectively, or a grand total of approximately \$308,000,000.

The Department of National Revenue records the number of tourists entering Canada in automobiles from the United States through each of the ports of entry along the border. Estimating the expenditure of these tourists by provinces according to the provinces in which they entered, gives the following provincial distribution of their expenditure in 1929:—Maritime Provinces, \$7,953,000; Quebec, \$50,759,000; Ontario, \$125,780,000; Manitoba, \$2,717,000; Saskatchewan, \$1,090,000; Alberta, \$1,256,000 and British Columbia, \$19,189,000.

On the basis of information collected from Canadian hotels, the following estimates were made of the expenditure of tourists from other countries for hotel accommodation in each of the provinces of Canada during 1927:—Prince Edward Island, \$21,000; Nova Scotia, \$762,000; New Brunswick, \$496,000; Quebec, \$9,902,000; Ontario, \$7,283,000; Manitoba, \$627,000; Saskatchewan, \$128,000; Alberta, \$1,364,000 and British Columbia, \$1,852,000, making a total for Canada of \$22,435,000. The total for Canada in 1929 was estimated as \$29,000,000. These figures do not include expenditures in tourist camps or private dwellings providing tourist accommodation, although these facilities divert a good deal of tourist trade from the hotels.

**Expenditures of Canadian Tourists Abroad.**—Canadian tourists visiting other countries travel in the main to the British Isles and other European countries on visits home, or as sight-seers. Again, many of them, especially elderly or delicate persons, go to Florida, Bermuda or the West Indies. These tourists may be classified in the same three classes as those entering Canada. The first class leaving Canada by ocean ports is estimated to have spent \$27,214,000

<sup>1</sup> Abridged from studies of "The Tourist Trade in Canada, 1920-1926", and for 1927, 1928, 1929 and 1930, published by the Bureau of Statistics and obtainable on application. These studies contain a full explanation of the methods used in making the estimates.

abroad in 1929, while those visiting the United States by automobile expended an estimated amount of \$65,055,000, and those visiting the United States by rail or steamer approximately \$30,000,000, or a grand total in 1929 of \$122,000,000.

**Summary.**—In the years 1920 to 1930 (for the latest year preliminary figures only are available) the total expenditures of tourists from other countries in Canada, as compared with the expenditures of Canadian tourists in other countries, are estimated as follows:—

Year.	Estimated Expenditure of Tourists from Other Countries in Canada.	Estimated Expenditure of Canadian Tourists in Other Countries.	Estimated Excess of Expenditure of Tourists from Other Countries.
	\$	\$	\$
1920.....	83,734,000		
1921.....	86,394,000		
1922.....	91,686,000		
1923.....	130,977,000		
1924.....	166,764,000	73,060,000	93,704,000
1925.....	186,972,000	76,047,000	110,925,000
1926.....	195,918,000	83,961,000	106,957,000
1927.....	230,223,000	101,296,000	128,927,000
1928.....	286,693,000	100,646,000	186,047,000
1929.....	305,000,000 <sup>1</sup>	122,000,000 <sup>1</sup>	183,000,000 <sup>1</sup>
1930.....	250,000,000 <sup>2</sup>	113,000,000 <sup>2</sup>	137,000,000 <sup>2</sup>

<sup>1</sup> Revised estimate.    <sup>2</sup> Preliminary figures.

It will be noticed that while there has been a steady increase in the amount spent by tourists from other countries in Canada, there has also been an increase in the amount spent by Canadians in other countries. The "favourable" balance accruing to Canada from tourist trade has increased greatly since the war. The statistics demonstrate how valuable an asset to Canada is her tourist trade, the expenditures of tourists in Canada in 1929 constituting an "invisible" export of greater value than any single commodity exported in the fiscal year 1929-30. If the "invisible" import of expenditures of Canadian tourists in other countries is deducted, the balance represents an item still exceeded in value only by the exports of wheat. The further increase of this item in the trade balance depends not only on additional numbers of tourists from other countries, but also on the extent to which Canadians "see Canada first" when they decide to travel.

### Section 5.—Balance of International Payments 1920-29.<sup>1</sup>

In recent years much attention has been devoted by economists to the consideration of the balance of international payments, as distinguished from the balance of commodities imported and exported. The balance of international payments is much the wider term. Thus in 1929 Canada's international buying and selling of commodities and services amounted to nearly \$4 billions as compared with \$2½ billions for the foreign trade in commodities alone, which means that the so-called "invisible" items of our international business accounted for nearly 40 p.c. of the aggregate for all items. Included in these "invisible" items

<sup>1</sup> Taken from a press letter, "Estimated Balance of International Payments for Canada", issued annually by Herbert Marshall, B.A., F.S.S., Chief of the Internal Trade Branch of the Dominion Bureau of Statistics, including explanatory data on the methods followed in computing these statistics.

are: tourist expenditures, dealt with in the preceding section; receipts and payments of interest; receipts and payments in freight charges, in remittances of immigrants and emigrants, in charitable and missionary contributions, etc.; and, as a supplementary item evening up accounts, the borrowings and lendings of capital. Many of these items can be only approximately estimated, especially for a country like Canada, lying along a land frontier of some 4,000 miles with the United States, with business relationships and family relationships very closely knit together.

Nevertheless, it has been considered well worth while to make as close an estimate as possible of the balance of the international payments of the Dominion for 1920 and subsequent years, and the figures for the years 1926 to 1929 are presented in Table 37. It is expected that with greater experience the technique may be improved, and the margin of error reduced to the minimum.

In 1920 the Dominion's commodity balance of trade was "unfavourable" to the extent of about \$24 millions. When the totality of transactions in 1920 is taken into account as far as possible, the excess on the import side of our account was \$268 millions, while in 1921 and 1922 the excesses on the same side were \$137 millions and \$68 millions respectively. (A chief reason for the "adverse" balance in these years was that we were then being repaid amounts advanced to the United Kingdom during the war, there being a net withdrawal from the United Kingdom of \$104 millions in 1920, \$128 millions in 1921 and \$84 millions in 1922.)

In 1923 there was a change, with a surplus of \$45 millions shown on the export side, in spite of further repayments of \$52 millions by the United Kingdom. The surplus was \$108 millions in 1924, \$277 millions in 1925, \$173 millions in 1926, \$51 millions in 1927 and \$164 millions in 1928. In these years Canadian insurance companies were purchasing large amounts of foreign securities, Canadians were making additional further direct investments, principally in South America and the United States, and we were buying back from abroad our own securities or purchasing foreign securities, principally on the New York stock exchange. In addition, the Canadian banks increased very largely the sums of money they had abroad on call.

These exports were the result of abundant funds accumulating in the Dominion owing to three causes. In the first place there had come into the country during the war about \$1,250 millions through the purchase of our commodities at high prices; this was seeking an investment outlet. In the second place, the large investment of United States capital in the Dominion from 1914 to 1920 was now increasing the nation's output. In the third place, successive large harvests were a foundation of prosperity. These factors, combined, caused an unprecedented accumulation of savings which was used by financial institutions and individuals not only to finance domestic capital needs, but also to avail themselves of opportunities for profitable investment abroad. The prolonged and extravagant "bull" market in the New York and other United States' stock exchanges culminating in the early summer of 1929 and the high interest rates prevailing in those markets attracted enormous sums to the United States from other countries, including Canada. Thus from 1923 to 1928 we had on balance an export of capital to our credit, though at the same time other countries, particularly the United States, continued to invest large sums in the Dominion. The year 1929 appears to have shown a reversal of the net outward capital movement which has been characteristic of Canadian international transactions for the

last few years. When all debits and credits are totalled a debit item of \$88 millions is necessary to balance the account. This item will be partly accounted for by the errors and omissions which are inevitable in all such calculations. It is believed, however, that some portion of the amount is due to net importation of capital into Canada. This was no doubt due in part to the reduction in commodity exports, which showed an "unfavourable" balance of about \$63,000,000 in the calendar year 1929 instead of the surplus of exports of previous years. This reversal of trend in the commodity trade resulted largely from the smaller crop of 1929 accompanied by an unusual marketing situation in which only a small portion of Canada's surplus grain products was exported. The collapse of the United States' stock markets in the autumn of 1929 and the beginning of a return movement of funds employed there was probably another factor in the apparent net inward movement of capital to Canada in 1929.

## CHAPTER XVII.—INTERNAL TRADE.

This treatment of trade within the Dominion commences with a general statement on interprovincial trade. This is followed by sections dealing with the statistics of the grain trade and of the marketing of live stock and animal products. Statistics of cold storage facilities and of commodities in cold storage are next in order. In the latter part of the chapter will be found sections relating to various administrative services connected with trade, including: the payment of bounties; the granting of patents, copyrights and trade marks; and weights and measures, electricity and gas inspection. The concluding section of the chapter deals with the statistics of wholesale and retail merchandising.

### Section 1.—Interprovincial Trade.<sup>1</sup>

Canada may be divided into the following five economic regions, each deriving its specific character from the predominant occupations of its people:—

1. *The Eastern Fishing, Lumbering and Mining Region*, comprising the river valley and gulf of the St. Lawrence, together with the Atlantic coast; in other words, the greater part of the Maritime Provinces, the northern part of the province of Quebec (excluding the former district of Ungava), and a portion of northern Ontario.

2. *The Eastern Agricultural and Industrial Region*, comprising the cultivated portions of the Maritime Provinces and of the provinces of Quebec and Ontario. In the latter provinces the cultivated areas extend along the banks of the St. Lawrence, and along the valleys of its tributaries within the Canadian borders.

3. *The Central Agricultural Region*, extending from the Red River valley to the Rocky mountains and from the Canadian-United States boundary to about 56° N. lat.

4. *The Western Fishing, Mining and Lumbering Region*, comprising the western portion of the province of Alberta, the whole of British Columbia and the southern portion of the Yukon Territory.

5. *The Northern Fishing and Hunting Region*, extending from the regions of permanent settlement northwards to the Arctic Circle and from the coast of Labrador to the Pacific and to the Alaskan boundary. This vast region is sparsely inhabited by indigenous nomadic tribes engaged in fishing and hunting for their own support, for exchange with the fur-trading companies, and with individual whalers and traders who visit some parts of the region.

Great differences exist between the products of these various regions; even the fisheries and lumber products of the east are quite distinct from those of

<sup>1</sup> Revised by G. S. Wrong, B.Sc., Chief of the Transportation Branch, Dominion Bureau of Statistics.

British Columbia. The needs of the people throughout the country are met to a great extent by the exchange of the products of one region for those of another.

Interprovincial trade in Canada had its beginning, many years before Confederation, in the exchange of the furs and lumber products of Quebec and Ontario for the fisheries and mineral products of the Maritimes. Indeed, it was thought at the time of Confederation that the coal fields of Nova Scotia would furnish sufficient fuel for the needs of all the eastern part of the Dominion. Later, the manufacturers of Ontario and Quebec found markets from one end of the Dominion to the other, in exchange for the farm, mineral and other products required by large urban communities and produced principally in western and northern regions. A further stimulus to the trade between east and west over the rocky areas north of lake Superior may result from the recently increased production of the Alberta coal fields and the reduced freight rates.

Thus, while many of the small communities and areas, like the primitive agriculturist, produce only for their own needs and are economically independent, the principle of comparative advantage is seen in the increased trade between the economic regions of the Dominion, a trade which is principally carried on over the railways of the country, but also largely over its waterways. A comparatively new development is the inauguration of sea transport between Eastern Canada and British Columbia *via* the Panama Canal. (See pp. 706-7.)

A monthly traffic report of the railways of Canada is published by the Transportation Branch of the Dominion Bureau of Statistics, and shows, for each province, and for the Dominion as a whole, the total *revenue* freight traffic of all railways, (not the "on company service" freight), divided into 70 classes of commodities. The data also show the quantity of each class that originated and terminated in each province. The reports are of use in computing the imports and exports of each province for each of the 70 classes of commodities. For example, if the total tonnage unloaded in Alberta during 1929, as shown in Table 1, is deducted from the tonnage originating in Alberta over the same period, the remainder of 4,930,569 tons represents the net exports from Alberta for the year 1929. The comparative figure for 1928 was 7,536,293 tons. These statistics show rail traffic only, a limitation which should be borne in mind in connection with the trade of provinces favoured with facilities for water transportation.

The total revenue freight traffic movement on the steam railways of Canada fluctuates to a certain extent with the yield of the crops and with activity in the mining and construction industries involving heavy movements of low grade freight. The general trend from 1921 to 1928 was upward, increasing from 83,814,436 tons of freight carried in 1921 to 119,227,758 tons in 1928. In 1929, however, a decrease to 114,600,778 tons was reported.

Statements similar to that in Table 1 may be compiled for any of the 70 commodities for which statistics are collected, showing the interprovincial trade by rail in these commodities. For details see "Summary of Monthly Traffic Reports of the Railways of Canada, 1929", obtainable from the Dominion Bureau of Statistics.

### Section 2.—Grain Trade Statistics.<sup>1</sup>

The Canada Year Book, 1922-23, contained on pp. 581-3 a historical summary of the more important points respecting the shipment, inspection and sale of Canadian grain under the Canada Grain Act, and an outline of the Canada Grain Act of 1925 appeared at p. 1017 of the 1925 Year Book. The 1929 amendments were dealt with at pp. 1047-48 of the 1930 Year Book.<sup>3</sup>

**Movement of Canadian Wheat, Crop Year 1928-1929.**<sup>2</sup>—A résumé of the Canadian wheat movement naturally begins with a description of the crop of the Western Inspection Division. The wheat crop of 1928 marketed in the Western Division during the crop year from Aug. 1, 1928 to July 31, 1929, amounted to 546.1 million bushels. A carry-over of 54.8 million bushels from the previous crop year, together with some minor items, brought the stock of the Western Division to a total for the year of 601.3 million bushels (see the chart on page 623 for particulars). As for distribution, 420.7 million bushels were commercially disposed of, the chief items of which were 180.5 million bushels exported to the United Kingdom and 139.4 million bushels, shipped to the Eastern Division. The direct exports to the United States were 10.0 million bushels and to other countries 65.1 million bushels. The total shipments from the Western Division were thus 395.1 million bushels. The wheat used by the milling companies for the manufacture of flour amounted to about 25.6 million bushels, of which 12.5 million bushels were ground into flour for domestic consumption. The all-rail movement eastward from the Western Division, including shipments to the Ogilvie Flour Mills Co. at Fort William for grindings, was 3.2 million bushels. Lake shipments from Fort William and Port Arthur were 293.4

<sup>1</sup> Revised by Dr. T. W. Grindley, Chief, Agricultural Branch, Dominion Bureau of Statistics.

<sup>2</sup> For further information see the "Report on the Grain Trade of Canada", issued annually by the Agricultural Branch of the Dominion Bureau of Statistics. <sup>3</sup> See also Chapter XXIX of this volume under "Dominion Legislation—Agriculture".

million bushels, 136.2 million bushels going to Canadian ports and 156.6 million to United States ports. The shipments to Canadian and American ports represented, respectively, increases of 34.6 p.c. and 7.9 p.c. over 1927-28. The principal Canadian lake ports were those of lake Huron and Georgian bay, with receipts of 75.4 million bushels, and Port Colborne with 54.6 million bushels. Among the United States lake ports Buffalo was of chief importance in the handling of Canadian wheat, with receipts by water from Port Arthur and Fort William of 137.7 million bushels. The export of wheat through Vancouver was 95.0 million bushels, as compared with 79.0 million in the previous crop year, and 2.8 million bushels were exported through Prince Rupert. The seed requirements were estimated at 42.6 million bushels, and the stocks at the end of the crop year were 79.2 million bushels.

The Eastern Division received during the crop year not only the eastern crop, estimated at 20.6 million bushels, but also shipments from the West aggregating 140.3 million bushels. The quantity on hand at the beginning of the crop year was 22.8 million bushels, making, with a comparatively small importation from the United States, a total stock entering the Eastern Division of 183.7 million bushels. The distribution included 25.2 million bushels carried over in store into the following year, 80.5 million bushels exported from the St. Lawrence ports, and 11.8 million bushels shipped through the winter ports of Saint John and Halifax. In addition, 83.9 million bushels were cleared for export to the United Kingdom and other countries *via* the United States Atlantic ports. The chief ports concerned with the movement of Canadian grain from both Divisions were New York, with shipments of 55.4 million bushels, Baltimore with 12.9 million, and Philadelphia with 10.3 million.

Total exports from Canada to the United States for consumption amounted to 10.0 million bushels, to the United Kingdom 209.6 million bushels, to other countries 134.8 million bushels; 230.0 million bushels were shown to be shipped *via* Canadian ports and 114.4 million bushels *via* United States ports, after deducting 39.6 million bushels transhipped from Buffalo to Montreal and adding the same to the Canadian movement. Total exports of wheat from Canada during the crop year amounted to 354.4 million bushels.

Table 3 shows for the licence years 1929 and 1930 the number of railway stations at which elevators are placed, the number of elevators and their total storage capacity, the figures being given by provinces for each class of elevator, with a summary showing the total of all elevators for each province. The growth of Canadian elevators in number and capacity has accompanied the expansion of grain acreage in the present century. Canadian elevators in 1901 numbered 426 with a capacity of 18,329,352 bushels; in 1911 these had increased to 1,909 elevators and 105,462,700 bushels; and totals of 3,855 elevators and 231,213,620 bushels were reached in 1921. Further increases in the last few years have resulted in a total of 5,787 elevators with a capacity of 394,594,210 bushels in 1930. The latter figure may be compared with an average wheat production of 398,833,000 bushels in Canada in the decennial period 1921-1930.

Table 4 gives summary statistics of the inspections of grain for 1923-29, detailed statistics given in previous Year Books being omitted to save space. The latter may be found in the Reports of the Grain Trade of Canada. Tables 5 and 6 show the shipments of grain by vessel and rail for 1928 and 1929.

Tables 7 and 8 deal with the Canadian grain handled in recent years at public elevators in the east.

## 2.—Summary of the Distribution of Grain in Canada during the crop year ended July 31, 1923.

### 3.—Number and Storage Capacity of Canadian Grain Elevators in the licence years 1929 and 1930.

NOTE.—Detailed statistics of elevators for the years 1901 to 1918 are given in the 1921 Year Book, pp. 507-509, and the figures for 1919 to 1924 will be found in the 1924 Year Book, pp. 549-550. For 1925 and 1926 see p. 616 of the 1927-28 Year Book, and for 1927 and 1928 see p. 609 of the 1929 Year Book.

1 Mixed Grain.

**Flour-milling in 1929.**—The operating flour and grist mills industry in Canada in 1929 numbered 1,325 establishments, with a capital investment of \$67,773,534 and a total daily capacity of 122,727 barrels of flour. The mills were distributed by provinces as shown in Table 9. Statistics of their employees, value of products, etc., will be found in Table 6 of the chapter on Manufactures on pages 424-429 of this volume.

### Section 3.—Marketing of Live Stock and Animal Products.<sup>1</sup>

The estimated value of farm live stock and poultry in Canada in 1930 was \$742,077,000, or 117.5 p.c. of the value of field crops grown during the year. In gross value of product the slaughtering and meat-packing industry, which is dependent chiefly on animal husbandry for its materials, has during recent years been one of the most important single manufacturing industries in Canada.

The Canada Year Book, 1922-23, contained on pages 594 and 595 a historical description of the development and present position of the live-stock industry in the Dominion, with statistics of farm animals compiled from the decennial censuses, 1871 to 1921. A summary of this data is given in Table 10.

#### 10.—Animals in Canada and Animals Killed or Sold by Farmers in Canada, by census years 1871-1921.

Year.	Animals in Canada.			Animals Killed or Sold and Wool Sold.			
	Cattle. <sup>1</sup>	Sheep.	Swine.	Cattle. <sup>1</sup>	Sheep.	Swine.	Wool.
	No.	No.	No.	No.	No.	No.	Lb.
1871.....	2,484,655	3,155,509	1,366,083	507,725	1,557,430	1,216,097	11,103,480
1881.....	3,382,395	3,048,678	1,207,619	457,681	1,493,465	1,302,503	11,300,736
1891.....	3,997,028	2,563,781	1,733,850	957,737	1,464,172	1,791,104	10,081,970
1901.....	5,576,451	2,510,239	2,353,828	1,083,353	1,329,141	2,497,636	10,857,507
1911 <sup>2</sup> .....	6,526,083	2,174,300	3,634,778	1,752,792 <sup>3</sup>	949,039 <sup>3</sup>	2,771,755 <sup>3</sup>	6,933,955
1921 <sup>3</sup> .....	8,519,484	3,203,936	3,404,730	1,618,626 <sup>3</sup>	1,027,969 <sup>3</sup>	1,779,257 <sup>3</sup>	11,338,268

<sup>1</sup>Figures for 1871-91 do not include work oxen.

<sup>2</sup>Census taken as of June 1, while previous censuses were taken in April, so that a greater number of young animals is included in 1911 and 1921.

<sup>3</sup>Animals slaughtered on farms were not included. The following figures are comparable with data given for the previous years (the 1911 amounts being partly estimated).—

	Cattle.	Sheep.	Swine.
1911.....	1,915,059	1,097,015	4,282,624
1921.....	2,097,390	1,217,987	2,972,331

In Table 11 are given statistics showing the numbers of animals on farms for the years 1919 to 1930, expressed as percentages of the average numbers for the quinquennium 1911-1915.

#### 11.—Index Numbers of Animals on Farms in Canada, calendar years 1919-1930.

(Average number for 1911 to 1915 = 100.)

Year.	Animals on Farms.				
	Horses.	Milch Cows.	Other Cattle.	Sheep.	Swine.
1919.....	130.1	133.6	177.2	163.2	118.5

**Live-Stock Marketings, 1929.**—The number of cattle sold at stock-yards showed a decrease of 75,993 and the sales of hogs a decrease of 29,774 in 1929 as

<sup>1</sup>Revised by Dr. T. W. Grindlay, Chief, Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics, also "Live Stock Market and Meat Trade Review", published annually by the Live Stock Branch of the Dominion Department of Agriculture. See also "Farm Live Stock and Poultry", in Chapter VIII, subsection 3, pp. 230-235 of this volume.

compared with 1928. Cattle sold numbered 799,435 in 1929, 875,428 in 1928, 958,872 in 1927, 980,154 in 1926, 967,712 in 1925, 872,932 in 1924, 830,898 in 1923 and 862,203 in 1922. The total numbers of hogs sold were 1,060,542 in 1929, 1,090,316 in 1928, 1,117,555 in 1927, 1,138,533 in 1926, 1,286,154 in 1925, 1,311,362 in 1924, 1,031,656 in 1923 and 835,773 in 1922. Sales of calves increased from 361,222 in 1928 to 378,860 in 1929, and sheep sales increased from 469,172 head in 1928 to 541,470 in 1929.

Table 12 shows the receipts for sale at the various stock-yards and the disposition of the live stock sold in 1928 and 1929.

The interprovincial and export movement of live stock in 1929 shows a falling-off in cattle and sheep, but an increase in calves and hogs. Total shipments in 1929, with comparative figures for 1928 in parentheses, were as follows: cattle 443,807 (541,483); calves 184,987 (169,234); swine 676,405 (567,364); and sheep 128,839 (144,640). Ontario was the largest shipper in the aggregate, reporting 86,278 cattle, 128,169 calves, 174,643 swine and 17,236 sheep. Saskatchewan was the largest shipper of cattle with 143,168 head and the second largest shipper of swine with 182,171 head; Alberta led in swine and sheep shipments with 231,461 and 27,282 head respectively.

The marketings of live stock through stock-yards by direct shipment to packers, or by export according to provinces of origin for the calendar year 1929 are given in Table 13. In Table 14 are given the statistics of the grading of animals from five provinces marketed through the stock-yards in 1929.

\*Totals include small numbers from other sources.

**Slaughtering and Meat-packing.**—The tendency to large scale production in this industry is shown in the summary of census records below. The number of establishments has rapidly dropped off while the industry has grown by leaps and bounds. The concentration of the industry into a comparatively small number of large establishments has resulted in the utilization of by-products and in a marked increase in economy and efficiency of operation. In addition to the

principal statistics reported in the decennial censuses from 1871 to 1911, annual figures collected through the Census of Industry for the years 1925 to 1929 are included in Table 15, whilst live stock slaughtered at Canadian inspected establishments in 1929 and 1930 are shown in Table 16.

**Consumption of Animal Products.**—The consumption of meats in Canada in 1929 is estimated at 667,461,257 pounds of beef, 798,639,058 pounds of pork and 68,848,278 pounds of mutton and lamb. The per capita consumption of beef on this basis amounts to 68·13 pounds; pork, 81·52 pounds, and mutton and lamb, 7·03 pounds, a total of 156·68 pounds of meats per capita per annum. The corresponding data for other animal products are as follows:—butter, 293,464,036 pounds and 29·95 pounds; cheese, 34,782,012 pounds and 3·55 pounds; eggs, 299,256,707 dozen and 30·55 dozen; and poultry 108,673,236 pounds and 11·09 pounds. Details are given in Table 17.

**Interprovincial and International Trade in Meats.**—Ontario was the largest shipper of meats, moving a total of 77,443,937 pounds out of the province during the year 1929. Beef handled amounted to 30,206,323 pounds, veal 1,157,352 pounds, mutton and lamb 885,800 pounds, fresh pork 1,616,060 pounds, cured pork 22,601,132 pounds, pure lard 5,838,877 pounds, lard compound 1,529,070 pounds, and miscellaneous meat products 13,609,318 pounds. Manitoba shipped 72,950,629 pounds, the principal items including 25,035,879 pounds of beef, 1,362,895 pounds of veal, 411,729 pounds of mutton and lamb, 4,079,736 pounds of fresh pork, 7,662,773 pounds of cured pork, 2,336,914 pounds of pure lard, 692,063 pounds of lard compound, and 31,368,640 pounds of miscellaneous products. Shipments from Quebec totalled 35,507,122 pounds, 7,885,734 pounds being beef, 2,515,438 pounds veal, 365,931 pounds mutton and lamb, 1,381,511 pounds fresh pork, 2,870,932 pounds cured pork, 590,120 pounds pure lard, 754,768 pounds lard compound, and 19,142,688 pounds miscellaneous products. Alberta shipments aggregated 10,864,913 pounds made up of 1,365,711 pounds of beef, 205,859 pounds of veal, 44,258 pounds of mutton and lamb, 1,234,414 pounds of fresh pork, 4,338,067 pounds of cured pork, 745,958 pounds of pure lard, 1,898 pounds of

lard compounds, and 2,928,748 pounds of miscellaneous items. Shipments from Saskatchewan were as follows: beef 1,864,452 pounds, veal 111,187 pounds, mutton and lamb 9,227 pounds, fresh pork 1,253,245 pounds, cured pork 2,516,334 pounds, lard 369,620 pounds, miscellaneous 435,731 pounds, a total of 6,559,796 pounds. Totals for other provinces were: Prince Edward Island 30,915 pounds, Nova Scotia 383,980 pounds, New Brunswick 171,297 pounds, and British Columbia 818,972 pounds. Details of these shipments will be found at pp. 52-69 of the "Live Stock and Animal Products Statistics, 1929", which may be obtained on application to the Dominion Bureau of Statistics.

**Export and Import Trade in Live Stock and Live-Stock Products.**—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States and all countries, are shown for the four fiscal years ended Mar. 31, 1927-30, in Table 12 of the chapter on External Trade, at pp. 524-543, and imports in Table 13 at pp. 544-575. Exports and imports are also available by calendar years 1925-1929, and may be found on pp. 88, 90 and 91 of the report on "Live Stock and Animal Products Statistics, 1929". At pp. 233-252 of the report on "Trade of Canada (Imports for Consumption and Exports), Calendar Year 1929" are given figures of exports of "Animals and Animal Products" for 1928 and 1929 and imports of this class for the same calendar years will be found at pp. 40-59.

#### Section 4.—Cold Storage.

**Cold Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), now consolidated as c. 25, R.S.C., 1927, subsidies have been granted by the Dominion Government towards the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture. Table 13 shows for 1930 the number of cold storage warehouses in Canada, with the refrigerated space. The latter amounts to 52,089,044 cubic feet, of which 9,800,865 cubic feet apply to 48 warehouses subsidized under the Act, while 42,288,179 cubic feet apply to 495 non-subsidized warehouses.

#### 13.—Cold Storage Warehouses in Canada, by Provinces, 1930.

*Note.*—The figures in this table are supplied through the courtesy of J. F. Singleton, Chief of the Division of Dairy Markets and Cold Storage, Dominion Department of Agriculture.

**Cold Storage Stocks.**—Statistics of the stocks of food in the cold storage warehouses of Canada are collected and published monthly by the Agricultural Branch of the Dominion Bureau of Statistics. A summary of the cold storage

data is included in the report on "Live Stock and Animal Products Statistics", published annually. In Table 19 are included statistics by months, for 1929 and 1930, of the stocks of food in cold storage and in process of cure, for various important commodities.

### 19.—Stocks of Food on Hand in Cold Storage and in Process of Cure, by Months and Commodities, 1929 and 1930.

Note.—Figures in this table are of stocks on hand on the first of each month as published by the Agricultural Branch, Dominion Bureau of Statistics.

Section 5.—Bounties, Patents, Copyrights and Trade Marks.<sup>1</sup>

**Bounties.**—In cases where it is considered advisable for the Government to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree, but the only bounties which involved payments in 1929-30 were those on hemp and on copper bars and rods. The amounts of these bounties paid in recent periods have been as follows:—

Copper Bounties Paid in—		
Year ended June 30, 1925	1,164,140 lbs. at 1½c	\$ 14,551.75
Year ended June 30, 1926	10,505,627 lbs. at 1c	106,086.27
Year ended June 30, 1927	16,387,302 lbs. at ½c	122,904.39
Year ended June 30, 1928	12,514,446 lbs. at ½c	62,572.24
Year ended June 30, 1929	6,837,124 lbs. at ½c	34,185.63
Year ended June 30, 1930	10,857,149 lbs. at ½c	54,285.75
4 Mos. ended Oct. 31, 1930	889,286 lbs. at ½c	4,445.43
Totals	59,458,074 lb.	\$401,032.46
Hemp Bounties Paid in—		
Calendar Year 1926	19,048 lbs. at 1½c	\$ 285.72
Calendar Year 1927	203,087 lbs. at 1½c	2,792.43
Calendar Year 1928	826,821 lbs. at 1½c	10,335.25
Calendar Year 1929	666,118 lbs. at 1½c	7,493.77
10 Mos. ended Oct. 31, 1930	246,502 lbs. at 1c	2,465.02
Totals	1,961,571 lb.	\$ 23,372.19

Bounties have been paid at various times in the past on iron and steel, on lead, on crude petroleum, on manila fibre, on zinc and on linen yarns, but the bounties on iron and steel ceased in 1911, on lead in 1918, on zinc in 1921, on linen yarns in 1923 and on crude petroleum in 1927. The total amounts paid in bounties on these commodities between 1896 and the date of expiration were: iron and steel and manufactures of (1896-1912), \$16,785,827 (Canada Year Book 1915, p. 460); lead (1899-1918) \$1,979,216 for 1,187,169,878 lbs. of lead; zinc \$400,000; linen yarns \$17,523; manila fibre (1903-1913), \$367,962; crude petroleum (1905-1927) \$3,457,173 on 233,135,217 gallons. (For quantities of crude petroleum and bounties paid in each year, see table on p. 635 of the 1927-28 Year Book.) Total payments for expired bounties between 1896 and 1929 aggregated \$23,007,701, which with the \$401,032 paid on copper bars and rods and the \$23,372 for hemp, make a total of \$23,432,105. The existing bounty on copper bars and rods was extended to June 30, 1931 at the rate of ½c. per lb. by c. 15 of the Statutes of 1928. The Year Book of 1915, pp. 459-461, gave a description of the bounties that had been payable since 1883, as well as tables showing, for each commodity, the quantities on which bounties were annually paid and the amounts of such bounties for the years 1896 to 1915 inclusive. For details of the bounties on zinc, see p. 635 of the 1927-28 Year Book.

A bounty on Canadian coal used in the manufacture of iron or steel was authorized by c. 6 of the Statutes of 1930. By that Statute, manufacturers of iron and steel may be paid 49½c. per ton of bituminous coal mined in Canada, converted into coke in Canada and used by such manufacturers in the smelting of iron ore or in the manufacture of steel ingots or steel castings in Canada. This bounty was established on the recommendation of the Royal Commission on Maritime Claims relating to the manufacture of iron or steel by the use of Canadian coal.

<sup>1</sup> Information regarding bounties has been revised by H. B. Borbridge, Chief Accountant, Department of Trade and Commerce, and information regarding patents, copyrights and trade marks by T. L. Richard, Commissioner of Patents, Ottawa.

**Patents.**—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies and earlier, are, in Canada, a purely statutory grant and have always been so. The earliest Act was one of Lower Canada, passed in 1824, wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding Acts.

The first Canadian patent was issued under the Lower Canada Act of 1824 to Noah Cushing of Quebec; 165 patents were granted under the Acts of Upper and Lower Canada, and, under the consolidating and later Acts of the provinces 3,160 patents were granted.

Letters patent of inventions are now issued subject to the provisions of Chapter 150 R.S.C. 1927, and applications for protection relating to the same should be addressed to The Commissioner of Patents, Ottawa, Canada.

Invention means any new and useful art, process, machine, manufacture or composition of matter or any new and useful improvement in any art, process, machine, manufacture or composition of matter.

The growth of Canadian inventions is shown by the fact that an average of 1,422 patents was issued annually to Canadians during the decade 1920-29. The business of the Office has gradually continued to expand and the number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year ended Mar. 31, 1913, when 8,681 applications were received and the total fees amounted to \$218,125. In the fiscal year ended Mar. 31, 1930 there were 14,288 applications, with fees amounting to \$478,327, as compared with 13,062 and \$434,498 respectively in 1929. For the fiscal year ended Mar. 31, 1930, the number of patents granted was 10,401 as compared with 9,335 in 1929, an increase of 1,066. Of the patents of 1930, 6,586 or 63 p.c. were issued to United States inventors, 1,169 to Canadians and 941 to residents of Great Britain and Ireland, while Germany with 669, France with 295 and Sweden with 114, came next in number of inventors to whom patents were issued. Table 20 shows the distribution of the Canadian patentees for the years 1920 to 1930 by province of residence.

It will be seen from the table that the more populous provinces of Ontario and Quebec obtained the largest absolute number of patents, but a calculation of the number of patentees in relation to population shows that, for the fiscal year 1930, the greatest relative inventiveness was displayed in British Columbia. Thus, in this province, in 1930, one patent was granted for every 4,740 persons, the other provinces, as regards the number of persons to each patent granted, being placed in order as follows:—Ontario, 6,620; Alberta, 9,300; Manitoba, 9,330; Saskatchewan, 10,890; Quebec, 15,030; New Brunswick, 26,470; Prince Edward Island, 28,590; and Nova Scotia, 32,580.

As will be seen from Table 21 the increased activity in invention which was manifested during 1928-29 has been still more marked in the fiscal year 1929-30. With few exceptions the activity has been distributed over the whole field of invention.

In the chemical and allied arts the use of cellulose derivatives in the production of artificial threads and fibres and their treatment for the making of fancy products, the production of synthetic resins for various uses and the manufacture of synthetic drugs and dyes have been the subjects of increased numbers of applications.

The increasing use of electrical power for industrial and domestic purposes has resulted in a large number of applications for generation, transmission and control apparatus. In connection with talking picture machines many improvements have been made in the use of photo-electric cells, and in the construction of thermionic valves for radio and other uses there is a marked increase in the number of applications. Submarine cable applications for the elimination of distortion of signals have materially increased. Automatic telephones and television apparatus have formed the subject of many applications, particularly by specialists connected with large organizations. Electric, gas and vapour discharge lamps for general lighting, advertising signs and for use in the production of ultra-violet radiations have greatly developed and applications relating to transportation such as road, railway and aeronautical vehicles, brakes, clutches, couplings and propellers showed a good general increase. In inventions of machinery for the mechanical keeping of accounts and compilation of statistics and of calculating and cash register machines there has also been considerable activity.

**Copyrights and Trade Marks.**—Registration of Copyright is governed by c. 32, R.S.C., 1927, and an application for protection relating to same should be addressed to The Commissioner of Patents, Ottawa, Canada.

The Copyright Act of 1921 (amended in 1923 and consolidated in c. 32, R.S.C. 1927) sets out in section 4 the qualifications for a copyright and in sec-

tion 5, its duration. "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

The Trade Marks Act (c. 201, R.S.C., 1927) was amended by c. 10 of the Statutes of 1928, bringing the Act into agreement with the terms of the Convention for Protection of Industrial Property, as amended at The Hague in 1925, with regard to refusal to register certain trade marks. The renewal of expired trade-mark registration was also provided for, while it was also enacted that in certain cases interested parties might apply to the Exchequer Court of Canada for the cancellation of a trade mark at any time within three years from its registration.

## Section 6.—Weights and Measures, Electricity and Gas Inspection.<sup>1</sup>

**Weights and Measures.**—The object of weights and measures administration is to provide and maintain uniform standard units for the conduct of industry and commerce. Weights and measures, indeed, are complementary to the currency. Short weight, whether arising from fraud or accident, is identical in effect with short change.

Prior to Confederation, the administration of weights and measures was in the hands of each Provincial Government, but passed to the Dominion Government in 1867, under section 91 of the British North America Act. Steps were then taken to simplify the standards in use and to establish uniformity throughout the Dominion.

What might be termed the principal Weights and Measures Act of Canada was passed in the session of 1872-73; its provisions closely followed English weights and measures law, but the system of weights and measures to be legally used in trade was greatly simplified. This Act established as the primary legal standards for Canada the imperial pound, gallon and yard, but in place of the system of stones, quarters, hundredweights (112 lb.) and the long ton (2,240 lb.), it provided a decimal series of weights, 1, 2, 3, 5, 10, 20, 30, 50, 100 lb., and the short ton of 2,000 lb. The only exceptions to this were the continued use of the old French land measure, the arpent, in Quebec, and the use of the long ton (2,240 lb.) in the coal-mining industry, but not for the retail sale of coal. The troy ounce of 480 grains and its decimal submultiples are the legal weights for the weighing of gold and precious metals. The metric system is legal for all transactions.

Many changes, deletions and additions have been made to the Act of 1873 by later legislation, but its principles remain unchanged. The latest legislation is the Weights and Measures Act (c. 212, R.S.C., 1927).

The Weights and Measures Service was first administered by the Department of Inland Revenue, and offices were opened in all the principal centres of Canada and equipped with standards and inspection equipment. In 1918 the Service was transferred and attached to the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 18 districts, each in charge of a district inspector and suitable staff stationed in the larger cities throughout the country. The chief rules of administration are as follows:—

(a) Every new type of weighing and measuring device must be submitted to the Department at Ottawa for approval before being placed on the market.

(b) Every new machine must be inspected and stamped by an inspector before being sold or taken into use.

(c) Imported machines are held by the customs until release is approved by the nearest inspector.

(d) All inspections take place on the traders' premises, except where devices are brought to the inspection offices.

(e) Fees are charged for inspection and stamping, the schedule being defined by Order in Council, and all moneys so collected are paid into the Consolidated Revenue Fund of Canada.

<sup>1</sup>The material on Weights and Measures has been revised by E. O. Way, Director of Weights and Measures, Department of Trade and Commerce and that on Electricity and Gas Inspection by J. L. Stiver, Director, Electrical and Gas Standards Laboratories, Department of Trade and Commerce.

The following table is a summary of the articles and machines inspected in the fiscal year 1929-30.

**24.—Inspections by the Weights and Measures Service, fiscal year ended Mar. 31, 1930.**

The total revenue collected by the Service during the year amounted to \$407,359, and the total expenses, including salaries, totalled \$344,566.

**Electricity and Gas Inspection.**—The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts, the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C. 1927), and the Electricity and Fluid Exportation Act (c. 54, R.S.C. 1927).

The latest report of the Branch shows 489,569 electricity and gas meters tested in the fiscal year ended Mar. 31, 1930, as compared with 459,159 in the preceding year. The total revenue derived from electricity and gas inspection was \$329,006, as compared with an expenditure of \$223,937. The Branch also collected \$318,792 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act; the cost of collecting this revenue was only \$210.

Statistics collected as a by-product of the administration of the last-named Act will be found on p. 386, in the Water Power chapter of the Year Book. Here, however, may be given statistics collected by the Branch in the process of administration and showing the phenomenal increase in the number of consumers of electricity in the past fifteen years, from 505,597 to 1,582,505 (Table 25); the lesser increase in the gas meters in use from 267,454 in 1916 to 639,295 in 1930 (Table 26); and the number of cubic feet of gas sold in Canada from 1920 to 1930, classified as carburetted water gas, coal gas, coke oven gas, natural gas and acetylene gas (Table 27).

**25.—Number of Electricity Meters in Use, fiscal years ended Mar. 31, 1915-1930.**

### Section 7.—Statistics of Wholesale and Retail Merchandising.<sup>1</sup>

Comprehensive information regarding the distribution of commodities to the consumer is an outstanding need in the field of statistical effort at the present time. Statistics of production have helped to solve many of the problems of production, thus rendering it more efficient. We have very little information of an exact nature about wholesale and retail distribution, yet some of the most important business problems of the day are concerned with this field of activity by which goods reach the ultimate consumer from the manufacturer and producer. It is to be expected that if a comprehensive picture of the channels through which commodities are distributed and services rendered to consumers was made available, it would lead to many economies and aid in the development of more efficient distribution.

In connection with the 1931 population census there will be taken a census of merchandising and service establishments, the purpose of which will be to obtain the much needed comprehensive picture of the distribution of com-

<sup>1</sup> Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of the Publications of this Branch see Chapter XXVIII, Section 1 under "Internal Trade"

modities at wholesale and retail and of the agencies through which services are performed. This census will include questions on capital employed, employees, wages, sales and expenses, etc.

### Subsection 1.—Census of Trading Establishments.

A first and limited inquiry of this nature was made in 1924. It comprised about two-thirds of the wholesale and retail stores of the Dominion representing sales amounting to a somewhat higher percentage. Summarized results of this census of trading establishments were presented at pp. 629-635 of the 1929 Year Book, while more detailed figures were given in the "Census of Trading Establishments, 1924" obtainable from the Dominion Statistician.

**Grand Total of Capital, Purchases and Sales.**—The grand total amount of the capital invested in the 66,814 stores reporting for 1924 was shown by their inventories to be \$1,580,123,723, including \$914,990,830 in 60,181 retail stores, \$476,559,544 in 3,782 wholesale stores and \$188,573,349 in 2,851 stores doing both a wholesale and retail business. The total purchases of merchandise were \$2,321,078,297, including \$1,225,016,362 by retail stores, \$812,139,031 by wholesale stores and \$283,922,904 by wholesale-retail stores. The aggregate of sales was \$3,030,663,185, including \$1,642,103,468 by retail stores, \$1,021,920,931 by wholesale stores and \$366,638,786 by wholesale-retail stores.

### Subsection 2.—Survey of Chain Stores.

Chain stores have become in recent years an increasingly important factor in the distribution of commodities of various kinds to the ultimate consumer. No picture of the relative importance of chains and independents will be available until the census of 1931, but the Bureau made a partial survey of the chain store field in 1929. Returns were received from 210 out of some 350 chains, the former including practically all large stores. The salient features of the survey follow.

**Numbers of Chains and Stores.**—Of the 210 chains from which returns were received, grocery chains led in point of numbers with 42 chains and 1,699 stores; 18 general, department and variety chains had 354 stores; 29 drug chains, 260 stores; 9 meat chains, 186 stores; 4 tobacco chains, 173 stores; 17 boot and shoe chains, 157 stores; 11 restaurant chains, 131 stores; and 12 bakery chains, 121 stores. Other chain systems varied from 12 to 108 stores as shown in Table 28.

**Sales.**—Total sales in 1929 for the 210 reporting chain systems amounted to \$256,130,000. This was equivalent to \$68,889 per store, and taking the estimated population of the Dominion in 1929 as 9,796,800 it worked out at over \$26 per capita. Sales by provinces were largest in Ontario where they reached \$137,383,000, or more than 50 p.c. of the total for all the provinces as reported by the 210 chain systems.

Even if allowance be made for chains which were missed and those from which information could not be obtained for this year's inquiry, it is evident

that the great bulk of the nation's retail merchandising is still done by independent stores. It is probable that a current estimate of total retail sales of around \$2,000,000,000 is not far astray. It is estimated that if the 140 chains from which returns have not yet been received were included the total sales for all 350 would not exceed \$400,000,000 (not including sales of certain departmental stores having branch rather than chain systems). Since many which did not report were small concerns the latter figure is probably too high. It would seem that chain stores (exclusive of co-operative chains of independent stores), though doing an increasing proportion of the business of distributing commodities to the consumer, probably do less than 25 p.c. of this work at present.

This report does not include co-operative chains of independents but the business done by these concerns adds considerably to the sum total performed by chain organizations. Nevertheless, including these, it is probable that more than two-thirds of the retail distribution is still performed by independent concerns.

Sales of grocery and meat chains amounted to \$115,232,179, or almost 45 p.c. of total recorded chain sales. In the 1924 Census of Trading Establishments, 16,905 grocery and meat stores showed sales of \$319,676,823. The current figure may be estimated at approximately \$400,000,000. If allowance be made for non-reporting chains in the present inquiry the total sales by this type of chain would probably be well under \$150,000,000; hence independents (including co-operative and voluntary chains) do the bulk of the business in a field which has been more intensively exploited by chain organizations than any other.

**Sales Outlets.**—An item of interest is that pertaining to the number of sales outlets, that is, taking the department rather than the store as the unit. Thus, while there are special chains for the sale of candy and confectionery, the candy departments of drug stores, bake shops, restaurants, etc., offer additional sales outlets for similar commodities. The complete story of the distribution of commodities is not known until all outlets for the sales of each commodity are revealed. An attempt has therefore been made to enumerate the total number of merchandising outlets for each class of commodity in the chain systems covered. In all there were 11,896 merchandising outlets in the 210 chain systems, which is an average of over three for each separate store. There were 2,965 outlets for foods and kindred products; 991 for cigars, tobacco, and smokers sundries; 428 for women's, misses', and children's clothing; 410 for house furnishings; 387 for drugs and drug sundries; and 378 for hardware. Outlets for other classes of goods numbered from 8 to 369.

**Sales by Classes of Commodities.**—Sales according to commodity classes as shown in Table 29 were largest for food and kindred products, amounting to \$140,732,928, which was almost 55 p.c. of the total sales of the 210 reporting chains. Next in order came women's, misses' and children's clothing, with sales amounting to \$10,743,621 or 4.2 p.c.; men's clothing and furnishings, \$9,815,928 or 3.8 p.c.; cigars, tobacco and smoker's sundries, \$8,686,764 or 3.4 p.c.; dry goods and notions, \$7,960,739 or 3.1 p.c.; hardware, \$7,729,686 or 3.0 p.c.; toilet articles and preparations, \$7,087,194 or 2.8 p.c.; shoes and other footwear, \$6,529,593 or 2.5 p.c.

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Canada is a country of magnificent distances, nearly 4,000 miles in length from east to west, with its relatively small population of 9,934,500<sup>1</sup> in the main thinly distributed along the southern borders of its vast area. Different parts of the country are shut off from each other by areas which are almost wildernesses, such as the region lying between New Brunswick and Quebec and the areas north of lakes Huron and Superior, the last dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies. To such a country with such a population, producing, like our western agriculturists, mainly for export, or, like our manufacturers, largely for consumption in distant portions of the country itself, cheap transportation is a necessity of life. Before 1850, when the water routes were the chief avenues of transportation and were closed by ice for several months each year, the business of the central portions of the country was reduced to a state of relative inactivity during the winter. The steam railway was therefore required for the adequate economic development of Canada, more particularly for linking up with the economic and industrial world the vast productive areas of the Canadian West, and thus promoting their development. The construction of the Canadian Pacific Railway gave to Canada, as an economic unit, length; the building of the newer transcontinental railways has given the country breadth.

Railway transportation, though essential, is nevertheless expensive, particularly in recent years, and for bulky and weighty commodities. Hence new enterprises have either been undertaken or are under consideration for improving water communication, such as the new and deeper Welland canal, the deepening of the St. Lawrence canals and of the channel between Montreal and Quebec, and the utilization of the Hudson Bay route for the transportation of western grain to the British and continental European markets.

Problems of transportation are, therefore, of vital importance in the economic life of Canada, occupying a large part of the time and thought of our Parliaments and public men. Scarcely less important, from the social and the economic points of view, is the development of methods of communication in a country so vast and so thinly peopled. The Post Office has been a great though little recognized factor in promoting solidarity among the people of different parts of the Dominion, while telegraphs and telephones have gone far to annihilate distance; the rural telephone, in particular, has been of great social and economic benefit in country districts. The use of the automobile has also been of great benefit in promoting social intercourse and in facilitating the transaction of business among the dwellers of both urban and rural districts. The press, again, assisted by cheap telegraph and cable rates, and reaching through the mails all over the country, has been of great use in developing national sentiment. To sum up, it may be said that the progress of modern inventions, not least among which is the radio, has greatly improved living conditions in both rural and urban communities throughout the Dominion.

<sup>1</sup> Estimated population 1930.

In Part I of this chapter is included a statement of the tendencies toward monopoly which have made it necessary to establish a measure of government control over those transportation and communication agencies which are not governmentally-owned and -operated; to this is added an account of the origin and functions of the Board of Railway Commissioners. The subsequent parts deal in order with steam railways, electric railways, express companies, roads, motor vehicles, air navigation, canals, shipping, telegraphs, telephones and the Post Office.

## **PART I—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION.**

Private enterprises engaged in the transportation and communications business in Canada have, in the past 50 years, shown the same tendency toward consolidation and amalgamation which has been evident elsewhere throughout the civilized world. The basic reason for such consolidation and amalgamation has been the fact that the business of transportation and communication is, generally speaking, a "natural monopoly", *i.e.*, a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. The outstanding example of these consolidations in Canada is the concentration of the control of the railways of the country in the hands of the Canadian Pacific Railway and the Canadian National Railway Companies.

However, since such control brings with it an element of monopoly and possible overcharge which is distasteful to the public, it has in Canada, as in other countries, been deemed advisable to set up authorities controlling the rates to be charged and the other conditions on which services to the public are to be rendered by common carriers. This control, so far as railways within the jurisdiction of the Dominion Government are concerned, has been placed in the hands of the Board of Railway Commissioners, whose authority has been extended to cover various other means of transportation and communication. A brief summary of the history and functions of this body follows.

Besides the Board of Railway Commissioners, dealing with the larger public utilities coming under the jurisdiction of the Dominion Government, there exist, in several of the provinces, bodies which undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these is the Railway and Municipal Board of Ontario, established in 1906, which controls the construction, operation and maintenance of railways and the approving of their rates and their rules and regulations affecting the public. Similarly, in Quebec, a Commission of Public Utilities was established in 1909 and was given superintendence over all Quebec corporations, other than municipalities, "that own, operate, manage or control any system, works, plant or equipment for the conveyance of telegraph or telephone messages or for the conveyance of travellers or goods over a railway, street railway or tramway, or for the production, transmission, delivery or furnishing of heat, light or power, either directly or indirectly to or for the public". In Nova Scotia there is a Board of Commissioners of Public Utilities and in Manitoba a Public Utilities Commission, with similar functions, while in the three westernmost provinces these same duties are performed by provincial Departments of Railways.

## The Board of Railway Commissioners for Canada.<sup>1</sup>

In the early days of railway building in Canada, the provinces were more concerned with rapid development than with rate regulation. Under the Railway Clauses Consolidation Act of 1851, rates were fixed by the directors of the railway, subject to the approval of the Governor in Council. Beyond this, competition was relied upon to bring rates to a reasonable level. As time went on, however, those who believed in the efficacy of competition as a regulator were disillusioned. For example, complaints were made that the Grand Trunk gave low through transit rates, say from Chicago to New York, through Canada, and recouped itself by high non-competitive rates in Upper Canada. In 1888 the supervision of rates was assigned to the Railway Committee of the Privy Council, sitting in Ottawa.

At the turn of the century, two reports were prepared for the Department of Railways and Canals by Professor S. J. McLean, the first setting down the experience of railway commissions in England and the United States, and the second discussing Canadian rate grievances, with a recommendation that regulation by commission be adopted in Canada. The second report found that non-competitive rates were exorbitant as compared with competitive ones and that the railways had exercised their right to vary rates without notice, to the great distress of shippers. Among the weaknesses of the Railway Committee as a rate-regulating body was its fixed station at Ottawa, which made the cost of appearing before it practically prohibitive. Besides, members of Parliament had no necessary aptitude for dealing with railway rates, and of their two functions—legislative and administrative—the legislative was to them the more important.

The Board of Railway Commissioners for Canada, as provided for by the amended Railway Act of 1903, was organized on Feb. 1, 1904. In the beginning, its membership consisted of a Chief Commissioner, a Deputy Chief and one Commissioner. In 1908 the membership was increased by the inclusion of an Assistant Chief Commissioner and two other Commissioners. According to the Act, the Board may be divided into two sections of three, but since any two members constitute a quorum, two Commissioners usually hear all but the more important cases, and, agreeing, give the decision of the Board.

The powers of the Commission, in brief, are in matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special, freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones which must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for the changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Commission. It is a knotty problem to mark the boundaries of competitive areas—to decide whether Nova Scotian manufacturers should be given rates which would allow them to compete west of Montreal, or again, whether high construction and operation costs in British Columbia should enforce a rate which prevents her goods from moving far into the prairies. By

<sup>1</sup> Revised by A. D. Cartwright, Secretary, Board of Railway Commissioners for Canada.

an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways.

The procedure of the Board is informal, as suits the nature of its work, for experience has shown that hearings in strict legal form give the parties to the argument uncompromising attitudes. If possible, matters are settled by recommendations to the railway company or the shipper; thus, during 1930, 95 p.c. of the applications to the Board were settled without formal hearing. The Railway Committee had kept its station at Ottawa, giving only formal hearings, so that the grievances of those who could not afford to appear in person or pay counsel went unredressed. The itineraries of the Railway Commission are arranged so that evidence may be taken at the least expense to those giving it.

The Chief or Assistant Chief Commissioner, depending upon which one is presiding, gives final judgment on points of law when, in the opinion of the Commissioners, the question is one of law. On questions of fact the findings of the Board are final and are not qualified by previous judgments of any other court. Questions of law and jurisdiction are differentiated. In the first case, the Board may, if it wishes, allow an appeal to the Supreme Court; in the second, the applicant needs no permission to present his appeal.

The Railway Committee of the Privy Council, being a Committee of the Cabinet, was responsible to Parliament. When the powers of the Committee were made over to the Railway Commission the responsibility was retained, but necessarily by a different means. There is now provision for an appeal from any decision to the Governor in Council, who may also of his own motion interfere to rescind or vary the action of the Board, but the power to rescind or vary usually consists in referring to the Board for reconsideration. From its inception until Dec. 31, 1930, the Board gave formal hearing to 9,764 cases. Its decision was appealed in 94 cases, 53 of these being to the Supreme Court of Canada and 41 to the Governor General in Council. Of the appeals 11 of those carried to the Supreme Court were allowed and 3 of those to the Governor General in Council.

## PART II.—STEAM RAILWAYS.<sup>1</sup>

### Section 1.—Historical Sketch.

The first Canadian railway was constructed in 1836 between St. Johns and Laprairie, Quebec, with the object of shortening the journey between Montreal and New York. A second railway from Montreal to Lachine was opened in 1847, and a third line to St. Hyacinthe in 1848. In 1850, however, there were only 66 miles of railway in all Canada.

**Commencement of the Railway Era—The Grand Trunk.**—The railway era in Canada may be said to have begun in 1851, when an Act was passed providing for the construction of a main line of railway between the two Canadas. The result was the completion of the Grand Trunk Railway between Montreal and Toronto in 1856, its extension westward to Sarnia in 1859, and eastward to

<sup>1</sup> Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This branch publishes an Annual Report on Steam Railways, as well as numerous other reports, for a full list of which the reader is referred to Chapter XXVIII of this volume.

Rivière du Loup in 1860. The Atlantic and St. Lawrence Railway, from Portland, Maine, to the Canadian boundary, was leased for 999 years, and in 1859, on the completion of the Victoria bridge across the St. Lawrence at Montreal, the Grand Trunk had a through route 800 miles long from Portland to Sarnia. A line from Detroit to Port Huron was leased in 1859, the Champlain roads in 1863, the Buffalo and Lake Huron in 1867, while the Chicago and Grand Trunk was completed from Port Huron to Chicago in 1880. In 1881 the Georgian Bay and Lake Erie system (171 miles) was incorporated, and in the following year the Great Western (904 miles) and the Midland systems (473 miles) were also incorporated into the Grand Trunk. In 1888 the Northern Railway, which had been opened from Toronto to Barrie in 1853, and the Hamilton and North-western Railway, were taken over by the Grand Trunk. In 1891 the completion of the St. Clair tunnel gave direct communication with the railways of the United States. In the 1870's the gauge had been changed from the original 5' 6" to the standard gauge of 4' 8½"

**Construction of the Intercolonial.**—An intercolonial railway between the Maritime Provinces and Canada had been proposed as early as the 1830's. In 1844 the Imperial Government made a survey for a military road, and in 1851 agreed to recommend to Parliament either a guarantee of interest or an advance of the sum required to build a railroad. Differences of opinion as to the route resulted in the project falling through, but in 1853 Nova Scotia undertook to construct by 1862 a trunk line from Halifax to the New Brunswick frontier, with branch lines to Pictou and Victoria Beach. In both Nova Scotia and New Brunswick, however, the scheme of an intercolonial railway broke down for lack of funds, and in 1867 there were only 373 miles of railway in the Maritimes—229 miles in New Brunswick, including lines from Saint John to Shediac and from St. Andrews to Richmond; 145 miles in Nova Scotia, including lines from Halifax to Truro and Windsor, and from Truro to Pictou. These, under the B.N.A. Act, passed to the Dominion Government. The latter undertook the completion of the railway, and in 1876 the line was opened. In 1879 the Rivière du Loup branch of the Grand Trunk was acquired, and in 1898 the Drummond Counties Railway from Chaudière Junction to Ste. Rosalie Junction was leased and running rights obtained from the latter point over the Grand Trunk tracks into Montreal, the Intercolonial thus becoming a competitor for the business of the commercial metropolis of Canada.

**The First Transcontinental Railway—the C.P.R.**—As early as 1849 a pamphlet published by Major Carmichael-Smyth advocated the construction of a Canadian Pacific railway nearly along the present route. In 1851 a Parliamentary Committee reported against undertaking the enterprise at that time. In 1871 the terms under which British Columbia entered Confederation bound the Dominion to commence the Pacific railway within two years and complete it within ten years. The building of the railway as a public work actually commenced in 1874, but was not very rapidly pushed forward. In 1880 the Government entered into a contract with the Canadian Pacific Railway syndicate, granting to the syndicate all portions of the line completed or under construction, a cash subsidy of \$25,000,000, a land grant of 25,000,000 acres, free admission of materials for construction, and protection for 20 years against competing lines. The company on its side agreed to complete the railway to a fixed standard by May 1, 1891, and thereafter to maintain it efficiently. As a matter of fact the

last spike on the main line was driven on Nov. 7, 1885. Like the Grand Trunk, the Canadian Pacific Railway began to acquire branch lines as feeders, among them being the North Shore, Quebec, Montreal, Ottawa and Occidental in 1881, the Winnipeg to Manitow line in 1882, the Ontario and Quebec, the Credit Valley and the Toronto, Grey and Bruce in 1883, the St. Lawrence and Ottawa, and the Manitoba Southwestern in 1884, the North Shore, Nova Scotia, in 1885, the Atlantic and Northwest in 1886, the West Ontario Pacific in 1887, the Sudbury and Sault Ste. Marie in 1888, the New Brunswick Railway and the Columbia and Kootenay in 1890 and the Montreal and Ottawa and Montreal and Lake Maskinongé in 1892.

**The Second Transcontinental—the Grand Trunk Pacific.**—About the end of the century the Grand Trunk, which already had a line as far west as Chicago, submitted to the Canadian Government a proposal whereby it might participate in the settlement and development of the West. Lines were to be leased from Chicago *via* Minneapolis to Winnipeg and thence a new line, subsidized by the Government, would be built to the Pacific Coast. The Government raised objections to so much of the line lying in the United States and a second proposal was made for a connecting line with larger subsidies from North Bay to Winnipeg. The Government in 1903 submitted a counter proposal that the line, instead of terminating at North Bay, should be continued east to Moncton, New Brunswick, the eastern section from Moncton to Winnipeg to be constructed by the Government and leased to the Grand Trunk Pacific for a 50-year period, the railway paying no rent for the first seven years and 3 p.c. on the cost of the railway for the remaining 43 years. The western half of the railway from Winnipeg to Prince Rupert was to be built by the Grand Trunk Pacific, the Government guaranteeing interest on bonds to 75 p.c. of the cost of construction, not exceeding \$13,000 per mile on the prairie section and \$30,000 per mile on the mountain section. The Grand Trunk reluctantly accepted this proposition and construction of the National Transcontinental and Grand Trunk Pacific commenced.

**The Third Transcontinental—the Canadian Northern Railway.**—The third transcontinental railway, the Canadian Northern, was begun in 1896 with the completion by Mackenzie and Mann of the 125-mile line of the Lake Manitoba Railway and Canal Co., chartered in 1889. Next were acquired the charters of the Winnipeg and Hudson Bay, the Manitoba and Southeastern, the Ontario and Rainy River, and the Port Arthur, Duluth and Western. Assisted by the Manitoba Government, which desired to establish competition with the Canadian Pacific Railway, the Canadian Northern next secured the Manitoba lines of the Northern Pacific and in 1902 completed its line from Winnipeg to Port Arthur. During the following decade, the agricultural west was filling up very rapidly and with the public of Canada under the influence of this boom, the Canadian Northern Railway was able to secure guarantees of bonds from the Dominion and Provincial Governments to enable it to extend its lines both westward to Vancouver and eastward to Montreal and so complete the great scheme of a transcontinental road.

**Effect of the War on the Railways—the Drayton-Acworth Report.**—With two new transcontinental main lines, besides branches, under construction, Canadian railway mileage was doubled between 1900 and 1915, increasing from 17,657 miles in the former year to 34,882 miles in the latter. The builders of the

new lines, as well as the Canadian Government and people, had expected that immigration of capital and labour from Europe would rapidly settle the areas tributary to the new railroads and give them abundant and lucrative traffic, as had been the case with the C.P.R. Instead, the war came, and European labour and capital were conscripted for the struggle; immigration fell off, while cost of operation increased, owing to the scarcity of labour and material in Canada. The interest on the bonds had to be met, and in 1915 the Government felt it necessary to give assistance to the railways. In 1916, after having again made loans to the Grand Trunk Pacific Railway and the Canadian Northern Railway Co., a Royal Commission was appointed by Order in Council of July 13, 1916, to investigate:— (1) the general problem of transportation, (2) the status of each of the three transcontinental systems, (3) the reorganization of any of the said systems, or their acquisition by the State, and (4) other matters considered by the Commission to be relevant to the general scope of the inquiry. Alfred Holland Smith of New York, Sir Henry Drayton of Ottawa and Sir George Paish of London, England, were originally appointed to the Commission. On the resignation of the latter, William M. Acworth, a distinguished English authority on railways, was appointed to take his place. The majority report of the Commission, signed by Sir Henry Drayton and Mr. Acworth, has formed the basis of the subsequent railway policy of Canada. Their recommendation was that the public should take control of the Canadian Northern, of the Grand Trunk Pacific and of the Grand Trunk proper, and that they should be administered on purely business principles by a board of trustees, such compensation as seemed proper to be decided by arbitration and given to the shareholders of the Canadian Northern and the Grand Trunk.

The process of the acquisition of these railways and the financial results of their operation down to the end of 1929 are described in Section 3, "The Origin and Growth of Government-owned Railways in Canada", appearing on pages 667 to 677 of this volume, and illustrated by tables dealing with capital expenditure, physical operations, earnings and expenses, and the growth of the railway debt to the public and to the Government.

## Section 2.—Statistics of Steam Railways.

The steam railways of the world may be said to have commenced their operations with the opening of the Stockton and Darlington Railway in England on Sept. 26, 1825. In the intervening century, the mileage of the steam railways of the world has increased to an estimated total of 771,245 miles, of which figure 291,887 miles are State railways. Of the enormous total, nearly one-third, or 249,432 miles, is in the United States. Canada is second with 41,073 miles (exclusive of 336 miles of Canadian railways in the United States) and British India third with 33,736 miles. Germany has 36,218 miles, France 33,208 miles, Russia in Europe 36,359 miles and in Asia 11,298 miles, Australia 27,409 miles, Great Britain and Ireland 24,342 miles, Argentina 23,430 miles, Brazil 19,560 miles, Mexico 16,406 miles.<sup>1</sup> Of all the leading countries of the world Canada has the smallest population per mile of her railway lines, *viz.*, 235.

The mileage of steam railways in operation in Canada is given by single years for each year from 1850 to 1929 in Table 1, showing the first great period of construction in the 1850's, when the mileage grew from 66 to 2,065, the lull

<sup>1</sup> From Slason Thompson's *Railway Statistics of the United States of America, 1929*, p. 34 with revisions for Canada and United States.

in the 1860's, the second great period of construction in the 1870's and 1880's, the lull in the 1890's, the third great period of construction between 1900 and 1915 and the subsequent falling-off in the rate of increase.

**1.—Record of Steam Railway Mileage as at June 30, 1835-1919, and Dec. 31, 1919-1929.**

**Capital Liability.**—The capital liability of the steam railways of Canada is shown in Table 3 for the years 1901 to 1929. The great increase after 1922 is due to the inclusion of all Government loans to railways and investment in road and

equipment of Government railways as part of the capital liability of the railways. Statistics of individual lines are given in Table 4. In Table 5 will be found statistics of the actual capital investment in road and equipment of Canadian railways as at the end of each of the six years ended 1929.

**3.—Capital Liability of Steam Railways, June 30, 1901-1919, and Dec. 31, 1919-1929.**

Note.—Corresponding figures for each year from 1876 to 1900 inclusive are given on p. 649 of the 1927-28 Year Book.

<sup>1</sup>Constructed and operated by Ontario Government Railway Commission. <sup>2</sup>Included with Quebec Central. <sup>3</sup>Included with Canadian Pacific.

**Capital Investment.**—The capital investment in road and equipment of Canadian steam railways is shown in Table 5 for the calendar years 1924-1929. The table gives the investment in new lines and in additions and betterments during the year, together with the cumulative total of such investments as at the end of each year. During 1929, \$38,111,226 was invested in new lines and \$106,926,685 in additions and betterments, while up to Dec. 31, 1929 a total of \$3,153,350,558 had been invested in road and equipment of Canadian steam railways. When comparison is made with the figures of Table 3, it is seen that the capital liability of the steam railways was considerably greater than the actual investment in physical property by the railways at the same date. This discrepancy is largely accounted for by the fact that the total of capital liabilities as shown in Table 3 includes loans and advances from the Government to cover deficits of the Canadian National Railways and unpaid accrued interest on such loans, which during the 7 years 1923 to 1929 amounted to nearly \$278,000,000 as shown in Table 23 and which in the years 1919 to 1922 had amounted to about \$264,000,000. A further factor in the discrepancy was that some of the outstanding railway stocks represent no actual investment in physical property.

<sup>1</sup>Includes a credit of \$14,944,515 on account of Hudson Bay Railway not operated and returned to Dominion Government for completion.

<sup>2</sup>Includes a credit of \$13,477,505 on account of Canadian National property transferred to Harbour Commissions of Halifax and Saint John.

<sup>3</sup>Includes difference between purchase price of Atlantic, Quebec and Western; Kent Northern; Quebec, Montreal and Southern; and Quebec Oriental Railways and investment reported in 1928—a credit of \$7,198,024; difference between valuation of Northern Alberta Railways and investment of Alberta and Great Waterways; Central Canada; Edmonton, Dunvegan and British Columbia; and Pembina Valley Railways as at June 30, 1929—a credit of \$5,639,429; a credit of \$1,569,859 for the Hereford Railway which ceased operation, and additions and betterments to separately operated properties and other undistributed items amounting to a debit of \$5,832,159.

**Summary of Traffic Statistics.**—A summary of freight and passenger traffic statistics and of the ratio of operating expenses to gross earnings, continuing a series which has been compiled since 1875, will be found for the years 1911 to 1929 in Table 6. This table has, however, the defect that its figures of passengers and freight carried are not comparable throughout but have been reduced as a result of the consolidation of railways. Better tests of the real volume of passenger and freight traffic are supplied in Table 9 of this chapter under the headings "Passengers carried one mile" and "Freight carried one mile" These records, commencing in 1915, show that the maximum volume of passenger traffic was reached in the calendar year 1919 and the maximum volume of freight traffic in 1928. Both freight and passenger traffic have in recent years been affected by the increase in the use of motor vehicles.

The statistics of gross earnings and operating expenses illustrate the difficulties confronting our railways in recent years. Before the war it was generally held that, on account of the enormous initial investment required in roadbed and equipment, a railway's operating expenses should not exceed about two-thirds or 70 p.c. of its gross earnings, the remainder being required to meet interest on capital invested, whether in stocks or bonds, as well as to provide for necessary improvements. The ratio of operating expenses to gross earnings is called the operating ratio, and in 1913 the Canadian operating ratio was 70·90 p.c. The new conditions of the war period, especially the higher cost of labour and of fuel, swelled the operating ratio, in spite of advances in freight and passenger rates, until in 1920 it reached 97·18 p.c., since when there has been a

decline to a ratio of 78.53 in 1928 and 81.08 in 1929. Although operating expenses for 1929 were lower than in 1928 on account of the decreases in both freight and passenger traffic, the gross revenues showed a much greater decline which reduced the net operating revenues by \$20,002,058 and increased the operating ratio from 78.53 p.c. to 81.08 p.c.

In Table 7 will be found an analysis of the distribution of the operating expenses of steam railways for the latest four years, the 1929 figures showing decreases compared with 1928, due to decreased volume of traffic. The earnings and operating expenses per mile of line and per train-mile are analysed in Table 8.

**6.—Summary of Steam Railway Statistics of Freight and Passenger Traffic, and Ratio of Expenses to Earnings, years ended June 30, 1911-1919, and calendar years 1919-1929.**

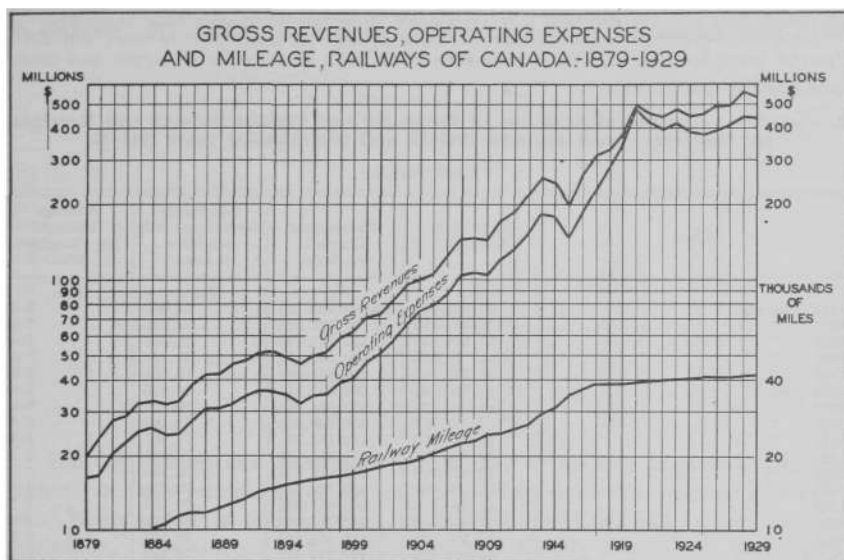

NOTE.—These statistics were published for the years 1875-1910 on p. 434 of the 1916-17 Year Book, and for 1901-1910 on p. 591 of the 1928 Year Book.

1929 "	13,067	10,595	2,472	4-540	3-681

A summary analysis of passenger and freight traffic statistics for recent years is given in Table 9, showing among other things a decline in average receipts per passenger per mile from 3.04 cents in 1921 to 2.77 cents in 1929, and a decline in the average number of passengers per train from 70 in 1919 and 64 in 1920 to 56 in 1929. Similarly, freight traffic statistics show a reduction in freight receipts per ton per mile from 1.200 cents in 1921 to 1.099 cents in 1929. The average haul for freight has been revised to show the average for all railways instead of for each railway, thereby eliminating the effects of consolidations of railways and of interchanging freight between Canadian railways. The passenger traffic has shown the effects of the competition of motor vehicles, both public and private, which in 1915, numbered less than 100,000, while in 1929 they numbered about 1,200,000. The average revenue per passenger in-

creased in 1918 and 1919 with increases in rates, but the increases in later years have been largely due to decreases in the short haul traffic. The increases in freight train loading and train revenues have been the results of larger and more powerful locomotives.

### 3.—Summary Analysis of Statistics of Passenger and Freight Services and Receipts, for the years ended June 30, 1915-19, and the calendar years 1919-29.

**Railway Wages and Salaries.**—The number of railway employees and the amount of their remuneration are naturally affected by the volume of traffic, which tends to rise in periods of active business conditions and fall in times of depression. The volume of traffic is also very directly affected by the size of the grain crops in the West. Thus it may be observed in Table 10 that the very favourable industrial and agricultural conditions of 1928 resulted in a considerable increase in the number of employees. The depression in 1929 resulted in a reduction in the pay roll chargeable to operating expenses of \$3,765,-820, although owing to heavy construction work the total pay roll increased by \$2,957,184.

Largely because of inflated monetary conditions, the amount of salaries and wages reached a peak in 1920, but, as will be seen from Table 10, the wage bill increased from 1915 to 1920 to a much greater extent than the number of employees, viz., by 222 p.c., while employees increased by only 49 p.c. By a revision in 1926, the pay roll includes both operating and construction or capital accounts and consequently the data are not directly comparable with data for previous years.

10.—Number of Steam Railway Employees, Amount of Salaries and Wages, and Ratios of the latter to Gross Earnings and Operating Expenses, for years ended June 30, 1915-1919, and for calendar years, 1919-1929.

Year.	Employees.	Salaries and Wages.	Ratio to Gross Earnings.	Ratio to Operating Expenses.
		No.	\$	p.c.

1928 ( " )	187,710 <sup>1</sup>	287,775,316 <sup>1</sup>	46.95 <sup>2</sup>	59.79 <sup>2</sup>
1929 ( " )	187,846 <sup>1</sup>	290,732,500 <sup>1</sup>	48.95 <sup>2</sup>	60.24 <sup>2</sup>

<sup>1</sup>Owing to changes in classification, the figures for 1926, 1927, 1928 and 1929 include 8,792, 8,360, 11,657 and 13,396 employees respectively, with salaries and wages of \$9,075,602, \$8,391,797, \$13,218,742 and \$15,095,199 respectively, engaged in outside operations and in classes not included prior to 1926. <sup>2</sup>The ratio percentages are for pay roll chargeable to operating expenses only.

**Rolling Stock.**—Statistics of the rolling stock of the steam railways of Canada are given for the last seven years in Table 11. The figures may be supplemented by the statement that between 1920 and 1929 the average capacity of box cars increased from 34,779 tons to 37,711 tons, of flat cars from 33,459 to 37,020 tons, and of all freight cars from 35,141 tons to 38,162 tons. The average tractive power of the locomotive in use in 1920 was 31,112 lb. and in 1929, 36,228 lb.

11.—Rolling Stock of Steam Railways, calendar years 1923-1929.

**Commodities Hauled.**—In Table 12, the duplications from two or more railways handling the same freight have been eliminated. The peak year was 1928 when agricultural products were particularly heavy. The 1929 statistics showed a decrease of 3,465,941 tons, or 2.9 p.c., wheat alone being lighter by 7,181,099 tons. The western wheat and oat crops were each less than half of the 1928 crops and other grains also showed large decreases. Forest products also decreased, but live stock remained about the same. Mine products increased by 10 p.c. and manufactures and miscellaneous freight increased by 6.8 p.c.

### 12.—Commodities Hauled as Freight on Steam Railways during the calendar years 1925-1929.

Note.—In this table duplications are eliminated, i. e., the same freight handled by two or more railways is counted only once. In this respect these figures differ from those in the corresponding table in the 1926 and previous Year Books, and also from those of Table 6 in this chapter.

<sup>1</sup>Traffic on the Thousand Islands Ry., 52,716 tons in 1925, is not distributed, and is included as originating on Canadian National Railways.

**Government Aid to Private Railways.**—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion, Provincial and even municipal Governments to extend some form of assistance. In our earlier history, when our Governments had plenty of Crown land and little cash, the subsidies granted to railways frequently took the form of land grants, which had the advantage of giving the railway a direct interest in opening up the country, though they sometimes led to the railways holding large tracts of land idle for speculative purposes when intermixed Crown lands had been homesteaded, thus retarding the settlement of agricultural land. Table 13 shows the areas of the land granted as subsidies to steam railway companies by the Dominion and Provincial Governments, with the names of the companies in the case of the Dominion Government. The total area so granted and for right of way purposes up to Dec. 31, 1929, amounted to 47,290,566 acres.

As the country grew wealthier, the objections to the land grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan, or a subscription to the shares of the railway. From 1851 up to Dec. 31, 1929, as shown analytically in Table 14, the total value of such aid granted to steam railways in Canada, exclusive of the capital of Government railways, amounted to \$225,567,753. Of this sum, \$176,693,510 represented aid granted by the Dominion Government, \$33,460,615 that granted by the Provincial Governments, and \$15,413,628 that granted by municipalities. Table 15 records the details of the most recent type of assistance given to private railways, viz., by the guaranteeing of their bonds or of the interest thereupon.

These guarantees enabled the railways receiving them to borrow money at rates of interest considerably lower than would otherwise have had to be paid. The total amount outstanding on Dec. 31, 1929, was \$703,844,823.

### 13.—Areas of Land Subsidies Granted to Steam Railways by the Dominion and Provincial Governments up to Dec. 31, 1929.

<b>Grand Total</b>	<b>703,844,823</b>

<sup>1</sup>Does not include \$216,207,141 perpetual debenture stock and guaranteed stock of the Grand Trunk Railway, on which interest and dividends are guaranteed by the Dominion Government, nor guaranteed bonds held by the Government.

**Railway Accidents.**—The number of passengers, employees and others killed and injured in steam railway accidents is given in summary form from 1915 to 1929 in Table 16, and in detailed analysis for 1927 to 1929 in Table 17. Between 1915 and 1929 the number of persons killed in *train accidents* only, increased by 46, or 12.5 p.c., and the injured by 1,566, or 100 p.c., the increases at highway crossings, due largely to careless driving of motorists, being 62 killed and 344 injured. The number of persons injured in other accidents (trackmen, shopmen, etc.), increased from 1,583 in 1915 to 10,699 in 1929; the extent of the injuries, of course, cannot be compiled or compared, but it is probable that legislation in connection with workmen's compensation results in injuries to employees being much more completely reported now than formerly.

**16.—Number of Passengers, Employees and Others Killed and Injured on Steam Railways, years ended June 30, 1915-1919, and calendar years 1919-1929.**

### Section 3.—Origin and Growth of Government-owned Railways.

**Canadian Government Railways.**—The Intercolonial Railway, built as a condition of Confederation and completed in 1876, and the Prince Edward Island Railway, opened in April, 1875, have since their construction been owned and operated by the Dominion Government. In 1903 the Dominion Government undertook the construction of the National Transcontinental Railway from Moncton, N.B., to Winnipeg, to be leased to the Grand Trunk Pacific Railway Company for a period of 50 years. However, as a result of the conditions arising from the outbreak of war, the company was unable to take over the operation of the road when completed in 1915. The Government itself undertook its operation and was also obliged to lease the Lake Superior branch of the Grand Trunk Pacific Railway, which was isolated from the main line. A number of eastern branch lines have been acquired in recent years, including: the New Brunswick and Prince Edward Island Railway which forms the mainland connection of the Prince Edward Island car ferry, the International Railway, the Moncton and Buctouche Railway, the Salisbury and Albert Railway, the St. Martin's Railway, the Elgin and Havelock Railway, the York and Carleton Railway, the Quebec and Saguenay Railway, the Caraquet and Gulf Shore Railway, the Lotbinière and Mégantic Railway and the Cape Breton Railway. The Saint John and Quebec and Inverness Railways which had been operated under lease were purchased in 1929, together with the Kent Northern, the Atlantic, Quebec and Western, the Quebec Oriental and the Quebec, Montreal and Southern. The Hudson Bay Railway, which had 332.5 miles of steel rail at the end of 1920, was declared to be comprised in the Canadian Government Railways, and until 1926 was operated to a limited extent by the board of directors of the Canadian National Railways. In that year, as a result of the decision to complete the road, it was returned to the Department of Railways and Canals until completed. The eastern terminus was transferred from Nelson to Churchill, and the line rehabilitated and extended through to Churchill. Construction of wharves and a grain elevator is not completed but it is expected that the railway will be opened to traffic in the autumn of 1931. To Mar. 31, 1930, the total cost of this railway was \$29,527,026 and of terminal work at Churchill \$4,707,563, exclusive of the expenditures of \$6,274,217 on the terminal at Nelson, some of which was salvaged.<sup>1</sup>

<sup>1</sup>These figures of total cost include deficits during operations and expenditures which formed part of cash loans to the Canadian National Railways and amounts chargeable to appropriations under collection of revenue in the case of the terminals, in addition to the expenditures by the Government on capital account as shown in Table 19.

Tables 18 and 19, from the Annual Report of the Department of Railways and Canals, show the capital expenditure of the Dominion Government on the Canadian Government Railways and their operating finances to Mar. 31, 1930. In Table 18 the cost of the Quebec Bridge (\$21,706,664) also \$18,000 of miscellaneous expenditure, are not included in the total of capital expenditure, while in Table 19 they are included.

**18.—Cost of Construction, Operating Expenses and Revenue of Canadian Government Railways before Confederation and for the fiscal years 1868-1900 and 1901-1930.**

NOTE.—From the Annual Report of the Department of Railways and Canals. For the years 1868 to 1915, see Canada Year Book, 1916-17, p. 437.

**The Consolidation and Organization of the Canadian National System.<sup>1</sup>**

—In pursuance of an Act of 1917 (7-8 Geo. V, c. 24), the Government acquired the capital stock of the Canadian Northern Railways with a mileage of 9,566.5. The insolvency of the Grand Trunk Pacific led to the appointment of the Minister of Railways as receiver on Mar. 9, 1919, and in Oct., 1920, the road was transferred to the Canadian National Railways. The Grand Trunk Railway was acquired under c. 13 of the 2nd session of 1919, which provided for arbitration as to the considerations to be given to its shareholders. This arbitration finally disposed of, steps were taken to consolidate the various railways under government operation and control. In Oct., 1922, the Grand Trunk Board and the Canadian Northern Board gave place to a single Canadian National Board, to which the former Canadian Government Railways were turned over for management and operation. The unification of the Grand Trunk and Canadian National Railways was provided for by Order in Council of Jan. 30, 1923, which also brought into effect the Act to incorporate the Canadian National Railway Company and respecting Canadian National Railways (c. 13, 1919). This was followed, on Feb. 5, 1923, by an Order in Council establishing the head office of the Canadian National Railways at Montreal, Que.

**Operation of the Canadian National Railways.**—The Canadian National system's steam mileage at Dec. 31, 1929, including lines in the United States but exclusive of the Central Vermont (which the Canadian National system purchased) and the Northern Alberta (which is controlled jointly by the Canadian

<sup>1</sup>For further details on the acquisition of the Canadian Northern, Grand Trunk Pacific and Grand Trunk Railways by the Dominion Government, see pp. 602-603 of the 1926 Year Book.

National and the Canadian Pacific Railways) was 19,571.36, which with the Eastern Lines' mileage of 3,332.54 made a total of 22,903.90. Including the Central Vermont, 420.76, and the Thousand Islands Railway, 4.6, controlled by constituent companies but separately operated, the total steam mileage was 23,329.26. Including 186.52 miles of electric lines, the grand total was 23,515.78.

The Maritime Freight Rates Act (17 Geo. V, c. 44), effective July 1, 1927, ordered that the accounts of the Canadian National lines east of Lévis and Diamond Junction, Quebec, be kept separate from those of the remainder of the Canadian National system. These lines were designated the "Eastern Lines" of the Canadian National Railway, and the territory, which included Prince Edward Island, Nova Scotia, New Brunswick and a part of Quebec, the "select territory". The Act also ordered that local and westbound freight rates on the Eastern Lines and freight rates on all eastbound traffic originating on these lines be reduced by 20 p.c. The reductions applied only to rates on the Eastern Lines and not to railways beyond the "select territory". Other railways operating in the "select territory" were allowed to make similar reductions in their freight rates in that territory and to bill on the Board of Railway Commissioners of Canada for the difference in freight receipts due to such reductions. The railways making such reductions included these bills with their revenues and consequently their revenues were not reduced by the change in the rates. The Act provides that any deficit from the operation of these lines shall be met by a separate appropriation by the Dominion Government. For the six months, July-December, 1927, and the calendar years 1928 and 1929, the Eastern Lines reported losses in revenues due to these reductions in rates of \$931,810, \$2,151,528 and \$2,451,818 respectively, and the deficit was therefore increased by those amounts. The total paid to privately owned railways under the Act was \$421,655 for the six months of 1927, \$628,893 for 1928 and \$811,149 for 1929. The four operating regions of the Canadian National Railways system were somewhat altered in consequence of the Maritime Freight Rates Act and are now divided as follows:—the Eastern Lines, including far the greater part of the former Atlantic region and the lines west to Lévis and Diamond Junction, a total of 3,332.54 miles; the Central Region, from Lévis and Diamond Junction west to Port Arthur and Armstrong, including the line in the United States to Portland, Maine, a total of 7,631.31 miles; the Western Region, including all lines west of Port Arthur and Armstrong, with the Duluth, Winnipeg and Pacific, a total of 10,948.27 miles; and the Grand Trunk Western, the lines in the States of Michigan, Indiana and Illinois, 991.78 miles.

The Quebec bridge across the St. Lawrence above Quebec city, with a main span of 1,800 ft., the longest in the world, and carrying a single track railway and accommodation for motor and pedestrian traffic, forms a connecting link in the Canadian National Railways system and is operated as a part of it.

Table 20 shows some of the more important train traffic statistics of Canadian National Railways operation for the years 1928 and 1929 (excluding the Eastern Lines and the Central Vermont Railway included in the similar table on pp. 663-4 of the 1927-28 Year Book).

<sup>1</sup>Excludes Eastern Lines, Central Vermont Railway and electric lines.

<sup>2</sup>For detailed statistics of the operation and finances of the Canadian National Railways during 1929 see the annual report of the Department of Railways and Canals for the fiscal year ended Mar. 31, 1930, and Steam Railway Statistics, 1929, published by the Dominion Bureau of Statistics. <sup>3</sup>Work service excluded.

**Operating Finances of the Canadian National Railways.**—In Table 21 "Canadian Lines" include those of the Canadian Northern system, the Grand Trunk Railway of Canada, the Grand Trunk Pacific and the Canadian Government Railways, and the Hudson Bay Railway for 1920 to 1925, but not since 1925. The "United States Lines" include those lines known as the New England line, the Grand Trunk Western, and the Duluth, Winnipeg and Pacific. The Hudson Bay Railway was returned to the Government while under construction, and appropriations, etc., for this were not included with the 1926 data. The Maritime Freight Rates Act necessitated the segregation of the Eastern Lines which have been kept separate since July 1, 1927.

Gross revenues, operating expenses and net revenues shown in this table include only those from steam railway operations, with the exception that commercial telegraph operations are included in the figures for 1927, 1928 and 1929, but the deficits are for the entire system, including the operating results of the

Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Up to 1928 there was a marked improvement over the results of the first year after consolidation (1923), when the deficit was \$51,697,675, but the light traffic in 1929 so reduced gross revenues that, with increased interest charges and only a slight reduction in operating expenses, the deficit increased from \$29,868,437 in 1928 to \$46,099,250. During 1926-1928, 40 to 45 p.c. of the net revenues was earned in the last three months of each year and only 25 p.c. of operating expenses was expended, but in 1929, owing to the exceedingly heavy decrease in traffic, only 30 p.c. of net revenues was earned during October, November and December and heavy maintenance and other expenses had already been incurred. The Central Vermont, which was previously included in this table, suffered severe damages from floods during 1927 and was forced into receivership on Dec. 13, 1927; consequently its accounts were not included with those of the Canadian National system. In 1930 the road was sold at public auction and purchased by the Canadian National Railways; from Feb. 1, 1930, the accounts have been included with those of the other constituent lines in the United States (25.3 miles of the Central Vermont are in Canada).

<sup>1</sup>Exclusive of Hudson Bay Railway in 1926, 1927, 1928 and 1929; this line was included in previous years.

<sup>2</sup>Adjusted to show data of Eastern Lines for twelve months, also to include revenues and expense of commercial telegraph.

<sup>3</sup>Includes contributions from Dominion Government to cover loss from 20 p.c. reduction in certain rates ordered by the Maritime Freight Rates Act, July 1, 1927; \$931,810 for 6 months 1927, \$2,151,528 for 12 months 1928, and \$2,451,818 including \$13,743 for Gaspé railways for 1929.

<sup>4</sup>Appropriations by Dominion Government to meet deficits of Eastern Lines including loss due to reduction in freight rates amounted to—\$3,049,746 in cash, \$214,949 in accounts, total \$3,264,695 for 6 months 1927; \$6,351,884 in cash, \$937,671 in accounts, total \$7,289,555 for 1928; and \$7,214,035 in cash, \$389,296 in accounts, total \$7,603,331 for 1929.

**The Debt and Interest Charges of the Canadian National Railways.—**

The two tables which follow analyse the increase in the debt and interest charges of the system, including both Canadian and United States lines. The first table (22) shows to whom the liabilities which have accumulated up to 1929 are payable and the second (23) the purposes for which the funds representing the annual increases in liabilities were used. To define clearly what is included under debt due to the Dominion Government in Table 22, the appropriations for the Canadian Government Railways have been separated from the loans and advances to the remainder of the system. The Canadian Government Railways include the Intercolonial, National Transcontinental, Prince Edward Island and several other smaller railways in the Eastern Provinces, together with the Quebec Bridge. The Hudson Bay Railway was included in the Canadian Government Railways until 1926, when it was transferred back to the Department of Railways and Canals for completion, while appropriations on its account were deducted. These Canadian Government Railways appropriations do not include the operating deficits of the Canadian Government Railways for 1919 and 1920 nor the deficits of the Eastern Lines since July 1, 1927, but include investments for construction, purchase and working capital of the Canadian Government Railways and the operating deficits of these railways since their consolidation with the system in 1921, except as already mentioned. As the book value of these properties is included on the asset side of the balance sheet, the cost of these roads to the Dominion is included in the liabilities of the system as an offset. The construction or purchase of these roads was financed by the Dominion from the Consolidated Revenue Fund, and while for book-keeping purposes their cost is set up as a system liability, they are not a debt and carry no interest obligation.

In a rather different class are the loans and advances made by the Government to the Canadian National Railways or constituent companies on notes, bonds and receiver certificates with accrued simple interest ranging from 3 to 6 p.c. In computing the public debt of Canada the Finance Department considers these railway loans and advances as "non-active assets" similar to investments in canals, public works, etc., and as such does not subtract them from the gross debt in computing the net debt; similarly, no interest is charged by the Finance Department on the railway advances. The railways, however, debit their accounts with the accrued interest on these Government advances, although none of this interest has been paid.

The debt due to the public includes debenture stock maturing and perpetual, and bonds and mortgages of the constituent railways, but does not include the capital stock of the Grand Trunk Railway held by the Government, nor the cost

of acquiring the same. Likewise it does not include the capital stock of the Canadian Northern system. The stock of the Grand Trunk Pacific is all held by the Canadian National system and is therefore not included either.

Table 22 shows the total debt at the end of 1929 to have been \$2,431,244,155, made up of \$1,122,559,493 owing to the public and \$1,308,684,662 to the Government. In addition to the actual loans and advances by the Government amounting to \$601,446,082, this sum of \$1,308,684,662 includes, not only the unpaid interest, already referred to, of \$290,088,439, but \$417,150,141 spent on the construction and purchase of lines forming the original Canadian Government Railways. The aggregate net increase in the principal of the debt during the 11 years as shown in Table 22 was \$1,050,037,910, of which \$349,595,527 was an increase in debt due to the public and \$700,442,383 in debt due to the Government.

In Table 23 is presented an analysis of the increase in capital liability in the years 1923 to 1929, according to the purpose for which the money was used. The accounts for the Eastern Lines, which under the Maritime Freight Rates Act were ordered segregated from those of the remainder of the system, are shown separately since July 1, 1927. In the first column is shown the interest accrued each year, including interest due to the public and to the Dominion Government. In the second column is shown the total increase in book long term debt as set up by the railway. It is stated in these terms because it contains accrued interest on Government loans which is not included in the debt by the Minister of Finance. Columns 3 and 5 show the division of the total increase shown in column 2 together with profit and loss adjustments, such as from sales of property, etc. The totals for 1924-1929 are shown for the purpose of comparison with Table 24. Of the total increase of \$638,718,402 in the seven years the system had been under one management, \$277,741,734 was due to operating deficits and \$360,988,799 was expended on additions and betterments, increased working capital, etc. To explain this last item Table 24 has been compiled. It shows a net increase in assets for the six years, 1923-1929, of \$310,019,869. Of course, some of this is offset by increased current liabilities, but the investments show an increase of \$269,239,904 as against the net increase of \$270,267,561 shown in column 5, Table 23.

The figures in Tables 22 and 23 do not include any Central Vermont data. Loans and advances received by the Canadian National Railways from the Dominion Government and advanced by the Canadian National to the Central Vermont are shown as charges against the Canadian National Railways.

<sup>1</sup> Includes debenture stock of Canadian Northern system, Grand Trunk and Grand Trunk Pacific and cost of constructing Canadian Government Railways, but excludes capital stock, which on Dec. 31, 1929, amounted to \$270,223,249, of which \$265,628,339 was owned by the Dominion Government and \$4,594,910 was held by others. Does not include appropriations for deficits of Canadian Government Railways for 1919 and 1920 nor of the Eastern Lines since July 1, 1927.

<sup>2</sup> Includes operating deficits 1921-1922-1923 and working capital of Canadian Government Railways.

<sup>3</sup> Reduced on account of the Hudson Bay Railway being returned to Canadian Government while under construction, and by repayments to Dominion Government, account of Canadian Government Railways.

<sup>4</sup> Reduction due to revision of appropriations.

<sup>5</sup> Accrued interest included on Dec. 31, 1928, was \$258,024,307 and on Dec. 31, 1929, \$290,088,439.

<sup>6</sup> Reduction due to transfer of Canadian Government Railways property to Harbour Commissioners of Halifax (\$12,830,122) and Saint John (\$647,383), and adjustments of Canadian National cash loans of \$5,947,732 and additions amounting to \$288,804.

<sup>7</sup> Interest on 4 p.c. Grand Trunk Pacific debentures reduced by \$1,046,378, under agreement with bondholders.

<sup>8</sup> Includes interest on debt of Eastern Lines, viz., \$392,407 for 1927 and \$780,680 for 1928 and \$871,473 for 1929.

**23.—Analysis of the Increase in the Debt of the Canadian National Railways, calendar years, 1923-1929.<sup>1</sup>**

<sup>1</sup> In computing the public debt of Canada, the Finance Department considers railway appropriations and advances in the same way as investments in canals, public works, etc., i.e., as "non-active assets" and does not subtract them from the gross debt in computing the net debt; similarly, no interest is charged by the Finance Department. The railways, however, debit their accounts with the accrued interest on Government advances although none of this interest has been paid.

<sup>2</sup> Not assumed by Canadian National Railways system.

<sup>3</sup> Deficits of Eastern Lines are met by appropriations by Dominion Government. These deficits do not include loss in revenues due to the 20 p.c. reductions in freight rates, viz., \$931,810 for six months 1927, \$2,151,528 for 1928, and \$2,451,818 for 1929 including \$13,743 for Gaspé railways, also paid by the Dominion Government.

**Assets of Canadian National Railways.**—No consolidated balance sheet was issued for 1922 and, consequently, it is not possible to show the changes during the 7 years the system has been under the unified management. Table 24, however, shows the asset side of the balance sheets for 1923 and 1929 and the increases and decreases during this six-year period.

The gross increase in investment in road and equipment of \$255,912,681 is included in the total of \$298,689,936 for additions and betterments, discounts, etc., for 1924-1929, shown in Table 23, and during this period the increase in miles of road owned was 1,891.87, (Hudson Bay Railway excluded in both capital and mileage). In the investment accounts some of the increases were due to transfers from one account to another. Some of the leased properties now controlled by the system were transferred to account 701 and hotels were transferred from account 701 to account 705. Much of the increase in account 706, "Investments in affiliated companies" was due to advances to the Central Ver-

mont Railway. Also, against the special deposit with the Minister of Finance of \$39,847,699, were temporary loans of \$32,601,600 not included as long term debt shown in Tables 22 and 23.

<sup>1</sup>In 1926 the Hudson Bay Railway, with a ledger value of \$14,944,870, was transferred to the Department of Railways and Canals and in 1928 Canadian Government Railways property, with a ledger value of \$13,477,505, was transferred to the Halifax and Saint John Harbour Commissions; consequently the gross increase was \$28,422,375 greater, or \$255,912,681.

**PART III.—ELECTRIC RAILWAYS.<sup>1</sup>**

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life and is supplied throughout Canada by the electric street railway, generally operated by hydro-electric energy which is so important a feature of Canadian economic life.

**Historical.**—Replacing the horse car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition grounds. Before many years their safety and convenience

<sup>1</sup>Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on Electric Railways in Canada.

resulted in the discarding of the older system. An electric system 7 miles in length was opened at St. Catharines in 1887, using the double overhead trolley. This was followed by the completion of the Ottawa Electric Railway in 1891, and the electrification of the Montreal and Toronto systems in 1892. The street railways of other eastern cities were generally electrified during the 1890's, while in the newer western cities electricity was used from the commencement. In the cities of Eastern Canada electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities, a fact indicated in Table 23. In 1921, on the expiry of the 30-year franchise of the Toronto Street Railway Co., the railway in this second largest city of Canada was taken over by the city and is now being operated by a transportation commission.

Many difficulties are met in operating the cars during the winter season, owing to snow. This, however, has been overcome by the use of sweepers, scrapers and ploughs. The single overhead trolley system has been found the most suitable and is in general use and during the past few years an increasing number of motor buses have been used; in 1924 only 48 were operated, but by 1929 the number had increased to 484.

In addition to the street railways there is quite a large mileage of electric suburban or interurban lines, especially in the Toronto, Niagara and Lake Erie district, where considerable freight traffic is carried, and on the Pacific coast, where the British Columbia Electric Railway operates several hundred freight cars.

**Development of Electric Railway Traffic.**—Figures for the year 1893 show that 30 companies, with a paid-up capital of about \$9,000,000, operated 256 miles of railway. By 1897, 35 companies made returns showing 583 miles of track, 1,156 cars, 26,431,017 miles run, 83,811,306 passengers carried and capital of \$18,727,355. In 1904, 44 companies showed 766 miles of track, 2,373 passenger cars, 42,066,124 car miles run, 181,689,998 passengers and capital of \$50,399,188. The statistics for 1929 show that during that year 57 companies with a capital of \$222,422,815, had 2,202 miles computed as single track, 4,183 passenger cars, 484 buses, 572 freight cars and 75 electric locomotives, 139,199,634 car miles run, and 836,729,851 fare passengers. The number of employees in the service of electric railways on Dec. 31, 1929 was 18,801, as compared with 18,697 in 1928. Total salaries and wages for the year 1929 were \$26,984,061, as against \$26,494,063 in 1928.

**Statistics of Electric Railways.**—Summary statistics of the operation of electric railways in Canada from 1901 to 1929 inclusive are given by years in Table 25. It may be noted in this table that the carriage of freight reached its maximum in 1928, with 3,892,114 tons, while the number of fare passengers carried in 1929 reached a new record of 836,729,851. This improvement was practically all in the large cities, the smaller systems showing decreases. In Table 26 statistics of mileage and equipment are given for the latest four calendar years, and annual statistics of the capital liability of electric railways are furnished from 1908 in Table 27. Detailed figures of the mileage operated, the capital liability, the earnings, operating expenses, employees, and salaries and wages, are given for 1929 in Table 28, while Table 29 shows by years from 1919 to 1929 the number of passengers, employees and others killed and injured on electric railways in Canada.

25.—Summary of Statistics of Electric Railway Operation, years ended June 30, 1901-1919, and calendar years 1919-1929.

**PART IV.—EXPRESS COMPANIES.<sup>1</sup>**

"Express service is an expedited freight service on passenger trains" But express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. A brief history of the various express companies will be found on pp. 611-612 of the 1926 Year Book.

Before 1915, an express company in Canada was not liable for delay or damage caused by anything quite beyond its control, thus maintaining itself as an entity separate from the railway company. But in 1915 this liability was qualified, and thenceforth an express company became liable for delay or injury of goods if either was caused by the railway company in whose cars the goods were being carried.

Goods are sent by express for quick transit, so that express rates do not compete with freight rates. Thus in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of 2½ times the maximum first-class railway freight rate for the same goods carried the same distance. An express company usually pays the railway company a percentage of its gross earnings; for example, the Canadian Express Co. paid the Grand Trunk 50 p.c. But the railway, by controlling the stock, has an additional revenue; and since express companies have little equipment but offices, and therefore have small expenses for upkeep, the railway receives in the end practically all the profits of the express company above bare operating expenses. Express rates, like freight rates, are subject to the approval of the Board of Railway Commissioners.

**Express Company Operations.**—During 1929, the latest year for which the statistics of the Transportation Branch of the Dominion Bureau of Statistics are available, there were four Canadian and one American express organizations operating in Canada. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National System is handled by a department of the railway. The British America Express Co. operates over the Algoma Central and Algoma Eastern Railways. The Central Canada Express Co. was formerly operated over the Central Canada, the Edmonton, Dunvegan and British Columbia and the Alberta and Great Waterways Railways, but in 1927 its business was taken over by the Canadian National Express Department. With the amalgamation of these railways in 1929 and formation of the Northern Alberta Railways Company, the express business was handled by a department of the new company from Nov. 1, 1929. The American Railway Express Co. operates over the Canadian sections of United States railways and over the route from Skagway to points in the Yukon Territory. The business of this company was taken over by the Railway Express Agency, Incorp., on Mar. 1, 1929. These companies are organized under powers conferred by Acts of the Dominion Parliament, and their business consists in the forwarding of parcels, the transfer of baggage and the issue of money orders, travellers' cheques, letters of credit and other forms of financial paper (Table 32). The total capital liabilities of the two Canadian companies and of the Canadian National Express Department stood at \$8,529,573 on Dec. 31, 1929.

<sup>1</sup> Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues an annual report on Express Statistics.

Statistics of the receipts and expenses of express companies in Canada are given in summary form for all companies for the years 1919 to 1929 in Table 30, and for each company for the year 1929 in Table 31. In these tables the amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting the express matter, are shown under the heading "express privileges". Table 31 also shows the mileage operated by each company in 1929. Of the total of 66,061 miles, 44,345 were over steam railways, 372 over electric railways, 14,227 on ocean steamship services (mainly by the Canadian Pacific lines), and 6,945 miles on inland or coastal steamboat routes.

### 30.—Summary Statistics of Revenues and Expenses of Express Companies, 1919-1929.

NOTE.—Similar figures for the years ended June 30, 1911-19, were published at p. 673 of the 1927-1928 Year Book.

PART V.—ROADS AND HIGHWAYS.<sup>1</sup>

**Historical.**—The early roads were auxiliary to water routes as avenues of transportation. Their use became common during the summer season, when portages were necessary to avoid obstacles to river and lake travel, and during the winters, when ice prevented navigation and snow covered the inequalities of the ground. Even the extensive system of waterways of Eastern Canada was an inadequate means of communication between points of settlement in a rapidly growing colony, and the need for overland routes manifested itself in the introduction of the system of common roads which prevailed under the old régime. Not only did the crude early roads serve the needs of the settlers, but also those of the British, French and American armies during the numerous campaigns. Soldiers were frequently employed, during times of peace, in road construction in different parts of Upper and Lower Canada.

The first important highway in Canada extended along the north shore of the St. Lawrence from Quebec to Montreal, being gradually completed with the growth of the French settlements. In Upper Canada, one of the earliest roads (Yonge St.), was that from Toronto to lake Simcoe, completed in 1794 under the direction of Gov. Simcoe, the work being done by the Queen's Rangers. This road not only gave access to the area north of Toronto, but also provided a more convenient route than that of the Ottawa river from the trading posts on the Upper Lakes to the centres of population along the St. Lawrence. Montreal was joined to Kingston by road in 1816, and in the following year to Toronto. Thereafter other highways to inland settlements, from points served by water routes, began to increase in number, as it became apparent that they were essential to the commercial life of the country as a means of transporting supplies to the settlers and of bringing their products to the central markets of the colony. The system of posts, which had been established about the beginning of the nineteenth century, necessitated passable routes between the various points, and by 1827 a through road was available between Halifax and Amherstburg, comprising for the most part the old Kempt road, the York road, Dundas street and the Baldoon road. From this trunk line of communication, branch roads extended north and south to the more important centres of population in the two Canadas.

The cost of construction of these roads was high, and travel by stage coach was tedious and costly. As late as 1850 some points in central Ontario were still inaccessible to any vehicle. Later years, however, have brought with them improved methods of construction and a resulting reduction in expenses, together with an improvement in the wearing qualities of the more important highways. The growth of motor traffic has played a conspicuous part in the recent movement towards increased and improved road construction. In the older provinces of the East it has been a question of improving the existing roads and of building highways for the use of through traffic between the larger cities, while in the western provinces it has been more a matter of replacing the prairie and mountain trails with roads fit for modern tourist and other traffic.

A table of road mileage in Canada follows. When it is considered that throughout the Dominion there are about 25 persons to every mile of road and

<sup>1</sup> Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics, which publishes an annual report entitled "Highways and Motor Vehicles in Canada".

that on an average there is one mile of road for every 9 square miles of land, the magnitude of the problem faced in the construction of these traffic routes is illustrated. A small population scattered over a large area has made this, like other transportation problems, particularly difficult of solution.

<sup>1</sup>Manitoba figures are for April 30, and B.C. figures for Mar. 31, 1929.

<sup>2</sup>Includes some unimproved earth roads.

<sup>3</sup>Includes 8 miles of other classes.

<sup>4</sup>Includes 6-8 miles of other classes.

**Good Roads Movements.**—The building of new roads and the improvement of those already in use is a matter of such general interest that numerous organizations have been developed throughout the country for the purpose of advising and assisting the various Governments in the work. Good roads associations, assisted by the automobile and motor clubs, are to be found in most of the provinces, for the distribution of propaganda and the education of the public in the need of improved highway routes. Provincial revenues from the taxation of motor vehicles and gasoline are very generally allocated to the construction and maintenance of improved highways. Thus Ontario alone, in its fiscal year ended Oct. 31, 1929, spent for highway maintenance and construction \$19,500,000, as compared with a revenue of \$17,000,000 from gasoline tax, motor licences, etc.

**The Canada Highways Act.**—By c. 54 of the Statutes of 1919, the Dominion Parliament authorized the expenditure of \$20,000,000 for the purpose of constructing and improving the highways of Canada during the five years succeeding the passage of the Act. In its apportionment, grants of \$80,000 were made to each province during each of the five years, the remainder being allotted in proportion to their respective populations. Details as to cost, time, methods of construction, etc., of all roads built under the scheme were to be arranged between the Minister of Railways and Canals and the various Provincial Government Departments. By c. 4 of 1923 and c. 4 of 1925 the operation of the Act was extended to April 1, 1928. A table on p. 669 of the Canada Year Book, 1929, shows the working of the Act and the allocation of expenditure as between the Dominion and the various provinces down to Mar. 31, 1928. The grant has been expended and no further federal appropriation has been made under this Act.

## PART VI.—MOTOR VEHICLES.

The earliest motor vehicles were propelled by steam, the history of the gasoline motor car commencing with the successful construction of a gasoline engine by Daimler in 1884. Until 1900 France remained the headquarters of the in-

dustry, possessing in that year more than half of the 10,000 cars in operation in Europe, while in the United States the number of cars was only about 700. Shortly afterwards, the invention of the Ford car resulted in a keen competition to bring motor cars within the reach of the average man, profits being secured from large production rather than high prices. Detroit became the centre of the automobile industry of the United States and the Canadian side of the Detroit river became the headquarters of the Canadian industry. As a consequence, the population of the border towns Windsor, Walkerville and Sandwich greatly increased between 1911 and 1921, while the town of Ford (now East Windsor), which had no existence in 1911, had 5,870 inhabitants in 1921 and 13,531, according to the municipal assessors, in 1928, when the aggregate for the "Border Cities" was over 105,000. Problems of regional location have resulted, during more recent years, in a gradual shifting of the centre of the industry, and the Toronto and Oshawa districts now rival in importance the older established centre on the Detroit river.

Like many other inventions, the motor car commenced as a toy, then became a luxury of the rich, while now it ranks as a necessity of life to a large proportion of the population. In the past few years, the motor truck and the motor bus have assumed considerable economic importance, and are separately classified in Table 35.

Up to the present the motor vehicle has affected the passenger traffic of the steam and electric railways more than the freight. Five interurban electric railways have recently ceased operation and passenger traffic on the smaller electric railways and on the steam railways has declined during the last decade instead of increasing with increased population. This diversion of passenger traffic has been effected largely by the private automobile, although the motor bus is rapidly becoming more important and is now operating between all large centres. The motor truck is also carrying an increasing amount of freight, although no statistics are yet available showing the tonnage handled.

The automobile manufacturing industry in Canada has made very rapid growth since its beginning about the year 1905, two of its chief tendencies during the period having been a consolidation of smaller firms into large units and the adoption of large-scale methods of production, similar in many ways to those of the United States industry. A brief statement of its history, with statistics of production, etc., is to be found on pp. 432-436 of the Canada Year Book, 1924, while more recent statistics of production will be found in Chapter XIV of this volume which deals with manufactures.

### Section I.—Statistics of Motor Vehicle Operation.<sup>1</sup>

**Registration.**—The increase in the use of motor vehicles in Canada has been very rapid. In 1904 the number of motor vehicles registered in Ontario was only 535. In 1907, 2,130 motor vehicles were registered in six provinces, and in 1908, 3,033 in eight provinces, the motor car being at that time prohibited in Prince Edward Island. From these small beginnings Table 34 shows an increase to 1,239,889 motor vehicles in 1930, an increase over 1929 of 44,295, or more than the total number of motor vehicles registered in 1912. In Table 35 are given by provinces the numbers of motor vehicles registered in 1930, classified as passenger cars, commercial cars or trucks, motor buses and motor cycles.

<sup>1</sup> Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The subject is treated in greater detail in "Highways and Motor Vehicles in Canada," published annually by this Branch.

As was the case in general business, registrations of motor vehicles showed a smaller increase in 1930 than in any previous year, being only 3.7 p.c. more than in 1929. Over 45 p.c. of all motor vehicles in Canada were registered in Ontario and the average number per capita was also greater than in any of the other provinces. For Canada there was an average of 9.5 persons for each passenger automobile and 8.0 persons for each motor vehicle, Ontario leading the provinces with 6.8 and 5.9, respectively, and British Columbia second with 7.4 and 6.0 persons per vehicle. According to the latest statistics of the National Automobile Chamber of Commerce of the United States, only three countries—the United States with 26,501,443, England with 1,242,839, and France with 1,240,000—had in 1929 larger registrations of motor vehicles than Canada, and only the United States had a larger registration of passenger automobiles.

**34.—Number of Motor Vehicles Registered in Canada, by Provinces, calendar years 1907-1930.**

NOTE.—The number of motor vehicles in the Yukon is included in the totals for Canada, 1914-30.

<sup>3</sup> Includes motor buses in Alberta.

**Government Revenue.**—The taxation of motor vehicles, garages, chauffeurs, etc., is becoming a lucrative source of Provincial Government income. In every province the operation of automobiles and motor cycles is dependent on carrying a licence duly issued by the various authorities, while similar licences permit the maintenance of garages and the driving of cars or trucks by hired chauffeurs. Perhaps the most recent form of levy on the use of motor vehicles is the gasoline tax, which has been assessed in all provinces since 1927. The accompanying table (36) shows the provincial revenue for the years 1929 and 1930, indicating, at the same time, the more important sources from which it is derived.

**Imports and Exports of Motor Vehicles.**—Imports and exports of motor vehicles in the fiscal years ended 1908 to 1930 are shown, by number of cars and by values, in Table 37. In the earlier years the imports of cars far exceeded the exports, but as the Canadian automobile manufacturing industry became established, exports commenced to exceed imports and in the four fiscal years up to and including 1926 averaged between two or three times the value of the imports, while the number of cars exported exceeded the number imported in an even larger proportion. During the fiscal year 1927, however, while the exports almost maintained the high figures of previous years, the imports increased so much as again to approach the value of the exports, and in the fiscal year 1928 the imports exceeded the exports by nearly \$9,000,000, owing to a continued increase in the importation of motor vehicles of all kinds and to the contraction in exports caused by the closing down of the factories of one of the largest makers of low-priced cars, pending the introduction of new models. In the fiscal year 1929, with this firm again producing, the total number of cars exported was more than double the number imported, and the proportion was about the same in 1930. The importation of parts has increased with the growth of the industry and amounted in the fiscal years ended Mar. 31, 1928 and 1929, to \$33,237,181 and \$55,761,414 respectively, but in 1930 decreased to \$35,746,929. In the same fiscal years exports (including re-exports) of automobile parts were \$3,304,937, \$3,804,743 and \$3,555,523 respectively.

<sup>1</sup> Freight automobiles were classified with passenger automobiles in figures of imports until 1917.

<sup>2</sup> Freight automobiles were classified with passenger automobiles in figures of exports until 1919.

### Section 2.—Motor Vehicle Acts and Regulations.<sup>1</sup>

The following is a brief synopsis of the laws and regulations in force in each province.

**Prince Edward Island.**—Under the Highway Traffic Act 1930, and regulations, all cars must be registered in the office of the Provincial Secretary. In addition to a registration fee of \$2.50 for cars not previously registered in the province or \$1 if registered before, and a marker fee of \$1, an annual tax of 80 cents per 100 pounds weight is payable on Mar. 1, but is not required of non-residents if the province or State of origin grants exemptions to Prince Edward Island privately owned passenger motor vehicles. Chauffeurs must be 18 years of age; all other drivers of cars, owners included, must be 16 years old and must be licensed. Every car must have a lock or other device to prevent it from being operated when left unattended. The speed limits are: in cities, towns and villages 15 miles an hour, on approaches to steep descents, bridges, or highway crossings 10 miles an hour, on roads outside cities or incorporated towns on which the driver has not a clear view for at least one hundred yards free from turns and intersections 15 miles an hour, and in all other places a speed reasonable and proper.

**Nova Scotia.**—The Motor Vehicle Act requires cars to be registered by the Motor Vehicle Branch, Department of Highways, which issues permits renewable annually on Mar. 31. Cars belonging to persons residing outside of Nova Scotia need not be registered if registered where the owners reside, and operated for private use. This privilege is given for a period of not more than three

<sup>1</sup> This information in this Section has been revised by the officials in charge of the administration of Motor Vehicle Acts and Regulations in the different provinces.

months in each year. If owners come into the province to reside permanently or to carry on business they must register. Every person who operates a motor vehicle must be licensed as a chauffeur, an operator, or a beginner. Motor vehicles must be equipped as provided in the Uniform Vehicle Code. The following are the permissible rates of speed: 15 miles an hour at railway crossings, schools, intersections with obstructed vision, curves with obstructed vision, danger zones; 20 miles an hour in a business district or residential district; 35 miles an hour under all other conditions. Commercial vehicles over 1 ton capacity, 25 miles an hour maximum speed.

**New Brunswick.**—Under the Motor Vehicle Law, 1926, the registering and licensing authority is the Motor Vehicle Branch, Department of Public Works. Cars must be registered when new and, besides the registration fee, an annual fee is payable on Jan. 1. Non-residents may not operate cars registered in another province during more than 90 days in any year without registering in New Brunswick. A chauffeur must be 18 years old; chauffeurs must take out licences and must qualify by examination. The driver of a car must have a permit. If the driver is between 16 and 18 years of age the permit will be granted only after he passes an examination proving his ability to operate a car. To owners, as well as other persons not having a chauffeur's licence, the driver's licence fee is \$1. The speed limits are: in places which are closely built up, or in any city, town or village, 15 miles an hour; outside of any city, town or village where the road cannot be seen clearly for 200 yards, 20 miles an hour. Driving recklessly, or at a speed greater than 40 miles an hour on a highway, may result in a fine, imprisonment, or suspension of licence. All vehicles keep to the right.

**Quebec.**—The law regarding motor vehicles is contained in the Quebec Revised Statutes, 1925, c. 35. Cars must be registered in the office of the Provincial Treasurer and re-registered annually on Mar. 1. Certain government and municipal cars and farm tractors are given free registration, while exemptions are made in the case of pleasure cars registered in other provinces and certain commercial vehicles but only in cases specified in Article 10 of the Act. All drivers of cars must be licensed and 18 years old. Cars, when left unattended, must be locked in such a way as to prevent their use, and must have mufflers. The speed limits are: in cities, towns and villages, 20 miles an hour; on highways where the land is closely built up, 20 miles an hour, and in open country, 30 miles an hour. Motor vehicles must be stopped before driving over a railway crossing. Motors must stop for street cars which are standing to take on or discharge passengers, and must reduce the speed to 16 miles an hour when meeting another vehicle. These rates have reference to pleasure cars only. In the case of a commercial vehicle having non-pneumatic tires, a speed of 8 miles an hour when loaded and 10 miles an hour when unloaded is allowed. When equipped with pneumatic tires the corresponding rates are 12 and 15 miles an hour. Motor buses are allowed a speed of 30 miles an hour in open country.

**Ontario.**—In this province the Highway Traffic Act, under the administration of the Motor Vehicles Branch of the Department of Public Highways, regulates the operation of motor vehicles on the highways. Motor vehicle permits and drivers' licences are issued for the calendar year. No one under the age

of 16 years may operate a motor vehicle and persons between the ages of 16 and 18 years must hold chauffeurs' licences. Those operating as chauffeurs or for hire must hold chauffeurs' licences and all other drivers must hold operators' licences. Vehicles owned by residents of other provinces who do not reside or carry on business in Ontario for more than three consecutive months in each year may be operated in Ontario without Ontario registration plates. Passenger cars registered in the United States may be operated in Ontario without Ontario plates for thirty days in any one year. The speed limit in cities, towns and villages is 20 miles an hour and, in open country, 35 miles an hour. At intersections, level railway crossings and where the view of the driver is obscured the speed allowed is 10 miles within and 15 miles outside of cities, towns and villages. Vehicles must not pass street cars which are stationary for the purpose of taking on or discharging passengers. At intersections the motor vehicle on the right has the right of way and before entering or crossing a through highway a vehicle must be brought to a full stop. A motor vehicle must be equipped with non-glare headlights, muffler, windshield wiper and mirror. Under Part XIII of the Act a person convicted of certain serious offences in connection with the operation of motor vehicles or a person against whom an unsatisfied judgment is outstanding is required to file proof of his financial responsibility. All accidents resulting in personal injuries or property damage apparently exceeding \$50 must be reported to the nearest provincial or municipal police officer.

**Manitoba.**—Under the Highway Traffic Act, 1930, cars must be registered in the office of the Municipal Commissioner, and registration is renewable annually on Jan. 1. Chauffeurs must not be under 18 years of age, and other drivers not under 16 years of age. All drivers must be licensed. No person not a resident of the province shall operate without a licence for a period exceeding 30 days of the date of entry, unless the province or State in which he resides gives reciprocity in this respect. Any motorist must stop and produce his licence for inspection if called upon to do so by an Inspector of Motor Vehicles, or any police officer. Penalties for driving car while intoxicated include imprisonment and impounding of the car. No person shall operate a motor vehicle upon any highway or street at a greater speed than is reasonable and proper, having regard to the condition of the highway and the traffic. The onus of proof is on the motorist. No ray of light from any headlight shall be thrown in a horizontal direction at a greater height from the ground than 42 inches in front of the motor vehicle when travelling on the highways. The use of search-lights and glare headlights is absolutely forbidden on the highway. Number plates must be carried on the front and rear of vehicles so as to be plainly visible. All vehicles must move to the right-hand side of the road and give sufficient room for passing when overtaken by the driver of an automobile or other vehicle and given a signal to pass. In the event of an accident the driver involved must give every help possible, and give his name and address to the police officer or, if no officer is at hand, report to the nearest police station or officer. Failure to comply may involve a fine of \$50 or 30 days' imprisonment.

**Saskatchewan.**—The licensing authority under the Vehicles Act is the Minister of Highways. Licences expire annually on Dec. 31. Licence fees for private vehicles are computed on the wheel base, the minimum fee being \$10, the maximum \$30.

The fee for motor trucks is computed on the size of rear tires and the gross weight. The gross weight consists of weight of vehicle empty plus the maximum load which will at any time be carried, as submitted by the owner. Trucks are divided into five classes. For each converted truck which has gross weight not exceeding 3,000 lb., the fee is \$10. For each truck equipped with a lifting device for service purposes, \$25. For each truck used for general commercial purposes the minimum fee is \$12.50, the maximum \$150. Owners of this type of vehicle receive a licence and plates bearing before the number the letter "T" For each truck to be used solely within the corporate limits of a city or exclusively in connection with owner's farming operations, minimum licence fee \$12.50, maximum \$35. Licence plates for the former bear initial letters "UT" (urban trucks), the latter being described as farm trucks. The owner of a truck in addition to being supplied with two licence plates to be attached one on the front and one on the rear of the truck also receives two weight plates to be attached one on each side of the vehicle, embossed with the gross weight in pounds for which the licence fee has been paid.

The fee for a livery licence is \$8 more than the fee paid for a private or truck licence. Every applicant for a livery or chauffeur's licence must satisfy the Minister of Highways that he is a fit and proper person capable of operating a motor vehicle, and all applicants resident in a city or town are required to obtain endorsement of their application by the Chief Constable, the Secretary-Treasurer being responsible in the smaller urban and rural municipalities. A chauffeur's licence the fee for which is \$5 may be granted to applicants under 18 years of age only upon passing a special examination test. No person under the age of 16 years may drive a motor vehicle. All motor vehicles except motor cycles must expose two number plates. The registration fee for a motor cycle is \$6.

Classes known as "freight vehicles" and "public vehicles", in addition to being registered under the Vehicles Act, must also secure licences under the Public Vehicles Act, 1928, and are required to display a second set of plates. Such vehicles must be equipped with liquid fire extinguishers and standard speedometers. Public vehicles must in addition be internally lighted, such light being kept constantly lighted between the hours of sunset and sunrise at all times when occupied by passengers. The registration fees under this Act are, for the former, a sum equal to one-half the sum paid under the Vehicles Act, and for the latter are dependent upon the passenger capacity. The drivers of these vehicles are further required to obtain permits from the Minister of Highways to operate such vehicles. Motor vehicles must carry lights at night and all front lights must be equipped with non-glare devices.

While a non-resident may use his motor vehicle within the province for a period of, or for periods together amounting to, not more than three months in any year, the expression "non-resident" does not include the owner of a motor truck used for any portion of the year in connection with construction work of any kind. Cars must be equipped with mufflers. Cities, towns, and villages have authority to regulate the speed limits within their respective boundaries. While the speed of private vehicles on the public highway is governed by the amount of traffic which is, or may reasonably be expected to be, on the highway, taking into consideration the nature, condition and use of such highway, no loaded truck shall be driven at a greater speed than 25 miles per

hour, and no unloaded truck shall be driven at a greater speed than 35 miles per hour, while no motor vehicle may be driven at a greater speed than 35 miles per hour when passing any motor or other vehicle going in the opposite direction. No motor vehicle and its load shall have a greater width than 96 inches.

Motor vehicles must stop for street cars which are taking on or discharging passengers. Upon meeting another vehicle at an intersection of highways, the vehicle to the right hand has the right of way. Should a driver on leaving a stopping place in a city or town, desire to turn, he may do so only at an intersection of the public highway.

**Alberta.**—The law relating to motor vehicles is contained in the Vehicles and Highway Traffic Act, 1924. Cars must be registered in the office of the Provincial Secretary, who issues certificates which are renewable annually on Jan. 1. Paid chauffeurs must be licensed. No chauffeur's licence shall be issued to any person under the age of 18. Drivers' licences came into effect on July 1, 1929, but no person under the age of 16 shall drive or operate a motor vehicle. The speed limits are: 20 miles an hour in cities, towns and villages, 10 miles an hour at street crossings and bridges, and 30 miles an hour outside cities, towns and villages. A motor car may not pass a street car which has stopped for passengers to get on or off. A resident of the United States or of any province in Canada, who has complied with the provisions of the law regarding registration of his motor vehicle in the State or province in which he resides, may use his motor vehicle within the province for a period or periods together not exceeding 3 months in any year without registration. The same applies to drivers' licences. The Provincial Secretary may revoke or suspend the licence of any chauffeur convicted under the provisions of the Liquor Act of selling or having for sale intoxicating liquor. Provision is made for the impounding of cars by the authorities where the owners or drivers are convicted of driving cars while intoxicated or convicted under other sections of the Act relating to speeding and juvenile driving. There is provision against the carrying of loaded weapons in an automobile—a preventive measure against accidents during hunting trips.

**British Columbia.**—Under the Motor Vehicle Act and amending Acts, all motor vehicles are to be registered with the Commissioner of Provincial Police. Trailers must also be licensed. Motor vehicles registered outside of the province may be used for touring purposes for a period up to six months providing that they apply for and obtain within 24 hours after commencing to operate in the province a non-resident touring permit (where the owner of a motor vehicle brought into the province for touring purposes is a resident of the United States, it is not necessary that he obtain a touring permit, provided that he carries the customs permit).

Chauffeurs must take out chauffeurs' licences, of which there are three classes:—Class A, entitling the holder to drive and operate every kind of motor vehicle; Class B, entitling the holder to drive and operate any motor vehicle having a seating capacity not exceeding seven passengers inclusive of the driver, and any motor vehicle used exclusively in the transporting of personal property; and Class C, entitling the holder to drive and operate any motor vehicle used exclusively in the transporting of personal property. To obtain a Class A or Class B licence, it is necessary for the applicant to pass a written examination

on the Motor Vehicle Act and Highway Act and Regulations thereunder; also to produce proof of his ability to drive, and to pass a medical examination. Non-resident chauffeurs who have complied with the laws of their place of residence are exempt from taking out chauffeurs' licences while driving foreign-registered motor vehicles for which a touring permit has been issued and is in effect and, in the case of United States owned cars, for which a permit is not necessary, while carrying the customs permit. No chauffeur under 21 years of age shall operate a motor vehicle carrying passengers for hire unless he is the holder of a special permit.

No person shall drive or operate any motor vehicle on any highway unless he is the holder of a driver's licence. No person under 17 years of age may drive a motor vehicle on any highway, except that a person between 15 and 17 years of age may obtain a special permit upon application of the parent or guardian and after passing an examination. The parent or guardian is civilly liable for loss or damage caused through the negligence or improper conduct of such minor, in operating any motor vehicle entrusted to the minor by the parent or guardian. Permit to minor is confined to the use of one particular car. A learner-driver's licence, good for 30 days, may be issued to a learner free of charge to be used only while such learner is accompanied by an adult holder of a driver's licence who occupies the seat beside the applicant. (In the case of a motor cycle, it is not necessary to be accompanied by an adult holder of a driver's licence.) At the expiration of 30 days, the learner-driver's licence is to be surrendered and a regular driver's licence taken out.

A motor-vehicle dealer requires a dealer's licence to sell motor vehicles and to operate the same for purposes of demonstration. Motor-vehicle salesmen require licences to operate motor vehicles bearing demonstration plates. Prospective purchasers can only operate motor vehicles bearing demonstration plates upon written consent from the dealer, good for 48 hours and for not more than two such periods in any year. Mechanics in the employ of the dealer may operate motor vehicles bearing demonstration plates for conditioning or testing without obtaining licences or written consent.

Motor vehicles are to be driven in a careful and prudent manner at all times. The onus is on the driver for driving to the common danger if driving at a greater speed than 20 miles per hour in any city, town or village; or 30 miles per hour outside cities, towns or villages; or greater than the maximum rate of speed stated on signs erected on certain portions of the highway. A motor vehicle may not pass a standing street car at more than 5 miles per hour, if such street car is not taking on or discharging passengers; and must stop at least 10 feet from and in the rear of the passenger exit if such street car is taking on or discharging passengers (in cities where safety zones are provided, motor vehicles are allowed to pass between safety zone and curb at a rate as set by by-law). A motor vehicle must not exceed a speed of 15 miles per hour when passing schoolhouses between the hours of 8 a.m. and 5 p.m. of any day on which school is regularly held, or public playgrounds for children between dawn and dusk. Accidents in which death or personal injury has occurred or in which loss or injury apparently exceeding \$25 is sustained must be reported. All chiefs of police to whom such accident reports are furnished must forward copies within 24 hours to the Commissioner of Provincial Police.

No person shall ride as a passenger on a motor cycle in front of the person driving or operating the motor cycle. Persons carrying on business of letting motor vehicles for hire without drivers must first ascertain whether person hiring same is the holder of a driver's licence in the province and must have him sign his name in a record book and enter the number of his driver's licence. Notices of transfer must be registered in every case where there is a change in the interest or title of a motor vehicle. Provision is made for the surrender of drivers' licences upon conviction for an infraction of the Act or Regulations or of Section 285 of the Criminal Code; upon arrest or indictment for manslaughter a driver's licence is suspended. Owners of motor vehicles are responsible for violations of the Motor Vehicle Act or of traffic by-laws by persons entrusted with their motor vehicles. Any licence issued under the Act may be cancelled or suspended by the Commissioner for violations of the Act and Regulations or for any other reason where a person is considered unfit to drive or operate a motor vehicle.

**Yukon Territory.**—The Motor Vehicle Ordinance, No. 14, 1914, with amendments, requires all cars to be registered in the office of the Territorial Secretary, who issues certificates renewable annually on April 1. A non-resident may operate an unregistered motor for not more than 90 days. No male under 16, and no female under 18 years of age may drive a motor. In cities, towns and villages the speed limit is 15 miles an hour, or 10 miles an hour at street intersections.

## PART VII.—AIR NAVIGATION.<sup>1</sup>

During 1930 steady progress was made in civil aviation. The Dominion and Provincial Governments extended the range and variety of their operations and commercial operating companies increased in number. Aircraft provide a ready means of obtaining accurate information of conditions in remote and unsettled parts, and easy access to them. Their use in the development and conservation of the natural resources is increasing every year. Air mail and air transport lines are now in operation in many parts of the Dominion.

Civil aviation in Canada is divided into two classes:—(1) Civil operations, carried out for other Government departments under the Director of Civil Government Air Operations; (2) Commercial aviation, under the regulation of the Controller of Civil Aviation. Both are under the Department of National Defence.

**Directorate of Civil Government Air Operations.**—This Branch carried out flying on forest fire patrols, fire suppression, oblique and vertical photography for surveys, aerial wheat dusting, air mail investigation, and transportation, etc., for different Government departments in various parts of the country. Permanent bases are established at High River, Alta.; Winnipeg, Man.; and Ottawa, Ont. The forest area under fire protection is approximately 100,000,000 acres. During 1930 a total of 75,000 square miles was photographed for survey purposes; the flying time on all operations for the period April to November was 13,546 hours.

<sup>1</sup> Revised under the direction of J. A. Wilson, Esq., Controller of Civil Aviation, by A. E. Heatley, Department of National Defence.

**Provincial Operations.**—The Ontario Provincial Air Service owns and operates, in fire protection, transportation, aerial photography and sketching in northern Ontario, 33 aircraft. Operations covered an area of about 800 miles from east to west, and 400 miles from north to south. A total of 14,119 hours was flown during 1930. Quebec and British Columbia contract with commercial firms for the flying they require.

**Commercial Aviation.**—During 1930 there were 135 commercial operating companies in Canada; their activities included forest fire patrols, timber cruising, aerial photography, transportation of passengers, of express and mail, instruction, advertising, short passenger flights, etc., in various parts of the country.

**Air Mail Service.**—Regular air mail services were established in January, 1928. Contracts have been awarded to commercial firms by the Post Office Department<sup>1</sup> for the following air mail routes:—*Winter Services:*—Leamington-Pelee Island; Quebec-Seven Islands-Anticosti; Moncton-Magdalen Islands; Moncton-Charlottetown. *Summer Services:*—Rimouski-Montreal-Ottawa; Lac du Bonnet-Bissett-Wadhope. *Annual Services:*—Montreal-Detroit; Montreal-Albany; Sioux Lookout-Red Lake area; Toronto-Buffalo; Oskelaneo-Chibougamau; McMurray-Aklavik; Winnipeg-Regina-Calgary; Regina-Saskatoon-Edmonton; Montreal-Saint John; Montreal-Quebec; Peace River-North Vermilion; Amos-Siscoe. Mail to the extent of 474,199 lb. has been carried under contract without loss or damage during 1930. Surveys for the extension of the present routes are being undertaken as follows:—Ottawa-Winnipeg; Toronto-Sudbury; Prairie Provinces to Vancouver.

**Encouragement of Aviation.**—To encourage a more widespread interest and knowledge of aviation, the Department of National Defence in 1928 assisted by issuing two light aeroplanes to each of 23 flying clubs in the following localities:—Halifax, Granby, Montreal, Ottawa, Toronto, Hamilton, London, Walkerville, Winnipeg, Regina, Moose Jaw, Saskatoon, Calgary, Edmonton, Vancouver, Victoria, Cape Breton, Fort William, Saint John, Kingston, St. Catharines, Brantford and Brandon. Granby and Victoria have since withdrawn from the scheme. The total membership at present is 3,643. A total of 14,686 hours were flown, 178 members obtained private pilots' licences and 59 members obtained commercial pilots' licences during 1930. Many fine aerodromes have been established through this movement.

A large air terminal has been built at St. Hubert, seven miles south of Montreal, where a mooring tower for airships and an aerodrome are constructed; immigration, customs and postal facilities are available there. A terminal aerodrome has also been constructed at Rimouski for the despatch and reception of transatlantic mails by air.

**Manufacture of Aircraft.**—An aircraft industry, to construct in Canada the aircraft and equipment required for aviation, is essential to the sound development of flying. Canadian Vickers, the pioneer firm in Canada, maintain their own designing department and have produced several original types specially suited for operation in Canada. The increased interest and the growing operations of the Dominion and Provincial Governments and commercial operators, led to the establishment of increased manufacturing facilities. Several aircraft

<sup>1</sup> For particulars regarding the administration of the Air Mail Service see pp. 744 and 745.

constructors from England and the United States have formed branches in Canada for the assembly and service of their products. The DeHavilland Aircraft of Canada, Ltd., established a plant in Toronto for the service and assembly of their aircraft, chiefly of the "Moth" light-aeroplane type. The Curtiss Reid Aircraft Co. established a factory in Cartierville, Que., the Fairchild Aircraft Ltd., at Longueuil, Que., the Boeing Aircraft of Canada, Ltd., at Vancouver; Ottawa Car Manufacturing Co. at Ottawa, for manufacture of A. V. Roe aircraft. Aero engine factories are established for construction or assembly and service of their products as follows:—Armstrong-Siddeley Motors, Ltd., at Ottawa; Aero Engines of Canada, Ltd., at Montreal, for "Wright" and "Bristol" engines; Canadian Pratt and Whitney Aircraft Co., Ltd., at Longueuil, Que.

<sup>1</sup>1925 figures include 10 outstanding applications on which fees have been paid.

<sup>2</sup>These figures show duplication, since in several instances the aircraft are used both as landplanes and seaplanes.

PART VIII.—CANALS.<sup>1</sup>

Before the period of extensive railway construction which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages. The canals of Canada were constructed to eliminate the toil of unloading, transporting and reloading at the portages.

The earliest mention of canals in Canada is in connection with the Lachine canal, begun by early French settlers in 1700, but only after the conquest of Canada by the British were improvements of the main water routes made, and in the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although the canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country.

## Section I.—Canal Systems.

There are in Canada seven canal systems under the control of the Dominion Government in connection with navigable lakes and rivers. They consist of the canals (1) between Port Arthur or Fort William and Montreal; (2) from Montreal to the International Boundary near lake Champlain; (3) from Montreal to Ottawa; (4) from Ottawa to Kingston and Perth; (5) from Trenton, lake Ontario, to lake Huron (not completed); (6) from the Atlantic ocean to Bras d'Or lakes, Cape Breton; and (7) from Winnipeg to lake Winnipeg. By means of these canals a total waterway of 1,846 miles has been opened to navigation, the actual mileage of canals being 509·18.

A detailed description of the individual canals was given on pp. 626-629 of the 1926 Year Book. Summary statistics of their length and lock dimensions are given in Table 39.

<sup>1</sup>Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on "Canal Statistics"

39.—Canals of Canada, Length and Lock Dimensions, 1930.

**Government Expenditures on Canals.**—Tables 40 and 41 deal with the expenditure of the Dominion Government on the construction and maintenance of canals. The items of revenue and expenditure, showing in the fiscal year ended 1930 a slightly decreased net outlay as compared with 1929, indicate the net total expended on the maintenance of these water routes. All canals, it may be added, have since 1904 been free of tolls to vessels applying for the privilege of locking facilities. The total capital cost of Canadian canals since their construction was begun is set at \$225,909,708. The heavy capital expenditures in recent years are due to the construction of the Welland Ship Canal, on which \$112,891,842 had been spent up to Mar. 31, 1930. The lock gates were first opened on Apr. 21, 1930, and it is anticipated the canal will be completed in 1931.

## 40.—Expenditures and Revenues of Canals, fiscal years ended June 30, 1868-1906, and Mar. 31, 1907-1930.

NOTE.—For the individual years 1868 to 1910, see Canada Year Book, 1916-17, page 462.

## Section 2.—Canal Traffic.

Tables 42 to 47 deal with the traffic passing through Canadian canals in recent years up to and including 1930. In this latest year the total traffic amounted to 14,803,334 tons, which was an increase of 1,103,687 tons from the total for 1929.

The large decrease in 1929 was almost entirely in grain shipments. Not only was the western crop reduced to less than half of the 1928 crop, but the movement to foreign markets was exceptionally slow. In 1930 grain shipments showed considerable improvement although still much lighter than in 1928. For details of the traffic handled through each canal see the annual report on canal statistics published by the Bureau of Statistics.

## 42.—Total Traffic through Canadian Canals navigation seasons 1900-1930.

By Nationality of Vessels and Origin of Freight.<sup>1</sup>

<sup>1</sup>Includes duplications where vessels use two or more canals.

**The Panama Canal.**<sup>1</sup>—The Panama canal, which was opened to commercial traffic on Aug. 15, 1914, is a waterway which is destined to be of the greatest importance to the British Columbian ports, from which vessels now leave direct for Great Britain and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the war the great expectations based upon the opening of the canal were not realized, owing to the scarcity of shipping, but, with the post-war decline in ocean freight rates, an increase in traffic between our Pacific ports and Europe is occurring, and, while the proportion carried in vessels of Canadian registry is comparatively small, the cargo tonnage has nevertheless assumed considerable proportions. During the year ended June 30, 1930, as will be seen from Table 48, a tonnage

<sup>1</sup>Revised and figures supplied by courtesy of the Governor of the Panama Canal Zone.

of 261,532 originating on our eastern coast and a total of 179,242 tons destined for our western coast were carried westward through the canal. The greater importance of the route as one from Pacific to Atlantic ports is illustrated by the total of 1,947,277 tons from western ports and 189,349 tons destined for eastern Canadian ports locked through in the same period. Strictly inter-coastal Canadian cargo during the year aggregated 192,438 long tons. The canal is thus becoming an avenue of trade between Eastern and Western Canada.

The report of the Governor of the Panama Canal Zone for the year ended June 30, 1930, records a decrease from 1929 of from 6,413 to 6,185 in the number of transits, but an increase from 29,837,794 to 29,960,614 in canal net tonnage and decreases from \$27,127,377 to \$27,076,890 in tolls collected, and from 30,663,006 to 30,030,232 in tons of cargo carried (Table 49).

With respect to traffic by nationality of vessels and cargo carried, vessels of United States registration carried 14,499,233 tons, or 48.3 p.c. of the total cargo of 30,030,232 tons locked through in the year 1930. British vessels carried 7,572,969 tons, or 25.2 p.c., Japanese vessels 1,009,735 tons, or 3.4 p.c., German vessels 1,388,022 tons, or 4.6 p.c., and Norwegian vessels 1,808,278 tons, or 6.0 p.c.

PART IX.—SHIPPING AND NAVIGATION.<sup>1</sup>

Canadian shipping may be divided into three classes: (1) ocean or sea-going shipping; (2) inland or rivers and lakes international shipping; and (3) coasting trade or coastwise shipping. Ocean shipping covers the sea-going vessels arriving or departing from Atlantic and Pacific coast ports, including St. Lawrence river ports up to Montreal. Inland shipping is the term used to cover inland international shipping, *i.e.*, shipping between Canadian and United States ports on the Great Lakes and international rivers and on lakes and rivers accessible to shipping from United States ports such as the Ottawa, Rideau, Trent, etc. Ferriage is, however, excluded from this and other classes of shipping. Coastwise shipping or the coasting trade covers shipping between one Canadian port and another on the Atlantic coast, on the Pacific coast and on the inland international lakes and rivers or lakes and rivers accessible to them. It does not, however, include shipping on isolated Canadian waterways such as the Mackenzie river, lake Winnipeg, lake St. John, etc.

Whereas, in the case of most countries of such an extensive coast line, the ocean shipping is much the more important, in Canada, shipping on inland waters, while finally dependent to a large extent on ocean traffic to foreign ports, shares, almost equally with that on the Atlantic and Pacific oceans the attention devoted to water traffic. The Great Lakes are among the leading highways of the international trade of the world; consequently the statistics of inland international shipping are included with those of sea-going shipping in Table 50, while those of sea-going shipping alone will be found in Table 51.

50.—Sea-going and Inland Vessels (exclusive of Coasting Vessels and Ferriage) Arrived at and Departed from Canadian Ports, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.

NOTE.—For the years 1863-1900, see Canada Year Book, 1911, P. 389.

<sup>1</sup> The tables in Sections 1-4 following have been compiled or revised from the Shipping Report of the Department of National Revenue for the fiscal year ended Mar. 31, 1930.

### Section 1.—Ocean Shipping.

Canadian ocean shipping dates back to the days of early European fishermen who frequented the shores of Newfoundland and the Maritime Provinces. Ocean-going vessels of that time were crude wooden sailing craft of but 20 or 30 tons burden, to be entrusted only to skilful and hardy mariners for navigation through nearly unknown seas. Later exploration and settlement produced a larger volume of traffic, but it was not until the building of ships in Canada by the French assumed some dimensions that traffic became important. The first ocean-going vessels in Canada were probably built by Pont-Gravé, one of the first settlers in New France, and soon afterwards Talon and Hocquart, intendants of the colony, realizing the advantages offered to the industry by the timber resources available, gave it every encouragement. Shipyards were established at Quebec and other points along the St. Lawrence, and these, together with later establishments in the Maritime Provinces and on the western coast, have formed the principal bases of Canadian shipping on the Atlantic and the Pacific.

Canadian shipping attained some prominence in the days of fast wooden sailing vessels, and also at a later date when steam power first came into use. In 1833 the *Royal William*, a Canadian ship built to ply between Quebec and Halifax, crossed the Atlantic from Pictou to London, the first vessel to navigate the Atlantic under steam power. A few years later Samuel Cunard established the well-known steam-ship line of that name. His company pursued a conservative course; wooden ships were used long after iron hulls were a proven success, and paddle wheels after the introduction of the screw propeller. By 1867 the company's business had shifted to New York, and its terminal was moved thither from Halifax. The Allan line had a somewhat similar early history, but remained a purely Canadian company. In addition to other lines of less importance, both the C.P.R. and the Dominion Government operate fleets on the Atlantic and the Pacific oceans.

In the following tables statistics are given of sea-going vessels entered and cleared at Canadian ports during the fiscal years from 1901 to 1930 (Table 51); of the nationalities, tonnage of freight carried, and number of crew of vessels entered and cleared at Canadian ports in the fiscal years ended 1929 and 1930 (Table 52); of entrances and clearances of sea-going ships at the principal ports (Table 57); and of the countries whence arrived and to which departed (Table 53). The number and particularly the tonnage of vessels entered and cleared at Canadian ports in both ocean and coasting trade, indicate clearly the predominance of British and Canadian shipping over that of all other nations. This is particularly the case on the Atlantic coast, where the bulk of our European and South American trade is handled. The figures in Table 51 show a significant and fairly steady expansion in the total of ocean shipping through Canadian ports since the beginning of the century.

**51.—Sea-going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.**

Note.—For corresponding figures for the years 1868-1900, see Canada Year Book, 1911, p. 379.

## Section 2.—Inland Shipping.

Inland shipping is associated in its beginnings with the birch-bark canoe of the American Indian. The advantages of this light and easily navigable boat were realized by explorers and fur traders, and for many years it was in general use, giving way to more substantial craft only with the demands of heavier traffic. The *bateau* and Durham boat came into common use after the migration of the U.E. Loyalists, and, on the St. Lawrence and the other main highways of the time, they also soon gave place to larger vessels. Original plans of the Lachine canal, which called for a width of 12 feet and a depth of 18 inches, afford an illustration of the size of these primitive craft.

In the absence of any roads to make land travel possible, the St. Lawrence river and the Great Lakes formed the main highway to the interior. The route from Montreal to the Upper Lakes was broken at three places—from Montreal to Kingston transportation was by *bateau* or Durham boat, from Kingston to Queenston schooners were used, then there was the portage road from Queenston to Chippawa and, finally, schooner again to the destination. The charge for transporting a barrel of rum from Montreal to Kingston was from \$3 to \$3.50, and freight charges on other goods were proportions of this standard rate.

In 1809, the *Accommodation*, the first Canadian steamship, was built for the Hon. John Molson, to run between Montreal and Quebec. By 1818 Molson had formed a company, the St. Lawrence Steamship Company or the Molson Line. On lake Ontario, the *Frontenac*, beginning with 1817, was used on a weekly service between York and Prescott, and following this beginning came a period of great activity in lake and river shipping. In 1845, the *Gore* reached

lake Huron by way of the Welland canal to carry on transport trade on the Upper Lakes, where previously there had not been enough traffic to support a large ship. Shipping on the Upper Lakes became brisker now, for there were settlers to be carried from Buffalo to the western United States and grain to be brought back. In this period Canadian shipping made its profit by carrying American goods, for there was little traffic originating in the Canadian near-West.

With the advent of steam railways water-borne traffic was not decreased but on the contrary, increased, and at present the greater part of the western grain is shipped via the Great Lakes route to eastern ports and the iron ore and coal traffic between lake Superior and lake Erie ranges between 60 and 80 million short tons per annum; the total traffic on these upper lakes alone is greater than that carried by all Canadian railways and about one-twelfth of that carried by all United States railways.

**Inland International Shipping.**—Statistics of the inland international shipping between Canadian and United States ports for the fiscal years ended Mar. 31, 1926-1930, exclusive of ferriage, are given in Table 54. The total tonnages of inland international shipping entered and cleared in the fiscal years 1920-1930, were as follows:—1920, 24,248,779; 1921, 29,731,901; 1922, 29,070,783; 1923, 38,124,846; 1924, 37,928,971; 1925, 36,958,025; 1926, 29,591,831; 1927, 31,181,890; 1928, 35,589,163; 1929, 39,326,700; 1930, 36,446,557.

**54.—Canadian and United States Shipping on Elvers and Lakes between Canadian and United States Ports, exclusive of Ferriage, fiscal years ended Mar. 31, 1926-1930.**

## Section 3.—Coasting Trade.

Statistics of the arrivals and departures of the vessels engaged in the coasting trade of Canada, whether on the sea or the Great Lakes and international rivers, are given in Table 55. This statement does not include vessels plying on inland waterways inaccessible to international shipping nor does it include ferry services between one Canadian port and another.

55.—British and Foreign Vessels Employed in the Coasting Trade of Canada, fiscal years ended Mar. 31, 1926-1930.

## Section 4.—Grand Total Shipping Trade.

A statement is given in Table 56 showing sea-going, coastwise, inland and total vessels entered and cleared at Canadian ports, by provinces, during the fiscal year ended Mar. 31, 1930, and totals for the fiscal years 1923 to 1930.

It is noteworthy in this table that the volume of coastwise shipping is the greatest while sea-going is next in tonnage. In the period covered since 1923, both sea-going and coastwise shipping have shown a trend of marked expansion. Inland international shipping, on the other hand, has varied considerably from year to year without showing any definite trend. It is, however, significant of the importance of water-borne traffic on the inland rivers and lakes that the total tonnage of shipping entered and cleared was greater for Ontario ports than those of any other province in the fiscal year ended 1930. This was due to the fact that the great bulk of the inland international shipping was through Ontario ports, while there was also a large tonnage of coasting trade through these ports. British Columbia was next to Ontario in total shipping, followed by Quebec and Nova Scotia.

56.—Total Number and Tonnage of All Vessels Entered and Cleared at Canadian Ports, by Provinces, during the fiscal year ended Mar. 31, 1930, with Totals for the fiscal years ended 1923-1930.

## Section 5.—Shipping Constructed and on the Registry.

The shipbuilding industry in Canada dates from the earliest settlement of the country, and up till the 1870's was one of the leading industries of Quebec and of the Maritime Provinces, 490 vessels with a total tonnage of 183,010 being constructed in the calendar year 1874. At this time, however, the advent of the steel ship rendered the wooden vessels, the material for which was so abundant in Canada, obsolete, with the result that the tonnage built has never again reached the above figure, though in the fiscal years 1919 and 1920 the construction of the Canadian Government Merchant Marine, built as an extraordinary measure arising out of the war, raised the totals constructed to 104,444 and 164,074 tons respectively. Statistics of ships built and registered in Canada or sold to other countries are given in Table 58. For further information on the shipbuilding industry, see Table 6 on pp. 428 and 429 of the present volume.

**58.—Vessels Built and Registered in Canada and Vessels Sold to Other Countries, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.**

NOTE.—For 1874-1900, see Canada Year Book, 1911, p. 383. Statistics are from the Shipping Reports of the Department of National Revenue.

Section 6.—The Department of Marine.<sup>1</sup>

Administration of the general shipping interests of Canada is in the hands of the Dominion Department of Marine. It deals with:—(1) administration of the Canada Shipping Act and other Acts of the Dominion Government relating to marine transportation; (2) pilotage; (3) the construction and maintenance of lighthouses, lightships, fog alarms, buoys and beacons; (4) ports, harbours, piers, wharves and breakwaters; (5) the Meteorological Service of Canada; (6) sick and distressed seamen, and the establishment, regulation and management of marine and seamen's hospitals; (7) river and harbour police; (8) inquiries into the causes of shipwrecks and casualties and the collection of wreck statistics; (9) the inspection of steamboats; (10) the construction and maintenance of the St. Lawrence River ship channel; (11) the maintenance of winter communication between Prince Edward Island and the mainland, and (12) the administration of government radiotelegraph stations and the supervision of private stations in Canada. The net revenue of the Department for the fiscal year ended Mar. 31, 1930, was \$810,530, and the expenditure for the same period was \$23,508,502.

A summary statement of the revenue and expenditure of the Department of Marine is given for each fiscal year since Confederation in Table 60, while details for the six years from 1925 to 1930 are presented in Tables 61 and 62.

<sup>1</sup> Revised by E. Hawken, Assistant Deputy Minister, Department of Marine.

<sup>1</sup>Included with "Ship channel, river St. Lawrence" for 1930.

**Steamboat Inspection.**—The Steamboat Inspection Service of Canada, maintained under the authority of the Department of Marine, comprises the Board of Steamboat Inspection, together with staffs of inspectors at the principal ocean and inland ports. The Board decides on the standards to be required of all vessels coming under its jurisdiction. These must be attained by all ships given official warrant as to their seaworthiness and mechanical condition. Further, the Board grants certificates of competency to engineers of steamboats.

A table showing the number and tonnage of steamboats inspected during the fiscal year ended Mar. 31, 1930, follows:—

**Section 7.—Merchant Marine Services Operated by the Canadian Government.<sup>1</sup>**

During the closing years of the war, the Dominion Government, realizing the need for a mercantile fleet, not only as a means of developing Canada's export trade but also as a means of assisting the National Railways and of providing employment, placed orders with Canadian shipbuilding firms for the construction of 63 steel cargo vessels of six different types. These vessels were intended primarily to co-operate with British shipping in supplying the necessities of war, as well as to provide in times of peace the means of carrying abroad the products of Canada's farms, forests, mines and factories, without which Canada could not hope to take full advantage of the opportunity of expanding her export trade. Prior to Dec. 31, 1919, 19 vessels had been delivered by the builders. Additions were subsequently made to the fleet until the total fleet, as at Dec. 31, 1924, numbered 57 vessels of a total deadweight tonnage of 353,450. Through sale or loss of vessels the fleet was reduced to 31 vessels with a deadweight tonnage of 243,710 at Dec. 31, 1929. With regard to ownership and operation, a separate company was organized for each vessel and the capital stock of each is owned by the Canadian Government Merchant Marine, Ltd. Under an operating agreement with each of these companies, the Canadian Government Merchant Marine, Ltd., operates all the steamers and keeps a separate account for each company. Promissory notes have been given to the Minister of Finance and Receiver-General for the total capital stock of each vessel, with interest payable at 5½ p.c. per annum.

Early operations proved profitable, and a surplus of \$1,004,233 (without provision for interest charges) was shown for the year ended Dec. 31, 1920. Subsequent years, however, have shown the effects of the depression in the shipping

<sup>1</sup> Revised by Geo. W. Yates, Assistant Deputy Minister, Department of Railways and Canals.

industry, and annual deficits of \$8,047,635, \$9,649,479, \$9,368,670, \$8,836,609, \$7,667,513, \$6,687,221, \$7,036,940, \$7,545,525 and \$5,928,758 are shown for the years 1921 to 1929 respectively.

In conformity with the Canada-West Indies Trade Agreement Act of 1926, (16-17 Geo. V, c. 16), the Dominion Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. The service is provided by a fleet of twelve vessels of a total dead weight tonnage of 60,592. Five of these boats, known as the "Lady" ships, were specially constructed for passenger service on this route, while the remaining seven vessels previously formed part of the Canadian Government Merchant Marine fleet, and were taken over by the Canadian National (West Indies) Steamships, Ltd., for operating purposes, under entrusting agreements with the companies which respectively owned such ships. The investment in vessels at Dec. 31, 1929, amounted to \$9,633,306, mainly made up of the construction cost of the "Lady" ships and the present day valuation of the other seven ships, together with the cost of conversion for use in the West Indies service of three of the latter.

The first annual report of the Canadian National (West Indies) Steamships, Ltd., is for the year ended Dec. 31, 1929, during which operating revenues amounted to \$3,332,683 and operating expenses to \$3,780,524, or a net operating loss of \$447,841. After debiting \$227,315 for depreciation and \$442,739 representing interest on notes and advances, the total book loss for the year was \$1,117,896.

## PART X.—TELEGRAPHS.

### Section I.—Telegraph Statistics.<sup>1</sup>

The Toronto, Hamilton and Niagara Electro-Magnetic Telegraph Co., organized by a group of Toronto men, was the first to establish an electric telegraph service in the pre-Confederation province of Canada. It was formally organized on Oct. 22, 1846, and its Toronto-Hamilton line was opened on Dec. 19 of the same year. In January, 1847, the line was completed to Queenston, whence there was a connecting line to Buffalo. The Montreal Telegraph Co. commenced the construction of a line to Toronto in February, 1847, and began actual operation between the two cities on Aug. 3 of the same year. By the end of the year it had 540 miles of wire in use, 9 offices and 35 employees, and had sent out 33,000 messages. Both the Montreal and the Toronto companies were incorporated by special Acts at the 1847 session of the Legislature. In 1852 the Toronto, Hamilton and Niagara Co. sold out to the Montreal company.

The British North American Electrical Association was also formed in 1847, with the object of connecting Quebec with the Maritime Provinces, but for some years its line went no farther than Rivière du Loup, though it was finally extended to Woodstock, N.B., where it connected with the American Telegraph Co., which already had lines in New Brunswick. The New Brunswick Telegraph Co. built a line connecting Saint John with the Maine lines in 1848, and in the following year extended it to Amherst, N.S., where it connected with the Nova Scotia line, bringing Halifax for the first time into telegraphic communication with New York.

<sup>1</sup> Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics, which issues an annual report dealing with telegraph statistics.

The movement for consolidation of services, so evident in the Canadian railways, was also active among the telegraph companies. Thus the Montreal company bought out the Toronto, Hamilton and Niagara Telegraph Co., the Montreal and Bytown Telegraph Co., the Grand Trunk Telegraph Co., and maintained a strenuous competition with the Dominion Telegraph Co., organized in 1868. In 1881, however, the conflicting interests were consolidated under lease by the Great North Western Telegraph Co., this move effecting great economies in operation. A few years later, however, the Canadian Pacific Railway Co. established competing lines, and by September, 1886, had opened 366 offices in Ontario, Quebec and Western Canada.

The Dominion Government Telegraph Service was commenced with the object of furnishing rapid communication in outlying districts where the amount of business was so small that commercial companies would not enter the field, but where the public interests required that there should be communication. Its services are especially useful in connection with the signal and other stations established by the Department of Marine along the north shore of the Gulf of St. Lawrence, and in the Maritime Provinces and British Columbia. On Mar. 31, 1930, the Government Telegraph Service comprised 9,351 miles of pole line, 11,035 miles of wire, 364½ knots of cable and 796 offices. Details will be found in the Annual Report of the Minister of Public Works.

**Telegraph Systems.**—The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The lines previously owned by the Great North Western Telegraph Co., the Grand Trunk Pacific Telegraph Co., the Canadian Northern Railway Co. and the National Transcontinental Railway are now owned by the Government and are operated by the Canadian National Telegraph Co. (formerly Great North Western Telegraph Co.). The Dominion Government Telegraph Service operates the line to the Yukon and other lines in outlying districts.

The Canadian system, in proportion to population, is one of the most extensive in the world, and is operated under considerable climatic and geographic disadvantages. In the operation of railways and in the receipt and despatch of market and press reports its services to the nation are invaluable.

**Telegraph Statistics.**—A brief summary table giving the more important figures of the operation of Canadian telegraphs from 1920 to 1929 follows. For details see the Bureau of Statistics' Annual Report on Telegraph Statistics.

**67.—Summary Statistics of All Canadian Telegraphs for the calendar years 1920-1929.**

<sup>1</sup>Cablegrams not included. The total in Table 67 includes messages handled by the Marconi Wireless Telegraph Co. <sup>2</sup>Not including press messages. <sup>3</sup>The total in Table 67 includes offices of wireless and cable companies. <sup>4</sup>Statistics of the Grand Trunk Pacific Telegraph Company have been included with the Canadian National up to 1927 and the two were amalgamated in 1928. <sup>5</sup>Included with Canadian National in 1929.

**Submarine Cables.**—Six transoceanic cables have termini in Canada—five of them on the Atlantic and one on the Pacific coast. The date on which the cable was first shown to be of commercial value was in 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and American interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and has been owned by a partnership of the Governments of Great Britain, New Zealand, Australia and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of

1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communications Company, a company formed to take over all Empire-owned cables and lease the Empire-owned beam wireless systems. The necessary legislation was passed by Great Britain in February, 1929, and by Canada in June, 1929, and Canada received \$591,662 as her share of the proceeds of the sale.

## Section 2.—Radio Service.<sup>1</sup>

**Radiotelegraphy.**—The administration of radio within the Dominion is vested in the Minister of Marine.

As early as 1904, the Department commenced the establishment of coast radio stations as aids to navigation and for communication with ships at sea. At the present time Canada's extensive coastline is covered by a network of some 60 odd stations, of which 27 are located on the east coast, 13 on the Great Lakes, 15 on the west coast and 5 on Hudson bay and strait. Twice daily at advertised hours, a number of these stations broadcast messages to shipping, containing such important information as weather forecasts, storm warnings, reports in connection with floating derelicts, ice and other dangers to navigation.

The discrimination by underwriters in insurance rates charged on ships plying to Canadian ports has led the Department to feel that any reasonable expenditure which would tend to reduce these charges would be a sound investment. To this end 12 radio direction-finding stations have been established at specially selected sites with respect to navigational routes, 7 on the east coast, 4 on Hudson bay and strait, and one on the west coast of Vancouver island. These stations are fitted with a special apparatus that enables the direction of an incoming radio signal transmitted by a ship to be accurately determined. That these stations have proved exceptionally successful is demonstrated by the volume of letters received by the Department of Marine commending the work of its stations, and it is the expressed opinion of many master mariners that Canadian direction-finding stations set a standard for accuracy and efficiency. A more recent extension of this feature is the development of the direction-finding instrument for use on board ship. To assist this development, the Department has installed radio transmitters at a number of its light-houses and lightships. These radio "beacons", as they are termed, function automatically whenever the fog alarm plant is in operation, sending out a characteristic radio signal with an approximate range of 50 miles. Ships fitted with their own direction-finding instruments are thus enabled to take their own bearings from the points at which the beacon stations are located. The latest type of radio beacon used by the Department is completely automatic in its operation. Such beacons are controlled by a clock which starts in proper sequence the gasoline engine, the generators and other associated apparatus, keeping them operating for a predetermined period and stopping all machinery at the end of the period.

Since the sinking of the *Titanic*, which on her maiden voyage struck an iceberg that had drifted into the transatlantic steamship lanes, an international ice patrol, supported and maintained by the maritime nations of the world, watches the traffic routes of the North Atlantic for the purpose of reporting the

<sup>1</sup> Revised by the courtesy of Commander C. P. Edwards, O.B.E., Director, Radio Service, Department of Marine.

presence of icebergs to passing ships by radio. Canada has her own problem in this connection—that of combating ice which accumulates in the lower gulf of St. Lawrence prior to the opening of navigation to Quebec and Montreal each spring. For this purpose a patrol service is maintained in the Gulf during the ice period each year by the ice-breakers *Mikula* and *Montcalm*. These vessels cruise in the vicinity of Cabot straits, observing ice conditions and broadcasting to ships a synopsis of location and drift of the ice, and recommending routes to follow. When it is impossible for ships to circumvent the ice fields by devious routes, the ice-breakers are prepared to open up lanes through the ice.

On the west coast of Vancouver island co-ordination of the different services of the Department of Marine was undertaken a few years ago, and as a result line telephone, land patrol, sea patrol and the lifeboat service were all linked together by radio to provide an efficient life-saving organization. In addition to the direction-finding station already established, three radiophone stations were installed at lighthouses and at a life-saving station, thus providing a network of communication assuring instant assistance in case of disaster.

Due provision has been made for the safe navigation of the large volume of shipping which may shortly find its way through the Hudson strait and bay. The Department has completed the establishment of four direction-finding stations in that area, enabling radio-equipped vessels to navigate the strait and bay in all kinds of weather. Further observations covering navigation conditions in the Hudson bay and strait during the 1929 season of navigation were made and have been compiled in book form.<sup>1</sup> Copies may be procured upon request from the Department of Marine.

★ For the benefit of navigators, to whom time within a fraction of a second is necessary if reasonable accuracy is to be attained in computing observations on celestial bodies, three Canadian stations, two on the west coast and one on the east coast, transmit time signals twice daily at advertised hours.

Numerous fishermen have fitted their vessels with receiving sets and for their benefit the Department has inaugurated a special broadcasting service embodying such information as weather forecasts, storm warnings, market prices of fish, etc. Three stations are used for this purpose, Louisburg (VAS), Sambro Lightship (VCX) and Saint John, N.B. (CFBO), augmented by a broadcasting service undertaken by the fishery patrol steamer *Arras*, which accompanies the fishing fleet to the Grand Banks during the summer season. ✕

A transoceanic commercial radio beam service is carried on by the Drummondville, Quebec, station, which maintains communication with Great Britain, Australia and the United States.

To ensure the safety of the lives of the passengers and crew, all passenger steamers and certain freighters plying to and from Canadian ports must carry radio equipment manned by competent operators in possession of a certificate of proficiency in radiotelegraphy. The Department maintains a complete radio inspection service to enforce this regulation, and members of the inspection staff located at various ports through the Dominion are responsible for checking the efficiency of radio equipment on ships and for seeing that only competent operators are carried. Examinations for certificates of proficiency in radiotelegraphy are conducted by the Radio Branch and approximately 2,546 such certificates have been granted to date. Table 69 shows the name and situation of the Government-owned radiotelegraph stations in Canada and Newfoundland. In former editions of the Year Book licensed private commercial stations were also

listed, but their increasing number renders this impossible. A list of those in operation in 1926 appears on pp. 657-658 of the 1926 Year Book, while an official list of the radio stations of Canada is published annually by the Radio Branch, Department of Marine, at 25 cents per copy, with supplements.

Table 70 gives the number of messages and words handled and the cost of maintenance for the Government stations of the east coast, the west coast, the Great Lakes, and Hudson bay and Hudson strait. For the year 1929-30, the total number of messages was 440,912, as compared with 456,239 in 1928-29, 404,144 in 1927-28 and 402,023 in 1926-27, and of words handled 9,167,302, as compared with 8,942,945 in 1928-29, 7,695,757 in 1927-28 and 7,347,794 in 1926-27.

**Radiotelephony.**—Radiotelephony—the wireless transmission of the human voice—is a later development of radiotelegraphy. During the Great War, radiotelephony was perfected for the use of warships and aeroplanes. In 1920 and 1921 its peace-time possibilities were for the first time widely appreciated, and musical programs were broadcasted by electrical companies as part of their campaign to sell private radio equipment. Radiotelephony has become a very practicable means of relaying telephone messages to places where the population is too sparse to support a telephone system and to ships at sea. Thus it is a great boon to distant and isolated posts or settlements and to survey parties in the field, who by this means can keep in touch with the centres of population. But radiotelephony is not applicable to the regular business of telephone companies in urban districts, because only a limited number of messages can be transmitted simultaneously without interference. However, as an indication of the increasing popularity of radio receiving sets for “listening in” on broadcasted musical programs and news, the number of such sets licensed in Canada (private receiving stations in Table 71) has grown from 9,956 in the fiscal year ended Mar. 31, 1923 to 424,146 in 1930. In the latest year the total was divided among the provinces as follows:—Ontario, 212,046; Quebec, 71,843; Saskatchewan, 32,951; Manitoba, 26,419; British Columbia, 36,075; Alberta, 21,479; Nova Scotia, 13,410; New Brunswick, 8,789; Prince Edward Island, 986; Northwest Territories and Yukon, 148. In the calendar year 1929, the production in Canada of radio apparatus, including sets, parts and batteries, reached a total value of \$20,966,137. Complete sets manufactured numbered 143,968 valued at \$14,986,173.

A public radiotelephone service between Canada and Great Britain is now available to Canadian users through the medium of the transatlantic circuit operated by the American Telegraph and Telephone Co. from New York. In view of the desirability of establishing a direct Anglo-Canadian circuit, extended tests were carried out during the summer of 1929 between the Canadian Marconi Co.'s beam-radio station at Drummondville, Quebec, and the British Post Office station at Rugby, England. Negotiations between the interested administrations and operating companies with a view to concluding an agreement for the establishment of such a service are proceeding.

Approximately \$250,000 is expended annually by the Radio Branch of the Department of Marine for the suppression of inductive interference in the inter-

ests of broadcast listeners. This service is entirely free. Upwards of 100 men and 24 fully equipped cars are engaged in this work. Radio broadcasting throughout the Dominion is at present carried on by private enterprise. A Royal Commission has investigated the broadcasting situation and its report is now before the Government.

## PART XI.—TELEPHONES.<sup>1</sup>

The telephone is in part a Canadian invention, though its inventor, Alexander Graham Bell, a Scotchman by birth, was at the time of its invention a resident of the United States, having immigrated with his father to Brantford, Ontario, in 1870, and subsequently proceeded to Boston. According to his account, the discovery of the telephone, both as to its main principle and as to the first transmission of the human voice, was made at his father's residence at Tutela Heights, Brantford, in 1876, and the first telephone talk over any distance was conducted between Brantford and Paris, a distance of 8 miles, on Aug. 10, 1876.

Telephone development in Canada dates from the year 1880, when the Bell Telephone Co. was incorporated by Act of Parliament. Although at this time all patents and lines were owned by the Canadian Telephone Co., they were dependent on the Bell Co., to which they sold out in 1882. By 1883 the first submarine telephone cable had been laid between Windsor and Detroit, and during the year the Bell Co. operated in Canada 4,400 rental-earning telephones,

<sup>1</sup> Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics which issues an annual report on Telephone Statistics.

44 exchanges and 40 agencies, with 600 miles of long distance wire. It controlled development in all the provinces except British Columbia, where the greater part of the system has always been in the hands of the British Columbia Telephone Co., Ltd.

With the rapid growth of private companies in the Maritime Provinces, the lines of the Bell Co. were disposed of in 1888 to the Maritime Telegraph and Telephone Co. in Nova Scotia, and to the New Brunswick Telephone Co. in New Brunswick, an interest in these corporations being retained under the terms of sale. A development of a different kind is seen in the three Prairie Provinces, where well-organized systems were sold to the Governments of Manitoba and Alberta in 1908 and to Saskatchewan in 1909. The lines in Ontario and Quebec are still largely owned by the Bell Telephone Co.

**Telephone Systems.**—The 2,415 telephone systems existing in 1929 (Table 73) include the three large provincial systems in Manitoba, Saskatchewan and Alberta, and a smaller governmental system in Ontario, together with the system operated by the National Parks of Canada, Department of the Interior. There were also 137 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Out of the 1,543 co-operative telephone companies, no fewer than 1,176 are in Saskatchewan alone and 205 in Nova Scotia. Besides the above, there were 492 stock companies, 106 partnerships and 132 private systems.

The steady growth of the use of telephones from 1911 on is indicated in the summary statistics of Table 72, showing an increase from 302,759 in 1911 to 1,399,986 in 1929, or from 4.2 to 14.3 telephones per 100 of the population. By provinces, the numbers of telephones in 1929 were as follows:—Ontario 619,580, Quebec 293,353, British Columbia 125,861, Saskatchewan 116,467, Alberta 80,273, Manitoba 79,279, Nova Scotia 44,575, New Brunswick 33,910, Prince Edward Island 6,553, Yukon Territory 135. The number of instruments per 100 estimated population was as follows:—British Columbia 21.2, Ontario 18.9, Saskatchewan 13.4, Alberta 12.4, Manitoba 11.9, Quebec 10.9, New Brunswick 8.1, Nova Scotia 8.1 and Prince Edward Island 7.6. In the proportion of telephones to population Canada as a whole, with 14.3 telephones per 100 population, ranks second to the United States which has 16.3 telephones per 100 population.

Estimates of the number of telephone conversations during 1929 were 2,525,500,000 local and 37,851,600 long distance calls. These estimates were based on estimates made by systems operating 83.6 p.c. of all telephones in Canada and their estimates were based on actual counts made on days of normal business activity, and, after adjusting for uncompleted calls, holidays, Sundays, etc.,

the average was multiplied by 365. The long distance calls in practically all cases were the actual long distance calls put through or completed. The average was 1,803 local and 27 long distance calls per telephone and 257 telephone conversations per capita as compared with an estimated average of 241 in 1928. The estimated per capita average for the United States in 1928 was 230.7 and for New Zealand, 209.1.

Statistics of the number of telephone companies reporting to the Dominion Bureau of Statistics are given in Tables 73 and 74.

**PART XII.—THE POST OFFICE.**

**Historical.**—A postal service was established between Montreal and Quebec as early as 1721, official messengers and other travellers making a practice of carrying letters for private persons. When Canada came under British rule the Post Office was placed on a settled footing by Benjamin Franklin, then Deputy Postmaster-General for the American colonies, who visited Canada in 1763, opened post offices at Quebec, Montreal and Three Rivers, and also established courier communication between Montreal and New York. Since 1755 Halifax had had a post office and direct postal communication with Great Britain.

As a consequence of the American Revolution and the resulting isolation of Canada from Nova Scotia the first exclusively Canadian postal service, a monthly courier route from Halifax to Quebec, was established in 1788, involving a seven weeks' trip and expenses of about £200 of which only one-third was met by postal charges. Up to 1804 the postal facilities of Upper Canada consisted of one regular trip by courier each winter with whatever mail might reach Montreal during the season of navigation. Charges were necessarily high, \$1.12 being paid on ordinary letters from London to Toronto *via* Halifax.

The first post office in Toronto was opened about 1800. By 1816 there were 19 offices in the two Canadas, and by 1827 this number had increased to 114. At this time the system consisted primarily of a trunk line of communication between Halifax, Quebec, Montreal, Toronto and Amherstburg, over which couriers travelled at varying intervals. Branching off this line were routes to Sorel, Sherbrooke, St. Johns, Hull, Hawkesbury, Perth and Richmond, with most deliveries made once or twice a week.

Hitherto the Post Office had been under the control of the Imperial Department, but considerable agitation resulted in the service being transferred on April 6, 1851, to the several provinces. Only enough mutual control was maintained to insure the continuance of Imperial and intercolonial services. The provinces had complete jurisdiction over the establishment and maintenance of systems and rates.

At Confederation the provincial systems were transferred to the Dominion. The Post Office Act of 1867 established a service throughout Canada. The domestic rate on letters was reduced from 5 to 3 cents per half-ounce, and in 1870 the rates to the United States and Great Britain were reduced from 10 to 6 cents and from 12½ to 6 cents respectively per half-ounce. In 1875 a convention between Canada and the United States reduced postal rates between the countries to the domestic level. In 1878, on the admission of Canada to the Postal Union, letter postage to the countries of the Postal Union was reduced to 5 cents per half-ounce. After a conference in 1897 Imperial penny postage (2 cents per half-ounce) was established on Dec. 25, 1898, while the domestic rate was reduced from 3 to 2 cents per ounce. These rates were maintained until 1915, when a 1-cent war tax was imposed on all pay letters and post cards (except where this would be in violation of international agreements), and also on postal notes. Later the rate to Great Britain was increased to 4 cents on the first and 3 cents on succeeding ounces, while that to Postal Union countries was raised to 10 cents on the first and 5 cents on succeeding ounces.

Penny postage again became effective for Canada, the United States, Newfoundland and other countries of the continent of North America on July 1, 1926, and for Great Britain and all other places within the British Empire on Dec. 25, 1928. On May 24, 1929, penny postage became effective to France and, on Dec. 25, 1929, was extended to all places in South America. For these countries the rate is 2 cents per ounce, while for other Postal Union countries it is 5 cents on the first ounce and 3 cents on succeeding ounces. In spite of reductions of from 33 p.c. to 50 p.c. represented by these changes, the first of which were effective for 9 months of the fiscal year 1927, Table 80 shows a comparatively small reduction in the net revenue of the Post Office Department in that year. However, in the fiscal year 1930, during the whole of which penny postage was in effect for inland post for the countries of North America and for all places in the Empire, as well as for France and South America during part of the year, the net revenue of the Department increased \$3,500,000 over that of 1927. The effect of the reduction in rates was offset by increases in postal business.

In its per capita use of the mails Canada takes a high place. In 1868, the year following Confederation, the average postal expenditure for each member of the population was less than 27 cents, whereas during 1930 each person in Canada expended approximately \$3.70. This is more remarkable when it is considered that rates of postage have decreased greatly during this period.

The Post Office Department is administered by the Postmaster-General. Besides the several administrative branches at Ottawa, the Dominion is divided into 15 districts, each in charge of a Superintendent of Postal Service. The Canadian system embraces a territory more extensive than that served by any other system, excepting those of the United States and Russia, though the sparsity of population and the comparative lack of development make inevitable a peculiarly difficult and expensive service.

**Rural Mail Delivery.**—A system of rural mail delivery was inaugurated in Canada on Oct. 10, 1908, limited at that time to existing stage routes, persons residing on such routes being entitled to have mail boxes put up in which the mail carrier was to deposit mail matter and from which he was to collect mail matter and carry it to the post office. As a consequence of the public approval of this scheme new regulations, taking effect on April 1, 1912, made all persons residing in rural districts along and contiguous to well-defined main thoroughfares of one mile and upwards eligible to receive their mail in this manner, while couriers on rural mail routes were also required to sell postage stamps and take applications, and accept money for, money orders and postal notes. The result has been an increase in the number of rural routes from approximately 900 in 1912 to 4,210 in 1930, having 237,351 mail boxes as against approximately 25,000 in 1912. The establishment of these routes has been an important factor in the amelioration of the conditions of Canadian rural life.

**Statistics.**—Tables 78 to 80 show the number of post offices in operation in Canada in the latest six years, the gross revenue in all offices collecting \$10,000 and upwards in 1929 and 1930, and the net revenue and expenditure of the Department in various years since 1890.

<sup>1</sup> Revised, as to financial transactions, by H. E. Atwater, Financial Superintendent, Post Office Department.

<sup>1</sup>"Net revenue" is exclusive of salaries and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year ended Mar. 31, 1930, was \$39,984,126.

**Auxiliary Services.**—The auxiliary postal services—the issuing of money orders (including postal notes) and the facilities offered by the Post Office savings banks—have expanded enormously since Confederation. In 1868, for example, there were 515 money order offices in operation, issuing orders to an amount of \$3,342,574. In 1930 the number of offices had increased to 6,209, while the value of orders issued was 60 times as large as in the earlier year. In the following tables, illustrating the use of money orders and postal notes, it will also be noticed that the large number of 17,525,979 money orders, representing a value of \$197,699,353, was issued during 1930. The number of postal notes received and paid was 8,466,055, with a value of \$15,578,489. It may be added that postal notes are issued payable to bearer and are in general use for the transfer of small sums, but money orders, on the other hand, are payable to order at a designated post office. Statistical tables showing deposits with the Government saving banks since Confederation and combined business of Post Office and Dominion Government savings banks, 1925-30, are included in the chapter on Currency and Banking. (See pp. 914-5).

**81.—Operation of the Money Order System in Canada, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.**

NOTE.—For 1868 to 1900, see Canada Year Book, 1911, p. 289.

Attention may be drawn to the difference between the value of orders issued in Canada and payable in other countries and those issued elsewhere payable in Canada. This difference (about \$9,398,000 in 1930 and about \$33,580,000 in 1914) represents to a large extent remittances made by immigrants and to travellers in foreign countries. It is an indication, at least, of the large amounts sent out from Canada, and is an essential figure in the computation of our balance of trade.

**Postage Stamps.**—The value of the postage stamps, post cards, etc., sold during each of the latest five fiscal years, as shown in the statement of revenue in the Postmaster General's reports, was as follows: \$30,166,763 in 1926, \$26,226,473 in 1927, \$26,200,776 in 1928, \$26,475,541 in 1929, and \$27,101,353 in 1930. The decrease in the value of the stamps sold in recent years as compared with 1926 is no doubt partly due to the reduced rates which have become effective, but another factor is the rapidly increasing use of devices for prepaying postage in cash. Receipts from this source were as follows: \$3,895,185 in 1926, \$6,068,722 in 1927, \$7,467,611 in 1928, \$8,410,255 in 1929 and \$9,045,805 in 1930.

**Air Mail Services.**—The air mail service inaugurated about Christmas 1927 has developed rapidly. In the first year of operation, 1927-28, the mileage flown was 9,538 and the weight of mail carried, 38,484 lb.; for 1928-29 the figures were 308,161 miles and 321,584 lb.; and during 1929-30, 688,219 miles were flown and 425,280 lb. of mail carried. The proportion of mail carried to miles flown has decreased each year, owing to the extension of the service to new and relatively thinly populated areas which have not enjoyed a frequent mail service in the past. Apart from the fact that these services will build up in the course of time, the benefits accruing to Canadians in isolated communities are sufficient to warrant such expansion of the service as has been made.

In December, 1929, the air mail route between Fort McMurray, Alta., and Aklavik, N.W.T., was inaugurated. This route extends for 1,676 miles down the Athabaska, Slave and Mackenzie rivers to a point nearly 300 miles within the Arctic Circle. Remarkable regularity and dispatch have characterized the service. New mining camps of northern Ontario and Quebec were also linked up by air mail in December, 1929.

The principal development of 1930 has been the organization of a daily air mail service between Winnipeg and Calgary *via* Moose Jaw, Regina, and Medicine Hat, with a northern link to Saskatoon, North Battleford and Edmonton. This service expedites the transcontinental movement of mails by 24 hours.

The following statement, from the Annual Report of the Postmaster General, shows mileage flown and weight of mails carried by air during the fiscal year ended Mar. 31, 1930.

1 Minimum trips scheduled.

**Subsidies, etc.**—The conveyance of mail by land, water and air entailed a total expenditure of \$15,525,812 during 1930. Land transportation (largely that by rural delivery) cost \$6,554,150; railway carriage cost \$7,804,999; conveyance by steamship cost \$532,793, while that by air cost \$633,870. These amounts were paid solely for services rendered as carriers. In addition, however, considerable mail is carried, on both the Atlantic and Pacific coasts, by steamships and steamship lines which are especially subsidized by the Government. Table 84, showing amounts so paid in 1928, 1929 and 1930, follows:—

## 84.—Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1928-1936.

NOTE.—The figures in the following table were kindly supplied by F. E. Bawden, Esq., Secretary, Dept. of Trade and Commerce. They appear annually in the "Public Accounts", issued by the Finance Department and represent the amounts paid in connection with contracts made under statutory authority by the Department of Trade and Commerce for trade services, including the conveyance of mails.

## CHAPTER XIX.—LABOUR AND WAGES.<sup>1</sup>

### PART I.—LABOUR.

#### Section 1.—Occupations of the People.

This section, formerly appearing in the Labour and Wages chapter of the Year Book, has been transferred to the Population chapter, where a fairly extended analysis of the occupations of the people in 1921 appeared at pp. 134-147 of the 1929 Year Book.

#### Section 2.—The Dominion Department of Labour.

The Department of Labour of the Dominion Government was established in 1900 under the authority of the Conciliation Act, 1900 (63-64 Vict., c. 24). Its chief duties originally comprised the administration of certain provisions of this Statute designed to aid in the prevention and settlement of labour disputes, the administration of the Government's fair wage policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, the collection and classification of statistical and other information relative to conditions of labour, and the publication of a monthly periodical known as the *Labour Gazette*. From 1900 to 1909 the Department was administered by the Postmaster-General, who was also Minister of Labour. It was constituted a separate Department under the Labour Department Act, 1909 (R.S.C. 1927, c. 111).

The work of the Department was greatly increased in 1907 by the passage of the Industrial Disputes Investigation Act (R.S.C. 1927, c. 112). At present the Department is also charged with the administration of an Act passed in 1918 known as the Employment Offices Co-ordination Act (R.S.C. 1927, c. 57), the Government Annuities Act of 1908 (R.S.C. 1927, c. 7), the Technical Education Act enacted in 1919 (R.S.C. 1927, c. 193), the White Phosphorus Matches Act of 1914 (R.S.C. 1927, c. 128), the Combines Investigation Act of 1923 (R.S.C. 1927, c. 26), the Old Age Pensions Act of 1927 (R.S.C. 1927, c. 156), the Fair Wages and Eight Hour Day Act of 1930 (20-21 Geo. V, c. 30), and the Unemployment Relief Act of 1930 (21 Geo. V, c. 1). The scope of the Department has increased in other directions, especially in the investigation of the cost of living and in connection with the International Labour Organization of the League of Nations. Reference is made elsewhere in the present volume to the operations of the Government Annuities Act, 1908 (see p. 872), the Old Age Pensions Act (see p. 739), and the Technical Education Act (see p. 922), also to the proceedings which have taken place under the Combines Investigation Act, 1923 (see pp. 748-9).

**Industrial Disputes Investigation Act.**—The Industrial Disputes Investigation Act, (R.S.C. 1927, c. 112), has attracted considerable favourable attention

<sup>1</sup> The sections and subsections of this chapter, with the exceptions of Section 3; Section 7; and Section 9, Subsection 3; all of Part I, have been revised by, or under the direction of, H. H. Ward, Deputy Minister, Department of Labour, Ottawa. The information in Section 3, Part I, has been obtained through the courtesy of the provincial Departments of Labour or Bureaus of Labour, and that in Section 7, Part I, has been revised by the chairman of the respective provincial Compensation Boards.

from legislators and publicists throughout the world. As enacted in 1907, it forbids strikes and lockouts in industrial disputes affecting mines and public utilities until the matters in dispute have been dealt with by a board of conciliation and investigation consisting of three members, two appointed by the Minister of Labour on the recommendation of the respective parties to the dispute, the third on the recommendation of the first two, or, if they fail to agree, by the Minister himself. After their report has been made either of the parties to the dispute may reject it and declare a strike or a lockout, a course adopted, however, only in a small percentage of cases. The machinery of the Act may be extended to other industries with the consent of the parties concerned. In January, 1925, a judgment was rendered by the Judicial Committee of the Privy Council declaring that the Act as it stood was not within the competence of the Dominion Parliament.<sup>1</sup> So at the ensuing session of Parliament amendments were made to the Statute, with the object of limiting its operation to matters that are not within exclusive provincial jurisdiction. It was also provided by these amendments that the Statute should apply in the case of "any dispute which is within the exclusive legislative jurisdiction of any Province and which by the legislation of the Province is made subject to the provisions of this Act"

The Legislatures of six of the provinces, namely, British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick and Nova Scotia, have taken advantage of this provision and enacted enabling legislation, by which the Dominion Industrial Disputes Investigation Act becomes operative in respect of disputes of the classes named in the Dominion law and otherwise within exclusive provincial jurisdiction.

A review of the proceedings under the Industrial Disputes Investigation Act from its enactment in March, 1907, to Mar. 31, 1930, shows that during the 23 years 729 applications were received for the establishment of boards of conciliation and investigation, as a result of which 499 boards were established. In all but 38 cases, strikes (or lockouts) were averted or ended.

**Fair Wages Branch.**—The Fair Wages Branch of the Department of Labour is charged with the preparation of schedules of minimum wage rates, which are inserted in Dominion Government contracts and must be adhered to by contractors in the execution of such works. The number of fair wage schedules prepared, from the adoption of the Fair Wages Resolutions in 1900 up to the end of the fiscal year 1929-30, was 5,139. The number of fair wage schedules and clauses furnished during the fiscal year 1929-30 was 434.

The fair wages policy of the Government of Canada was expressed in an Order in Council adopted on June 7, 1922, and amended on April 9, 1924. As drawn up at that time it was applied to contracts for building and construction operations, also to contracts for the manufacture of certain classes of Government supplies. The policy required that the current wages rates and working hours of the district should be observed in the case of all workmen employed, or if there were no current rates or hours in existence, then fair and reasonable conditions in both respects. Contracts for railway construction to which the Dominion Government has granted financial aid, either by way of subsidy or guarantee, are likewise subject to fair wages conditions. The policy has, more-

<sup>1</sup> See page 241 of the *Labour Gazette* for February 1925, for text of judgment of the Judicial Committee of the Privy Council in regard to the validity of this Statute.

over, been extended within recent years to cover contracts for works carried out by the several Harbour Commissions which have been aided by grant of public funds.

An Order in Council was passed on Dec. 3, 1929, providing for the payment of current wage rates to workmen employed in the construction, alteration, extension, maintenance and operation of works for the utilization of water powers under licence from the Dominion Government. The Fair Wages Clause was also inserted in an important agreement made by the Dominion Government with one of the paper companies for the cutting of pulpwood in the province of Manitoba, under which the company agreed to pay to those employed in the industry wage rates not less than those generally accepted as current in each trade or occupation in similar industries, and to maintain conditions of labour not less favourable than those prevailing in similar industries in the district.

On May 30, 1930, an Act of Parliament was adopted, known as the Fair Wage and Eight-Hour Day Act, 1930, which provides for the payment of current wages rates to all persons employed on contracts made with the Government of Canada for works of construction, remodelling, repair or demolition, provided that the wages in all cases shall be such as are fair and reasonable. This Statute also directed that the working hours of persons while so employed shall not exceed eight hours a day. It was further declared that the foregoing conditions are to be applied to all workmen employed by the Government itself on the construction, remodelling, repair or demolition of any work.

On Mar. 27, 1930, an Order in Council was passed providing that, except in cases where the work of employees was intermittent in character, or the application of the rule was not deemed to be practicable, or in the public interest, the hours of work of any Dominion Government employees who had up to that time been required to work more than eight hours daily should be reduced to eight hours a day, with a half holiday on Saturday.

The Department of Labour is frequently consulted by other Departments of the Government regarding the wage rates to be observed in connection with work undertaken on the day labour plan.

**Labour Gazette.**—A monthly publication, known as the *Labour Gazette*, has been issued by the Dominion Department of Labour since its establishment in 1900. It contains a monthly review of the industrial situation in Canada and of the state of employment, including reports of the operations of the Employment Service of Canada in the various provinces, also information relative to: labour legislation, wage rates and hours of labour, wholesale and retail prices of staple commodities in Canada and other countries, labour disputes (including the proceedings under the Industrial Disputes Investigation Act), industrial accidents, legal decisions affecting labour, industrial training and technical education, proceedings under the Combines Investigation Act, and other matters of general or current industrial interest. The *Labour Gazette* is widely distributed throughout Canada, and the statistical and other information contained therein is constantly used in connection with wages and other issues between employers and workers. A subscription charge of 20c. per annum is made for this publication.

**Labour Legislation.**—Much attention is devoted to labour legislation. Information as to new laws enacted by the Dominion and the provinces is kept up to date, while notes or articles regarding their provisions are published in the *Labour Gazette*. Since 1917, the Department has published annual reports

containing the text of Canadian labour laws enacted during each year, together with an introduction summarizing this legislation under subject headings. The first of these reports was based on a consolidation of Dominion and provincial labour legislation as existing at the end of 1915, which was made from the most recent revised Statutes and the subsequent annual volumes of Statutes up to 1915, and which formed the Department's report on labour legislation for 1915. Reports on the labour laws enacted in the four succeeding years were published in regular order. In 1920 a further consolidation was brought out and annual reports supplementary thereto were issued in 1921, 1922, 1923, 1924, 1925 and 1926. A third consolidated report on labour legislation containing the texts of the Dominion and provincial labour laws up to the end of 1928, was issued in December, 1929. A supplement containing labour laws of 1929 was issued in 1930. The Department of Labour has also published various articles dealing with provincial labour laws, indicating the extent to which these have been standardized and the differences which exist.

The advantage of uniformity in the laws relating to the welfare of persons engaged in industrial work in the several provinces was pointed out in June, 1919, by a Royal Commission on Industrial Relations, and this view was endorsed by a resolution of the National Industrial Conference held in September, 1919. A commission established in 1920, composed of representatives of the Dominion and Provincial Governments, of employers and of workers, to consider this subject, met in Ottawa between April 26 and May 1, 1920, and formulated recommendations looking to greater uniformity in provincial laws relative to workmen's compensation, factory control, mining, and minimum wages for women and girls.

**Joint Industrial Councils.**—One section of the report of the Royal Commission of 1919 on Industrial Relations dealt with shop committees and industrial councils, the Commissioners urging the adoption in Canada of the principles underlying Whitley Councils and kindred systems. The subject was also discussed at the National Industrial Conference of 1919. The committee to which the matter was referred made a unanimous report, urging the necessity for greater co-operation between employer and employee and stating their belief that this end could be furthered by the establishment of joint industrial councils. Information respecting such organizations, furnished by employers throughout Canada, has been assembled and published by the Department of Labour in the form of a special bulletin, which also contains facts regarding similar systems in other countries.

The Select Standing Committee on Industrial and International Relations, in reporting to the House of Commons on Mar. 27, 1928, recommended that the Government should establish a National Civil Service Council, composed of representatives of the Government and of the organized Civil Service in equal numbers, to consider and advise the Government upon matters of mutual concern to the Government and civil servants in their respective capacities as employer and employees. Subsequently, invitations were sent out to the eleven larger Civil Service organizations to name representatives to a joint meeting for the purpose of drafting a constitution for the proposed National Civil Service Council.

Under Order in Council P.C. 2232 of Dec. 22, 1928, there was established an Advisory Committee on the Civil Service Superannuation Act to advise the

Treasury Board in respect to matters incidental to the administration of the Act. This Committee is composed of five representatives named by organizations of civil servants and five named by the Government, of whom three are named by the Department of Finance, one by the Department of Insurance and one by the Department of Justice. The Committee began its sessions in January, 1929, and is still functioning respecting matters affecting the superannuation of public employees.

### **Section 3.—Provincial Labour Departments and Bureaus.**

The rapid industrial development at the end of the nineteenth century in Quebec and Ontario, the leading manufacturing provinces, brought with it the recognition of the need of special provincial offices to safeguard the interests of labour, with the result that the Ontario Bureau of Labour was established in 1900 and the Quebec Department of Public Works and Labour in 1905. In 1904 an Act was passed in New Brunswick providing for a Bureau of Labour, but this never became operative. Some years later, to cope with conditions created by the growth of industry in the West, Acts were passed providing for the creation of provincial Bureaus of Labour in Manitoba (1915), in British Columbia (1917), in Saskatchewan (1920), and in Alberta (1922).

**The Quebec Department of Labour.**—This Department was formerly known as the Department of Public Works and Labour, each division having a separate Deputy Minister, but at the session of 1921 the Legislature created each division a distinct Department.

Its duties include the institution and control of inquiries into important industrial questions and those relating to manufactures, and it may collect useful facts and statistics relating thereto, to be transmitted to the Quebec Bureau of Statistics. The Department is charged with the administration of provincial Acts respecting trade disputes, factory inspection, maintenance of fair wage clauses in Provincial Government contracts, superintendence of licensed registry offices for domestic workers, inspection of boilers and foundries, prevention of fires, establishment and maintenance of provincial employment offices, the issue of educational certificates to wage-earners under 16 years of age, together with the inspection of heating installations, steam, hot-water and hot-air furnaces. The Department's functions also include the qualification of electricians and contractors in that line of business, and the qualification of stationary engineers and firemen, and the inspection of boilers registered under the Interprovincial Code, together with the registering of the blue prints in connection with the construction of boilers. The Department publishes annual reports outlining the work performed.

**The Department of Labour of Ontario.**—The Department of Labour of Ontario was established in 1919 and placed under the direction of a Minister and a Deputy Minister of Labour. This Department had its origin in the Bureau of Industries which had been formed in 1882 as a part of the activities of the Department of Agriculture, to collect and publish statistics relating to the industries of the province and (later) to administer the first Factory Act of Ontario proclaimed law in 1886. In 1900 a Bureau of Labour attached to the Department of Public Works was authorized to collect and publish information relating to employment, wages and hours, strikes, labour organizations and gen-

eral conditions of labour. Several investigations were made regarding such matters and the first free employment offices were opened by the Bureau of Labour. In 1916 this Bureau was in turn superseded by the Trades and Labour Branch, also under the Ministry of Public Works but administered by a Superintendent. The establishment of the Branch had been recommended by the Ontario Commission on Unemployment and the expansion of the work undertaken by the Branch and the increase in the demands made upon its resources led to the creation of a special Department of the Government by the Department of Labour Act, 1919. Following certain changes in the Ontario Cabinet in September, 1930, the Honourable J. D. Monteith became Minister of Public Works and Labour.

The Department of Labour administers the following Acts:—The Department of Labour Act; The Factory, Shop and Office Building Act; The Steam Boiler Act; The Stationary and Hoisting Engineers Act; The Building Trades Protection Act; The Employment Agencies Act; the Apprenticeship Act; The Regulations respecting the Protection of Persons working in Compressed Air; The Minimum Wage Act. The Department is required to maintain employment offices, to collect information respecting employment, sanitary and other conditions in work-places, wages and hours of work, and to study labour legislation in other parts of the British Empire and in foreign countries, as well as any suggested changes in the labour laws of Ontario. The representatives of the Department of Labour have right of access to offices, factories and other work-places at any reasonable hour, and may be authorized to hold inquiries under the Public Inquiries Act. The Department publishes annual reports which cover the work of the officers employed in the administration of the various Acts assigned to it and contain much statistical and other information pertaining to labour. The Minimum Wage Act is administered by a board of five persons, two representing employers and two representing employees, with an impartial chairman; two of the members are women. In September 1930 the Mothers' Allowances Commission and the Old Age Pensions Commission were transferred to the newly-formed Department of Public Welfare.

**Manitoba Bureau of Labour.**—The Act of 1915, establishing the Manitoba Bureau of Labour, provided that it be attached to the Department of Public Works; an amendment of 1922, however, stated it may be attached to that or any other Department, as the Lieutenant-Governor in Council may determine.

The Bureau is established to co-operate with employers, trade unions and others; it is charged with the enforcement of the following Acts:—The Manitoba Factories Act; The Bake Shops Act; The Building Trades Protection Act; The Fair Wage Act; The Electricians' Licence Act; The Elevator and Hoist Act; The Shops Regulation Act; The Public Buildings Act; The Minimum Wage Act; The Steam Boiler Act; the licensing of cinematograph projectionists under The Public Amusements Act; The Fires Prevention Act; The One Day Rest in Seven Act.

**Saskatchewan Department of Railways, Labour and Industries.**—This was created as a separate Department by an Act passed in 1928. It is presided over by the Minister of Railways, Labour and Industries, assisted by a permanent Deputy Minister. The functions of the Department include the following:—Administration of the Factories Act and Elevator Regulations, the Steam Boilers Act, the Building Trades Protection Act, the Act protecting the payment

of wages to certain employees, the Mines Act, the Minimum Wage Act, and the Order in Council respecting fair wages in government contracts, also of all matters connected with railways over which the Government of Saskatchewan by any Act may have control. It is also charged with the operation of public free employment offices; the collection and publication of statistics relating to employment; wages and hours of labour throughout the province; strikes and other difficulties; trade unions and labour organizations; the relations between capital and labour, and other subjects connected with industrial problems; the commercial, industrial and sanitary conditions of employment; raw products of Saskatchewan and their industrial possibilities; such other matters as may be related to industrial development; the protection of game as outlined in the Game Act.

**Alberta Bureau of Labour.**—The Act of 1922, creating the Alberta Bureau of Labour, provided that the Bureau be in charge of a Minister having under him a Commissioner of Labour. The latter is empowered to collect and publish information and statistics affecting labour, and to administer such Acts as may be assigned to the Bureau by Order in Council. Important among these Acts are:—The Alberta Government Employment Bureau Act; The Minimum Wage Act; The Boilers Act; The Factories Act; The Theatres Act. The Bureau issues annual reports.

**The British Columbia Department of Labour.**—This Department was instituted by an Act of 1917, under a Minister and Deputy Minister of Labour. It administers the laws of British Columbia affecting labour, and is empowered to collect information respecting industries, wages, employment, prices, labour organizations and other data pertaining to labour problems. Prominent among the Acts under the jurisdiction of the Department are:—The Minimum Wage Act for Female Employees; The Male Minimum Wage Act (passed in 1929); The Hours of Work Act; The Semi-Monthly Payment of Wages Act; The Factories Act. The Department also operates the employment bureaus within the province. The Deputy Minister of Labour is *ex officio* Chairman of the Board of Adjustment under the Hours of Work Act of 1923, which, with exceptions, provides for the eight-hour working day in industry, and is also Chairman of the Male Minimum Wage Board. Annual reports are published by the Department, containing much information respecting labour matters.

#### Section 4.—Canada and the International Labour Organization.<sup>1</sup>

The International Labour Organization of the League of Nations was set up in accordance with Part XIII of the Treaties of Peace, to promote the improvement of industrial conditions by legislative action and international agreement.

The Organization comprises the permanent International Labour Office in Geneva, Switzerland, and the International Labour Conference, which meets annually and is composed of four representatives of each Member State, two of whom are government delegates, while two represent the employers and the employed respectively. Fifty-five countries are members of the International Labour Organization, including all of the important industrial countries of the world except the United States.

<sup>1</sup> On this subject see also the 1921 Year Book, pp. 607-609; 1922-23 Year Book, pp. 704-707; 1924 Year Book, pp. 686-670; 1925 Year Book, pp. 676-678; 1926 Year Book, pp. 679-681; 1927-28 Year Book, pp. 735-737; and the 1929 Year Book, pp. 725-727.

The International Labour Office functions as a secretariat of the annual conference, and also collects and publishes information on subjects relating to industrial life and labour. The Office is under the control of a Governing Body consisting of 24 persons, appointed by the International Labour Conference, of whom 12 represent Governments, 6 represent employers and 6 represent workers. In addition to its control of the Labour Office, the Governing Body is charged with the preparation of the agenda of the annual conference.

Under the terms of the Peace Treaties, eight of the government seats on the Governing Body are held by the countries of "chief industrial importance". Canada was designated by the Council of the League of Nations as one of the eight states of "chief industrial importance". The Minister of Labour is the Government representative on this body. Mr. Tom Moore, President of the Trades and Labour Congress of Canada, is one of the 6 workers' representatives on the Governing Body.

The conclusions of the International Labour Conference are cast in the form of draft conventions or recommendations, addressed to the national Governments which comprise the membership of the International Labour Organization. A two-thirds majority of the Conference is required for the adoption of either a draft convention or recommendation. Under the Treaties of Peace, the Member States are bound to bring the draft conventions or recommendations before the authority or authorities within whose competence the subject matter lies, for the enactment of legislation or other action. Thus the findings of the Conference only become binding in the various countries concerned if and when action regarding them is taken by the latter.

Most of the proposals dealt with in the successive meetings of the Labour Conference since its establishment in 1919 have been adjudged by the law officers of the Crown in Canada to fall within provincial jurisdiction. The draft conventions and recommendations of the Conference have in all cases been brought to the attention of the Dominion Parliament, while those which dealt with subjects within provincial control were also referred to the Provincial Governments.

The Dominion Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Organization but also with the different Departments of the Dominion Government, with the provinces, and with employers' and workers' organizations. Replies have also been prepared in the Department of Labour to various questionnaires issued by the International Labour Office. Performance of these duties has necessitated a close study of the different technical questions which have figured on the agenda of the various conferences and at the meetings of the Governing Body. A bulletin entitled "Canada and the International Labour Conference", issued by the Department of Labour in February, 1922, furnished information respecting the International Labour Organization and the subjects which had received attention at the hands of that body. Comprehensive articles dealing with the proceedings of the annual sessions of the International Conference have been published from year to year in the Labour Gazette. These articles contain the text of the various draft conventions and recommendations of this Conference.

Fourteen sessions of the International Labour Conference have been held. Thirty draft conventions and 39 recommendations have been adopted at these annual gatherings.

The draft conventions and recommendations of the Conference have, among other subjects, related to the following:—hours of labour, measures for the avoidance of unemployment, employment conditions of women and children, employment conditions of seamen, employment in agriculture, weekly rest, statistics of immigration and emigration, principles of factory inspection, inspection of emigrants on board ship, workmen's compensation for accidents and occupational diseases, sickness insurance, minimum wages, prevention of accidents to dockers, forced labour and regulation of hours of work of salaried employees.

Up to December, 1930, 414 ratifications of these conventions had been registered with the League of Nations, of which 8 were conditional or with delayed application; 23 had been approved by the competent national authority; and 162 had been recommended to the competent national authority for approval.

**Canadian Action on Draft Conventions and Recommendations.**—The action taken by the Dominion and the Provincial Governments on the draft conventions and recommendations of the International Labour Conference has been summarized in the articles on this subject published in previous Year Books and referred to in the footnote on p. 753.

### Section 5.—Organized Labour in Canada.

The Dominion Department of Labour publishes an annual report on labour organization; this sets out the various branches of unionism in existence, the principles on which they are founded, their chief activities, and statistics of the different groups comprised in the trade unions of the Dominion. Reference is also made in this annual report to the principal international labour organizations with which the organized workers of Canada are affiliated.

Trade unionism in Canada occupies a unique position, by reason of the fact that most organized workers in the Dominion are members of organizations whose headquarters are located in a foreign country, *viz.*, the United States. This condition is explained when it is understood that workers move freely from one country to the other in order to find employment. In years gone by Canadian workmen who sought a livelihood in the United States greatly outnumbered those who came from that country to Canada. As industry was further developed in the United States there arose a number of unions of various crafts, and with these the Canadian workers soon became affiliated. With the development of industry in the Dominion, many of these Canadians returned to their native land, bringing with them the gospel of trade unionism and collective bargaining as a means of protecting their rights. In many instances these trade unionists became the nuclei of strong bodies of organized workers formed in Canadian cities.

The usual *résumé* of the origin and growth of the trades union movement in Canada has been omitted in this edition, owing to considerations of space. The interested reader is referred to pp. 712-714 of the 1930 edition of the Year Book and to "Labour Organization in Canada, 1929", published by the Dominion Department of Labour. This latter publication presents the history and present

organization of trades unionism in the Dominion in a very comprehensive manner. The following paragraphs give a short sketch of the present organization of the five main groups into which Canadian labour organizations now fall.

**Trades and Labour Congress of Canada.**—Through the initiative of the Toronto Trades Assembly (now the Toronto District Trades and Labour Council), the first national labour organization, the Canadian Labour Union, was formed in Toronto in September, 1873. This organization held its second and third annual meetings in 1874 and 1875, but disappeared as a result of the serious depression of the later '70's. In 1883 the Trades and Labour Council of Toronto, feeling the necessity of the wage-earners of Canada having a medium through which to express their opinions, assumed the responsibility of calling another trades and labour congress, which met in Toronto on Dec. 26, with 47 delegates. On the summons of the Toronto Council, a second meeting, with 109 delegates, assembled on Sept. 14, 1886, the first occasion on which any labour body outside of the province of Ontario was represented. A permanent organization was effected at this meeting under the name of "Trades and Labour Congress of the Dominion of Canada". This was the title of the organization until 1895, when the title "Trades and Labour Congress of Canada" was adopted in preference to "Canadian Federation of Labour". Since 1886 conventions have been held annually, the 1928 meeting in Toronto being counted as the 44th. The Trades and Labour Congress is representative of international trade unionism in the Dominion, the bulk of its membership being drawn from the international organizations which have local branches in Canada. According to reports for 1929, the Congress received payment of per capita tax on the Canadian membership of 59 international bodies and also from two national organizations which had their entire membership in the Dominion, their total membership being 119,109 comprised in 1,452 local branches. With other affiliations and unions directly under charter, the Congress had in all at the close of 1929 a membership of 126,638 in 1,500 branches.

**All-Canadian Congress of Labour.**—The All-Canadian Congress of Labour was organized Mar. 16, 1927, by labour bodies not eligible for membership in the old established Trades and Labour Congress of Canada. One of the promoters of the new body was the Canadian Federation of Labour, which was formed as a result of the expulsion from the Trades and Labour Congress of Canada of Knights of Labour assemblies and all other unions which were composed of members of crafts over which existing international organizations claimed jurisdiction. With the formation of the All-Canadian Congress of Labour the Canadian Federation passed out of existence. At the close of 1929 the All-Canadian Congress of Labour had eleven central bodies in affiliation, with a combined membership of 51,461, as well as 22 directly chartered local unions, with a membership of 1,471, making a total combined reported membership of 52,429.

**Membership of International Organizations in Canada.**—At the close of 1929 there were 85 international craft organizations having one or more local branch unions in Canada, four more than the number recorded in 1928. These bodies among them had 1,953 local branches in the Dominion with 203,514 members. The membership of the two industrial unions with branches in the Dominion was 26,865 comprised in 49 branches. With these figures the total

international trade union membership in Canada at the close of 1929 was 230,379. The international craft organizations represent approximately 63 p.c. of the total of all classes of workers in the Dominion organized under trade union auspices (Table 2).

**Canadian Central Labour Bodies.**—There are in Canada 25 Canadian central labour bodies, 18 of which are in direct opposition to the international organizations. In some instances these Canadian central labour bodies have been formed by secessionists from international unions. The combined membership of the Canadian central labour organizations on Dec. 31, 1929, was 53,277, comprised in 639 local branches (Table 3).

**Membership of Independent Units.**—There are 31 independent local labour bodies in the Dominion, 30 of which had a membership of 10,820 at the end of 1929, the remaining one not reporting.

**Federation of Catholic Workers of Canada.**—During the period when the Knights of Labour operated in Quebec, there existed also four independent unions, one of labourers and three of leather and shoe workers. Up to 1902 these several bodies were represented at the annual conventions of the Trades and Labour Congress of Canada. In that year, in an effort to eliminate a duplication of unions and bring the independent bodies under the banner of the international organizations, the Trades Congress denied them further representation. The Knights of Labour assemblies gradually disappeared, but the independent unions continued to exist. Up to the time of the expulsion by the Trades Congress of those bodies which were outside the ranks of the international organizations there was only one Catholic union, that composed of shoe workers in the city of Quebec, which had accepted the social doctrine of the Roman Catholic Church and admitted a chaplain (a member of the clergy), this course being adopted in 1901 following the adjustment of a dispute in the shoe industry in that city by the archbishop of the diocese. Some years later a number of other national unions were formed in the province of Quebec, all of which accepted for their guidance the declarations of Pope Leo XIII, who on May 15, 1891, issued an encyclical on "The Condition of the Working Classes", the provisions of which were subsequently proclaimed by Pope Pius X as fundamental rules for workingmen's associations. In 1918 a conference of national unions was held in Quebec city, followed by other meetings in Three Rivers in 1919 and Chicoutimi in 1920; the delegates at the later conference, numbering 225 from 120 unions, decided to establish a permanent central body to co-ordinate the work of the scattered units. Accordingly, at the 1921 conference held in Hull, at which approximately 200 delegates representing 89 unions were present, a constitution to govern the new body was approved. The name selected was Federation of Catholic Workers of Canada, and permanent officers were elected, the constitution and by-laws becoming effective on Jan. 1, 1922. From information at hand, there are 106 National Catholic unions with a combined membership of 25,000.

**One Big Union.**—A number of delegates from Western Canada to the Quebec convention of 1918, dissatisfied with the alleged reactionary policy of the Trades and Labour Congress of Canada, held a caucus at which it was decided to concentrate their energies towards having the Trades Congress legislate in

accordance with their views. Some months later a meeting of delegates was called by the British Columbia Federation of Labour to assemble immediately following the annual convention of that body, which, for the first time in its history, met outside of the province under its jurisdiction, in Calgary. The conference assembled on Mar. 13, 1919, with 239 delegates present; the outcome of the meeting was the formation of an industrial organization, the "One Big Union" On June 11, 1919, a conference of the advocates of the new body was held in Calgary to further the plans of the organization, which had a membership of 41,150 at the close of 1919. From the outset the O.B.U. met with much opposition from the old-established labour unions, represented by the Trades and Labour Congress of Canada, which was opposed to the substitution of industrial unionism for the existing system of craft unions. According to information supplied the Department by the general secretary, the O.B.U. at the close of 1929 had 44 units under charter, one of which was located in the United States, as well as two central labour councils (bodies similar to trades and labour councils), the combined reported membership being 22,890.

**Total Reported Membership of Organized Labour in Canada.**—At the close of 1929 the numerical strength of organized labour in Canada was given by the Department of Labour as follows: international organizations, 2,002 local branches with an aggregate membership of 230,379; Canadian central labour bodies, 639 branches and 53,277 members; independent units, 31, with 10,820 members; National Catholic unions, 106 with 25,000 members; grand total 2,778 local branches and 319,476 members. As compared with 1928, this represents an increase of 125 branches and of 18,874 members.

Table 1 shows by years the membership of trade unions in Canada since 1911.

1.—Membership of Trade Unions in Canada, 1911-1929.

Year.	Members.	Year.	Members.

## Section 6.—Fatal Industrial Accidents.

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903, the data being obtained from provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada and various other governmental authorities, from departmental correspondents and from press clippings. Table 4 shows the number of fatal industrial accidents reported to the Department during each year from 1926 to 1930 inclusive. The number of fatalities in each of the different industries is also shown as a percentage of the total number. Preliminary figures show 1,607 fatal industrial accidents in 1930.

<sup>1</sup>Figures subject to revision.

<sup>2</sup>Previously included under Transportation and Public Utilities.

**Causes of Fatal Accidents.**—The classification of fatal accidents in 1930 according to causes shows that the largest number, 427, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus caused, 121, appear under the heading covering persons being struck or run over by, or crushed by or between, cars and engines, 66 of these victims being engaged on steam railways. Also, 97 were caused by automobiles and other power vehicles and implements, 97 were in connection with watercraft (15 being in fishing and trapping and 37 in water transportation); 31 were due to derailments and collisions (20 in steam railways); 25 were caused by animal-drawn vehicles and implements (13 of which were in agriculture, accidents primarily caused by animals being classified elsewhere); 26 were caused by persons falling from or in cars or engines, 16 by mine and quarry cars; and 15 fatalities occurred in aircraft.

Next in order as a cause of fatalities came falls of persons<sup>2</sup>, 307 in number, including 120 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 77 falls from elevations, 28 due to collapse of support, 27 falls from loads, etc., 16 from ladders, 9 into holds of vessels, 9 due to falls on the level, 9 into tanks, vats, kilns, etc., 8 down stairs and inclines, and 4 due to falls on sharp objects.

"Dangerous substances" caused 305 fatalities, of which 78 were due to explosive substances, 72 to electric current, 54 to mine explosions from gas, coal dust, etc., 41 to hot and inflammable substances and flames, 33 to gas fumes, etc., 14 to steam escapes, boiler explosions and compressed air, and 13 to conflagrations.

Fatalities numbering 212 were caused by "falling objects", of which 73 were due to objects falling in mines and quarries, 67 to falling trees and limbs, 37 to objects falling from elevations, loads, piles, 19 to collapse of structures, 12 to breaking or loosening of straps, cables, etc., and 4 to other falling objects.

There were 60 fatalities caused by handling of heavy or sharp objects and 6 by the use of tools. Working machines caused 39, prime movers caused 59, and 11 were due to hoisting apparatus. There were 45 fatalities caused by striking against or being struck by objects, of which 9 were due to striking against objects and 36 to being struck by objects. Animals caused 36 fatalities including 29 caused by horses.

The category "other causes" includes 108 fatalities, of which 4 were deaths following infection, 33 due to industrial diseases, strains, etc., 5 to drownings of which no particulars were available, 10 to shooting and violence, 32 to cave-ins, land slides, ice-jams, etc., 22 to lightning, frost, storms, sunstroke, and 2 accidents of which no particulars were available.

### Section 7.—Workmen's Compensation in Canada.

An account of the development of workmen's compensation legislation in Canada from employers' liability legislation was given at pp. 744-746 of the 1927-28 Year Book, while a summary of the present position with regard to workmen's compensation appears in the general sketch of labour legislation in Canada at pp. 746-748 of the current edition. Details regarding the operation of the various Workmen's Compensation Boards of the Provinces are given below.

**Operations of the Workmen's Compensation Boards.—Nova Scotia**—The Workmen's Compensation Act was passed in 1915, but only became effective on Jan. 1, 1917. During the thirteen years between that date and Dec. 31, 1929, accidents to the number of 92,638 were reported to the Board, of which 79,799 were compensated as per Table 5. Prior to Jan. 1, 1920, medical aid was furnished only in special cases.

#### 5.—Compensation Paid and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1917-1929.

*New Brunswick.*—The Workmen's Compensation Act of New Brunswick was passed in 1918. It extends to a wide range of industries, and is administered by a Board of three persons, levying assessments and paying benefits. For the sums paid out annually from 1920 as compensation and for medical aid see Table 6.

*Quebec.*—The Quebec Workmen's Compensation Commission was established in 1928 by authority of c. 80 of the Statutes of that year. The Act was brought into force by proclamation on June 9, 1928, operations of the Commission commencing as of Sept. 1, 1928.

The Quebec Commission does not itself insure employers against their liability under the Act, employers being required to insure in an approved company, although certain large corporations are permitted to practise self-assurance. Table 7 shows the operations of the Board from Sept 1, 1928 to Dec. 31, 1930.

**7.—Compensation Paid and Accidents Compensated by the Quebec Workmen's Compensation Commission, 1928-1930.**

1930.....	20,900	19,850	3,792,346

*Ontario.*—Under the system operated by the Ontario Workmen's Compensation Board in schedule 1, where the liability is collective, 24 classes of industries pay various percentages of their payrolls annually to the Board and escape individual civil liability for accidents and certain specified industrial diseases. The percentage of payroll collected by the Board is graded according to the degree of hazard in the occupation and ranged in 1929 from 10 cents per \$100

of payroll in blue-printing to \$10 per \$100 in wrecking of buildings, erection of high metal chimneys, etc., and aerial testing. The average for all classes was \$1.34 per \$100 of payrolls which amounted to \$559,429,000. Certain other industries under schedule 2, including municipal undertakings, railways, car shops, telegraphs, telephones, etc., are made individually liable to pay the rates of compensation fixed under the Act. Employees of the Dominion or of the province, killed or injured in the discharge of their duty, are by special legislation placed on the same footing as those of private employers of the second class.

Statistics of the benefits awarded and the accidents to workers reported during the first 15 years of the operation of the Act appear in Table 8. The 61,795 accidents paid for during the year 1930 included: 427 cases of death, 15 of permanent total disability, 2,959 of permanent partial disability, 28,220 of temporary disability and 30,174 in which medical aid only was provided. These latter are all under schedule 1, as medical aid in schedule 2 cases and Crown cases is furnished directly by the employer.

<sup>1</sup> No provision for medical aid.      <sup>2</sup> Half year only.

*Manitoba.*—Under the Workmen's Compensation Act, which came into force Mar. 1, 1917, Part I of the Act, dealing with workmen in hazardous occupations, is administered by The Workmen's Compensation Board, which charges insurance rates according to the hazard of the industry, the sums received by the workman being in lieu of the rights of action previously existing. The province, the city of Winnipeg, and certain corporations operating public utilities are permitted by the law to practise self-insurance.

From the date of the coming into force of the Act to Dec. 31, 1929, the Board dealt with 66,612 compensable accidents and paid out \$8,786,940 for compensation and medical aid. Of the accidents in 1929, 4,817 involved medical aid costs only, 5,278 involved temporary and 283 permanent disability, while 71 resulted in death (Table 9).

*Saskatchewan.*—The Workmen's Compensation Act, being Chapter 79 of The Statutes of Saskatchewan, 1928-1929, is administered by a Board of three members and was brought fully into force at midnight of July 1, 1930. This Act is similar to that of other provinces; certain railway employees engaged in what are generally known as the "running trades" are exempt from this Act but are covered by The Workmen's Compensation Act, being c. 210 of the Revised Statutes of Saskatchewan, 1920.

During the first six months of operation 3,210 accidents were reported, 625 of which were rejected, cancelled, or no action taken, leaving the number of claims compensated and in course of being disposed of, 2,585.

There were 18 fatal accidents reported; also 15 accidents reported which had resulted in permanent disability at Dec. 31, 1930.

These figures do not include accidents occurring in 1930 but reported in 1931.

*Alberta.*—The Workmen's Compensation Act of 1918 became effective Aug. 1, 1918, as regards mining, and Jan. 1, 1919, in respect of almost all industries except agriculture, railroading and the operation of retail stores and offices. Railroading (except for the running trades) was brought within the scope of the Act in 1919, and a further amendment in 1928 left only conductors and trainmen exempt from the operations of the Act.

Table 10 shows the operations of the Board for the calendar years 1921 to 1929. Of the 14,899 accidents reported in the latter year 72 were fatal and 146 resulted in some permanent injury. The amounts shown below do not include sums transferred to the pension fund, which had assets amounting to \$2,247,756 on Dec. 31, 1929, nor do they include administration expenses nor sums set aside to cover estimated liabilities.

*British Columbia.*—The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the province, protecting in 1929 approximately 175,000 employees with a payroll of over \$189,000,000. Insurance rates levied against employees are graded according to the hazard of the industry. All employers under the Act are required in addition to deduct one cent per day or part thereof from the wages of employees and to remit this money to the Board to the credit of the medical aid fund, which provides all necessary medical and surgical and hospital expenses for injured employees. For statistics see Table 11.

**Section 8.—Strikes and Lockouts.**

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its inception in 1900. Table 12 shows the number of disputes, the number of employees involved in disputes, and the time loss in working days for each year from 1901 to 1930 and the totals for the period. The items in the columns headed "time loss in working days" in the tables following are calculated by multiplying the number of persons directly involved in strikes and lockouts by the number of working days they are so affected during the time the disputes are in existence. The tables give the figures for previous years and a detailed analysis for 1929 and 1930.

The statistics have been revised back to 1901 and summary tables of the revised figures with details as to strikes and lockouts during 1930 may be found in the *Labour Gazette* for February, 1931, pp. 133-160.

**Industrial Disputes in Recent Years.**—In each of the years 1926, 1927, 1928 and 1929 the time loss in "man working days" from strikes and lockouts was less than in any year since 1916 and less than in most of the years back to 1901, when the record was begun. This was chiefly because there were no coal-mining disputes involving large numbers of workers for relatively long periods of time. The number of strikes and lockouts in existence in 1930 was 67, as compared with 93 in 1929, slightly less than for any recent year, but the number of employees involved was 13,768 in 1930 and 12,946 in 1929, less than in any other year since 1915. Table 12 shows the number of strikes and lockouts existing in each year and the number beginning in each year back to 1901, also the number of employees involved, with the time loss in man working days in each year. The table includes figures as to coal mining and industries other than coal mining. The time loss in 1930 was less than in any other year on record.

\*Figures for disputes extending over the end of a year are here counted more than once.

Table 13 is a record by months since 1925 and shows that the greatest time losses usually occur in the spring and summer months. The year 1930 was an exception, in that the greatest number of strikes originated in September and the largest time loss in February, followed closely by September and November. This large time loss was due to a strike of 500 fishermen at North Sydney in November, and to one of 1,300 coal miners at New Aberdeen in November. During September 1,400 coal miners at Springhill, N.S., were on strike for over a week, and 260 coal miners at River Hebert for two weeks, as well as 170 plasterers at Montreal for over a week. In February much time loss was incurred through disputes involving 950 coal miners at Glace Bay for a day and 1,800 women's clothing workers at Toronto, out for 7 days during February.

<sup>1</sup>These totals relate only to the actual number of disputes in existence or the employees involved during the year and are not a summation of the monthly figures.

Table 14 is a record of industrial disputes, by provinces, for the years 1929 and 1930. In 1929 the chief time loss was in Ontario, where strikes of some magnitude occurred among pulpwood cutters in the vicinity of Port Arthur, and among cotton factory employees and steel car riveters at Hamilton, and painters, plumbers and plasterers at Toronto. In 1930, the chief time loss was in Nova Scotia, Quebec, and Ontario, due to disputes involving fishermen in Cape Breton Island, coal miners at Springhill, Nova Scotia, clothing factory workers in Montreal, Que., and clothing factory workers at Toronto, Ont.

Table 15 shows strikes and lockouts by industries during 1929 and 1930, the most important during 1929 being in logging, mining, textile manufacturing, iron and steel manufacturing, and in building, while in 1930 most of the important disputes occurred in the fishing, mining, clothing manufacturing, and construction industries. A diagram showing the time loss by groups of industries since 1901 appears on page 769.

## 15.—Strikes and Lockouts, by Industries, 1929 and 1930.

<sup>1</sup>Non-ferrous smelting is included with mining; water service is under public administration.

**Causes and Results of Industrial Disputes.**—During 1929 and 1930, as in previous years, most of the disputes were in regard to wages, or wages and working conditions, but also during these two years a large proportion of disputes (and these included some of the most important) were in regard to trade unionism, usually concerned with union wages and working conditions, including recognition of unions, closed shop, etc.

As in previous years many of the disputes during 1929 and 1930 were settled by negotiation; in 1930, out of a total of 65 disputes terminated during the year 28 settlements resulted from negotiation. An appreciable number of disputes terminated in the return of strikers or by their replacement, 24 being terminated in this manner in 1929.

## Section 9.—Employment and Unemployment.

### Subsection 1.—Operations of The Employment Service of Canada.

**Employment Service of Canada.**—Under sec. 3 of The Employment Offices Co-ordination Act (c. 57, R.S.C., 1927), an Act passed by the Dominion Parliament in May, 1918, the Minister of Labour is empowered:—

“(a) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;

“(b) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;

“(c) to compile and distribute information received from employment offices and from other sources regarding prevailing conditions of employment”.

The Act further provides that certain sums of money are to be appropriated annually and paid to the provinces on a basis proportionate to the amount that each expends on the maintenance of employment offices.

The desired uniformity and co-ordination of employment office activities throughout the various provinces are obtained by having the Dominion payments contingent upon an agreement ensuring that the provinces, in the conduct of their employment offices, shall endeavour to fill situations in all trades and occupations for both men and women, and that no charge shall be made to employers or employees for this service. Each province agrees to maintain a provincial clearance system in co-operation with the interprovincial clearance system established by the Dominion Government, in order to secure the necessary mobility of labour as between localities in the same province or in different provinces. For the fiscal year 1930-31, agreements were concluded with all of the provinces except Prince Edward Island. Thus is formed the Employment Service of Canada—a chain of employment offices reaching from Halifax to Vancouver. At the time the Act came into force only 12 provincial employment offices were operated in Canada. This number was steadily increased until, at the close of 1919, due to the impetus given by the Employment Offices Co-ordination Act together with the requirements of the demobilization period, offices were functioning at 84 different centres. Subsequent contractions have

reduced the Service to offices permanently located at 67 centres (on Dec. 31, 1930), distributed by provinces as follows:—Nova Scotia, 3; New Brunswick, 3; Quebec, 7; Ontario, 26; Manitoba, 3; Saskatchewan, 9; Alberta, 5; and British Columbia, 11.

**Employment Service Council of Canada.**—An Order in Council, issued in 1918 in pursuance of the Act, provided for the formation of a body to be advisory to the Minister of Labour in the administration thereof. This body, known as the Employment Service Council of Canada, is composed of representatives of the Dominion Departments of Labour and Pensions and National Health, the Provincial Governments, the Canadian Manufacturers' Association, the Canadian Construction Association, the Trades and Labour Congress of Canada, the Railway Association of Canada, the Railway Brotherhoods, the Canadian Lumbermen's Association, the Canadian Council of Agriculture and the returned soldiers. At the eleven annual meetings of the Council, the most recent of which was held on Aug. 21-22, 1930, various recommendations and suggestions relative to employment office administration were brought forward and presented to the Minister.

**Operations of Employment Offices.**—Statistics covering the work of the local offices are collected and tabulated by the Employment Service Branch of the Department of Labour. Table 16 shows the positions available, applications for work and placements effected by the Service in each year since 1920. During 1930 there were 612,990 applications for employment, 386,034 vacancies and 368,679 placements recorded, as compared with 550,726 applications, 428,027 vacancies and 398,367 placements in 1929. During 1930, 7 p.c. fewer placements were made than in 1929. Nearly one-half of all placements were of a casual nature, largely as a result of short terms of employment given, to persons otherwise unemployed, by municipalities and Provincial Governments on various relief schemes provided during the latter part of the year. All provinces except Nova Scotia, Ontario and Alberta showed a decline in placements, the heaviest loss being in British Columbia, where a decline in the number of workers transferred for harvest work in the Prairie Provinces was the outstanding feature. Construction and maintenance was the only industrial division to show a gain in placements.

The ratio of vacancies to applications was higher in 1929 than in 1930, as was also the ratio of placements to applications. For each 100 applicants registered during 1929 there were 77.7 vacancies and 72.3 placements, while there were 63.0 vacancies and 60.1 placements for each 100 applicants in 1930.

**Reduced Railway Fares.**—In order to facilitate the movement of labour in cases where there are not enough workers in any one locality to fill the available vacancies, the Employment Service, by special arrangement with nearly all the members of the Canadian Passenger Association, has been granted the privilege of issuing certificates which entitle the bearers to purchase railway fares at the reduced rate of 2.7 cents per mile. This rate is for a second class ticket and is applicable only to fares of not less than \$4. During 1929, 30,896 certificates were issued, 17,230 to persons proceeding to points within the same province as the despatching office, and 13,666 to workers going to points in other provinces. Of the certificates issued 3,408 were issued in British Columbia to persons proceeding to the Prairie Provinces to engage in harvesting operations; these travelled

at harvesters' rates, which were cheaper than the 2·7 cents per mile rate. During 1930, 13,938 certificates for special rates were granted, 10,746 to persons travelling to employment within the same province as the despatching office, and 3,192 to persons for whom employment had been secured in other provinces; these included 13 certificates issued for the special harvest rate from British Columbia to the Prairie Provinces.

**16.—Applications for Employment, Positions Offered and Placements Effected by the Employment Service of Canada, by Provinces, 1929-1930,<sup>1</sup> and for Canada, 1929-1930.**

<sup>1</sup>Figures by provinces and years for 1920-25 will be found at p. 703 of the 1928 Year Book and for 1926-28 at p. 731 of the 1930 Year Book.

**Subsection 2.—Unemployment as Reported by Trade Unions.**

Monthly statistics on unemployment are compiled and published by the Employment Service Branch of the Dominion Department of Labour, based on returns received from 1,700 local trade unions having an aggregate membership of 200,000 workers. "Unemployment" as here used means involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it

should be understood that the figures for each month have reference only to the reporting organizations. Table 17 is a record of unemployment in trade unions for the past 16 years, by provinces. The maximum of unemployment in 1930 was in December, when the percentage stood at 17.0; in 1929, the December figure of 11.4 p.c. constituted the maximum. In 1930 the minimum, reached in April, was 9.0 p.c., while the minimum for 1929 was 2.9 p.c., attained in June. Employment among organized workers, as indicated by these statistics, was less active on the average in 1930 than in 1929, the average of the monthly figures of unemployment for 1930 being 11.1 p.c., while for 1929 the corresponding figure was 5.7 p.c.

### 17.—Percentages of Unemployment in Trade Unions, by Provinces, 1915-1930.

Note.—For the percentages of unemployment for 12 months in 1921 and 1922, see p. 732 of the 1922-23 Year Book; for 12 months in 1923, p. 688 of the 1924 Year Book; for 12 months in 1924, p. 700 of the 1925 Year Book; for 12 months in 1925, p. 704 of the 1926 Year Book; for 12 months in 1926, p. 757 of the 1927-28 Year Book; for 12 months in 1927, p. 745 of the 1929 Year Book, and for 12 months in 1928 and 1929, p. 733 of the 1930 Year Book.

**Subsection 3.—Employment as Reported by Employers.**

The Dominion Bureau of Statistics tabulates monthly reports of the numbers employed by firms having 15 or more persons on their staffs; the returns are representative of practically every industry except agriculture and the more specialized business and professional callings. During 1930, some 7,260 of these employers reported an average working force of 993,845 persons, varying from 941,427 on Jan. 1 to 1,043,232 at the beginning of July. In Canada, as in other parts of the world, there was a general slackening in industrial activity during 1930, resulting in a lower level of employment than in 1929, and also than in some months of 1928. With these exceptions, however, the general index was higher than in previous years of the record. The accompanying tables give monthly index numbers of employment for 1929 and 1930 in the economic areas, leading cities and industries, with yearly averages for periods of seven to eight years. The indexes are calculated upon the averages for the calendar year 1926 as 100.

Employment showed partial recovery at the beginning of February from the year-end losses, but in the next two months the trend was downward. From May 1 until July 1, steady improvement was recorded and the situation on Aug. 1 showed little change; from the beginning of September, however, curtailment was again indicated, and on Dec. 1 the index was nearly three points lower than on Jan. 1, although it was higher than the average for the years 1921-1927.

**Employment by Economic Areas.**—In all except the Maritime Provinces, employment was in smaller volume than in 1929. The index numbers were higher in the Maritime Provinces than elsewhere; this was largely due to the execution of an important program of road construction and improvement work undertaken during the summer. Table 18 is a record of employment in the five economic areas, by months, since 1929, and the following graph illustrates the trend of employment generally over the latest five years.

**18.—Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1929, to December, 1930, with Yearly Averages since 1921.**

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated economic area to the total reported by all employers making returns in Canada on Dec. 1, 1930.

Relative weight of employment in economic areas as at Dec. 1, 1930.....	7.7	28.3	40.8	14.9	8.3	100.0

The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

**Employment in Cities.**—Separate tabulations are made for the eight leading industrial centres:—Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the adjoining "Border Cities", Winnipeg and Vancouver. In Quebec city, Ottawa and Vancouver, the index of employment was on the whole rather higher than in 1929. Activity in the other five centres, however, was reduced as compared with the preceding year, but all centres except Windsor and Winnipeg showed a higher level of employment as compared with 1928, and activity was generally greater than in earlier years of the record.

**19.—Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1929, to December, 1930, with Yearly Averages since 1922.**

**NOTE.**—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated city to the total reported by all employers making returns in Canada on Dec. 1, 1930.

Relative weight, by cities, as at Dec. 1, 1930 <sup>3</sup> .....	14.1	1.4	12.7	1.3	3.4	1.5	3.3	3.2

<sup>1</sup>The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here shown for the 12 months, Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

<sup>2</sup>Includes adjacent "Border Cities"

<sup>3</sup>Percentages of Dominion total.

**Employment by Industries.**—Employment in manufacturing, logging, mining, communications and transportation was in smaller volume than in 1929; in construction, the index averaged practically the same, while activity in services and trade was on the whole slightly greater. Within the manufacturing industries, the heaviest losses during 1930 were in the iron and steel, rubber and lumber groups. On the other hand, the vegetable food, tobacco, electric current, electrical apparatus, chemical and non-metallic mineral industries reported a higher level of employment than in 1929. Table 20 gives index numbers of employment by main industrial groups.

**20.—Index Numbers of Employment as Reported by Employers, by Industries, as at the First of each Month, January, 1929, to December, 1930, with Yearly Averages since 1921.**

NOTE.—These indexes are calculated upon the averages for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated industry to the total reported by all employers making returns in Canada on Dec. 1, 1929.

<sup>1</sup>The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here given for the 12 months Jan. 1—Dec. 1, 1926, generally shows a slight variation from 100.

**Subsection 4.—The Unemployment Relief Act, 1930.**

The Dominion Unemployment Relief Act, 1930, was enacted by the Seventeenth Parliament in September, 1930. The Act specifies that \$20,000,000 might be expended "in constructing, extending or improving public works and undertakings, railways, highways, bridges, and canals, harbours and wharves; assisting in defraying the cost of distribution of products of the field, farm, forest, sea, lake, river and mine; granting aid to provinces and municipalities in any public work they may undertake for relieving unemployment and reimbursing expenditures made by provinces and municipalities in connection with unemployment, and generally in any way that will assist in providing useful and suitable work for the unemployed" Administration of the Act is vested in the Minister of Labour and an advisory committee on expenditure consisting of the Minister of Railways and Canals, the Minister of Public Works, the Minister of the Interior and the Minister of Marine. Under the regulations governing the admin-

istration of the Act the Minister is authorized to enter into agreements with the several provinces for the expenditure of the \$20,000,000 appropriated under the Act, either for the purpose of immediate relief or for assisting local public works undertaken to provide employment. The sum of \$4,000,000 was set aside to provide for the payment to municipalities of one-third of their expenditures in the direct relief of persons for whom work could not be procured, the Provincial Governments and the municipalities each being required to assume responsibility for one-third of the expenditure for this purpose.

In regard to public work undertaken for the relief of unemployment the regulations provide that agreements should be made between the Minister and the Provincial Governments whereby the municipalities would pay one-half the total expenditures on public works undertaken by them, the Dominion and Provincial Government concerned each contributing one-fourth of the total amount. Exception is made where municipalities, by reason of recent abnormal expenditures for unemployment relief, are unable to bear half the cost of such public works. All agreements under the Act must be in accordance with the principles contained in the Fair Wages and Eight-Hour Day Act, 1930.

Agreements have been entered into with the Canadian Pacific Railway Company and the Canadian National Railways whereby there will be expended by these railway companies a sum of approximately \$26,000,000 in the performance of certain works and the purchase of certain material over and above the normal expenditure of the said railways, such works to be commenced immediately and to be completed within the next fifteen months. As compensation to the said railway companies the Dominion agrees to pay out of the amount appropriated by the Unemployment Relief Act interest at the rate of 5 p.c., calculated for a period of 18 months, on the total estimated cost of the works.

A grant of \$500,000 has also been made to the Railway Grade Crossing Fund, from which fund, under the provisions of the Railway Act, contributions are made for the purpose of obviating dangerous level crossings, in order to provide employment.

The following summary will show the standing of the appropriation as at Dec. 31, 1930.

### Section 10.—Old Age Pensions.

**The Old Age Pensions Act, 1927.**—An Act respecting Old Age Pensions (R.S.C., 1927, c. 156), was adopted by the Dominion Parliament in 1927. Under The Old Age Pensions Act, the Governor in Council is authorized to make an agreement with the Government of any province for the payment to such province quarterly of one-half the net sum paid out by such province for old age pensions, pursuant to a provincial statute providing for the payment of such pensions to the persons and under the conditions specified in the Act and the Regulations made thereunder.<sup>1</sup>

Sec. 5 provides that before any such agreement is made with the province, the scheme for the administration of pensions proposed to be adopted by the province shall be approved by the Governor in Council, and that no change in such scheme shall be made without the consent of the Governor in Council.

Sec. 8 is as follows:—

(1) Provision shall be made for the payment of a pension to every person who, at the date of the proposed commencement of the pension:—

- (a) is a British subject, or, being a widow who is not a British subject, was such before her marriage;
- (b) has attained the age of seventy years;
- (c) has resided in Canada for the twenty years immediately preceding the date aforesaid;
- (d) has resided in the province in which the application for pension is made for the five years immediately preceding the said date;
- (e) is not an Indian as defined by the Indian Act;
- (f) is not in receipt of an income of as much as three hundred and sixty-five dollars (\$365) a year, and
- (g) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

(2) The receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

Sec. 9 provides that the maximum pension payable shall be \$240 yearly, subject to reduction by the amount of the income of the pensioner in excess of \$125 a year. The pension authority may accept a transfer of the pensioner's interest in a dwelling house in which he resides, when the value of the dwelling will not be computed in calculating the amount of pension payable. The pension authority is entitled to recover out of the estate of any deceased pensioner the amount of pension payments with interest at 5 p.c., subject to the limitation that no claim shall be made for such recovery out of any part of the estate which passes by will or intestacy to any other pensioner or to any other person who has contributed, since the grant of the pension, or for the last three years during which the pension has been paid, to the pensioner's support.

Secs. 10, 12, 13 and 14 provide for the distribution of the pension burden among the provinces where the pensioner has resided during the 20 years immediately preceding the grant of the pension. Sec. 11 provides for a reduction of pension where a pensioner has resided for a portion of the 20 years in a province with which no agreement is in force. Sec. 15 provides for a suspension of the pension where a pensioner has transferred his residence to some place out of

<sup>1</sup> These Regulations as consolidated are printed in *extenso* at p. 127 of the Annual Report of the Department of Labour for the fiscal year ended Mar. 31, 1930.

Canada. It is provided by sec. 16 that a pension shall not be subject to alienation or transfer by the pensioner or to seizure in satisfaction of any claim against him. The Governor in Council was empowered by sec. 19 to make Regulations; pursuant to this section Regulations were approved on June 25, 1927, Sept. 26, 1927, Jan. 16, 1928, Dec. 21, 1928, and May 13, 1930.

The first province to enter into an agreement with the Dominion Government under the Old Age Pensions Act was British Columbia, where the payment of pensions began on Sept. 1, 1927. The province of Saskatchewan put the old age pension system into effect on May 1, 1928, and Manitoba adopted the plan on Sept. 1, 1928. In Alberta pensions were paid from Aug. 1, 1929, and in Ontario from Nov. 1, 1929. An Ordinance passed by the Yukon Territorial Council on June 7, 1927, empowered the Gold Commissioner to enter into an agreement with the Dominion Government for the purpose of putting into effect in the territory, or otherwise obtaining the benefit of, the Act respecting Old Age Pensions. By Order of the Governor in Council, old age pensions were paid in the Northwest Territories from Jan. 25, 1929. The New Brunswick Legislature passed enabling old age pension legislation during its 1930 session, to become effective on proclamation by the Lieutenant-Governor in Council.

Table 22 is a financial summary showing the cost of old age pensions in Canada as at Dec. 31, 1930, while Table 23 gives the countries of birth of the old age pensioners at that date, Canada and England leading. Table 24 is a statistical summary of old age pensions down to the end of 1930.

The percentage of old age pensioners born in Canada to all such pensioners was nearly 62.6, and that of pensioners born in the British Isles 24.5; thus practically 87 p.c. of all old age pensioners were born in Canada and the British Isles. Pensioners born in the United States represented nearly 2.9 p.c. of the total.

## Section II.—The Co-operative Movement in Canada.

A general article on "The Co-operative Movement in Canada" appeared at pp. 704-720 of the 1925 edition of the Year Book under the three sub-headings of "Consumers' Co-operation", "Co-operative Credit", and "Producers' Co-operation".<sup>1</sup> Because of the pressure upon space, this article is not reprinted here, but a digest of the latest available material on each of these three subdivisions of co-operation is included.

<sup>1</sup> The article referred to above was prepared for the Year Book by Miss Margaret Mackintosh, M. A., of the Department of Labour, Ottawa.

### Subsection I.—Consumers' Co-operation.

The co-operative store was first introduced into Canada by miners who had had experience of co-operation in Great Britain. The first co-operative store was opened at Stellarton, N.S., in 1861, and continued to do business until 1916. Many similar ventures were afterwards commenced, but a considerable number failed through their neglect to build up adequate reserve funds. In 1909 the Co-operative Union of Canada was formed, with six affiliated societies and 1,595 members; since October, 1909 it has published a monthly, "The Canadian Co-operator", from which the following statistics (Table 25) showing the growth of consumers' co-operation in the societies affiliated with the Co-operative Union have been taken.<sup>1</sup>

1927....	24	8,914	673,827	228,504	554,101	778,508	4,481,574	283,777	227,733
1928....	33	74,836	3,905,813	2,523,646	1,103,323	13,305,918	8,147,967	1,067,581	252,976
1929....	41	10,648 <sup>2</sup>	769,755	484,864	663,476	1,006,828	5,030,580	238,302	238,302

<sup>2</sup> The decrease in membership is accounted for by the dropping of the United Farmers of Canada, Saskatchewan Section, Ltd., and the United Grain Growers, Ltd., the withdrawal of the latter society being also responsible for the decreases in the figures shown in the remaining columns.

The progress shown by the returns from the societies affiliated with the Co-operative Union does not represent the whole growth of the consumers' co-operative movement in Canada. Although the societies affiliated with the Co-operative Union are among the oldest and best established, there is a larger number of consumers' co-operative societies outside the Union than within it, the great majority of these being in the western provinces. In 1926, the Manitoba Co-operative League was organized to link up the co-operative societies in that province, and a similar organization was formed in Alberta in 1923. In Saskatchewan a conference of representatives of co-operative societies has been held annually since 1923.

The following table shows the number of co-operative societies in the Dominion, provincially arranged by groups, together with their respective memberships:—

<sup>1</sup> For details regarding the Co-operative Union of Canada and its activities, see the 1925 Year Book, pp. 708-9.

### 26.—Number and Membership of Co-operative Associations in Canada, by Provinces and Groups, 1936.

Note.—The figures for the Co-operative Union of Canada which has 41 affiliated societies and a total membership of 10,648 have been included in the respective groups to which they belong.

#### Subsection 2.—Co-operative Credit in Quebec.

A form of co-operation which has achieved great success is that which provides short-term credit for small farmers and industrial workers in the province of Quebec. In 1900, what are known as "Les Caisses Populaires", or People's Banks, were begun with the establishment, by the late Alphonse Desjardins, of La Caisse Populaire at Lévis. M. Desjardins adopted the principles of lending money only for approved purposes to carefully selected members in a restricted area, of limited liability, of withdrawable shares of small amount payable by instalments, and of distribution of profits. These banks are for the most part established in agricultural districts. Loans are made to purchase agricultural implements at cash prices, to increase farm live stock, to improve farm buildings, to tide over a period of depression, to get out of a merchant's debt and for various other similar purposes. The loans, though comprised within the term "short credit", are for longer periods than are usual in ordinary commercial transactions because agricultural operations necessarily extend over longer periods than those of trade. They may be for 12, 15, or even 24 months, because they must give time for the farmer to realize on his products.

At present these banks are organized under the Quebec Syndicates Act, 1906. The value of the shares is generally \$5, which may be paid in instalments. The liability of the shareholders is limited to the value of their shares, which generally does not exceed \$2,000 per shareholder. Shareholders and borrowers must reside

within the area of the bank's field of operations, except that under the by-laws shareholders who remove from the locality may continue their holdings in the bank, but without participation in the management by holding office. Larger loans are made upon mortgage and the smaller ones upon notes, but a portion of the loan capital and interest must be repaid at fixed periods in such a way as to extinguish the debt within a determinate time. Each bank is administered by a board of from five to nine members. A credit committee of at least three members passes on the loans requested by shareholders, and a board of supervision of three members checks loans and value of securities and audits the accounts. The members of these boards give their services gratuitously.

The following table (Table 27) exhibits the progress of the banks during the fifteen years 1915 to 1929. The table is compiled from statistics included in successive volumes of the Quebec Year Book.

27.—Progress of Co-operative People's Banks in Quebec, 1915-1929.

Year.	Banks Reporting.	Members.	Depositors.	Borrowers.	Loans Granted.	Value of Loans Granted.	Profits Realized.
	No.	No.	No.	No.	No.	\$	\$
1915.....	91	23,614	13,696	6,728	8,983	1,483,160	89,893
1916.....	94	25,028	15,613	6,696	11,201	1,641,258	100,945
1917.....	93	25,669	18,977	7,458	12,741	2,306,172	148,591
1918.....	98	27,593	20,672	8,056	14,293	2,623,096	180,039
1919.....	100	29,795	23,451	9,148	14,386	3,667,004	238,375
1920.....	113	31,752	26,238	9,213	15,390	4,341,544	311,323
1921.....	100	31,029	30,570	9,219	14,583	1,248,725	352,940
1922.....	108	33,166	30,583	8,999	13,867	2,891,092	334,396
1923.....	111	32,173	29,771	8,373	12,273	3,429,444	354,804
1924.....	119	31,250	30,874	8,414	11,017	3,763,852	398,976
1925.....	122	33,279	33,527	9,384	13,682	3,909,790	449,531
1926.....	154	36,298	37,343	10,418	15,843	4,493,956	468,034
1927.....	159	41,355	40,753	11,754	16,832	4,778,761	537,294
1928.....	168	41,374	40,568	11,895	17,403	5,047,769	571,664
1929.....	178	44,835	44,685	13,553	17,994	4,249,650	645,616

From the table it will be seen that good progress has been made during the fifteen-year period. The number of banks reporting increased from 91 in 1915 to 178 in 1929, the membership from 23,614 to 44,835, the number of depositors from 13,696 to 44,685, borrowers from 6,728 to 13,553, the number of loans granted from 8,983 to 17,994, their amount from \$1,483,160 to \$4,249,650, and the profits realized from \$89,893 to \$645,616.

### Subsection 3.—Producers' Co-operation.<sup>1</sup>

The chief co-operative organizations of producers in Canada, as was clearly shown in the article on co-operation published in the 1925 issue of the Year Book, are still engaged in agricultural operations, including the grain growers of the prairies, the dairy farmers of Ontario and Quebec, and the fruit and vegetable growers of Nova Scotia, Ontario and British Columbia. The largest co-operative organizations in Canada are found among the grain growers of the Prairie Provinces.

**The Wheat Pools.**—A continued normal growth in membership, with a consequent increase in acreage under contract, marked the progress of the prairie wheat pools during the past year. Due chiefly to a policy of stringent economy which was made necessary by the difficult wheat marketing situation, no expansion of country elevator facilities was undertaken; but the complete line of 1,636 houses already erected was operated successfully throughout the past season.

<sup>1</sup> See also pp. 712-20 of the 1925 Year Book, and pp. 711-13 of the 1926 Year Book.

The Alberta Wheat Pool increased the storage capacity of its No. 1 terminal at Vancouver to the extent of 2,750,000 bushels, and also acquired, by lease, a 1,000,000 bushel terminal at Victoria, B.C. The combined storage space in Pool, country and terminal elevators now totals 95,976,250 bushels.

The central selling agency, or Canadian Wheat Pool, in common with all other wheat marketing organizations, was faced with an exceptionally difficult year and its turn-over and exports showed a heavy decline from the previous year. Total wheat sales for the 1929-30 season were 129,952,000 bushels, of which 56,877,613 bushels went into export channels. Unstable monetary and political conditions in China affected Canadian wheat exports unfavourably and the Pool's shipments to the Orient totalled only 4,000,000 bushels, compared with nearly 18 million in the preceding season. The United Kingdom was again the co-operative's largest customer, taking approximately 23,000,000 bushels, as compared with 34,600,000 bushels in 1928-29. Total Pool handlings amounted to 139,570,304 bushels, of which 24,040,981 bushels were coarse grains.

The Pool year was featured by difficulties of financing (involving legislative guarantees of bank loans by the Governments of the Prairie Provinces); changes in sales policy; a growing demand among members for a 100 p.c. Pool by legislative enactment; and continued expansion of cereal research activities.

The following table (Table 23) gives a statistical view of the expansion of the wheat pools during the past six years:—

23.—Pool Membership, Acreage and Bushels Handled by the Wheat Pools of the Prairie Provinces, 1923-1931.

**Section 12.—Labour Legislation in Canada.**

A general summary of Dominion and provincial labour laws to the end of 1928 will be found at pp. 755-762 of the 1929 Year Book, together with a short note on the division of legislative jurisdiction as between the Dominion and the provinces. A summary of 1929 legislation was published in the 1930 Year Book at pp. 746-748.

Legislation affecting labour enacted by the Parliament of Canada and the legislatures of the several provinces during 1930 has been published in the Report on Labour Legislation in Canada 1930, issued by the Dominion Department of Labour. The more important changes are noted below.

**Dominion Labour Legislation.**—The Fair Wages and Eight Hour Day Act provides for the payment of current or fair and reasonable rates of wages, and for the eight-hour day for employees on Dominion public works. Exceptions in regard to hours may be made in special cases.

P.C. 670, dated Mar. 27, 1930, provides that except where the work is intermittent in character or the application of the rule is not deemed to be in the public interest, the hours of work of employees of the Dominion Government who have heretofore been required to work more than eight hours per day shall be reduced to eight, with a half holiday on Saturdays.

The Unemployment Relief Act (see p. 778) was passed at the Special Session of Parliament called to deal with unemployment. This Act appropriated the sum of \$20,000,000 to be expended in public works undertaken by the Dominion Government to relieve unemployment, in assisting the provinces with similar works, and in reimbursing the provinces and municipalities for expenditure in connection with unemployment.

**Provincial Labour Legislation.**—In Alberta the Mines Act was repealed and a new statute for the regulation of coal mines was enacted. No boy under 16 years of age may be employed in or about a mine. Formerly boys between 14 and 16 years might work above ground on certificates as to education. Operators of hoisting machinery must be at least 21 years of age and have certificates of mental and physical fitness from a competent medical practitioner, which must be renewed every six months. Among the new provisions is one authorizing agreements between employers and workmen for the payment of wages oftener than twice a month. New regulations were made as to mine equipment and numerous general rules were added.

In the revision of the Manitoba Mines Act the powers of the inspector in ordering the remedying of dangerous conditions were widened and more detailed statistical returns as to wages, etc., required.

Part VIII of the Ontario Mining Act dealing with the operation of mines was re-enacted with a number of changes. These included provision for the maintenance of mine rescue stations and for an eight-hour day for operators of hoisting engines.

The Saskatchewan One Day's Rest in Seven Act provides for a rest period of at least twenty-four consecutive hours in every seven days (on Sunday if

possible) for industrial workers including municipal employees. Certain exceptions are made which are specified in the Act. The law applies only in cities, but it may be extended to other parts of the province by the Lieutenant-Governor in Council, who may also withdraw industries from its scope.

The Industrial Establishments Act of Quebec was amended to reduce the maximum normal working hours of women and girls and of boys under 18 years of age from 60 hours to 55 hours per week.

In Quebec workshops forming part of commercial establishments were brought within the scope of the Women's Minimum Wage Act and the Minimum Wage Commission was given power to fix the number of hours per week for which the minimum wage is payable, and to fix overtime rates. The Minimum Wage Act of Alberta was made applicable to the whole province.

A law providing for a minimum wage for women was enacted in New Brunswick and will come into effect on proclamation. This Act applies to all female employees who work for wages except farm labourers and domestic servants. The board of five members has power to fix minimum wages, and the number of hours per week for which such wages shall be paid, as well as overtime rates, and special rates for handicapped workers and apprentices.

A new Mechanics' Lien Act in Alberta is broader in scope and simpler in language than its predecessor.

Laws providing for mothers' allowances were enacted in Nova Scotia and New Brunswick. The New Brunswick Act comes into force on proclamation. Both Acts provide for the payment of an allowance, not exceeding \$60 per month, to a mother who is a widow with two or more legitimate children under 16 years of age and who is eligible under the conditions as to character, income and residence in the province. The mother of one child under 16 is eligible if she is herself an invalid or if she has an invalid child over 16 years of age residing with her.

The Child Welfare Act of Manitoba was amended to provide for the payment of an allowance in respect of any child within the prescribed age who is born in Canada whether or not the father of such child is a British subject by birth or naturalization. An amendment to the Saskatchewan Child Welfare Act provides for the granting of an allowance to a mother whose husband has not been heard of for seven years.

A clause added to the Children's Protection Act of Nova Scotia empowers the councils of cities and incorporated towns to pass by-laws regulating and controlling children under 16 years of age engaged as express or dispatch messengers and as vendors of newspapers and smallwares. Such by-laws must be approved by the Lieutenant-Governor in Council before having the force of the law.

Under the Ontario School Attendance law power to grant certificates relieving children from school attendance during employment is now given only to school attendance officers. The Vocational Education Act of Ontario was re-enacted with a number of changes, including the provision for instruction of children who reside in districts where the desired courses are not provided and the withdrawal of the optional system of administration, the single vocational committee method alone being retained.

An amendment to the Ontario Apprenticeship Act provides that the Ontario Minister of Public Welfare may require employers in any designated trade to contribute to the cost of maintaining the system of apprenticeship and administering the Act.

The Manitoba Workmen's Compensation Act was amended to carry out the recommendations of a special committee appointed in 1929. Compensation payable to a widow is raised from \$30 to \$40 per month. Monthly payments to a widow or invalid widower with or without children are limited to 66½ p.c. of the average earnings of the workman, subject to a minimum of \$12.50 per week in the case of a widow or invalid widower with one child and \$15 per week if the children number two or more. New provisions were enacted dealing with accidents outside the province, including one covering cases in which the workman regularly spends some of his time outside of Manitoba. The section which denied compensation to dependants resident in countries which were enemy countries during the Great War was repealed as from May 17, 1929. The waiting period is now three consecutive days. To the schedule of industrial diseases were added conjunctivitis and retinitis due to electro and oxy-acetylene welding, and occupational dermatitis and ulcerations and infections of the skin due to certain specified employments.

The Unemployment Relief Act of Alberta authorizes the payment from the General Revenue Fund of a sum not exceeding \$100,000 for the purpose of supplying relief to the unemployed of the province.

The Electrical Energy Act of Alberta provides for regulations governing, among other things, the inspection of plants and equipment, the safety of workers, and the licensing of electricians. The Steam Boilers Act of Saskatchewan was the subject of a number of amendments relating to qualifications for certificates.

### **Section 13.—Legislation Respecting Combinations in Restraint of Trade.**

In the 1927-28 edition of the Canada Year Book at pp. 765-770 a general article on Canadian legislation concerning trade combinations and monopolies against the public interest will be found under the heading "Legislation Respecting Combinations in Restraint of Trade". In addition to an outline of the Combines Investigation Act, and a review of the principal cases dealt with under the Act up to Mar. 31, 1927, the article includes a brief statement of the provisions against combines as contained in the Criminal Code,<sup>1</sup> the Customs Tariff,<sup>2</sup> the Excise Act,<sup>3</sup> and the Patent Act.<sup>4</sup> A further section of the article summarizes former Canadian legislation for the investigation of combines, including the Combines Investigation Act of 1910 and the Combines and Fair Prices Act of 1919.

<sup>1</sup> R.S., 1927, c. 146, ss. 496-498. <sup>2</sup> R.S., 1927, c. 44, s. 15. <sup>3</sup> R.S., 1927, c. 80, s. 27. <sup>4</sup> R.S. 1927, c. 150, s. 40.

**The Combines Investigation Act.**—The Combines Investigation Act (R.S.C. 1927, c. 26) is designed, as its full title indicates “to provide for the investigation of combines, monopolies, trusts and mergers”, and declares to be unlawful only such combines as “have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others”. The statute provides that a preliminary inquiry shall be made by the Registrar on receipt of an application signed by any six British subjects resident in Canada, or if the Registrar has reason to believe that a combine exists, or if the Minister of Labour so directs. If the preliminary inquiry discloses sufficient evidence to justify further investigation, this may be conducted by the Registrar or by a special Commissioner appointed by the Governor in Council. Full authority is given the Registrar and the Commissioner to examine witnesses on oath and compel the production of records and documents.

The remedies provided by the Act are those of publicity and penalty. The proceedings are conducted in private, unless otherwise ordered by the Minister, but the report of any Commissioner is required to be published within fifteen days of its receipt by the Minister. Any person who is a party or privy to, or knowingly assists in the formation or operation of, a combine is guilty of an indictable offence and liable to a penalty not exceeding \$10,000 or to two years' imprisonment; or, if a corporation, to a fine not exceeding \$25,000. Provision is also made in the Act for the reduction or removal of the customs duty on any article of commerce, among the manufacturers or dealers in which there exists a combine, the operation of which is facilitated by the tariff. Similarly, the Exchequer Court may revoke a patent if there is evidence to show that the holder of such patent has made use of his exclusive rights to limit production or competition unduly, to enhance prices unreasonably, or to restrain or injure trade.

The constitutional validity of the Combines Investigation Act was given final confirmation by the Judicial Committee of the Privy Council in a decision delivered in January, 1931. This judgment confirmed the unanimous decision of the Supreme Court of Canada, given in April, 1929, after a reference for determination of this question had been made to the courts by the Dominion Government. Both courts also upheld the constitutional validity of section 498 of the Criminal Code, relating to combinations in restraint of trade.

An investigation into the Amalgamated Builders' Council and related organizations, a combine of plumbing and heating contractors and others in the province of Ontario, was completed in December, 1929. Prosecutions on charges of violations of the Combines Investigation Act and section 498 of the Criminal Code were commenced by the Dominion Government against about fifty persons and corporations in Windsor, London and Toronto who were connected with the alleged combine. In May and June, 1929, thirteen of these persons and one company pleaded guilty to charges under the Combines Investigation Act and were fined a total of \$26,500, the largest fine being \$10,000 and the smallest \$500. Pleas of guilty to offences under section 444 of the Criminal Code were also entered at the city of London. Sentence was suspended on this charge, relating to conspiracy to defraud. Other prosecution proceedings in cases following this investigation were delayed by the courts and were resumed after the pronouncement of the Privy Council on the constitutional validity of the Combines Investigation Act.

An organization of electrical contractors in the city of Toronto, known as the Electrical Estimators Association, was investigated under the Combines Investigation Act in 1930. The report of the Commissioner conducting the investigation was completed in October, 1930. It stated that members of this Association had been guilty of participating in a combine contrary to the provisions of the Combines Investigation Act and that they had also committed similar offences in violation of section 498 of the Criminal Code. The principal method used by the members of this association was to discuss tenders before submitting them. Each contractor submitted to the secretary of the association an estimate of his costs of material and labour on a particular job; these costs were averaged and the contractor whose costs were nearest to the average was declared to be entitled to the job. He added an agreed-upon percentage, and informed the other members of his tender price. The other contractors then saw to it that none of their tenders was submitted to the architect or owner below that price.

Investigations into alleged combines in the motion picture industry and the bread-baking industry were among the other principal cases dealt with under the Act. An investigation into an alleged combine in the motion picture industry was commenced by a Commission in October, 1930, and was not completed at the end of the year. The annual report of the Registrar of the Combines Investigation Act contains reference to other investigations in progress during 1929 and 1930.

## PART II.—WAGES AND COST OF LIVING.

### Section I.—Wage Rates.<sup>1</sup>

Statistics of rates of wages and hours of labour have been collected for recent years by the Dominion Department of Labour, and are published in a series of bulletins supplementary to the *Labour Gazette*. Report No. 1 of this series was issued in March, 1921. The records upon which the statistics are based begin in most cases with the year 1901. Index numbers have been calculated to show the general movement of wage rates; the series covers 21 classes of labour back to 1901, 4 classes of coal miners back to 1900, and common factory labour, miscellaneous factory trades and lumbering back to 1911. The index numbers are based upon wage rates in 1913 as 100.

The accompanying table of index numbers (Table 1) shows the relative changes from year to year. A downward movement appeared in most of the groups in 1921 and 1922, after the peak had been reached in 1920. The index numbers for 1923 and 1924 showed on the whole a slightly upward trend, but while there were slight increases during 1925 in some groups, a substantial decline in coal miners' wages reduced the average. In 1926 slight increases took place in the wages paid by the building, metal and printing trades, electric railways

<sup>1</sup>See pp. 774-783 of the 1927-28 Year Book for an article on the "Wages Statistics of the census of 1921".

and steam railways. In 1927 general increases took place in all the six groups included in the average, as well as in the other three groups; wage increases in the building trades and on the steam railways were the outstanding features of the year. In 1928, except steam railways which was stationary, and common factory labour which declined fractionally, all groups showed an upward movement, a substantial increase appearing in building trades. In 1929 all groups except coal-mining were higher, the building trades showing the greatest increase. In 1930 building trades showed a substantial increase, lumbering a decrease, and other groups fractional increases.

Rates of wages and hours of labour in 1929 in various trades in the largest cities of the five economic areas of Canada will be found in Table 2. Samples of wages and hours of labour for common labour in various cities of Canada are given for various years since 1920 in Table 3. The attention of those specially interested in the subject of wages and hours is directed to the valuable detailed study, "Wages and Hours of Labour in Canada, 1920 to 1930", published by the Department of Labour as a supplement to the *Labour Gazette*, January, 1931.

<sup>1</sup>Simple average of the six succeeding columns.

## Section 2.—Wages and Hours of Labour Under Minimum Wage Boards in Canada.

### Subsection 1.—Minimum Wages for Females.

The accompanying table gives summary figures as to the minimum rates of wages in force during 1930 under the orders of the various boards, hours in some cases being governed by hours legislation. In some provinces these orders include regulations as to employment conditions, terms of employment, sanitary conditions, etc., and all provide for variations under licence from the Boards to permit lower rates of pay for handicapped employees, etc., and to meet special conditions in the nature of emergencies.

In this table the figures for adult learners and for minors and apprentices are shown in a range covering both classes. There is considerable variation in the rates for such classes in the various industries, and the time allowed for instruction varies considerably, from a few weeks to two years and upwards.

\*Food factories in Halifax only. †Applicable to certain cities only.

(a) In Manitoba in brickyards and in seasonal and casual employment in industries not otherwise covered a minimum wage of \$12 per week or 30 cents per hour is established.

(b) For Ontario the ranges of rates shown for experienced adults cover the various rates set for localities according to population.

(c) Seasonal canneries included under separate order: 18 to 60 years of age, 18 to 25 cents per hour, other ages 15 to 20 cents.

(d) The Factory Act provides for maximum hours for female employees, 10 per day and 60 per week.

(e) Textile and knitting factories: \$10-\$12 for experienced adults; \$6-\$10 for minors and learners; boot and shoe and leather trades, \$8-\$12.50 for experienced adults; \$5-\$11 for minors and learners; various classes of clothing and tobacco factories: \$9.00-\$12.50 for experienced adults, \$6-\$11 for minors and learners; these rates to be paid for 44-55 hours per week in clothing factories and for 50-55 hours in tobacco factories, pro rata for additional hours.

(f) The Factory Act provides for maximum hours, for female employees, 10 per day and 55 per week.

(g) Probationary period without minimum rate.

(h) Winnipeg and vicinity only under order.

(i) In mail-order houses and in retail stores in certain cities and towns.

The number of learners and apprentices is usually restricted, for instance to 25 p.c. of the employees.

The hours of labour are in most provinces governed by the various Factory and similar Acts, and in some provinces the Boards have power to make further restrictions. In Ontario the Act was amended to give the Board authority to state the hours for which the minimum rates were payable and to establish rates for additional hours. The hours for female employees are limited by the Factory Act to 10 per day and 60 per week, additional hours being permitted only when authorized by the factory inspector to meet emergencies and under certain limitations. In Quebec the provision is similar, except that the maximum hours are 10 per day and 55 per week.

The information here given is intended to afford merely a statistical summary of the minimum wages and restricted hours of labour in the provinces and industries affected. While some of the more significant details have been given in footnotes, it has been found impossible to include the information in such form as to indicate any more than the general conditions under these provisions.

**Employees Under Orders of Minimum Wage Boards in Canada, 1930.**

(k) In the fishing industry a minimum rate of \$15.50 per week (48 hours) or 32½cts. per hour is set for experienced workers (12 months); \$12.75 to \$14.75 under one year.  
 (l) Rate applies to work between 44 and 50 hours per week, hours in excess of 50 to be paid at not less than a rate based on 50 hours per week; hours under 44 at a rate based on normal hours in establishment.  
 (m) Longer working time permitted on Saturdays, etc., and sometimes in certain months.  
 (n) Full minimum rate for 36 hours or longer up to 50 hours for time under 36 hours and over 50 hours, 20 to 25 cents per hour, according to population; order applies only to localities of 4,000 and up.  
 (o) Kitchen help \$11 per week of six days or \$12 per week of seven days; 35 cents per hour.  
 (p) Including garages, gasoline, service stations, shooting galleries, elevator service, etc.; in British Columbia, driving vehicles, ushers, cloak-room attendants, etc., special provision for broken and part time.  
 (q) Full minimum rate for 40 hours or more worked; 25 to 30 cents per hour for work less than 40 hours.  
 (r) Custom millinery in localities of 4,000 population and up.  
 (s) Cities of 30,000 and up.  
 (t) Telephone only: in localities of 4,000 and up and those having 200 or more telephone subscribers.  
 (u) Probationary period in departmental stores with minimum of \$6 thereafter.  
 (v) In establishments classified as factories, covered by factory orders.  
 (w) Applies also to wholesale houses and warehouses. (x) Cities and towns only.

### Subsection 2.—Minimum Wages for Male Employees.

In Alberta, legislation of 1926 provides that no male may be employed at a lower wage than the minimum rate for female employees in the same class of work, except in the case of apprentices under indenture approved by the Commissioner of Labour, who is the Secretary of the Minimum Wage Board.

In British Columbia the orders issued under the Male Minimum Wage Act, 1925, having been declared invalid in October, 1928, by the Supreme Court of Canada (see *Labour Gazette*, November, 1928, p. 1310), a new Act was enacted in the session of 1929. This like the original applied to all occupations except those of farm labourers, fruit pickers, fruit packers, fruit and vegetable canners and domestic servants. On Jan. 22, 1930, an order effective from that date was issued providing for a minimum rate of 50 cents per hour for "stationary steam engineers" and 40 cents per hour for "special engineers" as defined under the "Boiler Inspection Act" On July 31, 1930, an order was issued effective from that date providing for a minimum rate of 80 cents per hour for licentiates in pharmacy, engaged in the selling, dispensing, etc., of drugs, etc.

### Section 3.—Cost of Living of Wage Earners.

An index number of the cost of living in working men's families has been computed by the Department of Labour since 1913, and is published monthly in the *Labour Gazette*. This index is specifically designed for the purpose of measuring the trends of the cost of living for certain wage-earning classes with a somewhat lower standard of living than that which is measured by the Bureau of Statistics index number of retail prices, shown on pp. 818-819 of the present volume. The former wage-earner's index is used extensively in negotiations as to wage rates and in the settlement of industrial disputes. An abridgement of this index is presented in Table 5.

<sup>1</sup>The figures for "all items" were calculated by giving the following weights to each group: Food 35 p.c.; Fuel 8 p.c.; Rent 18½ p.c.; Clothing 18½ p.c. and Sundries 20 p.c.

<sup>2</sup>Revised.

## CHAPTER XX.—PRICES.<sup>1</sup>

Commodity prices naturally fall into two main divisions—wholesale prices and retail prices. Because the number of wholesale traders is smaller than that of retail traders, buying and selling by carefully defined grades more prevalent, and price ranges at any particular time and place much narrower, it would appear that wholesale prices and their fluctuations are more easily and accurately ascertainable than retail prices. But this advantage is largely offset by certain difficulties inherent in the nature of index numbers of wholesale prices. The making of an index number of wholesale prices for general purposes requires the inclusion of a much wider range of commodities than is necessary for a retail or cost of living index. Moreover, wholesale commodities are in all stages from raw material to finished product, while retail prices are concerned only with the latter. At each stage in the evolution of a commodity we are frequently confronted with several grades, and this situation is complicated by the fact that grades undergo changes in the course of time. Hence, to secure from month to month and year to year quotations which give accurate continuity is a task in which eternal vigilance is the price of success. The maker of wholesale index numbers must be assiduous in acquiring and keeping up to date a knowledge of grades and qualities, and in dealing with a very large list of commodities this is a difficult task. With retail prices, the question of grades is not quite so involved and in some cases it is sufficient to obtain quotations on the basis of "the kind principally sold".

Wholesale transactions are generally between expert buyers and sellers, dealing on purely business principles. Accordingly, wholesale prices conform approximately to the operation of the principle of supply and demand, and are thus more valuable as an index to the current state of business. Retail prices, on the other hand, are governed to some extent by custom and do not respond easily to fluctuations in wholesale prices. Indeed, small fluctuations in wholesale prices are not fairly reflected in retail prices because of the limitations of the currency in representing small quantities of commodities. Retail prices vary considerably for the same commodity in different parts of the same city, owing to differences in the service rendered, in location of stores and in classes of customers.

Further, since wholesale prices are determined by the business situation of the moment while retail prices change more slowly, there exists what is technically called a "lag" between the two, retail prices not showing changes in fundamental business conditions until some time after wholesale prices. Thus, while wholesale prices in Canada reached the peak in May, 1920 and commenced to decline in June, retail prices reached the peak in July, 1920, and began to decline in August.

Retail prices find one of their chief uses in the measurement of changes in the cost of living. This measurement is complicated by such changing factors as consumption, habits and standards of living, and qualitative changes in com-

<sup>1</sup> Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. This Branch compiles and publishes statistics on: Prices (wholesale, retail, securities, services, interest rates, cost of living), Retail and Wholesale Trade, Foreign Capital Investment in Canada and Canadian Investment Abroad, Balance of International Payments and other related activities. For a complete list of the publications of this Branch the reader is referred to Chapter XXVIII, Section I, under "Internal Trade".

modities included in the budget, particularly clothing. The difficulty of maintaining comparability between one period and another necessitates very thorough research and an elaborate collection of retail price data.

## Section I.—Wholesale Prices of Commodities.

### Subsection I.—Historical Review of Canadian Prices.

Until recently the index number of wholesale prices in Canada did not go back beyond 1890. However, it has now been extended backward to 1867 on the 1913 base, the added quarter of a century including a very interesting period to students of price statistics. The average index numbers for every year since Confederation are given in Table I. In that table will be noted the high prices of 1867, immediately following the close of the American Civil War and the Austro-Prussian War of 1866, and the tendency to declining prices in the years immediately following. Prices went up again after the Franco-German War of 1871 and reached a high point in 1872 and 1873, but the crisis of the last-named year resulted in a decline. This declining trend persisted fairly steadily throughout the 25 years from 1872 to 1897 and was featured by an inadequate increase in the supply of gold. The gold supply of the world did not increase as rapidly as the supply of commodities, consequently more commodities could be secured for a given amount of gold. This gold shortage was accentuated by the demonetization of silver which ceased to be legal tender with gold and was reduced to the level of token money by the chief nations. Relief came through the discoveries of gold in the Rand mines and the application of the cyanide process to low-grade ores. The result was a rapidly increasing world production of gold from about 1890 down to the outbreak of the Great War, with consequent rising general prices as soon as the volume of the new gold became a large part of the total stock. Thus prices increased from the low point of 75.6 in 1897 to 100 in 1913 and 102.3 in 1914. Afterwards, the Great War, both through the scarcity of commodities which it occasioned and the inflation of the currency which it produced, drove prices rapidly upward to a maximum of 243.5 in 1920, followed by a rapid collapse to 152.0 in 1922. This was succeeded by a slight increase to 160.3 in 1925, but the tendency since 1925 has been downward.

Commencing in the fall of 1929, a severe economic depression set in which was accompanied by a drastic decline in wholesale prices. By December, 1930, the index on the 1913 base was 121.4 and for the whole year it averaged 135.3.

#### I.—Annual Index Numbers of Wholesale Prices in Canada, 1867-1930.

(1913=100.)

1867.....	133.0	1883.....	106.0	1899.....	81.4	1915.....	109.9

THE COURSE OF WHOLESALE PRICES IN CANADA  
1867—1930  
AVERAGE PRICES, 1913 = 100

**Subsection 2.—The New Index Number on a Post-War Base (1926).**

The official Canadian index number of wholesale prices and other price indexes computed by the Dominion Bureau of Statistics have been revised and calculated with the year 1926 as base. In the index of wholesale prices, the number of price series has been increased from 236 to 502, some of the latter being composite prices. For example, the index number for milk is obtained from the weighted average of 15 prices collected at representative centres all over the Dominion. New statistical materials have made possible refinements and extensions of the weighting system previously used; this adds to the accuracy of the index numbers, particularly those of groups and sub-groups. A detailed explanation of the methods now used in computing the indexes and the reasons for their adoption follows:—

**Base Year.**—Since the nations of the world and along with them their currency systems have arrived, or are in the process of arriving, at a condition which may perhaps be called post-war "normalcy", comparisons with pre-war years become less important and interesting, and the need arises of placing index numbers upon some post-war base which will serve as a suitable background for future movements. A second important reason lies in the necessity of a periodical revision of index numbers so as to take account of current changes in the kind, quality and weighting of the commodities used in their computation. Ten years ago, the maker of index numbers was not concerned with artificial silk, but today this commodity must be given an important place in the textile group. Again, such commodities as newsprint paper, copper, wheat, etc., must be given a greater weight in a Canadian index based on current conditions than in one based on 1913 conditions. So many changes take place in the production, consumption and exchange of commodities in a decade that a periodical revision of index numbers based upon them is a necessity.

It is preferable that a base period should consist of an average of several years, but the abnormal conditions which prevailed during and after the war furnish insuperable obstacles to a base of this character. Prior to 1925 the disparity between farm prices and the prices of manufactured goods was an abnormal factor in the prices situation. In Canada this was rectified in 1925, when on account of the marked rise in grain prices, the index for which rose from 143.9 in 1924 to 180.3 in 1925, a price level unusually high for the period resulted. It was finally decided to take as base the year 1926, the price level for which was about halfway between that for 1925 and 1927. This is in effect practically equivalent to an average of the three years 1925, 1926 and 1927. The Bureau was also influenced in its choice of 1926 as base by the fact that the index numbers computed by the United States Bureau of Labour Statistics are on the 1926 base. It was desirable, owing to the close interrelation of price movements in the two countries, to construct the index numbers on similar principles for comparative purposes.

**Number of Price Series Included.**—The new total index number for all commodities shows very much the same movement as the old series. It was however, mainly for the purpose of improvements in groups and sub-groups that the number of price series included in the index was increased from 236 to 502. This large increase in the number of items included made it possible to make many groups much more comprehensive and representative. Building and construction materials, for example, are now represented by a wider range of commodities as well as by a more geographically complete series of prices. The number of price series in this group was increased from 32 to 90. Similar improvements have been made in a great many other groups and sub-groups. Chemicals and Allied Products now includes 73 price series as compared with 13 in the old index. Non-metallic Minerals and Their Products is represented by 73 price series in the new index and 16 in the old. These changes in the number of price series have added greatly to the usefulness of the index numbers as regards groups and sub-groups, which furnish subsidiary index numbers for special purposes.

**Formula.**—Actual calculations of the index number were made according to the same formula as before. This formula, which produces the aggregative index, is now used for the purpose of calculating many of the most important index numbers and for a comparison of three or more periods on a fixed base has the support of many eminent index number makers. It is expressed as follows:  $\frac{\sum P_1 Q_0}{P_0 Q_0}$

**Weighting.**—Weighting, of course, must conform to the formula used, but many variations are possible within the system. Quantity exchange is the basis of the Bureau's weight, that is to say, production and import figures are used to arrive at a weight, but as regards production, only quantities actually marketed are considered. In arriving at the weight for any commodity, duplication is avoided by making deductions, where possible, when the commodity is included again in another form, for example in the case of wheat and flour. An improvement in weighting has been made by working out a threefold system, *viz.*, weights for individual commodities, sub-groups, and finally, groups of commodities. In the first place the commodities in each sub-group are weighted in such a manner as to arrive at the most accurate index for that sub-group. Such weights, however, will not do for a main group which may include another sub-group containing the same commodity in a different form. For this reason, the sub-group index numbers are again weighted by sub-group weights (values worked into percentages). Another reason for the sub-group weights is the fact that in each sub-group only representative commodities are included. In order to give each sub-group sufficient weight in arriving at a group index it must be weighted by a figure which represents as far as possible the total value of all commodities which might be included in the sub-group. Finally, group index numbers are weighted in arriving at the index number for all commodities, so as to ensure that no group index will wield a disproportionate influence upon the final result. The group weight is the estimated total importance in exchange of all commodities which can be classified in that particular group. An example will make this clear:—

Grains are a sub-group of the main group Vegetables and Their Products. Individual commodity and sub-group weights are as follows:—

Commodity.	Weight for Individual Commodity or Prices Series.	Sub-group Weight.
Barley, No. 3, C.W. x 40%.....	Average price x 45,000,000 bushels...	\$325,000,000 or 35-38 p.c.
Barley, No. 4, C.W. x 30%.....		
Barley, Feed x 30%.....		
Barley, good malting.....	Average price x 3,000,000 bushels...	
Corn, Am. Yellow, No. 2.....	Average price x 12,000,000 bushels...	
Corn, Am. Yellow, No. 3.....		
Flax, No. 1, N.W.C. x 70%.....	Average price x 6,000,000 bushels...	
Flax, No. 2, N.W.C. x 15%.....		
Flax, No. 3, N.W.C. x 15%.....		
Oats, No. 2 C.W. x 20%.....	Average price x 50,000,000 bushels...	
Oats, No. 3 C.W. x 25%.....		
Oats, No. 1 Feed (Western) x 30%.....		
Oats, No. 2 Feed (Western) x 25%.....		
Oats, Ontario.....	Average price x 10,000,000 bushels...	
Peas, No. 2 White, Ontario.....	Average price x 2,000,000 bushels...	
Rye, No. 2 C.W. x 70%.....	Average price x 7,000,000 bushels...	
Rye, No. 3 C.W. x 10%.....		
Rye, Rejected, x 20%.....		
Rye, No. 2 Ontario.....	Average price x 2,000,000 bushels...	
Wheat, No. 1 Man. Northern, x 35%.....	Average price x 350,000,000 bushels...	
Wheat, No. 2 Man. Northern, x 25%.....		
Wheat, No. 3 Man. Northern, x 40%.....		
Wheat, No. 2 Ontario.....	Average price x 20,000,000 bushels...	

The index number for the above sub-group is weighted by the aggregate value of all grains marketed less the values of grain shown elsewhere in the form of other commodities such as flour, rolled oats, linseed oil, etc. For this sub-group the weight is \$325,000,000 or 35-38 p.c. of the total value of the whole Vegetable Products group.

Quantities and values used for weights are, in the main, for the year 1926, but where weights for that year are not deemed to be representative, conditions in other years are considered. Sometimes an average of several representative years is taken. There is no attempt made to adhere rigidly to one hard and fast rule of weighing. In many cases, modifications are made with the object of adopting the weights likely to obtain the most satisfactory results. Final group weights are as follows:—

Vegetables and Their Products.....	30
Animals and Their Products.....	16
Fibres, Textiles and Textile Products.....	9
Wood, Wood Products and Paper.....	15
Iron and Its Products.....	12
Non-Ferrous Metals and Their Products.....	6
Non-Metallic Minerals and Their Products.....	9
Chemicals and Allied Products.....	3
<b>Total.....</b>	<b>100</b>

**Classification of Commodities.**—These new index numbers have been issued in the same three classifications as the old index, *viz.*, Component Materials, Purpose and Origin.

NUMBER OF PRICE SERIES INCLUDED IN THE NEW AND OLD INDEX NUMBERS OF WHOLESALE PRICES.

	New.	Old.
Vegetables and Their Products.....	124	67
Animals and Their Products.....	74	50
Fibres, Textiles and Textile Products.....	60	28
Wood, Wood Products and Paper.....	44	21
Iron and Its Products.....	39	26
Non-Ferrous Metals and Their Products.....	15	15
Non-Metallic Minerals and Their Products.....	73	16
Chemicals and Allied Products.....	73	13
<b>Totals.....</b>	<b>502</b>	<b>236</b>

The Dominion Bureau of Statistics annual index number of wholesale prices for 1930 was 86.6 as against 95.6 in 1929. It represented a drop of 44.4 p.c. from the peak year 1920, but still remained 35.3 p.c. above the 1913 index of 64.0. No annual average index has been so low since 1916, when the number was 84.3. The current decline in the index was first apparent in September, 1929, and in the fifteen-month period between that time and November, 1930, it has fallen from 98.4 to 79.5, or 18.3 p.c. During the 1920-21 recession, the index dropped almost without a break from May, 1920, to December, 1921, a period of nineteen months. The difference between the peak and trough of the movement at that time amounted to 41.3 p.c.

All of the various commodity groups, which are combined to calculate the general index numbers given above, moved appreciably lower in 1930. Vegetable Products fell from 91.6 in 1929 to 77.7, the largest drop registered by any class of commodities. Drastic reductions in prices for grains combined with appreciably lower quotations for sugar, coffee, flour, and rubber, were the chief influences upon the course of the index. Animals and Their Products declined from 109.0 to 99.1 due mostly to weaker prices for furs, hides and skins, live stock, meats, and butter. Fibres, Textiles and Textile Products were 81.8 as against 91.3 in 1929. Both raw and finished items of cotton, wool, silk, and rayon were generally lower for the current year. Wood, Wood Products and Paper dropped from 93.9 to 88.7, lumber and timber of nearly all descriptions having been cut in price. Iron and Its Products moved down from 93.7 to 91.1, average quotations being lower for rolling-mill products and iron and steel billets. Non-Ferrous Metals and Their Products broke from 99.2 to 80.7, due to abrupt reductions in copper and steady declines in lead, tin, zinc, and silver. Non-Metallic Minerals and Their Products changed from 92.9 to 91.3, easier prices for coal, petroleum products, asbestos, and building brick accounting largely for the decline. Chemicals and Allied Products were 92.8 as against 95.4 in 1929, principally because paint materials and tanning and dyeing materials moved downward. Of the 502 items, 324 were lower as the year closed than they had been in January, while 142 remained unchanged, and 36 were higher.

## 2.—Weighted General Price Index Numbers, by Months, 1922-1930.

(1926=100.)

3.—Annual Weighted Index Numbers of Wholesale Prices of Commodities, by Groups (Chief Component Material Classification), 1913-1930, with Monthly Figures for 1928-1930.

Note.—The monthly and annual figures for 1927 and 1928 have been revised, particularly as regards the groups of Animals and their Products and Non-Ferrous Metals and their Products. These revisions also affect slightly the "All Commodities" column.

(1926=100.)

## Section 2.—Retail Prices of Commodities.

Collection of data and calculation of index numbers of retail prices and the cost of living are carried out in co-operation by the Dominion Bureau of Statistics (Department of Trade and Commerce) and the Department of Labour. Resultant series of index numbers are computed from different points of view. The computations of the Labour Department are designed to show changes in the cost of living for workmen in cities. They are constructed from family budgets, principally a weekly family budget of staple foods, fuel and rent published monthly in the *Labour Gazette* since 1915 and annually since 1911; in addition, figures are included for clothing and sundry items and further data for fuel, light and rent. The Labour Department aims by this method to have a basis for computation that can be readily applied to the data for any given locality or district at any time, or for any class of labour, for instance, coal miners, who usually do not live in cities. Index numbers of retail prices and costs of living issued by the Bureau are constructed from a more general point of view, having for their object the measurement of the general movement of such prices and costs in the Dominion as a whole, and being so calculated as to make comparisons possible with other general index numbers constructed on similar principles, for example, the index of wholesale prices. Calculated as they are on the aggregative principle, *i.e.*, the total consumption of each commodity, the Bureau's index numbers afford an excellent measurement of changes in the average cost of living in the Dominion as distinguished from that of any particular class or section.

In the Bureau's index 1926 is taken as the base year and is represented by 100 to bring it into conformity with other series of index numbers shown in this report. The Labour Department uses 1913 as 100 for both cost of living and wages index numbers. As will be seen from Table 7, the general cost of living was slightly lower again, having fallen from 100.0 in 1929 to 99.3 in 1930. This decline would have been considerably larger had it not been for the rentals index, which advanced from 103.3 to 105.9. Food and clothing were both appreciably below corresponding figures for 1929, while fuel and miscellaneous items recorded very little change.

**Weighting.**—The system of weighting involves weights for (1) individual items, (2) sub-groups and (3) group weights as shown in the description of group index numbers. The whole weighting system is based on estimated aggregate consumption in Canada. Separate index numbers are calculated for food, fuel and lighting, rent, clothing and sundries.

**Food.**—In the Dominion Bureau of Statistics index of the cost of living the food group includes 46 items, which are:—

Beef, sirloin steak	Butter, creamery	Prunes
Beef, shoulder roast	Cheese, old and new	Raisins
Veal	Bread	Currants
Mutton	Soda biscuits	Jam
Pork, fresh	Flour	Peaches
Pork, salt	Rolled oats	Marmalade
Bacon	Rice	Corn syrup
Ham	Tapioca	Sugar, granulated
Fish, cod	Tomatoes	Sugar, yellow
Fish, finnan haddie	Peas	Coffee
Fish, salmon	Corn	Tea
Lard	Beans	Cocoa
Eggs, fresh	Onions	Vinegar
Eggs, storage	Potatoes	Salt
Milk	Apples	Pepper
Butter, dairy		

Prices are secured by circularizing about 900 grocers and 700 butchers, and from data collected by correspondents of the Department of Labour.

Average prices are calculated for more than 70 cities and these are converted to a Dominion average for each commodity. In computing the index each average price is weighted by the aggregate Canadian consumption in 1926, which is the base year used in the calculation. The group index number is weighted by 30 p.c. in order to arrive at the general index number.

**Fuel and Lighting.**—Information regarding items of this group is obtained by circularizing between 600 and 700 firms to obtain prices for coal, coke, wood, gas, and electricity. Separate index numbers are made for each type of fuel or lighting and these are weighted by a figure representing the importance of the sub-group in consumption. The weights are as follows: coal 53 p.c., wood 16 p.c., gas 9 p.c., electricity 13 p.c., coke 9 p.c. The group index number for fuel and lighting is in turn weighted by 6 p.c. in order to arrive at the general index.

For the purpose of constructing the coal index, Canada is divided into three parts, according to the kind of coal most used for domestic purposes. In the Maritimes, eastern bituminous is the typical coal fuel; for Ontario and Quebec it is anthracite and coke. Western domestic coal is used in the Prairie Provinces, and in British Columbia both western domestic and B.C. bituminous are extensively used. City prices are weighted by domestic consumption data to obtain provincial average prices, and these in turn are weighted by provincial domestic consumption in order to obtain the Dominion index.

Wood index numbers are constructed on similar principles with the exception that no account is taken of different consumption areas.

Gas index numbers include both natural and manufactured gas. In each case average monthly bills are weighted with consumption figures for each city. The resulting index numbers are then weighted by the national domestic consumption of natural and manufactured gas to obtain the final index.

Electricity index numbers are computed on the basis of monthly bills, representing average consumption in Canadian cities, weighted by the number of consumers in each city in 1926.

By-product coke has been taken as representative of all coke in making the index for this fuel. Over 75 p.c. of the coke manufactured in Canada in late years has been of that variety, and imported coke is almost exclusively of that kind.

Index numbers for coke are constructed by weighting city average prices with consumption figures, and the resulting aggregative index for each province is again weighted by provincial consumption in 1926 in order to arrive at the Dominion figure. No prices are included for the western provinces in calculating this index because their consumption is negligible.

**Clothing.**—For this group 55 clothing items are utilized as follows: men's 25, women's 23, and women's dress goods 7. In order to obtain prices for the commodities included, over 200 schedules are sent out quarterly.

Included in the above estimate of clothing returns as single units, are groups of schedules received from practically all the large Canadian departmental stores. Each store sends in 16 schedules of men's and women's clothing prices and in nearly all cases quotes on three grades of every article specified. Because departmental stores play such a large part in the determination of

retail price levels, the returns received from them are given considerable weight in the compilation of the clothing index data. The following Canadian cities are covered by departmental store price schedules:—Montreal, Toronto, Winnipeg, Saskatoon, Regina, Calgary, Lethbridge and Vancouver.

In calculating the index number for this group separate indexes are first computed for the three sub-groups, men's clothing, women's clothing, and women's dress goods, and these are weighted by the figures 50 p.c., 33.3 p.c. and 16.7 p.c. respectively in order to arrive at the final group index.

Because of the difficulty of following clothing prices through a period of time of any length owing to changes in style and season, the index numbers for this group are calculated by the link relative method and afterwards tied up into chain relatives:—That is to say, index numbers are calculated for each commodity from current prices with immediately preceding prices as a base and the resulting index is multiplied by the last of the indexes on the 1926 base to make a continuous chain. Individual index numbers are then weighted by estimated consumption and combined into the final clothing index.

**Rent.**—In order to follow the trend of rentals, four types of dwelling are used, viz., house, duplex, flat and apartment, and in each case, with the exception of duplex houses, information is utilized regarding both lower and medium grade dwellings. In all about 500 schedules are sent out semi-annually. The averages resulting from the compilation of these data are weighted as follows:—

Sub-group weights—		
A. Grade of Dwelling—		
Lower grade.....		40 p.c.
Medium grade.....		60 p.c.
		100 p.c.
B. Type of Dwelling—		
	Lower Grade.	Medium Grade.
	p.c.	p.c.
House.....	84.6	73.3
Duplex.....	—	8.3
Flat.....	7.7	7.7
Apartment.....	7.7	10.7
	100.0	100.0

In calculating the general rental index, seven sub-indexes are made, corresponding to the type of dwellings noted above. These indexes are based upon averages of rental quotations for each city. After the city averages have been weighted, the sub-indexes are obtained by the aggregate method. The two sets of sub-group weights are then applied to obtain the final index. In order to calculate the total cost of living index numbers, that of the rental group is weighted by 20 p.c.

For a time, in calculating its rental index numbers, the Bureau took account of three grades of dwellings, lower, medium grade, and better grade dwellings. Also two sizes for each grade were included. The range of quotations for better grade dwellings was so wide, however, that it was not possible to arrive at average rental figures that were of any value. Experience proved also that quotations for two sizes of each item are not necessary, since the trend of rentals is shown accurately by quotations for one typical size.

**Miscellaneous Group.**—This group index is weighted by 26 p.c. to obtain the total Dominion cost-of-living index numbers. It contains many sub-groups, each of which is weighted to obtain the group index. Sub-groups and weighting data are seen in the following table:—

Sub-groups.	Number of Items.	Estimate of Average Number of Schedules.	Sub-group Weights.	Frequency of Calculation.
1. Medicine (drugs).....	15	95	15	Annually.
2. Household effects.....	49	Textiles..... 70 Hardware..... 95 Crockery..... 20	40	Quarterly.
3. Furnishings.....	20	80	119	Quarterly.
4. Trampfare.....	2	60	59	Annually. <sup>1</sup>
5. Telephones.....	1	75	59	"
6. Amusements.....	1	55	90	"
7. Insurance.....	2	Data covering 14 Life and 44 Fire Co's.....	109	"
8. Tobacco.....	4	40	90	"
9. Newspapers.....	2	75	24	"
10. Books and Education.....	3	Periodicals..... 10 Publishers..... 3 Stationers..... 6	15	"
11. Doctor.....	3	35 (Provincial schedules of fees used)	71	"
12. Dentist.....	1	60	18	"
13. Hospitals.....	4	200	24	"
14. Laundry.....	4	60	14	"
15. Cleaning supplies.....	6	400	13	Quarterly.
16. Barber.....	3	65	27	Annually.
17. Toilet articles.....	10	95	16	"
18. Motor operation costs.....	2	Data covering motors operated by private owners, taxi companies, government fleets, civic fleets, etc.....	197	"
<b>Totals.....</b>	<b>133</b>	—	<b>1,000</b>	—

<sup>1</sup>Where any important changes in rates occur during the year the index is recalculated to measure the effect of the change.

**Method of Construction.**—Several of the miscellaneous groups having no special characteristics and all being calculated in the same manner, may be considered together. They are computed from link relatives in much the same manner as is done in the case of the clothing sub-groups. Relatives are made from the quotations of the individual firms or persons. These relatives are averaged for every city and then weighted to obtain provincial and Dominion averages of relatives. Finally, a Dominion average price is calculated for each commodity in the group, which bears the same relation to the last previous price as the average of relatives bears to 100. The bases of these calculated prices are averages of actual prices in 1926. Thus if the average of relatives for the post-base period were 110 and the base price \$1 the new price would be \$1.10. The prices calculated in this way are weighted with estimates of national consumption and from the aggregates of the resultant products Dominion link relatives are obtained. These are changed to chain relatives on a base 1926=100. The indexes for prices of medicine, tobacco, household furnishings, laundry, cleaning supplies, barbers' services, and toilet articles are constructed on this plan. So also are those for dentists' fees and theatre admission prices, but the arrangement of the data is slightly different for these two indexes. The principle involved in the construction of the sub-group indexes for textiles, hardware and crockery, which are combined to form the

household effects index, is likewise the same as that described. The final index for household effects is obtained by weighting the three group indexes upon a consumption or replacement basis and then taking an average of these figures.

*Tramfares.*—The tramfares index is composed of two units, a city index and a radial index. In each case an average fare for the Dominion is reckoned by dividing total annual passenger revenue by the total number of passengers carried. From these average fares indexes are made, the two units being combined after weights representing city and radial passenger revenue for 1926 have been applied.

*Telephones.*—In compiling the telephones index the monthly charge for the typical residential phone of the locality is the unit upon which the number is based. Provincial indexes are made from aggregates of weighted city phone bills. A Dominion index is also struck by taking the average provincial bills and weighting them with a figure representing the number of provincial subscribers. The aggregate thus obtained is divided by a similar aggregate for 1926 and multiplied by 100, to produce the index in its final form.

*Insurance.*—Changes in the cost of insurance are measured by a combination of two indexes, one of fire insurance rates and a second measuring the extent of changes in the level of life insurance premiums. The first is of simple construction, for there is practically no element other than that of straight risk entering into the cost of fire insurance. Its index is calculated from annual figures which show the percentage ratio of Canadian paid-in premiums to total risk taken. This cannot be done for life insurance because the element of risk is inextricably involved with profit-sharing, savings and investment, etc., which result in a great many different policy plans. Then too, risk is not a stable element as it may be considered for practical purposes in the case of fire insurance, varying as it does with the age of the policy-holder. Thus a more complicated index has been found necessary for life insurance.

Eighteen sub-group indexes have been made, taking into account variation in risk by including premium rates for three age groups centering around the 21st, 35th and 50th years of life and variation in types of policy groups which account for the greater part of life insurance written in Canada; namely, ordinary life, twenty-year life, and twenty-year endowment. Finally, a third distinction is made between premiums for participating and non-participating policies.

Data used for weighting take into consideration the amount of business done by the various companies quoted, the amount of insurance sold according to age groups noted, the relative importance of the types of policies included and the proportion of participating to non-participating business.

*Newspapers.*—The index of newspaper prices is formed from a sub-index based upon evening publications and another for morning issues. An average subscription cost is calculated from the city delivery price and the country mail rate for each paper. These averages are weighted by circulation figures for 1928 to produce an aggregate relative. The importance of the sub-groups in the final index is determined by the estimated value of the total paid-in subscriptions for the papers in each group.

*Books and Educational Costs.*—An index of the cost of books and other educational accessories is constructed from three sub-indexes of prices for books,

INDEX NUMBERS OF RETAIL PRICES  
1914-1930  
FOOD, FUEL, LIGHTING, RENTS, CLOTHING AND SUNDRIES  
1925=100

periodicals and stationery. Standard editions only are considered in the book index, while periodicals are chosen with regard to the volume of their Canadian circulation. In the third group, emphasis is placed upon such articles as note books and similar supplies needed by children in school.

*Doctors' Fees.*—The range of doctors' fees is represented by charges made for day visits, office consultations and ordinary confinement or obstetrical cases. An aggregative index is made, based in part upon data from schedules filled in by individual practitioners and also upon lists of fees published by provincial medical associations.

*Hospital Charges.*—In compiling the index of hospital fees each institution is weighted according to the number of patients accommodated, and provincial averages of fees are weighted according to population in order to get Dominion figures. The main index is made from four sub-groups which measure changes in the fees charged for public, semi-private, and private wards, and for the use of operating rooms.

*Motor Operating Costs.*—Operating cost index calculations are based upon accurate cost accounts compiled for the operating expenses of passenger cars used in civic and Dominion Government service throughout Canada. In addition, corroborative data pertaining to the trend of gasoline, tire, and accessory prices are secured as a check upon the cost compilations utilized.

**7.—Index Numbers of Canadian Retail Prices, 1914-1930, Changed to New Base, 1926=100.**

Year.	Food Index.	Fuel Index.	Rent Index.	Clothing Index.	Sundries Index.	Total Index.

**The Family Budget.**—A family budget constructed by the Department of Labour appears regularly in the *Labour Gazette*. This budget material has been used by the Bureau to obtain the tables which follow.

Table 9 shows the average prices of items included in the family budget in 1913, 1920 and each of the years from 1923-30. The index numbers are weighted by the quantities used by the Department of Labour in computing their monthly family budget. Table 10 gives these group indexes by provinces. An examination of the tables reveals the course of the budget, consisting of food, fuel and lighting, and rent, over the period shown.

9.—Prices of a Family Budget of Staple Foods, Fuel and Lighting, and Rent, for Sixty Cities in Canada, 1913, 1920, 1923-1930.

## Section 3.—Index Numbers of Security Prices.

Many important advances have recently been made in the direction of improving the technique of making index numbers of security prices. The chief of these are: first, the computation of index numbers to serve different purposes; secondly, weighting of the index numbers so that they will accurately represent

the market—an accurate index of market trends cannot be made on the basis of a simple average of market quotations or on any system which does not consider weighting; thirdly, using weighted average prices of individual securities rather than the average of high and low quotations or closing quotations. This last point is of considerable importance, because the average price at which a stock sells on a day's market frequently differs widely from the average of its high and low quotations or its closing price.

In the revised index numbers of security prices which have recently been issued by the Bureau full use of the improvements mentioned has been made, and these index numbers are now in line with the most advanced technique pertaining to the making of such indexes. In the revision the base of the calculations was also changed. The basic period is now the year 1926, that is, prices prevailing in that year are taken as 100 and subsequent price movements are expressed as a percentage. The year 1926 was chosen as the base, in conformity with the tendency which now prevails to substitute a post-war for a pre-war base. This year was also chosen in order to enable comparisons to be made with important indexes in the United States.

Two series of index numbers are now published by the Bureau on a weekly basis, *viz.*, traders' and investors' indexes. (See Tables 11 and 12.) As will be apparent, these measure movements of an entirely different character. The traders' index is based upon the prices of the twenty-five best selling industrial and public utility common stocks sold on the Montreal and Toronto exchanges each week. This traders' index measures the trend of gains or losses for an "average" trader on the Montreal and Toronto stock exchanges, who buys and sells the leading common stocks in the same proportion as they are traded in the market as a whole, and who turns over his investments every week. The investors' index, on the other hand, measures the trend of values for the investor who buys a list of stocks and holds them over a long period of time.

**Investors' Index Numbers of Common Stocks, 1913 to 1930.**—Monthly figures for the investors' index number of common stocks, computed by the Dominion Bureau of Statistics on the basis 1926=100, have been carried back to 1913. The index falls into two parts, *viz.*, the period subsequent to 1926 and the earlier period. For the period 1913 to 1926 those stocks were used which were included in the index number previously issued on the 1913 base, *viz.*, 31 industrials, 10 public utilities and 9 banks, or 50 stocks in all. In the subsequent period the list of stocks included in the monthly index numbers was enlarged and now contains 98 industrial, 18 domestic utilities, 8 companies located abroad and 8 bank stocks. Despite the difference in the number of stocks included, the trend of stock prices is adequately shown throughout the whole period. The larger number of stocks included in the revised index number, though adding little to the accuracy of the general index, gives more complete information regarding various groups of stocks traded on Canadian exchanges.

Banks are included in the monthly index numbers but not in the weekly, the trading in such securities not being, as a rule, sufficiently important to warrant their inclusion in a weekly index. In any case, their inclusion does not affect the general index by more than a point or two.

11.—Investors' Index Numbers of Common Stocks, by Months, 1930.

NOTE.—For earlier figures, see p. 782 of the 1930 Year Book, p. 784 of the 1929 Year Book, and pp. 796-800 of the 1927-1928 Year Book.

**Weighted Index Numbers of Mining Stocks.**—A weighted index number of mining stocks is computed by the Dominion Bureau of Statistics on the basis 1926=100. Mines of a semi-industrial nature, such as International Nickel and Consolidated Mining and Smelting Company, do not appear here but are included in the Bureau's Investors' index of common industrial and public utility stocks.

Stocks included in this index are confined to producing mines, those which are about to pass into this category, and a couple which have large interests in other producing mines. Each stock is weighted by the number of shares outstanding.

Index numbers are calculated for the total stocks and for three groups, *viz.*, gold stocks, gold-copper stocks, and silver and miscellaneous stocks. The gold stocks are Premier, Coniaurum, Dome, Hollinger, McIntyre, Vipond Consolidated, Kirkland Lake Mines, Lake Shore, Sylvanite, Teck-Hughes and Wright Hargreaves. Gold-copper stocks include Amulet and Noranda. Silver and miscellaneous stocks are Nipissing, Coniagas and Mining Corporation. The term "silver and miscellaneous" is used because all four stocks have important interests other than silver and two of the four are not now producing silver.

Excepting for the early months of the year, the course of the general index of mining stocks in 1930 was steadily downward. From 78.9 in January, they rose to 86.1 in February and declined thereafter to 59.2 in December. The copper stocks index fell from 191.4 in January to 69.1 in December and silver and miscellaneous from 49.6 in January to 25.1 in October after which they rose to 30.0 in December. Gold stocks were much more stable, the index fluctuating between 57.4 and 64.5.

## Section 4.—Prices of Services.

A study of the prices of services sheds considerable light on the cost of living as such services are a considerable item in the average family budget. Information with regard to the trend of street car fares, of rates for manufactured and natural fuel gas, of domestic electric light rates and of telephone charges was published on pp. 801-4 of the 1927-28 Year Book. Later information shows that the prices of manufactured fuel gas have shown a downward tendency, the Dominion index number for 1929 being 97.6, as compared with 100.0 in 1926. The index number of the price of natural fuel gas also declined from 100.0 in 1926 to 92.3 in 1929. On the other hand, telephone rates have shown a distinct increase, the Dominion index number for domestic telephone rates having risen from 100.0 in 1926 to 107.2 in 1929. Again, the business telephone rate has risen from 100.0 in 1926 to 118.2 in 1929. Additional information and details by provinces will be found on pp. 202-12 of the Bureau of Statistics' Annual Report on Prices and Price Indexes, 1913-29.

**Hospital Charges.**—In view of discussions of the increased cost entailed by illness and hospital treatment, special investigations of hospital charges are now made annually and the results are given as Dominion averages in the following table. In general, this shows that hospital charges have increased approximately 90 p.c. since 1913, except for operating room charges, which have increased only about 60 p.c. At the same time, the cost of maintaining patients in hospitals has increased by about 110 p.c. Since the general cost of living in Canada has

increased only from 50 to 60 p.c., it may be inferred that patients in hospitals have an improved standard of living and of comfort as compared with the conditions before the war.

The detailed results of this investigation, including the statistics by provinces, are to be found on pp. 203-6 of the Bureau of Statistics' Annual Report on Prices and Price Indexes, 1913-29.

#### Section 5.—Index Numbers of Interest Rates.

Few economic statistics are of more significance than the net rates of interest paid on absolutely the safest securities, such as government bonds maturing on a fixed and definite date. Other interest rates naturally grade upward from the rates which the safest of possible borrowers has to pay, and from the fluctuations of that price an idea may be obtained as to the relation between the supply of, and the demand for, funds for investment.

Prior to the war the funded debt of the Dominion was entirely held outside the country, there being no home market for Canadian Government bonds. Since about the beginning of the century, however, the province of Ontario, the wealthiest and most populous of the provinces of the Dominion, has done its financing largely in Canada itself, and the fluctuation in the rate of yield of Province of Ontario bonds is thus the best long-term indicator of net interest rates in the Dominion. These yields, compiled originally by Wood, Gundy and Co., of Toronto, and furnished by that firm to the Bureau of Statistics,

have been recalculated as index numbers on a 1926 base and are shown in Table 15, a particularly interesting feature being the decline in the interest rates index from the high point of 129.4 in October 1920 to 87.7 in February of 1928. Since the latter date, the scarcity of funds for this type of investment forced the index number up to 104.4 in May and September 1929, from which point it gradually declined to 92.9 in September 1930. In January and February 1931 it had risen to 95.0 but in March and April it declined to 92.9 and in May to 91.9.

Section 6.—Index Numbers of Import and Export Valuations.

Index numbers of import and export valuations have been computed by the Dominion Bureau of Statistics for the calendar years 1920 to 1929 and are shown in Table 16. Fifty export and 60 import commodities are included in the calculations. The year 1913 has been taken as the base. Index numbers were calculated on the aggregative principle and both an individual and a group system of weighting has been used on the basis of quantities imported or exported.<sup>1</sup>

<sup>1</sup>For list of commodities included see Appendix A, "Prices and Price Indexes, 1913-1926".

## CHAPTER XXI.—PUBLIC FINANCE.

The following treatment of public finance includes a discussion of Dominion, provincial and municipal finance in Canada, with numerous tables, and closes with a brief discussion of the national wealth and national income of the Dominion as the basis of all public finance.

In recent years the subject of public finance has been more elaborately treated than formerly, in response to an increasing public demand resulting from the growing pressure of taxation to meet the augmented expenditures of the national, provincial and local administrations. In the consideration of these growing expenditures two facts must be kept in mind: (1) that our country is showing a relatively rapid growth of population—22 p.c. in the 10 years from 1911 to 1921—and (2) that \$1.50 in 1930 had approximately the same retail purchasing power as \$1 in 1913. Furthermore, since most of our citizens are producers, the effect of this latter fact in swelling the aggregated total money income of the citizens of Canada so as to increase their tax-paying power should not be forgotten. In addition, there is an evident increase in the functions of government.

The great increase in Dominion expenditure since 1913 has, of course, been mainly due to the war and the burden of interest, pension charges, soldiers' civil re-establishment, etc., resulting from the war. Similar increases have also taken place during the same period in provincial and municipal expenditures. Thus in their fiscal years ended 1929 the total ordinary expenditure of the nine Provincial Governments was \$177,542,192, as compared with \$53,826,219 in 1916, only 13 years before, an increase of no less than 230 p.c. (The aggregate interest payments of Provincial Governments rose from \$7,817,844 in 1916 to \$41,207,090 in 1929.) Again, between 1913 and 1929, the aggregate taxes imposed by the municipalities of Ontario increased from \$34,231,214 to \$115,787,422—an increase of 238.3 p.c. In Quebec the ordinary receipts of municipalities other than counties increased from \$20,319,277 in 1914 to \$59,994,328 in 1929, an increase of 195.3 p.c. In Manitoba the increase in municipal taxation has been from \$9,922,537 in 1912 to \$19,463,666 in 1929, an increase of 96.2 p.c. In Saskatchewan the grand total of municipal tax levies was \$13,358,627 in 1914 and \$28,563,828 in 1929. In Alberta the municipal taxes levied amounted to \$9,791,846 in 1914 and to \$13,886,677 in 1929. In British Columbia the taxes collected by the municipalities totalled \$8,698,820 in 1914 and \$17,109,794 in 1929. Finally, in the extreme east the aggregate tax receipts of the municipalities of Nova Scotia were \$6,416,142 in 1929, as compared with \$3,254,094 as recently as 1919, an increase of 97 p.c. in the last ten years. The seven provinces covered by these statistics contained in 1921 approximately 94 p.c. of the population of the Dominion.

### Section 1.—Dominion Public Finance.<sup>1</sup>

**Historical Sketch.**—Both under the French *régime* and in the earlier part of the British, the territorial or casual revenues of Canada, consisting of certain

<sup>1</sup> The data contained in this section have been revised by the Department of Finance, with the exception of those parts dealing with recent modifications in taxation and war tax revenue, which were checked by the Department of National Revenue.

seigneurial dues and the proceeds of the sale of government timber and land, were reserved to the Crown, while the right of levying taxes and of regulating the trade and commerce of the colony was, after 1763, deemed to be vested in the British Parliament.

By the Quebec Act of 1774, certain duties on spirits and molasses were imposed, to be expended by the Crown in order to provide a revenue "towards defraying the expenses of the administration of justice and the support of the civil government of the province". A little later, in 1778, the British Government, by the Declaratory Act (18 Geo. III, c. 12), renounced forever the right of taxing the colonies to provide Imperial revenue, but maintained its claim to impose duties considered necessary for the regulation of trade, the proceeds to go towards defraying the expenditures of the colonial administration. After the Constitutional Act of 1791, the customs duties remained under the control of the Imperial Government, their revenue, as well as the territorial revenue above mentioned, coming in to the executive administration independently of the Legislative Assembly and thus making the executive power largely independent of the Legislature. In case these revenues proved insufficient, recourse could generally be had to the grant made by the Imperial Government for the support of the army. As time went on, however, the Crown revenues became more and more inadequate to meet the increasing expenditure, while the wave of economy in Great Britain after 1815 made it impossible any longer to supplement these revenues from military sources. On the other hand, the purely provincial revenues collected under the authorization of the Provincial Legislature showed an increasing surplus. The power of the purse thus began to pass into the hands of the Legislatures; further, in 1831 the British Parliament passed an Act placing the customs duties at the disposal of the Legislatures.

Under the Act of Union a consolidated revenue fund was established. All appropriation bills were required to originate in the Legislative Assembly, which was forbidden to pass any vote, resolution or bill involving the expenditure of public money unless the same had first been recommended by a written message of the Governor General. The British Government surrendered all control of the hereditary or casual revenues, which were thenceforth paid into the treasury of the province to be disposed of as its Legislature should direct.

At the interprovincial conferences which took place prior to Confederation, it was decided that the new Dominion Government, which was to take over permanently, as its chief source of revenue, the customs and excise duties that had yielded the greater part of the revenues of the separate provinces (direct taxation being as unpopular in British North America as in other new countries), was also to assume the provincial debts and to provide out of Dominion revenues definite cash subsidies for the support of the Provincial Governments. (See Tables 17 and 18.) Until the Great War, which made other taxes necessary, the customs and excise revenue constituted the chief resource of the Dominion Government for general purposes—the Post Office revenue and the Government railway receipts which are not taxes at all, being mainly or entirely absorbed by the expense of administering these services. Indeed, for many years preceding the war, customs and excise duties, together with the revenue from the head tax on Chinese immigrants, were the only items of receipts which were classified as taxes by the Department of Finance. In the last pre-war fiscal year these two

items aggregated \$126,143,275 out of total receipts on consolidated fund account amounting to \$163,174,395, the Post Office and Government railways furnishing between them \$26,348,847 of the remainder, offset, however, by expenditures on these two services amounting to \$27,757,196. Miscellaneous revenue, largely fees, amounted in that year to \$10,682,273—a comparatively small fraction of the total. As both customs and excise taxes were indirect, the average Canadian felt but little the pressure of taxation for Dominion purposes.

The war enormously increased the expenditure, and this increase had in the main to be met by loans. It is, however, a cardinal maxim of public finance that, where loans are contracted, sufficient new taxation should be imposed to meet the interest charge upon the loans and to provide a sinking fund for their ultimate extinction. This war taxation was begun in Canada within the first weeks of the war, when in the short war session of August, 1914, increases were made in the customs and excise duties on various commodities, including coffee, sugar, spirituous liquors and tobacco. In 1915, special additional duties of 5 p.c. *ad valorem* were imposed on commodities imported under the British preferential tariff and 7½ p.c. *ad valorem* on commodities imported under the intermediate and general tariffs, certain commodities being excepted. New internal taxes were also imposed on bank circulation, on the income of trust and loan companies, on insurance in other than life and marine companies, on telegrams and cablegrams, railway tickets, sleeping-car berths, etc., also on cheques, postal notes, money orders, letters and post cards. In the following year, the business profits war tax (dropped in 1921)<sup>2</sup> was introduced, and in 1917 an income tax was imposed. In 1918 both of these taxes were increased and their application widened, and in 1919 the income tax was again increased, and still further augmented in 1920 by a surtax of 5 p.c. of the tax on incomes of \$5,000 and over; the sales tax was also introduced in that year. The cumulative result of these war taxes was that, in the fiscal year ended Mar. 31, 1921, customs duties were for the first time displaced from their position as the chief factor in Canadian revenue, the war taxes yielding \$168,385,327, as against the customs yield of \$163,266,804. In 1922 war taxes yielded \$177,484,161, while the yield of the customs fell to \$105,686,645. Again, in 1923 the war taxes yielded \$181,634,875 and customs duties \$118,056,469, in 1924 \$182,036,261 and \$121,500,798, in 1925 \$147,164,158 and \$108,146,871, in 1926 \$157,296,321 and \$127,355,144, in 1927 \$156,167,434 and \$141,968,678. In 1928, however, the customs duties yielded \$156,985,818 as against \$150,319,087 collected by the war taxes, in 1929 \$187,206,332 as against \$145,029,742, and in 1930 \$179,429,920 as against \$134,086,005 collected by the war taxes.

A more detailed sketch of the new taxation imposed during the war period from 1914 to 1921 will be found at pp. 755-757 of the 1926 Year Book. An outline of the chief changes in taxation between 1922 and 1925 will be found at pp. 807-809 of the 1927-28 Year Book.

**Recent Modifications in the System of Taxation.**<sup>1</sup>—In the session of 1926 various changes were made in the customs tariff by c. 7. Green coffee, spices, nutmegs, mace, arrowroot and sponges were made free under the British

<sup>1</sup> For modifications in taxation in the years 1922 to 1925, see 1927-28 Year Book, pp. 807-809.

<sup>2</sup> Belated revenue from this tax has been collected in subsequent fiscal years down to 1930 (see Table 8, p. 844).

preferential tariff, and the preferential rate on pineapples in air-tight cans was reduced from 1½c. to ½c. per lb. The duties on raw sugar imported for refining were also materially reduced under all tariffs, but so as to increase the British preference. Again, the duties on automobiles were substantially reduced under all tariffs, the rate on the cheaper types of automobiles imported under the general tariff being reduced from 35 to 20 p.c., and under the British preferential tariff from 22½ to 12½ p.c. Finally, tin plate was made free under the preferential tariff and reduced from 12½ to 5 p.c. under the general tariff. By c. 10, amending the Income War Tax Act of 1917, the exemption limit was raised from \$2,000 to \$3,000 in the case of married persons or those with dependants, and from \$1,000 to \$1,500 in the case of other persons. The rates of taxation were also reduced all along the line, those with incomes of \$5,000 or less paying only 2 p.c. instead of 4 p.c. or more of their taxable income, the income tax of a married person without dependants being reduced from \$619.50 to \$290 on an income of \$10,000 and from \$3,024 to \$2,530 on an income of \$25,000. The rate of taxation of corporate incomes was reduced from 10 to 9 p.c. The budget speech also announced the abolition of the tax on receipts and the restoration of penny postage, both as from July 1, 1926.

In the session of 1927 the general rate of the sales tax was reduced from 5 to 4 p.c. The rate of the graduated income war tax was also reduced by 10 p.c., so that each taxpayer paid only 90 p.c. of what he would have paid on the same income in the preceding year. The \$500 exemption for children was extended to include those under 21 (instead of 18) years of age dependent upon the taxpayer for support. Further, the tax on cheques, money orders, notes, etc., which had previously been graduated from a minimum of 2 cts. on cheques of from \$5 to \$50 to a maximum of \$1 on cheques of \$2,500 and over, was reduced to a flat 2 cts. on all cheques of \$10 and over. The excise tax on matches was also reduced by 25 p.c. No changes were made in the tariff in 1927, as the new Advisory Board on Tariff and Taxation, to which certain matters had been referred, was only in the initial stages of its investigations.

In 1928 the general rate of the sales tax was reduced from 4 to 3 p.c. The rate of the graduated income war tax on individuals was reduced by a further 10 p.c. of the 1926 tax, so that an individual paid only 80 p.c. of what he would have paid on the same income two years before. Similarly, the rate of taxation on the income of corporations and joint stock companies, which had been 10 p.c. two years before and 9 p.c. in 1927, was reduced to 8 p.c. on incomes in excess of \$2,000. The \$500 exemption for children was further extended to include this exemption for sons and daughters over 21 dependent upon the taxpayer for support on account of mental or physical infirmity. The customs tariff was also amended in the direction of reducing the duties upon machinery and other commodities used in production in the mining and fishing industries, on onion plants for propagation, also on disinfecting and spraying preparations in the fruit and horticultural industries, and on press blankets used in the printing and publishing industry. In the textile industries reductions were very generally made on cotton, woollen and other yarns used by manufacturers as the material for further production, also on many finished cotton, woollen, linen, flax, jute, silk and artificial silk products. Also the duty on many

types of machinery used in the textile industry was generally reduced or even taken off entirely under the British preferential tariff. For details of these very numerous changes, see c. 17 of the 1928 Statutes.

In 1929 the general rate of the sales tax was reduced from 3 p.c. to 2 p.c. The taxes on certain insurance premiums, on cables and telegrams, and on railway and other tickets were also repealed. The tax on sales or transfers of stocks was so modified as to be levied on the actual value rather than the par value of shares transferred; further, instead of a tax of 3 cents being levied for every \$100 par value of shares transferred, the tax was made to vary from one-tenth of a cent per share, where shares are sold at 50 cents each or less, to four cents, where they are sold at over \$100 each. A number of changes were made in the Customs Tariff by c. 39 of the 1929 Statutes.

In 1930, the general rate of the sales tax was reduced from 2 to 1 p.c. *Bona fide* co-operative organizations, government or like annuities (to the extent of \$5,000), and donations to churches, schools and hospitals (to a maximum of 10 p.c. of the net income of the taxpayer) were exempted from income tax, and the \$500 exemption for children was extended to cover certain dependent relatives suffering from mental or physical infirmity. In the customs tariff, the iron and steel schedules were completely revised, seasonal tariffs were adopted in respect of fruits and vegetables, duties were reduced on tea, porcelain and chinaware and meats and increased on beans and butter, and so-called countervailing duties were imposed in respect of 16 commodities. The year was unusual in that it saw a second tariff revision, namely that of the special session, of September, when the anti-dumping clauses of the tariff were re-written and very many changes were made in rates of duty in the schedules. Increases were made *inter alia* on most agricultural products, on printed matter and manufactures of paper, on numerous commodities in the iron and steel group, on a wide range of textile items and on boots and shoes. Power was granted to the Governor in Council to prohibit the importation into Canada of goods exported to the Dominion from any country not a contracting party to the Treaty of Versailles.

### Subsection 1.—The Current Balance Sheet of the Dominion.

A summary review of the current financial situation of the Dominion as on Mar. 31, 1930, is given in the balance sheet shown in Table I. This shows the gross debt on the above date to have been \$2,544,586,411, partly offset by available assets aggregating \$366,822,452, leaving a net debt of \$2,177,763,959.<sup>1</sup> Non-available assets, including such public works as canals and railways, also loans to railways, amounted in the aggregate to \$1,656,443,062, leaving a debit balance on Consolidated Fund Account on Mar. 31, 1930, of \$521,320,897. The details of the various assets and liabilities are contained in the schedules accompanying the balance sheet and printed in the Public Accounts.

<sup>1</sup> The net debt on Mar. 31, 1924, was \$2,417,783,275; on Mar. 31, 1925, \$2,417,437,686; on Mar. 31, 1926, \$2,389,731,098; on Mar. 31, 1927, \$2,347,834,370; on Mar. 31, 1928, \$2,206,850,233 and on Mar. 31, 1929, \$1,225,504,705. See Table 19, p. 853.

Interest due and outstanding.....	2,853,096
	<b>\$ 2,544,586,411</b>

NOTE.—The Dominion of Canada is also responsible for principal and interest on loans negotiated by railways, under various Acts of Parliament, amounting to \$590,091,292. (See p. 356 for details.)

## Subsection 2.—Receipts and Disbursements.

The receipts of the Dominion Government on Consolidated Fund Account for the fiscal year ended Mar. 31, 1930, were \$441,411,806, a decrease of \$14,052,068 as compared with the preceding year; besides these, special receipts amounted to \$4,505,186—a total of \$445,916,992 (Table 2). The regular expenditure on consolidated fund account was \$357,779,794, while special expenditure amounted to \$9,803,722. There was also a net expenditure on capital account of \$22,561,144, and other expenditures of \$8,031,586, including Government Merchant Marine \$2,491,297, advances to Quebec Harbour Commissioners (non-active) \$2,821,000. Thus the total disbursements, inclusive of these and other advances, amounted to \$398,176,246. There was a decrease of \$47,740,746 in the net debt (gross debt less available assets) during the year. (See Table 23.)

Detailed statistics of receipts and disbursements are contained in Tables 2 and 3. Tables 4 and 5 are historical tables giving the figures of the main items of Dominion receipts and expenditure since Confederation, while Table 6 shows the per capita receipts and expenditure for these years, calculated on census and estimated populations.

\* Includes Advances to Railways (non-active), amounting to \$45,780,890 in 1920, \$109,662,655 in 1921, \$97,950,645 in 1922, \$77,863,938 in 1923, \$23,710,617 in 1924, \$9,934,453 in 1925, \$10,000,000 in 1926, \$10,000,000 in 1927, \$2,932,653 in 1930; together with advances of \$5,979,856 in 1923, \$1,500,000 in 1924, \$900,000 in 1925, \$668,000 in 1926, \$426,817 in 1927, \$999,837 in 1928 and \$758,000 in 1929, \$2,491,297 in 1930 to the Canadian Government Merchant Marine; also other advances shown at the end of Table 3 on p. 836.

**6.—Census and Estimated Populations, Per Capita Taxation and Total Revenue Receipts, Per Capita Expenditure on Consolidated Fund Account and Total Expenditure, 1868-1930.<sup>1</sup>**

NOTE.—The years marked with an asterisk (\*) are those of the censuses, April 2, 1871; April 4, 1881; April 6, 1891; April 1, 1901; June 1, 1911 and 1921. In all cases down to 1910 the population is estimated at the close of each fiscal year; June 30 from 1868 to 1906, and Mar. 31 from 1907 to 1910. For the inter-censal years 1912 to 1920, and also for 1822 to 1930, the population is estimated as at June 1. The fiscal period of 1907 is for the nine months ended Mar. 31.

Fiscal Year.	Population.	Per Capita Revenue from Taxation.	Per Capita Total Revenue Receipts.	Per Capita Expenditure on Consolidated Fund Acct.	Per Capita Total Disbursements.	Fiscal Year. ## Subsection 3.—War Tax Revenue.

An account of the various war taxes imposed in 1915 and subsequently has already been given on pp. 831-3 in the introduction to this section. For convenience of reference the amounts received from these taxes since the beginning are segregated and the totals paid in to the Receiver-General are given in Table

8. The taxes imposed on banks, trust and loan companies and insurance companies are collected by the Department of Finance. The excise war taxes, the business profits war tax and the income war tax are collected by the Department of National Revenue, formerly the Customs and Excise Department. The amounts of excise war taxes collected from different sources in the last six fiscal years are given in Table 9, while Table 10 contains the details by provinces for the latest year. The amounts collected in income war tax and business profits war tax are given by provinces for the two latest fiscal years in Table 11. (See also Tables 33 to 35 of this chapter.)

8.—War Tax Revenue Received during the fiscal years ended Mar. 31, 1915-1930.

Subsection 4.—Inland Revenue.

Under the Inland Revenue Act (R.S. 1906, c. 5), the Department of Inland Revenue until 1918 had the control and management of standard weights and measures and of the collection of excise duties, of stamp duties, internal taxes, bridge and ferry tolls and rents. It administered the statutes which dealt with the adulteration of food and other articles, electricity and gas inspection, patent medicines, petroleum, naphtha and the analysis of fertilizers and feeding stuffs. This Department also established the food standards, which were put into force by Orders in Council under the authority of section 26 of the Adulteration Act. By Order in Council dated May 18, 1918, the Department of Customs and the Department of Inland Revenue were amalgamated and combined under the name of the Department of Customs and Inland Revenue, under one Minister of the Crown. By Order in Council dated June 3, 1918, the administration of the Gas, Electric Light and Weights and Measures Inspection Acts, the Adulteration of Food, Commercial Feeding Stuffs, Fertilizers, Proprietary and Patent Medicine, and Inspection of Water Meters Acts was transferred to the Department of Trade and Commerce, as from Sept. 1, 1918. On June 4, 1921, the Department of Customs and Inland Revenue was consolidated as the Department of Customs and Excise (11-12 George V, c. 26).

As from April 1, 1927, the name of this Department, which collects the great bulk of the revenue of the Dominion, was changed to Department of National Revenue by authority of 17 Geo. V, c. 34. This Act provides for three chief departmental officers—the Commissioner of Customs, the Commissioner of Excise and the Commissioner of Income Tax, while an Assistant Commissioner of Customs may also be appointed. In the fiscal year ended Mar. 31, 1930, the gross amount of customs duties collected by the Department was \$199,011,628, as compared with \$200,479,505 in 1929, \$171,872,768 in 1928 and \$158,966,367 in 1927. The total of excise duties and excise war taxes collected in the fiscal year ended Mar. 31, 1930, was \$129,822,444, as compared with \$148,374,269 in 1929 and \$149,724,171 in 1928. The total of income tax collected in the fiscal year ended Mar. 31, 1930, was \$69,020,726, and of business profits war tax \$173,301.

**Canadian Excise Tariff.**—The following is a statement of the Canadian excise tariff, as existing on July 1, 1930:—

Spirits—		Tobacco, per lb.....	\$ 0.20
When made from raw grain, per proof gal. \$	9.00	Cigarettes, weighing not more than 3 lb. per thousand, per thousand.....	.60
When made from malted barley " "	9.02	Cigarettes, weighing more than 3 lb. per thousand, per thousand.....	11.00
When made from imported molasses or other sweetened matter free of customs duty, per proof gal.....	9.03	Foreign raw leaf tobacco, unstemmed, per standard lb.....	0.40
Malt, per lb.....	0.03	Foreign raw leaf tobacco, stemmed, per standard lb.....	0.60
Malt, imported, crushed or ground, per lb....	0.05	Canada twist tobacco, per lb.....	0.20
Malt liquor, when made in whole or part from any other substance than malt, per gal.....	0.15	Snuff, per lb.....	0.20
		Cigars, per thousand.....	3.00

When, however, any person is licensed by the Minister of National Revenue to manufacture patent and proprietary medicines, extracts, essences and pharmaceutical preparations by the use of spirits in bond, subject to the Excise Act and regulations thereunder, the following duties of excise are collected:—when made from raw grain, \$2.40 per proof gallon; when made from malted barley, \$2.42 per proof gallon; when made from imported molasses or other sweetened matter free of customs duty, \$2.43 per proof gallon. Druggists, licensed by the Minister of National Revenue to prepare prescriptions for medicines and pharmaceutical preparations, are also allowed to use limited quantities of spirits, testing not less than 50 p.c. over proof, on payment of the above lower manufacturers' rates of duty. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to hospitals for medicinal purposes only.

**Revenue from Excise Duties.**—The inland revenue collected from excise duties, other than war taxes, is shown by items for the last six fiscal years in Table 12. Tobacco, including cigarettes, is shown by the figures to be supplying about 60 p.c. of the revenue from excise duties.

**12.—Details of Excise Duties Collected during the fiscal years ended Mar. 31, 1925-1930.**

(Accrued revenues as shown in the Report of the Commissioner of Excise.)

**Consumption of Alcohol and Tobacco.**—In Tables 15 and 16 are shown the quantities of spirits, malt liquor, malt, cigars, cigarettes and tobacco taken out of bond for consumption in the fiscal years ended 1901 to 1930, and the annual consumption of spirits, beer, wine and tobacco per head of population, together with the duties paid in the same years.

Between 1920 and 1930, the consumption of cigars fell from 270,089,761 to 196,251,957 and of tobacco from 23,049,012 lb. to 22,195,455 lb. On the other hand, the consumption of cigarettes increased from 2,440,982,912 to 5,035,878,655.

Between 1923 and 1930 the consumption of spirits (exclusive of imported spirits) has risen from 729,678 gal. to 1,926,063 gal., and of malt liquor from 36,789,195 gal. to 62,992,156 gal.

**15.—Quantities of Spirits, Malt Liquor, Malt and Tobacco, Taken Out of Bond for Consumption, in the fiscal years ended 1901-1930.**

(For earlier years see 1916-17 Year Book, p. 528.)

## Subsection 5.—Provincial Subsidies.

Tables 17 and 18 show the aggregate amounts of the subsidies and other payments made by the Dominion to the Provincial Governments for each of the fiscal years ended from 1925 to 1930 (Table 17), and the totals paid from Confederation to 1930 (Table 18). The provincial subsidies payable by the Dominion Government were originally settled by the British North America Act, 1867 (30 and 31 Vict., c. 3, s. 118) but were revised by the British North America Act, 1907 (7 Edw. VII, c. 11). Under the revised settlement each Provincial Government receives: (a) a fixed grant according to population and (b) a grant at the rate of 80 cents per head of the population up to 2,500,000, and at the rate of 60 cents per head of so much of the population as exceeds that number. The province of British Columbia received an additional grant of \$100,000 per annum for a period of 10 years from 1907.<sup>1</sup> An additional grant of \$100,000 per annum is payable to Prince Edward Island under an Act of 1912 (2 Geo. V, c. 42), and the payments to Manitoba were revised by the Extension of Boundaries (Manitoba) Act, 1912 (2 Geo. V., c. 32). Other payments to the Provincial Governments by the Dominion Government consist of special grants, such as compensation for lands, allowances for buildings, allowance in lieu of debt, etc.

## Subsection 6.—National Debt.

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369, as against assets of \$208,394,519, leaving a net debt of \$335,996,850. Comparatively small as was this debt, it was a debt incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

The great changes brought about in our national debt during the 16 years from 1914 to 1930 have been: (1) the enormous increase in net debt from \$335,996,850 to \$2,177,763,959; (2) the gross debt, having been largely incurred for war purposes, is not represented by corresponding assets; (3) the debt is now mainly held in Canada, \$1,804,977,029 being payable in Canada at Mar. 31, 1930; (4) the average rate of interest paid on interest-bearing debt has been considerably increased. The interest-bearing debt on Mar. 31, 1914, was \$416,892,576, with an annual interest charge of \$14,687,797, the average interest rate being thus only 3.52 p.c. On Mar. 31, 1922, the interest-bearing debt was \$2,669,967,110, with an interest charge of \$137,881,774, the average rate of interest paid being 5.164 p.c. Had the rate of interest in 1922 been the same as in 1914, the interest charge in that year would have been some \$44,000,000 less than it actually was. Since 1922 the maturity of certain loans has enabled the Government to refund at lower and more normal peace-time rates of interest with the result that the average rate of interest payable on the national debt has been slowly declining, standing at 4.967 p.c. on Mar. 31, 1930. Further, in these same eight years the principal sum of the interest-bearing debt has been reduced by \$264,132,389. The net result of these two achievements is that the annual interest charge has, in the last eight years, been reduced by the substantial amount of \$18,367,541.

The *interest-bearing* debt, the annual interest charge upon that debt and the average rate of interest, as at the end of each of the last eleven fiscal years, have been as follows:—

Fiscal Year.	Bonds, Debentures and Treasury Bills.	Annual Interest Charges on Bonds, Debentures and Treasury Bills.	Savings Bank Deposits, Trust and other Funds.	Annual Interest on Savings Bank Deposits and other Funds.	Total Interest Bearing Debt. <sup>1</sup>	Annual Interest Charge.	Average Rate of Interest.

<sup>1</sup> The total of interest-bearing debt, as here given, includes bonds purchased and held by the Treasury for sinking funds.

A summary account of the loans effected between 1914 and 1930 follows.

**War and Renewal Loans.**—The first Dominion domestic war loan was raised in November, 1915, under authority of c. 23 of the Statutes of that year (5 Geo. V, c. 23). It originally consisted of \$50,000,000 5 p.c. tax-exempt 10-year gold bonds, issued at 97½ and maturing Dec. 1, 1925. As the issue was heavily over-subscribed (public subscriptions by 24,862 subscribers \$78,729,500, bank subscriptions \$25,000,000), and the extra money was needed, the Government increased the amount of the loan to \$100,000,000. In July, 1915, \$25,000,000 of 1-year and \$20,000,000 of 2-year 5 p.c. notes had been floated in the United States, with the object of stabilizing exchange and relieving the pressure on London.

In September 1916, the second Canadian domestic war loan of \$100,000,000 5 p.c. tax-exempt 15-year gold bonds was issued and again over-subscribed (public subscriptions by 34,526 subscribers \$151,444,800, bank subscriptions \$50,000,000). In March of that year, a loan of \$75,000,000 in 5, 10, and 15-year 5 p.c. bonds had been floated in New York.

The third Canadian domestic war loan, composed of \$150,000,000 5 p.c. tax-exempt 20-year gold bonds, was issued at 96 in March, 1917, and was again over-subscribed, 40,800 public subscribers applying for \$200,768,000, while the banks subscribed \$60,000,000. In August, 1917, \$100,000,000 of 5 p.c. 2-year notes were issued in New York at 98.

The fourth domestic war loan (First Victory Loan) was issued in November 1917. For the first time subscriptions as low as \$50 were received towards an issue of \$150,000,000 5½ p.c. 5, 10 and 20-year gold bonds, the Minister of Finance reserving the right to allot the whole or any part of the amount subscribed in excess of \$150,000,000. The subscribers numbered 820,035 and the subscriptions totalled \$398,000,000, or about \$50 per head of the then population of Canada.

The fifth domestic war loan (Second Victory Loan) of \$300,000,000 5½ p.c. 5 and 15-year tax-exempt gold bonds, was issued at 100 and interest as of date Nov. 1, 1918; the end of the war, then clearly in sight, stimulated subscriptions. The applications numbered 1,067,879 and subscriptions totalled \$660,000,000.

The sixth domestic war loan (Third Victory Loan) was raised at 100 and interest in November, 1919. It consisted of \$300,000,000 taxable 5-year and 15-year 5½ p.c. gold bonds. The subscriptions amounted to \$678,000,000.

A 5½ p.c. renewal loan, aggregating \$114,464,150 and due in 1927 and 1932, was floated in Canada in the autumn of 1922 to pay off the maturing 5-year Victory Loan bonds of 1917. Largely for the same purpose, a \$100,000,000 5 p.c. loan was issued in New York.

In the autumn of 1923 a refunding loan of \$20,000,000 at 5 p.c. was issued in Canada to pay off the maturing 5-year Victory Loan bonds of 1918.

Refunding operations in 1924, to retire \$107,955,650 5-year Victory bonds, issued in 1919, and to redeem treasury bills held by banks, took the form of a domestic issue of \$50,000,000 4½ p.c. 20-year bonds and \$35,000,000 4 p.c. 2-year notes, and a short term issue in the New York market of \$90,000,000 4 p.c. 1-year treasury notes. An issue of \$24,000,000 in 4 p.c. 1, 2 and 3-year notes (\$8,000,000 of each) was also made in November, 1924.

A refunding loan of \$75,000,000 at 4½ p.c. due 1940 was issued in Canada in September, 1925, and 4 p.c. 1-year notes amounting to \$70,000,000 in New York. Securities redeemed included £5,000,000 4½ p.c. bonds due in London, \$90,000,000 4 p.c. notes due in New York, also \$8,000,000 4 p.c. notes and \$42,014,500 5 p.c. bonds of the 1915 war loan due in Canada.

In 1926, refunding issues dated Feb. 1 were made as follows: In Canada, \$20,000,000 4½ p.c. 4-year bonds and \$45,000,000 4½ p.c. 20-year bonds; in New York, \$40,000,000 4½ p.c. 10-year bonds. Maturing securities included \$25,000,000 5 p.c. bonds due in New York April 1, and \$70,000,000 4 p.c. notes called for redemption April 1.

In 1927 \$45,000,000 of 4 p.c. treasury notes due Dec. 1, 1930, were issued in order to retire maturing 5½ p.c. obligations.<sup>1</sup>

The general result of these loans has been that in 1930 the great bulk of the Canadian national debt was owed to the Canadian people. At the end of the fiscal year 1929-30 the net funded debt of Canada payable in London was \$257,185,700, the debt payable in New York, \$165,965,900, while the net funded debt payable in Canada amounted to no less than \$1,804,977,029. The largest creditors of the Dominion Government are within the Dominion itself and, as a consequence, the interest payments made on national debt account outside the country are a relatively small item. Summary and detailed statistics of the national debt as on Mar. 31, 1930, are given with comparative figures for previous years in Tables 19 to 22, while Table 23 shows the principal and interest of the national debt at Confederation and in each subsequent fiscal year.

<sup>1</sup>This loan was redeemed on the due date.

In addition to the direct liabilities of the Government of Canada, there are certain indirect liabilities arising out of the guaranteeing of securities for the railways, both before and after their acquisition by the public. The outstanding railway securities guaranteed as to principal and interest amounted on Mar. 31, 1930, to \$590,091,292 held by the public and \$58,157,952 held by the Minister of Finance. The amount guaranteed as to interest only (Grand Trunk Railway acquisition guarantees) was at the same date \$216,207,142.

There were also certain smaller indirect liabilities arising out of the guaranteeing of loans issued by Harbour Commissions, etc., for the improvement of harbour and other transportation facilities. The total of the outstanding indirect obligations created by these loans was \$30,735,118 on Mar. 31, 1930.

The list of securities guaranteed by the Dominion Government was, at Mar. 31, 1930, as follows:—

Security.	Amount of Guarantee Authorized.	Amount Outstanding at Mar. 31, 1930.	
		Held by the Public.	Held by the Minister of Finance.
	\$	\$	\$

<sup>1</sup> The minus sign (-) denotes a decrease.<sup>2</sup> This amount includes \$10,199,520, for which land was taken from the Canadian Pacific Ry. Co.<sup>3</sup> This amount includes \$3,305,450, caused by the settlement of accounts with Ontario and Quebec.<sup>4</sup> This amount takes into account \$5,397,503, allowed to Ontario and Quebec under 47 Vict., c. 6.<sup>5</sup> Active assets only. <sup>6</sup> Nine months.

## Section 2.—Provincial Public Finance.<sup>1</sup>

Provincial Governments in Canada are in the position, under section 118 of the British North America Act, 1867 (30 and 31 Vict., c. 3), and the British North America Act, 1907 (7 Edw. VII, c. 11), of having a considerable assured income in subsidies from the Dominion Treasury. Details of these payments are given for recent years in Tables 17 and 18 of this chapter. In addition, through their retention of ownership of their lands, minerals and other natural resources, the provinces which, by the voluntary action of their previously existing Governments, entered Confederation raise considerable revenues through land sales, sales of timber, mining royalties, leases of water powers, etc., while the Prairie Provinces received from the Dominion special grants in lieu of land revenues. However, under recent legislation whereby the Prairie Provinces were given control of their natural resources, all the provinces of the Dominion were placed on an equal footing in the administration of natural resources within their boundaries and as regards revenues accruing therefrom. Further, under section 92 of the British North America Act, Provincial Legislatures are given authority to impose direct taxation within the province for provincial purposes and to borrow money on the sole credit of the province.

While the *laissez faire* school of political thought was predominant throughout the country provincial receipts and expenditures were generally very moderate, as may be seen, both for individual provinces and for the provinces collectively, from Table 24. From the commencement of the twentieth century, however, the Canadian public, more especially in Ontario and the West, began to demand increased services from the Government, particularly in respect of education, sanitation, and public ownership and operation of public utilities. The performance of these functions necessitated increased revenues, which had in the main to be raised by taxation. Among the chief methods of taxation to be employed has been the taxation of corporations and estates, succession duties showing a considerably increased yield even within the comparatively short period of thirteen years from 1916 to 1929 covered by the statements compiled by the Finance Branch of the Bureau of Statistics.<sup>2</sup> The fact that provincial government is cheaper per head in the *laissez faire* eastern provinces is evident from Table 25, which gives the per capita ordinary revenue and expenditure for various fiscal years from 1881 to 1930. This, however, is not to be taken as evidence that the larger services rendered to the public in the western provinces are not worth what is being paid for them.

For the half-century subsequent to Confederation, the provincial accounts, published by each Government according to its own system of accounting, were quite incomparable as among the provinces, a fact much regretted by students of provincial public finance. Upon the creation of the Dominion Bureau of Statistics in 1918, its Finance Branch undertook the work of placing the various provincial public accounts on a comparable basis, correlating, for example, the revenues derived from succession duties, taxation of corporations, sales of public lands, royalties on forest, mineral and fisheries products, as well as the expen-

<sup>1</sup> Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues detailed statements on Provincial Finance which may be obtained from the Dominion Statistician. For a list of these publications see Chapter XXVIII.

<sup>2</sup> The succession duties collected by the provinces in 1929 amounted in the aggregate to \$13,657,536, as compared with \$1,020,972 as recently as 1904, or a 13-fold increase in 25 years. The aggregate revenue raised by taxation of corporations, land, income and miscellaneous (exclusive of gasoline), increased from \$7,217,548 in 1916 to \$24,464,297 in 1929—a three-fold increase in 13 years. For the details for the years 1916 to 1926, see pp. 680-685 of the 1921 Year Book, pp. 788-793 of the 1926 Year Book and pp. 836-841 of the 1927-28 Year Book.

ditures on such services as agriculture, civil government, education and public works. As the result of the Bureau's exhaustive analysis of the provincial public accounts, a summary statement of the ordinary receipts and expenditures of the Provincial Governments appeared for the first time in the 1919 Year Book. In the 1927-28 edition an analysis was given of the public accounts of the provinces for their respective five fiscal years ended 1922 to 1926. The various items of receipts and expenditures were classified under appropriate headings, and a uniform terminology was adopted. The result was given at pp. 836-841 of the 1927-28 Year Book, which presented summary statements of the ordinary receipts and expenditures of each Provincial Government for each of the five provincial fiscal years from 1922 to 1926. From these statements it is possible to ascertain the amounts received and expended in each year under the respective headings for each province, as well as for the provinces collectively. The figures for the years from 1916 to 1920 will be found on pp. 680-685 of the 1921 Year Book and for 1921 on pp. 786-791 of the 1922-23 Year Book.

In 1927 it was decided to commence a more exhaustive analysis of the finances of the provinces, including extraordinary as well as ordinary revenue and expenditure in the survey. The difficulties experienced in making this analysis have been considerable, but the results, it is expected, will soon be available.

**Ordinary Revenue and Expenditure.**—The total ordinary revenue of the nine provinces for their latest fiscal years for which final data are available, ended 1929, was \$183,598,024 as compared with \$168,109,505 in 1928, \$156,845,780 in 1927, \$146,450,904 in 1926, \$132,398,729 in 1925, \$127,896,047 in 1924, \$117,738,244 in 1923, \$116,156,699 in 1922, \$102,030,458 in 1921, \$92,653,023 in 1920 and \$50,015,795 in 1916. The total ordinary expenditure in 1929 was \$177,542,192 as compared with \$165,538,910 in 1928, \$152,211,883 in 1927, \$144,183,178 in 1926, \$136,648,242 in 1925, \$135,159,185 in 1924, \$132,671,095 in 1923, \$112,874,954 in 1922, \$102,569,515 in 1921, \$88,250,675 in 1920 and \$53,826,219 in 1916. Thus the total ordinary revenue of the provinces shows an increase of 267 p.c. in the short space of 13 years, while the total ordinary expenditure shows an increase of 230 p.c. in the same period.

Considering the individual provinces, the largest revenue for 1929 is that of Ontario, \$64,549,718, Quebec being next with \$39,976,283, and British Columbia third with \$21,094,427. As regards total expenditure for the same year, that of Ontario was highest, \$61,906,824, Quebec second with \$35,964,487, and British Columbia third with \$22,825,520. In 1929, British Columbia raised the largest revenue per head of population, *viz.*, \$35.69, while Prince Edward Island had the lowest, \$12.58. (For available figures for 1930, see tables).

**The Growth of Provincial Taxation.**—Whereas in earlier years the Dominion subsidies, together with the revenues arising out of the natural resources of the provinces and from fees for specific services rendered to the citizens, nearly sufficed to cover the whole expense of government and rendered a resort to taxation for provincial purposes practically unnecessary in most of the provinces, the great increase in the functions of government since the commencement of the present century has put an end to this state of affairs. The aggregate amount of taxation for provincial purposes in the fiscal years prior to 1916 is unfortunately not available. Since that time provincial taxation has increased, according to the analyses made in the Dominion Bureau of Statistics, from \$15,718,146 in 1916 to \$109,182,462 in 1929—a nearly seven-fold increase in 13 years.

The increase in the use of automobiles, both for commercial purposes and pleasure, is clearly demonstrated by the growing revenues from licences and per-

mits issued by the Provincial Governments. In 1921 the total revenue of all provinces from automobile licensing amounted to \$7,857,751. It increased to \$9,290,900 in 1922; to \$10,842,525 in 1923; to \$11,944,242 in 1924; to \$13,020,607 in 1925; to \$15,288,138 in 1926; to \$15,822,339 in 1927; to \$18,980,716 in 1928, and to \$21,735,827 in 1929.

The growth of revenue from the gasoline tax still further demonstrates the increasing use of motor vehicles. In 1923 Manitoba and Alberta were the only provinces showing a gasoline-tax revenue, the total being \$280,404. In 1924 the five provinces of Prince Edward Island, Quebec, Manitoba, Alberta and British Columbia collected gasoline tax revenue to the amount of \$559,543, while in 1925 the same provinces with Ontario added, collected \$3,521,388. In 1926 all provinces, except Saskatchewan, collected gasoline taxes which amounted to \$6,104,716, in 1927 to \$7,615,907, and in 1928 to \$9,151,735; in 1929, gasoline tax was collected in all provinces and amounted to \$17,237,017.

The provincial revenues from the liquor traffic have increased considerably of late years. The adoption of government control of the sale of liquor in the majority of the provinces, has resulted in trading profits, licensing revenues, and permit fees, all of which have swelled the provincial revenues. Prior to the adoption of government control such revenues were not available to the provinces. In 1925 the total revenue collected by all provinces from the liquor traffic was \$8,964,824; in 1926 it was \$11,609,392, increasing to \$16,793,656 in 1927. In 1928, it amounted to \$22,755,212 and in 1929 to \$27,599,687. The method of control varies somewhat as between provinces. In the majority of cases there are independent commissions or boards to administer the provincial liquor traffic acts, but the accounting and trading profits are shown somewhat differently in the various provincial public accounts reports.

**Bonded Indebtedness of the Provinces.**—The bonded indebtedness of the provinces amounts to about four-fifths of their total direct liabilities. In recent years, the aggregate bonded indebtedness of the provinces has steadily increased. The total for the nine provinces was \$644,195,268 in 1923, \$705,230,487 in 1924, \$708,900,342 in 1925, \$715,489,427 in 1926, \$757,168,785 in 1927, \$779,155,374 in 1928 and \$819,517,036 in 1929. This bonded indebtedness for 1929 was divided by provinces as follows:—P.E.I., \$2,109,000; N.S., \$50,072,847; N.B., \$39,525,603; Que., \$80,334,792; Ont., \$350,563,845; Man., \$77,316,136; Sask., \$58,275,776; Alta., (net) \$92,764,276; B.C., \$77,482,736. The development of the principle of public ownership is largely responsible for the high bonded indebtedness in certain provinces, particularly in Ontario where the hydro-electric system and the provincially-owned Temiskaming and Northern Ontario Railway largely account for the bonded indebtedness of the province. The larger of these public utilities, the hydro-electric system, is, however, meeting from its revenues the interest on the indebtedness incurred in its construction.

**Interest Payments of the Provinces.**—The interest payments of the Provincial Governments have naturally increased in proportion to their growing indebtedness described above. In 1916, the first year for which aggregate figures are available on a comparable basis, the total interest payments of the provinces were \$7,817,844; in 1921 they had risen to \$19,818,266; in 1926 they were \$37,366,925 and in 1929 \$41,207,090. The 1929 interest payments of the Provincial Governments were as follows:—P.E.I., \$74,998; N.S., \$2,270,269; N.B., \$1,903,544; Que., \$3,301,376; Ont., \$19,038,262; Man., \$4,026,694; Sask., \$2,362,569 (funded debt only); Alta., \$4,280,799; B.C. \$3,948,579.

**Fiscal Years of the Provinces.**—The fiscal years of the provinces end as follows:—P.E.I., Dec. 31; N.S., Sept. 30; N.B., Oct. 31; Quebec, June 30; Ontario, Oct. 31; Manitoba and Saskatchewan, April 30; Alberta and British Columbia, Mar. 31.

**24.—Statement Showing the Ordinary Revenues and Expenditures of the Provincial Governments for their respective fiscal years ended 1868-1904**—continued on pp. 862-3.

<sup>1</sup> Subject to revision.

### Section 3.—Municipal Public Finance.<sup>1</sup>

The existence of local self-governing units has always been characteristic of democratic societies, and nowhere more so than in Canada. The struggle for responsible government was naturally accompanied by an agitation for local self-government in the cities and towns of Canada, and after responsible government had been conceded, a complete system of municipalities was established throughout the old Province of Canada by the Municipal Act of 1849.<sup>2</sup> Under the division of powers made by the British North America Act between the Dominion

<sup>1</sup> Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues statements on "Financial Statistics of Urban Municipalities of 10,000 Population and Over", on "Bonded Indebtedness of Municipalities" and an "Assessment Valuations of Municipalities". For a list of publications see Chapter XXVIII, Section 1, under "Finance".

<sup>2</sup> For a brief outline of the rise of the municipal system of Ontario, see 1922-23 Year Book, p. 106.

and the Provincial Governments, legislation regarding municipal government, being a local matter, was naturally assigned to the provinces, which differ considerably with regard to their types of municipal organization. Thus in Prince Edward Island the only incorporated municipalities are the city of Charlottetown and six incorporated towns. In Nova Scotia there are no rural municipalities smaller than counties. In British Columbia six of the 33 cities have fewer than 1,000 people, while there are no towns at all and only twelve villages; again, in the same province the rural districts are mainly administered from the provincial capital, there being only 28 rural municipalities. Finally, in Saskatchewan and Alberta there exist local improvement districts, areas which have not as yet been organized into rural municipalities, where the taxes are levied, collected and expended by the Provincial Government. Such districts, however, may be regarded as on the way to become self-governing rural municipalities and their statistics are therefore included in Table 26, which gives statistics of the number and types of municipalities in 1929, except that the New Brunswick figures are for 1921.

<sup>1</sup> From census returns of 1921. <sup>2</sup> There are 44 counties in all, geographically, but a number are united for municipal purposes. <sup>3</sup> Officially known as townships. <sup>4</sup> Includes six summer resort villages. <sup>5</sup> Includes five summer resort villages. <sup>6</sup> Year 1926.

**Municipal Assessments.**—Throughout the Dominion, the chief basis of municipal tax revenue is the real estate within the limits of the municipalities; though in certain provinces personal property, income, and business carried on are also taxed. General taxes are normally assessed at the rate of so many mills on the dollar of the assessed valuations. In the Prairie Provinces the values of improvements made to real property are often rated at a very low figure, e.g., in Saskatchewan, where the taxable valuations of buildings are about 10 p.c. of the taxable valuations of lands, and in Alberta, where they are about 20 p.c. of the taxable valuations of lands, as shown in Table 27.

There are various reasons for fluctuations in assessment valuations, due to differences in laws and varying practices with regard to assessment as between provinces, as between classes of municipalities and as between municipalities of the same class from year to year. Such matters are more fully dealt with in the special report of the Bureau on "Assessment Valuations by Provinces".

Land valuations in the West, which in earlier years were somewhat inflated, have of late been assessed on a sounder basis, and in some provinces the Equalization Boards have placed a more equitable valuation on lands as among the various rural municipalities.

<sup>1</sup> Less the Maritime Provinces, Quebec and Manitoba. <sup>2</sup> Personal property and income assessments for cities are for Sydney only. <sup>3</sup> Including \$73,160 exempted property not separable. <sup>4</sup> Including \$94,120 exempted property not separable. <sup>5</sup> Local Improvement Districts not included. <sup>6</sup> In addition assessments for schools only were: townships \$3,742,872, towns and villages \$23,428,159 and cities \$32,843,163 in 1928; and townships \$2,730,538, towns and villages \$23,719,597 and cities \$92,401,140 in 1929. <sup>7</sup> \$256,406 is by special franchise.

**Bonded Indebtedness.**—Like other Canadian governing bodies, the municipalities of the greater part of Canada borrowed rather freely during the boom period of 1900-12, and again during the period of inflation between 1917 and 1920. The bonded indebtedness of Ontario municipalities rose from \$153,568,409 in 1913 to \$451,936,592 in 1929, while that of Quebec municipalities increased from \$132,078,584 in 1914 to \$293,557,500 in 1929, and a proportionate increase took place in other provinces. The recent growth in the bonded indebtedness of all classes of municipalities is shown by provinces in Table 28. The figures show that there was an increase for 1929 over 1928 in each of the provinces with the exception of Nova Scotia. In Saskatchewan net debenture debt is shown for all municipalities in 1923 to 1926, while in 1927, 1928 and 1929 the statistics represent gross debenture debt. In Alberta the statistics given represent principally net debenture debt in 1924, 1925, 1926, 1927 and 1928, while in 1929 gross debenture debt is given. All other provinces give total debenture debt throughout.

## Section 4.—National Wealth and Income.

### Subsection 1.—National Wealth.

There are several methods of computing national wealth, *i.e.*, the aggregate value of the property within the nation, apart from undeveloped natural resources. Perhaps the most familiar of these methods is that of working back to capital values through income tax returns, but this can be applied only in countries where incomes are thoroughly appraised. A second method is that of estimation from probate returns, the value of the estates of deceased persons being regarded as representative. A third is that of a complete census, based upon a canvass of the individual. In the accompanying tables a fourth method, namely, the so-called "inventory" method, is employed; it consists in totalling the amounts known from various sources to be invested in agriculture, manufactures, dwellings, etc.

It must be understood that statistics of this character are suggestive and indicative rather than strictly accurate. The concept of wealth is distinctly intangible, and there are numerous elements of uncertainty in a calculation of this nature. The present survey, which includes the provincial distribution of Canadian wealth, places the estimated aggregate of the tangible wealth of the Dominion, exclusive of undeveloped natural resources, at \$28,940,000,000 in 1928, as compared with \$27,668,000,000 in 1927, \$26,691,482,000 in 1926, \$25,673,174,000 in 1925 and \$22,195,302,000 in 1921. These figures however, are not exactly comparable, in view of certain improvements and additions that have been made in the method of estimation. An increase of nearly \$1,300,000,000 is shown in the national wealth in the year 1928, and of over \$6,700,000,000 in the seven years 1921 to 1928.

**Aggregate and Per Capita Wealth of the Provinces, 1928.**—As regards the provincial distribution of wealth, Ontario ranked first with estimated aggregate wealth of \$9,892,000,000 or 34.2 p.c. of the total, and Quebec second, with estimated wealth of \$7,302,000,000, or 25.2 p.c. of the whole. Saskatchewan was third, with estimated wealth of \$3,075,000,000, or 10.6 p.c. of the total for the Dominion.

While Ontario led in absolute wealth, the western provinces came first in per capita wealth; British Columbia held first rank with a per capita wealth of \$4,369; Alberta second with \$3,717; Saskatchewan third with \$3,613; and Manitoba fifth with \$2,986. These figures may be compared with \$3,063 and \$2,759, the per capita wealth of Ontario and Quebec respectively, and \$2,996, the per capita wealth for the whole Dominion. Further details are furnished in Table 30.

As the statistics of population and wealth for the Yukon are uncertain, the per capita estimate of wealth is open to question, and has not been shown.

### 30.—Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1927 and 1928.

NOTE.—Figures for 1921 and 1925 are given on pp. 849-850 of the 1927-28 Year Book and for 1926 on p. 827 of the 1930 Year Book.

<sup>1</sup>Includes 9,050 population in the Northwest Territories or 0.09 p.c.

<sup>2</sup>As the statistics of population and wealth for the Yukon are uncertain, the per capita estimate of wealth is open to question and has not been shown.

<sup>3</sup>Includes 9,200 population in the Northwest Territories or 0.09 p.c.

**Wealth of Canada, by Items, 1928.**—In the items included in Table 31, all duplications have been excluded. In any consideration of the individual items it should be remembered that each item covers only the portion of wealth which is mentioned in the description of the item. For example, the item of fisheries includes only capital invested in primary operations, while capital invested in fish-canning and -curing establishments is included under manufactures, though it might also be considered as part of the wealth connected with fisheries. In the same way, the items for manufactures do not include lands and buildings in urban centres which are shown under the heading of urban real property.

The total agricultural wealth in 1928 was \$8,052,521,000, the largest item in our national wealth and 27.82 p.c. of the whole. This amount included the value of agricultural production in 1928, or \$1,801,440,000, to cover the average stocks of agricultural goods in the possession of farmers and traders and the amount invested in preparation for the new crop.

The second largest element in the national wealth was urban real property. This included the assessed valuations of taxed and exempted property, to which was added one-third to provide for undervaluation by assessors and for roads, bridges and sewers. The estimated value, as based on returns for 1928 received in the Bureau from the municipalities, was \$7,582,784,000 or 26.20 p.c. of the total wealth of the Dominion.

The wealth invested in steam railways, computed from the cost of road and equipment, and distributed by provinces on the basis of mileage, constituted the next largest item, amounting to \$3,020,060,000 or 10.43 p.c. of the total.

Another important item is the tangible value of the forests, amounting to \$1,896,613,000 or 6.45 p.c., and including the estimated value of accessible raw materials, pulpwood, and capital invested in woods operations. In 1928, as in 1927 and 1926, this item included an estimate of the present value of young growth, accounting for an increase of \$525,000,000 in this year's estimate over that for 1925.

The value of machinery and tools in manufacturing establishments and of lands and buildings of manufacturing concerns in rural districts was estimated at \$1,356,306,000 in 1928 or 4.69 p.c. In addition the estimated value of materials on hand and stocks in process in manufacturing establishments was set at \$795,775,000 in 1928 or 2.75 p.c. This item in 1925 included an estimate for stocks of manufactured goods in the hands of dealers, but in the present statement this is included in the item for trading establishments, which shows the estimated value of furniture and fixtures, delivery equipment, and materials and stocks on hand in 1928 as \$1,066,901,000 or 3.68 p.c. of the total.

On the basis of the estimated population of 1928 of 9,658,000, the per capita investment in agricultural wealth was \$834, in urban real property \$785, in steam railways \$313, in the forests \$193, and in household furnishings and personal property \$134. The per capita wealth of all kinds was \$2,996. Further details of the items are presented in Tables 31 and 32.

**31.—An Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1928.**

**Analyses by Provinces and Classes of Wealth.**—In Table 32 will be found detailed statistics of the wealth of each province by leading items. Again the suggestive character rather than the strict accuracy of such data must be emphasized. The specie holdings, for instance, are distributed among the provinces according to their populations since they are an asset of Canada as a whole rather than of the particular locality in which they happen to be deposited.

**32.—Estimate of National Wealth of Canada, 1928, by Provinces and Classes.**

**NOTE.**—For a fuller description of the various items, see the table immediately preceding.

## Subsection 2.—National Income.

The national income of Canada is necessarily less than its national production, a total for which is suggested in the general survey of production on pp. 193-198 of this volume. If, as there pointed out, there is no reason to suppose that those whose activities are not connected with the production of "form utilities" are less "productive" in the broad sense of the term than others, the total value of the production of 1928 must have been not less than \$6,446,000,000.

In order to arrive at the figure of national income, however, certain heavy deductions from the above amount must be made—deductions especially connected with the maintenance of the industrial equipment of the country—providing not only for depreciation but for obsolescence and replacement by new and improved apparatus of production. Altogether, the charges under this head may have been not less than \$400,000,000. This would leave the 1928 income of the Canadian people at somewhere in the neighbourhood of \$6,000,000,000.

**Incomes Assessed for Income War Tax in Canada.**<sup>1</sup>—In those countries of the world where an income tax has been established for a considerable time

<sup>1</sup> This material has been revised by the Income Tax Branch of the Department of National Revenue.

the figures of the assessed income have been generally accepted as furnishing a guide both to the amount and to the distribution of the total national income by classes. Estimates of the national income, based upon income tax statistics, have been published, for example, in Great Britain and in the United States.

In Canada, the income tax is a newer thing than in either of the above-mentioned countries; also, in a newer country than either, incomes are to a greater extent received in kind. Both of these considerations render it improbable that so large a percentage of the total national income of Canada is brought under the notice of the income tax authorities as in Great Britain or the United States. Nevertheless, the data collected by the Income Tax Branch of the Department of National Revenue in the course of its administration of the income war tax, are significant both with regard to the total income assessed and with regard to the distribution of that income among various classes of the population, as well as by size of income groups.

In Canada, in the fiscal year ended Mar. 31, 1921, 3,696 corporations and 190,561 individuals paid income tax on incomes aggregating \$912,410,429; in the following year 8,286 corporations and 290,584 individuals paid income tax on \$1,462,529,170; in the fiscal year ended 1923, 6,010 corporations and 281,182 individuals paid income tax on \$1,092,407,925; in the fiscal year ended 1924, 5,569 corporations and 239,036 individuals paid income tax on incomes aggregating \$1,108,027,871; in the fiscal year ended 1925, 6,236 corporations and 225,514 individuals paid income tax on incomes aggregating \$999,160,248; in the fiscal year ended 1926, 5,738 corporations and 209,539 individuals paid income tax on incomes aggregating \$1,003,110,646. In the fiscal year ended 1927, after the exemption limit had been raised from \$2,000 to \$3,000 for married and from \$1,000 to \$1,500 for single persons, 116,029 individuals and 5,777 corporations paid income tax on incomes aggregating \$744,184,891. In the fiscal year ended 1928, 122,026 individuals and 6,121 corporations paid income tax on incomes aggregating \$1,040,232,948, in the fiscal year ended 1929, 129,663 individuals and 7,438 corporations paid income tax on incomes aggregating \$1,195,402,266, and in the fiscal year ended 1930, 142,154 individuals and 7,957 corporations paid income tax on incomes aggregating \$1,325,193,444. See Tables 33 to 35 for further details.

### Subsection 3.—Outside Capital Invested in Canada and Canadian Capital Invested Elsewhere.<sup>1</sup>

An estimate of the outside capital invested in Canada and the Canadian capital invested outside of the Dominion is now prepared annually by the Internal Trade Branch of the Dominion Bureau of Statistics. Any estimate of this char-

<sup>1</sup> Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of the publications of this Branch see Chapter XXVIII, under "Internal Trade".

acter is liable to a margin of error, but the utmost care has been taken in the computation and it is believed that the figures approximate fairly to actual conditions. More complete information is being obtained from year to year, enabling corrections to be made in previous estimates such as were published at p. 836 of the 1929 Year Book. Details of the investment of outside capital in Canada are given for the four last available years in Table 36.

It is estimated that the total investment of British and foreign capital in Canada on Jan. 1, 1929, was \$5,904,169,000. Of this sum, \$2,197,682,000 was British capital, \$3,470,087,000 was from the United States and \$236,400,000 from other countries. Though these totals are large, it should be remembered that the national wealth of the Dominion in 1928 is estimated at \$28,940,000,000 (p. 871) exclusive of the value of those undeveloped natural resources in which some of the outside capital is invested, and that it is inevitable that at the present stage Canada should seek the assistance of outside capital to develop the undeveloped natural resources of the Dominion.

It must also be borne in mind that Canadians have invested large amounts of capital abroad. The Bureau estimates that Canadian investments in other countries amounted to \$1,745,816,000 at the beginning of 1929, or nearly 30 p.c. of the amount of outside investments in Canada. Of this, \$991,652,000 was placed in the United States, \$95,916,000 in Great Britain and \$658,248,000 in other countries.

It is estimated that the amount of business capital employed in Canada is \$17,500,000,000. This sum includes the bonded indebtedness of Dominion, Provincial and municipal governments, investments in railways, all manufacturing concerns, mines and metal industries, public utilities, trading establishments, finance, insurance, land and mortgage. It does not include private capital in domestic enterprises such as farms, homes, etc. Of this sum it is estimated that 65 p.c. or \$11,500,000,000 is owned in Canada; 20 p.c. or \$3,500,000,000 in United States; 13 p.c. or \$2,200,000,000 in Great Britain; 2 p.c. or \$300,000,000 in other countries.

If the basis of comparison is total national wealth, foreign and British investments decrease in significance. Canada's national wealth in 1930 was probably \$30,000,000,000; British and foreign investments in Canada were about \$6,000,000,000 or 20 p.c.

## CHAPTER XXII.—CURRENCY AND BANKING; LOAN AND TRUST COMPANIES.

### Section I.—Canada's Monetary System.

**Historical.**—Early trade in Canada was carried on by barter, which at times resulted (e.g., in transactions between Indians and fur traders) in the adoption of beads, blankets, etc., as recognized media of exchange. Later, during the French period in Canada, while barter still formed perhaps the most important means of exchange between individuals and merchants, a more or less satisfactory currency system developed. Beaver and other furs, tobacco and wheat were at times used as substitutes for currency, the last named being at one time a legal tender. A makeshift currency system was also developed during the French régime when playing cards, stamped with a value and redeemable yearly on the receipt of bills of exchange on Paris, came into circulation. Other paper money was also issued, and the total amount outstanding at the time of the cession was estimated at 80,000,000 livres, which was nearly all lost to its holders.

The British Government next sought to establish a uniform standard of colonial currency, but since at this time French coinage again began to come into circulation and the Spanish dollar also rivalled the English shilling as the most common medium of exchange, this was not universally possible. English sovereigns were overrated in terms of dollars in an endeavour to encourage their circulation. A rate of 5s. to the dollar was set in Halifax and was in use in government accounting systems, while in Montreal York currency (the rates prevalent in New York), giving the dollar an exchange value of 7s. 6d. or 8s., was in common use.

Canadians again became more or less familiar with the characteristics of paper money as a result of the experiences of the various neighbouring Northern States during the first half of the nineteenth century. During the war of 1812 this familiarity was increased by the establishment of an army bill office, issuing bills of various denominations, redeemable on presentation. The growing volume of trade between Canada and the United States also resulted in a tendency toward a decimal coinage, and in 1853 a measure was passed providing for the adoption of a decimal currency, with a dollar equivalent to the United States dollar; the British sovereign was made legal tender at \$4.86½. An Act of 1857 requiring all government accounts to be kept in dollars and cents came into force on Jan. 1, 1858; the formal adoption of decimal currency in the province of Canada dates from that time.

By the Uniform Currency Act of 1871 (34 Vict., c. 4), the decimal currency was extended throughout the Dominion, the British sovereign was made legal tender for \$4.86½ and the United States eagle legal tender for \$10, while authority was given to coin a Canadian \$5 gold piece. No Canadian gold coinage was issued, however, prior to the establishment of the Canadian branch of the Royal Mint in 1908, the first coins then struck being sovereigns similar to those of Great Britain, but with a small "C" identifying them as having been coined in Canada. In May, 1912, the first Canadian \$10 and \$5 gold pieces were struck, but the Canadian gold coinage has so far been limited in amount, since Cana-

dians have generally preferred Dominion notes to gold for use within the country, and when gold is needed for export bullion or British and United States gold coin serve the purpose equally well.

**The Ottawa Branch of the Royal Mint.**—The Ottawa Mint was established as a branch of the Royal Mint by the Ottawa Mint Proclamation, 1907, issued under the Imperial Coinage Act, 1870, and was opened on Jan. 2, 1908. Previously the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint in London or from The Mint, Birmingham, Ltd., and in its earlier years the operations of the Mint in Canada were confined to the production of gold, silver, and bronze coins for domestic circulation, of British sovereigns, and of small coinages struck under contract for Newfoundland and Jamaica. Previous to 1914 small quantities of gold bullion were refined, but during the war the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England, and the subsequent great development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Gold coins have never been a popular medium of exchange in Canada and none have been struck since 1919, most of the fine gold produced from the rough shipments from the mines being delivered to the Department of Finance in the form of bars worth between \$10,000 and \$11,000 each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold on the New York market or disposed of to local manufacturing firms.

Under its constitution as a branch of the Royal Mint the Ottawa Mint may coin and issue Imperial gold coins. The domestic currency of Canada, as at present authorized by the Currency Act, consists of \$20, \$10, \$5 and \$2½ gold pieces, 900 millesimal fineness (only \$10 and \$5 pieces have been issued); of \$1, 50 cent, 25 cent, and 10 cent silver pieces, 800 millesimal fineness; of 5 cent pieces of pure nickel (from metal produced in Canada); and of one cent pieces in bronze. The silver 5 cent piece is still legal tender, but its coinage was discontinued in 1921, and the silver dollar has never been coined.

**Gold.**—Gold is used only to an insignificant extent as a circulating medium in Canada, its monetary use being practically confined to reserves, but 5-dollar and 10-dollar gold pieces weighing respectively 129 and 258 grains, 9-10ths pure gold by weight, have been coined, the Canadian gold dollar thus containing 23-22 grains of pure gold. These coins were first issued in 1912, authority to issue them having been conferred in 1910. By the Currency Act, 1910 (9-10 Edw. VII, c. 14), British sovereigns, which are legal tender for \$4-86½, and other gold coins, and the 5-dollar, 10-dollar and 20-dollar gold coins of the United States, which contain the same weight of gold as Canadian gold coins of these denominations, are also legal tender. These, however, are almost entirely divided between the Dominion Government and the banks as reserves, and the chief circulating medium of the country is provided by paper and token currency.

Table 1, compiled from the Report of the Deputy Master of the Mint, shows the value of the gold bullion received for treatment at the Ottawa branch of the Royal Mint since its foundation, together with the gold coin and bullion issued. A statement of the gold, silver, nickel and bronze coinages issued to

the separate Provinces and to the Dominion of Canada since 1858 is published as Table 2. Table 3, compiled by the Dominion Comptroller of Currency, gives the form in which the gold has been held by the Government in recent years.

**Token Currency.**—Canadian silver dollars weighing 360 grains, 37-40ths fine, are provided for by the Currency Act of 1910, but no silver dollars have ever been struck by the Mint. Fifty, twenty-five, ten and five-cent pieces of weight proportionate to their respective fractions of the dollar, and of the same fineness, are in circulation, but, by c. 9 of the Statutes of 1920, the standard of fineness was reduced to 8-10ths. In 1921 the coinage of a nickel five-cent piece weighing 70 grains was authorized, and a number of these coins have appeared.<sup>1</sup> Silver coins are legal tender only up to ten dollars, nickel coins to five dollars, and bronze coins to twenty-five cents. Table 4 shows the net issue of silver and bronze coins (that is, the value issued less the value withdrawn), by years from 1901.

<sup>1</sup> Nickel coinage issued to the Dominion of Canada from the Mint to Dec. 31, 1930, had a face value of \$1,495,500. See Table 2.

4.—Circulation in Canada of Silver and Bronze Coin, Dec. 31, 1901-1930.

<sup>1</sup>The figures for net amount of coins issued show the value issued less the value withdrawn and to this extent do not correspond with the figures shown in Table 2.

<sup>2</sup>The decreases shown in recent years are due to the withdrawal of worn and mutilated silver coins from circulation.

**Dominion Notes.**—An important part of the Canadian monetary system is the paper currency of the Dominion Government. Under the Dominion Notes Act, 1914 (5 Geo. V, c. 4), the Dominion Government is authorized to issue notes up to and including \$50,000,000 against a reserve in gold equal to one-quarter of that amount. By c. 4, Acts of 1915, "An Act respecting the Issue of Dominion Notes", the Dominion Government is authorized to issue notes up to \$26,000,000 without any reserve of gold, \$16,000,000 of the notes to be against certain specified Canadian railway securities guaranteed by the Dominion Government.<sup>1</sup> Notes may be issued to any additional amount in excess of \$76,000,000, but (except as provided by the Finance Act, 1914—see footnote below) an amount of gold equal to the excess must be held. Thus Dominion notes normally approximate to gold certificates. Under the Act, the Government issues notes of the denominations of 25 cents, \$1, \$2, \$4, \$5, \$50, \$100, \$500 and \$1,000. In addition, "special" notes of the denominations of \$500, \$1,000, \$5,000 and \$50,000 (first issue of the last-mentioned September,

<sup>1</sup>The following is an outline of Canadian legislation respecting the issue of notes. After Confederation, by an Act of 1868 (31 Vict., c. 45) authority was given for the issue of notes to the extent of eight million dollars. The reserve was fixed at 20 p.c. up to a circulation of five millions; beyond that, 25 p.c. to be held as reserve. The law of 1870 (33 Vict., c. 10) authorized a limit of nine million dollars. The reserve was fixed at 20 p.c., but the nine millions were only to be issued when the specie amounted to two millions. Dollar for dollar was to be held beyond nine millions. In 1872 (35 Vict., c. 7) the reserve for the excess over nine millions was fixed at 35 p.c. in specie. This was amended in 1875 (38 Vict., c. 5) by requiring dollar for dollar beyond twelve millions; for the reserve between nine and twelve millions 50 p.c. in specie was to be held. In 1876 the law respecting Dominion notes was extended to the provinces of Prince Edward Island, British Columbia and Manitoba. In 1880 (43 Vict., c. 13) the basis of the present standard was established. A reserve of 25 p.c. in gold and guaranteed debentures was required, of which 15 p.c. at least was to be in gold. The limit was raised to twenty million dollars. In 1894 (57-58 Vict., c. 21) the limit was raised to twenty-five millions, but this was found unworkable and was repealed in 1895 (58-59 Vict., c. 16), and authority was given to issue notes to any amount over twenty millions, on holding dollar for dollar beyond that sum. In 1903 (3 Edw. VII, c. 43) the Minister of Finance was required to hold gold and guaranteed debentures of not less than 25 p.c. on Dominion notes issued and outstanding up to thirty million dollars; beyond thirty millions he was required to hold gold equal to the excess. In 1914 (5 Geo. V, c. 4, assented to Aug. 22, 1914) this amount was raised to fifty millions and in 1915 (5 Geo. V, c. 4, assented to April 8, 1915) to seventy-six millions, under the conditions stated in the text. The Finance Act, 1914 (5 Geo. V, c. 3) makes provision, in case of war, panic, etc., for the issue of Dominion notes against approved securities; this emergency arrangement was made a permanent feature by c. 48 of the Statutes of 1923.

1918) are issued for use between banks only, the purpose being as a safeguard against theft. Table 5 gives the main statistics of Dominion notes outstanding and the reserves on which they have been based since 1890, Table 6 statistics of gold held by the Minister of Finance from 1919 to 1930, while Table 7 shows the use of notes of different denominations during the past six years.

<sup>1</sup>Includes Dominion notes in the central gold reserves as security for bank note circulation.

<sup>2</sup>Includes provincial notes amounting to \$32,857 in 1890 and reduced gradually to \$27,603 on June 30, 1930.

<sup>3</sup>Includes issue of \$50,000 notes, 1919-1930.

<sup>4</sup>Per capita circulation in 1900 is taken as 100.

<sup>5</sup>The circulation uncovered by specie reserve was to a considerable extent covered, between 1890 and 1910, by the holdings of guaranteed debentures amounting to \$1,946,666. Since 1914 a part of the issue of Dominion notes outstanding has been covered by the holding of securities approved under the Finance Act, 1914, and the Finance Act, 1923. On June 30, 1930, the Dominion notes outstanding against securities approved under the Finance Act, 1923, amounted to \$49,700,000.

**Bank Notes.**—Bank notes form the chief circulating medium in use in Canada. Under the Canadian Bank Act, the banks are authorized to issue notes of the denominations of \$5 and multiples thereof to the amount of their paid-up capital. These notes are not in normal times legal tender.

In addition, during the period of the movement of the crops (Sept. 1 to Feb. 28-29), the banks may issue "excess" circulation to the amount of 15 p.c. of their combined capital and "rest" or reserve funds. In the event of war or panic the Government may permit the "excess" to run all the year. The banks pay interest on this excess at 5 p.c. If a bank desires to extend its circulation, it may also do so by depositing dollar for dollar in gold or Dominion notes in the central gold reserves.

In case of insolvency the notes of a bank are a first lien upon its assets. Notes are further secured, in case of insolvency, by the bank circulation redemption fund, to which all banks contribute on the basis of 5 p.c. of their average circulation not covered by gold or Dominion notes deposited in the central gold reserves established in 1913. The sum thus secured is available for the redemption of the notes of failed banks.

The figures of bank note circulation are given in Table 8. Table 9 brings together the statistics of the amount of circulating media in the hands of the

general public, yearly averages being used where possible. "In the hands of the general public" here includes currency in the tills of the banks in the process of ordinary exchange as well as that outstanding among the general public, but does not include Dominion notes of denominations larger than five dollars which are used almost entirely for inter-bank transactions and reserves. In both Tables 8 and 9 "bank notes in circulation" include notes of other banks held by the banks, averaging about \$15,000,000 in 1930. In the case of the silver, nickel and bronze coinage in Table 9, the figures are the total amounts issued by the mint since 1858 less amounts withdrawn from circulation and therefore include amounts held by the banks as well as coins lost by the public, which over such a period would probably amount to a considerable sum.

### 8.—Statistics of Bank Note Circulation, calendar years 1900-1930.

Note.—The statistics in this table are averages computed from monthly returns in each year. Figures for 1929-99 will be found at p. 861 of the 1927-28 Year Book.

<sup>1</sup>Yearly averages.

<sup>2</sup>Dominion notes of larger denominations in hands of banks are not included, but provincial notes, amounting to \$27,609 in 1930, are included.

<sup>3</sup>Per capita circulation in 1900=100.

<sup>4</sup>Figures supplied by the Mint as at Dec. 31 of each year, are the net issues of coinage since 1858 (see Table 4 of this chapter pp. 883-4).

## Section 2.—Banking in Canada.

**Historical.**—In the early days of banking one of the chief functions of banks was to issue promissory notes payable to the bearer on demand; where the bank's credit was good these notes passed freely from hand to hand, creating the chief circulating medium in the Canadas. In some cases in the Maritime Provinces bank notes were preferred to those issued by the Provincial Governments.

The need of a uniform circulating medium in Canada was felt by the merchants of Montreal toward the end of the eighteenth century, and the prospectus of a proposed bank of issue to be known as the Canada Banking Company was issued in 1792. This scheme, however, depended chiefly on the co-operation of British capital and was frustrated by the outbreak of war with France. A second project in 1808 for the incorporation of a Bank of Canada failed to secure the assent of the Legislature of Lower Canada.

At the close of the war of 1812 the army bill currency was withdrawn, and public attention once more turned to the expediency of securing a currency through the establishment of banks. The Bank of Montreal began business toward the end of 1817 as a private institution, under articles of association based on the first charter of the Bank of the United States. In the following year under similar articles of association the Quebec Bank was established, as well as the Bank of Canada at Montreal and the Bank of Upper Canada at Kingston. The three Lower Canadian institutions obtained their provincial charters in 1822, while the Bank of Upper Canada was superseded by a second Bank of Upper Canada established at York (Toronto) as a chartered bank in 1821. Meanwhile the Bank of New Brunswick had been incorporated in 1820, while in Nova Scotia the Halifax Banking Co. (private) commenced business in 1825, and the Bank of Nova Scotia received a regular charter in 1832. With all of these earlier banks note issue was an important part of their business.

The Bank of British North America, previously incorporated in Great Britain, commenced business in Canada in 1836, while Moisons' Bank was established in 1853, the Bank of Toronto in 1855, the Banque Nationale in 1860 and the Banque Jacques-Cartier (later the Banque Provinciale du Canada) in 1862. The Union Bank was established in 1866, the Canadian Bank of Commerce in 1867. There were no fewer than 28 banks in existence at Confederation. These were as follows:—

*Ontario and Quebec.*

Bank of Montreal,  
Quebec Bank,  
Commercial Bank of Canada,  
City Bank,  
Gore Bank,  
Bank of British North America,  
Banque du Peuple,  
Niagara District Bank,  
Moisons' Bank,  
Bank of Toronto,  
Ontario Bank,  
Eastern Townships Bank,  
Banque Nationale,  
Banque Jacques Cartier,  
Merchants' Bank of Canada,  
Royal Canadian Bank,

Union Bank of Lower Canada,  
Mechanics' Bank,  
Canadian Bank of Commerce.

*Nova Scotia.*

Bank of Yarmouth,  
Merchants' Bank of Halifax,  
People's Bank of Halifax,  
Union Bank of Halifax,  
Bank of Nova Scotia.

*New Brunswick.*

Bank of New Brunswick,  
Commercial Bank of New Brunswick,  
St. Stephen's Bank,  
People's Bank of New Brunswick.

**Subsection 1.—The Canadian Banking System in General.<sup>1</sup>**

A brief *résumé* of the Canadian banking system must emphasize: (1) its growth, from the beginning closely related to the Montreal produce and export trade; (2) its development of the branch bank system in order to meet the demands of a rapidly moving frontier of settlement; (3) its adaptation to the requirements of the grain and cattle trade of the west; and (4) the consolidation during later years of the features which tended towards its early success. The development of a stable system has been accompanied by failures,<sup>2</sup> particularly

<sup>1</sup> For details regarding Canadian bank note issue, see page 886.

<sup>2</sup> See Table 23, pp. 909-10.

marked about the middle of the 19th century, but progress has nevertheless been steady, based on sound principles, and adapted as closely as could be to the particular needs of the country.

The branch bank forms perhaps the most distinctive feature of the Canadian system as it exists to-day, and for a country such as Canada, vast in area and with a small population, the plan has proved a good one. A result of the growth of branch banks has been the partially centralized system that now obtains—centralized as to banks, of which there are now 11, rather than as to districts as in the partially centralized system of the United States.

A second peculiarity of the system may be noted—the existence and operation of the Canadian Bankers' Association. Through this body, which was incorporated in 1900 and acts under the authority of the Dominion Treasury Board, co-operation of individual banks is facilitated and encouraged. The association supervises clearing-house transactions, appoints curators to supervise the affairs of banks which have suspended business, and oversees the printing and issue of notes to its members. Adherence to similar principles and a linking together of the credit of the system result from the co-operation secured through the association.

The elimination of weaker banks or their amalgamation with more stable ones has been a progressive move towards greater efficiency. Co-operation between the banks and the Dominion Government has been made permanent through the medium of periodic returns and the regulation of note issues and reserves.

Apart from the many detailed services rendered to its clients, the Canadian banking system may be said to perform three main functions. In brief they are as follows:—

1. To put into circulation the paper currency which forms the circulating medium for small exchanges.
2. To provide a mechanism of exchange by the issue of bills of exchange, etc.
3. To form a means by which the credit of the banks and their unused deposits may be put to immediate productive use.

**Bank Legislation.**<sup>1</sup>—The history of Canadian banking legislation began over a century ago with the granting, between 1820 and 1822, of the Royal Assent to charters incorporating the Bank of New Brunswick, the Bank of Upper Canada, the Bank of Montreal, the Quebec Bank and the Bank of Canada. The right to issue bank notes existed and was exercised by private banks without legislative sanction for a considerable period after the early charters were granted, and before banks became the subject of general legislation. In Lower Canada the practical monopoly of issue was conferred upon the chartered banks by an Act of 1830, whereby the total amount of notes of less than £1 (\$4)<sup>2</sup> in circulation might not at any time exceed one-fifth of the paid-

<sup>1</sup> Revised from information furnished by the Office of the Inspector-General of Banks, Department of Finance.

<sup>2</sup> In the "Old Currency" £1 was equivalent to \$4 and 1 shilling to 20c.

up capital, and no notes under 5 shillings (\$1) might be issued, it being further provided that all issues of less than £1 might be limited or suppressed by the Legislature.

In 1841, in the first session of the Canadian Legislature after the Union, a tax of 1 p.c. was imposed upon bank-note circulation, which was limited to the amount of paid-up capital, notes of less than £1 not to exceed one-fifth of such capital. Various charters granted or renewed after the Union included provisions prohibiting banks from holding shares of their own stock or granting advances there-against. They were also prohibited from lending on the security of lands, houses, ships or pledge of merchandise (though such could be taken as additional security for debts previously contracted) or holding lands or houses except for the transaction of their business, neither could they own ships or be engaged in trade except as dealers in bullion or bills of exchange, the object being to confine transactions to legitimate banking business. Statements of assets and liabilities were to be submitted periodically—half-yearly or yearly—and such further information as the Government might call for was to be supplied confidentially. A further and important enactment was the imposition of the double liability upon shareholders, which had not previously existed with respect to the banks of Lower Canada, although it had for several years been a requirement of the younger banks of Upper Canada and first appeared in British North America in the Act incorporating the Bank of Nova Scotia enacted in 1832. Suspension of specie payments on demand for a period of 60 days, either consecutively or at intervals during one year, was to cause forfeiture of charter. Total liabilities were not to exceed thrice "the aggregate amount of capital stock paid in, and the deposit made in the bank in specie and Government securities for money", but this provision proved of doubtful utility.

In 1850 what was known as the "Free Banking Act" prohibited any but the chartered banks or other corporations or persons authorized under the new Act from issuing notes. A period of one year was allowed for banks or companies whose right of issue was thus withdrawn to retire their notes outstanding. It was provided that individuals or partners might establish banks, or joint stock companies with a minimum capital of £25,000 (\$100,000) might be formed to carry on the business, but in such cases operations were to be confined to an office in but one place and total liabilities were not to exceed thrice the amount of paid-up capital. In order to issue notes the banks thus formed were obliged to deposit with the Receiver-General provincial or provincially guaranteed securities for not less than £25,000 (\$100,000) par value, receiving therefor registered notes. The chartered banks already existing could surrender their right of circulation against assets and secure from the Receiver-General registered notes in return for the deposit of securities, which special issue was not subject to the 1 p.c. tax imposed by the Act of 1841. The legislation included provisions giving effect for the first time to the principle of making bank notes a preferred claim, it being stipulated with respect to any one-office banks established under the Act that, if securities against outstanding notes did not realize sufficient, the general assets of a bank, if wound up, were first to be applied towards the payment of its notes.

Legislation of 1851 increased from one to five years the period allowed for the retirement of note issues not in conformity with previous legislation, pro-

vided at least one-fourth of the average circulation during the year 1850—and not secured by the pledge of bonds—was retired annually. Provision was made for partial remission and entire exemption within a specified period of the tax on bank-note circulation, subject to certain restriction of such circulation. At the same time permission was granted to issue in excess of the restricted formula against gold or silver coin or bullion, or debentures of any kind issued by the Receiver-General, without requiring the banks actually to deposit such debentures and secure registered notes. The debentures, however, were to be applicable exclusively to the redemption of notes in case of failure. Monthly rather than half yearly returns now became necessary. In 1853, to encourage the issue of "secured" notes, the issue was permitted in excess of paid-up capital to the extent of specie holdings or debentures receivable, although actual deposit of securities with the Receiver-General was not required. The tax of 1 p.c. was to be calculated only on the average circulation outstanding in excess of such specie and security holdings. Until 1858 banks charging or receiving interest at a rate higher than 6 p.c. were liable to onerous penalties. In that year it was enacted generally that any rate of interest might be exacted, but banks were prohibited from taking or stipulating for a higher rate than 7 p.c. In 1859, at the urgent request of the banks, a measure was passed authorizing them to make advances on the security of bills of lading and warehouse receipts covering certain commodities.

By 1861-2 free banking had practically run its course. In all, six banks had taken advantage of the legislation, one of which—the Bank of British North America—doubtless found it valuable. The others did not thrive. The Act was finally repealed by the Provincial Notes Act of 1866, which aimed at a gradual reduction in the volume of bank-note circulation.

By Section 91 of the British North America Act, the right to legislate respecting banking, the incorporation of banks and the issue of paper money was assigned exclusively to the Dominion Parliament. A temporary measure was passed in 1867, largely by way of re-enactment until 1870 of previous legislation, but extending the powers of banks formerly incorporated by any of the provinces to the territory of the whole Dominion, and subjecting banks in New Brunswick and Nova Scotia to a tax of 1 p.c. upon the excess of their average notes in circulation above their average holdings of coin and bullion. (In these provinces there had been no general banking Act, special provisions being embodied in the respective charters which differed in only a few essential respects from those granted in Upper and Lower Canada.) It was re-enacted that banks were entitled to hold and dispose of mortgages on realty as additional security for debts already contracted and to acquire title to mortgaged property if necessary.

The Bank Act of 1870 provided for a minimum paid-up capital of \$200,000 for new banks and that at least 20 p.c. of the subscribed capital must be paid up in each year after the commencement of business. A proposal to limit the liabilities of banks in relation to capital and specie and Government debenture holdings was not translated into legislation. Bank notes in circulation were not to exceed the amount of paid-up capital. The right to issue notes under \$4 was withdrawn, largely in consideration of the abolition of the tax of 1 p.c. on note

circulation. If possible up to 50 p.c., but in no case less than one-third of a bank's cash reserves were to be held in Dominion notes. Dividends were limited to 8 p.c. until or unless the bank's reserve fund was the equivalent of 20 p.c. of its paid-up capital. In case of the failure of a bank, double liability of shareholders became enforceable without waiting for the realization of the bank's general assets. Banks were required to transmit certified lists of shareholders annually to be laid before Parliament. Any existing bank was permitted, on the authority of the shareholders, to apply for an extension of its charter, and the Governor-in-Council, upon the recommendation of the Minister of Justice and the Treasury Board, was empowered to extend such charter to 1881. Any suspension by a bank of payment of its liabilities for a period of 90 days would constitute insolvency, and operate as a forfeiture of its charter.

In 1871 the first comprehensive Banking Act of the Dominion was passed. A large part of the Statute was devoted to the re-enactment and consolidation of legislation already in force, although the measure of 1870 contained the main features of the Government's policy. The procedure relative to extension of charters laid down in the preceding year was superseded by this Act, which became the charter of the banks until July 1, 1881, that date being set in contemplation of regular decennial revisions. No new bank was permitted to commence business with less than \$500,000 capital *bona fide* subscribed and \$100,000 similarly paid up, with the further proviso that at least \$200,000 must be paid up within two years after commencement of business. The sections respecting loans against warehouse receipts, etc., were thoroughly revised and difficulties of procedure removed. Banks were permitted to take security on commodities in store pending marketing and also while undergoing conversion from the raw to the finished state. Advances were allowed upon security of shares of other banks. It was provided that a bank might charge any rate of interest or discount not exceeding 7 p.c., but that no higher rate should be recoverable. Monthly returns of assets and liabilities were required. Certain technical amendments were made to the Bank Act in 1872, 1873 and 1875. In 1879 the power to lend upon the security of shares of other banks was repealed.

At the first general revision of the Bank Act in 1880 (effective 1881) a note holder was definitely recognized as a preferred creditor, claims of the Dominion and Provincial Governments respectively to rank next in order of preference. Banks were prohibited from issuing notes under \$5, higher denominations to be multiples of this sum. Dominion notes were now to constitute not less than 40 p.c. of the bank's cash reserves. Monthly returns of a more detailed character were to be made. The Act was amended in 1883 so as more effectively to enforce the prohibitions, restrictions and duties already imposed upon the banks. The use of certain titles by private bankers not operating under the provisions of the Act was prohibited.

At the revision of 1890 (effective 1891) it was stipulated that not less than \$250,000 capital must be paid up before a certificate permitting a bank to commence business could be issued by the Treasury Board. A period of one year from the date of the charter was allowed for the payment of the capital and the carrying out of other preliminaries. Dividends were not to exceed 8 p.c. until or unless the reserve fund was the equivalent of 30 p.c. of the paid-up capital. A fund known as the "Bank Note Circulation Redemption Fund" was established, consisting of deposits made by the banks with the Minister of Finance of amounts equal to 5 p.c. of their average note circulation, such deposits to be subject to adjustment annually, and to constitute a guarantee of the payment of all notes of a suspended bank with interest at 6 p.c. from the date of suspension until the date when their redemption was undertaken by the liquidator. Failing action by the liquidator within two months, the Minister of Finance was authorized to redeem the notes out of the fund, and such outlay, if not made good out of the assets of the failed bank, was to be reimbursed by the contributing banks *pro rata* to their contributions. Another major change gave the banks, in certain classes of loans, the same legal power to take security over the borrower's goods as had previously been granted by warehouse receipts. This enactment served to make general and more clear principles already recognized by previous legislation and practice. Directors' qualifications were set out more clearly and it was now provided that a majority only of directors, instead of all, need be British subjects. Penalties for the excessive issue of circulation were made more severe.

The revision of 1900 (effective 1901) recognized the Canadian Bankers' Association as an agency in the supervision and control of certain activities of the banks. It was charged, under the Treasury Board, with the responsibility of supervising the printing and distribution of notes to the banks and their issue and destruction; also with control over clearing houses and the appointment of curators to supervise the affairs of suspended banks. The amended Act also included provisions permitting one bank to sell its assets to another. More detailed monthly returns were required and the interest on notes of failed banks was reduced from 6 p.c. to 5 p.c. In 1908, after the financial crisis of 1907, provision was made for emergency circulation during the crop moving season from October to January, when banks were allowed to issue excess circulation up to 15 p.c. of their combined paid-up capital and rest or reserve funds, this emergency circulation to be taxed at a rate not exceeding 5 p.c. per annum. In 1912, the period was extended to the six months from September to February inclusive.

At the fourth revision of the Bank Act in 1913 provision was made for an audit of each bank's affairs by auditors appointed by the shareholders. There was also provision for the establishment of Central Gold Reserves in which banks might deposit gold or Dominion notes for the purpose of issuing addi-

tional notes of their own there-against. Annual reports to the Minister of the fair market value of real and immovable property held by the banks for their own use were required. Banks were empowered to lend to farmers upon the security of their threshed grain. As a war measure the provision for emergency circulation was extended in 1914 to cover the whole year and banks were further authorized to make payments in their own notes instead of in gold or Dominion notes.

The fifth revision of 1923 (13-14 Geo. V, c. 32) resulted in numerous important changes. The qualifications of provisional directors were re-defined, while provision was made for keeping records of attendance at directors' meetings and bringing them to the notice of shareholders. Annual and monthly statements were given further attention and more complete returns required, including statements of controlled companies in the names of which any part of a bank's operations was carried on. Other or special returns were to be made if called for by the Minister. Two auditors were now to be appointed by the shareholders instead of one, and the qualifications, duties and responsibilities of auditors were more clearly defined. The personal liability of directors in case of distribution of profits in excess of legal limits was also more definitely expressed. Regulations regarding loans were amended and advances to any officer or clerk of a bank could not, in any circumstances, be granted in excess of \$10,000. Registration of security for loans under sec. 88 was provided for. It became necessary for guarantee and pension funds to be invested in trustee securities. The punishment of directors and other bank officials for making false statements of a bank's position was provided for in sec. 153. In 1924, as a result of the failure of the Home Bank of Canada, provision was made for periodical examination of the chartered banks by an Inspector-General of Banks, who was to be an officer of the Department of Finance.

**Banking Statistics.**—In Table 10 is given a historical summary of Canadian banking business since Confederation. In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in two main groups, liabilities to shareholders and liabilities to the public, the latter group only being considered when determining the ordinary financial position of any such institution. Assets are divided into four groups, other assets being included in the total. As of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted on the accompanying graphs, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and of municipal securities were relatively insignificant prior to the Great War.

**Deposits, Loans and Discounts.**—As an index of the course of banking business, of the nature of many transactions undertaken and of the general security of bank assets, loans and discounts are of great value. They illustrate clearly the channels into which a large proportion of the potential earning power of the banks is directed, and, by providing a comparison between investments made in lending operations inside and outside of Canada, afford essential information regarding the conduct by a bank of one of its most important activities.

Bank deposits (the demand deposits being to a large extent the product of lending operations, by which credit is advanced on security followed by the deposit of the proceeds of a loan) are also of considerable importance, and, on account of their derivation, are one of the most valuable records of the volume of business done at any time. Actual deposits of cash (mainly deposits payable after notice or on a fixed day) are, of course, included with the amounts deposited after the granting of loans.

Tables 13 and 14, following, give the deposits and loans of Canadian chartered banks for the years 1926 to 1930.

### 13.—Deposits in Chartered Banks in Canada and elsewhere, for the calendar years 1926-1930.

NOTE.—The statistics in this table are averages computed from monthly returns in each year.

<sup>1</sup>Includes loans to cities, towns, municipalities and school districts.

**Bank Reserves.**—The Bank Act contains no specific provisions as to the amount of gold to be held against either note circulation or general liabilities of a bank. It requires, however, that 40 p.c. of whatever cash reserves a bank finds it expedient to carry shall be in Dominion notes. A second provision instructs the Minister of Finance to arrange for the delivery of Dominion notes to any bank in exchange for specie. Thus the gold reserve against Dominion notes, to the extent that the notes are held by the banks, is reserve against banking operations, the Dominion Government being the custodian of the gold for the banks. The other cash element in bank reserves is specie in hand. In addition to this cash on hand, Canadian banks carry three other kinds of assets which are regarded as reserves, being funds more or less immediately available for the liquidation of liabilities. These are:—(1) cash balances in banks outside of Canada; (2) call and short loans in New York (the favorite call loan market); and (3) readily marketable securities. These are shown, together with net liabilities, in Table 15. In Table 16, the ratio to net liabilities of each element of the reserve is shown.

## 15.—Bank Reserves, with Liabilities, calendar years 1901-1930—continued on p. 901.

NOTE.—The statistics in this table are averages computed from monthly returns in each year. Figures for 1892-1900 were given on p. 872 of the 1927-28 Year Book.

<sup>1</sup>See footnote 1 on preceding page.

<sup>2</sup>Net liabilities are obtained by deducting from total liabilities to the public, as shown in Table 16, the items "Notes of other banks," "Cheques on other banks", "Loans to other banks in Canada, secured, including bills rediscounted", which represent indebtedness within the system and are counterbalanced by credits within the system.

16.—Ratio of Bank Reserves to Net Liabilities,<sup>1</sup> calendar years, 1901-1930.

Note.—The statistics in this table are based upon the averages of the monthly returns in each year. Figures for 1892-1900 will be found at p. 874 of the 1927-28 Year Book.

Year.	Cash on hand.	Cash due from Banks outside of Canada.	Call and Short Loans elsewhere than in Canada.	Securities.	Total Reserves.

Subsection 2.—The Individual Chartered Banks of Canada.<sup>1</sup>

During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same, 36 in 1881 and 1891, and 34 in 1901, but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 11 in December, 1930. That this has been far from involving a curtailment of banking facilities is seen in Table 10, which shows the development of the banking business since 1867, and in Table 17, which compares the number of branch banks existing in Canada at different periods, showing a growth from 123 at Confederation to 4,083 inclusive of sub-agencies at Dec. 31, 1930, besides 182 branches in other countries. Table 18 gives the number of branches of the various banks, by provinces, as at Dec. 31, 1930, while Table 19 contains the statistics of branches of Canadian banks doing business outside of Canada, an extension of Canadian banking (more especially to Newfoundland and the West Indies) which has proceeded very rapidly in recent years.

<sup>1</sup>Revised by H. T. Ross, Secretary, Canadian Bankers' Association.

17.—Number of Branches of Chartered Banks in Canada, by Provinces, 1868, 1902, 1905, 1916, 1920, 1926, 1927, 1928, 1929, 1930.<sup>1</sup>

**Earnings of Canadian Banks.**—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable faithfulness the fluctuations of general business. So far as individual banks are concerned, indeed, the changes resulting from this era of amalgamations are apt to render the figures incomparable over a period of years. During the six years covered by Table 20, however, the Bank of Nova Scotia, the Bank of Toronto, the Banque Provinciale du Canada, the Dominion Bank and the Imperial Bank have not been affected by the tendency toward absorptions, and the steady increase in the net profits of these banks is excellent evidence of the prosperity of the country. Further, the remarkable increase of the aggregate net profits of Canadian chartered banks from \$19,589,531 in 1925 to \$26,715,583 in 1930 is convincing evidence of the business activity of Canada. It is noteworthy that the net profits of the Bank of Montreal and the Royal Bank in 1930 were each nearly a quarter of the total for all the banks of Canada.

<sup>1</sup>Includes other liabilities.

**Bank Amalgamations and Insolvencies.**—Two tables are appended which may be of interest to students of Canadian banking history. The first, showing bank insolvencies since 1867, gives the capital paid up, reserves, assets and liabilities of insolvent banks, and shows also the payments to noteholders and depositors. In the majority of cases, both these classes of creditors have received payment in full. The table of bank absorptions gives the dates of absorption of the 35 banks which were incorporated with other institutions between 1867 and 1930.

<sup>1</sup>This bank was only in existence for 3 months and 26 days. Some of its notes were redeemed on its re-opening for a few days. The Dominion Government received 25 cents on the dollar on several thousand dollars worth of the notes which it held. <sup>2</sup>Liquidation incomplete. <sup>3</sup>These banks never suspended payment. Their branches were taken over by other banks which assumed all liabilities to depositors. Some years later, for technical purposes, these banks were put into insolvency.

24.—Bank Absorptions in Canada since 1867.<sup>1</sup>

<sup>1</sup>The purchasing banks named in the latter part of the table are no longer in business.

<sup>2</sup>Dates given since 1900 are those of the Orders in Council authorizing the absorptions.

<sup>3</sup>The Banque d'Hochelega after absorbing the Banque Nationale adopted the name Banque Canadienne Nationale.

### Subsection 3.—The Volume of Business Transacted through the Banks.

In advanced industrial societies money is only "the small change of commerce". The great bulk of monetary transfers, particularly in the case of the larger transactions, is made through the banks. Thus it has been estimated that in the United States in 1917 about 6 p.c. of the business transactions of the country were financed by the use of money and the remaining 94 p.c. by the use of cheques. Accordingly, if we knew the aggregate amount of the cheques paid through the banks and charged to accounts, we should have an almost complete record of the volume of business transacted, and thus of the business activity of the country.

Statistics of this character were at first secured through the operation of the clearing houses—places where the representatives of all the banks met daily in the leading cities and presented for payment the notes of other banks and the cheques drawn upon other banks that had been paid into their institutions in the regular course of business. In Canada, the first clearing houses to be established were those of Halifax (1887), Montreal (1889), Toronto (1891), Hamilton (1891) and Winnipeg (1893), and the number has subsequently increased to 32. Statistics showing the annual aggregates of the transactions at each clearing house were published in the Canada Year Book as early as the 1893 edition (p. 524), while current monthly and weekly figures are given in the daily and financial press. In recent years, owing to the reduction in the number of the banks through amalgamations, the proportion of the inter-bank transactions recorded by the clearing houses to the grand total of banking transactions has declined, and the place of total bank clearings as a measure of business has been taken by total bank debits—*i.e.*, the totals of cheques charged to accounts at all banks. The total bank debits at all branch banks situated in the clearing-house cities of Canada have been compiled for 1924 and subsequent years by the Canadian Bankers' Association for the Dominion Bureau of Statistics, which has published the figures monthly and annually with interpretative analyses. Further, in order that an estimate might be made of the proportion of banking transactions outside the clearing-house cities to the total, the Canadian Bankers' Association secured for the month of January, 1929, the grand total of all cheques charged to accounts at all branch banks throughout the Dominion. The results were published in the Bureau's Monthly Review of Bank Debits for February, 1929, and showed that the aggregate of transactions outside the clearing-house cities was in January, 1929, 14½ p.c. of the grand total in the clearing-house cities. The corresponding figures in the five economic areas were as follows:—Maritime Provinces 90.6 p.c., Quebec 6.1 p.c., Ontario 17.2 p.c., Prairie Provinces 18.6 p.c., British Columbia 14.3 p.c. It would thus appear that only in the Maritime Provinces does the total of bank debits in clearing-house cities inadequately represent the grand total of business transactions throughout the whole area.

**Clearing-House Transactions.**—The appended table shows for the years 1926 to 1930 the total volume of clearings in the clearing houses of Canada. These figures, it may be added, represent not only actual city clearings but exchanges between numerous rural branches of the banks in each district.

<b>Totals.....</b>	<b>17,715,090,615</b>	<b>20,568,437,223</b>	<b>24,554,938,119</b>	<b>26,105,168,317</b>	<b>20,991,874,458</b>

Bank clearings, though generally regarded as a leading barometer of business conditions, are defective in that they record only inter-bank transactions—transactions through which one bank becomes either the debtor or the creditor of another. They do not record the numerous transactions in which the transfer of value is made within a single bank, as, for example, where the purchaser and the seller of values that are paid for by cheque carry their accounts in the same bank. As the number of separate banks has in recent years been steadily diminishing through amalgamations, there being only 11 in December, 1930, as compared with 18 in 1923, inter-bank transactions are bearing a steadily decreasing proportion to the total of business transacted, a fact which goes far to explain the relative smallness of the increase in bank clearings from 1926 to 1929 and the decrease in 1930 to a point below the 1927 level, as shown in Table 25.

**Bank Debits.**—Since bank clearings have ceased to be a satisfactory measure of general business, the Bureau of Statistics in 1923 took up with the Canadian Bankers' Association the question of securing a record of bank debits, *i.e.*, of all cheques charged against accounts at all banks. The Bankers' Association agreed to secure from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing-house cities of Canada, and the figures of cheques charged to accounts (bank debits) are given for the years 1926-1930 in Table 26. The Weyburn Security Bank, which operated in southern Saskatchewan, voluntarily added a total of all cheques charged to accounts at all of its branches.

It will be noted, as establishing the need of the newer record, that bank debits for 1930 show an increase of 23.6 p.c. over those of 1926, while bank

clearings in the later year show an increase of only 13.5 p.c. The bank debits are a comparable record for the five years; the bank clearings, owing to the reduction in the number of banks, are not a comparable record.

**Subsection 4.—Government and other Savings Banks.**

In a comparatively new country where capital is relatively scarce, it is a natural thing that the banks which finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus in Canada the great bulk of the current savings of the people is found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given for recent years in Table 10 of this chapter, the 1930 average being \$1,427,569,716. Further, the current savings of

the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1929 aggregating \$210,728,479. In comparison with the enormous figures of notice deposits in chartered banks and with total insurance in force, the deposits in the special savings banks are comparatively small, but are none the less significant.

There are three distinct types of savings banks in Canada at the present time, in addition to the savings divisions of the chartered banks and of trust and loan companies. First, there is the Post Office Savings Bank, the deposits in which are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario, in Manitoba and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are in the province of Quebec two important savings banks, the Montreal City and District Savings Bank and the Caisse d'Economie de Notre-Dame de Québec, established under Dominion legislation and making monthly reports to the Department of Finance.

**Dominion Government Savings Banks.**—Prior to 1929 there were two classes of Dominion Government savings bank in Canada, the Post Office Savings Bank, under the Post Office Department, and the Dominion Government Savings Bank, attached to the Department of Finance. The former was established under the Post Office Act of 1867 (31 Vict., c. 10) in order "to enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon" Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers-General, and in other places in the provinces of Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. The Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929. Historical statistics for both systems will be found in Table 27 and more detailed figures covering the last six years in Table 28.

**27.—Deposits with Government Savings Banks,<sup>1</sup> June 30, 1863-1908, and Mar. 31, 1907-1930.**

NOTE.—Figures for all intermediate years will be found on p. 833 of the 1926 Year Book.

**Provincial Government Savings Banks.—Ontario.**—In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. The funds received from this source are used almost exclusively to finance farm loans under the Agricultural Development Act. Interest at the rate of 3 p.c. per annum compounded half yearly is paid on all accounts. The deposits are all repayable on demand. Total deposits on Oct. 31, 1930, were \$23,307,118 and the number of depositors at that date was over 80,000. Seventeen branches are in operation throughout the province.

**Manitoba.**—A system somewhat similar to the Ontario system is in operation in Manitoba, where 7 savings offices of the province had on Dec. 31, 1930, 41,857 deposit accounts with deposits aggregating \$14,232,495.

**Alberta.**—In Alberta the provincial Treasury receives savings deposits and issues savings certificates bearing interest at 4 p.c. The total amount in savings certificates was \$11,805,693 on Mar. 31, 1930.

**Other Savings Banks.**—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had on Dec. 31, 1930, a paid-up capital of \$2,000,000, savings deposits of \$55,319,814, and total liabilities of \$57,096,970. Total assets amounted to \$61,543,430, including over \$43,000,000 of Dominion, provincial and municipal securities. The Caisse d'Économie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a Dominion charter by 34 Victoria, c. 7, had on Dec. 31, 1930, savings deposits of \$12,189,076, a paid-up capital of \$1,000,000 and total assets of \$16,035,401.

The co-operative people's banks of Quebec (178 reported to the Provincial Government in 1929) are also an important element in promoting thrift and assisting business in that province. Thus on Dec. 31, 1929, savings deposits in these banks amounted to \$8,090,614, while the amount on loan was \$10,314,622. Loans granted in 1929 numbered 17,994, amounting to \$4,249,650. Profits realized amounted to \$645,616. (See p. 786.)

### Section 3.—Loan and Trust Companies.

Business such as that now transacted by loan and trust companies was first carried on by an incorporated Canadian company in 1844, when the Lambton Loan and Investment Co. was established, while the Montreal Building Society was incorporated by c. 94 of the Statutes of 1845. In order to legalize and encourage such operations in Upper Canada, an Act was passed by the Canadian Legislature in 1846, followed in 1847 and 1849 by Acts in New Brunswick and Nova Scotia respectively. These early companies were termed building societies; their activities comprised mainly the lending of money on the security of real estate and also the lending of money to members without their being liable to the contingency of losses or profits in the business of the society. In addition to these operations, such companies were authorized by an Act of 1859 to "borrow money to a limited extent". Later, by the Building Societies Act of 1874, authority was given to receive money on deposit and to issue debentures, subject to certain restrictions as to amounts of deposits.

The number of loan and savings societies in operation and making returns to the Government at Confederation was 19, with an aggregate paid-up capital of \$2,110,403 and deposits of \$577,299. Rapid increases in the number of companies and total volume of business resulted from subsequent legislation until in 1899 102 companies (including trust companies) made returns, showing capital stock paid up \$47,337,544, reserve funds of \$9,923,728 and deposits of \$19,466,676; total liabilities had increased from \$3,233,985 to \$148,143,496 between 1867 and 1899. By 1913 the number of companies had declined, through amalgamations and absorptions, to 74 (including 16 trust companies), with a combined paid-up capital of \$68,091,042, reserves of \$35,959,342, deposits of \$32,681,806 and total liabilities of \$478,658,228.

The laws relating to trust and loan companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. The statistics of Tables 31 and 32 refer only to those companies operating under Dominion charter, except that beginning in 1926 the statistics of loan companies and trust companies incorporated by the province of Nova Scotia, and brought by the laws of that province under the examination of the Dominion Department of Insurance, have been included. Also, since 1922 provincially incorporated loan and trust companies make voluntary returns of their

principal statistics to the Dominion Department of Insurance, so that all-Canadian totals are again available for recent years. As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies rose from \$188,637,298 in 1922 to \$206,596,109 in 1929. The total assets in the hands of the trust companies increased from \$805,689,070 in 1922 to \$2,059,862,042 in 1929. The latter figure included \$1,836,029,835 of "estates, trusts and agency funds" (Table 30).

**Functions of Loan Companies.**—The principal function of loan companies is the lending of funds on first mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. Of the loan companies operating under provincial charters, the majority conduct loan, savings and mortgage businesses, generally in the more prosperous farming communities.

**Functions of Trust Companies.**—Trust companies, it may be added, act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, and, where so appointed, as authorized trustees in bankruptcy. Some companies receive deposits, but the lending of actual trust funds is restricted by law. The figures of Table 30 are of particular interest in the case of trust companies, which, on account of the nature of their transactions, are peculiarly provincial institutions, since their chief duties are intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

<sup>1</sup>Includes money in trust for investment amounting to \$2,562,455 in 1914, \$3,113,170 in 1915, \$3,799,149 in 1916, \$3,443,682 in 1917 and \$5,170,463 in 1918; corresponding amounts are included under the heading "Estate, trust and agency funds" for the years 1920 to 1929. The figures for 1919 are not available.

### Section 4.—Sales of Canadian Bonds.

Interesting aspects of public financing and of the investment of capital in Canadian development during the twentieth century are measured by statistics of the sales of Canadian bonds since 1904 shown in Table 33. (The figures are reproduced from *The Monetary Times Annual*, 1931.) In the first part of this table, the bonds sold in each year are divided according to whether the financing was for Dominion, Provincial or Municipal Governments, railways or other corporations, while in the second part of the table the sales in each year are distributed according to sales in Canada, United States and Great Britain.

The total sales of Canadian bonds naturally reached a very high mark toward the close of the war owing to the huge amounts of Dominion Government financing required to cover the war expenditures. However, with the exception of the years 1918 and 1919, the total sales were greater in 1930 than in any other year. An important factor in the increase of more than \$100,000,000 over 1929 was no doubt the more favourable conditions in the bond market in 1930. The break in the stock market in the autumn of 1929 resulted in a drop from the former high level of interest rates which had prevailed in the call loan market and thus released great sums of money for investment in bonds. Furthermore, the ending of the fever of speculation in stocks turned the attention of the

investing public toward the greater security of bonds as an investment. Interest rates dropped and the prices of good bonds advanced with the result that bonds with ample security behind them could be sold under conditions more favourable to the seller than for some years before.

Dominion Government financing through bond sales since 1907 may be divided into three periods: the first from 1908 to 1914, when the money was required largely for internal development of the country, public works and Government railways; the second from 1915 to 1919, when war expenditures required very large borrowings; and the third since the war, when the issues have been largely required for refunding former loans at more favourable interest rates and for expenditures in connection with public works and railways.

Provincial bond issues have been on a much larger scale since the war than formerly, probably due to the development of provincially-owned public utilities and of improved highways. Sales of the bonds of Canadian municipalities, on the other hand, were greater in 1913, toward the end of the "land boom", than they have been in any other year, although sales in 1930 almost reached the record of that former year. However, allowing for the increased population in cities and towns, there has not been the same marked increase in the average annual sales of municipal bonds, in the period since the war compared with the period before the war, that is noticeable in the case of provincial bonds.

Sales of corporation bonds have been at a much higher level during the past five years than in any other period. Public utility corporations account for a large proportion of corporation bond issues and the recent rapid expansion in hydro-electric development is the probable reason for the large total of securities of this type in the last few years.

A very striking change has taken place during the present century in the market in which Canadian bond issues are principally sold. Prior to the war, a great part of the capital required for Canadian development was drawn from Great Britain, and the major portion of Canadian bond issues were sold there. The coming of the war temporarily eliminated that market, and Canadians turned largely to the United States for outside capital. However, the great increase in wealth during and since the war has enabled a much greater proportion of public and industrial financing to be done at home, and beginning with the Victory Loan campaigns, Canadians not only learned how to invest their money in bonds, but had the necessary funds to invest on a large scale in bond issues. These facts are reflected by the figures in Table 33 which show that in the last 15 years more than 60 p.c. of the total issues of Canadian bonds have been sold within Canada.

### 33.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, calendar years 1904-1930.

(From *The Monetary Times Annual.*)

## CHAPTER XXIII.—INSURANCE.<sup>1</sup>

Insurance companies transacting business throughout the Dominion of Canada are licensed by the Dominion Government under Acts administered by the Department of Insurance under the Minister of Finance, while other insurance companies, doing business only in one province, or, by arrangement, in more provinces than one, are licensed by Provincial Governments. The statistics here published are in the main those of companies doing business under licence from the Dominion Government, and are divided into three classes relating to:— (1) insurance against fire, (2) life insurance, and (3) insurance of a miscellaneous character, covering risks of accident, guarantee, employers' liability, sickness, burglary, hail, steam boiler, tornado, weather, inland transportation, automobile, sprinkler leakage, live stock and titles. These statistics refer in all cases to calendar years and are compiled from the reports of the Department of Insurance.

Since 1915, the Department of Insurance has endeavoured to collect from the available sources statistics of the business transacted by companies holding licences from the Provincial Governments of Canada, or permitted by the laws of the provinces to transact business without a licence. The business of the provincial licensees is divided into three classes:—(1) business transacted by provincially incorporated companies within the province by which they are incorporated; (2) business transacted by provincially incorporated companies in provinces other than those by which they are incorporated; and (3) business transacted by British and foreign companies licensed by the Provincial Governments. Further, under section 129 of The Insurance Act (c. 101, R.S.C. 1927), fire insurance on property in Canada may be effected, under specified conditions, with companies or associations outside of Canada which are not licensed to transact insurance business in Canada.

This chapter is brought to a close with a presentation of the statistics of Dominion Government annuities, administered by the Department of Labour but closely related to the field of insurance.

### Section I.—Fire Insurance.

Fire insurance in Canada began with the establishment by British fire insurance companies of agencies, usually situated in the sea ports and operated by local merchants. The oldest existing agency of a British company is that of the Phoenix Fire Office of London, now the Phoenix Assurance Co., Ltd., which commenced business in Montreal in 1804. On account of the growth of the insurance business of these early British companies, branch offices were established and local managers were appointed, charged with directing the companies' affairs in Canada.

The Halifax Fire Insurance Co. is the first purely Canadian company of which any record is available. Founded in 1809 as the Nova Scotia Fire Association, it was chartered in 1819 and operated in the province of Nova Scotia until 1919, when it was granted a Dominion licence. Among the other pioneer fire insurance companies still in operation, mention may be made of the following: the Quebec Fire Assurance Co., which commenced business in 1818 and was largely confined in ownership and operations to Quebec province; the

<sup>1</sup>The statistics of fire, life and miscellaneous insurance have been revised by G. D. Finlayson, Superintendent of Insurance, and those pertaining to Government Annuities by H. H. Ward, Deputy Minister, Department of Labour.

British America Assurance Co., incorporated in 1833, the oldest company in Ontario; the Western Assurance Co., organized in 1851, and, after a rapid and steady growth, one of the largest companies of its kind on the continent; two United States companies, the Aetna Insurance Co., Hartford, Conn., and the Hartford Fire Insurance Co., which commenced business in Canada in 1821 and 1836 respectively.

Any company desirous of carrying on business throughout Canada must obtain a licence from the Dominion Government, but if it proposes restricting its operations to one particular province, a licence may be had from that province, and it may transact business within such limits without regard to any general laws of the Dominion relating to insurance. In 1875 a Department of Insurance was created as a branch of the Finance Department at Ottawa, under the supervision of an officer known as the "Superintendent of Insurance", whose duties are to see that the laws enacted from time to time by the Canadian Parliament are duly observed by the companies. Some important requirements under these laws are:—(1) a deposit of \$50,000 of approved securities with the Government; (2) the appointment of a chief agent with power of attorney from the company; (3) the filing of a statement showing the financial position of the company at the time of its application for a licence, and subsequent annual statements of its business. In addition, books of record must be kept at its chief office and be opened to the inspection of Government officers whose practice is to examine them annually.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1929, shows that at that date there were 224 fire insurance companies doing business in Canada under Dominion licences; of these 51 were Canadian, 67 were British and 106 were foreign companies, whereas in 1875, the first year for which authentic records were collected by the Insurance Department, 27 companies operated in Canada—11 Canadian, 13 British and 3 American. The proportionate increase in the number of British and foreign companies from 59 p.c. to 77 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

Although in its early days the Dominion did not prove a very lucrative field for fire insurance companies, the great advance in building construction and the wide use of improved fire appliances and safety devices have reduced materially the danger of serious conflagrations and have placed the risks assumed by companies in Canada on an equality with those of other countries. A general decline in the rate of losses paid to premiums received may be noted in recent years (Table I).

A feature of the fire insurance business during recent years, besides the increase in premiums received, is the continued increase in the number of companies which are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business.

**Statistics of Fire Insurance.**—Statistical tables of fire insurance in Canada follow, illustrative of the progress of total business since 1869 and of the operations of individual companies for the year 1929. The net amount of fire insurance in force on Dec. 31, 1929, with companies holding Dominion licences, was \$9,431,169,594, while the net amount in force with provincial companies on the same date was \$1,324,757,247. In addition, policies amounting to \$859,437,-

033 were in force during the year 1928 (the latest year for which information is available) by companies, associations or underwriters not licensed to transact business in Canada. Thus the grand total fire insurance in force on Dec. 31, 1929, would approximate \$11,615,364,000. Fire insurance in force in companies operating under Dominion licences increased by \$177,296,132 in 1930.

Table 1 shows figures of the growth since 1869 of companies holding Dominion licences and Table 2 shows the business done in Canada by individual companies during the year 1929, while in Tables 3, 4 and 5 are given figures of the assets, liabilities, income and expenditure of companies of various nationalities during the years 1924 to 1929. A close study of the various items included in these tables will afford an excellent idea of the type of business transacted by these various groups. A further summary of business by provinces is given in Table 6 for the years 1928, and 1929, with premiums and losses shown by nationality of companies. Further, a general summary of the business transacted by both Dominion and provincial licensees is given in Table 7, with business by unlicensed companies added in Table 8.

**Summary of Fire Insurance in Canada, 1929.**—Of the total amount of fire insurance effected in Canada during each year, a part is sold by companies holding provincial licences and permits. Such companies generally confine their operations to the province from which they get authority to operate, but may be allowed, at the same time, to sell insurance in other provinces. The bulk of fire insurance business, however, is that done by Dominion licensees. Operations in 1929 are summarized in Table 7. Business transacted by unlicensed companies is summarized in Table 8.

**Section 2.—Life Insurance.**

An article descriptive of the growth of life insurance in Canada, contributed by A. D. Watson, Esq., of the Department of Insurance, Ottawa, appeared on pp. 860-864 of the Canada Year Book, 1925.

**Life Insurance Statistics.**—The business of life insurance was carried on in Canada in 1929 by 41 active Dominion companies, including 28 Canadian, 5 British and 8 foreign companies. In addition there were 6 British and 5 foreign companies licensed to write insurance but which had ceased to write new insurance, while 4 other British and 4 other foreign companies were authorized under the Act to transact business in connection with policies written prior to Mar. 31, 1878. One other foreign company was licensed to transact business in 1926, but has written no life insurance business in Canada except one group policy which was written in 1928 but lapsed before the close of the year.

As shown by the historical statistics of Table 9, the life insurance business in Canada has expanded from very small beginnings, the total net life insurance in force in all companies operating under Dominion licences in 1869 being only \$35,680,062 while in 1930 it was \$6,492,496,222,<sup>2</sup> the amount per head of the estimated population of Canada having more than doubled since 1920—an evi-

<sup>2</sup> Preliminary figures. This total does not include nearly \$187,000,000 of fraternal insurance.

dence of the general recognition of the fact that, in view of the high cost of living, a larger amount of life insurance is necessary for the adequate protection of dependants. Notable also from these historical statistics is the fact that in this field the British companies, which were the leaders in 1869, have fallen far behind the Canadian and the foreign companies. The total net amount of new insurance effected during the year 1929 was \$978,141,485<sup>1</sup>, as compared with \$918,742,064 in 1928, \$838,475,057 in 1927, \$797,940,009 in 1926, and \$712,091,889 in 1925, while the premiums paid were \$210,728,479, as compared with \$192,945,783 in 1928, \$173,732,359 in 1927, \$159,872,965 in 1926 and \$145,480,207 in 1925. The total net assurance premiums paid in 1930 were \$220,554,056.<sup>2</sup>

The following diagram shows the rapid increase of life insurance in force in companies operating under Dominion licences between 1870 and 1929. Preliminary figures for 1930 show an increase of \$335,234,015 in the year, or a larger amount than the total in force as late as 1896.

In Table 10 detailed statistics are given of the business of Canadian, British and foreign companies respectively, by companies, in 1929, while Table 11 is a summary showing the business of Canadian, British and foreign companies for the past 5 years. Table 12 shows the ordinary and industrial policies in force and effected during the year ended Dec. 31, 1929. Table 13 gives the insurance death-rate by classes of companies, and Tables 14, 15, and 16 show respectively the assets, liabilities, and cash income and expenditure of Canadian and other life insurance companies for the years 1925 to 1929. Statistics of Dominion fraternal insurance are given in Table 17 and of Dominion and provincial insurance combined in Table 18, which shows that on Dec. 31, 1929, the total life insurance in force in Canada was \$6,548,251,744.

<sup>1</sup>In 1930 the new insurance effected was \$884,888,498 according to preliminary figures.

<sup>2</sup>Preliminary figures.

<sup>1</sup>Includes income or expenditure on business outside of Canada. <sup>2</sup>Income or expenditure in Canada.

**Life Insurance Effected through Fraternal Benefit Societies.**—Table 17 gives statistics of life insurance effected through fraternal benefit societies on the members thereof. The rates charged by these societies are computed to be sufficient to provide the benefit granted, having regard for actuarial principles. Each benefit fund of every society must be valued annually by a qualified actuary (Fellow of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries), and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 9 Canadian societies reporting to the Insurance Department of the Dominion Government, *viz.*, the Alliance Nationale, the Ancient Order of Foresters, the Artisans Canadiens-Français, Canadian Woodmen of the World, the Catholic Mutual Benefit Association, the Commercial Travellers' Association of Canada, the Commercial Travellers' Mutual Insurance Society, the Independent Order "Fior d'Italia", the Independent Order of Foresters and the Grand Orange Lodge of British America.

Under an amendment of the Insurance Act, which became effective Jan. 1, 1920, it became necessary for all foreign fraternal societies previously transacting business in Canada under provincial licences to obtain licences under the Insurance Act, in order to be permitted to continue to issue new insurance in Canada. Twenty-one such societies transacted business in 1929, *viz.*, Association Canado-Américaine, Brotherhood of American Yeomen, Catholic Order of Foresters, Expressmen's Mutual Benefit Association, Jewish National Workers' Alliance, Knights of Columbus, Knights of Pythias, Ladies' Catholic Benevolent Association, Lutheran Brotherhood, Lutheran Mutual Aid Society, Maccabees, National Fraternal Society of the Deaf, Sons of Zion, Royal Arcanum, Royal

Clan (Order of Scottish Clans), Slovene National Benefit Society, Sons of Norway, Verhovay Aid Association, Women's Benefit Association, Women's Catholic Order of Foresters, Workmen's Circle.

**17.—Life Insurance Effected through Fraternal Benefit Societies, 1925-1929.**

*Note.—The figures are for Canadian business only.*

**Summary of Life Insurance in Canada, 1929.**—In addition to the business transacted by life insurance companies incorporated by the Dominion Government to carry on business throughout the country, a considerable volume is also carried on by companies operating under provincial licences or otherwise permitted by the Provincial Governments to carry on such transactions. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 18, showing policies issued and in force, premiums received and losses paid, as at Dec. 31, 1929, summarizes the volume of business done by both life companies and fraternal societies as Dominion and provincial licensees in that year.

## Section 3.—Miscellaneous Insurance.

Since 1875 the growth of insurance business other than fire and life has been a steady one. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies duly licensed for the transaction of accident, guarantee, plate glass and steam boiler insurance—the only four classes of miscellaneous insurance then transacted—was 5, 3, 1 and 1 respectively. The report for the year 1929 shows that miscellaneous insurance in Canada now includes: accident, sickness, automobile, burglary, explosion, forgery, guarantee, leakage, steam boiler, title, tornado, live-stock insurance, etc. In 1880 10 companies transacted business of the miscellaneous kind, but in 1929 such insurance was sold by 225 companies, of which 47 were Canadian, 57 British and 121 foreign. In addition, 12 fraternal orders or societies carried on sickness insurance as well as life insurance business.

**Accident Insurance.**—The first licence of this kind was issued to the Travelers Co., of Hartford, Conn., in 1868. The first licence to a Canadian company was issued to the Accident Insurance Co. of Canada, which was organized in 1872 and commenced business in 1874. Much accident insurance has also been sold by companies doing primarily a life insurance business. Sixty-five companies transacted accident insurance in 1929.

**Automobile Insurance.**—This is now one of the most important branches of the miscellaneous class of insurance. Premiums increased from \$80,446 in 1910 to \$573,604 in 1915 and to \$12,769,905 in 1928, and for 1929 reached \$16,827,604, showing an increase of nearly 32 p.c. for the year. There has been an increase in the number of companies from 7 to 148 during the 19-year period.

**Plate Glass Insurance.**—Policies were first sold in Canada by the Metropolitan Plate Glass Insurance Co., a United States' concern, which withdrew from Canada during 1882 to avoid business restrictions. The 69 companies operating in Canada in 1929 received premiums of \$603,262 and incurred claims of \$245,680

**Burglary Insurance.**—This type of insurance received but slight attention in Canada until 1918. In 1893, however, one company issued burglary policies. A second followed in 1905, and in 1910 5 companies were operating, while at the end of 1929 60 companies were reported as having sold this type of insurance during the year. The premium income of these companies amounted in 1929 to \$1,218,216 and the losses incurred amounted to \$268,272.

**Hail Insurance.**—Insurance against hailstorms is a class of business of comparatively recent development in Canada. During the year 1929, 40 insurance companies undertook this class of risk, the premiums written amounting to \$3,571,334 and the losses incurred to \$1,013,527. The total premiums for the 19 years during which this business has been carried on in Canada amounted to \$61,592,519 and the total losses paid to \$42,053,602.

### Section 4.—Government Annuities.

In the early years of the 20th century, there arose throughout the civilized world a distinct movement in favour of ameliorating the living conditions of the less well-off members of society. One form which this movement took in the United Kingdom was that of old age pensions, granted by the State as a gift to its poorer citizens, whose earnings were very generally insufficient to permit of a margin of saving. In Canada, where wages were higher and a margin of saving was possible, the movement at first took the form of providing, by establishing Government annuities, an absolutely safe investment for such savings, which had only too often been lost through the inexperience of their owners, leaving the latter a burden upon the charity of relatives or of the public.<sup>1</sup> The cost of administering these annuities is borne by the Dominion Government.

Under the Government Annuities Act, (Chapter 5 of the Statutes of 1908, now incorporated, with amendments, in c. 7, R.S.C., 1927), His Majesty the King, represented by the Minister (at present the Minister of Labour), may sell to persons over the age of 5 years, domiciled or resident in Canada, immediate or deferred annuities of not less than \$10 nor more than \$5,000 (1) for the life of the annuitant, (2) for a term of years certain, not exceeding 20 years, or for the life of the annuitant, whichever period shall be the longer, or (3) to any two persons domiciled in Canada during their joint lives, and with or without continuation to the survivor. The property and interest of any annuitant in any contract for an annuity is neither transferable nor attachable. The purchaser may contract that, in the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid shall be refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c. compounded yearly.

The Government Annuities Act was amended by c. 12 of the Statutes of 1925, reducing the minimum annuity purchasable from \$50 to \$10, so that single-premium cumulative annuities of \$10 and multiples thereof might be purchased by any person at any time. It was considered that this amendment would make it possible for employers, instead of paying cash bonuses to their deserving employees in good years, to make provision for the old age of such employees by purchasing annuities of \$10 or multiples thereof.

---

<sup>1</sup> A Dominion-Provincial non-contributory scheme of old age pensions, providing for the payment, to persons 70 years and over, of pensions not exceeding \$10 per month, contributed in equal parts by the Dominion and the provinces which become parties to the scheme, was enacted by chapter 35 of the Dominion Statutes of 1927. The system is now in effect in British Columbia, Manitoba, Saskatchewan, Alberta, Ontario and the Northwest Territories. For further particulars, see pp. 780-783.

From Sept. 1, 1908, the date of the inception of the Annuities Branch, up to and inclusive of Mar. 31, 1930, the total number of annuity contracts issued was 11,521. Of these contracts, 1,338 have been cancelled, leaving in force on Mar. 31, 1930, 10,183 contracts. The total amount of purchase money received during the same period was \$24,860,087. The following statement gives the details:—

Fiscal Year ended Mar. 31.	Contracts.	Purchase Money Received.

<sup>1</sup>Seven months.

Statistics of the annuities in force for the last four years are given in Tables 23 and 24. From Sept. 1, 1908, to Mar. 31, 1930, 11,521 annuities had been issued. On Mar. 31, 1930, 4,012 immediate annuities and 6,171 deferred annuities were in force. The total value of these annuities on that date was \$20,720,895 and the amount of annuities purchased was \$3,893,123.

## CHAPTER XXIV.—COMMERCIAL FAILURES.

According to section 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869 applying to the four original provinces. This Act was in force for four years and was renewed by c. 46 of the Statutes of 1874, while in 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by Dun's and Bradstreet's commercial agencies. In 1919 a general Dominion Bankruptcy Act was passed (9-10 Geo. V, c. 36). Statistics of commercial failures dealt with under this Act since it came into force in 1920 have been compiled and published by the Dominion Bureau of Statistics. (See pp. 955-956.)

The history of commercial failures in Canada is traced by years from 1900 in Table I. Both Bradstreet's and Dun's records are included for comparative purposes. The two sets of records are shown in the table to have the same general tendency so far as numbers of failures are concerned. Dun's record, however, ordinarily shows a rather larger number of failures, and considerably larger assets and liabilities than Bradstreet's.

1.—Commercial Failures in Canada, with Their Assets and Liabilities, According to Bradstreet's and Dun's Records, for the calendar years 1900-1930.

**Failures by Branches of Business.**—The majority of the commercial failures of the country are always to be found among the trading establishments. Thus, according to Dun's records, out of a total of 2,705 commercial failures in the Dominion in 1930, 1,859 were those of trading establishments. The aggregate liabilities of the 615 manufacturers who failed in 1930, however, were larger than those of the 1,859 traders. The figures are given by these broad groups for the years from 1915 to 1930 in Table 2, while the failures of manufacturers and traders are further analysed for the years 1928 to 1930 in Table 3.

**2.—Commercial Failures in Canada, by Provinces and Classes, for the calendar year 1930, with Totals for 1915-1929** [From Dun's Review].

**Causes of Failures.**—An interesting study of the causes of commercial failures in Canada and the United States is published annually by Bradstreet's. The percentage analysis shows that "incompetence" caused a larger percentage of failures in the United States than in Canada, while "inexperience" and "competition" were more important causes of failures in Canada than in the United States. "Lack of capital" is given as the principal cause of failure in both countries.

**5.—Causes of Failures in Canada and the United States, by Numbers and Percentages, calendar years 1929 and 1930** [From Bradstreet's].

**Assignments under the Bankruptcy and Winding Up Acts.**—Under the Bankruptcy and Winding Up Acts (R.S.C., 1927, cc. 11 and 213) certain documents relating to assignments have since 1920 been forwarded to the Dominion Statistician for statistical analysis. Table 6 gives the resulting figures of failures by provinces in 1922 and subsequent years, while Table 7 classifies them by branches of business. Table 8 gives the assets and liabilities of the assignors. A detailed analysis of the 1930 failures, by provinces and branches of business, is made in Table 9.

## CHAPTER XXV.—EDUCATION.

### Section I.—Public School and Higher Education.<sup>1</sup>

Throughout the Dominion of Canada public education is a matter of provincial concern. Before Confederation, the maritime colonies were separated from Ontario by French-speaking Quebec, and in each of these an educational system specially adapted to the local conditions had come into existence. When Confederation was under consideration, the protection of existing vested rights was the predominant consideration. As a result, section 93 of the British North America Act, which embodies the Canadian constitution in so far as that constitution is a written one, provides that in and for each province the Legislature may exclusively make laws in respect of education, except that "nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the province at the union".

Inasmuch as the administration of public education is one of the chief functions of Provincial Governments, there is in each of the provinces except Quebec a Department of Education administered either by a member of the Provincial Executive Council or by the Executive Council as a whole. In practice, however, the routine administration is in the hands of the permanent officials of the Department of Education, who are members of the permanent civil service. In Quebec the Superintendent of Education, appointed by the Government, is *ex officio* President of the Council of Public Instruction; the link between the Department of Public Instruction and the Government is the Provincial Secretary; there are also two deputy heads, called the French and English Secretaries of the Department.

Since the Departments of Education are permanent authorities, controlled as to details of administration by permanent officials, educational policy is relatively permanent; further, the control of the Governments over education throughout the provinces is relatively stronger than in the United States. A capable Deputy

---

<sup>1</sup> Revised by M. C. MacLean, M.A., F.S.S., Chief, Education Statistics Branch, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to schools and colleges, both public and private, throughout Canada, and to this end co-operates with the Provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXVIII, Section 1, under "Education".

Minister or Superintendent of Education impresses his personality and his views upon the whole system of his province, especially as in practice he controls the payment of government grants, which constitute, on the average, about 14 p.c. of the expenditure applied to educational purposes.

The Department of Education in each province naturally has its headquarters at the capital of the province. Its local representatives are the school inspectors, who are appointed and paid by the Provincial Governments, except for the "public" and "separate" schools in Ontario, where they are appointed by the county or city municipality from a list approved by the province (in all but unorganized districts), and where the cities receive a grant from the province for inspection purposes in place of having inspectors' salaries paid direct.

**Education in Quebec.**—In Quebec there are two distinct systems of education, in each of which the teaching of religion takes a prominent position—the Protestant and the Roman Catholic systems. In the former, which is under the control of the Protestant Committee of the Council of Public Instruction, with an English Secretary, the curriculum and the general system of education is similar to that in the other provinces, except that the highest grade is Grade XI, from which students are matriculated to McGill University and Bishop's University, the two Protestant English-speaking universities of the province.

In the Roman Catholic schools, which are mainly French-speaking, as the Protestant schools are English-speaking, the administration is in the hands of the Catholic Committee of the Council of Public Instruction, with a French Secretary. General elementary and continuation or "complementary" training is given by means of a curriculum, extending over a preparatory course of six "years" of an elementary course and two "years" of a complementary course. Some of these "years" require more than a year to complete, the work of the "eighth year" corresponding in a general way to the work of Grade X, as that work is usually defined.

**Recent Developments in Education.**—One of the outstanding tendencies of the past few years has been the increase in the proportion of students reaching the higher grades in Canadian schools. In 1921 the proportion of the total enrolment of ordinary publicly-controlled schools in the high-school grades was less than 8 p.c.; by 1929 it had increased almost to 12 p.c. This is the result of a number of factors, foremost among them being the raising of compulsory attendance ages and more rigid enforcement of attendance laws. Moreover, the higher grades are being reached at earlier ages, the average (median) age of pupils in

what is usually the final year of high school (junior matriculation) being almost one-half of a year less in 1929 than in 1924 in the seven provinces for which age-grade data are compiled.

Raising of standards in the teaching profession has been a pronounced characteristic of recent years, and one that augurs well for the enhanced efficiency of the schools. Numerous factors are concerned and it is often difficult to say whether they are more a cause or a result. Each of the provinces and the Dominion as a whole now possess teachers' professional organizations, severally termed federations, alliances, unions, or associations, which have held consistently before them the ideal of improvement within the profession. Teachers without professional training have in most of the provinces been reduced to very small numbers, while normal-school courses have been generally lengthened and the requirements for admission gradually raised. Summer-school courses, enabling teachers to improve both their academic and professional standing, have become increasingly numerous and well-patronized. Teachers' pension or superannuation schemes have become operative in seven of the provinces, most of them within the last few years, adding much to the stability of the profession.

**Summary Statistics of Education.**—The statistical tables on education in Canada commence with a statistical summary (Table 1), which shows that, in the academic year ended in 1929, there were 2,387,057 pupils in attendance at educational institutions in Canada, or 24.4 p.c. of the estimated 1929 population. Of the above, 2,080,949 were enrolled in ordinary day schools under provincial control, the average daily attendance numbering about 1,647,871. Those attending vocational schools—agricultural, commercial, industrial and other technical schools—numbered 122,671. There were 18,600 students in private business colleges, and 74,238 in other private schools under college grade. University students in regular courses numbered 28,870 and college students in regular courses 9,128. Students in classical colleges numbered 10,894.

There were, in 1929, 68,888 teachers in schools under public control (including the "independent" schools in Quebec), 13,490 males and 55,398 females. The total expenditure on schools under public control was \$138,223,885, of which Governments contributed \$19,038,719; the difference was made up by local taxation. The expenditure on ordinary public day schools has increased by 36.2 p.c. since 1921, while the enrolment has increased by 15.6 p.c. This more than proportionate increase in expenditure is to some degree accounted for by increases in teachers' salaries, but increased accommodation, improvements in school equipment, and maintenance also accounted for a share. The proportion which the Provincial Governments bear of this expenditure has risen much more rapidly than that borne by the municipalities.

## 1.—Summary of Education in Canada

## NUMBER OF PUPILS ATTENDING

No.	Type of Institution.	P.E.I.	N.S.	N.B.

	<b>Grand Totals (excluding duplicates).....</b>	<b>19,440</b>	<b>124,907</b>	<b>89,235</b>
	<b>Population in 1921.....</b>	<b>89,615</b>	<b>523,837</b>	<b>387,876</b>
	<b>Population in 1926.....</b>			
13	Elementary grades <sup>18</sup> .....	15,634	102,125	79,946 <sup>19</sup>
14	Secondary and higher grades <sup>20</sup> .....	3,682	18,829	7,442 <sup>21</sup>

<sup>1</sup> Including 509,875 in primary schools and 595 in nursery schools under control of Commissioners and Trustees.

<sup>2</sup> Including public, separate, continuation and high schools and collegiate institutes all day courses—figures of calendar year 1923 for the public and separate schools and of the school year 1928-29 for the other schools. See also Note 2, p. 962. <sup>3</sup>In Tables 2, etc. the total given includes 3,616 in private schools; the above table includes only schools under control.

<sup>4</sup>Including all the students of the technical college except those following regular degree course. <sup>5</sup>Including 1,034 in day and 2,038 in evening technical schools.

<sup>6</sup>Including 6,426 in night schools, 2,298 in dressmaking schools, 4,100 in schools of arts and trades, 45 in Rangers' School, 46 in intermediate agricultural school, and 60 in school for historic guides—figures of 1927-28. <sup>7</sup>Including 26,730 in day and 41,593 in evening courses at industrial technical and art schools, 3,346 in night elementary schools and 3,128 in night high schools—figures of 1928-29.

<sup>8</sup>Including 2,597 in day and 3,360 in correspondence and evening technical schools. <sup>9</sup>Including 1,040 in day and 850 in evening technical schools. <sup>10</sup>Including 2,363 in day and 2,901 in evening technical schools and 246 in correspondence department. <sup>11</sup>Including 4,432 in day, 7,629 in evening and 211 in correspondence vocational courses.

<sup>12</sup>Including 254 in normal college, and 662 in summer training courses; 53 in university training courses are included under universities. <sup>13</sup>Including 345 in normal school and 70 in vocational teacher-training courses.

<sup>14</sup>Including normal schools, 1,638, model schools, 96, vocational teacher-training, 269 over and above extra-mural students. <sup>15</sup>Including 536 in normal schools and 14 in vocational teacher-training but not including those who are included under item 9. <sup>16</sup>Excluding duplicates with universities.

<sup>17</sup>Including a number who are entered under item 9. <sup>18</sup>Including regular normal schools 339, vocational teacher-training 78, but not including university classes for graduates, 421 in departmental summer school for teachers or university summer school, most of whom are included under item 9.

<sup>19</sup>Not added in the totals of Quebec or the grand total of all schools below as it is not certain whether or not they are included elsewhere. <sup>20</sup>The total includes 206 in Northwest Territories and 153 in Yukon. <sup>21</sup>In institutions at Halifax, N.S., but supported by the province. <sup>22</sup>Including 467 blind and 1,276 deaf. For further details see Table 87. <sup>23</sup>Including 55,970 in "independent primary schools" (i.e., independent of the control of commissioners and trustees) and 3,215 in independent nursery schools.

<sup>24</sup>Included with the figures of classical colleges and private schools. <sup>25</sup>Exclusive of courses included in item 2. <sup>26</sup>Including 2,123 in evening courses at technical schools; 353 in special courses at technical schools; 458 in short courses at agricultural colleges and 818 at evening and correspondence courses in the school of H.C.S.

<sup>27</sup>Including classical colleges, 10,136 and classical independent schools 758. <sup>28</sup>Including 228 in dairy schools, 947 in regular courses at the technical schools, 269 in regular courses at the colleges of agriculture, 128 in regular courses at the School of H.C.S., 465 in independent schools where superior education is given, 793 in the schools of fine arts, 150 in polytechnic school, 237 in protestant theological colleges, 789 in Monument National School and 1,620 in Institute of Pedagogy 1927-28. <sup>29</sup>Not including

## by Provinces, 1929, or Latest Year Reported.

10,894 <sup>27</sup>						10,894	10
5,576 <sup>28</sup>	2,010	448	194	31	276	9,128 <sup>16</sup>	11
6,211 <sup>30</sup>	11,614	3,487	1,225	1,356	2,190	28,870	12
<b>611,783</b>	<b>828,430</b>	<b>166,191</b>	<b>240,028</b>	<b>177,176</b>	<b>129,506</b>	<b>2,387,057<sup>22</sup></b>	
<b>2,361,199</b>	<b>2,933,662</b>	<b>610,118</b>	<b>757,519</b>	<b>588,454</b>	<b>524,582</b>	<b>8,788,483</b>	
		<b>639,056</b>	<b>821,042</b>	<b>607,584</b>			
547,927 <sup>25</sup>	614,397	137,532	207,120	146,889	97,088	1,948,858	13
63,116	163,356	25,386	29,725	27,096	24,497	363,119	14

degree courses which are included under items 11 and 12. <sup>30</sup>Excluding preparatory and short courses and such other figures as have already been included in items 10 and 11. <sup>31</sup>All these are of university standard. <sup>32</sup>Excluding business colleges and Indian schools in Quebec and including Indian schools in N.W.T. and Yukon. <sup>33</sup>In calculating the numbers in elementary and secondary grades, night, special and part-time technical schools and schools for the blind and deaf are left out of the reckoning, except where the night schools were known to be high schools. The numbers in elementary grades in public and private ordinary schools also in Indian schools are known. Business college courses are assumed to be of secondary rank, also preparatory and short courses at universities and colleges, except in the case of certain affiliated schools in Ontario, where allowance was made for the number in elementary grades. The regular courses are clearly of higher grade than secondary. <sup>34</sup>Approximately. Since Grade VIII in New Brunswick included high school subjects, the enrolment in this grade (about 5,668) might be added to item 14 and deducted from item 13 in which case the number in elementary grades would read 74,278 and in secondary and higher grades 13,110. <sup>35</sup>Approximately.

## \*General Note.—

To avoid the confusion that would result from giving totals different from those given in the provincial reports the figures of 1928 are used throughout for Quebec. In all cases except the primary and nursery schools the figures of 1929 are also published in the provincial reports although the 1928 figures are used in making up their summary. The 1929 figures for each of the items in the above table except items 1 and 7 are as follows:—

Technical and night schools. (See item 2.)	10,062
Normal schools.	1,921
Schools for the blind and deaf. (See item 5.)	589
Classical colleges. (See item 10.)	11,200
Short and special courses, etc. (See item 9.)	4,526
Affiliated colleges, etc. (See item 11.)	6,044
Universities. (See item 12.)	(Approx.) 7,582

Further, to avoid confusion, the short courses for teachers at universities and colleges are entered under item 9 instead of item 3. There were about 2,500 teachers in these short courses who might be added to the 9,926 in item 3 making about 12,500 in all in teacher-training. There were in all about 81,000 teachers and professors in Canada.

## 1.—Summary of Education in Canada, by Provinces,

## DISTRIBUTION AND ATTENDANCE OF PUPILS IN

No.	Item.	P.E.I.	N.S.	N.B.

towns with high schools and collegiate institutes. Assuming that each city and town and each village school, public and separate, and each secondary school represented a school section, the total number of sections would be 6,992 as above. <sup>1</sup>In existence. <sup>2</sup>In existence, 1928. <sup>3</sup>Of this amount \$9,600,313 was contributed by subsidized independent schools and higher institutions. <sup>4</sup>Exclusive of promissory notes. <sup>5</sup>Exclusive of \$564,425 to provincial university. <sup>6</sup>Including \$153,488 on technical education. <sup>7</sup>Including Government expenditure on salaries of teachers of general schools and P.W.C. (\$266,772) and total supplement by districts (\$91,922). <sup>8</sup>Approximately. The number publicly controlled was 15,845. The number of teachers in independent schools was 3,522. <sup>9</sup>Approximately. <sup>10</sup>This figure is considerably lower than usual as a result of Winnipeg schools being closed throughout September on account of contagious disease.

### Subsection I.—Elementary and Secondary Education.

It is considered that the best general test of the efficiency of public general education in Canada is furnished by the statistics of Table 2, showing the 1929 age-grade distribution of 1,458,011 pupils in the provincially-controlled schools of seven provinces. Many other tables of this form, analysing age-grade distribution by provinces, by sex, and by rural and urban areas and graded or ungraded schools, may be consulted in the "Annual Survey of Education in Canada, 1929", pp. 20-41.

<sup>1</sup> Kindergarten and kindergarten-primary.

General elementary and secondary education throughout the Dominion, in so far as it is provincially-controlled, is carried on, except in Quebec, in free schools supported by general taxation. These schools may be divided into 12 grades, 8 of which are normally considered to be elementary and 4 secondary; the average pupil takes one school year to complete each of these 12 grades, so that the average pupil, entering school at 6 years of age, would finish his secondary school course at 18.

A historical summary of the enrolment and average attendance in provincially-controlled schools from 1824 to 1929 is given by provinces in Table 3. The totals of pupils enrolled in all provinces in the years 1867, 1871, 1881, 1891 and 1901 are approximations, based in certain cases upon provincial statistics for the nearest available years.

3.—Historical Summary of Enrolment and Average Attendance in Schools in Canada, by Provinces, 1824-1929.

TOTAL NUMBER ENROLLED, 1824-1929.

<sup>1</sup>Primary schools including Protestant high schools, 1928. The high school enrolment is not given because it would not be complete without including the high school pupils of the classical colleges and independent classical schools and of the normal schools. <sup>2</sup>The figures by sex represent high schools and collegiate institutes only; the totals include pupils in fifth classes.

**Secondary Education.**—In the past quarter of a century the number of pupils of both sexes doing work of secondary grade has shown a very great absolute increase as well as a large increase relative to the number in elementary grades. The available statistics are given by years in Table 5, and show that in

each of the provinces and in every year the number of girls in the secondary grades has exceeded the number of boys. The drop in the Ontario figures between 1915 and 1917 is due in part to the change in the statistical year from the calendar year to the natural school year from September to June.

<sup>1</sup>1924—P.E.I., inc. P.W.C., 719-1,113; 1925—P.E.I., inc. P.W.C., 659-1,087; 1926—P.E.I., inc. P.W.C., 733-1,098; 1927—P.E.I., inc. P.W.C., 648-1,104; 1928—P.E.I., inc. P.W.C., 517-1,014; 1929—P.E.I., inc. P.W.C., 592-1,017. <sup>2</sup>Includes the pupils of continuation schools, high schools and collegiate institutes only. In 1928-29 in all secondary grades reported there were approximately 45,652 boys and 52,181 girls. These included full-time day vocational, public and separate schools. The figures in the tables are for comparative purposes confined to continuation and high schools and collegiate institutes. <sup>3</sup>The figures given for New Brunswick are approximate.

**Subjects of Instruction in Secondary Grades.**—The subjects taken in the elementary grades of the provincially-controlled schools are settled by the curriculum, but in the secondary grades there are usually options appealing to different types of pupils, wishing to follow different callings. Statistics of the subjects taken by pupils in secondary grades in 1929, available for six provinces, are presented in Table 6, showing among other things the small number of pupils taking Greek and German and the high proportion studying French and Latin. Tables on pp. 45-55 of the "Annual Survey of Education in Canada, 1929" show in detail the changes in the subjects chosen by secondary grade pupils in the different provinces in recent years.

### 6.—Provincially Controlled Schools in Canada: Numbers of Pupils Taking Certain Secondary Grade Subjects in each of Six Provinces, 1929.

NOTE.—The numbers taking the listed subjects include all pupils of secondary grade in N.S.; secondary pupils enrolled during the second term in N.B.; pupils in secondary schools only (not including secondary pupils in other than secondary schools) in Ontario, Saskatchewan, Alberta and British Columbia. The totals show the total enrolment in the schools represented.

**Teaching Staffs.**—As shown in Table 1, the teaching staffs of Canadian schools consisted in 1929 of 68,888 teachers, 13,490 males and 55,398 females. Tables on pp. 73-81 of the "Annual Survey of Education in Canada, 1929" deal in detail with the classification of these teachers, the rates of salary paid and the teaching experience. Table 7 summarizes statistics regarding rates of salary, as far as available.

<sup>1</sup>The data for 1907 are incomparable and have been omitted. In recent years several universities have added teacher training departments, in most cases for university graduates who are trained for teaching positions in the secondary schools. These are not all included in the figures.

**Receipts and Expenditures.**—The total receipts and expenditures of the provincially-controlled schools of the different provinces are published for recent years in Table 9. Figures for the receipts in British Columbia and for expenditures in Nova Scotia, New Brunswick, Prince Edward Island and Quebec are not available.

<sup>2</sup>The items for 1922-1928 do not include promissory notes.

<sup>3</sup>Including grants to provincial university as follows: 1922, \$445,000; 1923, \$446,250; 1924, \$458,125; 1925, \$466,000; 1926, \$516,242; 1927, \$531,875; 1928, \$545,917; 1929, \$564,425.

<sup>4</sup>Figures for British Columbia do not include receipts.

### Subsection 2.—Vocational and Technical Education.

At the opening of the present century training in handicrafts had been introduced in the schools of several of the provinces in the form of manual training for boys and domestic science for girls. At the same time commercial courses were appearing in the secondary school curricula. From these beginnings vocational courses made rapid strides until in the year 1929 there was one pupil following a course in day technical schools for every four in secondary schools of general education, while the number in evening technical courses was 50 p.c. greater than in day. The courses offered vary widely, not only with the aptitudes of the pupils, but with the industrial characteristics of the areas served by the various schools. Household science, commercial and general industrial courses are widely offered, while mining, pulp and paper, navigation and other definitely specialized classes are held only in the localities of the corresponding industries.

**Aid Given by Dominion Government.**—While educational administration is a matter for the provinces, the Dominion Government, realizing at once the weight of the provinces' burden of educational costs, and the national importance of vocational education, has twice during the past two decades supplemented the provincial funds available for the furtherance of technical instruction. In 1913 the Agricultural Instruction Act was passed, distributing \$10,000,000 in 10 years among the provinces for the advancement of agricultural education. In 1919 a similar sum was voted for technical education, to be divided within 10 years among the provinces, approximately in proportion to population, but so as not to exceed the sums expended by the provinces toward the same end. At the end of the ten-year period only the province of Ontario had earned the whole of its share of the grants in question, and by c. 8 of the Statutes of 1929 the other eight provinces were granted a further period of five years in which to earn the remainder of their respective shares. The total of these balances at Mar. 31, 1930, was \$1,622,113.

The number of students in institutions for technical education coming within the scope of the Technical Education Act of 1919 (9-10 Geo. V, c. 73) in the academic years ended June 30, was as follows:—1921, 56,774; 1922, 61,961; 1923, 70,300; 1924, 79,829; 1925, 88,024; 1926, 88,961; 1927, 96,682; 1928, 109,008; 1929, 121,252; 1930, 125,644 (Table 10).

\*These totals include 1929 figures for Ontario, the 1930 figures not being available at the time of going to press.

**Subsection 3.—Higher Education.**

In the statistical tables which follow, 23 universities and 101 colleges are recorded. Of the colleges, 52 are in the province of Quebec, including 24 classical colleges and little seminaries, 10 independent, non-subsidized institutions for classical education, and 11 others where superior education is given. The "classical colleges" and "little seminaries" are officially classed as "secondary" institutions, but the meaning of "secondary", as referring to Catholic education in Quebec, includes the provision of a full course in arts, the degrees being conferred by Laval University or the University of Montreal.

**Universities.**—Of the 23 universities, six are provincially-controlled (New Brunswick, Toronto, Manitoba, Saskatchewan, Alberta and British Columbia); four others are undenominational (Dalhousie, McGill, Queen's and Western); while the remainder are denominational—St. Dunstan's, St. Francis Xavier, St. Joseph's, Laval, Montreal and Ottawa representing the Roman Catholic Church; King's, Bishop's, and Trinity College representing the Church of England; Acadia and McMaster representing the Baptist Church; and Mount Allison and Victoria representing the United Church of Canada. Victoria and Trinity are in federation with Toronto and King's in close association with Dalhousie.

**Colleges.**—Of the 101 colleges recorded a total of 56, in so far as they did work of university grade, did only arts work. These 56 included 24 classical colleges and little seminaries and 10 independent classical schools in Quebec. The remaining 45 included 33 carrying theology, usually as their main work. The theological colleges listed in the table, with the religious denominations they represent, are as follows:—

*United Church:* Pine Hill Divinity Hall, Halifax; United Theological College, Montreal; Emmanuel College, Toronto; Manitoba College, Winnipeg; St. Andrew's College, Saskatoon; St. Stephen's College, Edmonton; and Union College, Vancouver. *Presbyterian:* Presbyterian College, Montreal; Knox College, Toronto. *Roman Catholic:* Holy Heart College, Halifax; 11 independent superior schools, Que.; St. Augustine's Seminary, Toronto; Mt. Carmel College, Niagara Falls; Studentat des Redemptoristes, Ottawa. *Anglican:* Diocesan Theological College, Montreal; Wycliffe College, Toronto; Huron College, London; St. John's College, Winnipeg; St. Chad's College, Regina; Emmanuel College, Saskatoon; and Anglican Theological College, Vancouver. *Lutheran:* Evangelical Lutheran Seminary, Waterloo, Ont.; Lutheran College and Seminary, Saskatoon, Sask. It should also be noted that several of the universities have theological faculties.

Apart from the arts and theological colleges there remain several professional schools, the type of instruction in each being apparent from the name

of the institution as it appears in Table 17 below. The most numerous group is composed of agricultural colleges, there being five of these. The list of colleges is not exhaustive. Within some of the larger university systems there are included important individual schools which are not mentioned separately, because, as a result of their affiliation with the University, their enrolment is reported by the latter. (See General Note to Table 17.) The list is intended to include all institutions offering a course of instruction of at least two years in advance of matriculation, or its equivalent in seminaries where preparatory requirements are not definitely expressed in terms of matriculation.

**Registration of Students.**—The gross enrolment reported by universities was 57,254, by colleges 25,137. It is not uncommon, however, for a student to be taking part of his work in a university and part in an affiliated college—hence to be reported by both institutions. After eliminating these duplications the net total of students enrolled during the year was found to be 72,152, of whom 46,354 were males and 25,798 were females. Almost exactly 50 p.c. or 36,038 were engaged in work of university standard, *i.e.*, were in courses for which matriculation is pre-requisite. Of these, 23,543 were men, 12,495 women. Those attending the regular full-year session were distributed in the several branches of learning as follows:—

Arts and pure science, 18,200; engineering and applied science 2,787; medicine 2,763; pedagogy 2,480; philosophy and theology, 2,430; music, 2,010; agriculture 1,266; household science, 1,261; commerce, 1,280; law, 884; public health and nursing, 847; pharmacy, 550; dentistry, 452; forestry, 171; veterinary science, 156; social service, 116; etc. Extra-mural students and short-course students numbered 15,638, of whom 4,779 were studying for degrees.

**Degrees Conferred.**—In the total of 6,772 degrees, licences and diplomas granted by universities and colleges, 2,427 or 35·7 p.c. were conferred on women, 4,345 on men. The most popular degree with both sexes is that of B.A., 1,274 being received by men, 912 by women. Next in order with men are M.D. 639, and B.Sc. 322.

**Financial Statistics.**—Total reported assets of universities and colleges amounted to \$129,080,664. This includes endowments, lands, buildings, equipment and all other property of the institutions reporting, except in a few cases where the value of property was not appraised. Total income for the academic year was \$15,074,337, of which \$2,435,344 was derived from investments or endowments, \$6,383,338 from provincial or municipal grants, \$2,969,265 from tuition and other fees (excepting board and lodging) paid by the students, and the balance from other or unclassified sources. On the side of expenditure 4·9 p.c. was reported as capital expenditure.

11.—Universities of Canada: Foundation, Affiliation and Faculties.

NOTE.—For details of degrees conferred by these universities in 1928, see pp. 108-111 of the Bureau of Statistics' Annual Survey of Education in Canada, 1929. For summary of degrees conferred, see Table 15 of this chapter.

<sup>1</sup>Other than board and lodging. <sup>2</sup>Including board and lodging. <sup>3</sup>It should be noticed that the financial items shown for Montreal and Laval do not include the great part of the affiliated institutions. Since such institutions in each case form a more important part of the university organization than in the case of most of the other universities, the financial figures are proportionately understated by their non-inclusion. In 1928-29 the expenditure of the classical colleges affiliated with Montreal was about \$1,400,000; of the classical colleges affiliated with Laval roughly \$800,000. This added to the expenditure given in the table would place the figure on a more comparable basis with those of other universities. It is not always possible to separate, in the case of the affiliations of any university, the financial obligations incurred on account of students credited to these universities from the obligations incurred on account of high school, technical and even elementary pupils and students. <sup>4</sup>Component items not distinguishable. <sup>5</sup>Includes property to the value of \$4,354,083 (Man. Agric. College, \$4,072,521, etc.) vested in the Provincial Government, but used by the University.

### 17.—Professional and Affiliated Colleges of Canada: Number and Sex of Teaching Staff and Students, by Individual Institutions, 1928-29.

General Note.—Data for colleges are incomplete, as reports were not received from a few colleges for 1928-29. Moreover, within some of the larger university systems there are included important individual schools which are not mentioned separately, because, as a result of their affiliation with the University their enrolment is reported by it. In illustration of this may be cited the case of the École Polytechnique, Collège Marguerite-Bourgeoys, Institut Pédagogique St. Georges, etc., affiliated with the University of Montreal, and seven Grand Seminars (theology), the Secondary School for Girls, etc., affiliated with the University of Laval.

General Note.—Data for colleges are incomplete, as reports were not received from a few colleges for 1928-29. Figures in this report cover only the above-named colleges.

<sup>1</sup>Data for preceding year.

<sup>2</sup>Staff and Enrolment not included in provincial total. Provincial report complete before figures received. Collège du Sacré-Cœur became affiliated to the University of Ottawa in 1930.

## Section 2.—Scientific and Industrial Research in Canada.

Prior to 1870 the basis of research in Canada was observation and record rather than experiment. Fifty years ago, laboratories, except elementary ones of scant accommodation, were non-existent. The courses in science in the universities did not, before 1878, involve any practical work beyond extremely simple demonstrations. The industries did not concern themselves with scientific investigation, and research was not regarded as an essential feature of the work of the Government Departments, except possibly in the Geological Survey.

Scientific research in Canada began in the '80's with the institution in the universities of courses in experimental and practical science. Many of the investigators of Canadian origin who have distinguished themselves in the field of science within the last 30 years owe their incentive toward research to the outlook developed by these courses.

Since 1890, Canadian universities have steadily increased their equipment for scientific teaching and research. While many of the teachers have had little time for research or for advanced courses, scientific investigators in Canadian universities have made valuable contributions to the literature of the sciences, and many of them have achieved high distinction.

Scientific societies, such as the Royal Canadian Institute, founded in 1849, and the Royal Society of Canada, founded in 1881, have also promoted research through the publication of papers giving the results of researches in the various departments of science and through the distinction conferred by membership in such societies.

Various departments of the Dominion and Provincial Governments have maintained scientific laboratories. Some of these have been concerned merely with routine examination or analysis, but in many cases research was undertaken. The research activities of government departments have, however, been inadequate to meet the needs of the situation. Less than 9 years ago, it was estimated that the amount expended annually by government laboratories for investigations of all kinds was less than \$325,000, of which less than \$100,000 was actually expended for research in government laboratories.

Twenty years ago the value of research was not appreciated by Canadian industries. A number of firms had routine testing or assay laboratories, but until 1905 there was none which employed research for the improvement of its manufacturing processes or of its products. The example of foreign firms has to some extent altered public opinion in Canada on this question, but the number of Canadian firms which apply research to their industrial problems is still very small. In 1917 the Research Council of Canada issued a questionnaire to the industries. Replies received from 2,400 of the leading firms in Canada showed that only 37 had laboratories for research; 83 employed as many investigators and 276 assistants, but the great majority of these were engaged only in routine examinations. Apart from salaries, the total amount expended in 1916 for research by all firms listed did not exceed \$135,000.

With the growth of Canadian wealth the scientific equipment of the leading Canadian universities has been greatly increased, and scientific researches are now being prosecuted on a considerable scale as a result of the research scholarships granted by the National Research Council of Canada, or endowed, by various wealthy benefactors, in the leading universities of the country. An especially

notable achievement is the discovery of insulin, a preparation which indefinitely prolongs the lives of those suffering from diabetes, by Dr. F. G. Banting, Dr. J. B. Collip and Mr. C. H. Best, working under the supervision of Prof. J. J. R. Macleod, Professor of Physiology in the University of Toronto. The Nobel prize in medicine for 1923 was awarded to Dr. Banting and Dr. McLeod for their discovery, and in the same year Parliament voted to Dr. Banting a life annuity of \$7,500, to enable him to devote himself entirely to medical research.

The importance of scientific and industrial research has been recognized in recent years by the creation of the Honorary Advisory Council for Scientific and Industrial Research, now known as the National Research Council and by the establishment of provincial research organizations, notably the Research Council of Alberta and the Ontario Research Foundation. Provincial research organizations are also being formed in Saskatchewan, Manitoba and Nova Scotia.

### Subsection I.—The National Research Council.<sup>1</sup>

Established in December, 1916, by the Dominion Government, the Honorary Advisory Council for Scientific and Industrial Research, as it was then called, found itself greatly handicapped during its early years by a lack of laboratory facilities. The only research laboratories of any consequence existing in Canada at that time were those of the universities, where many valuable researches were even then under way, but where the work was often seriously limited by lack of funds. This deficiency the National Research Council undertook to remedy, in particularly urgent cases, by the provision of special equipment or much-needed technical assistance. The serious shortage of scientifically trained men which the country was then experiencing led to the establishment of post-graduate research scholarships in the universities. Advisory committees were also created in some of the more important branches of science and technology, in order that the Council might have the benefit of the advice of specialists in extending its various activities.

Since 1924 the work of the Council has been largely expanded through the establishment of a number of research committees to undertake investigations on major problems, some of them of national importance. Arrangements were at first made for co-operative researches in the laboratories of Dominion and Provincial Government departments and the universities. More recently provision has been made for research work by the Council's own staff in laboratories of a more or less temporary character, and construction has been started of National Research Laboratories in which the Council will, it is hoped, be able to carry out effectively the various responsibilities assigned to it by the Research Council Act.

**Organization and Staff.**—The Council itself consists of 15 members, each of whom, with the exception of the president, is appointed for three years and serves entirely without remuneration. Its membership includes specialists in science, executives in the universities and the industries, and representatives of government departments that are carrying on scientific or industrial research.

The chief executive officer of the Council is the President. Responsible directly to him are the Secretary-Treasurer, in charge of the administrative staff, and the directors of the various professional divisions. The divisions already

<sup>1</sup> Prepared by F. E. Lathe, Director of Research Information, National Research Council Ottawa. A list of publications of the National Research Council will be found at p. 1096.

established by the Council are those of Chemistry, Physics, Biology, and Research Information. The first three of these are actively engaged in laboratory researches. The Division of Research Information is responsible for the Council's research library, its publications including the recently established Canadian Journal of Research, a bibliographic and abstracting service, economic studies, and technical inquiries. Provision has been made for the organization of other divisions, as required.

**Buildings and Equipment.**—Less than five years ago the Government authorized the Council to establish its first small laboratory, which was required for the work of one of the Council's research committees. Early in 1930 investigations were begun in the John Street Laboratories, Ottawa, where provision was made, in the old mill buildings purchased by the Government, for research in chemistry, physics and aeronautics.

For chemical and physical investigations some 20 research units were fitted up. In addition, it was decided that in view of the rapid development of aviation in Canada immediate provision should be made for aeronautical research on an adequate scale. The only wind tunnel previously existing in Canada was a small one at the University of Toronto. Further, in spite of the fact that hydro-aeroplanes are of particular importance in Canada owing to its great and widely distributed water areas, there had been no water channel to provide for research on this type of machine. Two of the old mill buildings have been found well adapted to such work and have now been remodelled to house a well equipped wind tunnel, with a nine-foot nozzle and provision for winds up to 150 miles per hour, and a water channel about 410 feet long with equipment for towing at carefully controlled speeds. A large dynamometer for testing aeroplane engines is also being installed.

The Council's major researches in chemistry, physics, biology and related sciences will be carried out in the National Research Laboratories, a building now nearing completion on a ten-acre site near the confluence of the Ottawa and Rideau rivers. These laboratories, which are being erected at a cost of approximately \$3,000,000 exclusive of the necessary scientific apparatus and equipment, consist of a four-storey building 418 ft. long and 176 ft. wide. There are two large interior courts, one on each side of a central library and assembly room, so that the whole building is amply provided with light. The building is of steel frame construction faced with sandstone, and is as nearly fireproof as possible.

On the first floor, space is being reserved for offices for the Council's staff. Here also will be the main assembly room, designed both for general meetings of the staff and for scientific and technical conventions. Immediately above and at the rear of the assembly room will be the research library, with accommodation for 300,000 volumes. Beneath each interior court will be a large exhibition hall, where it is intended to set up exhibits showing the progress of scientific and industrial research.

The greater part of the building will be divided into unit research laboratories of convenient size, two or three of which are in some cases thrown into one for special purposes. The walls between the individual units have been made easily removable.

At the rear of the building are the engineering laboratories, carried through both the basement and the first floor to secure space for large testing machines

and other similar equipment. At one end, and also carried through two stories, a high-tension electrical laboratory has been provided, where researches will be carried on at voltages up to about 750,000. This has been decided upon in view of the enormous hydro-electric development in Canada and the corresponding need for research in electrical transmission and related problems.

**Laboratory Investigations.**—Pending the completion of the main building of the National Research Laboratories the existing laboratories are being utilized to the fullest possible extent. The following is a partial list of the problems upon which researches are under way or have been recently completed:—

Heat insulation for houses, to determine the heat conductivity of various insulating materials.

Aerial photography, with the object of eliminating electrical effects which now spoil a large proportion of the films exposed.

The rapid determination of moisture in grain by electrical methods.

The development of a method of grading grain which will more clearly distinguish between the various grades.

The study of sound waves so rapid as to be inaudible to the human ear.

The chemical effect of extremely short electro-magnetic waves.

Voltmeter design.

The standardization of radium.

The utilization of Canadian deposits of dolomitic magnesite.

Methods of testing raw wool.

Research in laundry problems.

Leather research, especially problems in tanning.

The chemical nature of rubber, the treatment of its several constituents and the development of rubber accelerators.

The conversion of natural gas into intermediate products which can be used in present commercial processes, the production of carbon black and hydrogen.

The utilization of Canadian asbestos.

Improvements in the quality of fish oils, and their conversion into more valuable products.

The utilization of waste apples.

The clarification of honey and the development of new honey products.

Researches on maple sugar.

The utilization of loganberry residues.

The synthesis of resins.

Biological researches have not yet been carried out at Ottawa by the Council's staff, owing to the very limited laboratory accommodation, but for several years work has been under way in Edmonton, in co-operation with the University of Alberta. The activities of the staff there have in the main been confined to problems of the grain industry.

**Associate Committees.**—Two classes of associate committees have been established by the National Research Council. The main function of the first class is to advise the Council on scientific questions, and of the second, to direct or undertake research work on some major problem.

Advisory committees have been established on chemistry, physics, botany, mining and metallurgy, nitrogen fixation, electrical measuring instruments, and engineering standards. These committees report on problems referred to them

by the Council, make recommendations as to researches which might be undertaken, issue reports, and keep closely in touch with the advances being made in their respective branches of science and technology.

The associate committees whose function it is to undertake research usually have in their membership representatives from other organizations prosecuting research or interested in the special problems which the committee was appointed to study. In this way co-operative researches are carried out with other government departments, both Dominion and Provincial, the universities, and various other organizations.

Research committees of the kind described have been established on animal diseases, biophysics, cereal rust, coal classification, field-crop diseases, grain research, heating and insulation, honey, laundry research, leather, magnesite, natural gas, New Brunswick forest problems, oceanography, smelter smoke, tuberculosis, weed control and wool growing and manufacture. This partial list of subjects gives some idea of the extent and character of the external work of the Council.

**Assisted Researches.**—Assisted researches are those carried out in other laboratories than those of the National Research Council, and to which the Council has made a financial contribution for the purchase of equipment not ordinarily found in scientific laboratories, or for the provision of technical assistance in carrying out the experiments. In no case does the grantee receive any compensation for his own services. By this plan important contributions to science and industry have been made at a minimum of expense to the Government.

The following may be taken as fairly typical of the more than 100 investigations on this plan now under way in the laboratories of 10 Canadian universities, and in 15 government and industrial laboratories:—

- The fermentation of honey.
- Mastitis in cows.
- Relation of bacteria to feed flavours in milk.
- Winter hardiness in crop plants.
- Action of bacteria and enzymes on carbohydrates.
- Factors governing the milling and baking quality of wheat.
- The lateral support of steel columns and struts.
- The welding of steel structures.
- The effect of low temperature on steel castings.
- Pressure variations in the cylinders of internal combustion engines.
- The action of alkali waters on concrete.
- The chemical effect of high-speed cathode rays.
- The effects of electric and magnetic fields.
- Investigations of fundamental gas laws.
- Researches in the field of low temperatures.
- The active principle of yeast.
- The floatability of pulpwood.

**Training of Research Workers.**—To give graduates of Canadian universities further specialized training in methods of scientific and industrial research, the National Research Council has established a series of post-graduate scholarships. These scholarships are of several classes, and awards are made according to the academic standing of the applicants and the extent of their experience in post-graduate research. The fact that two or three times as many applications are received as there are awards to be granted permits the Council to confine the awards to applicants with outstanding qualifications.

Bursaries, each of an annual value of \$750,<sup>1</sup> are the lowest awards and usually go to men who have done at least one year's post-graduate research, a few being reserved for specially deserving men in the graduating classes. Studentships, of \$1,000 each,<sup>1</sup> usually go to those who have held bursaries for one year and have done highly satisfactory work. Fellowships, of \$1,200 each,<sup>1</sup> call for two or three years of post-graduate research and a demonstrated capacity for independent research.

In addition to the above scholarships, which are tenable in Canada, the Council grants a few travelling fellowships of \$1,500 each for study abroad. These are awarded only to candidates who already possess the Ph.D. degree or its equivalent, and who wish to pursue advanced study under British or foreign specialists. Holders of these scholarships must agree to return to Canada at the end of the period covered by the award. A Ramsay Memorial fellowship of \$1,750 is available annually to an outstanding man who holds the Ph.D. degree and wishes to continue chemical research abroad.

These scholarships involve a total annual expenditure of about \$50,000. It is not too much to say that they have been a very important factor in building up post-graduate schools in Canadian universities and in providing the trained man-power necessary for the development of Canadian natural resources and manufacturing industries. It is gratifying to note that nearly all of the 284 persons who had completed their post-graduate training under this system by Mar. 31, 1930, are now engaged in scientific or technical work in Canada. A large number of them have made important contributions to science.

### Subsection 2.—The Ontario Research Foundation.

The Ontario Research Foundation was established by Acts of the Provincial Legislature passed in 1928 and 1929 (18 Geo. 5, c. 57, and 19 Geo. 5, c. 86). The objects of the Foundation are as follows:—

- (a) The improvement and development of manufacturing and other industries by the introduction of advanced methods and processes.
- (b) The discovery and better development of the natural resources of the province and the discovery and utilization of the by-products of any processes in treating or otherwise dealing with the mineral, timber and other resources of the province.
- (c) The development and improvement of methods in the agricultural industry and the betterment, welfare and progress of farm life.
- (d) Scientific research and investigation for the mitigation and abolition of disease in animal or vegetable life and the destruction of insect or parasitic pests.
- (e) Generally, the carrying out, with the approval or under the direction of the Lieutenant-Governor in Council, of any other research work or investigation which may be deemed expedient.

The scheme provides that half of the cost of the Foundation shall be borne by the Legislature and the remaining half by subscriptions to be received from industries and private subscribers. An Advisory Council of 25 persons representing the scientific, agricultural and industrial interests of the province was established by Order in Council of May 14, 1929.

<sup>1</sup> For the year 1931-1932 the bursaries, studentships and fellowships are being reduced to \$600, \$750 and \$1,000 respectively.

The present premises of the Ontario Research Foundation are 47 Queen's Park, Toronto, with additional quarters in a new building fronting on St. Joseph Street.

At the commencement of 1931 there were eighteen full-time research men on the staff as well as the necessary administrative and non-technical workers. Industrial fellowships are supported by the following organizations: Canada Packers' Ltd., Canadian Automobile Manufacturers' Association, Consumers' Gas Company, Canadian Woollen Manufacturers' Association, Ontario Metal Industries Research Association and a group of Ontario tanners. Officers of the Department of Agriculture and the Department of Mines have co-operated with the staff of the Foundation and financial support has been given to investigations of mutual interest. The various laboratories have been suitably equipped and researches in the following fields are in progress: textiles, biochemistry, bacteriology, animal pathology, leather, physical and chemical metallurgy, ceramics, fuel, gas, chemistry, agricultural economics, as well as geophysical prospecting and soil surveys in certain localities in the province.

### **Subsection 3.—The Advisory Council of Scientific and Industrial Research of Alberta.**

The Scientific and Industrial Research Council of Alberta was formed by Order in Council on Jan. 6, 1921. It originally consisted of five members, with the Provincial Secretary as chairman, and was appointed "to supervise and direct research work, to engage specialists to perform such work and to define the duties of each" According to its report for 1928, the Premier of the province was the then chairman, and the members included the Minister of Public Works, the President of the University of Alberta, and several professors of the same institution. Work was carried on during the year on fuels and road materials, as well as on geological and soil surveys, and on the chemical utilization of natural gas.

### **Subsection 4.—The Saskatchewan Research Council Act, 1930.**

The Research Council Act, 1930 (Sask. c. 88, 1929-30) provides for the constitution of a "Research Council of Saskatchewan" for the purpose of promoting the application of scientific methods to industry, and the development of natural resources within the province. It will consist of not more than ten members designated by the Government, and will include two members of the Executive Council with the President of the University of Saskatchewan as Director of Research.

### **Subsection 5.—The Royal Society of Canada.**

An account of the origin, history and functions of the Royal Society of Canada, contributed by Prof. J. Playfair McMurrich, Past President of the Royal Society of Canada, appeared at p. 884 of the 1924 Year Book.

### **Subsection 6.—The Royal Canadian Institute.**

An Account of the Royal Canadian Institute, contributed by Prof. J. Playfair McMurrich, appeared at pp. 885-6 of the 1924 Year Book.

### Section 3.—Public Libraries in Canada.

Under the above heading, a short article appeared on pp. 168-9 of the 1921 edition of the Year Book. Because of the pressure upon the space of the Year Book it is not repeated here. Statistics of Canadian libraries are given at pp. 178-221 of the "Annual Survey of Education in Canada, 1928", published by the Dominion Bureau of Statistics. For Canadian library legislation, see pp. 165-177 of the same report.

### Section 4.—The Development of the Fine Arts in Canada.<sup>1</sup>

Numerous attempts have been made from time to time, in the form of public addresses and published articles and books, to show that there is in Canada so very indefinite and uncertain a thing as national art. As to the fine art of painting, for instance, the difficulty of its classification as national or Canadian lies in the fact that its means of expression consists usually of pigment placed on canvas. Because pigment is a universal medium, and has been used in most countries for many hundreds of years, the critics fail who attempt to explain just how pigment placed on canvas by individuals who call themselves Canadians is different in a national way from similar work in other countries, especially in contiguous countries. Painters who live and work in Toronto or Winnipeg or Montreal are not likely to be very different in the general result from painters who live and work in Boston, Cleveland, Detroit, Minneapolis or Seattle. To make the lack of difference more obvious one might take the instance of a painter working in Windsor and another in Detroit, the one claiming to produce Canadian national art and the other American national art, with only the river St. Clair flowing between them. The farmer who grows wheat in southern Saskatchewan in a field that actually touches his neighbour's in Montana could scarcely find the difference, especially the national difference, between his wheat and his neighbour's.

Since Canada is a British Dominion with more than three thousand miles of frontier touching the United States of America, it is difficult to dissociate her art from British tradition and American influence. At the time she was wrested from the French, in 1759, there was no native art of any importance, but the French missionaries had introduced painting of a religious character for the purpose of Christianizing the natives, with the result that in some of the early churches and monasteries, conspicuously in Laval in the city of Quebec, there were paintings of great artistic and intrinsic value. The churches also brought to life a native art in the shape of wood carvings for altars and interior decoration, and while some claim to artistic value can be made for these carvings, they should properly be placed among the handicrafts.

Painting, therefore, did not enter into the lives of the people as a fine art until at least a hundred years later. Feeble efforts had been made to encourage pictorial art, but nothing of a permanent character resulted until late in the nineteenth century.

**Sources of Art and Pioneers of Painting in Canada.**—In pursuit of the sources of art in Canada we turn naturally to the redman, from him to the early trader and the missionary, and from these again to the first settlers. But while

<sup>1</sup> Contributed by Newton MacTavish, M.A. D.Litt., author of *The Fine Arts in Canada*.

the priest and the settler brought some works of art with them, mostly for religious purposes, and while there are records of a few native painters,<sup>1</sup> mostly portraitists, the results have had but little influence on the art of the country. Into Old Canada were brought some good examples of early European painting, especially the pictures now assembled in the imposing collection at Laval University, where there are examples of Italian, Flemish, Dutch, French and English schools and of individual masters, including Signorelli, Salvatore Rosa, Simone Memmi, Van Loo, Guido Reni, Poussin, Fragonard, Velasquez, and Carlo Dolci. Most of these paintings were sent to Canada during the French Revolution and were collected by Hon. Joseph Legaré, who was one of the early Canadian painters. Others were bought for Mr. Legaré in Europe. But while they are interesting in themselves and valuable, they should not be taken into our present consideration.

Therefore we must come down to the beginning of the nineteenth century before we can find the beginnings of art in Canada. And in doing so we are confronted with a significant set of coincidences. We find that in the years 1806, 1810 and 1812 the stars in their courses must have favoured the future of art in this new country. For in 1806 George Theodore Berthon, an artist who eighty years later left in Canada many excellent examples of art, was born in Vienne, France. Four years later, in 1810, there was born in England Daniel Fowler, whose work is among the best of the artists in Canada who have laid down their brushes forever. In the same year, as we have recorded, Paul Kane came into the world. Two years later, in the old town of Königsberg, Prussia, O. R. Jacobi was born, and in the same year Cornelius Krieghoff first saw the light in the quaint city of Rotterdam. Both came to Canada later on, and while Krieghoff has been called the Hogarth of Canada (his studies of rural life and types in Lower Canada meriting that distinction), Jacobi, perhaps rightly, is regarded as the most conspicuous of our early painters. It is well to record here also that two of the first artists from abroad to leave an impression in Canada were Hoppner Meyer and E. C. Bull. Meyer was a son of the London engraver of the same name. Some of his water-colour portraits are still to be seen in Toronto, and are examples of a refined and elevated taste. Bull was accounted a splendid pencil draughtsman. He taught drawing at Upper Canada College and the Mechanics Institute.

George Théodore Berthon received in France his training as a portrait painter, studying under his father and also under David. As a young man he went to England, but on the advice of a friend then living in Canada he came to this country and settled in Toronto as a professional portrait painter. His first commission was a portrait of Chief Justice Robinson, and thereafter, for the Law Society, he painted portraits of successive Chief Justices. These fine big canvases now hang in Osgoode Hall, and, although they are appreciated only by the few, they compose nevertheless a notable collection, worthy of being placed where they could command more attention from the public. They are Victorian in style and feeling, and they have a somewhat literal or photographic quality. But they are highly convincing and convey an authentic impression of personality. They are sound in construction and dignified in effect, and they must have been well executed technically in order to have retained their present freshness and

<sup>1</sup> De Beaucourt, Louis Delongpré, Antoine Plamondon, Joseph Legaré, T. Hamel, Gilbert Stuart Newton, and William Valenteue.

clarity of colour. It is fortunate that an artist so sound was available to record for us with apparent faithfulness the appearance of so many of our public men of the Confederation and pre-Confederation periods. Besides portraits Berthon painted a few landscapes, but it is on portraiture alone that his reputation rests. He was elected a member of the Royal Canadian Academy in 1880, and he died in Toronto in 1892.

Naturally one wonders why an artist would come to a country where there was as yet almost no artistic development. We acknowledge the pioneer spirit and we have before us, even in our own country, the instance of Paul Kane. But Kane went into remote parts with no intention of remaining. Nor did he remain. Then, again, there is the instance of Gauguin, the French painter who went to the island of Tahiti, lived amongst the coloured people of that land, painted them and died there.

Scarcely can we believe that Jacobi came to Canada with much thought of remaining. There is a record that he came for the single purpose of painting Shawinigan falls, a beautiful bit of natural scenery near Three Rivers, not many miles from the city of Montreal. The fact that he remained and passed his last days here is a fine tribute to the attractiveness of the country. For he had been a distinguished painter in his own land, where, after a course of training at Düsseldorf, he had received commissions from the Duke of Westphalia and the Emperor of Russia. Besides these attentions, the Duke of Nassau had appointed him court painter at Wiesbaden, where he had remained for twenty years.

Jacobi was about fifty years of age when he came to Canada in or close to the year 1860. He was then at the height of his power. His paintings of this period and even of the period embracing the next ten years, display a good sense of colour values, though they may be found lacking in originality and variety of design. Some of his paintings are notable for their delightful tones of grey, but most of them are emphatic exponents of the merits of red and orange.

In Jacobi Shawinigan falls must have aroused genuine enthusiasm, for the painting of waterfalls became with him a veritable passion. And notwithstanding the many opportunities to be found in Ontario and Quebec for catering to this passion, he fell into the dangerous practice of repeating. One of his favourite compositions was an orange sunset, with some indication of trees on each side and a waterfall down the middle. This somewhat sentimental bit of landscape he repeated many times, with, of course, enough variation to show that it was not the product of the stencil. He was an idealist, and for that very reason there is but little "Canadian" feeling in his work. His landscapes, with some exceptions as far as type goes, might as well be called Prussian as Canadian. He loved to render his impression of a landscape bathed in the enrapturing glow of the setting sun, and yet no one can say of many of these impressions that this is that or that is this.

Jacobi had been in Canada about a decade when, in 1873, the Ontario Society of Artists was organized. He was among the first exhibitors. He was also one of the first teachers in the school of art which began about that time and which is known now as the Ontario College of Art. But his teaching was of short duration and of but little consequence. Mr. T. Mower Martin, who is the present *doyen* of painters in Canada, was the principal. It appears that Jacobi did not relish the fact of being exceeded in academic honours by one whom he regarded

as his inferior in distinction and even in artistic accomplishments. Mr. L. R. O'Brien, who had turned from architecture to painting and who put an active mind to all things affecting art in Toronto, suggested that Jacobi be invited to join the school as teacher of water-colour drawing and that the teachers be distinguished as professors.

Mollified by the offer of these honours Jacobi accepted them and became forthwith one of the professors. But the honours were not to last long. For Jacobi, however grave may have been his fault of repetition, seems to have been a better painter than a teacher. He had no system, but relied solely on demonstration. The result was about the same as if a juggler were to display his greatest skill and then command his pupil to do likewise. Jacobi would surround himself with the class, which was in number about twelve or fifteen, and, taking a water-colour pad on his knee, would proceed to paint. He used the old-fashioned dry water-colours, and the brushes were composed of stiff, stubby bristles which he cleaned by drawing them between his teeth and lips.

"Now", he would say, retaining his Teutonic accent, "ve vill make a nize leetle vater-colour. Ve vill put a round spot of red in the centre, so. Zat is ze sun. Now ve vill take some yellow, so, and some purple, so, and before you know it, ve haf a sky. Then ve put some trees on this side and some odders on the odder side, so. And then ve run a leetle vaterfall down the meedle, so; and it is finished. Now you haf seen me make a vater-colour. It is very simple. Make one yourself".

Each pupil, encouraged by the apparent simplicity of the work, would begin immediately, the idea being to paint with the same facility. But the results in most instances were at once disastrous and in the end highly discouraging. Mostly for that reason Jacobi did not last long as a "professor", but he accepted from time to time a few private pupils. Among these was the late Henry Sandham, R.C.A., who in the 'nineties had some reputation in New York as an illustrator. It cannot be shown, however, with all his good work and his indifferent teaching, that Jacobi had any effect on the art of the country. His paintings, pleasing as they may be in colour and tone, and interesting as they always are in method, will be valuable more for their association than for their artistic superiority. He never was in actual sympathy with Canadian scenery, never so much as with the scenery of his imagination. Nor can it be shown that he ever advanced in any Canadian spirit. During his latest years his work deteriorated under defective eyesight. He applied spectacles in course of time—two sets of lenses and, finally, three sets. Still he wondered why his admirers turned to his earlier productions in preference to his later. He long endured these conditions, living very simply in the city of Toronto, and his pictures sold at about one-tenth the price that they could fetch at public auction in the same city fifty years later. Near the end of his career he went to the Western States, where he died in 1901.

Almost contemporaneous with the coming of Jacobi to Canada was the coming of Daniel Fowler. What could have induced Fowler to come? He was an Englishman and had studied law first and then art. He had passed a year in study on the Continent and afterwards had opened a studio in London. But, his health declining, he sought rejuvenation in the wilds of Canada. He settled on Amherst island near Kingston. For fourteen years he lived there, but the desire to paint must have lain dormant, for that period of his life was barren so far as art is concerned. Then he visited London. There the former desire

to paint was revived. He returned to his island home in Canada, and for many years thereafter he was a painter of large and varied output. He gave most of his attention to landscape and still-life. His colouring at times is brilliant and there is in his work more breadth than in the work of most of his contemporaries. Examples of it may be seen in the National Gallery of Canada, at Ottawa.

Of Krieghoff there are scarcely any records apart from his work. One is safe in assuming, notwithstanding, that he came to Canada in the course of his wanderings from one place to another and settled in the country, near Montreal. He must have had a good rearing, for he was an accomplished linguist, a musician of some attainments, and he was as well a student of botany. It is recorded also that he received a training in art at Rotterdam. Even so, from his native land he was attracted to America. But he came more as an itinerant musician than as a painter. He possessed an adventurous disposition, and at the time of the Seminole trouble in Florida he joined the United States forces and attained the rank of sergeant. Later he drifted northwards into Canada, and remained for some time in Montreal. At length he found his way to the city of Quebec, and apparently it was the friendships formed there that induced him to remain. Then began the serious portion of his career as a painter. He came to the conclusion that he was not an efficient draughtsman, and his work shows that the conclusion was based on reason. Convinced of this defect, he went to Paris where he studied for two years, after which he returned to Quebec. Without doubt he was benefited by the schooling, but it cannot be said that he ever attained much skill in drawing. Nevertheless, he was a fair draughtsman and he possessed great adaptability. He gave much attention to landscape painting, but he used the human figure and various animals as accessories and oftentimes as the chief motive.

Krieghoff enjoyed considerable patronage in Quebec, where his paintings were acquired by most of the wealthy residents of the city. Brilliant in tone as were many of his landscapes, particularly the scenes of autumn, they were not too brilliant for the taste of the art fanciers of that time and place, and many of the officers stationed at Quebec took with them on their return to England specimens of Canadian scenery as depicted by this artist; many of these were painted in one day in the open. There were also Indian and French Canadian types, subjects that appealed greatly to Krieghoff. And, while the artist was prone to use lavishly the primary colours, some of his paintings, judged even as the productions of to-day, are really charming in tone, composition and method. Most of them, on the other hand, would be regarded now as being too raw in colour and crude in execution. Many of them have the appearance of highly-coloured lithographs. The figures might be regarded as the work of a caricaturist and humourist. We find in his work touches that suggest Hogarth and conceits that might well come from Cruikshank. The French Canadian and the Indian were his especial subjects. Therefore the wigwam, the canoe and the mansard roof are important accessories to his compositions. The breaking up of a dance at a French Canadian farmstead and running the toll-gate were subjects that appealed to his sense of humour, and the results of his efforts to realize these events on canvas are amusing, even if exaggerated. His weakness for exaggeration ran to such lengths as that of having a rheumy old man running on crutches after a horse that has passed, galloping, through the toll-gate, or that of sleighs upsetting, dogs fighting, horses bolting and persons looking on

from upstairs windows during the leave-taking after the dance. The ridiculous aspects of these things are amusing, even if some critics might pronounce them inartistic.

Kriehoff was in most instances a close observer, and his pictures, like Kane's, are valuable as giving details of habits, customs and many things that compose the everyday life of a people. In these respects the works of Kane and Kriehoff differ greatly from the works of Fowler and Jacobi. For there is little that is topographical in Jacobi's, nothing that is historical in Fowler's. These two strove to produce art, and while they came from foreign lands, it is to them that we look for the first elements of art in a country that even yet gives thought mostly to the common amenities of life.

Let us remark that Kane, Kriehoff, Fowler and Jacobi were born at a time when, even in the United States, art had not begun to attain a foothold. In Canada population was sparse, conditions crude, and only the wealthy or official class had much opportunity for practising the principles of refinement. We have to imagine Kriehoff and Fowler coming into a country where there were few, if any, art societies, no art schools, scarcely even an artist; where the people were compelled, after settling questions of politics and religion, to think about the prime necessities of life and to ignore the refining influences of painting and the high grades of literature.

Fowler and Jacobi we must accept as real artists. For that reason it is easy to assume that they had no intention of remaining in the country. Still they did remain, and they passed most of their latter days here. At the time of Fowler's coming (1843) the country was not in the mood to encourage art; for the people, apart from earning a livelihood, were mostly concerned with affairs of church and state. These were the days closely following the time of the Family Compact and the Château clique—the days of John Strachan, William Lyon Mackenzie, and Louis Joseph Papineau. Toronto, which is now regarded as the art centre of the Dominion, was a small village skirting a marsh. Montreal, which has ranked as the third city on the continent for imposing private collections of paintings, was then nothing more than an important place of trade. Ottawa, which now boasts of the National Gallery, was a small frontier settlement known as Bytown. Colonization in Upper Canada had scarcely begun. The people, thrust between traders and soldiers, had no room for the fine arts, even if they had the disposition to welcome them.

We are considering, of course, a period prior to the time of Inness, Homer, and Ranger in the United States and prior also to what is called in England the pre-Raphaelite Movement—the time made notable by Carlyle and Watts, Tennyson and Burne-Jones, Wordsworth and Rossetti, Browning and Leighton, William Morris and Holman Hunt. In France neither Millet nor Manet, each of whom has made a profound impression on the art of the world, had as yet tasted fame.

**The Rise of Art in Canada up to Confederation.**—The four painters, however, whom we have discovered as the pioneers of art in Canada, apart from Kane, did not actually come upon the scene as artists until about the middle of the century. That was not a propitious time for the advancement of art. Still, we find that in 1834 the Artists' Society had conducted the first art exhibition on record in Toronto. This exhibition had been held in the old Parliament Building, with Sir John Colborne, the Lieutenant-Governor of Upper Can-

ada, as the chief patron. Thirteen years later the Toronto Society of Arts had been organized. This society had held three exhibitions, and among the exhibitors had been Krieghoff, G. T. Berthon, and Paul Kane. Later still, in 1867, the very year of Confederation, the Society of Canadian Artists, which had but a brief career, was organized in Montreal, with John Bell-Smith, father of F. M. Bell-Smith, as its president.

But the country itself was progressing. The rebellion of '37 had passed, and responsible government, the cause of much contention, was at length established. Toronto had become a place of some consequence, boasting the seat of government, a university, and, as citizens, a number of distinguished personages. Montreal was climbing Beaver Hall Hill, and such places as Hamilton, Niagara and Kingston could lay claim to a showing of refinement.

But the art of painting was a thing unhonoured and unsung. If it were nurtured at all, it was in the bosoms of strange individuals who came from abroad and settled in Canada, perhaps in remote spots, with hopes of establishing, as Wordsworth established at Rydal, a centre of culture and quiet enjoyment. For example, take the case of the painter William Cresswell. He came to Canada a decade or two later and selected for his future home a beautiful site in Huron county, a few miles from the town of Seaforth. He went, as it would seem to an English gentleman of his means and culture, to the backwoods. For the country still supported dense forests and was still in the pioneer stage of civilization. Nevertheless, the eye of the artist had been attracted thither. The spot where Cresswell chose to build his house, a spot not without aspects of beauty even to-day, though now sadly neglected, looked down upon the valley of the Maitland. The flow of water, which now is shallow and shrunken, formed then a brimming river, and the meadows and elms were such as the artist had admired at home, along the banks of the Avon or the backwaters of the Thames.

Cresswell lived there, there he painted, but he had to go a hundred miles from home before he could find any sympathy with his aims or understanding of his efforts. This applies likewise to Fowler, and it was undoubtedly the experience of Harlow White, another Englishman who came to Canada and essayed the praiseworthy task of painting local scenery.

We can scarcely imagine these artists seeking a market in Canada. On the other hand, we are as unlikely to think of them finding a market abroad. They were as a matter of fact, like others who painted in Canada about the time of Confederation, between the high and the low strata of appreciation. While their topographical pictures could be better done to-day by the camera, they were too good for the Canadian market and not good enough for the markets abroad. There were, happily, some outstanding exceptions—the still-life studies and landscapes of Fowler, which if not strikingly artistic are nevertheless faithful reproductions, and the landscapes of Jacobi. For although we have gone on many years from the time we first introduced these two painters, they were still active and on the scene. Kane, Berthon and Krieghoff also lingered on, although they were, with the exception of Berthon, soon to depart.

These painters witnessed the slow progress of the country. They saw the union of Upper Canada with Lower Canada, the beginning of responsible government, the struggle for Confederation, and finally Upper Canada and Lower Canada become but a part of one vast Dominion. But it must be emphasized that throughout all this, in all these years, they saw only one or two intermittent

attempts, which resolved mostly into feeble social gatherings, to place in combination before the public objects of local production that could make any show of artistic merit.

Like Kane, but in later years and under vastly different circumstances, F. A. Verner, R.C.A., a native of Ontario, made studies of Western life, treating almost exclusively the buffalo and the Indian. Kane went into great detail. He made pictures of Indian villages, lodges, interiors and exteriors, Indian games, battles, dances, sports, and domestic handicrafts. He shows how the net and spear were used in capturing salmon. In many of the pictures the almost absolute nakedness of the Indians is impressive, though some of them, on the other hand, display an abundance of gorgeous apparel. "Halfbreeds Travelling" shows a large cavalcade passing from an elevation to a lower level. Every vehicle is two-wheeled and is hauled by one ox. A few horses are seen, but they run wild or carry the hunters. Each wagon supports a long upright pole, at the top of which flutters a flag or a tuft of some kind.

Kane's pictures deserve to be known and cherished if for no other reason than that the material for them was obtained by the painter under great risks and difficulties. Kane was borne in 1810 in Ireland. He came as a child, with his parents, to York, Upper Canada, at a time when art was almost unknown in that actual backwoods community. He had a natural tendency towards drawing, and in spite of adverse circumstances he succeeded in making the painting of portraits his profession. Early in life, however, he nourished the ambition to devote "such talents as he possessed", to quote from his book *Wanderings*, to the painting of a series of pictures "illustrative of the North American Indians and scenery" At the age of twenty-six years he visited the Southern States, and at thirty he went to Europe to study the paintings to be seen in the important picture galleries. Fifteen years later he returned to Canada, equipped, one might infer, to carry out his chief ambition in life. Through the good offices of Sir George Simpson, Governor of the Hudson's Bay Company, an order was given to the company's numerous brigades of boats to pass Kane through to the Pacific coast and back again. Sir George also gave the artist a commission for a number of pictures, and it was through his appreciation that we can account for Kane's pioneer achievements, for had it not been for the assistance he received it would have been impossible for him to accomplish even a small portion of what he actually did accomplish. For he was, during two and one-half years, a guest of the Hudson's Bay Company. Kane's portraits of Indian types, many of which have passed away forever, make up the best part of his work. Some of them are praiseworthy, even as works of art, and most of them are well composed, dignified and convincing.

**The Progress of Art Since Confederation.**—Canada had now advanced to the time of Confederation (1867), and as yet she could claim in painting almost nothing that would attract cultivated attention from abroad, at least in countries where our own language was spoken. England, it is true, was responding to the pre-Raphaelite movement—to the profound influence of the group of writers and painters who flourished at that time. But in the United States, Canada's nearest prototype, there had been no big combined movement, and in the whole realm of art where a lasting impression had been left we can point only to such writers as Washington Irving, Edgar Allan Poe, and Nathaniel Hawthorne, and

to such painters as John Singleton Copley, George Inness and Winslow Homer. So that while Canada produced no painters or writers of world-wide reputation she was not hopelessly overshadowed by her powerful neighbour.

*The Foundation of the Ontario Society of Artists.*—Furthermore, it must be observed that while these movements and achievements were being felt abroad, Canada was unconsciously laying the foundations of a vigorous artistic future and, indeed, for an awakening of interest in all the arts. For a movement had begun, a movement which culminated in 1872 with the formation of the Ontario Society of Artists, of which the foundation members were John A. Fraser, Robert F. Gagen, Charles Stewart Millard, Marmaduke Matthews, T. Mower Martin, James Hoch, and J. W. Bridgeman. W. H. Howland, a layman, was the first president, and John A. Fraser, a painter, the first vice-president. A week after the organization meeting H. Hancock was elected a member and appointed secretary, a position which he held until 1889, when he was succeeded by Robert F. Gagen, who held the position until he died a few years ago and who for more than half a century was not only a refined and able artist but as well a genial guide, philosopher and friend to hundreds of beginners in art in Ontario.

John A. Fraser was, particularly at that time, an inspiration to the artists associated with him. He had an unusually direct method of handling water-colours, and in this medium his work still takes one right back to Cotman.

The first exhibition of The Ontario Society was held during April, 1873. Among the exhibitors were five who were still exhibiting fifty years later: Robert F. Gagen, F. M. Bell-Smith, F. A. Verner, T. Mower Martin, and Marmaduke Matthews.

To appreciate the significance of this early society it is well to keep in mind the fact that it preceded the organization of the Royal Canadian Academy and that it preceded also the organization in the United States of the Art Students' League and the Society of American Artists.

*The Foundation of the Montreal Art Association.*—During this period, that is during the 'seventies, a wave of artistic sentiment reached many persons of influence in both Canada and the States. As a result the Art Students' League of New York was formed in 1875 and the Society of American Artists in 1878. About the same time a group of enthusiastic laymen, headed by Beniah Gibb, founded the Montreal Art Association, which ever since has been the most robust art organization in the Dominion, not so much for the encouragement of art in Canada, if one could except its school of art, as for the acquisition of a beautiful gallery and beautiful paintings to place therein. This association had great advantages accruing from the sympathy and support of wealthy citizens, advantages that never have been enjoyed by any similar association in Canada.

Canada, however, could not as yet claim much distinction in art. Nevertheless the period of the 'seventies was formative, as well in politics as in æsthetics. To the student of Canadian history it possesses features of peculiar interest. The confederated provinces, bound together here and there by straggling communities and separated elsewhere by long stretches of uninhabited wilderness, were taking their first uncertain steps towards the goal of a great, extensive Dominion. The fishermen of Nova Scotia knew but little of the Quebec habitant or of the Ontario settler; and the habitant and the settler in their turn knew nothing more even of the wonderful possibilities of their own territories

and less still of the amazing significance of the vast regions lying westward for three thousand miles between them and the Pacific. But the Intercolonial Railway was being built, the Canadian Pacific was being projected, and the old Grand Trunk was looking about for feeders. Sir John A. Macdonald, conscious of the need of an attractive scheme to raise his party out of the mire into which it had been thrown by the Pacific Scandal, began to introduce his ingenious National Policy, which by the application of a protective tariff was a bold attempt to force trade among the provinces by placing a barrier against foreign goods, particularly goods from the United States.

But what has all this to do with art? Nothing, except that with the attempt to nationalize trade we discover an attempt to nationalize art. The Princess Louise, who, as consort of the Governor General, the Marquis of Lorne, brought with her our first official touch of royalty, was herself something of an artist. She had lived at home during the period of the pre-Raphaelites, had seen the Barbizon School reach its zenith in France, had beheld the startling fame of such men as Turner and Corot, and now, as the impersonation of royalty in the greatest colonial possession that the world had ever seen, she undertook to signalize the Lorne régime by establishing with royal status a Royal Canadian Academy of Arts that might at least have some semblance to the Royal Academy of England.

*The Foundation of the Royal Canadian Academy.*—We should hesitate before giving to the Lornes all the credit for bringing about the organization of the Academy. It is true that the idea was put forward by the Marquis of Lorne at the opening of an exhibition held by the Art Association of Montreal, and soon thereafter the first steps towards organization were taken at a meeting of artists held at Toronto at which the Governor General was present. It was then determined to form a national academy of art which should bring together the leading artists of the country, but which should be quite apart from any other art association.

The Princess Louise, as well as the Marquis himself, took a lively interest in the details of the organization, and it appears that it was left for the Governor General finally to say who should compose the charter members. Every artist in the country, naturally enough, was eager and anxious to be taken into the membership, and it is known that at least one whose name was not on the list submitted to the Governor General was able, by his own persuasions, to convince the royal party at Rideau Hall that his work entitled him to membership, with the result that the wishes of his fellow painters were ignored and his name placed on the list. Perhaps this was due to the natural sympathy of the royal party, because the Marquis himself (as well as the Princess) was a sketch artist of no mean ability.

Kane and Krieghoff had passed away, but Fowler and Jacobi and Berthon, though veterans, had still some years of production ahead of them. Others too had come upon the scene. Lucius O'Brien, a real son of the soil, born at Shanty Bay, Ontario, in 1832, became an architect and afterwards acquired some skill as a water-colourist. But he seems to have possessed other qualities that fitted him to work in sympathy with the Lornes. He became the first president of the Academy. In that capacity he seems to have had more tolerance than many artists have for the supercilious attitude of society towards art, and perhaps for that very reason the early exhibitions were noted more for the social dis-

inction of the guests than for the artistic distinction of the paintings. The fact that O'Brien was president gave to his own work a consequence that is discovered in it even to-day by art collectors who attach much importance to historical interest. He set up in College Street something of an establishment, just off the main thoroughfare of Toronto, and it is an interesting fact that this house was for several years the headquarters of the Ontario Society of Artists. It is even more peculiarly interesting as an example of the early designing of Frank Darling, an architect and a member of the Royal Canadian Academy, who received, in recognition of conspicuous merit, the gold medal given by the King on the recommendation of the Council of the Royal Institute of British Artists.

Architecture, it will be observed, was and is a recognized branch of the Royal Canadian Academy. Of a total membership of forty, the constitution provides for nine architects, while there may be as many as twenty-two painters, five sculptors, and four designers, etchers, or engravers. Although for years no woman has been an Academician, as the members of full rank are named, there are a number of women on the list of associates. It is understood commonly that women cannot be admitted into full membership, but there is nothing in the constitution to prevent them. In the early days one woman (Mrs. Charlotte M. B. Schreiber) was recognized as an Academician, but at that time there was in the constitution a clause to the effect that women members would not be required to act in committee. Since then that clause has been removed, but all along there seems to have been a determination to debar women from taking any active part in the affairs of the Academy. It is not assumed that women cannot qualify, but it has been unlikely that any woman could command enough votes to elect her. So that we have throughout the Dominion a number of women who are acknowledged to be better artists than some of the Academicians, and yet they may not append the letters R.C.A. to their names. They are permitted, however, to append A.R.C.A., which signifies associate membership.

The so-called charter members of the Academy were Napoleon Bourassa, W. N. Cresswell, A. Allan Edson, Daniel Fowler, John A. Fraser, James Griffiths, Robert Harris, Eugene Hamel, J. W. Hopkins, H. Langley, T. Mower Martin, L. R. O'Brien, William Raphael, Henry Sandham, Mrs. Charlotte M. B. Schreiber, T. S. Scott, James Smith, W. G. Storm, and F. C. van Luppen. Of these nineteen, five were architects—Hopkins, Langley, Scott, Smith, and Storm. Van Luppen was a sculptor. He was born in Belgium, and there also he died.

In reviewing the Academy it is well at the same time to review the Ontario Society of Artists, for the one dovetails into the other. Perhaps it would be fairer to say that the Society has been a stepping-stone to the Academy. But, as we have observed, the Society was the first organization. It had been in existence about eight years when the Academy was formed, in 1880. The Ontario Society is a chartered body, but, unlike the Academy, it has no academical status and therefore may not and does not issue diplomas.

The Society has flourished with the aid of a meagre annual grant of money from the Ontario Government. Most of the money, \$500 annually, was used, according to agreement, for the purchase of paintings from each annual exhibition. For some time there was a fund of \$1,200 expended annually by the Ontario Government through a committee, mostly laymen, for purchasing paintings by members of the Society on condition that the Society should maintain

an exhibit of work in the Normal School, Toronto. Many of these paintings were hung from year to year in the corridors and other available space in the Normal School building, and others were hung in the Parliament Buildings. These buildings withstood the strain for about forty years, but at length the Whitney Government resolved to disperse the collection by having individual pictures hung in normal schools of the province. The educative value of the scheme is doubtful, and while it should worry no one as to the disposition of many of the pictures, the aggregate effect, if these pictures could be properly assembled, would be important.

Notwithstanding all this, the Society has been a recruiting ground for the Academy, and the same, but in a lesser degree, applies to the Montreal Art Association. From the Society went in the first place Jacobi and Fowler, and Jacobi succeeded O'Brien as president. The same can be said of nearly every artist in Ontario. In its membership the Society has not been so restricted as the Academy, and to it beginners in painting commonly have looked for their first introduction to the public. The standard in these organizations never has been rigid, but young painters naturally receive with greater regard an acceptance for exhibition by a committee of the Academy.

*The Study of Art Abroad by Canadian Artists.*—An indirect effect, even if but slight, of the presence of foreign artists in Canada, where they were confined almost exclusively to the interior province of Ontario and the adjacent city of Montreal, was the encouragement thereby given to native Canadians to study art in foreign countries. This was felt first in the 'eighties and 'nineties, when many young Canadians sought knowledge and inspiration abroad, mostly in France, but also in England, in Holland and elsewhere on the Continent. And even to-day critics are heard complaining, though not so frequently or grievously as heretofore, that Canadian artists see their own country through foreign spectacles.

Conspicuous among the first Canadian artists to study and work abroad was James Wilson Morrice, who died in Tunis in 1924. He is represented in the Luxembourg Galleries, Paris; the Pennsylvania Academy of Fine Arts, Philadelphia; the Section Art Décoratif of the Louvre, Paris; the Tate Gallery, London; the National Gallery of Art, Washington; the National Gallery of Canada, Ottawa, and in public galleries in Nantes and Odessa. He was a member of many important art organizations in Paris and London. His choice of subject usually was landscape or marine, but he also painted the figure.

Horatio Walker is another important Canadian painter, still living. His bent has been towards landscapes, with animal figures, and *genre* subjects. He has been dubbed the Canadian Millet. Half a dozen medals have been awarded to him in the United States, where examples of his work can be seen in many public galleries. Other Canadian painters who have lived and painted abroad with distinction are Paul Peel, Wyatt Eaton, Blair Bruce, Curtis Williamson, E. Y. Dyonnet, John Russell, Ernest Lawson, W. E. Atkinson, Clarence Gagnon, A. Suzor-Coté, St. Thomas Smith, Homer Watson, Lawren Harris, Franklin Brownell, and A. Y. Jackson. Peel's canvas "After the Bath" was awarded a gold medal at the Salon, Paris, in 1892, and was bought by the Hungarian Government. Eaton was active in the organization of the American Art Association. Williamson was awarded a medal at Philadelphia for figure painting, and he also won a silver medal at the St. Louis Universal Exposition. Lawson has won several valuable awards in the United States as a landscapist, and he is classed among the foremost "American" painters. Gagnon is best known abroad

as an etcher, and he is represented in the Petit Palais, Paris; South Kensington Museum, London; and in Dresden, Venice, Mülhausen, and The Hague. Watson was awarded a gold medal at the Pan American Exhibition, Buffalo, in 1901. Brownell was awarded a gold medal at the Paris Exhibition of 1900. Jackson is one of the only two Canadians represented in the Tate Gallery, London, the other being James Wilson Morrice. Harris also has won distinction and several prizes abroad.

*The Group of Seven.*—Within quite recent years there has been in Canada, as elsewhere, a departure, mostly by young artists, from academic lines. This was first noticed in the city of Toronto, where, in 1920, they gave their first public exhibition in the name of the Group of Seven. This group was composed of Lawren Harris, A. Y. Jackson, Arthur Lismer, J. E. H. Macdonald, Frank Johnston, F. Horsman Varley, and Franklin Carmichael. These painters, several of whom were young and venturesome, found their inspiration in the wild and rugged parts of northern Ontario, where Tom Thomson and E. W. Beatty, their forerunners, had already blazed a trail. Thomson, who died when his work was just coming into prominence in a restricted sense, was not a modernist in keeping with the meaning that since has been attached to that word; nor was Beatty. For while Thomson painted in a bold and luscious manner, he gave corresponding attention to contour and design. From these features the Group of Seven departed, as many other groups and individuals elsewhere had departed, until they became, in the painting of landscape which was their chief vehicle, as bizarre almost as the ultra bizarre anywhere, although not so extreme as the "cubists", the "vorticists", or many others who have devised cognomens for their cults.

Within recent years, the "modern" tendency in painting has attracted mostly the younger painters, especially beginners, with the result that for years every regular exhibition of paintings in Canada has been dominated by works that are at least loud in colour and formidable in treatment and design. One group of students went so far as to withdraw in a body from the Ontario College of Art in order to establish a society or group where they might work out what they regarded as their own ideas untrammelled by tradition or the restrictions of academic teaching. The last year or two, however, has seen a change; so much so, indeed, that at the annual exhibition of the Ontario Society of Artists in 1930 and '31 the absence of extreme or "freakish" pictures was regarded by many persons as a relief.

*Canadian Sculptors.*—Passing mention has been made of early wood carvings in Canadian churches, but sculpture on the whole was not a notable art in Canada until near the end of the eighteenth century. The first sculptor of real significance was a French Canadian, Philippe Hébert, examples of whose work may be seen in the bronze casts of historical subjects which stand in front of the Provincial Parliament Buildings, in the city of Quebec, and of the Maisonneuve monument, which takes the form of a public fountain on Place d'Armes, Montreal. Another historical monument, the largest and most imposing that has yet been produced by a Canadian, is the one now being erected on Vimy Ridge, France, as a memorial to the Canadian soldiers who fell in the great battle fought there. The sculptor is Walter S. Allward, a member of the Royal Canadian Academy. Allward's monument to Graham Bell, inventor of the telephone, stands in the city of Brantford, and another to the Canadian soldiers who fell in the South African war rises skyward in the city of Toronto. Other Canadian sculptors are A. Laliberté, Dr. R. Tait MacKenzie, George W. Hill

Hamilton P. MacCarthy, A. Phimister Proctor, Katherine E. Wallis, A. Suzor-Coté, Emmanuel Hahn, Frances Loring, Florence Wyle, Elizabeth Wood, Alfred Howell, and Lionel Fosbery.

A. Phimister Proctor is one of the most notable Canadian sculptors. He was on the Jury of the Paris Exhibition of 1900, and is represented in the Metropolitan Museum, New York, the Art Gallery of Toronto, the National Gallery of Canada, and in several public parks in New York City. The huge lions in front of the Public Library on Fifth Avenue in the same city are of his moulding, as well as the colossal sleeping lions which are a part of the McKinley Memorial Monument in the city of Buffalo. Bronze casts of statues by Hill, which are mostly historical, may be found in the city of Montreal and in the Carnegie Institute, Pittsburgh; and by MacCarthy in Ottawa, Saint John, N.B., and Annapolis Royal, N.S. The work of the other sculptors mentioned is mostly of miniature proportions, although Dr. MacKenzie has executed a number of life-size figures of athletes and classic heroes. As a result of the Great War many monuments of patriotic character have been erected in cities and towns, and even in villages, but most of them possess doubtful artistic merit. There are as well, in conspicuous spots adjacent to the public buildings in the capitals of the nine provinces that compose the Dominion, and also at the Dominion capital (Ottawa), monuments to British rulers and statesmen, and to Canadian public men, educationists, ecclesiastics, military heroes, politicians, and leaders generally.

**Art Galleries of Canada.**—The principal public art galleries in Canada, indeed the only ones of note, are the National Gallery of Canada, Ottawa, the Art Gallery of Toronto, and the Montreal Art Gallery. The National Gallery possesses examples of all the early painters in Canada, most of the contemporaneous native painters, all the diploma paintings of the Royal Canadian Academicians, and as well a creditable collection of old masters and modern painters. The Montreal Art Gallery displays a number of very fine old masters and examples of later schools, but the showing of work by Canadians is meagre. Canadian painters, again, are represented better in the Art Gallery of Toronto, where there is also a limited showing of eighteenth and nineteenth century art.

For private collections of paintings Montreal, until recently, was regarded as the third most notable city on the American continent. There were the collections of Lord Strathcona, Lord Mountstephen, Sir George Drummond, Sir William van Horne, and the Greenshields, but most of these collections have been dispersed. In the city of Toronto may be seen in private houses what are accepted as fine examples of such painters as Rembrandt, Frans Hals, Romney, Raeburn, Gainsborough, and Reynolds, as well as of celebrated modern French and Dutch painters. The capital city, Ottawa, which is much less important in size and wealth than the other two cities mentioned, has a number of noteworthy private collections, mostly of the work of contemporaneous European artists.

**Architecture in Canada.**—Architecture in Canada has been affected by European tradition perhaps more than any other art. Nevertheless it has made, from time to time, ever since Champlain built his first habitation under the precipice at Quebec, courageous attempts to build edifices that would meet the requirements of the climate, the people, and the times, in a fashion different from that of any other country. This is to be observed, naturally, in French Canada, where the earliest settlers built their homes, clinging, although not too

tenaciously, to the simple structure they had been used to in France. "The requirements", as well expressed by Mr. Percy Knobbs, "were for the most part simple in character, with stout walls of well-set rubble, with wooden casements, windows and shutters; steep roofs with pronounced bellcast, stone gables carried up to the skewers well above the roof and stout chimneys were the main characteristics of their [the early builders'] work".

These bellshape roofs often extended out so as to form a verandah or shelter at the front door as well as at the back. A prototype, though varied, can still be seen in northern France. But it is true that although the French Canadians never seemed to have achieved a log structure in the same sense as had the Swiss and the Scandinavians, still they early learned to set logs horizontally, with notches and bonds at the quoins.

The foregoing applies to early domestic architecture. For more pretentious and public buildings there was a mixture of the French and, later, the Georgian classic, to be followed by the revised Gothic of the Victorian era. More recent developments in the United States have had a marked effect, influenced by historic facts and racial instincts.

With the beginning of the twentieth century a great change came in domestic architecture, which, although it was largely due to architects trained abroad, contained novel characteristics and features well suited to climatic conditions. This change has been most noticeable in the inland provinces of Ontario and Quebec.

The Old Country tradition was early established in the Maritime Provinces and parts of Ontario, where there were early settlements of Scots, while in southern Quebec and the Ottawa valley wood construction in studding, clapboarding and shingled roofs resembled the edifices of a similar character in New York and Massachusetts, in the United States. Here and there frequently one could see, and still can see, the influence of classicism, especially in the Southern States, where columns and mouldings whose influence has been felt even as far northward as Canada are in evidence to-day. At Halifax, on the Atlantic coast, there are some noble buildings in the Georgian style, and farther inland there are many huge buildings for carrying on commerce and finance, especially in Montreal and Toronto. In Christ Church Cathedral, Montreal; in the Parliament Buildings, Ottawa, and in the main building of the University of Toronto one can see fine examples of Victorian Gothic architecture.

**Bibliography.**—The bibliography of art in Canada is meagre. Apart from brochures and magazine articles, only a very few works of reference have been published on the subject. In the year 1917 E. F. B. Johnston published a monograph entitled "Canadian Art and Artists", which appeared in the form of a special chapter for *Canada and Its Provinces*, (Toronto: The Publishers Association. Twenty-three volumes). In 1925 Newton MacTavish published "The Fine Arts in Canada", which was the first comprehensive history of the kind, (Toronto: The Macmillan Company of Canada), and in 1927 F. B. Housser published an appreciation of the Group of Seven in a book entitled "A Canadian Art Movement" (Toronto: The Macmillan Company of Canada). A comprehensive brochure on "Canadian Painters and Sculptors", by M. O. Hammond, was published in 1930, (Toronto: The Ryerson Press). Several "year books" on art in Canada have been issued, the latest and most ambitious of the kind being "Year Book of the Arts in Canada, 1928-'29", edited by Bertram Brooker, (Toronto: The Macmillan Company of Canada).

## CHAPTER XXVI.—PUBLIC HEALTH AND BENEVOLENCE.

Greatly increased attention has been devoted during recent years to public health and its related subjects, the work embracing, in addition to the supervision of the general health of the community, the maintenance of hospitals and institutions for the care of needy and indigent persons. In general, the administration of public health activities and the establishment and maintenance of such institutions is in the hands of the various Provincial Governments, under the powers given them in sec. 92 of the British North America Act, 1867. Under their control municipalities, societies and individuals generally initiate charitable and humane efforts, depending on the Government to some extent for financial aid and for competent uniform inspection of methods and standards. Exercising particular jurisdiction over some phases of the general health of the people of the Dominion is the Department of Health of the Dominion Government, while the Dominion Council of Health acts as a clearing house on many important questions related to the health of the people. This Council consists of the Deputy Minister of the Dominion Department of Pensions and National Health as chairman, the chief executive officer of the provincial Department or Board of Health of each province, together with such other persons, not exceeding 5, as may be appointed by the Governor in Council to hold office for 3 years. Of these 5 appointed members, four have in the past represented agriculture, labour, rural women's work and social service, and child welfare, while the fifth member is a scientific adviser on public health matters. (A fuller description of this Council will be found at pp. 908-9 of the 1926 Year Book.)

During recent years the increase of public interest in social and welfare problems has been very marked, and the Dominion Bureau of Statistics has been repeatedly urged to extend its statistical work in this field. The taking of the decennial census in 1931 offered an opportunity to initiate work along these lines, and a first approach to the problem, by means of a survey of the various types of institutions, after the manner of the United States Census of Institutions, covering hospitals, welfare institutions, etc., was decided upon when the schedules were drawn up.

The purpose behind the work is not merely to ascertain the numbers of men women and children committed to such institutions, but to obtain also pertinent facts and other information that will furnish a basis for the analysis of the social problems involved. In Canada at present, since most of these institutions are under Provincial Government control, comparable data do not exist owing to differences in methods of collection, to the fact that the provincial fiscal years extend over different months, and, in some cases, to the scarcity or absence of published information. The extent of these difficulties will be apparent from a perusal of Tables 1, 2 and 3, following, in which an attempt has been made to combine provincial figures in order to give statistics of institutions for Canada. In taking the 1931 census, arrangements have been made to take: (1) the usual census data for each individual who is resident in an institution; (2) special characteristics of the inmates which constitute them a social problem; and (3) general information as to plant personnel and finances for each institution.

**Public Health.**—Apart, however, from the actual organization of provincial Health Departments and of the administrative bodies charged with the management of hospitals and other such institutions, particular attention is given to the same branches of public health work in all the provinces. Perhaps the most important of all, and reflecting most clearly the benefits accruing from such work, are the provisions for medical inspection of school children. These are carried out in some cases by the district or sub-district medical health officers, and in others by public health nurses whose activities are confined to this work alone. In addition to the continual supervision exercised over the health of the children, expert advice and assistance are supplied freely to children, teachers and parents. In many cases dental inspection is provided for. While this work has been carried on upon a considerable scale for only a few years, great benefits have already been realized from it, notably general improvement in health and sanitary conditions and in the control and prevention of epidemics.

In other directions also, governmental activities through Departments of Health have produced numerous evidences of their value, which may be illustrated by an examination of the death rates from various communicable and other diseases, such as are shown in the Vital Statistics chapter of the present volume. In Ontario, for example, the rate of deaths from tuberculosis decreased from 85.6 to 52.1 per 100,000 between 1913 and 1929, and that from typhoid fever from 19.4 to 3.0 per 100,000. While some other rates have increased, it may be noted that increases are not general in the case of communicable diseases and that, in respect of tuberculosis especially, the cities of the province show the lowest mortality rates. The reason for this is the fact that public health work is more advanced there than in the towns and rural areas.

**Institutions.**—The most familiar of all the public institutions established to administer and foster the general health of the community is the general hospital common to all cities and towns of any considerable population, and found also in the more prosperous rural districts. Such hospitals are generally erected and supported by the municipality, their actual administration being in the hands of a board of trustees; their revenue, in addition to that provided by the municipality, is derived in the main from grants from the Provincial Governments, from donations of individuals and societies, and from patients' fees. Admission and treatment are free to all deserving persons who apply for them and whose resources are so limited as to prevent their otherwise receiving proper medical attention, while it is more or less generally expected of others that payments for services shall be made in proportion to costs and the ability of patients to defray them. Second in importance are the houses of refuge and orphanages, homes where destitute adults and homeless children are taken in, fed and clothed until they can support themselves or until homes for them are found elsewhere. Orphans' homes are found in practically every urban and rural community of any size, while refuges or homes for the aged are supported by the larger centres and by county municipalities. Asylums for the insane, also found in all the provinces, differ from the foregoing types in that they are in general owned, supported and administered entirely by the provinces. In Nova Scotia, however, the insane of each county, together with the inmates of the refuges and orphanages, are in some instances cared for in one institution. Other institutions supported by the public

include isolation hospitals, maternity hospitals, homes for the deaf, dumb and blind, homes for incurables, infirmaries, homes for epileptics and for lepers, and tuberculosis sanatoria.

Throughout the Dominion many other more or less similar institutions exist whose nature is more independent than that of the types mentioned above.<sup>1</sup> Since these institutions do not receive Provincial Government grants and hence are not in all cases subject to inspection, no complete record showing their number, purpose and the number of inmates can be obtained.

But little historical information on the subject is available. No statistics of public benevolence had been presented in the Canada Year Book for some years before their inclusion in the 1922-23 edition. It seems, however, that until comparatively recently the care of needy and destitute persons, as we now recognize it, was largely in the hands of individuals, of whose humane efforts scanty evidence remains for present use. The inability of private effort to cope with the problem has led to the present government control of the majority of benevolent institutions.

In the exercise of the powers granted them at Confederation, the various Provincial Governments have enacted legislation governing the regulation of public charities. In Ontario, for example, the Houses of Refuge Act, the Hospitals for the Insane Act, the Private Sanitarium Act, the Sanatoria for Consumptives Act, the Hospitals and Charitable Institutions Act and the Prisons and Public Charities Inspection Act have been passed, dealing with different phases of the subject. Similar legislation of other Provincial Governments provides for the maintenance of hospitals, the carrying-on of charitable work, the provision of funds, and inspection by competent officials.

#### **Numbers and Types of Hospitals and Charitable Institutions in Canada.**

—An attempt has been made to bring together in tabular form certain statistics of the number of institutions in the Dominion concerned with the health of the community or carried on as the result of benevolent effort. It is, of course, highly desirable that not only the mere data of numbers but also those relating to inmates, staff, finances, etc., should be similarly collated for the country as a whole. This, however, as stated above is for the present impossible, owing to the incomparability of statistics published by the various provinces and in others to the scarcity or absence of published information. The matter made available is given in as complete and concise a form as possible in Tables 1, 2 and 3.

Table 1 is designed to show the numbers of institutions in Canada, by provinces, for the latest provincial fiscal years, according as the statistics for the respective provinces are available.

<sup>1</sup> For information regarding Dominion Government hospitals for returned soldiers, see p. 1043 of this volume, also pp. 20-29 of the 1920 Year Book.

## 1.—Number of Public Hospitals and Benevolent Institutions in Canada.

Note.—The latest available figures are given. The fiscal years of the various provinces are as follows: Prince Edward Island, Jan. 1 to Dec. 31; Nova Scotia, Oct. 1 to Sept. 30; New Brunswick and Ontario, Nov. 1 to Oct. 31; Quebec, July 1 to June 30; Saskatchewan and Manitoba, May 1 to April 30; and British Columbia and Alberta, April 1 to Mar. 31.

<sup>4</sup>Refuges and orphanages are also hospitals for the insane in some cases.

<sup>5</sup>Including 15 Red Cross hospitals. <sup>6</sup>Including 21 Red Cross outposts.

A summary of the various types of hospitals in Canada, with their accommodation for patients, taken from a Directory of Hospitals published by the Department of Pensions and National Health, and recently revised by the Secretary of the Canadian Medical Association, Toronto, is given as Table 2. The same report gives the average cost throughout Canada, per patient per day in general hospitals, by beds, as \$3.45. Contrary to what might be expected, this cost, generally speaking, increases with the size of the hospital, for, while the larger hospitals purchase and operate to better advantage, this economy is more than offset by the more complete diagnostic and therapeutic equipment provided by them. The total numbers of hospitals and beds are not the aggregates of the items shown in Table 2 for the reason that some duplication exists. For instance, pædiatric hospitals are for the most part listed under both "Public General hospitals" and "Pædiatric hospitals" and certain tuberculosis, orthopædic, mental, maternity or private hospitals may appear under more than one classification. As at February, 1931, the Canadian Medical Association estimated the total number of beds throughout Canada at 72,358, divided by provinces as follows: Prince Edward Island, 535; Nova Scotia, 3,191; New Brunswick, 2,554; Quebec, 19,936; Ontario, 27,511; Manitoba, 6,220; Saskatchewan, 5,777; Alberta, 5,798; British Columbia, 7,007. Reverting to the cost of maintenance per patient per day, the figures of the Directory of Hospitals, quoted above, compare reasonably with figures compiled by the Dominion Bureau of Statistics.<sup>1</sup> Returns received by the Bureau indicate average costs of \$3.49 per patient per day in 1928 and \$3.62 in 1929. These figures represent a complete cost estimate, including such items as taxes, depreciation, insurance, interest, etc., and the observation is made that without these special items the average cost remained practically stationary for 1929.

<sup>1</sup>See press letter, issued April 7, 1931, on Rates and Index Numbers of Hospital Charges, by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics, and obtainable from the Dominion Statistician, Ottawa. See also pp. 825-6 for information on hospital charges, 1913-29.

Indigent patients, who, where they pay anything at all, pay only fractional amounts of the actual cost of their treatments, numbered 340,593 in 1929, showing an increase of 10 p.c. compared with the previous year.

The cost of maintenance has risen almost without interruption since 1913, when the average as computed by the Bureau of Statistics was \$1.68.

## 2.—Summary of Canadian Hospitals and Beds, 1930.

Type of Institution.	Number of Hospitals.	Number of Beds.
Public general hospitals (including general pædiatric and Red Cross).....	485	38,018
Tuberculosis institutions.....	31	5,655
Pædiatric accommodation in general hospitals.....	246	3,119 <sup>1</sup>
General Pædiatric hospitals.....	15	1,209
Orthopædic hospitals.....	13	533
Total beds for pædiatric and orthopædic.....	-	4,271
Public maternity hospitals (accepting maternity only).....	9	643
Public maternity hospitals (including those maternity hospitals accepting gynaecology or surgery and the Montreal Maternity Hospital).....	16	1,076
Maternity accommodation in general public hospitals (estimated from returns).....	-	4,636
Maternity beds in private hospitals (as reported).....	-	761
Total maternity accommodation (estimated).....	-	6,000 <sup>1</sup>
Department of Pensions and National Health ("Contract" hospitals not included).....	16	3,614
Mental and Neurological hospitals: Public.....	36	25,978
Private.....	6	884
Totals.....	42	26,862
Red Cross hospitals, outposts and nursing stations.....	47	401
Private hospitals.....	274	2,632 <sup>1</sup>
Government hospitals: Dominion.....	11	3,402
Provincial (including General Hospital, Halifax).....	36	23,464
General hospitals with tuberculosis beds or annexes. Many others accept such patients temporarily. Saskatchewan requires each public hospital to accept tuberculosis patients up to 10 p.c. of its capacity. This accounts for 54 hospitals and 241 beds in this list.....	105	954
Municipal hospitals in Canada (including isolation hospitals).....	89	7,120
Hospitals for the incurables.....	33	2,700 <sup>1</sup>
Convalescent hospitals (including private hospitals).....	9	325
Public hospitals prepared to treat drug addicts. (There are also several private institutions).....	1 <sup>2</sup>	-
Training schools for nurses.....	215 <sup>1</sup>	-
Hospitals requiring internes.....	97	425 appointments
Hospitals maintained by:—

**Section 1.—Public Health Activities of the Dominion Government.**

The Act of Parliament (18-19 Geo. V, c. 39, An Act respecting the Department of Pensions and National Health) creating the Dominion Department of Pensions and National Health, clearly defined the functions of that Department, which is divided into two distinct divisions, those of Pensions and National Health. The chief functions of the National Health Division (which from 1919 to 1929 was the Department of Health) are: to protect the country against the entrance of infectious disease; to exclude immigrants who might become a charge upon the country; to treat sick and injured mariners; to see that men employed

on public construction work are provided with proper medical care; to set the standards and control the quality of food and drugs, except meat and canned goods, which are under the Department of Agriculture; to control proprietary medicines and the importation and exportation of habit-forming drugs such as morphine, cocaine, etc.; to prevent the spread of venereal diseases; to care for lepers and to co-operate with the provinces with a view to preserving and improving the public health. The various divisions of the Department of Health, existing prior to the merger, are still maintained.

One of the subdivisions of the National Health Division is that of maritime quarantine. Its object is the prevention of the importation of major infectious diseases into the country. With this end in view, quarantine stations are in operation at the several maritime ports. Every vessel coming from abroad is inspected and passengers or crews who are found to be suffering from infectious disease, together with contacts, are removed to the quarantine station after the principles laid down in the Convention of Paris, 1926.

Associated with quarantine is the examination and medical care of immigrants. With this purpose in view there has recently been placed in Great Britain, Ireland and on the continent of Europe a staff of Canadian doctors, whose duty it is to examine at their homes and points of origin, or at the seaport of embarkation in Europe, all intending emigrants to Canada. By this arrangement it is hoped to obviate the expense, discomfort, disappointment and hardship which have so often occurred on account of the necessity of deporting to their country, owing to physical or mental disability, immigrants who have come all the way across the ocean and reached Canada.

For many years there have been in operation in Canada two lazarettos for the treatment of leprosy, one at Tracadie in the province of New Brunswick, and the other at William Head in the province of British Columbia. These are under the direction of the Department. Great advances have been made, not only in providing comforts for the lepers, but in the actual treatment of the disease.

Under Part V of the Canada Shipping Act, the Department treats sick and injured mariners entering Canadian ports on the payment of certain dues by ship-owners. Hospitals, hospital facilities and medical care are provided through the Division of Marine Hospitals' Service.

The Department co-operates with the provinces in assisting them in the control of venereal diseases and votes annually a sum of about \$100,000 which is divided *pro rata* among the provinces for this purpose. The provinces, however, must expend at least an equal amount.

In the field of child welfare, the Department co-operates with the provincial Departments and voluntary organizations and acts as a mentor and guide in directing the efforts of various bodies which are concerned with child welfare. A great mass of literature is distributed throughout the country, which reaches the outposts and is of very great value to parents as it helps them to care for their children and homes. Maternal mortality has also seriously occupied the Chief of the Branch of Child Welfare of the Department, and very valuable assistance has been given to the provinces, by statistics and otherwise, in stirring up public opinion to the terrible wastage of mothers' lives occurring on account of improper pre-natal care and careless medical attention, or entire lack of this, at maternal periods and in the early life of the child.

The Public Works Health Act is administered by the Department of Pensions and National Health. Under this Act, the Department is required to see that men working on construction work, canals, railways and other forms of public works, are provided with efficient medical and hospital attention.

The Food and Drugs Branch of the Department has to do with the safeguarding of foods and drugs from adulteration. Inspectors pick up, throughout the country, samples which are subjected to analysis in the various departmental laboratories. This Branch is under the direction of the Chief Dominion Analyst.

The Proprietary or Patent Medicine Branch operates in a somewhat similar manner. No patent medicine may be offered to the public as a "cure" for disease. The word "cure" is taboo. All must be registered, and it is the duty of the Department to see that each is of some value and not dangerous. The presence of all potent drugs, with the dosage, must be stated on the label.

The prevention of the pollution of inland waters is receiving the serious attention of the Department. A special division conducted by a sanitary engineer has been created for the purpose of providing a safe water supply on board vessels and preventing pollution of rivers and streams through discharged sewage. This division co-operates with the International Joint Commission in the enforcement of rules and regulations relating to questions involving public health with regard to boundary waters between the United States of America and Canada, in addition to supervising federal public buildings and offices with a view to conserving and promoting the health of civil servants and other government employees.

The Division of Hospital Advisory Services offers expert advice and assistance with regard to planning, construction, organization and maintenance of hospitals.

Since the introduction of opium smoking in Canada thirty or more years ago the use of habit-forming drugs, such as morphine, heroin and cocaine, has increased. It is estimated that there are about 8,000 drug addicts in Canada. One of the first steps taken by the Department of Health was the creation of a Narcotic Branch. Through this Branch, the importation and sale of such drugs are controlled in accordance with the principles laid down by the Hague Convention and now adopted by the League of Nations. Wholesale agents, physicians and druggists are obliged to keep records of importation or sale, as the case may be, and to forward their records periodically to the Department. The legitimate use of these dangerous habit-forming drugs is thus controlled.

The Laboratory of Hygiene is concerned with the examination of bacteriological and seriological products, such as vaccines and sera, as well as the standardization of the more potent remedies such as digitalis and strophanthus. Research is an important function of the Laboratory.

## Section 2.—Provincial Public Health Activities.

The material appearing under this heading in the 1930 edition of the Year Book has not been brought up-to-date this year, in view of the intended change in the compilation of these statistics referred to on p. 1010. The reader is referred to pp. 948-959 of the 1930 Year Book and to the individual reports published by the Public Health authorities of the Provincial Governments.

**Section 3.—Other Public Health Activities.****Subsection 1.—The Canadian Red Cross Society.**

A brief description of the organization and activities of the Red Cross Society in Canada appeared on p. 923 of the Canada Year Book, 1922-23.

**Subsection 2.—The Victorian Order of Nurses.**

The activities of the Victorian Order of Nurses since its inception in 1897 are summarized in the Canada Year Book, 1922-23, p. 923.

**Subsection 3.—Mothers' Allowances.**

Five of the nine provinces of Canada provide for the payment of allowances to mothers who are widowed or without adequate means of support. The province of Manitoba was the first to take up the work in 1916, and the example has been followed by the other western provinces and by Ontario.

A statement regarding Mothers' Allowances, showing the numbers of beneficiaries and the scales of payments and methods of administration, was published at pp. 935-936 of the 1925 Year Book.

# CHAPTER XXVII.—MISCELLANEOUS ADMINISTRATION.

## Section I—Public Lands.

### Subsection 1.—Dominion Public Lands.<sup>1</sup>

Agreements have recently been reached, and assented to by the Crown, for the transfer of the lands and natural resources of the Prairie Provinces and of the Railway Belt and the Peace River Block in British Columbia from the Dominion to the provinces concerned. The National Parks and Indian reservations are not included in these transfers but remain under the jurisdiction of the Dominion Government as in the older provinces of Canada. These agreements were entered into with the object of placing the western provinces in the same position as the original provinces of Confederation under section 109 of the British North America Act, 1867.

It is accordingly provided that the interest of the Crown in all Crown lands, mines, minerals (precious and base) and royalties derived therefrom within the province, and all sums due or payable for such lands, mines, minerals or royalties shall, from and after the coming into force of the agreement and subject as therein otherwise provided, belong to the province, subject to any trust existing in respect thereof, and to any interest other than that of the Crown in the same. Any remittance received by Canada in respect of any such lands, mines, minerals, or royalties, before the coming into force of the agreement shall continue to belong to Canada whether paid in advance or otherwise. On the other hand, the province is not liable to account to Canada for any such payment made thereafter.

The province is bound in each case to carry out, in accordance with the terms thereof, any contract of purchase or lease of any Crown land, mines or minerals, and every arrangement whereby any person has become entitled to any interest therein as against the Crown. The province is also engaged to perform every obligation of Canada arising by virtue of any statute, Order in Council or regulation in connection with railway subsidies or grants to railway companies of lands for right of way, road-bed, stations, station-grounds, workshops, buildings, yards, ballast pits or other appurtenances.

Canada is under obligation to transfer to the province all School Lands Funds. Such of the school lands specified in the Dominion Lands Act (R.S.C. 1927, c. 113, s. 37) as passed to the administration of the province are to be set aside and to be administered by the province "in accordance, *mutatis mutandis*, with the provisions of sections 37 to 40 of the Dominion Lands Act, for the support of schools organized and carried on therein in accordance with the law of the province".

Province.	Date of Agreement.	Date of Transfer of Resources.
Manitoba.....	Dec. 14, 1929	July 15, 1930
Saskatchewan.....	Mar. 20, 1930	Oct. 1, 1930
Alberta.....	Dec. 14, 1929	Oct. 1, 1930
British Columbia (lands in Railway Belt and Peace River Block).....	Feb. 20, 1930	Aug. 1, 1930

<sup>1</sup> Revised by J. W. Martin, Commissioner of Dominion Lands, Department of the Interior.

**Homestead Entries.**—Table 1 gives the number of homestead entries and cancellations in the fiscal years from 1874 to 1931, providing a record of the growth of settlement in the Prairie Provinces. From 7,426 in 1900 the number of entries rose rapidly to 41,869 in 1906, declined to 21,647 in 1907, and rose again to more than twice that number in 1911. The largest number of "net" entries was made in 1906, when new entries exceeded cancellations by over 30,000. The record number of 44,479 entries in 1911 was offset by 22,122 cancellations, leaving "net" entries of 22,357. It is noteworthy that more homestead entries were made in 1930 than in any other year since 1915.

The number of grants made to soldiers during each of the fiscal years ended Mar. 31, 1919 to 1931, was 1,643, 5,981, 2,892, 1,655, 1,212, 710, 584, 576, 468, 504, 742, 720 and 506 respectively. Entries by soldiers cancelled in the years 1919 to 1931 are included with those given in Table 1. Such cancellations from 1924 to 1931 numbered 630, 615, 510, 574, 819, 624, 746 and 363 respectively.

**1.—Number of Homestead Entries and Number of Homestead Cancellations from 1874 to Mar. 31, 1931.<sup>1</sup>**

NOTE.—From 1874 to 1894 the departmental years ended Oct. 31; from 1895 to 1899, Dec. 31; from 1900 to 1906, June 30; from 1907, Mar. 31.

						1931 <sup>1</sup> .....	10,984	3,827

<sup>1</sup>The fiscal year ended Mar. 31, 1931, includes only the period from Mar. 31, 1930 to Oct. 1, 1930, on which date the control of Crown lands in the western provinces was turned over to the respective Provincial Governments.

Table 2 is a statement of the homestead entries on Dominion lands in the years 1922 to 1931. Statistics of the origin of those making homestead entries in the fiscal years ended 1925 to 1931 are given in Table 3, and financial statistics of receipts from Dominion lands in Table 4.

The privilege of making pre-emptions or purchased homestead entries was withdrawn by Order in Council as from Mar. 20, 1918, confirmed by c. 19 of the Statutes of 1918, assented to May 24, 1918.

<sup>1</sup>See note to Table 1, p. 1020.

Table 3 is a statement of the nationalities of persons making homestead entries in the fiscal years 1925-31. The last item "Second homesteads" relates to second homesteads taken up, under an amendment made to the Dominion Lands Act in 1928, by Canadians who have already secured homestead entries on Dominion lands and are British subjects, either by birth or by naturalization.

**Railway Lands.**<sup>1</sup>—In the early stages of the settlement of the Northwest, large grants of wild lands were made to the railway companies as subsidies (see Table 13 of the chapter on Transportation for details, p. 665 of this volume), while the Hudson's Bay Co., under the contract by which the Northwest Territories passed to the Dominion, retained one-twentieth of the lands of the fertile belt. Statistics have been compiled of the sales of land by these companies and the prices at which lands were sold in the fiscal years since 1893, the figures given in Table 5 throwing considerable light on the ups and downs in the settlement of the West. The maximum acreage was sold in 1903, and the maximum amount was received in 1918. It is noteworthy that the sales reached a low point for recent years in 1923, and in 1929 were almost seven times those for 1923, while in 1930 they dropped off again. Details of sales by the different companies are given for the three latest fiscal years in Table 6. Their total sales since 1893 were 29,062,436 acres and the total amount received \$274,866,069, or an average of \$9.46 per acre.

**Subsection 2.—Provincial Public Lands.<sup>1</sup>**

In the Maritime Provinces, in Quebec, Ontario and British Columbia, (except the Railway Belt and the Peace River Block), the public lands have been administered by the Provincial Governments since Confederation. With the transfer of the natural resources to the Prairie Provinces and British Columbia, as outlined in Subsection 1, public lands in all provinces are now under provincial administration. In Prince Edward Island all the land is settled.

**Nova Scotia.**—All provincial legislation regarding Crown lands and forests is governed by an Act passed in 1926, called the Lands and Forests Act. The total area of the Crown lands in Nova Scotia is approximately 2,319,378 acres.

Crown land can only be granted to applicants of not less than 18 years of age, desiring the land for their own benefit and for the purpose of actual settlement, and for agricultural or grazing purposes, the grant in each case not exceeding 150 acres. The price of such land is \$1 per acre in addition to the expense of surveying. The applicant only obtains a grant of the land if he, two years from the date he has taken possession thereof, has built a house thereon; has resided upon the said land for not less than three successive years; and has cultivated not less than ten acres of land thereof.

Crown land may be leased if the land is of inferior quality, and if the person proposing to lease same undertakes to expend money in draining, dyking or developing such land. Lands may also be leased if the person proposing to lease same undertakes to expend money in the erection of mills and machinery for the manufacture of wood products or pulp. Grants and leases are signed by the Governor in Council.

The Minister of Lands and Forests may grant licences to cut timber on the ungranted land of the Crown, on payment of such dues as may be in his discretion. The cutting licences are subject to regulations and restrictions prescribed by the Governor in Council.

<sup>1</sup> Revised by the officers of the respective Provincial Administrations. For copies of the detailed regulations governing the disposal of provincial Crown lands, application should be made as follows:—Nova Scotia, to the Minister of Lands and Forests, Halifax; New Brunswick, to the Deputy Minister of Lands and Mines, Fredericton; Quebec, to the Deputy Minister of Lands and Forests, Quebec; Ontario, to the Minister of Lands and Forests, Parliament Buildings, Toronto; Manitoba, to the Director of Lands, Department of Mines and Natural Resources, Winnipeg; British Columbia, to the Deputy Minister of Lands, Victoria.

**New Brunswick.**—The area of New Brunswick is about 17,863,000 acres. Of this the Crown holds about 7,500,000 acres, most of which is timber land. The province is essentially a wooded country, and will in all probability always derive a large part of its revenue from forest industries. Practically all the Crown timber lands are held by licence for the cutting of timber, most of these licences expiring in 1933, subject to a renewal for an additional 10 years; or pulp or paper licences may be issued for a term of up to 50 years where the licensees have undertaken to erect or enlarge pulp or paper mills within a specified period. While it may safely be said that the bulk of the Crown lands are better suited to lumbering than agriculture, yet there are still some Crown lands well suited to mixed farming, which may be taken up by prospective settlers. The maximum allowed to any one settler is 100 acres, and he is required to reside on the land three years and cultivate ten acres of the same before obtaining a grant. For some of the best lands there is a charge of \$1 per acre, in addition to the settlement duties already referred to. This may be paid in four annual instalments. The Provincial Government controls hunting throughout the province and angling in non-tidal waters within the province. Fishing in tidal waters is, however, under the control of the Dominion Government.

**Quebec.**—In Quebec the area of public lands subdivided and unsold on June 30, 1929, was 8,327,192 acres. During the year ended June 30, 1930, 179,859 acres were surveyed; 121,461 acres reverted to the Crown; 164,696 acres were granted for agricultural and industrial purposes, etc.; adding to the acreage available at June 30, 1929, the area surveyed and the areas that reverted, and deducting sales and grants, there remained subdivided and unsold on June 30, 1930, 8,463,816 acres. Agricultural lands in 100-acre lots are available for settlement upon prescribed conditions at 60 cents per acre, on application to the Department of Colonization, Game and Fisheries.

**Ontario.**—Public lands in the province of Ontario are administered by the Department of Lands and Forests, Parliament Buildings, Toronto.

In Old Ontario, that is that part of the province below the French river and lake Nipissing, which comprises an area of approximately 77,000 square miles, there are still available for the settler public lands suitable for agriculture, but the bulk of the good agricultural land vested in the Crown is in northern Ontario, which has an area of 330,000 square miles. The suitable lands in southern Ontario are chiefly situated in Muskoka and Parry Sound districts and in the counties of Haliburton, Peterborough, Hastings, Frontenac, Lennox and Addington, and Renfrew. In northern Ontario the suitable lands are in Nipissing, Timiskaming, Cochrane, Sudbury, Algoma, Thunder Bay, Kenora, and Rainy River districts.

The Department maintains Crown Land Agencies at different points throughout the districts in which the Crown lands are available for supervision of the settlement of the lands and for the receiving of applications and other duties in connection therewith. A list of the Agents, giving their respective addresses, is found in a Departmental booklet entitled "Settlers' Lands in Ontario", copies of which may be obtained on request from the Department at Toronto.

In northern Ontario the townships which are open for sale are subdivided into lots of 160 acres each, with the exception of Cochrane and Timiskaming districts, where the area to which an individual is entitled is 80 acres.

Conditions under which sale lands throughout the province may be obtained involve personal residence for at least 6 months in each year; payment of one-quarter of the purchase price, which is 50 cents per acre, with the application, the remainder being spread over three years with interest at 6 p.c.; and the clearing and cultivation of a prescribed acreage in addition to the construction of the necessary habitations. Proxy regulations enable an individual to purchase a lot of 160 acres and place an agent in residence, but the duties in such case to be performed before the issue of patent are double those required in ordinary purchases. When a purchaser has completed his duties, made payment in full, and obtained his patent, he may make application for an additional parcel in some cases, for which a further patent may be obtained, for pasture purposes, and there is no necessity to construct additional buildings on the additional parcel provided the applicant is in residence on and cultivating the parcel already patented.

Free grant land is available in certain sections of the province. These lots consist also of 160 acres for the most part. No purchase money is required, but the following duties must be completed: 15 acres to be cleared and under cultivation; house to be erected with dimensions of at least 16 ft. x 20 ft.; actual and continuous residence on the land from time of location to issue of patent; mines and minerals and timber other than pine go with patent. Returned soldiers, on production of discharge certificates, may make application and sale lands can be allowed to them under free grant conditions.

Public lands may also be leased or the use of the same be obtained under licence of occupation for specific terms at nominal rates for sheep raising, ranching and other purposes.

Many fine sites are available for the erection of summer homes and for the enjoyment of summer pastimes. The Department issues a booklet entitled "Summer Homes in Ontario" dealing with this subject. Copies may be obtained on application to the provincial authorities.

To assist settlers in the northern part of the province, the Department of Northern Development, through the Settlers' Loan Commissioner, makes advances up to \$500 to settlers to enable them to purchase stock and seed and to improve the property. Information with respect to these loans may be obtained direct from the Settlers' Loan Commissioner at Toronto.

The Department of Northern Development, which comes under the Minister of Lands and Forests, administers the roads in northern Ontario, which now total approximately 15,000 miles. Inquiries with respect to these roads should be directed to the Deputy Minister of Northern Development at Toronto. Each year this Department constructs new roads at the average rate of one mile per day, and in the sections served by these roads there are still available, in addition to the free grant lands already mentioned, millions of acres of suitable land which can be purchased by *bona fide* settlers at 50 cents per acre.

**Manitoba.**—The Provincial Government of the province of Manitoba has control of approximately ten million acres of unsold land, of which one million consists of school lands. The greater portion of these lands was recently transferred to the province by the Dominion Government; a considerable part of them is situated in the eastern section, the inter-lake area, and west and north-west of lake Manitoba.

Intending settlers and others are afforded the choice of selecting from this unsold area lands suitable for grain crop, mixed farming or stock raising; and for

the purpose of placing the lands within easy reach of all, the terms of sale have been set at 10 p.c. cash, balance over a period of 10 years, with interest at 6 p.c. Much of this land is situated within reasonable distance from rail facilities and in organized communities, thereby affording splendid opportunities to prospective purchasers.

Large areas of these lands, particularly in the northern section of the province, are ideal for grazing purposes on a large scale. Intending ranchers may lease large tracts up to 10,000 acres, over a period of years, at 4 cents per acre. This industry has been sadly neglected in recent years, and now affords excellent opportunities to prospective ranchers. The Provincial Government also possesses large areas of marsh lands particularly adapted to muskrat farming, an industry which is now becoming firmly established in Manitoba by reason of the very favourable climatic conditions and abundant supply of the various roots and grasses upon which the muskrat thrives. These areas may be leased but not sold. The length of lease may be arranged to suit the lessee. The province also controls a few partly improved properties which may be purchased on very easy terms. These lands are situated in the better farming districts.

The province controls very attractive recreational areas in the eastern and northern sections, within easy reach of motor highways. These summer resort areas may be either purchased or leased on very attractive terms.

For further particulars application should be made to the Director of Lands, Law Courts Building, Winnipeg, Manitoba.

**Saskatchewan.**—The Provincial Government of the province of Saskatchewan has control of approximately seventeen million acres of surveyed lands. Forests and timber berths comprise nearly seven million acres. Grazing lands consist of about three and one-half million acres. There are two million acres of unsold school lands and at least three million acres available for provincial land settlement.

Intending settlers in the province of Saskatchewan must be British subjects by birth or by naturalization or through the naturalization of the father. Residence in the province of Saskatchewan for a term of at least four years is a necessary condition of eligibility for entry. Provincial land settlement entries are disposed of under easy terms of payment. The terms of the sale have been set at 10 p.c. cash and the balance is payable over a period of twelve years with interest at 6 p.c. The minimum price is \$1 per acre. The greater part of the provincial lands are situated in the parts of the province north of Township 36. Residence for a term of four months in each of three years, and at least twenty acres of breaking must be performed for the settlement entry. A habitable dwelling of a value of not less than \$60 must be erected on the land for which entry was made.

Lands which are suitable for grazing purposes only are disposed of under grazing lease, but, if the area is less than one section, such area is disposed of under the regulations as pasture lands and the minimum price is set at \$1 per acre. Pasture lands are only sold to settlers in the immediate vicinity.

Provisions are made for disposal of areas for fur farming purposes and a considerable industry has grown up in this province, particularly in respect of muskrat farming. Water areas with the adjoining land necessary for the purpose

of fur farming, to the extent of not more than six hundred and forty acres, may be leased for this purpose. A fee of \$10 must accompany each application for a fur-farm lease. The annual rental for the first three years is twenty-five cents per acre of the combined land and water area and for the remainder of the term the rental is fifty cents per acre.

The forest and timber berth areas in the northern part of the province are of very considerable extent and there is much merchantable timber available for disposal through the Forestry Branch of the Department of Natural Resources. The water areas in the province consist of more than two million acres. The water powers are located chiefly in the northern part of the province. There is a Fisheries Branch, in charge of a competent supervisor, in the Department of Natural Resources. There are considerable coal areas in the southern part of the province; and there is an abundant supply of all kinds of minerals, solid, liquid, and gaseous, in the northern part of the province. The mining industries are in their infancy in this province but prospectors have definitely established the fact that much petroleum and natural gas is present throughout the provincial area.

Applications for further particulars should be made to the Deputy Minister, Department of Natural Resources, Regina, Saskatchewan.

**Alberta.**—At the time of going to press it has not been possible to secure a statement regarding the regulations under which settlers may obtain lands in the province of Alberta. The reader is referred in this connection to the Deputy Minister, Department of Lands and Mines, Parliament Buildings, Edmonton, Alta.

**British Columbia.**—In British Columbia there are large areas of free grant lands. Any British subject, being the head of a family, a widow, a *femme sole* who is over 18 years of age and self-supporting, a woman deserted by her husband or whose husband has not contributed to her support for 2 years, or a bachelor over 18 years of age, or any alien, on making a declaration of his intention to become a British subject, may pre-empt, free, 160 acres of unoccupied and unreserved surveyed Crown lands, not being an Indian settlement and not carrying more than 8,000 feet per acre of milling timber west of, and 5,000 feet per acre east of the Cascade range. Fees payable include \$2 for recording, \$2 for certificate of improvement and \$10 for Crown grant. Residence and improvement conditions are imposed, and land can only be pre-empted for agricultural purposes. After occupation for 5 years and making improvements to the value of \$10 per acre, including clearing and cultivation of at least 5 acres, the pre-emptor may obtain certificate of improvement and Crown grant. The fact that an applicant has previously homesteaded in another province does not preclude him from pre-empting in British Columbia. Unsurveyed lands cannot be pre-empted.

Homesite leases of an area not exceeding 20 acres, surveyed or unsurveyed, may be obtained for occupation and cultivation—this being a provision to enable fishermen, miners or others to obtain homesites—at a small rental, under improvement conditions, including the building of a dwelling in the first year, title being procurable after 5 years' occupation and completion of survey.

Under the Land Act, vacant and unreserved Crown lands, surveyed or unsurveyed, may be purchased in quantities not exceeding 640 acres for agricultural

purposes on improvement conditions. The Minister may require improvements to the value of \$5 per acre within 4 years of allowance of the sale, and Crown grant may be withheld until it is certified that improvements are made. The minimum price of first class (agricultural) lands is \$5 per acre; second class (grazing) lands \$2.50 per acre. The purchaser of surveyed land is charged an additional 50 cents an acre for the survey; in the case of unsurveyed lands the applicant must have the area he applies for surveyed at his own cost.

Crown lands are leased, subject to covenants and agreements deemed advisable, for agricultural or industrial purposes—for hay-cutting up to 10 years; for other purposes, except timber-cutting, up to 21 years; for any industrial or other special purpose, with approval of the Lieutenant-Governor in Council, for not over 99 years.

The Land Settlement Board has selected a number of land settlement areas contiguous to the Canadian National and Pacific Great Eastern Railways. Lands within these areas are sold on easy terms for farming purposes, conditional upon development, prices being usually from \$3 to \$10 an acre, a small cash payment being required and the balance spread over a term of years to suit the purchaser. British Columbia returned soldiers are entitled to abatement of \$500 on purchase price. The Board has power to order those owning land within an area to improve it, and to levy a penalty tax for failure, also power to procure compulsory sale of undeveloped land.

Timber-cutting rights are acquired by timber sale. The applicant locates the timber, and, application being made, the area is cruised, surveyed if necessary, and advertised for sale by tender. All particulars are obtainable from the Forest Branch, Department of Lands. Information regarding water rights for power, irrigation, etc., may be obtained by addressing the Water Rights Branch, Department of Lands.

The Railway Belt and Peace River Block were transferred to the Provincial Government on Aug. 1, 1930, so that the area of land administered by the province is now 238,469,600 acres,<sup>1</sup> of which about 11,000,000 acres have been alienated; about 11,000,000 acres are under reserve as timber, coal, grazing and other leases and licences; and about 13,000,000 in timber, park, Indian, game and other reserves. The total area surveyed at Dec. 31, 1929, was 33,356,671 acres, including 22,921,487 acres of land surveys, 9,147,176 acres of timber, 686,111 acres of coal lands, 28,548 acres of phosphate licences and 603,375 acres of mineral claims. The area included in cities is 73,950 acres, in district municipalities 906,753 acres, and in village municipalities 5,058 acres.

The area of the province is 238,469,600 acres,<sup>1</sup> of which 92,800,000 acres is above timberline and 91,432,100 acres is forested—39,352,000 acres carrying over 1,000 ft. b.m. per acre and 17,281,600 acres from 5,000 to 30,000 ft. b.m. per acre. The area suitable for agriculture is estimated at 22,618,000 acres. On Vancouver island an area of 2,110,054 acres is included in the Esquimalt and Nanaimo Railway land grant, embracing the southeastern portion of the island, and applications for lands in this area are to be made to the land agent of that railway at Victoria.

<sup>1</sup> As estimated by the provincial authorities. The Dominion estimate of the area of British Columbia is 227,747,200 acres, of which 3,766,400 acres are covered by water.

## Section 2.—National Defence.<sup>1</sup>

Before the outbreak of the war, the Canadian Militia consisted of a Permanent Force, which on Mar. 31, 1914, numbered 3,000 officers, non-commissioned officers and men, and an Active Militia, which at the same date numbered 5,615 officers and 68,991 non-commissioned officers and men. After the outbreak of the war on Aug. 4, 1914, successive contingents of troops of all arms were recruited, equipped, trained and dispatched by the Canadian Government to Great Britain for active service. When hostilities ceased on Nov. 11, 1918, there had been sent overseas, for active service in the Canadian Expeditionary Force, about 418,000 officers, non-commissioned officers and men.<sup>2</sup>

**Organization.**—Prior to 1922, three departments of the Canadian Government were concerned with the defence of Canada, *viz.*:—the Department of Militia and Defence; the Department of Marine and Naval Service; the Air Board.

During the Session of 1922, the National Defence Act was passed, consolidating the Naval Service, the Air Board and the Department of Militia and Defence into the Department of National Defence. This Act became effective by proclamation on Jan. 1, 1923. Under it there is a Minister of National Defence and a Deputy Minister of National Defence. To advise the Minister there has been constituted, by Order in Council, a Defence Council consisting of a President (the Minister), a Vice-President (the Deputy Minister), and the following members:—the Chief of the General Staff, the Chief of the Naval Staff, together with the Adjutant-General, the Quartermaster-General and the Director, Royal Canadian Air Force, as associate members. There is also a Secretary of the Council.

### Subsection 1.—Military Forces.

The Militia of Canada is constituted by the Militia Act. The Active Militia is divided into the Permanent and the Non-Permanent Militia.

**Permanent Militia.**—The Permanent Force consists of the following units:—

- Cavalry.—The Royal Canadian Dragoons; Lord Strathcona's Horse (Royal Canadians).
- Artillery.—The Royal Canadian Horse Artillery Brigade ("A", "B" and "C" Battalions); Royal Canadian Artillery (Nos. 1, 2, 4 and 5 Heavy Batteries and No. 3 Medium Battery).
- Engineers.—Royal Canadian Engineers (13 detachments).
- Signals.—The Royal Canadian Corps of Signals.
- Infantry.—The Royal Canadian Regiment; Princess Patricia's Canadian Light Infantry; The Royal 22<sup>e</sup> Regiment (a French-Canadian regiment).
- Army Service Corps.—The Royal Canadian Army Service Corps (12 detachments).
- Medical Corps.—The Royal Canadian Army Medical Corps (12 detachments).
- Veterinary Corps.—The Royal Canadian Army Veterinary Corps (8 detachments).
- Ordnance Corps.—The Royal Canadian Ordnance Corps (12 detachments).
- Pay Corps.—The Royal Canadian Army Pay Corps (12 detachments).
- Military Clerks.—The Corps of Military Staff Clerks (12 detachments).

The strength of the Permanent Active Militia is limited by the Amending Act of 1919 to 10,000, but at present the limited establishment is less than 3,800.

**Schools of Instruction.**—The Canadian Small Arms School is the only school which is an independent unit of the Permanent Force, but at all stations of the Permanent Force in Canada there are conducted Royal Schools of Instruction.

<sup>1</sup>Revised by H. W. Brown, Asst. Deputy Minister, Department of National Defence.

<sup>2</sup>For the detailed expenditures of the Canadian Government on account of war appropriations in the fiscal years 1915-1921, see the Canada Year Book, 1921, p. 798.

**Non-Permanent Militia.**—The Non-Permanent Militia consists of:—

- 35 Regiments of Cavalry and Mounted Rifles.
- 68 Field Batteries, Canadian Artillery.
- 13 Medium Batteries, Canadian Artillery.
- 11 Heavy Batteries, Canadian Artillery.
- 3 Anti-Aircraft Sections, Canadian Artillery.
- 15 Field Companies of Engineers.
- 2 Fortress Companies of Engineers.
- 7 Field Troops of Engineers.
- 10 Divisional Signals.
- 2 Fortress Signal Companies.
- 7 Signal Troops.
- 21 Contingents, Canadian Officers Training Corps.
- 15 Machine Gun Units.
- 13 Battalions of Infantry.
- 13 Divisional Trains, Canadian Army Service Corps.
- 51 Units of the Canadian Army Medical Corps.
- 11 Detachments of Canadian Army Veterinary Corps.
- 11 Detachments of the Canadian Dental Corps.
- 11 Detachments of the Canadian Ordnance Corps.
- 12 Detachments and 1 Base Post Office of the Canadian Postal Corps.

The total establishment of the Non-Permanent Militia is 9,050 officers and 116,545 other ranks, as shown in the following table.

**7.—Permanent and Non-Permanent Active Militia in Canada, 1939.**

Arm of Service.	Permanent Active Militia.		Non-Permanent Active Militia.

<b>Totals.....</b>	<b>3,766</b>	<b>530</b>	<b>125,595</b>	<b>18,111</b>

**Reserve Militia.**—In addition to the Active Militia, there is also the Reserve Militia, a framework designed to serve as a basis for contingent military organization. Drill and training are voluntary and entail no expense to the public.

The reserve formations of the Active Militia, as distinguished from the Reserve Militia mentioned above, comprise:—

- The Reserve of Officers (general list).
- Reserve unit for each active unit.
- Reserve Regimental Depots (Cavalry and Infantry).

The reserve units of the Active Militia are intended for the purpose of providing for the organization of the officers and men who have completed their service in the Active Militia or who have otherwise received a military training.

On completion of service in the Active Militia men are not posted automatically to reserve units. These units are recruited by specific enlistment.

**Military Districts.**—For the command, training and administration of the Canadian Militia, Canada is divided into 11 military districts, each under a commander assisted by a district staff.

**Militia Appropriations.**—The Militia appropriations for the six fiscal years ended Mar. 31, 1926-1931, are shown in Table 8.

**8.—Money Voted by Parliament for the Militia, fiscal years ended Mar. 31, 1926-31.**

<sup>1</sup>Department of National Defence.

**Subsection 2.—The Naval Service.**

The Naval Service of Canada was established by the Naval Service Act, 1910 (9-10 Edw. VII, c. 43), the main provisions of which were described in the Year Book of 1910, pp. xxvi-xxix.

The Department of Naval Service was amalgamated with the Department of Militia and Defence and the Canadian Air Board, to form the Department of National Defence, in 1922.

The Royal Canadian Navy and its Reserve Forces are under the direction of the Chief of the Naval Staff, who is a member of the Defence Council. The Service consists of:—

1. Headquarters at Ottawa (permanent).
2. Royal Canadian Navy (permanent).
3. Royal Canadian Naval Reserve (non-permanent).
4. Royal Canadian Naval Volunteer Reserve (non-permanent).

**Royal Canadian Navy.**—The Royal Canadian Navy has an authorized complement of 104 officers and 792 ratings. A large majority of the men of the R.C.N. are serving under 7-years' engagements. A small proportion consists of specialist gunnery, torpedo, and engine room ratings, lent from the Royal Navy, and a small proportion are ex-petty officers of the Royal Navy and men serving under special service engagements of from one to five years.

A proportion of the officers of the Royal Canadian Navy serves periodically in ships of the Royal Navy, to acquire experience in capital ships, light cruisers, etc., and training courses are arranged for selected officers at the instructional schools of the Royal Navy to qualify in war staff, gunnery, torpedo, wireless, and other duties. Courses for selected men in the gunnery, torpedo, wireless telegraphy, and mechanical training schools of the Royal Navy are similarly arranged.

The ships of the Royal Canadian Navy are:—

H.M.C.S. *Champlain* (destroyer—in commission);  
 H.M.C.S. *Vancouver* (destroyer—in commission);  
 H.M.C.S. *Armentières* (minesweeper—in commission);  
 H.M.C.S. *Festubi* (minesweeper—in commission);  
 H.M.C.S. *Ypres* (minesweeper—in commission).

Two new destroyers, H.M.C.S. *Saguenay* and H.M.C.S. *Sheena*, have been constructed for the R.C.N., and are expected to arrive in Canadian waters in July, 1931.

Naval training establishments, comprising: naval barracks; gunnery drill sheds, with all modern appliances for teaching gun-laying, sight-setting, etc.; parade grounds; and other equipment, are maintained at Halifax and Esquimalt. Naval dockyards, with work shops, etc., for refitting and supplying necessary stores to H.M.C. ships, are also maintained at Halifax and Esquimalt.

**Royal Canadian Naval Reserve.**—The establishment of the Royal Canadian Naval Reserve is 70 officers and 430 men recruited from amongst sea-faring personnel. Officers have been appointed to act as registrars at Halifax, Charlottetown, Quebec, Montreal, Vancouver.

Officers and men of the Royal Canadian Naval Reserve attend naval training at Halifax and Esquimalt for 42 days for the first year of enrolment and for 14 days annually or biennially thereafter. They are permitted to volunteer for service afloat up to a maximum of six months during each period of enrolment. The period of enrolment in the Royal Canadian Naval Reserve is five years.

**Royal Canadian Naval Volunteer Reserve.**—The establishment of the Royal Canadian Naval Volunteer Reserve is 70 officers and 930 men, distributed as follows:—Halifax (half company); Saint John (half company); Charlottetown (half company); Quebec (half company); Montreal (company); Ottawa (half company); Toronto (company); Hamilton (half company); Winnipeg (company); Saskatoon (half company); Regina (half company); Edmonton (half company); Calgary (half company); Vancouver (half company); Prince Rupert (half company).

Each company or half company is under the immediate command of an officer of the R.C.N.V.R., appointed as company commanding officer. The company commanding officer is assisted by other commissioned officers of the force.

A petty officer instructor (a highly qualified ex-petty officer of the Royal Navy or of the Royal Canadian Navy) is employed at each company headquarters to give instruction to men of the company in gunnery, seamanship and other naval subjects.

Each officer and man of the R.C.N.V.R., performs annually a minimum of 30 drills of not less than one hour's duration at company headquarters. In actual practice 40 to 50 drills have been performed annually by each member of the company. Officers and men also attend from two to three weeks' naval training annually at the naval bases at Halifax or Esquimalt.

Officers and men who can obtain the necessary leave of absence are permitted to perform a maximum of four months' voluntary service during each period of enrolment, and a large number have availed themselves of this opportunity of gaining extended naval experience under sea-going conditions. The period of enrolment in the R.C.N.V.R. is three years.

**Subsection 3.—Air Services.**

Under the Act creating the Department of National Defence, the powers, duties and functions vested in the Air Board by the Air Board Act of 1919 are now administered under the direction of the Minister of National Defence.

The Air Services have three functions:—

- (1) The air defence of the country.
- (2) The conduct of flying operations for the civil departments of the Government.
- (3) The control of civil aviation.

On July 1, 1927, the Air Services, which up to that date had been administered by the Director, Royal Canadian Air Force, under the Chief of Staff, were reorganized and divided into two divisions, as follows:—

**(a) Military.**

**Royal Canadian Air Force.**—The Royal Canadian Air Force, under the Chief of the General Staff, administers and controls all military air operations. The functions of the Royal Canadian Air Force are as follows:—

- (a) To provide adequate training facilities for all Government Air Services.
- (b) To provide a nucleus air force around which service units can be formed in the event of war.
- (c) To build up a reserve of pilots and mechanics.

The principal station of the Royal Canadian Air Force is at Camp Borden, Ontario, with other units at Vancouver and Ottawa.

The R.C.A.F. Station, Camp Borden, provides training for officers and airmen of the permanent and non-permanent personnels of the R.C.A.F., and also summer training for provisional pilot officers. Training is also provided, and trained personnel supplied, to the Civil Division of the Air Services. The training covers flying and ground subjects, co-operation with military services, and such other courses of instruction as may be necessary.

The R.C.A.F. Station, Vancouver, provides a seaplane training base for the Royal Canadian Air Force, as the R.C.A.F. Station, Camp Borden, provides training on land machines only.

The strength of the Royal Canadian Air Force, as at Dec. 31, 1930, was 177 officers and 734 other ranks.

**(b) Civil.**

To meet the growing needs of civil aviation, the following three branches were organized, under the Deputy Minister:—

**Civil Government Air Operations.**—This Branch is charged with the carrying out of all air operations required by any Dominion Government service, including the forest protection, survey and other miscellaneous work now carried out for the Departments of the Interior, Mines, Agriculture, Indian Affairs, National Revenue, Public Works, Railways and Canals, Marine, Fisheries, etc. The headquarters of the Branch is at Ottawa, and its operating bases are as follows:—*main bases:* High River, Alta.; Winnipeg, Man.; Ottawa, Ont.; Dartmouth, N.S.; *sub-bases:* Lac-du-Bonnet, Cormorant Lake, Ladder Lake, Norway

House, Man.; Fitzgerald, Alta.; detachments: Grande Prairie, Alta.; Winnipegosis, Beren's River and Thicket Portage, Man.; Lac-la-Ronge, Sask. Eleven mobile photographic detachments undertake air photography in all provinces.

The central stores and workshops for the Civil Division are administered as a part of this Branch. These are located at Victoria island, Ottawa.

**Control of Civil Aviation.**—The duties of this Branch include the inspection, licensing and registration of aircraft, airharbours, commercial and private air pilots, air engineers and air navigators. In addition to these duties, the location and construction of air routes and matters connected with airship services are administered in this Branch.

Civil aviation in the Dominion has had its chief development in connection with the exploration and conservation of the natural resources of the various provinces, including forest protection, aerial photography and the transport of men and supplies to remote points and mining districts. Nineteen regular air mail routes are now in operation.

On Dec. 31, 1930, there were in force certificates and licences as follows:—private air pilots, 309; commercial air pilots, 402; air engineers, 370; registration of aircraft, 495; airharbour licences, 69. (See also "Air Navigation", pp. 696-698, in the chapter on Transportation and Communications.)

**Aeronautical Engineering.**—The Branch undertakes the technical duties for both Military and Civil Divisions. The Chief Aeronautical Engineer acts as Consulting Engineer to the Department of National Defence, and is responsible for all questions of design, airworthiness of aircraft, equipment, works and buildings, and other similar technical duties.

#### **Subsection 4.—The Royal Military College.**

The Royal Military College of Canada was founded in 1876 by the Honourable Alexander Mackenzie, Prime Minister of Canada. Since its foundation 2,203 gentlemen cadets have been enrolled, and of this number 199 are now in attendance.

The Royal Military College has a very distinguished record in connection with the war. Of the 914 graduates and ex-cadets who served, 353 were granted commissions direct from the College, and 43 enlisted with a view to obtaining commissions; 156 ex-cadets were reported as killed in action, died of wounds, or missing. Ex-cadets of the College won the following honours and decorations:—1 Victoria Cross and 3 recommendations for the Victoria Cross, 106 Distinguished Service Orders, 109 Military Crosses, 2 Distinguished Flying Crosses, 62 other British decorations, 42 foreign decorations. Three Canadian and one Australian divisions were commanded by graduates of the College.

Ex-cadets who have served in the Army, either in the regular forces or during the Great War, include 1 general, 5 lieutenant-generals, 17 major-generals, and 29 brigadier-generals or brigadiers. Eleven knighthoods have been conferred on ex-cadets for distinguished service.

The establishment of the College, as stated in the Act of 1874 (37 Vict., c. 36), was "for the purpose of imparting a complete education in all branches of military tactics, fortifications, engineering and general scientific knowledge in the

subjects connected with and necessary to a thorough knowledge of the military profession, and for qualifying officers for command and staff appointments". In addition to the foregoing, the course of instruction is such as to afford a thorough practical and scientific training in civil engineering, surveying, physics and chemistry, English and French. Strict discipline, combined with physical training, riding, drill and outdoor games, forms part of the curriculum.

The College is situated on a beautiful peninsula, one mile from Kingston, with the Cataraqui river emptying into the St. Lawrence river at its junction with lake Ontario on the one side, and Navy bay on the other. The grounds include about 500 acres. The buildings of the College proper are situated on the above-mentioned peninsula, comprising 60 acres. The remainder of the grounds, on which stands the historic Fort Henry, is at the disposal of the College for use as a training area. On the point of the College peninsula is situated Fort Frederick, built in 1837 when Kingston became the capital of Canada, the fort comprising a portion of the defences of Kingston. The College is under the supervision of the Department of National Defence, and is inspected annually by an advisory board composed of leading Canadian citizens, both civil and military, which makes its reports and recommendations to the Minister of National Defence. The staff is composed of a commandant and a staff-adjutant, assisted by a competent staff of civil and military professors and instructors.

A four years' course leads to a "diploma with honours" or "diploma" or a "certificate of military qualification". A number of commissions in the Canadian Permanent Force and the Royal Canadian Air Force, as well as commissions in the British Regular Forces, the Indian Army, and the Royal Air Force, are offered annually to graduates; and for cadets who desire to obtain commissions in the Royal Canadian Navy a limited number of naval cadetships are available each year to cadets who successfully complete the first two years' studies and who were under 18 years of age at the time of entry into the College. In addition, one inspector's commission in the Royal Canadian Mounted Police is open each year to a graduate. To those graduates joining the British Army, the privilege of one year's seniority is granted in the British or Indian Armies. This has been arranged in order to equalize the seniority of graduates of the Royal Military College of Canada with those of the Royal Military Academy, Woolwich or the Royal Military College, Sandhurst, since the courses at the latter institutions are shorter than the Canadian.

The principal Canadian universities admit recommended graduates to the fourth year of their civil engineering courses and to the third year of other engineering courses; and some of the universities admit graduates to the third years of arts and science courses.

The R.M.C. diploma is accepted by the Law Societies and Bar Associations of Ontario, Nova Scotia, Quebec, Manitoba, Saskatchewan, British Columbia and Alberta, as the equivalent of a B.A. degree for admission to the study of law. The Dominion Association of Chartered Accountants likewise accepts R.M.C. graduates as registered students under the same conditions as university graduates.

Entrance to the College is on a competitive basis. Candidates are required to pass a rigid medical examination, and to have obtained junior matriculation or an acceptable equivalent.

Applications for admission to the College should reach The Secretary, Department of National Defence, Ottawa, before May 31 of each year.

### Section 3.—Public Works.<sup>1</sup>

Since Confederation and before, the constructing department has been known as the Department of Public Works. In 1879 the railways and canals were placed under control of a new department, the building and maintenance of penitentiaries were transferred to the Department of Justice, the maintenance and construction of lighthouses to the Marine and Fisheries Department, and the small drill halls and armouries to the Department of Militia and Defence. The work of the Department of Public Works is now divided into three principal branches, *viz.*, the Engineering Branch, the Architect's Branch and the Telegraph Branch.

**Engineering.**—The Engineering Branch conducts the construction and repair of wharves, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, maintenance and operation of Government dredging plant; the construction and maintenance of graving docks; the construction and maintenance of interprovincial bridges and approaches thereto, also of bridges on highways of national importance in the Northwest Territories; the maintenance of military roads, also hydrographic and ordinary surveys and examinations, inclusive of some precise levelling and geodetic measurements which are required for the preparation of plans, reports, and estimates; river gaugings and metering; the testing of cements and materials of construction; the licensing of international and interprovincial ferries; and the control of works constructed in or over navigable waters by authority of the Navigable Waters Protection Act.

**Architecture.**—The Architect's Branch constructs and maintains Government buildings, post offices, customs houses, examining warehouses, and constructs quarantine, immigration and experimental farm buildings, armouries, military hospitals and drill halls, and telegraph offices.

**Telegraphs.**—The Telegraph Branch has control over the construction, repairs and maintenance of all Government-owned telegraph lines and cables. These lines are located in the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia and the Yukon. (See also pp. 725-728.)

**Graving Docks.**—There are 5 graving or dry docks built and owned by the Canadian Government. The dimensions of these docks are shown in Table 9. The dock at Kingston, Ontario, is under lease to the Kingston Shipbuilding Company. The dock at Lauzon, Quebec, east of the old dock, is 1,150 feet long, divided into two parts (650 and 500 feet respectively) and 120 feet wide with depth of 40 feet at high water. It cost about \$3,850,000. Under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17), several docks have been subsidized by payments of 3 or 3½ p.c. per annum on the original cost for a given number of years, as shown in Table 10.

<sup>1</sup> Revised by J. M. Somerville, Asst. Secretary, Department of Public Works.

**Expenditure and Revenue.**—Table 11 shows the expenditure and revenue of the Public Works Department of the Dominion Government, for the fiscal years 1925-30. For the fiscal year 1930 the expenditure was \$25,607,523, as compared with \$19,948,576 in 1929—an increase of \$5,658,947, largely accounted for by expenditures for harbours and rivers, dredging and public buildings.

### Section 4.—The Indians and Eskimos of Canada.<sup>1</sup>

The Indians of Canada who are wards of the Department of Indian Affairs number about 108,012, their numbers varying slightly from year to year. A small yearly increase is evident, however, and the popular notion that the race is disappearing is not in accordance with facts. Before they were subjected to the degenerating effects of European civilization and the devastating results of the many colonial wars, the numbers of the Indians were undoubtedly larger, but any reliable information as to the aboriginal population during either the French or the early British régime is non-existent, and there is no adequate basis for a comparison between the past and present aboriginal populations. An interesting sketch of the progress of the Indians of Canada since Confederation will be found in the Report of the Department of Indian Affairs, 1927.

**Administration.**—Indians are minors under the law, and their affairs are administered by the Department of Indian Affairs under the authority of the Indian Act. This Department is the oldest governmental organization in the Dominion, dating back to the time of the conquest. It was originally under the military authorities, and did not become a part of the civil administrative machinery until 1845. By section 5 of the British North America Act, 1867, the Indians of Canada and the lands reserved for them came under the control of the Dominion Government, and in 1873 an Act of the Canadian Parliament (R.S.C., c. 81) provided that the Minister of the Interior should be Superintendent-General of Indian Affairs and as such have the control and management of the lands and property of the Indians in Canada. The aim of the Department of Indian Affairs is the advancement of the Indians in the arts of civilization, and agents have been appointed to encourage the Indians under their charge to settle on the reserves and to engage in industrial pursuits.

The system of reserves, whereby particular areas of land have been set apart solely for the use of Indians, has been established in Canada from the earliest times. It was designed in order to protect the Indians from encroachment, and to provide a sort of sanctuary where they could develop unmolested until advancing civilization had made possible their absorption into the general body of the citizens.

<sup>1</sup> The letterpress under this heading is taken in the main from the article contributed by the Department of Indian Affairs to the 1921 edition. Paragraphs on the linguistic stock and tribal origin of the Indian population, their industries and occupations, their health, sanitation and dwellings, appearing on pp. 786-789 of the 1921 edition, are not reprinted. The statistics in this section of the Year Book have been revised by A. F. MacKenzie, Secretary of the Department of Indian Affairs.

Reserves have been set aside for the various bands of Indians throughout the Dominion, and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department, as guardian of the Indians, include the control of Indian education, health, etc., the development of agriculture and other pursuits among them, the administration of their funds and legal transactions and the general supervision of their welfare.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are in all 116. The number of bands included in an agency varies from one to more than 30. The staff of an agency usually includes various officers in addition to the agent, such as medical officer, clerk, farm instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised by the Department's inspectors, each inspector having charge of a certain number of agencies. Expenditures upon destitute Indians are made by the Dominion Government, either from public funds or from the tribal funds of the Indians themselves.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection attached to their wardship, so that it is necessary to guard against premature enfranchisement.

**Treaties.**—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario and the Prairie Provinces the situation has been different. There the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians, whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to set aside adequate reserves, make cash grants, provide per capita annuities, give assistance in agriculture, stock raising, hunting, trapping, etc. as particular circumstances might require, provide education for the Indian children, and otherwise safeguard the Indians' interests. These treaties have been made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, but their welfare has received no less attention from the Government on that account.

**Government Expenditure.**—On Mar. 31, 1930, the capital of the Indian Trust Fund, which a year earlier had amounted to \$13,629,404, had increased to \$13,856,521. The amounts expended from the Consolidated Revenue Fund were as follows:—voted by Parliament for the purposes of the Department, \$5,112,338, annuities by statute, \$219,416.

**Statistics.**—Statistical tables of population, school attendance, income and agricultural activities of the Indians in Canada follow. The figures in Table 12 are compiled from reports of the various censuses since Confederation, while the remaining tables contain data from the latest Annual Report of the Department of Indian Affairs. The 1930 figures include only those Indians who are wards of the Department of Indian Affairs, which takes a quinquennial census

of the Indians under its control. Such Indians increased in number from 104,894 in 1924 to 108,012, or an increase of nearly 3 p.c. in the quinquennium. The figures of the decennial census include some thousands of persons of Indian race who are living off the reserves as ordinary citizens of Canada.

<b>Totals.....</b>	<b>102,358</b>	<b>108,547</b>	<b>123,633</b>	<b>127,941<sup>3</sup></b>	<b>105,492</b>	<b>110,596</b>	<b>103,012<sup>5</sup></b>

<sup>1</sup>Census figures in the organized provinces and estimates for the rest of Canada.

<sup>2</sup>Racial origin not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs of that year.

<sup>3</sup>Includes 34,481 "half breeds".

<sup>4</sup>The smaller Indian population of the Northwest Territories in 1921 is to be ascribed to the extension of the boundaries of Quebec, Ontario and Manitoba in 1912. This also accounts for the increase in the 1921 Indian populations of these provinces.

<sup>5</sup>Includes only those Indians who are under the administration of the Department of Indian Affairs, while census figures are for all persons of Indian racial origin.

**Indian Education.**—The educational work of the Department is now very extensive. In the fiscal year ended Mar. 31, 1930, a total of 350 Indian schools were in operation, including 78 residential schools for Indians with an enrolment of 7,302, and 264 day schools for Indians with an enrolment of 8,299 Indian pupils, also 8 combined public and Indian schools, with 142 Indian pupils enrolled. The total enrolment in the Indian schools has increased from 12,799 in 1915-16 to 15,743 in 1929-30 and the average attendance from 8,080 to 11,579, or from 63.1 p.c. to 73.6 p.c. of the enrolment. Continuation and high school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the fiscal year ended Mar. 31, 1930, was \$2,330,438.

### 13.—Enrolment and Average Attendance of Pupils at Indian Schools, fiscal years ended Mar. 31, 1916-30.

**Economic Advancement of the Indians in the Past Decade.**—The Indians of Canada have made remarkable progress in economic status during the past decade. When the fact is kept in mind that the Indians, unlike the whites, are not increasing rapidly in numbers, the significance of the figures which follow will be better appreciated. The area of the land under cultivation by Indians was 236,028 acres in 1930, as compared with 173,198 acres in 1916. Their live stock in 1929 included 42,266 horses and 52,393 cattle, as compared with 35,315 horses and 37,188 cattle in 1916. The total income of the Indians was \$9,392,642 in 1929, as compared with \$6,241,497 in 1916. If the Department's annual estimate of the number of Indians is used, the per capita figure of income is \$37 in 1929 as compared with \$59 in 1916. Information showing the acreage and value of Indian lands in 1930, the crops raised in 1929, the live stock owned by Indians in 1929, the sources and values of the income of Indians in 1929, is given by provinces in Tables 14 to 17.

<sup>1</sup>Includes income received from timber, and annuities earned as interest on Indian trust funds.

**Eskimos.**—Unlike the Indian tribes, which are scattered throughout Canada, the Eskimos are limited to the Northwest Territories, chiefly the northern fringe of the mainland and the Arctic Archipelago. The Eskimo is a nomad but lives for the most part along the Arctic littoral, not wandering far inland, since he depends for his subsistence largely on marine mammals and fish. The administration of this race was carried on along with that of the Indians prior to 1927, but on Aug. 31 of that year the Government transferred the care of the Eskimos to the North West Territories and Yukon Branch of the Department of the Interior. This transfer was largely influenced by the fact that the administration of the Territories and natural resources (which had long been under the Department of the Interior) and of the Eskimo inhabitants were closely allied and could be more efficiently carried on together.

Officers of the North West Territories and Yukon Branch and the Royal Canadian Mounted Police made a careful estimate in 1927 of the numbers and locations of all Eskimos in Canada. The result placed the total at 7,103, located as follows:—Baffin island, 1,513; vicinity of Hudson bay and strait, 3,202; Central Arctic, 438; Western Arctic, 1,650; Yukon Territory, 300.

The Department of the Interior has accomplished much in the way of providing medical care and regular inspection of the Eskimos, the setting aside of

wild-life preserves for native use, and the establishment of permanent stations in the Arctic Archipelago from which regular patrols are made by the Royal Canadian Mounted Police.

It is generally realized that the help of the Eskimos will be invaluable to the development of whatever resources the far north holds.

### Section 5.—Pensions and other Provisions for the Welfare of War Veterans.<sup>1</sup>

**Pensions Division.**—In previous issues of the Year Book, a full description has been given of the work of the Pensions Division of the Department of Pensions and National Health.

The Annual Report for the fiscal year ended Mar. 31, 1930, shows an increase in the number of ex-members of the forces admitted for inpatient hospital treatment, the number being 12,828 as against 12,147 in 1929 and 11,040 in 1928. The Department maintains eight hospitals which are situated in the following centres: Halifax, Saint John, Ste. Anne de Bellevue, Toronto, London, Winnipeg, Calgary and Vancouver. The sheltered employment workshops are still operated at Hamilton, Montreal, Halifax and Vancouver and one shop by the Red Cross Society at Victoria.

The following is an epitomized statement of the manner in which the funds appropriated by Parliament have been dealt with, and also sets forth the costs of administration and the adjudication of pensions in amount and percentage.

**The Board of Pension Commissioners for Canada.**—The Board of Pension Commissioners is responsible for the adjudication and award of pensions in

<sup>1</sup> Revised by E. H. Scammell, Secretary, Pensions Division, Department of Pensions and National Health.

respect of disabilities connected with military service and the award of pensions to the dependants of those who have died. It consists of three members and operates under the authority of the Pension Act.

The following statistics illustrate the growth of the activities of the Board of Pension Commissioners:—

**18.—Pensions in Force as at Mar. 31, 1918–1930.**

Fiscal Year.	Dependants.		Disabilities.		Total.	
	No. of Pensions.	Liability.	No. of Pensions.	Liability.	No. of Pensions.	Liability.

Total	112
Grand Total	202,842

Rates of pensions for all ranks were published in tables on pp. 960-962 of the 1925 Year Book, to which the reader is referred.

**Federal Appeal Board.**—The members of the Board were appointed by Order in Council dated Aug. 17, 1923, and its work continued from that time without a break until its dissolution on Sept. 30, 1930.

The total additional annual liability in respect of pensions awarded under decisions of the Federal Appeal Board on account of adjustments made up to Aug. 31, 1930, was \$823,168. In addition the sum of \$2,280,418 was paid to ex-members of the forces and their dependants on account of retro-active adjustments of pension and treatment allowances under decisions of the Board.

In the entire seven years of the Board's existence 22,237 appeals were placed before it. Of this number 10,602 were heard; judgments were rendered on all but 81 of the cases heard. The greater number of the 81 cases on which judgment was not issued were claims where the hearings had been adjourned in order that the appellant might endeavour to obtain additional evidence in connection with his claim.

Of the balance of 11,635 cases registered with the Board, 4,167 were disposed of as being outside the Board's jurisdiction, 1,299 appeals were re-opened and settled by the Board of Pension Commissioners without the necessity of coming to appeal hearing, 754 was the total of cases where further information was required before an exact classification could be made, this including 251 appeals received in the last few days of the Board's existence; 5,415 cases normally would have come before the Board for hearing later, although in 1,749 of these Official Soldiers' Advisers had stated that they were not ready to proceed.

**Pension Tribunal and Pension Appeal Court.**—Since the end of the fiscal year as a result of legislation passed by Parliament in May, 1930, a number of changes have been made in the work of the department and in the provisions of the Pension Act. After a general discussion in Parliament, all matters concerning the welfare of veterans were referred to a special committee of the House of Commons. The desire to enlarge the scope of the legislation in order specially to benefit those who were in need was evident throughout the entire procedure and the report submitted by the committee was unanimous.

The major amendments to the Pension Act deal with the re-hearing of pension applications, the lodging of appeals, the removal of time limits, the broadening of the meritorious section, the stoppage of final payments, the reinstatement to pension of pensioners who accepted a final payment, the provision that marriage after the appearance of the disability before Jan. 1, 1930, is not a bar to the granting of a widow's pension, and a section dealing with the "benefit of doubt".

Under the amendments, the Federal Appeal Board ceased to function on Sept. 30, 1930. Provision was made for the appointment of a Pension Tribunal consisting of nine persons and a Pension Appeal Court consisting of three persons. The new procedure provided that applications be made in the first instance to the Board of Pension Commissioners for Canada, but that if a pension is not awarded the case be referred, through the channels provided for in the Act, to the Pension Tribunal to be dealt with by a quorum of that body at an open hearing. An appeal lies from any decision of the Pension Tribunal to the Pension Appeal Court on account of attributability, or whether any pre-enlistment disability was wilfully concealed, was obvious, was of a nature to cause

rejection from service, or was congenital; or in respect of the degree of any pre-enlistment disability; or the right to receive pension in respect of any period prior to the date of application therefor; or the jurisdiction of the Board of Pension Commissioners or the Pension Tribunal to deal with an application; or the interpretation of any provision of the Pension Act. There is no appeal in respect of assessment. All applications previously disposed of by the Federal Appeal Board or the Board of Pension Commissioners may be renewed under the amendment.

By the removal of the time limit, applications for pension or for reconsideration of any decision or award can be made at any time.

The Board of Pension Commissioners, acting alone, is authorized to award a compassionate pension or allowance under the meritorious section. Applications under this section may be renewed before the Pension Appeal Court by its order.

Notwithstanding that the granting of final payments to those with a pensionable disability of under 15 p.c. has been of material benefit to a number of pensioners, in many cases it has created a hardship in that the money paid has been expended and no further pension has been payable unless the disability has increased. Under an amendment to this effect, no further final payments can be made, and those who have already received such payments are being restored to pension as from the time at which the amount of the final payment received was equal to the sum of the instalments of pension which would have been paid if pension had been continued in the same monthly amount. The restoration to pension and the continuation thereof is subject to the condition that the disability has persisted.

The provision that the widow of a member of the forces whose death results from a war disability shall be entitled to a pension, if she was married to such a member of the forces either before he was granted a pension or before Jan. 1, 1930, has benefited between 800 and 900 widows, and it will benefit a great many in the years to come.

From the commencement of the Pension Act there has been a provision that the widow of a man who was in receipt of a pension of 80 p.c. or upwards, would be granted a pension on the death of her husband, whether his death was attributable to his service or not. At first the time limit during which death from a non-service disability must occur was set at 5 years from date of discharge or date of commencement of pension, meaning any degree of pension. This was subsequently enlarged to 10 years. Reference to the date of discharge has now been struck out and the ten-year period made to run from the time the pensioner is or was placed on a pension of 80 p.c. or upwards.

With regard to the "benefit of doubt", it may be well to quote the phraseology of the Act which reads as follows:—

"Notwithstanding anything in this Act, on any application for pension the applicant shall be entitled to the benefit of the doubt, which shall mean that it shall not be necessary for him to adduce conclusive proof of his right to pension applied for, but the body adjudicating on the claim shall be entitled to draw, and shall draw from all the circumstances of the case, the evidence adduced and medical opinions, all reasonable inferences in favour of the applicant".

**Veterans' Bureau.**—Provision was made for the establishment of a branch of the department to be known as the "Veterans' Bureau". This has taken the

place of the previous organization of Soldiers' Advisers. The head of the Bureau is known as the Chief Pensions Advocate and cases are presented to the Tribunal and the Court by him and by Pensions Advocates located in various parts of Canada. In addition Commission Counsel have been appointed to appear on the hearing of any application and to assist the Pension Tribunal and the Pension Appeal Court in disposing of claims.

**War Veterans' Allowances.**—An Act was passed by Parliament in May, 1930, providing for the issue of allowances to veterans in Canada, both pensioners and non-pensioners, who are unemployable by reason of intangible results of their war service apart from any consideration of their pensionable disability. The Act follows the lines laid down in the Old Age Pension Act, but sets an age limit of sixty instead of seventy, or an earlier age if the veteran is permanently unemployable by reason of physical or mental disability. The maximum allowance is \$240 per annum for a single man, and \$480 per annum for a married man if he and his wife are residing together. An income of \$125 per annum enjoyed by a single man, or \$250 enjoyed by a married man, whether consisting of personal income or pension, will not be taken into account, but anything in excess of these sums, other than casual earnings, will reduce the allowances payable.

Departmental officials have recognized for several years that there was an economic necessity to render some assistance, other than by way of pension, to men permanently unable to engage in remunerative employment who have seen real service, and the present Act, after many months of investigation of the problem, is the result. It does not apply to all who served in the Canadian forces, but only to those who served in a theatre of actual war, or who are in receipt of a pension or who have accepted a final payment in lieu of annual pension for injury or disease incurred or aggravated during service in respect of 5 p.c. or more total disability. In addition it applies to those who served in any of His Majesty's forces or the forces of any of His Majesty's Allies, who were domiciled in Canada at the time of enlistment and who served in a theatre of actual war.

The operation of the Act is placed under a War Veterans' Allowance Committee consisting of three members. This Committee is independent of the Department, although after it has granted an allowance, the Department is charged with the duty of the payment and administration thereof.

**Returned Soldiers' Insurance.**—The Returned Soldiers' Insurance Act of 1920 was placed under the jurisdiction of the Board of Pension Commissioners for Canada. The Board confines itself, however, to the issue of policies and to the supervision and adjudication of claims. All collections and payments are made by the Department. No applications under the Statute could be received after Sept. 1, 1923, but its operation has been extended from time to time, and applications may now be received until Aug. 31, 1933.

During the fiscal year ended 1930, there was a falling off in the number of applications for returned soldiers' insurance, due, doubtless, to the monetary stringency. The number of applications was 3,580, as against 4,757 during the previous fiscal year. Two hundred and eighty-one applications were refused for various reasons. Notwithstanding the employment situation, the number of surrenders was slightly less than during the previous year.

The total number of policies in force on Mar. 31, 1930, was 29,113, representing an insurance of \$64,728,863. During the fiscal year the premium income

was \$1,668,184, interest was \$287,504, making a total of \$1,955,688. Expenditure during the year, in respect of death claims, cancelled insurance and surrendered policies, amounted to \$853,912. The total number of death claims to Mar. 31, 1930, was 2,215, amounting to \$6,056,941. The balance on hand as at Mar. 31, 1930, was \$7,968,686.

### Section 6.—Land Settlement—The Soldier Settlement Board.<sup>1</sup>

At the regular session in 1930 the Dominion Parliament appointed a special committee to deal with all matters relating to pensions and returned soldier problems. A sub-committee, appointed to inquire into the question of returned soldiers on the land, brought in several recommendations which were accepted by Parliament and an amendment to the Soldier Settlement Act was passed. The recommendations were:—

1. That the time limit within which any soldier settler, who has not already appealed and who is dissatisfied with his award on revaluation, may lodge an appeal before the Exchequer Court, be revived and extended to January, 1931.

2. That no contract, as between a soldier settler and the Soldier Settlement Board, as to which a dispute may arise, shall be rescinded save by order of a District or County Judge before whom both parties may appear after due notice has been given.

3. That we approve and recommend the continuance of the practice of advancing small loans for breaking, and to settlers upon brush farms who have cleared a reasonable acreage of such land.

4. That the total outstanding indebtedness of all soldier settlers who are still in active occupancy of their farms should be reduced by the amount of 30 p.c., provided that in no case the amount of reduction granted shall exceed the total of the debt still owing by the settler to the board.

5. That all live-stock liens held by the Board shall be released, the said stock to become the absolute property of the settler.

The revaluation of soldier settler farms, provided for by legislation in 1927, has been practically completed, with the following results: settlers who applied for revaluation, 8,344, of whom 205 withdrew their applications; 8,140 farms were re-appraised; 8,047 revaluation cases were reviewed by the Board and the depreciation determined; 6,423 settlers consented to the awards. The aggregate sale price to settlers of the 8,047 farms revalued amounted to \$30,398,079 and the total depreciation in connection with these properties was considered to be \$7,295,629, or 24 p.c. In 365 cases appeals were taken to the Exchequer Court.

Up to the end of the calendar year 1930 loans were granted to soldier settlers amounting to \$112,377,516. Taking into account the revaluation of the land, the 30 p.c. cut in indebtedness and the reduction in cost of live stock the present investment, including unpaid interest, is \$58,673,089. Since the inception of the scheme loan payments have totalled \$45,674,924, of which \$14,653,188 was interest payments.

Under the 3,000 British Family Scheme 3,346 families came forward. There are 2,157 families actively farming under land purchase agreements; 168 families are still on probation; 100 families did not take up board properties, preferring to make their way independently of the scheme; four families have repaid their

<sup>1</sup> Revised by C. W. Cavers, Director of Information and Statistics, Soldier Settlement Board.

loans in full and seven have made arrangements to assume their obligations by tripartite agreement or assignment. A total of 910 families have withdrawn from settlement. Of the 3,346 families who came forward 3,156 are still in Canada; 2,619 are engaged in agriculture under the Board or privately and 537 have taken up other lines of work.

Under the New Brunswick Family Scheme for the settlement of 500 British families, 294 came forward to the end of 1930. Twenty families have withdrawn from settlement.

In connection with the unemployment situation the Board launched late in September a special drive to find placements on farms for farm labourers and by the end of the year 1,595 men had been placed. Total placements and re-placements of single and married farm workers during the calendar year were 4,950. Since this work was started the Board has made 55,312 placements, including domestics. By arrangement with the Department of Pensions and National Health the field staff of the Board were utilized to carry out investigations in rural districts of applications for allowances under the War Veterans' Allowance Act. The total number of investigations completed was 1,742. Field advisory service and aftercare were given to 4,190 prospective settlers and farm workers.

### Section 7.—Department of the Secretary of State.<sup>1</sup>

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously-existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the privy Seal as well as the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar-General, registering all proclamations, commissions, licences, warrants, writs, and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of The Companies Act, the Canada Temperance Act, the Naturalization Act, the Boards of Trade Act, the Trade Unions Act, the Ticket of Leave Act. The following information on these subjects has been secured in the course of administration.

**Charters of Incorporation.**—The number of companies incorporated under the Companies Act and amending Acts during the fiscal year 1929-30 was 1,280 with a total capitalization of \$1,346,138,367. Supplementary letters patent were granted during the year to 328 companies, 127 of which increased their capital stock by the aggregate amount of \$293,496,800; 35 decreased their capital stock by \$46,955,000; the remaining 166 were granted supplementary letters patent for various purposes, such as changing names, extending powers, etc. The total capitalization of new companies plus the increase of capital of existing companies amounted to \$1,639,635,167.

In Table 19 will be found the number and capitalization of companies incorporated during the years 1900-1930.

<sup>1</sup>Revised by Thomas Mulvey, B.A., K.C., Under-Secretary of State, Department of the Secretary of State.

**Naturalizations.**—The naturalizations effected under the Naturalization Act (R.S. 1906, c. 77) for the calendar years 1908-1917 inclusive, were given on p. 594 of the Year Book for 1919. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the "Imperial" Naturalization Act, which came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were ineligible to receive certificates of naturalization for a period of 10 years after the termination of the war was removed, and at the present time any alien may apply for naturalization, regardless of his nationality. All these Acts have been consolidated in R.S.C. 1927, c. 138.

Table 20 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1921 to 1929. The total number of persons naturalized during the fiscal year ended Mar. 31, 1930, was 20,067, including the wives and minor children of those to whom naturalization certificates were issued.

<sup>1</sup>Under Section 6 of the Naturalization Act the Secretary of State is authorized, in his discretion, to grant a special certificate of naturalization to any person with regard to whose nationality as a British subject a doubt exists.

**Canada Temperance Act.**—Under Parts I and II of this Act, provision is made for the prohibition of the sale of intoxicating liquors in counties and cities. The last vote taken under these parts was in the County of Compton, Quebec, on Apr. 28, 1930, in response to a petition for the repeal of the Act in that county. The vote resulted in favour of the repeal, which became effective on June 14, 1930. Part III of the Act relates to penalties and prosecutions, Part IV to the prohibition of the importation and exportation of intoxicating liquors into and from the provinces, while Part V enacts provisions in aid of provincial legislation for the control of the liquor traffic.

### Section 8.—The Royal Canadian Mounted Police.

The Royal Canadian Mounted Police (formerly the Royal Northwest Mounted Police) are distributed throughout the Dominion, with headquarters at Ottawa. It is a Dominion constabulary, whose duties, owing to the fact that the provinces are responsible for the enforcement of law and order, are somewhat different from those of most police forces. In addition, however, to its strictly federal duties, by an arrangement approved by Order in Council on April 14, 1928, and coming into effect on June 1, 1928, the Force has assumed the enforcement of law and order in Saskatchewan, outside of urban centres which maintain their own municipal forces. The arrangement, which is for a term of seven years from 1928, is substantially similar to that which obtained in the two provinces of Alberta and Saskatchewan from their establishment in 1905 until 1917. As a result there are now nearly 90 detachments in the province; with officers and other ranks to the number of nearly 250 exclusive of those in the depot.

The federal duties of the Force, as distinct from its provincial duties in Saskatchewan, fall under the following general headings:—(1) The enforcement of Dominion Statutes; (2) The enforcement of the Criminal Code in the Northwest Territories (including the Arctic), the Yukon, the national parks and Indian reserves, and also when Dominion Departments are the aggrieved parties; (3) the enforcement (by special agreement) of provincial laws, etc., in national parks in British Columbia and Alberta; (4) investigations for other departments; (5) Police assistance and protection rendered to Dominion Departments, provincial authorities, other police forces, etc. The fourth and fifth of these categories have increased greatly in recent years, from 8,500 cases in 1920 to 62,554 in 1929, and the assistance rendered is of the most varied kinds, including aid to the Customs in preventing smuggling, to Inland Revenue in suppressing illegal stills, to the Department of Health in combating the traffic in narcotic drugs, to the Secretary of State in verifying the statements made by applicants for naturalization, to the Post Office in detecting frauds upon and robberies of the mails, to the Department of Indian Affairs in protecting the Indians, etc. Aid is occasionally given to Provincial Governments in the maintenance of law and order.

The Arctic work is becoming increasingly important; there are now in the Arctic and sub-Arctic regions (exclusive of the Yukon) 33 detachments with 96 all ranks, or about 9 p.c. of the entire strength. These detachments include posts on Ellesmere, North Devon, Baffin and Victoria islands, as well as along the coasts of the Arctic ocean and Hudson bay; one (Bache Peninsula) is within eleven degrees of the North Pole, and a powerful auxiliary power schooner, the *St. Roch*, employed in the Arctic ocean, ranks as a detachment. Every winter

long patrols are made in these regions, the islands west of Ellesmere island (Axel Heiberg, etc.) being visited periodically. Contrasted with this is detective work in the urban communities, in running to earth counterfeiters, narcotic drug dealers, robbers of the mails, and others of the more dangerous types of evil-doers.

On Sept. 30, 1930, the strength of the Force was 56 officers, 1,067 non-commissioned officers and constables, and 122 special constables, or 1,245 all ranks, with 206 horses and 469 dogs. Excluding special constables, the accessions to the force numbered 45. The number of applicants was 2,807. The details of the strength and the fluctuations of strength are shown in Table 21.

<sup>1</sup>On loan to Canadian Legation, Washington.

### Section 9.—Judicial and Penitentiary Statistics.<sup>1</sup>

Before Confederation each province had its own system of criminal jurisprudence founded on the criminal law of England and introduced by the Royal Proclamation of 1763. At Confederation, criminal law was assigned by sec. 91

<sup>1</sup>Revised by Reginald E. Watts, Chief Statistician on Criminal Statistics, Dominion Bureau of Statistics. The fifty-fourth Annual Report of Statistics of Criminal and Other Offences for the year ended Sept. 30, 1929, is obtainable from the Dominion Bureau of Statistics.

of the British North America Act to the Dominion. In 1869 a number of Acts were passed establishing a uniform system of criminal legislation. These Acts were known as "The Criminal Law Consolidation and Amendment Acts of 1869".

The collection and publication of criminal statistics was first authorized by an Act of 1876 (39 Vict., c. 13), and the results have been published upon a comparable basis in annual reports from that time to the present, and are now collected and published by the Dominion Bureau of Statistics under the Statistics Act (R.S.C., 1927, c. 190), which provides for the receipts of an annual return by the Bureau from every court or tribunal administering criminal justice. The statistics as published show, for each judicial district (155 in number), the offences that have been committed, analysed to indicate the nature of the offence, the age, sex, occupation and social condition, birthplace, etc., of the convicted, and the sentence imposed. The Act also provides for the collection of the statistics of penitentiaries, prisons, reformatories and gaols, as complementary to the preceding.

### Subsection 1.—General Tables.

The statistics relate to years ended Sept. 30, the latest report being for 1929. Beginning with the report for 1922 an enlargement of the classification of offences has been adopted, by which offences of juvenile offenders are compiled separately from those of adults. The term "indictable" applies to offences of adults only, similar offences committed by juveniles being termed "major" offences; similarly, "non-indictable" offences of adults are termed "minor" offences when attributed to juveniles. All current tables have been worked out for 1922 and subsequent years in accordance with the new classification, but a comparative historical table, giving the totals for different classes of criminal offences and minor offences, including those of juvenile delinquents, is here published (Table 22), together with a more detailed table for recent years (Table 23). In the consideration of the former it should be remembered that while the criminal code undergoes little change over periods of time, the figures of summary convictions depend very much upon the changes in the customs of the people, and are apt to increase with the increasing urbanization of the population. The most significant column of Table 22 is the figure of criminal offences per 100,000 of population. Attention may be drawn to the increase in the proportion of both criminal offences and minor offences to population in the past year, convictions for criminal offences having risen from 277 per 100,000 population in 1924 to 359 per 100,000 population in 1929 and convictions for minor offences from 1,535 per 100,000 in 1924 to 2,928 per 100,000 in 1929.

It should be understood that the classification of offences in these general tables is irrespective of the mode of procedure. That is to say, the "criminal" cases include many indictable offences disposed of summarily under the Summary Trials Act. Hence any addition of indictable and major and minor offences, as shown in other tables, will not agree with the figures given in Tables 22 and 23. The object here is to show a broad historical record of criminal and minor offences respectively.

**22.—Convictions for Criminal Offences, by Groups, and Total Convictions for Minor Offences, years ended Sept. 30, 1876-1929, with Proportions to Population.**

NOTE.—For figures for the years 1876-1899 see p. 993 of the 1930 Year Book.

The recent trend of total convictions, including those of juveniles, and of sentences imposed, is shown by provinces for the years 1923 to 1929 in Table 24. Death sentences, which numbered 28 in 1919 and 26 in 1920, fell to 15 in 1923, rose to 22 in 1924, dropped to 18 in 1925, 15 in 1926, 12 in 1927, rose again to 19 in 1928 and to 26 in 1929.

Subsection 2.—Indictable Offences.

The progress of a community, from the moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the

study of such statistics it is important to have comparable figures over a period of years, and these are set out by provinces for each year since 1900 in Table 25. Again, in Table 26 are shown the number of charges and convictions and the percentage of acquittals for the 3 years ended Sept. 30, 1927-29, the figures indicating the percentage of acquittals in the latest years.

It will be noticed that during the thirty-year period covered by Table 25 crimes increased from 4,853 to 24,097, or 396.5 p.c. The increase in the population during the same period was but 84.1 p.c., revealing that the crime rate was nearly five times as fast as the population.

**Classes of Indictable Offences.**—Indictable offences are divided under the Canadian system into six main classes, as follows:—offences against the person, offences against property with violence, offences against property without violence, malicious offences against property, forgery and other offences against the currency, and other indictable offences. Convictions in all classes show an increase between 1927 and 1929. Details by offences are given in Table 27 and the details of the disposition of the charges in Table 28, which shows, among other information, that convictions of females numbered 2,637 in 1929 as against 2,200 in 1928, 2,013 in 1927, 2,055 in 1926, 2,035 in 1925, 1,826 in 1924, 1,609 in 1923. Details as to occupation, conjugal condition, educational status, ages, use of liquors, birthplace, religion and residence of those convicted of indictable offences are given in Table 29.

**27.—Indictable Offences, by Classes, years ended Sept. 30, 1927-1929.**

NOTE.—The figures of this table do not include charges or convictions of juvenile delinquents.

<sup>1</sup>Notwithstanding the fact that the United Church of Canada was completely organized in 1928 these persons reported themselves as Methodists.

## Subsection 3.—Summary Convictions.

The following statistics relate to "non-indictable" offences committed by adults (persons 16 years of age or over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions numbered 290,043 during the year ended Sept. 30, 1929, as compared with 245,763 in 1928, 193,240 in 1927 and 169,913 in 1926. This increase is due almost entirely to breaches of traffic regulations, which have risen from 78,027 in 1926 to 166,337 in 1929, or from 46 p.c. to 57 p.c. of the total convictions. By sexes the summary convictions appear as follows: in 1926 males, 159,528, females, 10,385; in 1927 males, 182,392, females, 10,848; in 1928 males, 232,554, females, 13,209; in 1929 males, 274,977, females 15,066.

Summary convictions are given by provinces from 1900 to 1929 in Table 30, and details of these offences are given for the four latest years in Table 31.

30.—Summary Convictions, by Provinces, years ended Sept. 30, 1900-1929.

<sup>1</sup> The decline after 1906 is due to the formation of the provinces of Saskatchewan and Alberta out of parts of the Northwest Territories.

**Offences against the Liquor Acts.**—Up till the Great War, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the Liquor Acts usually represented a breach of the conditions of sale. During the War prohibition was generally established but in more recent years the tendency has been for the Provincial Governments to take over the sale of liquor and to manage this sale by commissions and derive a revenue therefrom. Eight of the nine provinces now have their liquor commissions, so that Prince Edward Island is the only province in which prohibition prevails. In these circumstances, the convictions for offences against the liquor Acts reached these circumstances, the convictions for offences against the Liquor Acts in 1929 reached the highest figure on record *viz.*, 19,327. The number of such convictions in each year since 1900 is given by provinces in Table 33.

**33.—Convictions for Offences against the Liquor Acts, years ended Sept. 30, 1900-1929.**

<sup>1</sup> The decline after 1925 is due to the formation of the provinces of Saskatchewan and Alberta out of parts of the Northwest Territories.

**Subsection 4.—Juvenile Delinquency.**

Juveniles under 16 years of age to the number of 7,826 were found guilty of various offences in the year ended Sept. 30, 1929, as compared with 7,699 in 1928, 8,185 in 1927 and 7,831 in 1926, an increase of 127 in the latest year. Of these 5,106 were convicted of "major" offences and 2,720 of "minor" offences, terms which correspond very nearly to "indictable" and "non-indictable" offences, as applied to adults. Convictions for "major" offences numbered 5,063 in 1928 and convictions for "minor" offences 2,636. The offences proven against juveniles in 1928 and 1929 are shown by provinces in Table 35 and by chief types of major offences committed for the years 1923-29 in Table 36.

**Major Offences.**—In Table 36 are shown the various major offences for which juvenile delinquents were convicted in 1928 and 1929. It will be observed that theft, together with house- and shop-breaking, accounts for the great bulk of the offences; in 1929 79.5 p.c. of the major offences were of this character.

## 36.—Juvenile Delinquents Convicted of Major Offences, by Offences, 1923-1929.

Offence.	1923.	1924.	1925.	1926.	1927.	1928.	1929.	Increase or Decrease in 1929.

<b>Totals</b>	<b>4,165</b>	<b>4,645</b>	<b>4,990</b>	<b>5,090</b>	<b>5,156</b>	<b>5,063</b>	<b>5,106</b>	<b>+ 43</b>

**Minor Offences.**—Of the 2,720 juvenile delinquents found guilty of minor offences in 1929, 691 were convicted of breaches of municipal by-laws, 347 of disorderly conduct and disturbing the peace, 330 of disobedience and incorrigibility, 484 of trespass, 327 of truancy, 175 of vagrancy and indecent conduct, and 366 of other minor offences.

#### Subsection 5.—Police Statistics.

In 1929, 138 cities and towns, with populations of 4,000 or over, supplied police statistics to the Dominion Bureau of Statistics. These cities and towns, with an aggregate population of 3,359,703, had 5,004 policemen, who made 296,559 arrests and summonses. The total number of offences committed during the year and made known to the police was 329,496, and the number of prosecutions was 263,532, or 80 p.c. of the known offences. Convictions secured in respect of these offences numbered 213,324, being 64.7 p.c. of the known offences and 80.9 p.c. of the prosecutions.

The number of automobiles reported stolen was 11,160, of which 11,150 were recovered. Of 8,206 bicycles stolen 4,865 were recovered. The value of other lost articles reported to the police was \$2,290,972, of which 66.6 p.c. was recovered.

#### 37.—Police Statistics of Canadian Cities and Towns, by Provinces, year ended Sept. 30, 1929.

Province.	Number of—					Number of the Population to each Policeman.	Number of Arrests per Policeman.
	Cities and Towns.	Population.	Police.	Arrests.	Summonses.

<b>Totals.....</b>	<b>138</b>	<b>3,359,703</b>	<b>5,004</b>	<b>127,627</b>	<b>168,932</b>	<b>671</b>	<b>25</b>

#### Subsection 6.—Penitentiary Statistics.

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries in Canada. Six institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que., while the other four are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; and New Westminster, B.C. During the fiscal year ended Mar. 31, 1930, the average daily population of these institutions was 2,868 and the total net expenditure for the year was \$2,372,810, as compared with 2,643 average daily population and \$1,621,101 total net expenditure for the year 1929.

All female convicts, numbering 27 on Mar. 31, 1925, 34 on Mar. 31, 1926, 39 on Mar. 31, 1927, 40 on Mar. 31, 1928, 32 on Mar. 31, 1929, and 38 on Mar. 31, 1930, are kept in the penitentiary at Portsmouth, a suburb of Kingston, where a special wing and staff are maintained for their detention and supervision. A new building to be used for this purpose is under construction.

Tables 39 to 41 give the more important penitentiary statistics as reported by the Superintendent. An increase of 418 is shown in the number of those in custody on Mar. 31, 1930, as compared with the same date in the previous year. The number of paroles as shown in Table 39 indicates a continued decrease from 634 in 1923 to 300 in 1926, though it rose to 377 in 1927, declined to 363 in 1928, rose to 384 in 1929, and fell again to 363 in 1930. Table 40, showing the ages of convicts by groups, indicates that since 1923, when the total number in custody reached 2,486, there has been an increase in the average age of those in custody. In the last five years, the convicts under 30 increased from 1,301 to 1,837 or by 536, while the total number in custody increased by 842; so that convicts over 30 showed an actual increase but a proportional decrease. Detailed statistics of nationality, religion, conjugal state and racial origin are presented in Table 41.

**Population of Penal Institutions.**—The penal institutions of Canada may be classified under four heads:—penitentiaries, distinguished by long sentences and comparatively slow turnover; reformatories for boys and reformatories for girls, also with a rather slow turnover, but more rapid in the case of boys than in that of girls; and lastly common gaols, where the turnover is extremely rapid. If the average population for the year be the average of the inmates at the beginning and end of the year, and the number discharged be the turnover, the turnover in 1929 was:—in penitentiaries, 44 p.c.; in reformatories for boys, 284 p.c.; in reformatories for girls, 117 p.c.; in gaols, no less than 1,690 p.c. Thus the average time spent in gaol is a little over three weeks.

### 38.—Population of Penal Institutions, 1927-1929.

NOTE.—Penitentiary statistics until 1919 were supplied directly by each penitentiary and were for the calendar year. For 1920 and subsequent years they have been supplied by the Superintendent of Penitentiaries and are for the fiscal year ended Mar. 31. For other institutions, the figures are as at Sept. 30.

**Section 10.—The Civil Service of Canada.<sup>1</sup>**

Prior to 1882, appointments to the Civil Service of Canada were made directly by the Government of the day. In that year, a Board of Civil Service Examiners was appointed to examine candidates and issue certificates of qualification to those successful at examinations. Appointments, however, were still made by the Government.

The Royal Commission of 1907, appointed to inquire into the Civil Service Act and its operation, reported in favour of the creation of a Civil Service Commission. In 1908 this body was appointed, consisting of two members appointed by the Governor in Council and holding office during good behaviour, but being removable by the Governor General on address of the Senate and House of

<sup>1</sup> Revised by Wm. Foran, Secretary, Civil Service Commission, Ottawa.

Commons. The Civil Service was classified into three divisions under the Deputy Heads of Departments, each division consisting of two subdivisions, each of these having its scale of salaries. The Commission was charged with the organization of and appointments to the Inside Service (at Ottawa), certain appointments to be made after open competition and others after qualifying tests, also with holding qualifying examinations for the Outside Service (the Service apart from Ottawa) from which selections for appointments could be made by the various Departments. All British subjects between 18 and 35 years of age who had resided in Canada for three years were eligible to try these examinations.

In 1918 a third member of the Civil Service Commission was appointed, and by the Civil Service Act of that year the principle of appointment after open competition was applied to the Outside as well as the Inside Service. The Act also provided for the organization by the Commission of the various Government Departments, for a classification of all positions in the Service on a duties basis, for the establishing of new rates of compensation, and for the principle of promotion by merit whenever consistent with the best interests of the Service. Provision was also made for preference in the matter of appointment to the Service to be given to qualified applicants who had served in the Great War.

From April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation back to 1912, the summary results of which are presented in Table 42.

During the war years, as will be seen from Table 42, the number of employees increased very rapidly, as a result of the enlargement of the functions of government and the imposition of new taxes, necessitating additional officials as collectors. Such new services as the Department of Pensions and National Health and the Soldier Settlement Board were also created. The maximum was reached in January, 1920, when 47,133 persons were employed, a number which has since decreased to 43,525 in January, 1930. It may be added that, out of 44,175 in March, 1930, 1,161 in the Income Tax Branch and 2,145 in the Department of Pensions and National Health, or 3,306 in all, were engaged in services of outstanding importance which had no existence before the war. Further, an additional 11,739 persons were, in March, 1930, employed in the Post Office Department, performing services of an industrial rather than of a governmental type, and receiving their salaries out of the payments of the public for services immediately rendered, rather than out of taxation. This postal service alone accounted for \$2,727,756 of the \$7,443,404 paid in salaries in March, 1930, or 36.65 p.c. of the total.

The statistics of numbers of employees and of salaries, now being secured monthly, are more comprehensive than those previously published, as a result of the inclusion of various classes of employees, largely "part-time", "seasonal" and "fees of office" employees, who were not included in the report published in 1925. These employees were largely in the Departments of Marine and Fisheries and Public Works. There remain, however, many persons in the "non-enumerated classes", whose numbers cannot be supplied monthly by the departmental officials, but whose compensation is included in the monthly figures of expenditure on personnel, as shown in Table 43.

**42.—Summary of Civil Service Employees (Permanent and Temporary) of the Government of Canada, together with Total Salaries, in the month of January of the years 1912-1930, inclusive.**

1921.....	41,957	4,414,669	861,973	5,276,642
1922.....	41,094	4,369,509	616,105	4,985,614
1923.....	38,902	4,268,357	463,470	4,731,827
1924.....	38,062	4,297,467	449,223	4,746,695
1925 <sup>a</sup> .....	38,845	4,473,470	166,461	4,639,931
1926 <sup>a</sup> .....	39,097	4,699,076	-	4,699,076
1927 <sup>a</sup> .....	39,440	4,786,615	-	4,786,615
1928 <sup>a</sup> .....	40,740	5,161,558	-	5,161,558
1929 <sup>a</sup> .....	42,038	5,428,058	-	5,428,058
1930 <sup>a</sup> .....	43,525	5,543,749	-	5,543,749

<sup>a</sup>Figures for January, 1925-30 are not comparable with those for preceding Januaries, because monthly records now being published include various classes of employees not included in the historical record for the 13 years 1912-24. In Table 43 will be found comparable figures of employees in the various Departments in March, 1929, and March, 1930.

Table 43, which gives statistics by Departments, with a further classification by principal branches where such are recorded, is inserted to give comparable figures for the latest months. In the month of March, 1930, the total number of employees in the enumerated classes was 44,175 and the total expenditure in wages and salaries for all classes of employees was \$7,443,403.91, as compared with 42,790 and \$7,388,529.85 respectively in March, 1929.

**43.—Total Number of Civil Service Employees, by Departments and Principal Branches ("Non-Enumerated Classes" Excluded), and Total Expenditure on Salaries, and Wages of All Employees ("Non-Enumerated Classes" Included), March, 1929, and March, 1930.**

### Section 11.—Other Miscellaneous Administration.

In previous editions of the Canada Year Book, this chapter has been brought to a close with outlines of Dominion Government administration as follows:—

Section 11.—Harbour Commissions.

Section 12.—The International Joint Commission.

Section 13.—The Geodetic Survey of Canada.

Section 14.—The Topographical Survey.

Section 15.—The Dominion Observatories.

Section 16.—The Advisory Board on Tariff and Taxation. (This board was dissolved by Order in Council P.C. 1931, dated Aug. 8, 1930).

Since no material change has been made in these sections, other than that noted in Section 16, they have not been reprinted in this edition and the interested reader is referred to pp. 1013-18 of the 1930 Year Book for this information.

## CHAPTER XXVIII.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA.

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in the first part of this chapter; a list of its publications, which cover almost the whole field of the national statistics, is given in Section 1.

The second section of the chapter contains a list of the Acts of Parliament administered by the several departments of the Dominion Government, and the third section a bibliography of the publications of these departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments.

### Section 1.—The Dominion Bureau of Statistics.<sup>1</sup>

The Dominion Bureau of Statistics was set up by Statute in 1918 as a central statistical department for Canada (8-9 Geo. V. c. 43). The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (a) a series of specific reforms and enlargements in Canadian statistics, and (b) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created.

The Bureau has been constituted by the transfer or absorption, by Orders in Council, of the following work and branches:—(1) the Census and Statistics Office (covering the census, and also agriculture, general manufactures and criminal statistics), (2) Fisheries Statistics, (3) Mining Statistics, (4) Forestry Statistics, (5) Dairying and Fruit Statistics, (6) Water- and Electric-Power Statistics, (7) the Railways and Canals Statistical Branch of the Department of Railways and Canals, (8) the Trade Statistical Branch (exports and imports), (9) Grain Trade Statistics, (10) Live-Stock Statistics, (11) Prices Statistics, and (12) Employment Statistics. In addition four new branches were created, dealing respectively with Public Finance, Internal Trade, Vital Statistics and Education. Subsequently the statistical activities of the Fuel Controller and the Board of Commerce were absorbed. Modifications of the Bankruptcy, Public Health and Railway Acts, and of the regulation *re* franking privileges were also made, with a view to facilitating the collection of statistics.

The Bureau has completed the plans for a unified, nation-wide statistical system, covering every important phase of social and economic activity, and has carried them out to a considerable degree.

The main achievement of the Bureau has been in the organization of the several subjects in correlation with each other in accordance with this general plan, and the consequent establishment of a comprehensive viewpoint of the country as a "going concern". In addition, there has been created what is frequently called a central "thinking office" in statistics, continuously in touch with general conditions and the line of probable developments.

<sup>1</sup> A more complete account of the formation and activities of the Bureau of Statistics will be found on pp. 961-964 of the 1922-23 Year Book.

The final concept in the organization of the Bureau of Statistics is that of a national laboratory for social and economic research. Statistics are not merely a record of what has been, but are for use in planning what shall be; it is the duty of a statistical bureau to assist directly in the day-to-day problems of administration, as well as to provide their theoretic background. One of the most significant of recent developments in administration is the extent to which statistical organization has been increased as a guide to national policy. Though its usefulness has only begun, the Dominion Bureau of Statistics has laid the foundations for a service comparable with the increasingly important position taken by Canada in the economic and political world.

**Publications of the Bureau.**—The first annual report of the Dominion Statistician contained a full description of the organization of the Bureau and of its subject matter.<sup>1</sup> The main Divisions of the Bureau are as follows:—I. Administration; II. Population—Census and Vital Statistics; III. Agricultural Statistics; IV. Fisheries, Furs and Dairy Products; V. Mining, Metallurgical and Chemical; VI. Forestry and Allied Industries; VII. General Manufactures; VIII. External Trade (Imports and Exports); IX. Internal Trade; X. Transportation; XI. Financial Statistics; XII. Statistics of Administration of Justice; XIII. Education Statistics; XIV. General Statistics. The publications of the several Divisions are as follows:—

#### ADMINISTRATION—

Annual Report of the Dominion Statistician.

#### POPULATION—

##### Census—

#### I. Census of Population and Agriculture, 1921.

Bulletins of the Sixth Census of Canada, 1921, as follows:—

(d) Dwellings and Families, 1921. (e) Birthplaces of the People, 1921. (f) Citizenship of the Foreign-born, 1921. (g) Year of Immigration, 1921. (h) Ages of the People, 1921. (i) Conjugal Condition of the People, 1921. (j) Language Spoken and Mother Tongue, 1921. (k) Literacy, 1921. (l) School Attendance, 1921. (m) Occupations, 1921. (n) Children in Gainful Occupations, 1921. Also bulletins on population by provinces as follows: (a) Population of Nova Scotia—Electoral Districts, etc. (b) Population of Prince Edward Island—Electoral Districts, etc. (c) Population of New Brunswick—Electoral Districts, etc. (d) Population of Quebec—Electoral Districts, etc. (e) Population of Ontario—Electoral Districts, etc. (f) Population of Manitoba—Electoral Districts, etc. (g) Population of Saskatchewan—Electoral Districts, etc. (h) Population of Alberta—Electoral Districts, etc. (i) Population of British Columbia—Electoral Districts, etc.
- (2) Agriculture: (a) Field Crops of Prairie Provinces, 1921. (b) Agriculture of Canada—General Summary. (c) Pure-bred Domestic Animals, 1921. (d) Agriculture of Nova Scotia, 1921. (e) Agriculture of Prince Edward Island, 1921. (f) Agriculture of New Brunswick, 1921. (g) Agriculture of Quebec, 1921. (h) Agriculture of Ontario, 1921. (i) Agriculture of Manitoba, 1921. (j) Agriculture of Saskatchewan, 1921. (k) Agriculture of Alberta, 1921. (l) Agriculture of British Columbia, 1921.

Reports of the Sixth Census of Canada, 1921, as follows:—

- Vol. I. Introduction—Number, Sex and Distribution—Racial Origins—Religions.
- Vol. II. Ages—Conjugal Condition—Birthplace—Birthplace of Parents—Year of Immigration and Naturalization—Language Spoken and Mother Tongue—Literacy—School Attendance—Blindness and Deaf-Mutism.
- Vol. III. Families—Dwellings—Ownership of Homes—Rentals—Earnings.

<sup>1</sup> This report for the year ended Mar. 31, 1919, is now out of print.

**POPULATION—concluded.**

Vol. IV. Occupations and Employment.

Vol. V. Agriculture. Farm holdings by size, tenure, value, etc.—Farm Products—Field Crops—Vegetables—Fruits—Forest Products—Live Stock—Animal Products—Statistics of Operators.

Census Monographs, 1921.

Illiteracy and School Attendance in Canada.

Origin, Birthplace, Nationality and Language of the Canadian People.

**II. Census of Population, etc., 1911.**

Reports of the Fifth Census of Canada, 1911: Vol. I. Areas and Population by Provinces, Districts and Subdistricts, with Introduction. Tables I to XV, pp. i-viii, 1-623. Vol. II. Religions, Origins, Birthplace, Citizenship, Literacy and Infirmities by Provinces, Districts and Subdistricts, with Introduction. Tables I-XLVI, pp. i-xvii, 1-654. Vol. III. Manufactures for 1910 as enumerated in June, 1911, with Introduction. Tables I-XX, pp. i-xvi, 1-432. Vol. IV. Agriculture, with Introduction. Tables I-90, I-XXXV, pp. i-xev, 1-428. Diagrams 5 pp. Vol. V. Forest, Fishery, Fur and Mineral Production, with Introduction. Tables 1-51, I-XXVI, pp. i-1, 1-171. Vol. VI. Occupations of the People, with Introduction. Tables 1-25, I-VI, pp. i-xxx, 1-469.

Bulletins of the Fifth Census of Canada, 1911: Manufactures of Canada—Dairy Industries—Agriculture, Prince Edward Island—Agriculture, Nova Scotia—Agriculture, New Brunswick—Agriculture, Quebec—Agriculture, Ontario—Agriculture, Manitoba—Agriculture, Saskatchewan—Agriculture, Alberta—Agriculture, British Columbia—Religions—Origins of the People—Birthplace of the People—Educational Status—Mineral Production—Infirmities—Ages—School Attendance.

Special Report on the Foreign-born Population. (Abstracted from the Records of the Fifth Census of Canada, June, 1911: 23 Tables, 62 pp., 1915.)

**III. Census of Population and Agriculture of the Prairie Provinces, 1926.**

Report of the Census of Population and Agriculture of the Prairie Provinces, 1926.

Census of Manitoba—Population and Agriculture.

Census of Saskatchewan—Population and Agriculture.

Census of Alberta—Population and Agriculture.

Preliminary Bulletins, as follows: (a) Population of Manitoba—Electoral Districts, etc. (b) Population of Saskatchewan—Electoral Districts, etc. (c) Population of Alberta—Electoral Districts, etc. (d) Animals on Farms in the Prairie Provinces, 1926. (e) Farm Lands and Crops in the Prairie Provinces, 1926.

**IV. Census of Population and Agriculture of the Prairie Provinces, 1916.**

Report of the Census of Population and Agriculture of the Prairie Provinces, 1916. Tables 1-54. I-XLII (Population), I-XXVI (Agriculture), pp. i-lxiv, 1-356.

**V. Intercensal Estimates of Population.**

**Births, Deaths and Marriages—**

**VI. Vital Statistics.**

Annual Report on Vital Statistics of Canada by Provinces and Municipalities.

Monthly Report of Births, Deaths and Marriages registered in Cities.

Report of Conference on Vital Statistics, held June 19-20, 1918, pp. 1-48.

Special Report on Contributory Causes of Death, 1926.

Order of Birth in the Registration Area of Canada, 1925.

**PRODUCTION—****I. General Summary of Production.**

Including and differentiating (gross and net) (1) Primary Production (Agriculture, Fishing, Furs, Forestry and Mining) and (2) Secondary Production, or General Manufactures.

**II. Agriculture.****(1) Agricultural Production.**

Monthly Bulletin of Agricultural Statistics. The official record of current statistical data relating to agriculture. (Contains reports on agricultural conditions, prices, weather, etc.—estimates of areas, yields, quality and value of field crops—value of farm lands—wages of farm help—number and values of farm live stock and poultry—statistics of fruit and floriculture—

**PRODUCTION**—continued.

dairying—tobacco—hives and honey—maple syrup and sugar—clover and grass seed—miscellaneous crops—stocks of grain—annual summary of value of agricultural production—index numbers of agricultural prices, yields and values—international agricultural statistics.)

Advance Summaries of Agricultural Statistics.

Telegraphic Crop Reports (between the first of June and the first of September, weekly for the Prairie Provinces and every two weeks for the rest of Canada).

Agricultural Statistics by Counties and Crop Districts, 1922-24 and 1925-29.

Annual Statistics of Fruit and Floriculture, latest issue, 1930.

Handbook for the Use of Crop Correspondents, with Selection of Annual Agricultural Statistics, 1908-26.

[See also Censuses of Agriculture above.]

*(2) Grain and Grain Products.*

(a) Annual Report on the Grain Trade of Canada; (b) Monthly Review of the Wheat Situation; (c) Canadian Grain Statistics—weekly report on grain supplies and movements; (d) Canadian Milling Statistics—monthly; (e) List of Mills with Capacity.

*(3) Live Stock and Animal Products.*

(a) Annual Report on Live Stock and Animal Products; (b) Monthly Report on Stocks in Cold Storage; (c) Estimated Consumption of Meats, Butter, Cheese, Eggs and Poultry in Canada.

*(4) Other.*

Monthly Report on Raw and Refined Sugar (visible supply, meltings, shipments, exports and imports).

**III. Furs.**

Annual Report on Fur Farms.

Annual Report on the Production of Raw Furs (wild-life).

**IV. Fisheries.**

Annual Report on Fisheries Statistics.

Advance Summaries on Fish Caught and Marketed by Provinces.

**V. Forestry.**

Annual Summary of the Value, etc., of Forest Production. (Covers operations in the woods for saw-mills, shingle mills, pulp and paper mills, etc., production of mining timber; production of poles and cross ties, and farm production (decennial) of firewood, posts, etc.)

[See also Reports on Manufactures of Forestry Products listed under "Manufactures" Section VII, subsection (5).]

**VI. Mineral Production: (Mining and Metallurgy.)***(1) General.*

(a) Annual Report on the Mineral Production of Canada; (b) Preliminary Reports (semi-annual) on the Mineral Production of Canada; (c) Monthly Report on Leading Minerals; (d) Special Report on the Consumption of Mine and Mill Materials in Canada.

*(2) Coal.*

(a) Annual Report on Coal Statistics for Canada; (b) Monthly Summary Report on Coal and Coke Statistics for Canada; (c) Quarterly Report on Coal and Coke Statistics for Canada.

*(3) Annual Bulletins on Mining as follows:—*

1. *Metals*—(a) Arsenic; (b) Cobalt; (c) Copper; (d) Gold; (e) Lead; (f) Nickel; (g) Metals of the Platinum Group; (h) Silver; (i) Zinc; (j) Miscellaneous Metals, including Aluminium, Antimony, Chromite, Iron Ore, Manganese, Mercury, Molybdenum, Tin, Tungsten.

2. *Non-Metallic Minerals*—(a) Abrasives; (b) Asbestos; (c) Coal; (d) Feldspar; (e) Gypsum; (f) Iron Oxides; (g) Mica; (h) Natural Gas; (i) Petroleum; (j) Quartz; (k) Salt; (l) Talc and Soapstone; (m) Miscellaneous Non-Metallic Minerals, including Actinolite, Barytes, Fluorspar, Graphite, Magnesite, Magnesium Sulphate, Mineral Waters, Nitro-Alunite, Peat, Phosphate, Pyrites, Sodium Carbonate, Sodium Sulphate; (n) Special Report on the Consumption of Prepared Non-Metallic Minerals in Canada.

3. *Structural Materials*—(a) Cement; (b) Clay and Clay Products; (c) Lime; (d) Sand and Gravel; (e) Stone.

## PRODUCTION—continued.

4. *Mining Industries*—(a) Gold Mining Industry (including Alluvial-Gold Mining, Auriferous Quartz Mining and Copper-Gold-Silver Mining); (b) Silver, Cobalt and Silver-Lead-Zinc Mining Industry; (c) Nickel-Copper Mining Industry; (d) Miscellaneous Metal Mining Industries; (e) Non-Ferrous Smelting and Refining Industry; (f) Coal Mining, Coke, Natural Gas, Peat and Petroleum Industries; (g) Miscellaneous Non-Metal Mining Industries; (h) Clay Products and Other Structural Materials Industries; (i) Special Summary Report on the Mineral Industry and the Manufacturing Industries Related Thereto.
5. *Provincial Reviews*—Summary Bulletins showing Mineral Production for (a) Nova Scotia; (b) New Brunswick; (c) Quebec; (d) Ontario; (e) Manitoba; (f) Saskatchewan; (g) Alberta; (h) British Columbia; (i) Yukon.

[See also Reports on Iron and Steel and their Products, Manufactures of Non-Ferrous Metals, and Chemicals and Allied Products, listed under "Manufactures", Section VII, Subsections (6), (7), (8) and (9).]

## VII. Manufactures.

- (1) *General*—General Summary for Canada, also for the Provinces and Leading Cities (industrial groups classified by component materials, purposes, etc., of products—comparative statistics).
- (2) *Manufactures of Vegetable Products*—Annual Bulletins as follows: (a) Coffee and Spices; (b) Fruit and Vegetable Preparation, including canning, evaporating and preserving; (c) Pickles, Sauces, Vinegar and Cider; (d) Flour and Grist Mill Products (see also under heading "Agriculture"); (e) Bread and other Bakery Products; (f) Biscuits and Confectionery including Cocoa and Chocolate; (g) Macaroni and Vermicelli; (h) Liquors, Distilled; (i) Liquors, Malt; (j) Liquors, Vinous; (k) Rubber Goods and Rubber Boots and Shoes; (l) Starch and Glucose; (m) Sugar Refineries; (n) Tobacco Products; (o) Linseed Oil and Oil Cake; (p) The Canned Foods Industry; (q) Ice Cream; (r) Pack of Fruits and Vegetables.
- (3) *Animal Products and their Manufactures*—Annual Reports and Bulletins as follows: (a) The Dairy Factory Industry; (b) Slaughtering and Meat Packing and Allied Industries; (c) Fish and Fish Products; (d) Leather Tanneries; (e) Harness and Saddlery, Leather Belting, Trunks and Valises, Miscellaneous Leather Goods; (f) Leather Boots and Shoes, Leather Boot and Shoe Findings; (g) Leather Gloves and Mitts; (h) Fur Goods, Fur Dressing. Monthly Report on Boot and Shoe Production. Monthly Report on Concentrated Milk Products.

[See also Reports on Live Stock, etc., listed under "Agriculture".]

- (4) *Textile and Allied Industries*—General Report on The Textile Industries of Canada, 1917-26—Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste); (b) Woollen Textiles (cloth, yarn, waste, carpets, etc., and woollen goods, n.e.s.); (c) The Silk Industry; (d) Clothing, Men's Factory; (e) Clothing, Women's Factory; (f) Hats and Caps; (g) Hosiery and Knit Goods; (h) Men's Furnishings, n.e.s.; (i) Oiled Clothing and Waterproofs; (j) Cordage, Rope and Twine; (k) Corsets; (l) Cotton and Jute Bags; (m) Dyeing, Cleaning and Laundry Work.
- (5) *Manufactures of Forestry Products*—Annual Reports as follows: (1) The Lumber Industry; (2) The Pulp and Paper Industry; (3) Wood-Using Industries; (4) Paper-Using Industries. Biennial Report: Lumber Distribution in Canada and the United States. Preliminary Reports as follows: (a) The Lumber Industry; (b) The Pulp and Paper Industry; (c) Planing Mills, Sash and Door Factories; (d) Furniture; (e) Boxes, Baskets and Crates; (f) Carriages, Wagons and Materials; (g) Cooperage; (h) Coffins and Caskets; (i) Sporting Goods; (j) Boats and Canoes; (k) Lasts, Trees and Shoe Findings; (l) Handles, Spools and Turnery; (m) Woodenware; (n) Excelsior; (o) Miscellaneous Wood Products; (p) Printing and Publishing; (q) Printing and Bookbinding; (r) Lithographing, Engraving, etc.; (s) Paper Boxes and Bags; (t) Stationery and Envelopes; (u) Roofing Paper, Wallboard, etc.; (v) Miscellaneous Paper Goods.
- (6) *Iron and Steel and Their Products*—General Report. Annual Bulletins as follows: (a) Pig Iron and Ferro-Alloys; (b) Steel and Rolled Products; (c) Castings and Forgings; (d) Agricultural Implements; (e) Boilers and Engines; (f) Machinery; (g) Automobiles; (h) Automobile Accessories; (i) Bicycles; (j) Railway Rolling Stock; (k) Wire and Wire Goods; (l) Sheet Metal Products; (m) Hardware and Tools; (n) Miscellaneous Iron and Steel Products. Monthly Reports on (a) Iron and Steel, (b) Automobile Statistics.

**PRODUCTION—concluded.**

- (7) *Manufactures of Non-ferrous Metals*—General Report. Annual Bulletins as follows: (a) Aluminium Ware; (b) Brass and Copper Products; (c) Lead, Tin and Zinc Products; (d) Manufactures of the Precious Metals; (e) Electrical Apparatus and Supplies; (f) Miscellaneous Non-Ferrous Metal Goods.
- (8) *Manufactures of the Non-Metallic Minerals*—General Report. Annual Bulletins as follows: (a) Aerated Water; (b) Asbestos and Allied Products; (c) Cement; (d) Cement Products; (e) Coke and By-Products; (f) Gas, Illuminating and Fuel; (g) Glass (blown, cut, ornamental, etc.); (h) Lime; (i) Petroleum Products; (j) Products from Domestic Clays; (k) Products from Imported Clays; (l) Salt; (m) Sand-Lime Brick; (n) Stone. Bulletins as follows: (a) Aerated Waters; (b) Asbestos and Allied Products, including: (1) Artificial Abrasives, (2) Abrasive Products, (3) Artificial Graphite and Electrodes, (4) Gypsum Products, (5) Mica Products, (6) Miscellaneous Non-Metallic Products, n.e.s.; (p) Report on the Consumption of Coke, by Industries, in Canada.
- (9) *Chemicals and Allied Products*—General Report. Annual Bulletins as follows: (a) Coal Tar and Its Products; (b) Acids, Alkalies, Salts and Compressed Gases; (c) Explosives, Ammunition, Fireworks and Matches; (d) Fertilizers; (e) Medicinal and Pharmaceutical Preparations; (f) Paints, Pigments and Varnishes; (g) Soaps, Washing Compounds and Toilet Preparations; (h) Inks, Dyes and Colours; (i) Wood Distillates and Extracts; (j) Miscellaneous Chemical Industries (including adhesives, baking powder, boiler compounds, celluloid products, flavouring extracts, insecticides, polishes and dressings, sweeping compounds, etc.). Special Report on The Fertilizer Trade in Canada.
- (10) *Miscellaneous Manufactures*—Annual Bulletins as follows: (a) Brooms, Brushes and Mops; (b) Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts; (c) Buttons; (d) Beds, Springs and Mattresses.

N.B.—For Statistics of Water Power and Central Electric Stations, see under heading "Public Utilities".

**VIII. Construction.—(a) Building Permits—Monthly Record.****EXTERNAL TRADE (IMPORTS AND EXPORTS)—**

- (1) Annual Report of the Trade of Canada, for the fiscal year ended Mar. 31 (showing summary historical tables, analyses of current trends, detailed tables by items, group analyses according to component material, origin and degree of manufacture, and purpose, and comparisons of the volume of trade).
- (2) Condensed Preliminary Report of the Trade of Canada, for the fiscal year ended Mar. 31.
- (3) Annual Report of the Trade of Canada for the calendar year.
- (4) Advance Preliminary Statement regarding the Trade of Canada during the calendar year.
- (5) Quarterly Report of the Trade of Canada (showing statistics of imports and exports by months).
- (6) Monthly Summary of the Trade of Canada for latest month and 12 months).
- (7) Monthly Bulletins on Trade Statistics as follows: *General*.—(a) Abstract of Imports, Exports, and Duty Collected (by latest month, accrued period, and latest 12 months); (b) Summary of Canada's Imports for latest month; (c) Summary of Canada's Exports for latest month. *Special*.—(d) Imports and Exports of Asbestos; (e) Imports and Exports of Footwear (except Rubber); (f) Summary, Exports of Grain and Flour; (g) Exports of Lumber; (h) Imports of Lumber; (i) Exports of Meats and Lard; (j) Imports of Meats and Lard; (k) Exports of Milk, Milk Products and Eggs; (l) Imports of Milk, Milk Products and Eggs; (m) Exports of Non-Ferrous Ores and Smelter Products; (n) Imports of Non-Ferrous Ores and Smelter Products; (o) Exports of Paints and Varnishes; (p) Imports of Paints and Varnishes; (q) Exports of Pulp Wood, Wood Pulp and Paper; (r) Exports of Rubber Goods and Insulated Wire; (s) Imports of Rubber Goods; (t) Exports of Vehicles of Iron (Automobiles, Bicycles, Railway Cars, etc.); (u) Imports of Vehicles of Iron (Automobiles, Bicycles, Railway Cars, etc.); (v) Exports of Petroleum and Its Products; (w) Imports of Petroleum and Its Products; (x) Imports of Sheet Metal Products.

**INTERNAL TRADE—****(1) Prices Statistics.**

Annual and Monthly Reports on Wholesale and Retail Prices and Price Indexes in Canada.

Annual and Monthly Reports on Wholesale and Retail Prices and Price Indexes in the British Empire and Foreign Countries.

Index Numbers of Average Cost of Living in Canada.

Monthly and Weekly Index Numbers (Speculative) of Security Prices.

Monthly and Weekly Index Numbers (Investment) of Security Prices.

Monthly and Weekly Index Numbers of Mining Stocks.

Prices and Price Index Numbers of Services (Street Cars, Telephones, Electricity, Natural and Manufactured Fuel Gas, Hospitals, Doctors' Fees, etc.).

Interest and Exchange Rates.

Index Numbers of Import and Export Valuations.

Special Bulletins as follows: (a) Post-War Sugar Prices; (b) Post-War Prices of Raw Cottons; (c) Post-War Silver Prices; (d) Post-War Tin Prices; (e) Post-War Copper Prices; (f) Post-War Lead Prices; (g) Gasolene Prices; (h) Coffee Prices; (i) Wool Prices; (j) Post-War Rubber Prices; (k) Price Trends and Economic Conditions in Germany (May, 1927); (l) Price Trends and General Economic Conditions in France (May, 1927); (m) Price Trends and General Economic Conditions in Great Britain (May, 1927); (n) Wholesale Prices in the British Empire and Foreign Countries, and Exchange Rates in 1925 (with reference to important trade tendencies in the leading countries); (o) Trend of Commodity Prices in Canada, Past and Future.

**(2) Trading Establishments.**

Decennial Census of Wholesale and Retail Trading Establishments.

Annual Statistics of Chain Stores.

**(3) Capital Movements.**

Annual Records and Estimates of Capital Investments by Foreigners in Canada and of Canadian Investments in Foreign Countries.

**(4) Balance of International Payments.**

Compilation of Canada's Annual Balance of Payments.

Estimation of the Invisible Items in Canada's Trade Balance (Receipts and Payments for Interest, Freight, Insurance, Non-Commercial Remittances, Government Expenditures, Capital of Immigrants and Emigrants, etc.).

**(5) Retail Sales.**

Index Numbers of Retail Sales.

**TRANSPORTATION, COMMUNICATIONS AND PUBLIC UTILITIES—****(1) Railways and Tramways.—**(a) Annual Report on Railway Statistics; (b) Annual Report on Electric Railway Statistics; (c) Monthly Bulletin on Railway Revenues, Expenses, Incomes and Operating Statistics; (d) Monthly Statement of Traffic of Railways; (e) Weekly Report of Car-loadings of Revenue Freight.**(2) Express.—**Annual Report on Express Statistics.**(3) Telegraphs.—**Annual Report on Telegraph Statistics.**(4) Telephones.—**Annual Report on Telephone Statistics.**(5) Water Transportation.—**(a) Annual Report on Canal Statistics; (b) Monthly Report on Canal Statistics; (c) Report of Census of Canadian Registered Ships.**(6) Electrical Stations.—**(a) Annual Report on Central Electric Stations in Canada; (b) Report on Index Numbers of Electric Light Rates; (c) Monthly Report on Electric Energy Generated—included in Monthly Review of Business Statistics.**(7) Motor Vehicles.—**(a) Annual Report on Motor Vehicle Registrations; (b) Highways—Annual Report on Highway Mileage Open for Traffic, Construction and Expenditures on Construction and Maintenance.**FINANCE—****(1) Municipal Statistics.**

(a) Annual Municipal Statistics of Urban Municipalities of 10,000 Population and Over. (b) Municipal Statistics of Urban Municipalities of 1,000 to 5,000 Population, 1922. (c) Annual Bulletins on Assessed Valuations by Provinces, Municipal Bonded Indebtedness, etc.

**(2) Dominion. (a) Statistics of the Civil Service of Canada—**Annual Report; (b) Statement of Civil Service Personnel and Salaries in the Months of January, 1912-1924.**(3) Provincial Finance.—**Annual Report.

**JUSTICE—**

- (1) *Criminal Statistics*.—Annual Report (covering convictions, sentences, prison statistics, police statistics, pardons, commutations and executions). Preliminary Report on Criminal Statistics.
- (2) *Juvenile Delinquency*.—Annual Bulletin.

**EDUCATION—**

- (1) Report of Dominion-Provincial Conference on Education Statistics, held October, 1920.
- (2) Historical Statistical Survey of Education in Canada (1921). (Out of print.)
- (3) Illiteracy and School Attendance in Canada—A study of the Census of 1921 with Supplementary Data.
- (4) Annual Survey of Education in Canada. Published yearly since 1921, covering the following:—
  - (a) Publicly-controlled schools of general education, teachers, and teachers in training.
  - (b) Vocational and technical schools.
  - (c) Universities and colleges.
  - (d) Private schools of general education, and private business or commercial schools.
  - (e) Schools for native Indians.
  - (f) Organizations and societies of provincial or Dominion scope directly connected with the above-listed institutions.
  - (g) Library statistics (biennially).

[The section of the Annual Survey of Education on Universities and Colleges and some of the other sections may be obtained individually and in advance of the complete publication. In addition, reports on special subjects in the field of education are issued from time to time.]

**GENERAL—**

- (1) *National Wealth and Income*.—Estimates of the National Wealth of Canada, by Provinces, Industries, etc.—Summary of Income Tax Receipts.
- (2) *Employment*.—Monthly and Annual Reports on Employment, with Index Numbers of Employment by Localities and Industries.
- (3) *Commercial Failures*.—Monthly and Annual Reports.
- (4) *Bank Debits*.—Monthly and Annual Reports of Bank Debits to Individual Accounts at the Clearing-House Centres of Canada.
- (5) *Business Statistics*.—The Monthly Review of Business Statistics (a statistical summary, with charts and text, of current economic conditions in Canada).
- (6) *Divorce*.—Annual Report.
- (7) *The Canada Year Book*.—The official statistical annual of the Physiography, Resources, History, Institutions and Social and Economic Conditions of the Dominion, with a Statistical Summary of the Progress of Canada, maps, diagrams, etc.

Contents: I. Physical Characteristics of Canada (Geographical Features; Geological Formation; Seismology; Flora; Faunas; Natural Resources; Climate and Meteorology). II. History and Chronology. III. Constitution and Government (Constitution and General Government of Canada; Provincial and Local Government in Canada; Parliamentary Representation in Canada). IV. Population (Growth and Distribution). V. Vital Statistics. VI. Immigration. VII. Survey of Production. VIII. Agriculture. IX. Forestry. X. Fur Trade. XI. Fisheries. XII. Mines and Minerals. XIII. Water Powers. XIV. Manufactures. XV. Construction. XVI. External Trade. XVII. Internal Trade. XVIII. Transportation and Communications (Government Control over Transportation and Communications; Steam Railways; Electric Railways; Express Companies; Roads and Highways; Motor Vehicles; Air Navigation; Canals; Shipping and Navigation; Telegraphs; Telephones; Post Office). XIX. Labour and Wages. XX. Prices. XXI. Public Finance (Dominion Public Finance; Provincial Public Finance; Municipal Public Finance; National Wealth and Income). XXII. Currency and Banking; Loan and Trust Companies. XXIII. Insurance (and Government Annuities). XXIV. Commercial

**GENERAL—concluded.**(7) *The Canada Year Book*—concluded.

Contents—concluded.

Failures. XXV. Education. XXVI. Public Health and Benevolence. XXVII. Miscellaneous Administration (Public Lands; National Defence; Public Works, etc.). XXVIII. Sources of Official Statistical and Other Information Relative to Canada. XXIX. The Annual Register (Dominion Legislation; Principal Events of the Year; Extracts from *The Canada Gazette*, re Official Appointments, Commissions, etc.). Appendix.

(Issues of the Canada Year Book for 1921, 1924, 1926 and 1930 are available.)

(8) *Canada*.—An official handbook of present conditions and recent progress, published annually.**Section 2.—Acts Administered by Dominion Departments.****List of the Principal Acts of Parliament administered by Departments of the Government of the Dominion of Canada, as compiled from information supplied by the respective Departments.**

(Numbers within parentheses, unless otherwise indicated, denote chapters of the Revised Statutes of Canada, 1927—R.S.C., 1927.)

**Agriculture.**—Experimental Farm Stations (61); Fruit (80); Dairy Industry (45); Cold Storage (25); Seeds (185); Feeding Stuffs (67); Live Stock Pedigree (121); Live Stock and Live Stock Products (120); Animal Contagious Diseases (6); Meat and Canned Foods (77); Destructive Insect and Pest (47); Fertilizers (69); Root Vegetables (181); Section 235, Criminal Code (Race Track Betting) (36); Inspection and Sale (100).

**Auditor-General.**—Consolidated Revenue and Audit (178).**Civil Service Commission.**—Civil Service (22).

**External Affairs.**—The functions and duties of this Department are defined by the Department of External Affairs Act (65) and by the International Boundary Waters Treaty Act, 1911 (1-2 Geo. V, c. 23), as amended by the Statute of April 3, 1914 (4 Geo. V, c. 5).

**Finance.**—Appropriation; Bank (12); Bills of Exchange (16); Board of Audit (10); Canadian Farm Loan (66); Civil Service Superannuation (24); Consolidated Revenue and Audit (178); Contingencies (31); Currency (40); Dept. of Finance and Treasury Board (71); Dominion Notes (41); Federal District Commission (Stats. 1926-27, c. 55); Finance (70); Interest (102); Ottawa Mint (134); Penny Bank (13); Provincial Subsidies (192); Quebec Savings Banks (14); Special War Revenue (179) (in part).

**Fisheries.**—Fisheries (73); Fish Inspection (72); Meat and Canned Foods (77) (so far as it relates to fish or shellfish); Deep Sea Fisheries (74); Northern Pacific Halibut Fishery Protection (75); Pelagic Sealing (153); Customs and Fisheries Protection (43) (in part); Navigable Waters Protection (140) (in part); The Biological Board Act (18) is also administered by the Minister of Fisheries.

**National Health.**—Department of Pensions and National Health (Part II) (39); Quarantine (168); Public Works Health (91); Leprosy (119); Canada Shipping (Sick and Distressed Mariners) (186); Proprietary or Patent Medicine (151); Opium and Narcotic Drug (144); Food and Drugs (including Maple Act and Honey Act) (76).

**Immigration.**—The Immigration Act and Regulations, 1910 (96); the Chinese Immigration Act and Regulations, 1923 (95).

**Indian Affairs.**—Indian (98).**Insurance.**—Insurance (101); Loan Companies (28); Trust Companies (29).

**Interior.**—Department of the Interior (103); Dominion Lands (113); Public Lands Grants (114); Dominion Lands Survey (117); Forest Reserves and Parks (78); Irrigation (104); Railway Belt (116); Railway Belt Water (211); Yukon (215); Yukon Placer Mining (216); Yukon Quartz Mining (217); Dominion Water Power (210); Land Titles (118); Northwest Game (141); Northwest Territories (142); Ordnance and Admiralty Lands (115); Reclamation (175); Seed Grain (87); Seed Grain Sureties (88); Migratory Birds Convention (130); Manitoba Supplementary Provisions (124); Saskatchewan and Alberta Roads (180).

**Justice.**—Department of Justice (106); Solicitor-General's (107); North-west Territories (142); Yukon (215); Royal Canadian Mounted Police (160); Judges (105); Supreme Court (35); Exchequer Court (34); Admiralty (33); Petition of Right (153); Criminal Code (36); Penitentiary (154); Prisons and Reformatories (163); Identification of Criminals (38); Ticket of Leave (197); Fugitive Offenders (81); Extradition (37); Juvenile Delinquents (108); Bankruptcy (11).

**King's Printer and Controller of Stationery.**—Public Printing and Stationery (162); The Publication of Statutes (2).

**Labour.**—Labour Department (111); Conciliation and Labour (110); Industrial Disputes Investigation (112); Fair Wages Resolution of the House of Commons, 1900; Employment Offices Co-ordination (57); Technical Education (193), as amended 1929, c. 8; Government Annuities (7); Combines Investigation (26); Old Age Pensions (156); White Phosphorus Matches (128); Fair Wages and Eight Hour Day (20-21 Geo. V, c. 20); Unemployment Relief, 1930 (21 Geo. V, c. 1).

**Marine.**—Government Harbours, Piers and Breakwaters (89); Shipping of Live Stock (122); Marine and Fisheries Department (125); Maritime Conventions (126); Navigable Waters' Protection (140); Quebec Harbour and River Police (169); Canada Shipping (186); Radiotelegraph (195); Government Vessels Discipline (203); U.S. Wreckers' (214); Belleville Harbour Commission (1889, c. 35); Halifax Harbour Commission (1927 c. 58); Hamilton Harbour Commission (1912, c. 98); Montreal Harbour Commission (1894, c. 48; 1909, c. 24; 1912, c. 35; 1913, c. 32; 1914, c. 42); North Fraser Harbour Commission (1913, c. 162); New Westminster Harbour Commission (1913, c. 158); Quebec Harbour Commission (1899, c. 34) (1905, c. 33); Saint John, N.B., Harbour Commission (1927, c. 67); Three Rivers, Que., Harbour Commission (1923, c. 71); Trenton, Ont., Harbour Commission (1922, c. 50); Toronto Harbour Commission (1911, c. 26); Vancouver Harbour Commission (1913, c. 54); Winnipeg and St. Boniface Harbour Commission (1912, c. 55); Chicoutimi Harbour Commission (1926, c. 6).

**Mines.**—Geology and Mines (83); Explosives (62); The Domestic Fuel (17 Geo. V, c. 52).

**National Defence.**—Department of National Defence Act (136); Naval Service Act (139); Naval Discipline Act; Militia Act (132); Militia Pension Act (133); Royal Military College Act (18-19 Geo. V, c. 7); Sec. 85 and 86 Criminal Code; Army Act; Regimental Debts Act; Aeronautics Act (3); Air Force Act.

**National Revenue.**—Customs Tariff (44); Customs (42); Canada Shipping (in part) (186); Animal Contagious Diseases (in part) (6); Destructive Insect and Pest (in part) (47); Export (63); Copyright (in part) (32); Petroleum and Naphtha (159); Excise (60); Special War Revenue 1915 (179); Income War Tax, 1917 (197); Agricultural Pests Control Act (in part) (5); Customs and Fisheries Protection (in part) (43); Explosives (in part) (62).

**Post Office.**—Post Office (161); Special War Revenue (in part) (179).

**Public Works.**—Public Works (166); Government Harbours and Piers, s. 5 (89); Navigable Waters Protection (140); Telegraphs (194); Dry Dock Subsidies (191); an Act to authorize the payment of a subsidy to the Collingwood Shipbuilding Co. Ltd. (2 Geo. V, 1912, c. 17); Government Works Toll Act (167); an Act to incorporate the National Gallery of Canada (3-4 Geo. V, 1913, c. 33); an Act to authorize the payment of a subsidy to the Western Dry Dock and Shipbuilding Co., Ltd., (3-4 Geo. V, 1913, c. 57); Act to confirm an agreement between His Majesty the King and the Corporation of the City of Ottawa (10-11 Geo. V, c. 15); Ferries Act (68), transferred by Order in Council, June 3, 1918, for administration by Public Works Department. Act Regulating Vehicular Traffic on Dominion Property (20-21 Geo. V, c. 47).

**Railways and Canals.**—Department of Railways and Canals (171); Government Railways (173); Intercolonial and P.E.I. Railway Employees' Provident Fund (6-7 Edw. VII, c. 22 and amending Acts); Acts to amend the National Transcontinental Railway Act (4-5 Geo. V, c. 43 and 5 Geo. V, c. 18); Canadian National Railways (172); Canadian National Railway Branch Lines (14-15 Geo. V, cc. 14-32; 15-16 Geo. V, cc. 5, 6 and 7; 17 Geo. V, cc. 12-26; 18-19 Geo. V, cc. 18-36); Government Employees Compensation (30); Canadian National Refunding, 1927 (17 Geo. V, c. 27); The Canadian National Refunding Act, 1929 (19-20 Geo. V, c. 11); Canadian National (Central Vermont) Financing, 1930 (20-21 Geo. V, c. 7); Canadian National Refunding, 1930 (20-21 Geo. V, c. 8); Grand Trunk Pacific Securities, 1927 (17 Geo. V, c. 7); Canadian National Steam-

ships, 1927 (17 Geo. V, c. 29); Canadian National Railways Pension Act (19-20 Geo. V, c. 4); Canadian National Montreal Terminals Act, 1929 (19-20 Geo. V, c. 12); Maritime Freight Rates Act (79).

The "Railway Act" (Companies) confers certain powers upon the Minister of the Department. In the case of subsidized railways, the authorizing Acts are carried out under the Department, which also has certain jurisdiction where Government guarantee has been given.

**Secretary of State.**—Companies (27); Naturalization (138); Patents (150); Copyright (32); Trade Marks (201); Canada Temperance (196); Boards of Trade (19); Ticket of Leave (197); Trade Unions (202); Treaties of Peace.

**Trade and Commerce.**—Canada Grain (86) (20-21 Geo. V, c. 5); Copper Bars and Rods Bounty (13-14 Geo. V, c. 40); Electricity and Fluid Exportation (54); Electricity Inspection (55); Electric Units (56); Gas Inspection (82); Hemp Bounty (13-14 Geo. V, c. 50); Inland Water Freight Rates (208); Precious Metals Marking (84) (18-19 Geo. V, c. 40) (19-20 Geo. V, c. 53); Statistics (190); Weights and Measures Inspection (212); Act to place Canadian Coal used in the Manufacture of Iron or Steel on a Basis of Equality with Imported Coal (20-21 Geo. V, c. 6).

### Section 3.—Publications of Dominion Departments.

**List of Principal Publications of the Departments of the Government of the Dominion of Canada as Compiled from Information Supplied by the respective Departments.**

**Agriculture.**—Annual Reports of the Minister, of the Experimental Farms and Stations, of the Veterinary Director-General and of the Entomological Branch. Bulletins, pamphlets and circulars of the Experimental Farms Branch on a great variety of agricultural subjects, including publications of the following Divisions:—Field Husbandry; Animal Husbandry; Horticulture; Cereal; Chemistry; Forage Plants; Botanical; Poultry; Tobacco; Economic Fibre; Bacteriology; Bees, and Illustration Stations. *Seasonable Hints* is issued three times a year. Bulletins of the Dairy and Cold Storage Branch relating to the dairying and cold storage industries in Canada, the making of butter and cheese, dairying experiments, co-operation, etc. Reports, bulletins, pamphlets, etc., of the Live Stock Branch on cattle, sheep, swine, poultry, marketing of eggs, wool, etc. Bulletins of the Health of Animals Branch, with regulations as to contagious abortion; rabies; sheep scab; actinomycosis; anthrax; glanders; hog cholera; maladie du coit; tuberculosis; foot-and-mouth disease; quarantine; and meat inspection. Bulletins and reports of the Seed Branch as to seed-testing, the production and use of seed grains, the Seed Control Act, the Feeding Stuffs Act and the Fertilizers Act. Bulletins and circulars of the Entomological Branch and instructions to importers of nursery stock. Reports of the Canadian Seed Growers' Association. Fodder and Pasture Plants, by George H. Clark, B.S.A., and M. Oscar Malte, Ph.D., 143 pages, 27 plates, price 50 cents. Bulletin on the Maple Sugar Industry.

**Dominion Experimental Farms.**—(1) Report of the Director (contains summary of reports of Divisions, Farms and Stations); (2) Animal Husbandry Division; (3) Bee Division; (4) Botanical Division; (5) Chemistry Division; (6) Field Husbandry Division; (7) Illustration Stations Division; (8) Poultry Division; (9) Tobacco Division; (10) Horticultural Division; (11) Cereal Division; (12) Forage Crops Division; (13) Economic Fibre Division and (14) Division of Bacteriology. *Experimental Farms and Stations Reports.*—Agassiz, B.C.; Indian Head, Sask.; Nappan, N.S.; Charlottetown, P.E.I.; Invermere, B.C.; Sidney, B.C.; Brandon, Man.; Morden, Man.; Cap Rouge, Que.; Scott, Sask.; Swift Current, Sask.; Kapuskasing, Ont.; La Ferme, Que.; Kentville, N.S.; Lennoxville, Que.; Ste. Anne de la Pocatière, Que.; Rosthern, Sask.; Lethbridge, Alta.; Lacombe, Alta.; Summerland, B.C.; Farnham, Que.; Fredericton, N.B. *Experimental Sub-Stations.*—Beaverlodge, Alta.; Fort Vermilion, Alta.; Fort Resolution, N.W.T.; Salmon Arm, B.C.; Fort Providence, N.W.T.; Betsiamites, Que.; and Fort Smith, N.W.T.

A pamphlet entitled "List of Publications" contains a list of the publications of the Department, numbering more than 400. These publications include, in addition to the reports, bulletins and pamphlets on field crops, live stock, dairying, orchard and garden insect and plant diseases, poultry and miscellaneous topics. With few exceptions, the publications of the Department are free on application to its Publications Branch.

**Auditor-General.—Annual Report.**

**Board of Railway Commissioners for Canada.—Annual Report.** Pamphlet containing Judgments, Orders, Regulations and Rulings, issued fortnightly.

**Civil Service Commission.—Annual Report,** including lists of permanent appointments, promotions and transfers; Classification of the Civil Service of Canada, revised up to Sept. 1, 1927; Regulations of the Civil Service Commission; How Appointments are made in the Public Service; Examinations for Clerks, Stenographers and Typists; Examinations for Customs Service; Examinations for Postal Service; Examinations for Junior Trade Commissioners.

**Dominion Fuel Board.—The Dominion Fuel Board** was created in 1922 primarily to instigate a thorough study of the underlying causes of recurring fuel shortages in Canada and of the methods by which they may be counteracted. It is composed of officers of the Departments of Mines and of the Interior, and the co-operation of both Departments is given to the Board in its investigations. The following reports and publications have been issued:—Interim Report of the Dominion Fuel Board, 1923; Central and District Heating, Possibilities of Application in Canada, by F. A. Combe, 1923; Coke as a Household Fuel in Central Canada, by J. L. Landt, 1925; Smoky River Coal Field, by James McEvoy, 1925; Why You Should Insulate Your Home, by G. D. Mallory, 1927; Dominion Fuel Board Second Progress Report, 1928; Humidity in House Heating, by E. S. Martindale, 1929; Cards bearing instructions on "How to Burn Coke".

**Publications of Mines Branch, Department of Mines, in co-operation with Dominion Fuel Board.—Coking Experiments on Coals from the Maritime Provinces,** by B. F. Haanel and R. E. Gilmore, 1926; Tests of Various Fuels to Determine their Relative Heating Efficiency, by E. S. Malloch and C. E. Baltzer, 1927; Instructions for Burning Coal, Coke and Peat, 1927; Industrial Fuel and Power Statistics for Ontario, Calendar Year 1925, by E. S. Malloch and C. E. Baltzer, 1928.

**External Affairs.—Annual Report; Annual Treaty Series.**

**Finance.—Annual Report on the Public Accounts of the Dominion of Canada.** Monthly Statements of the Chartered Banks of Canada. Estimates.

**Fisheries.—(Publications marked \* are available in either English or French).**

- \* Annual Report including Fish Culture Report.
- \* Annual Statistical Report.  
Fish Culture Report (*separately*).
- A Popular Account of Some Canadian Fishes—A. Halkett.
- \* Canada's Fisheries.  
Map of the Atlantic Coast Provinces showing fishing grounds.
- \* The Dried Codfish Trade—J. J. Cowie.
- \* The Red Discolouration of Cured Codfish.  
Statistics of the Haddock Fishery in North American Waters—A. W. H. Needler.  
Statistics of the Cod Fishery—O. E. Sette.  
Investigation into the Natural History of the Herring—Dr. Johan Hjort.  
Investigations in the Gulf of St. Lawrence and Atlantic Waters of Canada—Dr. Johan Hjort.  
Fisheries Investigation into Hudson and James Bays in 1914—Melville, Lower and Comeau.
- \* Reports on the Lobster Industry—Dr. A. P. Knight.  
Discolouration, Smut or Blackening of Canned Lobsters—Harrison and Hood.  
Historical Account of the Lobster Canning Industry—R. H. Williams.
- \* Fish Canning in Canada.  
Reports by Professor E. E. Prince on
  - (1) Hatching and Planting of Trout;
  - (2) Planting of Predaceous Fish;
  - (3) Notes on the Habits and Life History of the Salmon.
- \* Fish and Chip Shops.
- \* Fisheries News Bulletin (monthly).
- Quarterly Bulletin of Sea Fisheries Statistics.
- \* The Salmon Fishery of British Columbia.  
Monthly Report on Fish Market Conditions in Several Countries.  
Preliminary Report on Fisheries Investigations in Hudson Bay, 1930.

Various reports and bulletins of the Biological Board of Canada are also available for distribution by the Department of Fisheries.

**Geographic Board of Canada.**—18th Report, containing all decisions to Mar. 31, 1924; 19th Report, containing all decisions from April 1, 1924, to July 31, 1927, with supplements numbers 1 to 12. "Place-Names of Alberta", 1928. 25c.; "Place-Names of Manitoba", 1931, 25c.; "Meaning of Canadian City Names", 1922; "Place-Names on Magdalen Islands, Quebec", 1922; "Place-Names of Prince Edward Island with Meanings", 1925, 25c.; "Place-Names in Thousand Islands, St. Lawrence River", 1910; "Place-Names on Anticosti Island, Quebec", 1922; Catalogue and Graphical Index of Maps in the Geographic Board Library, two volumes, 1922, Supplement 1925.

**Immigration and Colonization.**—Atlas of Canada—United Kingdom, United States, and French editions. Eastern Canada—United Kingdom, United States, and French editions. Canada West—United Kingdom, United States, and French editions. Farm Opportunities in Canada—United Kingdom, Irish Free State, Danish, French and United States editions. A Manual of Citizenship—English, French, and Dutch editions. Houseworker in Canada, Vest Pocket Booklet—British, United States and European editions. Map Folder of the World—United States edition. Land Settlement, Canada; Where to go for Advice. British Farm Settlement in New Brunswick. Roy Settlement in Canada. Winning Through.

**Indian Affairs.**—Annual Report. Indian Act, R.S.C., 1927. Schedule of Indian Reserves, 1928. Indian Treaties and Surrenders, Vols. I, II, III.

**Insurance.**—Quarterly Statement showing List of Licensed Companies. Annual Abstract of Statements of Insurance Companies in Canada (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous), Vol. II (Life Companies and Fraternal Benefit Societies). Annual List of Securities held by Insurance, Trust and Loan Companies in Canada, with Department's Valuation thereof. Abstract of Statements of Loan and Trust Companies in Canada. Annual Report of Loan and Trust Companies incorporated by the Dominion.

**Interior.**—Owing to the re-organization of the Department of the Interior, now in progress, it has not been possible to secure, for this edition of the Year Book, an up-to-date list of available publications. The list published in the 1930 Year Book is now in many respects out of date, but it is hoped to bring this section up-to-date next year. In the meantime, the interested reader is referred to the Secretary of the Department for information regarding current publications.

**International Boundary Commission.**—*Reports.*—Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada from the source of the St. Croix River to the St. Lawrence River, 1925, with accompanying Triangulation and Precise Traverse Sketches, \$5; Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada from the Western Terminus of the land Boundary along the 49th Parallel, on the west side of Point Roberts, through Georgia, Haro and Juan de Fuca Straits, to the Pacific Ocean, 1921, with accompanying Chart, \$5; Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada along the 141st Meridian from the Arctic Ocean to Mount St. Elias, 1918, \$5; Report of the International Waterways Commission upon the International Boundary between the Dominion of Canada and the United States, through the River St. Lawrence and the Great Lakes, 1915, with full set of 30 maps, \$7.50. *Maps.*—From the source of the St. Croix River to the Atlantic Ocean, 18 sheets except sheet No. 13, various scales, sizes 26 by 38 inches, 50c. each; from the St. Lawrence River to the source of the St. Croix River, 61 sheets and index sheet, various scales, 26 by 38 inches, 50c. each; from the St. Lawrence River at St. Regis to the head of Pigeon Bay in Lake Superior, 29 sheets and index sheet, International Waterways Commission, various scales 29½ by 36 inches, 25c. each; Northwesternmost Point of Lake of the Woods to the head of Pigeon Bay in Lake Superior, 36 sheets and index sheet, various scales, 26 by 38 inches, 50c. each; 49th Parallel, Northwesternmost Point of the Lake of the Woods to Point Roberts, 59 sheets, index and profile sheets, scale 1:62,500, size 15 by 30 inches, sheets 1 to 19, 50c. each, sheets 20 to 59, 25c. each; west side of Point Roberts through Georgia, Haro and Juan de Fuca Straits to the Pacific Ocean, 1 sheet, scale 1:200,000, 28 by 41 inches, 50c.; Cape Muzon to Mount St. Elias, 13 sheets 25 by 29 inches, scale 1:250,000, sheets 1 and 2 not yet published, 50c. each; Preliminary Map—Head of Portland Canal to Stikine River, scale 1:250,000, 24 by 33 inches, 25c. each; 141st Meridian from the Arctic Ocean to Mount St. Elias, 30 sheets, scale 1:62,500 with profile sheet, index sheet and special Arctic Coast Sheet, size 18 by 27½ inches, 25c. each; Mount St. Elias to White River sheet, scale 1:250,000, size 19 by 28 inches, 25c.

These reports or maps may be obtained on application to the International Boundary Commission, Department of the Interior, Ottawa. Cheques should be made payable to the Receiver General of Canada.

**Justice.**—Annual Report of the Superintendent of Penitentiaries.

**King's Printer and Controller of Stationery.**—The *Canada Gazette*, published weekly, with occasional supplements and extras; subscription in Canada and United States \$5 per annum payable in advance, single copies 15c. each, other countries \$6.50 per annum and 20c. per single copy. Judgments of the Board of Railway Commissioners, semi-monthly, \$3 per annum, single copies, 20c. Canada Law Reports, published monthly, yearly subscriptions, \$6. Revised Statutes of Canada, 1927 (5 vols.), \$10. Annual Statutes, 1928, \$5, 1929, \$5. Acts, Public and Private, with amendments to date, 10c. to \$1 per copy. Canadian Postal Guide, \$1 paper cover, \$1.50 cloth cover; including supplements, additional 25c. Parliamentary Debates, "Hansard", issued daily during session, French and English, \$3 per session each for House of Commons and Senate Debates; single copies, 5c. Prices of bluebooks are in nearly every case printed upon the front cover and are based practically on cost. They may be ordered direct from the King's Printer, Ottawa. A catalogue of official publications of the Parliament and Government of Canada is issued regularly and a copy may be obtained free of charge from the King's Printer, Ottawa.

**Labour.**—*Monthly.*—The *Labour Gazette* (published in English and French) at a subscription price of 20c. per annum. *Annually.*—Report of the Department of Labour (including: Reports of Proceedings under the Industrial Disputes Investigation Act, Conciliation and Labour Act, Employment Offices Co-ordination Act, Technical Education Act, Government Annuities Act, Combines Investigation Act, and Old Age Pensions Act. Labour Legislation in Canada as existing on Dec. 31, 1928 (a supplementary report thereto on Labour Legislation is published annually in February or March). Labour Organization in Canada. Organization in Industry, Commerce and the Professions in Canada. Co-operative Associations in Canada. Wages and Hours of Labour in Canada. Prices in Canada and other Countries. Strikes and Lockouts in Canada and other Countries. *General Reports.*—Report of Royal Commission on Industrial Relations, bound with Report of Proceedings and Discussions of National Industrial Conference, 1919. Hours of Labour in Canada and other Countries, 1923. Report of Commission appointed under Order in Council (P.C. 1929), Sept. 22, 1923, to inquire into The Industrial Unrest among the Steel Workers at Sydney, N.S. Report of Provincial Royal Commission on Coal Mining Industry in Nova Scotia, January, 1926. Government Intervention in Labour Disputes in Canada. Judicial Proceedings respecting Constitutional Validity of the Industrial Disputes Investigation Act, 1907, and Amendments of 1910, 1918, 1920 and 1925. Legal Status of Women in Canada. The Employment of Children and Young Persons in Canada. *Reports of Investigations under the Combines Investigation Act.*—(1) Investigation into Alleged Combine in the Distribution of Fruits and Vegetables in Western Canada, 1925; (2) Investigation into Alleged Combine amongst Coal Dealers at Winnipeg and other places in Western Canada, 1925; (3) Investigation into Alleged Combine limiting Competition in the Marketing of New Brunswick Potatoes, 1925; (4) Investigation into Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, 1926 (out of print); (5) Investigation into Alleged Combine in the Distribution of Fruits and Vegetables produced in Ontario, 1926; (6) Investigation by Registrar into the Proprietary Articles Trade Association, 1926; (7) Investigation by Commissioner into the Proprietary Articles Trade Association, 1927; (8) Reports of the Commissioner on the Amalgamated Builders' Council, 1929; (9) Report of Commissioner on the Electrical Estimators Association, 1930; (10) Report of Registrar into alleged combine in the Bread-Baking Industry in Canada, 1931. *Bulletins in Industrial Relations Series.*—(1) Joint Councils in Industry; (2) Report of a Conference on Industrial Relations, 1921; (3) Joint Conference of the Building and Construction Industries in Canada; (4) Employees' Magazines in Canada; (5) Canada and the International Labour Conference; (7) Canadian Railway Board of Adjustment, No. 1, Second Report; (8) National Conference Regarding Winter Employment in Canada; (9) Canadian Railway Board of Adjustment, No. 1, Third Report; (10) Canadian Railway Board of Adjustment, No. 1, Fourth Report.

**Marine.**—Annual Report. List of Canadian Shipping. Reports of Expeditions to Hudson Bay, Northern Waters and Arctic Archipelago. Canadian Port Directory. List of Lights, etc., in Canada;—(a) Pacific Coast; (b) Atlantic Coast; (c) Inland Waters.

**Charts and Publications of the Canadian Hydrographic Service.**—Catalogue of Marine Charts, Sailing Directions, Tidal Information and other Canadian Government publications of interest to mariners (free). *Pilots.*—(price \$1.00 per copy) St. Lawrence Pilot (below Quebec), comprising sailing directions from Cap des Rosiers to Quebec, 5th edition, 1929. Supplement No. 1 to above, 1931. St. Lawrence Pilot (above Quebec), comprising sailing directions from Quebec harbour

to False Ducks island and Stony point, lake Ontario, 2nd edition, 1920. Sailing Directions for the Canadian shores of lake Ontario, 1921. Supplement No. 1 to above, 1931. Sailing Directions for the Canadian shores of lake Huron and Georgian bay, 3rd edition, 1926. Sailing directions for the Canadian shores of lake Superior, 1st edition, 1922. Supplement No. 2 to the above, 1931. British Columbia Pilot, Vol. II, northern portion of the coast of British Columbia from Cape Caution to Portland Inlet and Queen Charlotte Islands, 1st edition, 1930. Navigating charts. *Reports of the International Waterways Commission*.—On the Regulation of Lake Erie, 1910. On the International Boundary Line through the St. Lawrence river, Great Lakes and Connecting Waters, 1915. *Tidal and Current Survey Reports*.—(issued free of charge)—Currents in the gulf of St. Lawrence, including the Anticosti Region, Cabot Strait and Northumberland Strait. Currents of the Southeastern Coasts of Newfoundland (under revision). Currents in Belle Isle Strait (under revision). Currents in the Entrance to the St. Lawrence Estuary. Tables of Hourly Directions and Velocity of Currents and Time of Slack Water in the Bay of Fundy. Tide Levels and Datum Planes on the Pacific Coast of Canada. Tide Levels and Datum Planes in Eastern Canada; giving the levels in 86 harbours and other localities. Tides at the head of the Bay of Fundy, with diagrams. Tidal Investigations and Results; Arctic Tides, with map. Tides and Tidal Streams; a general description of the various types of tide and the behaviour of Currents, with plates. Temperatures and Densities of the Waters of Eastern Canada, with maps. *Tide Tables*.—(issued free of charge) Tide Tables for the Pacific Coast. Tide Tables for the Eastern Coasts of Canada. Abridged edition for Quebec, Father Point and the St. Lawrence River. Abridged edition for Saint John, N.B., and the Bay of Fundy. Abridged edition for Halifax. Sydney and Atlantic coast of N.S. Abridged edition for Charlottetown and Northumberland Strait. Abridged edition for Vancouver and the Strait of Georgia. Abridged edition for Prince Rupert and Northern B.C.

*Charts of the Canadian Hydrographic Service*.—(Price 50 cents each.) Numerous charts are published of the Atlantic coast and its harbours, Hudson bay and harbours and anchorages, the St. Lawrence river, the Ottawa river, lake Ontario and harbours, lake Erie and harbours, lake Huron and Georgian bay and harbours, lake Superior and harbours, lake of the Woods, lake Winnipeg, Great Slave lake, Pacific coast and harbours. There is also a number of International Waterways Commission charts, not intended for navigation.

*Radiotelegraph Branch*.—Maps showing the Radiotelegraph and Radiotelephone coast stations in the Dominion of Canada. Postmaster-General's Handbook for Radiotelegraph Operators (Instructions re handling of traffic, etc.). Radiotelegraph Act and Regulations issued thereunder. Circular letter to Canadian Broadcast Listeners re Interference with the Regenerative Receiving Set. Official List of Radio Stations in Canada (price 25 cents).

*Mines*.—The scientific and investigatory work of the Department of Mines, which is chiefly concerned with the development of the Dominion's mineral industries, is carried on by the Department's four principal branches—the Geological Survey, the Mines Branch, the National Museum of Canada and the Explosives Division.

The Geological Survey carries on areal and economic investigations and research work in geology and mineralogy; the Mines Branch carries on field laboratory and industrial investigations covering the various phases of the mining and metallurgical industries from the primary occurrence of the ores to the utilization of the finished products; the National Museum of Canada carries on scientific investigations in all branches of natural history; and the Explosives Division, under the provisions of the Explosives Act (R.S.C., c. 62), has supervision of the manufacture, testing, storage, and importation of explosives and issues the licences and permits authorized by the Act.

The Department of Mines publishes an annual administrative report covering the activities of the whole Department, and occasional pamphlets illustrating the services rendered the mining and metallurgical industries. Each of the branches publishes annual reports in addition to memoirs and bulletins on special investigations and districts.

*The Geological Survey Branch*.—From 1842 to 1904, published annual volumes. From 1904 to 1910, upwards of 80 reports were issued, all separately. Since then the publications have consisted of memoirs and bulletins appearing at irregular intervals, an annual summary report and miscellaneous publications, including geological and topographical maps, geological guide books and handbooks. The subjects dealt with include areal and economic geology of particular districts, mineralogy, palæontology and related topics. In 1926 the first volume of a new Economic Geology Series was published, and further volumes of this series have since been issued. A list of the reports published by this Branch may be obtained on application to the Director, Geological Survey, Ottawa.

*The National Museum of Canada* has published a series of *Museum Bulletins* in many branches of natural history. A list of these may be obtained on application to the Director, National Museum of Canada, Ottawa.

*The Mines Branch*, since its inception in 1908, has published annual summary reports covering the investigations of the Divisions of Mineral Resources, Ore Dressing and Metallurgy, Fuels and Fuel Testing, Ceramic and Road Materials and Chemistry, also the operations of the Dominion Assay Office. More detailed and comprehensive reports have also been published by this Branch, dealing with the technology of most of the economic minerals of Canada. A list of the Mines Branch reports may be had on application to the Director, Mines Branch, Ottawa.

*The Explosives Division* has published annual reports since 1919 and a number of pamphlets on the proper care and handling of explosives. Copies may be obtained on application to the Chief Inspector of Explosives, Department of Mines, Ottawa.

The publications of the Department of Mines cover all phases of mining from preliminary explorations and surveys of unmapped territory through the mining, milling, smelting and refining of the ores to the marketing and utilization of the finished product. Most of these reports and maps may be obtained free of charge by those interested on application to the Deputy Minister of Mines, Ottawa, or to the Directors of the Branches concerned, whose addresses are given above. Many of these reports may be had in French translations.

**National Defence.**—Annual Report, Militia and Air Services; Annual Report, Naval Service; Report on Civil Aviation; List of Officers, Defence Forces of Canada, Naval, Military and Air Services; Canadian Navy List; General Orders, Militia and Air Services; Militia Orders; Air Regulations.

**National Research Council.**—*Annual Reports.*—Reports of the National Research Council for the years 1917-18; 1918-19; 1919-20; 1920-21; 1921-22; 1922-23; 1923-24; 1924-25 (English and French); 1925-26; 1926-27; 1927-28; 1928-29; 1929-30. *General Reports.*—(For Nos. 1 to 21 see p. 1042 of the 1927-28 Year Book. Nos. 6, 10 and 12 are now out of print.) No. 22, An Experimental Study of Sieving, by J. B. Porter, Ph.D., D.Sc.; No. 23, The Storage of Apples in Air-cooled Warehouses in Nova Scotia, by S. G. Lipsett, Ph.D., covering investigation by Associate Committee on Fruit Storage; No. 24, The Drying of Wheat, covering an investigation by the Associate Committee on Grain Research. *Bulletins.*—(For titles of Nos. 1 to 12, see p. 1042 of the 1927-28 Year Book. By Bureau of Publications:—Weekly News Bulletin; Pamphlets on Saskatchewan—Legislation, Natural Resources, etc.

## ALBERTA.

**Agriculture.**—Alberta, a brief, well-illustrated handbook on the Province; Alberta's Beauty Spots; Official Highway Map of Alberta; Annual Report of the Department of Agriculture; Statistics of Progress; The Ploughing Match; Summer-fallow in Southern Alberta; Sowing Good Seed; Storing of Roots; Alberta's Weed Problem; Weeds Poisonous to Live Stock; Soil Cultivation; Building up a Dairy Herd; Control of Grasshoppers; Destruction of Gophers; Sheep in Alberta; The Suckling Period; School Fairs Calendar; Agricultural Schools Calendar; Growing Feed in Southeastern Alberta; Meat Curing on the Farm; Turkey Breeding and Management.

**Education.**—Annual Report; Courses of Studies for Elementary Schools; Regulations re Public School Leaving Examinations; Regulations re Examinations for Secondary School Grades; Handbook for Secondary Schools; Promotion Tests for Grades V, VI and VII; Departmental Examinations for Grades VIII-XII; Pamphlets on Picture Study; Architecture and Sculpture; Summer School Announcement; Course of Studies and Examinations for Commercial Diplomas; Normal School Announcement; Night Class Instruction in Mining Centres; Technical Educa-

tion in Mining Centres; Bulletin and Regulations covering School Buildings in Rural and Village School Districts; Series of Plans and Specifications for Teachers' Residences; Series of Plans for one- and two-roomed Schools, with Specifications; The Certification of Teachers in Alberta; Annual Announcement of the Provincial Institute of Technology and Art; School Act; Geography Manual for High Schools; Physical Education for Rural Schools; Physical Education for Secondary Schools; Rural Education in Alberta; Civic Manual for High Schools; Seat Work Problems for Junior Grades.

**Attorney-General**—Annual Report on Dependent and Delinquent Children.

**Treasury**.—Budget Speech containing extracts from Public Accounts and other financial statements; Public Accounts.

**Public Works**.—Annual Report; Official Highway Guide.

**Municipal Affairs**.—Annual Report of Department; List of Alberta Municipalities; Report of the Alberta Assessment Commission Triennial Assessment, 1931-1933.

**Public Health**.—Annual Report of Department; Annual Report on Vital Statistics; Bulletins issued monthly on various Health Subjects. Pamphlets regarding Infectious Diseases—Diphtheria, Scarlet Fever, Measles, Whooping Cough, Smallpox, etc. (in different languages). Public Health Bulletin for Teachers; Alberta Mother's Book; Mouth Health; "What you should know about Cancer" (book); General Information regarding Tonsils; Health Rules for School Children; Hints on Home Nursing; Goitre; Systems of State Medicine (book).

**Other Publications**.—Annual Reports are also issued by the following Departments and Branches:—Railways and Telephones, Treasury (Insurance Branch), Public Accounts, Board of Public Utilities, Labour Bureau.

## BRITISH COLUMBIA.

**Agriculture**.—*Dairying*.—(5) Varying Butter-fat Tests; (71) Butter-making on the Farm; (2) Farm Cheese; (12) Rules Governing Cow-testing Associations in B.C.; (4) Clotted Cream; (17) The Story of Feed Unit; (6) Care of Milk and Cream; (18) Certified Milk and Butter-fat Records, 1929; (1) Ropy Milk in B.C.; (13) A Farm Dairy Sterilizer; (9) Dairy Farm Sterilizing Equipment. *Diseases and Pests*.—(45) Anthracnose; (39) Apple Aphides; (44) Apple-scab; (34) Woolly Aphid of the Apple; (38) The Lesser Apple-worm; (32) Cabbage-root Maggot; (37) The Imported Cabbage-worm; (2) Colorado Potato-beetle in B.C.; (35) Currant Gall-mite; (68) Diseases and Pests of Cultivated Plants; (66) Fire-blight; (63) Locust-control; (61) Making Lime-sulphur at Home; (36) The Onion-thrips; (41) The Oyster-shell Scale; (31) Peach-twig Borer; Spray Calendar; (40) Soap Solutions for Spraying; (68) Oil Sprays; (33) Strawberry-root Weevil. *Field Crops*.—(6) The Jerusalem Artichoke; (8) Field Corn; (3) Kale and Rape Crops; (86) The Potato in B.C.; (7) Root-seed Production; (98) Roots and Root-growing; (4) Noxious Weeds. *Fruits and Vegetable Growing*.—(57) Blackberry Culture; (69) Cantaloupe-growing in B.C. Dry Belt; (70) Celery Culture; (56) Currant and Gooseberry Culture; (43) Gardening on a City Lot; (54) Loganberry Culture; (51) Orchard Cover Crops; (53) Selection of Orchard Sites and Soils; (62) Planting Plans and Distances; (60) Pruning Fruit-trees; (55) Raspberry Culture; (67) Rhubarb Culture; (58) Strawberry Culture; (65) Tomato-growing in B.C.; (42) Top-working of Fruit-trees and Propagation; (64) Varieties of Fruit recommended for Planting in B.C. *Live Stock*.—(67) Care and Feeding of Dairy Cattle; (64) Goat-raising in B.C.; (60) Hog-raising in B.C.; (99) Care and Management of Sheep. *Poultry*.—(27) Breeding-stock Hints; (15) Profitable Ducks; (25) Hints on Egg Hatching; (93) Feeding for Egg Production; (12) Management of Geese; (31) The Goose; (39) Natural and Artificial Incubation and Brooding; Poultry-breeders' Directory; (63) Poultry-house Construction; (11) Poultry-keeping on a City Lot; (49) Market Poultry; (26) Practical Poultry-raising; (19) Poultry Rations for Chicks and Layers; (2) Tuberculosis in Poultry; (29) Rabbit Culture; (80) Fur-bearing and Market Rabbits; (28) Rabbit Recipes; (30) Sod-house Construction; (4) Management of Turkeys. *Settlers' Information*.—(43) Agriculture in the Similkameen, Boundary, and Kettle River Districts; (34) Agriculture in West Kootenay; (51) Central B.C.; (42) The Columbia Kootenay Valley; (44) Some Facts about B.C.; (40) The Okanagan Valley; (33) Vancouver Island and Gulf Islands. *Economic Survey Bulletins*.—(36) Dairy-farm Survey; (103) Dairy Survey; (41) Poultry-farm Survey, 1921; (101) An Economic Study of Small-fruit Farming in B.C.; (39) Small-fruit Survey, 1921; (105) Tree-fruit Farming in B.C.; (49) Tree-fruits Survey, 1921-25. *Miscellaneous*.—(92) Bee Culture in

B.C.; (85) Clearing Bush Lands in B.C.; (50) Exhibition Standards of Perfection; (48) Recommendations and Suggestions to Fall Fair Associations; Farm Account Book; The Farmers' Institutes of B.C.; Farmers' Institute By-laws; Farmers' Institute Rules and Regulations; Board of Horticulture Rules and Regulations; (47) Use of Water in Irrigation; (45) Judging Domestic Science and Women's Work, with Hints to Exhibitors; List of Publications; (35) How to Pack Nursery Stock; (83) Preservation of Food; (66) Silos and Silage; (5) Soils, Peat and Muck; Women's Institute By-laws; Women's Institute Rules and Regulations. *Reports*.—Agricultural Statistics, 1929; Climate of B.C., 1929; Department of Agriculture Reports, Years, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, and 1929.

**Lands.**—*Forest Branch*.—Circulars: "How to Obtain a Timber Sale" and "Forests and Forestry in British Columbia"; Grazing Regulations. *Land Settlement Board*.—Land Settlement Board Booklet.

**Mines.**—Comprehensive annual reports, special bulletins, preliminary reports, etc., obtainable on application to the Department of Mines.

**Bureau of Provincial Information.**—The Manual of British Columbia, 50c.; British Columbia, Playground of the World; Land of the Golden Twilight; Tabloid Travel Talks; Touring in British Columbia; Big Game of British Columbia. *Lands Series of Bulletins*.—(1) How to Pre-empt; (2) Some Questions and Answers regarding British Columbia; (3) British Columbia—Northern and Central Interior; (5) British Columbia—Southern Interior; (6) British Columbia Coast, Lower Mainland; (7) British Columbia Coast, Toba Inlet to Queen Charlotte Strait; (8) British Columbia Coast, Queen Charlotte Strait to Milbanke Sound; (9) British Columbia Coast, Milbanke Sound to Portland Canal; (10) Crown Lands, Purchase and Lease; (11) Cariboo Land Recording Division; (12) Kamloops Land Recording Division; (13) Similkameen Land Recording Division; (14) Vancouver Island; (15) Queen Charlotte Islands; (16) Cranbrook and Fernie Land Recording Divisions; (17) Yale Land Recording Division; (18) Osoyoos Land Recording Division; (19) Nicola Land Recording Division; (20) Nelson and Slocan Land Recording Division; (21) Revelstoke and Golden Land Recording Division; (22) Skeena Land Recording Division; (23) Stikine and Atlin Land Recording Division; (24) Hazelton Land Recording Division; (25) Peace River District; (26) Omineca District, Nation Lakes, etc.; (27) New Westminster Land Recording Division; (28) François-Ootsa Lakes; (29) Endako and Nechako Rivers; (30) Stuart and Babine Lakes; (31) Vicinity of the Pacific Great Eastern Railway (Squamish to Clinton); (32) Vicinity of the Pacific Great Eastern Railway (Clinton to 52nd Parallel); (33) Central Lillooet Division; (34) The Chilcotin Plateau; (35) Fort George Land Recording Division, Central and Western Portions; (36) South Fork of the Fraser and Canoe River Valleys; Kokanee Park; Mount Garibaldi Park; Mount Robson Park; Strathcona Park, Vancouver Island.

## CHAPTER XXIX.—THE ANNUAL REGISTER, 1930.

### Section I.—Dominion Legislation, 1930.

**Finance and Taxation.**—Three Appropriation Acts were passed during the session, *viz.*, cc. 1, 2 and 50 applying to the fiscal year ended Mar. 31, 1931. C. 1 and c. 2 granted respectively \$42,625,436.14 and \$61,070,000 for defraying the general expenses of the Government, the amount under c. 1 being one-sixth of the several items in the Estimates, and that under c. 2 being provision for supplementary estimates as per Schedule B. By c. 2 there was also provided a sum of \$6,638,030.23 for the previous fiscal year (1929-30). By c. 50 a further sum of \$213,127,180.71 was granted out of the Consolidated Revenue Fund for the fiscal year 1930-31, towards defraying the outstanding five-sixths of the several charges and expenses of the public service as set forth in Schedule A accompanying the Act, and \$21,101,944.75 as set forth in Schedule B (Supplementary Estimates).

The Income War Tax Act (c. 97, R.S.C. 1927) was amended by c. 24 as regards the exemption of \$500 on account of certain dependent relatives, where not already provided for by the Act. Donations of not more than 10 p.c. of the net taxable income of any taxpayer, made to organizations operated exclusively for charity, and income, to the extent of \$5,000 only, derived from annuity contracts (where a husband and wife both hold annuity contracts the limit is \$5,000 between them) were also exempted from income tax. Other provisions were made in relation to the corporation tax and family corporations. The dividends and interest received by non-resident officers and employees of businesses in Canada were rendered taxable.

C. 43 amended the Special War Revenue Act (c. 179, R.S.C. 1927) by the imposition of an excise tax on the sale, transfer or assignment of stocks, bonds, debentures and debenture stock according to a schedule outlined in the Act. Provision was also made for the collection of the tax and for penalties in cases of obstruction or refusal to comply with the conditions laid down.

The Customs Tariff was amended by c. 13 with respect to the rates of duty levied on a large number of commodities listed on Schedule A accompanying the Act. The Excise Act was amended by c. 18, principally as regards the conducting of enquiries or investigations in relation to the excise duties on screened malt, penalties for the sale of spirits unlawfully manufactured or removed from bond, and as regards the manufacture, sale and removal of tobacco.

By c. 7, financial refunding arrangements to the amount of \$8,609,000 in connection with certain lines of the Canadian National Railways located principally in the State of Vermont, and by c. 8, the refunding of other maturing financial obligations, not to exceed the aggregate face value of certain original securities, *viz.*, \$20,042,038.84, were provided for. C. 46 authorized the Canadian National Railway Company to issue debentures or other securities to the value of \$14,150,000 in respect of the purchase of securities and the construction of works and facilities in connection with the Toronto Terminals Railway Company.

**Agriculture.**—By c. 30, the Maple Sugar Industry Act, 1930, provisions were made to prevent the manufacture or sale of adulterated maple sugar or syrup. The trade use of the word "maple" was restricted to pure products, while manufacturing or packing plants engaged in interprovincial or export trade in maple products were required to be registered and licensed by the Minister of Agriculture. Inspectors were appointed for carrying out the provisions of the Act and were vested with powers of entry, sampling of goods, examination of books, and seizure of goods, necessary to the enforcement of the Act.

*The Canada Grain Act, 1930.*—The Canada Grain Act, 1925,<sup>1</sup> as amended in 1929, was completely revised and re-written as the Canada Grain Act, 1930, (c. 5) effective Sept. 1, 1930.

A number of changes and additions were embodied in the new Act, which now sets out very clearly the powers and duties of the Board of Grain Commissioners and permits it to deal with the practical operations of the trade by regulation—a much more elastic means of control than statutory enactment.

One of the principal changes in the Act provides for the complete registration of terminal documents by the Board. It was the practice under the previous Acts to register warehouse receipts as to weight only, but now these documents are registered as to weight and grade and are the first charge against the grain with the exception of liens established for handling and freight in accordance with the Act. Binning of the first four grades of wheat is controlled by the Board through this system of registration of documents, together with annual stock-taking at the end of each crop year.

The constitution of the Committees on Grain Standards, formerly known as Grain Standards Boards, was re-organized to be more in accordance with practical requirements.

In the new Act the general standards for all grains are set out much more fully and in a more practical way than in previous Acts.

The definitions of the various classes of elevators have been changed, the Act now providing for three classes of elevators, namely, terminal, eastern and country. The terminal elevators are further classified as public terminals, semi-public terminals or private terminals and the country elevators are divided into two classes, public country elevators and private country elevators.

**Fisheries.**—C. 10 confirmed and sanctioned the Convention signed at Washington May 26, 1930, in respect of Canada and the United States, concerning the protection, preservation and extension of the sockeye salmon fisheries of the Fraser River system. Inconsistent legislation previously existing was amended to conform with the obligations undertaken under the Convention.

The Department of Fisheries Act, c. 21, provided for the organization of the Department of Fisheries as separate and distinct from the Department of Marine (cf. c. 31 under Marine) and also outlined the duties and powers of the Minister.

The Fish Inspection Act (c. 72, R.S.C. 1927) was amended by c. 22 as regards its application to the containers used for packing and marketing certain specified kinds of fish. The Governor in Council is also empowered to extend the applica-

<sup>1</sup> A summary of this Act of 1925, contributed by the Board of Grain Commissioners, was published at pp. 1017-1018 of the 1925 Year Book. The subsequent amendments of 1929 were dealt with at pp. 1047 and 1048 of the 1930 Year Book.

tion of the Act to other kinds of fish than those actually specified, to fish oils, containers, and fish-curing establishments. Part VI of the Inspection and Sale Act (c. 100, R.S.C. 1927) was repealed.

**Insurance.**—The Insurance Act (c. 101, R.S.C. 1927) was amended by c. 26 of the 1930 Statutes as regards: the appropriation of profits, the release of securities to a liquidator under the Winding-up Act, value and number of unissued shares of Canadian fire insurance companies, and other matters connected with capital stock and voting privileges.

**Interior.**—By cc. 29, 41, 3 and 37, the natural resources of the Crown Lands of the Prairie Provinces and those of the Railway Lands and Peace River Block in British Columbia, previously administered by the Dominion Government, were transferred to the provinces of Manitoba, Saskatchewan, Alberta and British Columbia, respectively. These Acts brought the provinces concerned as nearly as possible into the same position as the original provinces of Confederation in respect of their natural resources (Sec. 109, B.N.A. Act, 1867).

The Timber Marking Act (c. 198, R.S.C. 1927) was amended by c. 45 to permit of the rectifying of entries in the Timber Marks register by the Exchequer Court.

C. 33 of the Statutes of 1930—the National Parks Act—provided for the Dominion Parks as established under the Dominion Reserves and Parks Act (c. 78, R.S.C. 1927) being designated National Parks of Canada, and re-defined the areas and boundaries of Banff, Jasper, Yoho, Glacier and Fort Beauséjour Parks. Fort Howe, Vidals Point and Menissawok Parks were thereby abolished.

**Justice.**—The Criminal Code (c. 36, R.S.C. 1927) was amended by c. 11 of the Statutes of 1930 as regards: the limitation of the meaning to be applied to "seditious intention"; the sale by a broker of shares which he is carrying on margin for a customer, if by such sale he reduces the amount of such shares under his control below the amount he should be carrying for all customers; driving a motor vehicle while intoxicated or under the influence of any narcotic; the sale of cattle injected with tuberculin by other than qualified veterinarians; and in several other respects. C. 12 confirmed the procedure as set out in Sec. 66 of the North-West Territories Act (1886) as regards criminal procedure to be inapplicable to the Supreme Court of Alberta. The Exchequer Court Act (c. 34, R.S.C. 1927) was amended by c. 17 as to the procedure to be followed in any case in which the Crown finds itself in possession of monies belonging or payable to others where doubt exists as to whom such payment should be made.

The Judges Act (c. 105, R.S.C. 1927) was amended by c. 27 to permit of the granting of an annuity to a judge of the Supreme Court of Canada or of the Exchequer Court of Canada equal to the salary of such judge where he held office on Mar. 31, 1927, and continued in office until he attained the age of 75 years. Where such a judge was appointed after the above-mentioned date and later ceased to hold office by reason of having attained the age of 75 years, provided he has continued in office for at least ten years, he may be granted an annuity equal to two-thirds of his salary at the time when he so ceased to be a judge.

C. 39 provided for a readjustment of pensions for members of the R.C.M.P. retired to pension prior to May 31, 1924.

The Supreme Court Act (c. 35, R.S.C. 1927) was amended by c. 44 to provide for appeals, where over \$2,000 is involved, direct to the Supreme Court from courts other than courts of last resort in a province, by leave of such courts of last resort and by consent of the parties.

**Labour.**—The Fair Wages and Eight Hour Day Act, 1930, (c. 20), provides that Government contracts shall be subject to conditions respecting fair wages and an eight hour day and that these advantages shall apply to all workmen employed by the Government of Canada. The Act also empowers the Minister of Labour to make regulations implementing and extending the Act along specified lines.

**Marine.**—The Department of Marine was constituted by c. 31—the Department of Marine Act. The duties and powers of the Minister were outlined and the necessary organization provided for. Thereby the Department of Marine and Fisheries Act (c. 125, R.S.C. 1927) was repealed.

**Pensions and National Health.**—C. 23 provides for analysts, in addition to members of the staff of the Department of Pensions and National Health, being designated "Dominion Analysts" upon request of any province, city or other municipality, provided they are duly qualified.

The Militia Pensions Act (c. 33, R.S.C. 1927) was amended by c. 32 to permit of the adjustment of officers' pensions in certain cases and provides for the granting of pensions and of compassionate allowances to widows and children of officers who die after a period at which pensions might be granted them, or who were in receipt of pensions at the time of their deaths.

The Pensions Act (c. 157, R.S.C. 1927) was amended by c. 35 as regards the power to administer oaths by members of the Commission, the appointment of a Pension Tribunal and a Pension Appeal Court and the establishment of the "Veterans' Bureau". In specially meritorious cases it was provided that "the Commission may grant a compassionate pension or allowance where the Tribunal or Appeal Court has decided against a pension under the Act" Provision is also made for the restoration of pensions in certain cases where a pensioner has accepted a final payment, and the widow of a pensioner is made eligible to receive a pension where her husband's death has resulted from injury or disease or aggravation thereof attributable to military service.

By c. 38, the time for receiving applications under the Returned Soldiers' Insurance Act (c. 54, Statutes of 1920) was extended three years to Aug. 31, 1933.

Under c. 48, the War Veterans' Allowance Act, provision is made for specified allowances ranging up to \$240 for single men and \$480 for married men with dependants to any veteran of the World War who, having attained the age of 60 years, is, in the opinion of the special Committee appointed under the Act, permanently unemployable by reason of physical or mental disability and has been domiciled in Canada for one year.

**Soldier Settlement.**—The Soldier Settlement Act (c. 188, R.S.C. 1927), as amended by c. 48 of the Statutes of 1928, was further amended by c. 42. The Board is required as on the standard date in 1929, to credit a settler's account with 30 p.c. of his indebtedness to the Board, provided such settler is qualified and established on the land in accordance with the provisions of the Act and has

not abandoned, his land nor terminated his agreement with the Board. Certain stipulations are made in cases where an application for revaluation under the Act has not been disposed of.

**Trade and Commerce.**—By c. 6, an Act was passed to place Canadian coal used in the manufacture of iron or steel on a basis of equality with imported coal in accordance with the recommendations of the Royal Commission on Maritime Claims. Adjustments were authorized by payments from the Consolidated Revenue Fund to manufacturers of iron or steel of 49½c. per ton of bituminous coal mined and converted into coke in Canada when used in iron smelting or the manufacture of steel ingots or castings in Canada.

Under c. 9 the Companies Act (c. 27, R.S.C. 1927) was amended with regard to the issue of no par value shares, corporate name, capital required before commencing business, incidental and ancillary powers other than those set out in the letters patent, procedure with regard to prospectuses, shares of stock, mortgages and charges, etc.

The Export Act (c. 63, R.S.C. 1927) was amended by c. 19, to prevent the clearance of vessels with intoxicating liquor on board, or the movement of liquor from bond, where such liquor is destined for a country where its importation is prohibited by law.

By c. 34 the Patent Act (c. 150, R.S.C. 1927) was amended, mainly in regard to the extension, to persons who had previously filed an application for a patent in a foreign country, of the same privileges as if filed in Canada, provided such foreign country affords similar privileges to citizens of Canada.

The Winding-up Act (c. 213, R.S.C. 1927) was amended by c. 49 as regards the persons by whom a winding-up order may be made.

**Transportation.**—The Railway Act (c. 170, R.S.C. 1927) was amended by c. 36, chiefly to permit railways to be carried upon, along or across existing highways only by permission of the Railway Board, provided such permission when granted along any highway within the limits of any city or incorporated town be granted with the consent of the municipal authority concerned. Railway companies were also allowed by this chapter to sell live animals and perishable goods upon which the tolls have not been paid on demand, or other goods if the tolls are not paid four weeks after demand (the time limit is two weeks for bulk goods) and to retain out of the proceeds all tolls and charges.

C. 47 is an act to provide for the regulation of vehicular traffic on Dominion property and defines the scope of such regulations as may be made thereunder.

**Miscellaneous.**—By the Manitoba Boundaries Extension Act of 1930 (c. 28) the boundary of the province of Manitoba was extended in the Northwest Angle of Lake of the Woods inlet as described in the Schedule accompanying the Act.

By c. 25 the Indian Act (c. 98, R.S.C. 1927) was amended to permit the Superintendent General of Indian Affairs to apply the whole or any part of the annuities and interest monies of Indian children attending industrial or boarding schools to their maintenance and to provide for the attendance of all Indian children between 7 and 16 years of age at industrial or boarding schools and for the further period of two years, if thought advisable in the discretion of the Superintendent General, where it would be detrimental to any particular Indian child to be discharged on attaining the age of 16 years.

By c. 14, the Divorce Act (Ontario) 1930, it was enacted that the law of England regarding the dissolution and annulment of marriage, as it existed on July 15, 1870, should be made the law of Ontario in so far as applicable, and by c. 15, The Divorce Jurisdiction Act, 1930, it was provided that in any province in Canada in which there is a court having jurisdiction to grant a divorce *a vinculo matrimonii*, a married woman deserted and living apart from her husband for two years may commence proceedings for divorce.

By c. 16, the Dominion Election Act (c. 53, R.S.C. 1927) was amended as regards: the definition of the term "resident", the preparation of voters' lists, the marking of ballots by blind voters and those unable to write, the appointment of a legal adviser to the Chief Electoral Officer and other matters.

By c. 40, the Salaries Act (c. 182, R.S.C. 1927) was amended to permit of the payment of \$10,000 annual salary to the Minister of Marine and to the Minister of Fisheries.

### Legislation of the Special Session of the Seventeenth Parliament— September, 1930.

The first Session of the 17th Parliament met on Sept. 8, 1930 for the express purpose of alleviating conditions brought about by the unemployment situation. To this end three Bills were introduced, which passed the House and Senate, and, after receiving the Royal Assent, became Acts, as follows:—

(1) The Unemployment Relief Act, 1930, providing the sum of \$20,000,000 to aid the provinces and municipalities in their unemployment relief work (see pp. 778-779 of the present volume).

(2) The Customs Amendment Act, which introduced amendments respecting "dumping".

(3) The Customs Tariff Amendment Act, which introduced tariff changes on a specified list of commodities with a view to assisting the industries concerned and so indirectly helping the unemployment situation.

---

## Section 2.—Provincial Legislation.

A list of the public Acts of the Provincial Legislatures usually appears under this Section of the Year Book. In order to conserve space, it has been decided this year to refer the reader to the different provincial authorities for information in this connection. It is felt that whatever is lost to those readers who are interested in having all provincial legislation brought together and listed under one head, is more than offset by the information of more general interest which is has been possible to include in the limited space available, but which would otherwise have had to be omitted.

## Section 3.—Principal Events of the Year, 1930.

**The Economic and Financial Trend.**—Nineteen hundred and thirty was undoubtedly a year of serious depression in Canada, reflecting conditions throughout the civilized world. While the Dominion was less affected than most other countries, as was evidenced by the comparative position of Canadian Govern-

ment securities in the money markets of London and New York, yet the country suffered severely from the repercussions of the world situation. One of the main elements of the depression was the great and disproportionate decline in wholesale prices throughout the world, affecting more particularly the food products and raw materials which Canada supplies in large quantities to other countries. In December, 1930, the general index number of wholesale prices in Canada, which was fairly representative of those of other countries, stood at 77.8 p.c. of the 1926 average as compared with 96.0 p.c. in the same month of 1929, or a decline of nearly one-fifth in the twelve months.

*Agriculture.*—In a country such as Canada, where agriculture occupies a large place among the economic activities of the nation, crop yields and prices cannot but affect the general trend of business. The subnormal wheat crop of 1929 adversely affected the earnings of the basic industries such as the railways, lake and ocean freight carriers, and a direct result of the retarded movement of the 1929 wheat crop was the inactivity of the principal harbours and shipping centres. The second phase of the wheat situation consisted in the drastic decline of prices during 1930. One of the chief reactionary factors influencing the social economy of Canada in the period under review was the reduction in the purchasing power of the farmer. The obvious causes were the moderate yields of 1929 and the very low prices obtained for agricultural products.

While the wheat crop of 1930, estimated at nearly 398,000,000 bushels, was less than the bountiful harvests of 1927 or 1928, the gain over 1929 was 93,352,000 bushels or 30.6 p.c. The estimated value of the wheat crop of 1930 was placed at \$174,800,000 compared with \$319,700,000 for the much smaller crop of the preceding year. The average price per bushel was placed at 44 cents for the 1930 crop, compared with \$1.05 for the 304,500,000 bushels harvested in 1929. The value of the principal field crops was estimated at \$631,600,000 in 1930 compared with nearly \$949,000,000 in 1929. The crops of 1930 were grown on an area of 62,215,000 acres compared with 61,207,000 acres in 1929.

*Iron and Steel.*—The primary iron and steel industry, being a major factor in the expansion of railway and industrial equipment, is an excellent indicator of the trend of general business. Some authorities go so far as to say that the wide fluctuation in the industries of this character is the main cause of the economic cycle, and there is apparent justification for the claim that the wide variation in the operations of the industries concerned with the supply and replacement of industrial equipment is an important element in the alternation of prosperity and depression. Production of pig iron in 1930 at 747,448 long tons was 30.8 p.c. under the record for the industry, which was established at 1,080,000 tons in the preceding year. Production of steel during the year at 1,012,000 tons was 26.6 p.c. less than the 1,378,000 tons made in the record year of 1929. In appraising the meaning of this curtailment, it should be remembered that in 1929 the industry was more actively employed than in any other peace-time year.

*Hydro-Electric Power.*—The marked development of the hydro-electric resources of the Dominion in progress in the post-war period, was continued throughout 1930, despite the major depression in other lines. New installations brought into operation during 1930 amounted to 397,850 horse-power, bringing the installation in Canada to a total of 6,125,000 horse-power at the end of the

year. Construction was active on many undertakings throughout the country, several of which were of outstanding importance, and it was anticipated that more than 1,500,000 h.p. would be added to the total in the next two or three years. New construction involved an expenditure of \$80,000,000 in 1930, and a further expenditure of \$300,000,000 was forecast for the next two or three years.

The larger central electric stations reported a total output of 17,856,122,000 k.w.h. compared with 17,632,876,000 k.w.h. in the preceding year. The depression in general industry was thus reflected in a declining rate of increase in the output of electric energy rather than in an absolute decline. The long-term expansion in the power industry is so rapid that a cyclical recession in the Dominion, such as that in evidence during 1930, did not entirely counterbalance the normal growth.

*Mineral Production.*—Reflecting the drop in metal prices and the reduced output of coal, asbestos, gypsum and structural materials, the net value of mineral production at \$276,865,000 was considerably below the record of \$310,850,000 established in 1929. More copper and zinc were produced than in any previous year in the history of Canada, but the average prices for these metals were so reduced that the total values were lower than in 1929. New high records in the quantity and value of gold tended to offset the declines in other lines. A considerable number of mining properties of proven value were, at the beginning of 1930, undergoing development with expectations of commencing or increasing production during the year. In some cases these plans were not realized owing to the fall in market values, particularly of copper, lead, zinc and silver.

*Construction.*—The decline in construction during 1930 coincided with the recurrence of a major depression. The value of contracts awarded during the year was nearly \$457,000,000 compared with \$576,700,000 in 1929, a decrease of 20.7 p.c. The value of building permits issued by 61 cities was \$166,400,000 compared with \$234,900,000 in the preceding year, a decline of 29.2 p.c.

*Automobile Production.*—The fluctuations in the automobile industry are known to correspond in general with the ups and downs of construction. Prosperous conditions and a high level of purchasing power lead to expansion in both lines, while the lack of effective demand occurring in times of depression results in drastic curtailment. Production of automobiles during 1930 at 154,192 cars and trucks was 41.3 p.c. under the record of 262,625 cars in the preceding year.

*Pulp and Paper.*—The rapid expansion of the last five years had resulted in obvious over-capacity, and marketing conditions were further complicated by the decline in newspaper advertising caused by business depression. The total production of newsprint was 2,499,631 tons in 1930, a decline of 8.4 p.c. from the level of 1929. In the ten years from 1920 to 1930, the productive capacity of newsprint mills in Canada increased from 2,630 tons per day to 12,105 tons per day, a development made possible only by reason of Canada's immense resources in forests and water-powers.

*Railway Transportation.*—The chief transportation agencies in Canada—the two great railway systems—were inevitably affected by the sharp decline in production of the principal crops in the preceding year, and the consequent reduction in the volume of commodities transported at fixed rates. The loadings of revenue freight on all Canadian railways during the year were 3,144,500 cars, a decline of 10.7 p.c. from the total of 3,524,000 cars loaded in 1929. The decline

of 379,530 cars in 1930 as compared with 1929 was accounted for as follows: grain and grain products 38,526, live stock 24,204, coal 44,845, lumber 50,080, pulpwood 6,263, pulp and paper 21,367, other forest products 31,883, ore 20,366, merchandise less than carload 46,888, and miscellaneous 100,025. The only enumerated item showing an increase was coke, of which 27,627 cars were loaded in 1930 as compared with 22,710 cars in 1929.

Freight earnings are universally recognized as supplying the great bulk of the revenue of Canadian railways, and a falling off here necessarily has a serious effect on earnings, while passenger earnings have in recent years shown a tendency to decline as a result of the competition of the motor car. Gross revenues of the more important railways amounted to \$450,400,000, which was \$78,800,000 or nearly 15 p.c. less than in 1929. Net revenues amounted to \$72,900,000 compared with \$99,900,000 in the preceding year. Despite the recession in operations, the principal railways showed confidence in the future by extensive preparations in perfecting their facilities for efficient transportation and by the betterment of existing lines for the heavier traffic expected during the continued development of the Dominion.

*External Trade.*—The external trade of Canada was affected in 1930, so far as exports go, by the smaller crops of 1929 and 1930 and the lower prices obtained for them as well as by the general trade depression. Imports were also in smaller value corresponding in trend with the decline in exports and in wholesale prices. Imports in the calendar year 1930 were valued at \$1,008,500,000 compared with \$1,299,000,000 in 1929. Exports were \$905,400,000 compared with \$1,208,000,000 in 1929. The balance of trade or excess of imports over exports was consequently \$103,100,000 in 1930 compared with \$90,700,000 in the preceding year.

*Currency and Banking.*—As a period of depression draws to a close, finance is normally one of the phases finding itself in a greatly strengthened position. The deflation of stock and commodity prices and a reduction in operations tend to release liquid capital, improving the fundamental position of the banks. Current loans showed a decline of \$254,000,000 in 1930, while the recession in notice deposits was only \$8,000,000. The surplus of notice deposits over current loans was \$277,000,000 at the end of 1930 compared with \$32,000,000 at the end of 1929. During 1930 the gold held against Dominion notes increased from \$60,400,000 to \$93,800,000, while the circulation of Dominion notes declined from \$203,900,000 to \$175,400,000.

As the interest rate on current and call loans in Canada is fairly well stabilized, the trend of interest rates may be determined by the prices of high grade bonds. The decline in long-term interest rates was one of the most constructive developments in 1930. The rise in bond yields was the best indication of the tight credit conditions in evidence during the greater part of 1929. The high call rates on the New York market had attracted liquid resources from many quarters. Upon the decline of the rate in September and October, 1929, a large proportion of these loans was withdrawn. In December, 1930, the average yield on four Dominion Government bonds was 4.55 p.c. The same bonds yielded an average of 4.91 p.c. in the same month of 1929. The yield on Ontario Government bonds in December, 1930 averaged 4.50 p.c. compared with 4.90 p.c. in December 1929. With current rates in external money markets at the lowest level in years, there were reasons to believe that this factor would ultimately be a powerful stimulus to the recovery from the depression.

**Common Stocks.**—The close interconnection of economic phenomena is shown by the decline in common stock prices during 1930. The curtailment of industrial operations and the severe decline in wholesale prices reacted against the revenue prospects of Canadian corporations. The deflation of speculative values during the course of the year was drastic. The trend from January to April was upward, but the failure of business conditions to show improvement during the first half of the year led to further liquidation, temporarily culminating in June. The market strengthened to reach an intermediate peak about the middle of September. A new low point was touched in December after severe liquidation prompted by reactionary factors at home and abroad. The general index number was 103.1 in December, compared with 156.5 in the same month of 1929, a decline of 34 p.c. in twelve months; industrials declined 43 p.c., while utilities were down 20.4 p.c.

**Death of H.R.H. the Princess Royal.**—H.R.H. Princess Louise Victoria Alexandra Dagmar (The Princess Royal) died in London on Jan. 4, 1931. Born in 1867, eldest daughter of H. M. King Edward VII and Queen Alexandra (when Prince and Princess of Wales), she married the Earl of Fife (who later became the Duke of Fife) in 1889 and was granted the title of "Princess Royal" in 1905.

**The Governor General.**—In December it was announced that the Governor General, Viscount Willingdon, had been appointed as Viceroy of India. Their Excellencies left Ottawa on Jan. 14 and sailed from Canada on Jan. 16. On Apr. 4, 1931 the new Governor General, the Earl of Bessborough, arrived at Halifax and was sworn in. In the interim, the Government was administered (in the absence on leave of the Rt. Hon. F. A. Anglin, P.C., Chief Justice) by the Rt. Hon. L. P. Duff, P.C., the Senior Judge of the Supreme Court of Canada.

**Dominion General Elections.**—The dissolution of the Sixteenth Parliament was proclaimed on May 30, 1930, nomination days being July 14 and July 21, the polling day July 28 and writs being returnable on Aug. 18, 1930. The election was won by the Conservatives and the Hon. R. B. Bennett was requested to form a Cabinet (see p. 91 for the list of the present Cabinet). The standing of the parties was Conservatives 136, Liberals 89, other groups 20. A list of the members of the Seventeenth Parliament will be found at pp. 100-104 of this volume. At the by-elections following the appointment of the Cabinet, all the Ministers were elected by acclamation, while the Hon. H. H. Stevens was also acclaimed in the constituency of Kootenay East, where Mr. M. D. McLean had resigned. On Sept. 2, the Hon. E. N. Rhodes was elected by acclamation in Richmond-West Cape Breton, Mr. J. A. MacDonald having accepted an office of emolument under the Crown.

**Provincial General Elections.**—In Alberta a general election was held on June 19 and resulted in the return of the U.F.A. Government of the Hon. J. E. Brownlee.

In New Brunswick a general election took place on June 19, the Conservative Government of the Hon. J. B. M. Baxter being returned to power.

**Imperial Conference of 1930.**—From Oct. 1 to Nov. 15, 1930, representatives of the Empire met in London for the Imperial Conference of 1930, at which Canada was represented by the Rt. Hon. R. B. Bennett, Prime Minister and Secretary of State for External Affairs; the Hon. Hugh Guthrie, Minister of

Justice; the Hon. H. H. Stevens, Minister of Trade and Commerce; and the Hon. M. Dupré, Solicitor General. The work of the conference was divided into economic and constitutional sections and was carried on during a time of world-wide trade depression when the general atmosphere seemed propitious for the encouragement of inter-Empire trade. The Prime Minister of Canada, the Right Hon. R. B. Bennett, in the early stages of the conference, enunciated his policy of reciprocal tariff preferences within the Empire and received the support of other Dominion Prime Ministers. After much discussion, the Government of the United Kingdom declined to consider the imposition of tariffs on foodstuffs entering Great Britain and Northern Ireland, although bulk buying, including a wheat quota purchasing system, was suggested as a compromise. This met with a qualified reception and arrangements were made for the 1931 conference to meet in Ottawa, an invitation along these lines having been extended by the Prime Minister of Canada.<sup>1</sup>

Among the most important constitutional and economic results of the 1930 Conference were:—(1) Britain agreed to maintain existing preferences given Dominion products for three years; (2) Trade proposals are to be considered in Ottawa in 1931; (3) A voluntary Empire judicial tribunal is to be created; (4) The Colonial Laws Validity Act is to be repealed; (5) Dominions may act through British ambassadors abroad; (6) The King appoints Governors General through the respective Dominion Governments.

**Return of Natural Resources to the Western Provinces.**—Agreements for the return of their natural resources to the four western provinces were signed on the following dates, Manitoba and Alberta, Dec. 14, 1929; British Columbia, Feb. 20, 1930 and Saskatchewan, Mar. 20, 1930. Some features of the agreements were the retention of and in some cases an increase in the subsidies formerly paid to the provinces, the retention of the National Parks and the continuation of the administration of Indian Reserves by the Dominion.

**International Relations.**—*The London Naval Treaty of 1930*<sup>2</sup>.—The London Naval Treaty resulted from a Conference of the chief world naval powers called together by the Prime Minister of Great Britain, the Rt. Hon. Ramsay MacDonald, on Jan. 21, 1930. The Treaty was signed on Apr. 22, 1930, by the plenipotentiaries of the British Commonwealth, the United States, France, Italy and Japan—the five leading naval powers of the world. The opening speech of the Conference, made by His Majesty King George V, was broadcast throughout the world and clearly outlined the purposes of the Conference as: the limitation of naval armaments, the paving of the way for a more comprehensive general disarmament conference at a later date, and the furtherance of the Briand-Kellogg Pact for the outlawry of war. One result was a definite Three-Power Pact under Part III of the Treaty, between the British Commonwealth of Nations, the United States and Japan to limit naval construction, in relation to cruiser, destroyer and submarine categories not included in the provisions of the Treaty of Washington of 1922. Nevertheless, Parts I and II of the Treaty impose definite obligations on France and Italy. Again, Article 24, Part V, provides the basis of the further negotiations between Great Britain, France and Italy, which began in March, 1931 and are still in progress (May, 1931). The present Treaty is effective from its ratification by each of the parties concerned

<sup>1</sup> The 1931 Conference, which, according to arrangement, was to meet in Ottawa has recently been postponed on account of the inability of certain Dominion Prime Ministers to be present.

<sup>2</sup> For the text of this Treaty, see p. V of the Introduction to the Statutes of 1930.

until Dec. 31, 1936. It was signed by the Hon. Philippe Roy, Canadian Minister at Paris, on behalf of Canada, but Canada was represented at the Conference by the Hon. J. L. Ralston, Minister of National Defence in the Mackenzie King Administration.

*Canada and the League of Nations.*—The work of the Canadian Advisory Office at Geneva, as the established channel of communication between the Government of Canada and the League of Nations, continued to grow with the responsibilities involved in the place in the League's organization which has been attained by the Dominion. During the year 1930 Canada's tenure of a non-permanent seat on the Council of the League came to an end; at the Fifty-eighth and Fifty-ninth Sessions of the Council, Canada was represented by Senator Dandurand, and at the Sixtieth Session in September by the Rt. Hon. Sir Robert Borden. At the meetings of the Governing Body of the International Labour Office, of which Canada is a permanent member, Dr. Riddell, the Canadian Advisory Officer, represented the Minister of Labour. Dr. Riddell also attended, as an observer, the Conferences for Concerted Economic Action held under the auspices of the League, at which Canada was not officially represented.

*General.*—A feature of the year 1930 was the visit to Japan of the delegation of the Canadian Chamber of Commerce. In May, 1930, a revising Convention for the Protection and Preservation of the Sockeye Salmon Fisheries in the Fraser River System was signed between Canada and the United States of America.

In August, 1930, the Norwegian Government formally recognized Canada's title to the Sverdrup group of islands in the Arctic Ocean.

During April and May, 1931, Canada was visited by H.I.H. Prince Takamatsu, on his return from England, where he had represented H.I.M. the Emperor of Japan on a mission to thank H.M. King George for the Order of the Garter, the insignia of which had previously been conveyed to Japan by H.R.H. the Duke of York.

**Obituary, 1930.**—(See also pp. 1064-5 of the 1930 Year Book.) July 16, Hon. J. E. Caron, M.L.C., former Quebec Minister. July 19, David Bonis, St. Marys, Ont., M.L.A. for Perth South. July 24, Geo. Smith, K.C., former County Judge for Essex, Ont. July 25, Lieut.-Col. Norman Lang, former M.P. for Humboldt, Sask. Aug. 1, Capt. J. J. R. H. Fleming, Ottawa, of the R.M.C. Staff. Aug. 4, Dr. J. A. Anderson, Toronto, M.L.A. for South Lanark. Aug. 7, Major J. E. Gobeil, M.C., Ottawa, Superintendent of Dominion Government Telegraphs. Aug. 11, E. A. Panet, Assistant Clerk of Legislative Council of Quebec and former M.L.A. Aug. 15, Hon. W. F. Vilas, Cowansville, Que., M.L.C. for district of Wellington, Que. Aug. 18, W. B. Williamson, K.C., Toronto, Ont., law clerk to Ontario Legislature for private and municipal bills. Aug. 27, Matthew Snow, Winnipeg, Man., Grain Commissioner. Sept. 25, Jas. B. Kennedy, former M.P. for New Westminster, B.C. Oct. 1, Col. C. Y. Weaver, D.S.O., V.D., M.L.A. for Edmonton, Alberta. Oct. 13, Col. Geo. S. Rennie, C.M.G., M.P. for Hamilton East. Oct. 19, Peter Cameron, Dunwick, Ont., former M.L.A. Oct. 22, Wm. Lagidmodière, former M.L.A. for Lorette, Man. Oct. 28, Walter Todd, Chief of Committees and Private Bills Branch, House of Commons. Nov. 3, Robert Douglas, Ottawa, Ont., Secretary of the Geographic Board of Canada. Nov. 9, Hon. W. A. Charlton, P.C., M.P. for Norfolk, Ont., from 1911-21 and former

Speaker of the Legislative Assembly of Ontario. G. L. Dickinson, former M.P. for Carleton, Ont. Nov. 10, Hon. J. G. Turriff, Senator for Assiniboia, Sask. Nov. 14, Hon. A. Turgeon, Speaker of the Legislative Council of Quebec. Nov. 16, Hon. F. T. Smye, Hamilton, Ont., Minister without portfolio in the Ontario Government. Nov. 20, Hon. J. L. Perrou, K.C., Montreal, Minister of Agriculture in Quebec Government. Nov. 26, R. H. Grant, Hazeldean, Ont., former Minister of Education in the Ontario Government. 1931.—Jan. 4, A. Bettez, M.P. for Three Rivers-St. Maurice. Jan. 5, Geo. B. Fowler, at Ann Arbor, Mich., Chief Preventive Officer, Dept. of National Revenue. Jan. 6, Lieut.-Col. F. McKelvey Bell, M.D., New York, late Deputy Director of Medical Services. Jan. 7, Carlton J. Oliver, M.L.A., Mansonville, Que., W. S. Carter, LL.D., D.C.L., Fredericton, N.B., Chief Superintendent of Education, N.B. Jan. 13, J. R. Lafond, Hull, Que., ex-M.L.A. for Hull County. Jan. 14, Adam Shortt, LL.D., C.M.G., Chairman of Dominion Board of Historical Publications. Jan. 17, Robert Andrew Kent, former Chief Clerk of Committees of the Ontario Legislature. Dr. T. A. Wilson, Chief Indian Medical Officer for B.C. Jan. 22, Hon. Wm. Smith, P.C., Columbus, Ont., ex-M.P. for Ontario South. Jan. 31, Joseph E. Armstrong, Sarnia, Ont., ex-M.P. for East Lambton. Feb. 1, Edward Robert Cameron, M.A., K.C., LL.D., former registrar of the Supreme Court of Canada. Feb. 2, E. H. St. Denis, Ottawa, Ont., late Assistant Dominion Statistician. Feb. 4, Hon. H. B. McGiverin, P.C., late Minister without Portfolio. Feb. 9, Hon. T. A. Low, P.C., Renfrew, Ont., late Minister of Trade and Commerce. Feb. 10, Chas. H. Masters, K.C., Ottawa, Ont., late Chief Reporter of the Supreme Court of Canada. Feb. 15, Hon. Louis Lavergne, Arthabaska, Que., former Senator. Feb. 23, Judge E. N. Lewis, Toronto, Ont., County Judge of Huron Co. and former M.P. for Huron East. Mar. 4, F. W. Cowan, Chief of the Preventive Service, Dept. of National Revenue, Ottawa. Mar. 7, A. H. Whitcher, F.R.G.S., Ottawa, Ont., late Secretary of Geographic Board of Canada. Mar. 27, William Simpson Walker, K.C., Montreal, former Registrar of the Exchequer Court of Canada, Quebec Admiralty District. Apr. 11, Senator P. E. Lessard, St. Paul, Alberta. Apr. 20, William Edward O'Meara, Ottawa, Ont., Secretary of Federal District Commission. May 1, Hon. George Green Foster, K.C., Montreal, Senator for Alma, Que. May 13, Hon. John S. Martin, Port Dover, Ont., late Minister of Agriculture for Ontario. May 30, Hon. R. E. Harris, K.C., Annapolis Royal, N.S., Chief Justice of Nova Scotia. June 3, Mr. Justice Victor Allard, Montreal, Que., Judge of the Court of Appeal.

**Day of General Thanksgiving.**—Monday, Nov. 10, 1930, was appointed by proclamation as a "day of general thanksgiving to Almighty God for the bountiful harvest and other blessings with which Canada has been favoured this year"

## APPENDIX.

## 1.—Immigration in the fiscal year 1930-31.

During the fiscal year ended Mar. 31, 1931, the immigrants into Canada, classified as in the summary table appearing on p. 173 of this volume, were as follows: From U.K., 27,584; from U.S.A., 24,280; from other countries, 36,359; total 88,223.

Canadians returned from the United States during the fiscal year ended Mar. 31, 1931, classified as in the table on p. 187, were as follows: Canadian-born, 26,811; British-born with Canadian domicile, 2,111; naturalized Canadian citizens; 1,287; total, 30,209.

## 2.—External Trade of Canada in the fiscal year 1930-31.

Preliminary figures of the external trade of Canada for the fiscal year ended Mar. 31, 1931, show a grand total trade of \$1,723,550,729, as compared with a figure of \$2,393,211,652 in the preceding year, or a decrease of \$669,660,923. The decrease in the imports was \$341,660,901. Domestic exports decreased by \$320,605,635, and foreign exports by \$7,394,387. Figures by industrial groups are given in the following table, where the figures of imports and exports may be compared with the totals given for previous years in the tables on pp. 513, 521-3 of this volume.

## Imports and Exports of Canada, fiscal year ended Mar. 31, 1931.
