## PREFACE.

The Canada Year Book had its origin in the first year of the Dominion, when the "Year Book and Almanac of British North America"—being (to quote its sub-title) "an Annual Register of political, vital and trade statistics, customs tariffs, excise and stamp duties, and all public events of interest in Upper and Lower Canada, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland, and West Indies"—was founded. Subsequently the title was altered to "The Year Book and Almanac of Canada,—an annual statistical abstract of the Dominion and a register of legislation and of public men in British North America" It was published annually from 1867 to 1879.

In 1886, after the passing of a general Statistics Act, the "Statistical Abstract and Record of Canada" was instituted as an official book of reference respecting the institutions, population, finance, trade and general conditions of the Dominion, "with comparative data for the United Kingdom, British Possessions and foreign countries". The work was prepared in the General Statistical Office of the Department of Agriculture, and was continued annually until 1904, under the direction of Dr. George Johnson, F.S.S. In 1905 the General Statistical Office was amalgamated with the Census Office (which was at the same time made a permanent organization), the Year Book being remodelled by Dr. Archibald Blue, Chief Officer, and continued under the title "The Canada Year Book, Second Series".

In the reorganization and centralization of statistics which followed the report of the Commission on Statistics of 1912, and the establishment of the Dominion Bureau of Statistics in 1918, the improvement of the Year Book, both in content and method of presentation, was made a primary object, and this improvement has been continued down to the present time.

Among the more important special features incorporated in the present edition are the following: a section consisting of meteorological tables and giving monthly average temperatures and precipitation throughout Canada (pp. 47-76); and a special article on "The Development of the Fine Arts in Canada", contributed by Dr. Newton MacTavish (pp. 995-1009). The chapter on Internal Trade has been improved by the revision of Section 7 dealing with wholesale and retail merchandising; this section now gives more comprehensive statistics on retail distribution—an important phase of economic inquiry which, owing to its breadth and ramifications, is full of difficulty, but where the research work of recent years at the Bureau is resulting satisfactorily. An additional section on sales of Canadian bonds has been added to the chapter on Banking and Currency. The Appendix contains preliminary figures on immigration and trade for the fiscal year ended Mar. 31, 1931.

Throughout the volume the latest available information is included in each section, tables generally including figures for the fiscal year 1929-30 and the letter-press supplying supplementary figures extending in some cases to the end of the calendar year 1930.

The present volume has been edited by S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F. R. Econ. Soc., assisted by A. E. Millward, B.A., B. Com, W. H. Lanceley, and R. F. Clarke, M.C., D.L.S., of the editorial staff of the General Statistics Branch of the Bureau. Grateful acknowledgments are hereby tendered to the numerous officials of the Dominion and Provincial Governments who have assisted in the collection of information. An effort has been made to apportion due credit to the various individuals and services concerned by means of footnotes to those chapters and sections which have been contributed, or in the compilation of which co-operation has been received.

While the greatest care has been taken in the preparation of the volume, there are doubtless imperfections and, with a view to the improvement of future editions, the Editor will be glad to hear of any errors which may have escaped his notice, and to receive any suggestions with regard to omissions or to method of treatment.

R. H. COATS,

Dominion Statistician.

DOMINION BUREAU OF STATISTICS,  
OTTAWA, June 1, 1931.

## TABLE OF CONTENTS.

CHAPTER.	SUBJECT.	PAGE.
	SYNOPSIS .....	v
	STATISTICAL SUMMARY, 1871-1930.....	xxvi
I	PHYSIOGRAPHY.....	1

# SYNOPSIS.

## CHAPTER I.—PHYSIOGRAPHY.

	PAGE.
<b>Part I.—Geographical Features</b> .....	1-18
1. Land and Water Area of Canada, by Provinces and Territories, as in 1931.....	7
Section 1. <i>Orography</i> .....	7-12
Section 2. <i>Rivers and Lakes</i> .....	12-17
2. Drainage Basins of Canada.....	13
3. Lengths of Principal Rivers and Tributaries in Canada.....	14
4. Area, Elevation and Depth of the Great Lakes.....	15
5. Areas of Principal Canadian Lakes, by Provinces.....	16-17
Section 3. <i>Islands</i> .....	17-18
<b>Part II.—Geology</b> .....	18-36
Section 1. <i>Geology of Canada</i> .....	18-29
Subsection 1. <i>Topography</i> .....	18-23
Subsection 2. <i>Geology</i> .....	23-29
Section 2. <i>Economic Geology of Canada, 1929</i> .....	29-36
<b>Part III.—Seismology in Canada</b> .....	37-38
<b>Part IV.—The Flora of Canada</b> .....	38
<b>Part V.—Faunas of Canada</b> .....	38
<b>Part VI.—The Natural Resources of Canada</b> .....	38-46
6. Area of Occupied and Estimated Available Farm Lands in the Nine Provinces of Canada, 1921, with Estimated Land Area, 1930.....	39
7. Area of Productive and Unproductive Forest Land in Canada, 1930.....	42
8. Canadian National Parks and Reserves, 1930.....	46
<b>Part VII.—Climate and Meteorology</b> .....	46-76
Section 1. <i>The Climate of Canada</i> .....	46
Section 2. <i>The Factors which control Canadian Weather</i> .....	47
Section 3. <i>The Distribution of Precipitation in Canada</i> .....	47
Section 4. <i>The Temperature and Precipitation of Northern Canada</i> .....	47
Section 5. <i>The Meteorological Service of Canada</i> .....	47
Section 6. <i>Meteorological Tables</i> .....	47-76
9. Monthly Averages of Normal Daily Maximum, Minimum and Mean Temperatures.....	48-61
10. Normal Monthly and Total Precipitation in Inches.....	62-68
11. Normal Snowfall, Monthly and Total Depth in Inches.....	69-75
12. Normal Monthly and Total Duration of Bright Sunshine in Hours.....	76

## CHAPTER II.—HISTORY AND CHRONOLOGY.

<b>Part I.—History</b> .....	77
<b>Part II.—Chronology, 1497 to 1936</b> .....	77-87

## CHAPTER III.—CONSTITUTION AND GOVERNMENT.

<b>Part I.—Constitution and General Government</b> .....	89
<b>Part II.—Provincial and Local Government</b> .....	89
<b>Part III.—Legislative and Executive Authorities</b> .....	89-112
Section 1. <i>Dominion Parliament and Ministry</i> .....	89-106
Subsection 1. <i>The Governor General of Canada</i> .....	90
1. Governors General of Canada, 1867-1931.....	90
Subsection 2. <i>The Ministry</i> .....	90-94
2. Ministries since Confederation.....	91
3. Members of the King's Privy Council for the Dominion of Canada, According to Seniority Therein, Dec. 31, 1930.....	92
4. Duration and Sessions of Dominion Parliaments, 1867-1931.....	93-94
Subsection 3. <i>The Senate</i> .....	94-97
5. Growth of Representation in the Senate, 1867-1931.....	96
6. Representation in the Senate of Canada, by Provinces, as at Jan. 1, 1931.....	96-97
Subsection 4. <i>The House of Commons</i> .....	97-104
7. Representation in the House of Commons as at Dominion General Elections, 1867-1930.....	99
8. Electoral Districts, Voters on Lists and Votes Polled, Names and Addresses of Members of the House of Commons, as elected at the Seventeenth General Election, July 28, 1930.....	100-104
Subsection 5. <i>The Dominion Franchise</i> .....	104-106
9. Number of Voters and Votes Polled in the General Elections of 1921, 1925, 1926 and 1930.....	106
Section 2. <i>Provincial Governments</i> .....	106-112
10. Provinces and Territories of Canada, with present Areas, Dates of Admission to Confederation and Legislative Process by which Admission was Effected.....	106
11. Lieutenant-Governors of Provinces, 1867-1930 and present Ministries.....	107-112

## CHAPTER III.—CONSTITUTION AND GOVERNMENT—concluded.

	PAGE.
<b>Part IV.—Canadian Representatives in Other Countries</b> .....	112-115
Section 1. Representatives within the Empire.....	112-113
Section 2. Representatives outside the Empire.....	114-115
<b>Part V.—Canada and The League of Nations</b> .....	115-122

## CHAPTER IV.—POPULATION.

Section 1. <i>Census Statistics of General Population</i> .....	123-132
1. Population of Canada by Provinces and Territories in the Census Years 1871 to 1921.....	124
2. Percentage Distribution of Canadian Population by Provinces and Territories, 1871 to 1921.....	124
3. Population of Canada by Provinces and Territories in 1871 and 1921, and Numerical Increase in each Decade from 1871 to 1921.....	124
4. Population of Canada by Provinces and Territories in 1871, and Increase Per Cent by Decades from 1871 to 1921.....	125
5. Density of Population in Canada, by Provinces and Territories, 1911 and 1921.....	130
6. Movement of Population, Including Estimated Natural Increase, Recorded Immigration and Estimated Emigration, for the intercensal periods 1901-1911 and 1911-1921.....	130
7. Census Population of Canada, by Provinces, as at June 1, 1921, with Estimated Populations as at June 1, 1924-1930.....	132
Section 2. <i>Other Census Data and Special Analyses</i> .....	132

## CHAPTER V.—VITAL STATISTICS.

Section 1. <i>Natural Increase</i> .....	135-139
1. Summary of Births, Marriages, Deaths and Natural Increase, by Provinces, for the calendar years 1924-1929.....	137
2. Summary of Births, Marriages, Deaths and Natural Increase, in Cities of 10,000 and over, for the calendar year 1928.....	138
3. Excess of Births over Deaths in Canada, by Provinces and for each Sex, 1928, with Totals for 1921-1928.....	139
Section 2. <i>Births</i> .....	139-148
4. Number of Living Births and Birth Rates, by Provinces, 1921-1929.....	140
5. Living Births in Cities of 10,000 Population and Over, 1928-1929.....	141
6. Percentages of Legitimate Children Born Alive to Canadian-born, British-born or Foreign-born Mothers, by Provinces, 1928.....	142
7. Births (exclusive of Stillbirths) by Sex, and Ratio of Males to Females, for Canada and by Provinces, 1924-1929.....	143
8. Quartile and Decile Ages of Married Fathers and Mothers, 1926-1928.....	144
9. Number and Percentage of Births (exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1928.....	145
10. Number and Percentage of Births (exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1928.....	146
11. Number of Illegitimate Births, Classified by Age of Mother, with the Percentage they form of Total Living Births, by Provinces, 1928, with Provisional Totals for 1929.....	147
12. Stillbirths by Age of Mother and Legitimacy of Child in 1928, with Provisional Totals for 1929.....	147
13. Crude Birth Rates of Various Countries in Recent Years.....	148
Section 3. <i>Marriages and Divorces</i> .....	148-152
Subsection 1. <i>Marriages</i> .....	148-152
14. Number of Marriages and Marriage Rates, by Provinces, 1921-1929.....	149
15. Difference in Ages of Bridegrooms and Brides, 1928.....	150
16. Average Ages of Parties Contracting Marriages, 1928.....	150
17. Nativity, by Provinces, of Persons Married in the Registration Area, 1924-1928.....	150-151
18. Crude Marriage Rates of Various Countries in Recent Years.....	152
Subsection 2. <i>Divorces</i> .....	152-153
19. Statistics of Divorces Granted in Canada, 1901-1930.....	153
Section 4. <i>Deaths</i> .....	153-171
Subsection 1. <i>General Mortality</i> .....	153-163
20. Deaths and Death Rates, by Provinces, 1921-1929.....	154
21. Distribution of Deaths in Canada by Certain Age-Groups, Numbers and Percentages, 1928-1929.....	155
22. Quartile and Decile Ages of Decedents by Sex, 1920-1928.....	156
23. Crude and Adjusted Death Rates in the Former Registration Area of Eight Provinces, by Provinces, 1921-1928.....	157
24. Deaths in the Former Registration Area of Canada, by Principal Causes, 1927-1929, and in the Present Registration Area, 1926-1929.....	159
25. Death Rates per 100,000 Population in the Former Registration Area, by Principal Causes, 1927-1929, and in the Present Registration Area, 1926-1929.....	159-160
26. Total Deaths (exclusive of Stillbirths) in Cities of 10,000 Population and Over, 1926-1929.....	162
27. Crude Death Rates of Various Countries in Recent Years.....	163
Subsection 2. <i>Infantile and Maternal Mortality</i> .....	163-171
28. Infantile Mortality by Provinces, together with the Rate per 1,000 Living Births, 1921-1929.....	164
29. Infantile Mortality in Canada, by Principal Causes of Death, 1926-1929.....	164-165
30. Proportion per 1,000 Deaths of Infants under 1 Year of Age Occurring at each Age-Period, 1928.....	166

## CHAPTER V.—VITAL STATISTICS—concluded.

	PAGE.
31. Deaths and Death Rates of Children Under One Year of Age (exclusive of Stillbirths) in Cities of 10,000 and Over, 1926-1929.....	166-167
32. Rate of Infantile Mortality per 1,000 Living Births in Various Countries of the World in Recent Years.....	168
33. Rate of Infantile Mortality per 1,000 Living Births in Great Cities of the World in Recent Years.....	169
34. Maternal Deaths in the Former Registration Area, by Age Groups, with Rates per 1,000 Living Births, 1921-1928, and Totals for Canada, 1921-1929.....	170
35. Maternal Deaths in each Province by Age Groups, 1929, with Totals for 1921-1929..	171
36. Maternal Deaths in each Province, by Causes of Death, 1929.....	171

## CHAPTER VI.—IMMIGRATION.

Section 1. <i>Statistics of Immigration</i> .....	172-189
1. Number of Immigrants Settling in Canada in each of the calendar years 1867-1880.....	173
2. Number of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar or fiscal years ended 1881-1930.....	173
3. Sex and Conjugal Condition of Immigrants into Canada, by Age-Groups, fiscal year ended Mar. 31, 1930.....	174
4. Sex Distribution of Immigrants as Adult Males, Adult Females and Children, fiscal years ended Mar. 31, 1911-1930.....	174
5. Racial Origin of Immigrants into Canada, Arriving via Ocean Ports and from the United States, fiscal years ended Mar. 31, 1929 and 1930.....	175-176
6. Languages of Immigrants ten years old and over, Arriving via Ocean Ports and from the United States, fiscal years ended Mar. 31, 1929 and 1930.....	177
7. Nationalities of Immigrants Arriving via Ocean Ports and from the United States, fiscal years ended Mar. 31, 1929 and 1930.....	178
8. Countries of Birth of Immigrants Arriving via Ocean Ports and from the United States, fiscal years ended Mar. 31, 1929 and 1930.....	179-180
9. Immigrants Arriving in Canada, by Chief Ports of Arrival, fiscal years ended Mar. 31, 1924-30.....	180
10. Destinations of Immigrants into Canada, by Provinces, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.....	181
11. Occupations and Destinations of Immigrants Arriving in Canada in the fiscal years ended Mar. 31, 1929 and 1930.....	181-182
12. Rejections of Immigrants upon Arrival at Ocean Ports, by Principal Causes and Nationalities, fiscal years ended 1903-1930, with Totals 1903-20 and 1903-30..	183
13. Deportations of Immigrants after Admission, by Principal Causes and by Nationalities, fiscal years ended 1903-30, with Totals 1903-20 and 1903-30.....	183
14. British Juvenile Immigrants, fiscal years 1901-1930.....	184
15. Record of Oriental Immigrants, fiscal years ended, 1901-1930.....	184
16. Record of Chinese Immigrants, fiscal years ended 1886-1930.....	185
17. Expenditure on Immigration in the fiscal years ended 1868-1930.....	186
18. Canadians Returned from the United States, fiscal years ended Mar. 31, 1925-30.....	187
19. Immigrant and Non-Immigrant Admissions and Other Activities of the Immigration Inspection Service of Canada, by Divisions, fiscal years ended Mar 31, 1928-1930.....	188
20. Returning Canadians and Other Non-immigrants Entering Canada via Ocean Ports, by Class of Travel, fiscal years ended Mar. 31, 1929 and 1930.....	189
Section 2. <i>Immigration Policy</i> .....	189-192

## CHAPTER VII.—SURVEY OF PRODUCTION.

Section 1. <i>The Leading Branches of Production</i> .....	195-198
1. Gross and Net Values of Production in Canada, by Industries, 1924-1928.....	196
2. Detailed Itemized Statement of the Net Values of Production in Canada during 1926, 1927 and 1928.....	197-198
Section 2. <i>The Provincial Distribution of Production</i> .....	198-200
3. Gross and Net Value of Production in Canada by Provinces, 1924-1928.....	199
Section 3. <i>Leading Branches of Production in each Province, 1928</i> .....	200-203
4. Gross and Net Values of Production in Canada, by Industries and Provinces, 1928.....	201-202
5. Percentage of the Value of the Net Production in each Industry to the Total Net Production of each Province, 1928.....	202-203

## CHAPTER VIII.—AGRICULTURE.

Section 1. <i>The Government in Relation to Agriculture</i> .....	204-212
Subsection 1. The Dominion Department of Agriculture.....	204-206
Subsection 2. Provincial Departments of Agriculture.....	206-208
Subsection 3. Dominion and Provincial Agricultural Experimental Stations.....	208-212
(A) Dominion Experimental Farms and Stations.....	208-212
(B) Provincial Agricultural Colleges and Experimental Stations.....	212
Section 2. <i>Statistics of Agriculture</i> .....	213-266
Subsection 1. Agricultural Revenue and Wealth.....	215-218
1. Estimated Gross Annual Agricultural Revenue of Canada, by Provinces, 1925-1929.....	215-217
2. Estimated Gross Agricultural Wealth of Canada, by Provinces, 1929.....	217
Subsection 2. Acreage, Yield, Quality and Value of Field Crops.....	218-230

## CHAPTER VIII.—AGRICULTURE—continued.

	Page.
3. Area, Yield and Value of Principal Crops Grown in Canada, 1921-1930.....	218-219
4. Total Area and Values of Field Crops in Canada, 1925-1930.....	220
5. Field Crops of Canada, Compared as to Quantity and Value, 1928 and 1929.....	220
6. Area, Yield, Quality and Value of Principal Field Crops in Canada, 1929, 1930, and Five-Year Average, 1925-1929.....	221
6A. Area, Yield, Quality and Value of Principal Field Crops in Canada by Provinces, 1930, and Five-Year Average 1925-29.....	222-225
7. Estimated Acreages under Pasture in Canada, 1924-1930.....	226
8. Annual Average Yields per Acre of Field Crops for Canada from 1923 to 1930, with Decennial Averages for the years 1920-1929.....	227
9. Areas and Yields of Wheat, Oats, Barley, Rye and Flaxseed in the Prairie Provinces, 1928-30.....	227
10. Percentages of Total Yields of Principal Field Crops of Merchantable Quality, for Canada and by Provinces, 1925-29.....	228
11. Stocks of Grain in Farmers' Hands on July 31, 1930, as compared with July 31, 1928 and 1929, with Total Production for the Previous Years.....	228
12. Stocks of Grain in Canada on July 31, 1928, 1929 and 1930.....	229
13. Distribution of the Canadian Wheat Crops, by crop years, 1928-29 and 1929-30.....	229
14. Distribution of the Canadian Oat Crops, by crop years, 1928-29 and 1929-30.....	230
Subsection 3. Farm Live Stock and Poultry	230-235
15. Summary Statistics of the Numbers of Live Stock and Poultry in the Dominion of Canada, Censuses of 1871-1921.....	230
16. Estimated Numbers and Values of Farm Live Stock in Canada, by Provinces, 1927-1930.....	231-232
17. Average Values per head of Farm Live Stock in Canada, as Estimated by Crop Correspondents, 1919-1930.....	232-233
18. Estimated Numbers and Values of Farm Poultry in Canada, 1928-30.....	233-234
19. Estimated Value of Canadian Wool Clip, 1915-1930.....	235
20. Production and Value of Farm Eggs in Canada, 1923-1929.....	235
Subsection 4. Fur Farming.....	235-238
21. Number of Fur-bearing Animals on Fur Farms in Canada at Dec. 31, 1920-1928.....	236
22. Values of Fur-bearing Animals on Fur Farms in Canada, at Dec. 31, 1920-28.....	237
23. Values of Fur-bearing Animals Sold from Fur Farms in Canada, 1920-28.....	237
24. Values of Pelts Sold from Fur Farms in Canada, 1920-28.....	238
25. Number of Fur Farms, Value of Land and Buildings and Value of Fur-bearing Animals, by Provinces, 1926-1928.....	238
Subsection 5. Dairying Statistics.....	239-242
26. Production and Value of Creamery Butter, by Provinces, 1927-1929.....	239
27. Production and Value of Factory Cheese, by Provinces, 1927-1929.....	240
28. Miscellaneous Products of Dairy Factories, 1927-1929.....	240
29. Total Values of All Products of Dairy Factories, by Provinces, 1925-1929.....	241
30. Values of the Dairy Production of Canada, by Provinces, 1929, with Dominion Totals for 1925-1929.....	242
Subsection 6. Fruit Farming.....	242-247
31. Fruit Trees, Bearing and Non-bearing, Acreage of Small Fruits, and Fruit Production for all Canada in census years.....	244
32. Estimated Production and Value of Commercial Fruits in Canada, 1923-1929.....	245
33. Numbers and Values of Fruit Trees, Bushes and Plants, Sold by Nurserymen in Canada, years ended May 31, 1926-29.....	246
34. Production and Value of Floricultural and Decorative Plants Grown in Canada and Sold during the year ended May 31, 1929.....	247
Subsection 7. Special Agricultural Crops.....	247-250
35. Estimated Production and Value of Maple Sugar and Maple Syrup in Canada, by Provinces, 1928-1930.....	247
36. Area, Yield and Value of Sugar Beets in Canada and Production of Refined Beet- root Sugar, 1911-1929.....	248
37. Area and Yield of Tobacco in Canada, by Provinces, 1900, 1910, 1911 and 1920-1930.....	249
38. Area and Commercial Production of Onions in Canada, 1927-1930.....	249
39. Area, Production and Value of Flax Fibre, etc., in Canada, 1915-1930.....	249
Subsection 8. Farm Labour and Wages.....	250-251
40. Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1925, 1928, 1929 and 1930.....	250-251
Subsection 9. Prices of Agricultural Produce.....	251-257
41. Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flax and Rye, basis in store at Fort William and Port Arthur, 1928-1930, and Yearly Average Prices for crop years ended July 31, 1926-1930.....	252
42. Yearly Average Prices of Home-Grown Wheat, Barley, and Oats in England and Wales, 1902-1929.....	253
43. Monthly Average Prices of Flour, Bran and Shorts at Principal Markets, 1930.....	253-254
44. Yearly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1927-1929.....	255
45. Monthly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1930.....	256
46. Index Numbers of Producers' Prices of Agricultural Commodities, 1918-1930.....	257
Subsection 10. Agricultural Statistics of the Census.....	258
47. Total Land Area of the Provinces of Canada, 1930, with Estimated Possible Farm Land and Farm Land Occupied, 1921.....	258
Subsection 11. Miscellaneous Agricultural Statistics.....	258-260
48. Major Irrigation Projects in Southern Alberta, 1930.....	260
49. Average Values per Acre of Occupied Farm Lands in Canada, as Estimated by Crop Correspondents, 1910, 1915-30.....	260

## CHAPTER VIII.—AGRICULTURE—concluded.

	PAGE.
Subsection 12. International Agricultural Statistics.....	261-268
50. Acreage and Production of Cereals and Potatoes in Countries of the World, 1929 and 1930, with Five-year Average for 1924-28.....	262-266
51. Exports of Wheat and Flour from the Principal Wheat-exporting Countries and Imports of Wheat and Flour to the Principal Wheat-importing Countries, crop years ended July 31, 1929 and 1930.....	267
52. Numbers of Live Stock in Principal Countries circa 1929.....	268

## CHAPTER IX.—FORESTRY.

Section 1. <i>Physiography, Geology and Climate as Affecting the Forests</i> .....	269-272
Section 2. <i>Main Types of Forest Growth</i> .....	272-275
Section 3. <i>Important Tree Species</i> .....	275
Section 4. <i>Forest Resources</i> .....	275-277
1. Estimate of Total Stand of Timber of Merchantable Size in Canada, by Regions, 1928.....	277
Section 5. <i>Forest Administration</i> .....	277-283
Subsection 1. Administration of Dominion and Provincial Timber Lands.....	277-279
Subsection 2. Forest Fire Protection.....	279-281
Subsection 3. Scientific Forestry.....	281-283
Section 6. <i>Forest Utilization</i> .....	283-304
Subsection 1. Woods Operations.....	284-287
2. Value of the Products of Woods Operations, by Products, 1924-1928.....	285
3. Products of Woods Operations, in Canada, by Chief Products, 1928.....	286
4. Volume of Timber Cut in Canada and Value of Products of Woods Operations, by Provinces, 1927 and 1928.....	286
Subsection 2. The Pulp and Paper Industry.....	287-299
6. Production, Consumption and Export of Pulpwood, calendar years 1908-1929.....	288
6. Pulp Production, Mechanical and Chemical, calendar years 1908-1929.....	293
7. Production of Wood-Pulp in Canada, by Provinces, 1925-1929.....	294
8. Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1928 and 1929.....	294
9. Summary of Paper Production in Canada, calendar years 1917-1929.....	295
10. The Production of Paper in Canada, by Provinces, 1929.....	297
11. Estimated Production of Newsprint Paper in 22 Leading Countries, 1929.....	297
12. Exports of Newsprint Paper from Principal Paper-producing Countries of the World, 1913, 1927, 1928 and 1929.....	298
Subsection 3. The Lumber Industry.....	299-304
13. Lumber, Lath and Shingle Production in Canada, for the calendar years 1908-1929.....	300
14. Production of Lumber and other Sawmill Products in Canada, by Provinces, 1929.....	301
Subsection 4. Summary of Primary Forest Production.....	301
Subsection 5. Other Forest Industries.....	302
Subsection 6. Manufactures of Wood and Paper.....	302-303
Subsection 7. Forest Depletion and Increment.....	303-304

## CHAPTER X.—THE FUR TRADE.

1. Summary of the Numbers and Values of Pelts of Fur-bearing Animals Taken in Canada, years ended June 30, 1920-1929.....	308
2. Numbers and Values of Pelts of Fur-bearing Animals, Taken in Canada, years ended June 30, 1928 and 1929.....	309
3. Kind, Number, Total Value and Average Value of Pelts of Fur-bearing Animals. Taken in Canada, years ended June 30, 1928 and 1929.....	309

## CHAPTER XI.—THE FISHERIES.

Section 1. <i>The Early Fisheries</i> .....	310
Section 2. <i>The Canadian Fishing Grounds</i> .....	310-314
Section 3. <i>The Government and the Fisheries</i> .....	314-317
1. Government Bounties Paid to Fishermen for the calendar years 1926-1929.....	317
Section 4. <i>The Modern Fishing Industry</i> .....	317-328
2. Total Values of the Fisheries of Canada, 1870-1929.....	318
3. Total Values of Fisheries, by Provinces, in the calendar years 1924-1929.....	319
4. Quantities and Values of the Chief Commercial Fishes, calendar years 1925-1929.....	319-320
5. Quantities and Values of Sea Fish and Products Marketed during the calendar years 1928 and 1929.....	321-322
6. Quantities and Values of Inland Fish Marketed during the calendar years 1928 and 1929.....	322-323
7. Yields of the Fisheries of Canada, Compared as to Quantity and Value, for 1928 and 1929.....	323
8. Number of Fish-Canning and Curing Establishments, by Provinces, 1928 and 1929.....	324
9. Materials Used and Value of Products of Fish-Canning and Curing Establishments, 1925-1929.....	324
10. Number and Capital Value of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, 1928 and 1929.....	325
11. Number of Persons Employed in the Fisheries of Canada, 1927-1928.....	326
12. Employees and Salaries and Wages in Fish-Canning and Curing Establishments, 1920-1929.....	326
13. Value of Exports and Imports of Fish and Fish Products, fiscal years 1902-1930.....	327
14. Exports of the Fisheries, the Produce of Canada, by Principal Countries, in the fiscal years ended Mar. 31, 1928 and 1930.....	327
15. Exports of the Fisheries of Canada in Quantity and Value, for the calendar years 1927-1929.....	328

## CHAPTER XII.—MINES AND MINERALS.

	Page.
Section 1. <i>Mineral Lands Administration and Mining Laws</i> .....	330-337
Subsection 1. Dominion Mining Laws and Regulations.....	330-332
Subsection 2. Provincial Mining Laws and Regulations.....	332-337
Section 2. <i>Summary of General Production</i> .....	337-346
Subsection 1. General Statistics of Mineral Production.....	337-342
1. Value of Mineral Production in Canada, calendar years 1886-1930.....	339
2. Mineral Production of Canada, calendar years 1928 and 1929.....	339-341
3. Mineral Production of Canada, Compared as to Quantity and Value, calendar years 1928 and 1929.....	341-342
Subsection 2. Provincial Distribution of Mineral Production.....	343-346
4. Mineral Production of Canada, by Provinces, calendar years 1899-1930.....	343
5. Mineral Production of Canada, by Provinces, calendar year 1929.....	344-346
Section 3. <i>Industrial Statistics of Mining—Capital, Labour, Wages, etc., in Principal Industries</i> .....	346-352
6. Summary of Principal Statistics of the Mineral Industries in Canada, by Groups, 1922-1929, and by Provinces, 1929.....	347-348
7. Summary of Principal Statistics relative to the Mining, Metallurgical, Structural Materials, and Clay Products Industries Operating Plants in Canada, by Industries, 1929.....	349-350
Subsection 1. Metallic Mineral Industries.....	350-351
Subsection 2. Non-Metallic Mineral Industries.....	351-352
Subsection 3. Structural Materials and Clay Products Industries.....	352
Section 4. <i>Production of Metallic Minerals</i> .....	352-369
Subsection 1. Gold.....	352-358
8. Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-1930.....	353
9. Values of Gold Produced in Canada, by Provinces, calendar years 1911-1930.....	354
10. Quantities and Values of the World Production of Gold and Silver for the calendar years 1928 and 1929.....	356-358
Subsection 2. Silver.....	358-361
11. Quantities and Values of Silver Produced in Canada during the calendar years 1887-1930.....	360
12. Quantities and Values of Silver Produced in Canada, by Provinces, during the calendar years 1911-1930.....	361
Subsection 3. Copper.....	361-363
13. Quantities and Values of Copper Produced in Canada, by Provinces, calendar years 1911-1930.....	363
14. Copper Production of Seven Countries and of the World, 1913-1929.....	363
Subsection 4. Lead.....	364-365
15. Quantities and Values of Lead Produced from Canadian Ores, calendar years 1901-1930.....	364
Subsection 5. Nickel.....	365-366
16. Quantities and Values of Nickel Produced in Canada during the calendar years 1901-1930.....	366
Subsection 6. Cobalt.....	366
Subsection 7. Zinc.....	366-367
17. Production of Zinc in Canada, calendar years 1911-1930.....	367
Subsection 8. Iron.....	368-369
18. Iron Ore Shipments and Production of Pig Iron and of Steel Ingots and Castings, calendar years 1909-1930.....	369
Section 5. <i>Production of Non-Metallic Minerals</i> .....	369-376
Subsection 1. Fuels.....	369-375
19. Coal Resources of Canada, by Provinces and Classes of Coal.....	370
20. Production of Coal in Canada, by Provinces, calendar years 1909-1930.....	371
21. Imports into Canada of Anthracite, Bituminous and Lignite Coal for Home Consumption, calendar years 1911-1930.....	372
22. Exports of Coal, the Produce of Canada, calendar years 1911-1929.....	372
23. Annual Consumption of Canadian and Imported Coal in Canada, 1911-1929.....	373
24. Coal Output, Exports, Imports and Coal Made Available for Consumption in Canada, 1929.....	373
25. Coal Production in the Principal Countries of the World, 1913-1929.....	374
Subsection 2. Other Non-Metallic Minerals.....	375-376
26. Production of Asbestos in Canada, calendar years 1909-1930.....	376
Section 6. <i>Production of Clay Products and Other Structural Materials</i> .....	377-378
27. Production of Portland Cement, by Quantities and Values, calendar years 1910-1930, and Imports and Exports, fiscal years ended Mar. 31, 1910-1930.....	377-378

## CHAPTER XIII.—WATER POWERS.

Section 1. <i>The Water Powers of Canada</i> .....	379-383
1. Available and Developed Water Power in Canada, by Provinces, Jan. 1, 1931.....	381
2. Hydraulic Turbine Horse Power Installed in Canada, by Provinces, as at Dec. 31, 1900-1930.....	382
3. Developed Water Power in Canada: Distribution by Provinces and Industries and per 1,000 Population, as at Jan. 1, 1931.....	383
Section 2. <i>Central Electric Stations</i> .....	383-386
4. Summary of Statistics of Central Electric Stations, calendar years 1917-1929.....	384
5. Equipment of Central Electric Stations, 1929.....	385
6. Electrical Energy Generated in Central Electric Stations during the calendar years 1925-1929, by Provinces.....	386
7. Electrical Energy, Generated or Produced for Export under Authority of the Electricity and Fluid Exportation Act during the fiscal years ended Mar. 31, 1927-1930.....	386

## CHAPTER XIII.—WATER POWERS—concluded.

	PAGE.
Section 3. <i>Public Ownership of Hydro-Electric Power</i> .....	387-398
Subsection 1. The Hydro-Electric Power Commission of Ontario.....	387-394
8. Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, 1910-1929.....	389
9. Distribution of Power to Systems of the Ontario Hydro-Electric Power Commission, 1925-1929.....	390
10. Capital Investments in Ontario's Hydro Undertakings, 1925-1929.....	390
11. Combined Revenue of the Ontario Hydro-Electric Power Commission and Associated Municipal Electric Utilities, 1927-1929.....	391
12. Accumulated Reserves of the Ontario Hydro-Electric Power Commission and of the Local Electric Utilities of the Co-operating Municipalities, 1925-1929.....	391
13. Consolidated Statement of Assets, Liabilities, Reserves and Surplus of Electric Departments of Urban Municipalities Served by the Hydro-Electric Power Commission of Ontario for the calendar years 1925-1929.....	392-393
14. Statement of Earnings and Expenses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission for the calendar years 1925-1929.....	393
15. Statistics Relating to Electrical Service in Rural Power Districts Operated by the Hydro-Electric Power Commission of Ontario, years ended Oct. 31, 1925-1929.....	394
Subsection 2. Hydro-Electric Power Commissions in other Provinces.....	394-398

## CHAPTER XIV.—MANUFACTURES.

Section 1. <i>The Evolution of Canadian Manufacturing Industries</i> .....	399-417
Subsection 1. Growth of Manufacturing Production in the Dominion and the Provinces since 1870.....	403-409
1. Historical Summary of Statistics of Manufactures, by Provinces, 1870-1929.....	406-409
Subsection 2. Thirteen Years of Manufacturing in the Industrial Groups.....	410-413
2. Summary of Statistics of Manufactures, by Industrial Groups, 1917-1929.....	410-413
Subsection 3. Summary Statistics of Manufacturing Production.....	413-417
3. Summary Statistics of Manufactures, 1923-28.....	414
4. Volume of Manufacturing Production, 1917-1929.....	416
5. Consumption of Manufactured Products, by Groups, 1928, with Totals for 1922-1927.....	417
Section 2. <i>Production by Industrial Groups and Individual Industries</i> .....	417-438
Subsection 1. Manufactures Grouped by Chief Component Materials.....	418-429
6. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Cost of Materials and Value of Products of Canadian Manufacturing Industries, 1928.....	424-429
Subsection 2. Manufactures Classified by the Purpose of the Products.....	430-432
7. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for 1922-27 and in Detail for 1928.....	430-432
Subsection 3. Manufactures Classified by Origin of the Materials.....	432-434
8. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Materials Used, 1926-1928.....	433-434
Subsection 4. The Forty Leading Manufacturing Industries.....	434-438
9. Principal Statistics of Forty Leading Industries, 1928.....	435-436
9A. Principal Statistics of Forty Leading Industries, 1929.....	437
Section 3. <i>Provincial Distribution of Manufacturing Production</i> .....	438-445
Subsection 1. The Manufactures of the Maritime Provinces, 1928.....	438-440
10. Statistics of Ten Leading Industries of each of the Maritime Provinces, 1928.....	439-440
Subsection 2. The Manufactures of Quebec, 1928.....	440-441
11. Statistics of Forty Leading Industries of the Province of Quebec, 1928.....	441
Subsection 3. The Manufactures of Ontario, 1928.....	441-443
12. Statistics of Forty Leading Industries of the Province of Ontario, 1928.....	442-443
Subsection 4. The Manufactures of the Prairie Provinces, 1928.....	443-444
13. Statistics of Ten Leading Industries of Manitoba, Saskatchewan and Alberta, 1928.....	444
Subsection 5. The Manufactures of British Columbia, 1928.....	444-445
14. Statistics of Twenty-five Leading Industries of British Columbia, 1928.....	445
Section 4. <i>Principal Factors in Manufacturing Production</i> .....	445-462
Subsection 1. Capital Employed.....	445-447
15. Provincial Distribution of Capital Employed in the Manufacturing Industries of Canada, in Percentages, 1920-1928.....	446
16. Distribution of Capital Employed in the Manufacturing Industries of Canada, by Industrial Groups and Percentages, 1926-1928.....	446
17. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and by Groups of Industries, 1928.....	447
Subsection 2. Employment in Manufactures.....	447-451
18. Salaried and Wage-earning Employees in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-1928.....	448
19. Percentages of Male and Female Employees on Salaries and Wages, by Provinces and Groups of Industries, 1928.....	449
20. Total Number of Wage-earners Employed in the Manufacturing Industries of Canada, by Months, 1927 and 1928.....	450
21. Number of Days in Operation and of Hours Worked per Shift and per Week in the Manufactures of Canada, by Provinces and Groups, 1928.....	451
Subsection 3. Wages and Salaries in Canadian Manufacturing Industries, 1928.....	451-456
22. Employees on Salaries and Wages in Manufacturing Industries, 1928, and Average Salaries and Wages, by Provinces, 1927 and 1928.....	453

## CHAPTER XIV.—MANUFACTURES—concluded.

PAGE.

23. Employees by Sex in Forty Leading Canadian Manufacturing Industries during 1928, with Averages of Salaries and Wages Paid and Number of Days Operated by Plants in each Industry for 1927 and 1928.....	454-455
24. Average Yearly Earnings and Real Wages of Wage-Earners in Manufacturing Industries, 1917-1928.....	456
25. Percentages of Wages and Salaries Paid to Total Net Value of Manufacturing Production, 1917-1928.....	456
Subsection 4. Size of Manufacturing Establishments.....	457-459
26. Manufacturing Establishments, Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, 1922 and 1928.....	458
27. Manufacturing Establishments, Grouped according to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1928.....	458
28. Number of Establishments and of Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923 and 1928.....	459
29. Number of Establishments and of Employees in Canadian Manufactures, by Provinces, and Average Number of Employees per Establishment, 1928.....	459
Subsection 5. Power and Fuel.....	460-462
30. Totals for Canada of Power Installed in the Manufacturing Industries, 1921-1928, with Details by Provinces and Groups of Industries for 1928.....	461
31. Total Fuel Used in the Manufacturing Industries of Canada, 1921-1928, with Details by Provinces and Groups, 1928.....	462
Section 5. <i>Manufacturing Industries in Cities and Towns</i> .....	463-470
32. Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1922.....	463
33. Principal Statistics of the Manufacturing Industries of the Seven Leading Manufacturing Cities of Canada, 1921-1928.....	464
34. Statistics of Manufactures of Municipalities with a Gross Production of \$200,000 or over, and with Three or more Establishments, 1928.....	465-470

## CHAPTER XV.—CONSTRUCTION.

1. Summary of the Value of Construction Contracts Awarded in Canada, 1911-1930, as Compiled by MacLean Building Reports, Ltd.....	472
2. Construction Contracts Awarded in Canada, 1925-1930, by Provinces and Types of Construction, as Compiled by MacLean Building Reports, Ltd.....	473
3. Value of Building Permits Taken Out in 61 Cities for the calendar years 1925-1930.....	474-475
4. Value of Building Permits Issued by 35 Cities in the calendar years 1910-1930.....	475

## CHAPTER XVI.—EXTERNAL TRADE.

Section 1. <i>Historical Sketch of External Trade and Tariffs</i> .....	476-482
Section 2. <i>The Commercial Intelligence Service</i> .....	482-485
Canadian Government Trade Commissioners.....	483-484
Section 3. <i>Statistics of External Trade</i> .....	485-613
Subsection 1. <i>Historical Statistics of Canadian Trade</i> .....	487-490
Summary of the Trade of Canada by Main Groups, fiscal years ended Mar. 31, 1914, 1921 and 1930.....	488
Summary of Trend of Canadian Trade, 1914 to 1930.....	490
Subsection 2. <i>General Analysis of Current Import and Export Trade</i> .....	491-492
Canada's Domestic Exports Less Exports of Barley, Flaxseed, Oats, Rye, Wheat and Wheat Flour, fiscal years ended Mar. 31, 1929 and 1930.....	491
Subsection 3. <i>Trade with the United Kingdom, and the British Empire</i> .....	492-494
Summary of Canadian Trade with the United Kingdom, by Groups and Principal Commodities, year ended Mar. 31, 1930, with Increases or Decreases as Compared with 1929.....	492-493
Trade of Canada with the British Empire.....	494
Subsection 4. <i>Trade with the United States and Other Foreign Countries</i> .....	494-496
Summary of Canadian Trade with the United States, by Groups and Principal Commodities, year ended Mar. 31, 1930, with Increases or Decreases as Compared with 1929.....	495
Trade of Canada with the United States and other Foreign Countries.....	496
Subsection 5. <i>Geographical Distribution of Canadian Trade by Continents and Countries</i> .....	497-500
Trade of Canada, by Continents, 1926, 1929 and 1930.....	497
Canada's Imports from Thirty-five Leading Countries, 1930.....	498
Canada's Domestic Exports to Forty Leading Countries, 1930.....	499
Subsection 6. <i>Principal Commodities Imported and Exported</i> .....	500-504
Principal Commodities Imported and Exported, fiscal year ended Mar. 31, 1930.....	500-501
Canada's Leading Imports, fiscal years, 1890, 1900, 1910, 1920 and 1930.....	502-503
Canada's Leading Domestic Exports, fiscal years, 1890, 1900, 1910, 1920 and 1930.....	504
Subsection 7. <i>Trade in Raw and Manufactured Products</i> .....	504-506
Statement showing Proportion of Raw Materials and Partly and Fully Manufactured Goods Imported into and Exported from Canada and the United States, 1900, 1914 and 1920-1930.....	505
Canada's Imports and Exports by Continents and Leading Countries, According to Degree of Manufacture, year ended Mar. 31, 1929.....	506
Subsection 8. <i>Canada's Position in International Trade in the calendar years 1913 and 1929</i> .....	507-511
Comparison of the Trade of the Principal Countries of the World, calendar years 1913 and 1929.....	507-508
Canada's Share in the Imports of Principal Countries, calendar years 1913, 1922 and 1929.....	509
Canada's Share in Domestic Exports of Principal Countries, calendar years 1913, 1922 and 1928.....	510

## CHAPTER XVI.—EXTERNAL TRADE—continued.

	PAGE.
Subsection 9. Main Historical Tables and Tables showing Current Trends in External Trade	511-609
1. Aggregate External Trade of Canada, fiscal years 1868-1930	513
2. Ratio of Exports to Imports and Value per capita of Exports, Imports and Total Trade, fiscal years 1868-1930	514
3. Movement of Coin and Bullion, fiscal years 1868-1930	515
4. Duties Collected on Exports, 1868-1892, and on Imports for Home Consumption, 1868-1930, with Percentage of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1868-1930	518
5. Exports to the United Kingdom, to the United States and to Other Countries, of Merchandise the Produce of Canada, fiscal years 1868-1930	517
6. Imports from the United Kingdom, from the United States and from Other Countries, of Merchandise Entered for Home Consumption, fiscal years 1868-1930	518
7. Percentage Proportions of Imports from United Kingdom and United States respectively, to Totals of Dutiable and Free in the 25 fiscal years, 1907-1930	519
8. Average <i>ad valorem</i> Rates of Duty Collected on Dutiable and Total Imports from United Kingdom, United States and All Countries in the 63 fiscal years 1868-1930	519
9. Imports for Home Consumption of certain Raw Materials Used in Canadian Manufactures, fiscal years 1911-1930	520
10. Exports to the United Kingdom, to the United States and to All Countries, by Classes of Merchandise, the Produce of Canada, by Values and Percentages, fiscal years 1927-1930	521
11. Imports from the United Kingdom, from the United States, and from All Countries, by Classes of Merchandise Entered for Home Consumption, by Values and Percentages, fiscal years 1927-1930	522-523
12. Principal Exports of Canadian Produce from Canada to United Kingdom, United States and All Countries, fiscal years 1927-1930	524-543
13. Principal Imports into Canada for Consumption from United Kingdom, United States and All Countries, fiscal years 1927-1930	544-575
14. Imports (Dutiable and Free) and Exports of Canadian and Foreign Produce, by Main Classes, during the fiscal years ended Mar. 31, 1926-1930	576-577
15. External Trade of Canada, by Main Groups and Degree of Manufacture, According to Origin, fiscal year ended Mar. 31, 1930	578-579
16. Summary of the External Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended Mar. 31, 1930	580-584
17. Value of Total Exports, Imports Entered for Consumption, and Duty Collected thereon, at certain Ports and by Provinces, during the fiscal years ended Mar. 31, 1929 and 1930	584-586
18. Dutiable Imports of Canada, by Values Entered for Consumption, from British Empire and Foreign Countries under the General, Preferential and Treaty Rate Tariffs, in the fiscal years ended Mar. 31, 1929 and 1930	586-587
19. Values of Imports into Canada of Merchandise Entered for Consumption from the British Empire and from Foreign Countries in the five fiscal years ended Mar. 31, 1926-1930	587-588
20. Values of Exports of Canadian Produce from Canada to the British Empire and to Foreign Countries, in the five fiscal years ended Mar. 31, 1926-1930	589-590
21. Value of Merchandise Imported into and Exported from Canada through the United States during the fiscal years ended Mar. 31, 1929 and 1930	591
22. Import and Export Trade of Canada with Bermuda, Newfoundland and Mexico, years ended Mar. 31, 1929 and 1930	592
23. Import and Export Trade of Canada with Barbados, Cuba and Santo Domingo, years ended Mar. 31, 1929 and 1930	593
24. Import and Export Trade of Canada with Jamaica, Trinidad and Tobago and other British West Indies, years ended Mar. 31, 1929 and 1930	594
25. Import and Export Trade of Canada with British Guiana, Argentina and Brazil, years ended Mar. 31, 1929 and 1930	595
26. Import and Export Trade of Canada with Chile, Peru and Uruguay, years ended Mar. 31, 1929 and 1930	596
27. Import and Export Trade of Canada with Colombia, Paraguay and Venezuela, years ended Mar. 31, 1929 and 1930	596
28. Import and Export Trade of Canada with Belgium, France and Germany, years ended Mar. 31, 1929 and 1930	597-599
29. Import and Export Trade of Canada with Italy, Netherlands and Switzerland, years ended Mar. 31, 1929 and 1930	600-601
30. Import and Export Trade of Canada with Denmark, Norway and Sweden, years ended Mar. 31, 1929 and 1930	602
31. Import and Export Trade of Canada with Irish Free State, Greece and Spain, years ended Mar. 31, 1929 and 1930	603
32. Import and Export Trade of Canada with British East Africa, British South Africa and British West Africa, years ended Mar. 31, 1929 and 1930	604
33. Import and Export Trade of Canada with British India, Ceylon and Straits Settlements, years ended Mar. 31, 1929 and 1930	605
34. Import and Export Trade of Canada with Hong Kong, China and Japan, years ended Mar. 31, 1929 and 1930	606-607
35. Import and Export Trade of Canada with Australia, Fiji and New Zealand, years ended Mar. 31, 1929 and 1930	608
Subsection 10. Comparison of the Volume of Imports and Exports	610-613
36. Comparison of the Value and Volume of the External Trade of Canada, by Main Groups, for the fiscal years ended Mar. 31, 1924 and 1930	612-613
Section 4. <i>The Tourist Trade of Canada</i>	614-615
Section 5. <i>Balance of International Payments, 1920-1929</i>	615-617
37. Estimated Balance of International Payments, 1926-1929	617

## CHAPTER XVII.—INTERNAL TRADE.

PAGE.

Section 1. <i>Interprovincial Trade</i> .....	618-620
1. Railway Revenue Freight Traffic Movement in Canada and the Provinces, for the calendar years 1928 and 1929.....	620
Section 2. <i>Grain Trade Statistics</i> .....	620-627
2. Summary of the Distribution of Grain in Canada during the crop year ended July 31, 1929.....	622
3. Number and Storage Capacity of Canadian Grain Elevators in the licence years 1929 and 1930.....	624
4. Quantities of Canadian Grain Inspected during the crop years ended Aug. 31, 1924 and July 31, 1925-1929.....	625
5. Shipments of Grain by Vessels from Fort William and Port Arthur for the navigation seasons 1928 and 1929.....	626
6. Shipments of Grain by Lake and All-Rail Routes from Fort William and Port Arthur for the crop years ended July 31, 1928 and 1929.....	626
7. Canadian Grain Handled at Public Elevators in the East, by crop years ended Aug. 31, 1922-1923 and July 31, 1924-1929.....	626
8. Canadian Grain Handled at Public Elevators in the East, by Classes of Ports, during the crop year ended July 31, 1928.....	627
9. Flour Mills of Canada, with their Equipment and Capacity, 1929, with Totals for 1928.....	627
Section 3. <i>Marketing of Live Stock and Animal Products</i> .....	628-635
10. Animals in Canada and Animals Killed or Sold by Farmers in Canada, by census years, 1871-1921.....	628
11. Index Numbers of Animals on Farms in Canada, calendar years 1919-1930.....	628
12. Receipts and Disposition of Live Stock at Principal Markets in Canada, calendar years 1928 and 1929.....	629-630
13. Live Stock from several Provinces of Canada, Marketed through Stock-Yards, Packers, etc., calendar year 1929.....	630
14. Grading of Live Stock from several Provinces of Canada, Marketed at the Stock-Yards, calendar year 1929.....	631
15. Principal Statistics of the Slaughtering and Meat-packing Industry of Canada, decennially 1871-1911, annually 1923-1929.....	632
16. Live Stock Slaughtered at Canadian Inspected Establishments, by months, 1929 and 1930.....	632
17. Total and Per Capita Consumption of Meats and Live-Stock Products in Canada, calendar years 1925-1929.....	633-634
Section 4. <i>Cold Storage</i> .....	635-636
18. Cold Storage Warehouses in Canada, by Provinces, 1930.....	635
19. Stocks of Food on hand in Cold Storage and in Process of Cure, by Months and Commodities, 1929 and 1930.....	636
Section 5. <i>Bounties, Patents, Copyrights and Trade Marks</i> .....	637-640
20. Number of Canadian Patentees, by Province of Residence, for the fiscal years ended Mar. 31, 1920-1930.....	638
21. Statistics of Patents Applied for, Granted, etc., fiscal years ended Mar. 31, 1926-1930.....	639
22. Statistics of Copyrights, Trade Marks, etc., fiscal years ended Mar. 31, 1926-1930.....	640
23. Receipts, Expenditures and Surplus on Account of Patents, Copyrights and Trade Marks, fiscal years ended Mar. 31, 1921-30.....	640
Section 6. <i>Weights and Measures, Electricity and Gas Inspection</i> .....	641-643
24. Inspectors by the Weights and Measures Service, fiscal year ended Mar. 31, 1930.....	642
25. Number of Electricity Meters in Use, fiscal years ended Mar. 31, 1915-1930.....	642
26. Number of Gas Meters in Use, fiscal years ended Mar. 31, 1916-1930.....	643
27. Number of Cubic Feet of Gas Sold in Canada, fiscal years ended Mar. 31, 1920-30.....	643
Section 7. <i>Census of Wholesale and Retail Merchandising</i> .....	643-646
Subsection 1. Census of Trading Establishments.....	644
Subsection 2. Survey of Chain Stores.....	644-646
28. Number of Stores and Sales of Chain Stores in Canada, by Classes of Chains and by Provinces, calendar year 1929.....	646
29. Chain Store Sales in Canada by Classes of Commodities, calendar year 1929.....	646

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Part I.—Government Control Over Agencies of Transportation and Communication....	648-650
The Board of Railway Commissioners for Canada.....	649-650
Part II.—Steam Railways.....	650-677
Section 1. <i>Historical Sketch</i> .....	650-653
Section 2. <i>Statistics of Steam Railways</i> .....	653-667
1. Record of Steam Railway Mileage as at June 30, 1835-1919, and Dec. 31, 1919-1929.....	654
2. Steam Railway Mileage, by Provinces, Dec. 31, 1921-1929.....	654
3. Capital Liability of Steam Railways, June 30, 1901-1919, and Dec. 31, 1919-1929....	655
4. Mileage, Capital Liability, Earnings and Operating Expenses of Individual Steam Railways for the calendar year 1929.....	655-656
5. Capital Invested in Road and Equipment of Canadian Steam Railways, calendar years 1924-1929.....	657
6. Summary of Steam Railway Statistics of Freight and Passenger Traffic, and Ratio of Expenses to Earnings, years ended June 30, 1911-1919, and calendar years 1919-1929.....	658

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.

	Page.
7. Distribution of Operating Expenses of Steam Railways for the calendar years 1926-1929.....	658
8. Earnings and Operating Expenses of Steam Railways per Mile of Line and per Train Mile, for the years ended June 30, 1915-19, and the calendar years 1919-1929.....	659
9. Summary Analysis of Statistics of Passenger and Freight Services and Receipts, for the years ended June 30, 1915-19, and the calendar years 1919-29.....	660-661
10. Number of Steam Railway Employees, Amount of Salaries and Wages and Ratios of the latter to Gross Earnings and Operating Expenses, for years ended June 30, 1915-1919, and for calendar years 1919-1929.....	661
11. Rolling Stock of Steam Railways, calendar years 1923-1929.....	662
12. Commodities Hauled as Freight on Steam Railways during the calendar years 1925-1929.....	663-664
13. Areas of Land Subsidies Granted to Steam Railways by the Dominion and Provincial Governments up to Dec. 31, 1929.....	665
14. Analysis of the Total Financial Aid Given to Steam Railways up to Dec. 31, 1929.....	665
15. Railway Bonds guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1928.....	665
16. Number of Passengers, Employees and Others Killed and Injured on Steam Railways, years ended June 30, 1915-1919, and calendar years 1919-1929.....	666
17. Number of Persons Killed and Injured on Steam Railways in the calendar years 1927-1929.....	666-667
Section 3. <i>Origin and Growth of Government-Owned Railways</i> .....	667-677
18. Cost of Construction, Operating Expenses and Revenue of Canadian Government Railways for the fiscal years 1868-1900, 1901-1930, and before Confederation..	668
19. Capital Expenditure on Government Railways to Mar. 31, 1930.....	668-669
20. Canadian National Railways (Canadian and U.S. Lines) Train Traffic Statistics, for the calendar years 1923 and 1929.....	671
21. Gross Revenues, Operating Expenses, Net Revenues, Interest on Funded Debt and Annual Deficit of the Canadian National Railways for the calendar years 1925-1929.....	672
22. Debt and Interest Charges of Canadian National Railways (including appropriations for Canadian Government Railways), 1919-1929.....	675
23. Analysis of the Increase in the Debt of the Canadian National Railways, calendar years 1923-1929.....	676
24. Assets of the Canadian National Railway System, Dec. 31, 1923 and 1929.....	677
<b>Part III.—Electric Railways</b> .....	677-681
25. Summary of Statistics of Electric Railway Operation, years ended June 30, 1901-1919, and calendar years 1919-1929.....	679
26. Mileage and Equipment of Electric Railways in the calendar years 1926-1929.....	679
27. Capital Liability of Electric Railways, years ended June 30, 1908-1919, and calendar years 1919-1929.....	680
28. Mileage Operated, Capital, Earnings, Operating Expenses, Employees and Salaries and Wages Bill of Electric Railways in Canada, year ended Dec. 31, 1929.....	680-681
29. Number of Passengers, Employees and others Killed and Injured on Electric Railways, calendar years 1919-1929, with Totals from 1894 to June 30, 1919.....	681
<b>Part IV.—Express Companies</b> .....	682-683
30. Summary Statistics of Revenues and Expenses of Express Companies, 1919-1929..	683
31. Revenues, Expenses and Operating Mileage of Express Companies, by Companies, calendar year 1929.....	683
32. Business Transacted by Express Companies in Financial Paper in the calendar years 1926-1929.....	683
<b>Part V.—Roads and Highways</b> .....	684-685
33. Classification of Canadian Highways, by Provinces, Dec. 31, 1929.....	685
<b>Part VI.—Motor Vehicles</b> .....	685-696
Section 1. <i>Statistics of Motor Vehicle Operation</i> .....	686-690
34. Number of Motor Vehicles Registered in Canada, by Provinces, calendar years 1907-1930.....	687
35. Types of Motor Vehicles Registered in Canada, by Provinces, in the calendar years 1929 and 1930.....	688
36. Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, for the years 1929 and 1930.....	689
37. Canadian Imports and Exports of Motor Vehicles, fiscal years ended Mar. 31, 1908-1930.....	690
Section 2. <i>Motor Vehicle Acts and Regulations</i> .....	690-696
<b>Part VII.—Air Navigation</b> .....	696-698
38. Statistical Summary of Civil Aviation in Canada, 1925-1930.....	698
<b>Part VIII.—Canals</b> .....	699-707
Section 1. <i>Canal Systems</i> .....	699-701
39. Canals of Canada, Length and Lock Dimensions, 1930.....	699-700
40. Expenditures and Revenues of Canals, fiscal years ended June 30, 1898-1906, and Mar. 31, 1907-1930.....	700
41. Capital Expenditures for Construction and Enlargement of Canals previous to, and for, the fiscal year ended Mar. 31, 1930.....	701

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.

Part VIII.—Canals—concluded.	PAGE.
Section 2. <i>Canal Traffic</i> .....	701-707
42. Total Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1900-1930.....	702
43. Distribution of Total Freight Traffic on Canals, by months, navigation seasons 1924-1930.....	702
44. Tonnage of Canal Traffic, by Canals and Classes of Products, navigation seasons 1929 and 1930.....	703
45. Principal Articles carried through Canadian Canals during the navigation seasons 1927-1930.....	703-704
46. Canal Traffic during the navigation seasons of 1929 and 1930, by Direction and Origin.....	704-705
47. Traffic through individual Canadian Canals during the navigation seasons 1925-1930.....	705-706
48. Traffic to and from the East and West Coasts of Canada via the Panama Canal, years ended June 30, 1921-1930.....	707
49. Summary of Commercial Traffic through the Panama Canal, years ended June 30, 1915-1930.....	707
<b>Part IX.—Shipping and Navigation</b> .....	<b>708-725</b>
50. Sea-going and Inland Vessels (exclusive of Coasting Vessels and Ferriage) Arrived at and Departed from Canadian Ports, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.....	708
Section 1. <i>Ocean Shipping</i> .....	709-712
51. Sea-going Vessels Entered and Cleared at Canadian Ports, with Cargo and in Ballast, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.....	710
52. Details, by Nationality, of Sea-going Vessels (exclusive of Coasting Vessels) Entered and Cleared at Canadian Ports during the fiscal years ended Mar. 31, 1929 and 1930.....	710-711
53. Sea-going Vessels Entered and Cleared, by Principal Countries, fiscal year ended Mar. 31, 1930.....	711-712
Section 2. <i>Inland Shipping</i> .....	712-718
54. Canadian and United States Shipping on Rivers and Lakes between Canada and United States Ports, exclusive of Ferriage, fiscal years ended Mar. 31, 1925-1930.....	713
Section 3. <i>Coasting Trade</i> .....	714
55. British and Foreign Vessels Employed in the Coasting Trade of Canada, fiscal years ended Mar. 31, 1925-1930.....	714
Section 4. <i>Grand Total Shipping Trade</i> .....	714-717
56. Total Number and Tonnage of All Vessels Entered and Cleared at Canadian Ports by Provinces, during the fiscal year ended Mar. 31, 1930 with Totals for the fiscal years ended 1923-1930.....	715
57. Number and Tonnage of Sea-going and of All Vessels Entered and Cleared at the Principal Ports of Canada, fiscal year ended Mar. 31, 1930.....	716-717
Section 5. <i>Shipping Constructed and on the Registry</i> .....	717-719
58. Vessels Built and Registered in Canada and Vessels Sold to other Countries, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.....	718
59. Number and Net Tonnage of Vessels on the Registry of Shipping of Canada, by Provinces, Dec. 31, 1921-1930.....	718-719
Section 6. <i>The Department of Marine</i> .....	719-724
60. Total Revenue and Expenditure of the Department of Marine, fiscal years ended June 30, 1868-1906, and Mar. 31, 1907-1930.....	720
61. Revenue of the Department of Marine, fiscal years ended Mar. 31, 1925-1930.....	720
62. Expenditure of the Department of Marine, fiscal years ended Mar. 31, 1925-1930.....	721
63. Steamboat Inspection during the fiscal year ended Mar. 31, 1930.....	722
64. Number of Seamen Shipped and Discharged at Canadian Ports, calendar years 1908-1929.....	723
65. Canadian Wrecks and Casualties for 1870-1900, for the years ended June 30, 1901-1917, and for the calendar years 1918-1929.....	723
66. Comparative Statement of Marine Danger Signals, fiscal years ended Mar. 31, 1919-1930.....	724
Section 7. <i>Merchant Marine Services Operated by the Dominion Government</i> .....	724-725
<b>Part X.—Telegraphs</b> .....	<b>724-722</b>
Section 1. <i>Telegraph Statistics</i> .....	725-728
67. Summary Statistics of All Canadian Telegraphs for calendar years 1920-1929.....	726
68. Statistics of Chartered Telegraph Companies for the calendar years 1924-1929.....	727
Section 2. <i>Radio Service</i> .....	728-732
69. Government-Owned Radio Stations in Canada, fiscal year ended Mar. 31, 1930.....	730
70. Business and Cost of Maintenance of Radiotelegraph Stations for the fiscal years ended Mar. 31, 1928 and 1930.....	731
71. Wireless and Radio Stations in Operation in Canada, Mar. 31, 1925-1930.....	732
<b>Part XI.—Telephones</b> .....	<b>732-736</b>
72. Progress of Telephones in Canada, years ended June 30, 1911-1918, and Dec. 31, 1919-1929.....	734
73. Number of Telephone Companies in Canada, by Provinces, Dec. 31, 1929.....	734
74. Number of Telephone Companies in Canada, 1911-1929.....	735
75. Telephones in Use, Mileage of Wire and Number of Employees, by Provinces, Dec. 31, 1929.....	735
76. Telephones in Use, Mileage of Wire and Number of Employees, 1911-1929.....	736
77. Financial Statistics of Canadian Telephone Companies for the years 1912-1929.....	736

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—concluded.

	PAGE.
<b>Part XII.—The Post Office</b> .....	737-746
78. Number of Post Offices in Operation, by Provinces, Mar. 31, 1925-1930.....	739
79. Statistics of Gross Postal Revenue of Offices Collecting \$10,000 and upwards, for the fiscal years ended Mar. 31, 1929 and 1930.....	739-741
80. Revenue and Expenditure of the Post Office Department for the quinquennial fiscal years 1890-1910, and for the fiscal years ended Mar. 31, 1911-1930.....	741
81. Operation of the Money Order System in Canada, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-1930.....	742
82. Money Orders, by Provinces, and Total Postal Notes, fiscal years ended Mar. 31, 1928-1930.....	743-744
83. Mileage Flown and Weight of Mails Carried by Air, fiscal year ended Mar. 31, 1930.....	745
84. Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1928-1930.....	746

## CHAPTER XIX.—LABOUR AND WAGES.

<b>Part I.—Labour</b> .....	747-792
Section 1. <i>Occupations of the People</i> .....	747
Section 2. <i>The Dominion Department of Labour</i> .....	747-751
Section 3. <i>Provincial Labour Departments and Bureaus</i> .....	751-753
Section 4. <i>Canada and the International Labour Organization</i> .....	753-755
Section 5. <i>Organized Labour in Canada</i> .....	755-760
1. Membership of Trade Unions in Canada, 1911-1929.....	758
2. International Trade Unions Operating in Canada.....	759-760
3. Canadian Central Labour Bodies Operating in Canada.....	760
Section 6. <i>Fatal Industrial Accidents</i> .....	761-762
1. Fatal Industrial Accidents in Canada, by Industries, 1926-1930.....	762
Section 7. <i>Workmen's Compensation in Canada</i> .....	762-766
5. Compensation Paid and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1917-1929.....	762
6. Compensation Paid by the New Brunswick Workmen's Compensation Board, 1920-1929.....	763
7. Compensation Paid and Accidents Compensated by the Quebec Workmen's Compensation Commission, 1928-1930.....	763
8. Benefits Awarded and Accidents Reported by the Ontario Workmen's Compensation Board, 1915-1930.....	764
9. Compensation Paid and Accidents Compensated by the Manitoba Workmen's Compensation Board, 1917-1929.....	765
10. Compensation Paid and Accidents Compensated by the Alberta Workmen's Compensation Board, 1921-1929.....	766
11. Compensation Paid and Accidents Compensated by the British Columbia Workmen's Compensation Board, 1917-1929.....	766
Section 8. <i>Strikes and Lockouts</i> .....	766-771
12. Strikes and Lockouts in Canada by years, 1901-1930.....	767
13. Monthly Record of Strikes and Lockouts, 1925-1930.....	768
14. Strikes and Lockouts, by Provinces, Number of Workers Involved and Time Lost, 1929 and 1930.....	770
15. Strikes and Lockouts, by Industries, 1929 and 1930.....	770
Section 9. <i>Employment and Unemployment</i> .....	771-779
16. Applications for Employment, Positions Offered and Placements Effected by the Employment Service of Canada, by Provinces, 1929-1930, and for Canada, 1920-1930.....	773
17. Percentages of Unemployment in Trade Unions, by Provinces, 1915-1930.....	773-774
18. Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of Each Month, January, 1929, to December, 1930, with Yearly Averages since 1921.....	774
19. Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of Each Month, January, 1929, to December, 1930, with Yearly Averages since 1922.....	777
20. Index Numbers of Employment as Reported by Employers, by Industries, as at the First of Each Month, January, 1929, to December, 1930, with Yearly Averages since 1921.....	778
21. Unemployment Relief Allotments and Commitments under the Employment Relief Act, by Provinces, as at Dec. 31, 1930.....	778-779
Section 10. <i>Old Age Pensions</i> .....	780-783
22. Financial Summary of Old Age Pensions in Canada, by Provinces, as at Dec. 31, 1930.....	781
23. Country of Birth of Old Age Pensioners, by Provinces, as at Dec. 31, 1930.....	782
24. Summary of Old Age Pensions in Canada, by Provinces, as at Dec. 31, 1930.....	783
Section 11. <i>The Co-operative Movement in Canada</i> .....	783-787
25. Statistics of Co-operative Societies Affiliated with the Co-operative Union of Canada, 1939-1929.....	784-785
26. Number and Membership of Co-operative Associations in Canada, by Provinces and Groups, 1930.....	784
Subsection 2. Co-operative Credit in Quebec.....	785
	785-786

## CHAPTER XIX.—LABOUR AND WAGES—concluded.

	PAGE.
<b>Part I.—Labour—concluded.</b>	
27. Progress of Co-operative People's Banks in Quebec, 1915-1929.....	786
Subsection 3. Producers' Co-operation.....	786-787
28. Pool Membership, Acreage and Bushels Handled by the Wheat Pools of the Prairie Provinces, 1923-1930.....	787
Section 12. <i>Labour Legislation in Canada</i> .....	788-790
Section 13. <i>Legislation Respecting Combinations in Restraint of Trade</i> .....	790-792
<b>Part II.—Wages and Cost of Living.</b>	792-799
Section 1. <i>Wage Rates</i> .....	792-798
1. Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1901-1930.....	793
2. Rates of Wages and Hours of Labour in Various Trades in certain Cities of Canada, 1930.....	794
3. Samples of Wages and Hours of Labour for Common Labour in Factories in Canadian Cities, 1921, 1925, 1927, 1928, 1929 and 1930.....	794-795
Section 2. <i>Wages and Hours of Labour Under Minimum Wage Boards in Canada</i> .....	796-798
Subsection 1. Minimum Wages for Females.....	796-797
4. Minimum Wages and Maximum Hours of Labour for Female Employees, Under Orders of Minimum Wage Boards in Canada, 1930.....	796-797
Subsection 2. Minimum Wages for Male Employees.....	798
Section 3. <i>Cost of Living of Wage Earners</i> .....	798-799
5. Changes in the Cost of Living in Canada from 1914 to 1930.....	798-799

## CHAPTER XX.—PRICES.

Section 1. <i>Wholesale Prices of Commodities</i> .....	801-811
Subsection 1. Historical Review of Canadian Prices.....	801-802
1. Annual Index Numbers of Wholesale Prices in Canada, 1867-1930.....	801
Subsection 2. The New Index Number on a Post-war Base (1926).....	803-811
2. Weighted General Price Index Numbers, by Months, 1922-1930.....	806
3. Annual Weighted Index Numbers of Wholesale Prices of Commodities, by Groups (Chief Component Material Classification), 1913-1930, with Monthly Figures for 1928-1930.....	907
4. Index Numbers of Wholesale Prices of Commodities, Classified According to Purpose, by Yearly Averages, 1914-1930, and by Months, 1928-1930.....	808
5. Weighted Index Numbers of Commodities, Classified According to Origin and Degree of Manufacture, by Yearly Averages, 1914-1930.....	809
6. Weighted Index Numbers of Prices of Commodities, Classified According to Origin and Degree of Manufacture, by Months, 1926-1930.....	810-811
Section 2. <i>Retail Prices of Commodities</i> .....	812-821
7. Index Numbers of Canadian Retail Prices, 1914-1930, Charged to New Base, 1926=100.....	818
8. Index Numbers of Retail Prices, Rents and Costs of Services, 1928, 1929, 1930 and January-April, 1931, (1926=100).....	819
9. Prices of a Family Budget of Staple Foods, Fuel and Lighting and Rent, in Sixty Cities in Canada, 1913, 1920, 1923-1930.....	820
10. Index Numbers of a Family Budget of Staple Foods, Fuel, Lighting and Rent, in Canada, by Provinces, 1920, 1923-1930.....	821
Section 3. <i>Index Numbers of Security Prices</i> .....	821-825
11. Investor's Index Numbers of Common Stocks, by Months, 1930.....	823
12. Traders' Index Numbers of Prices and Volume of Sales, Monthly Averages, 1928-May 1931.....	824
13. Weighted Index Numbers of Mining Stocks, by Months, 1929-1930.....	825
Section 4. <i>Prices of Services</i> .....	825-826
14. Average Daily Hospital Charges in Canada, by Months, 1929-1930.....	826
Section 5. <i>Index Numbers of Interest Rates</i> .....	826-827
15. Index Numbers of Interest Rates in Canada, Calculated from Yields of Ontario Bonds, 1900-1931.....	827
Section 6. <i>Index Numbers of Import and Export Valuations</i> .....	827-828
16. Index Numbers of Export and Import Valuations, calendar years 1921-1929.....	828

## CHAPTER XXI.—PUBLIC FINANCE.

Section 1. <i>Dominion Public Finance</i> .....	829-857
Subsection 1. The Current Balance Sheet of the Dominion.....	833-834
1. Balance Sheet of the Dominion of Canada, as at Mar. 31, 1930.....	834
Subsection 2. Receipts and Disbursements.....	834-843
2. Details of Revenue Receipts, fiscal years ended Mar. 31, 1926-1930.....	835
3. Details of Expenditure, fiscal years ended Mar. 31, 1926-1930.....	835-836
4. Principal Items of Receipts of Canada on Consolidated Fund Account, 1868-1930.....	837
5. Principal Items of Dominion Expenditure, 1868-1930.....	838-841
6. Census and Estimated Populations, per capita Taxation and Total Revenue Receipts, per capita Expenditure on Consolidated Fund Account and Total Expenditure, 1868-1930.....	842
7. Per Capita Revenue Receipts and Expenditure, by Principal Items, 1924-1930.....	843
Subsection 3. War Tax Revenue.....	843-846
8. War Tax Revenue Received during the fiscal years ended Mar. 31, 1915-1930.....	844
9. Summary of Excise War Taxes Collected by the Department of Customs and Excise (now the Department of National Revenue), during the fiscal years ended Mar. 31, 1925-1930.....	844

## CHAPTER XXI.—PUBLIC FINANCE—concluded.

	Page.
10. Excise War Taxes Collected by the Department of National Revenue, by Provinces, during the fiscal year ended Mar. 31, 1930	845
11. Amounts Collected under the Income War Tax Act and the Business Profits War Tax Act, by Provinces, fiscal years ended Mar. 31, 1929 and 1930	846
Subsection 4. Inland Revenue	846-849
12. Details of Excise Duties Collected during the fiscal years ended Mar. 31, 1926-1930	847
13. Number of Excise Licences Issued during the fiscal years ended Mar. 31, 1924-1930	848
14. Statistics of Distillation for the fiscal years ended Mar. 31, 1925-1930	848
15. Quantities of Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption in the fiscal years ended 1901-1930	849
16. Consumption per head of Spirits, Wine, Beer and Tobacco, and Excise and Customs Duties per head on these Commodities in the fiscal years ended 1901-1930	849
Subsection 5. Provincial Subsidies	850
17. Subsidies of Dominion to Provincial Governments, fiscal years ended 1925-1930	850
18. Total of Subsidy Allowances from July 1, 1867, to Mar. 31, 1930	850
Subsection 6. National Debt	851-857
19. Summary of the Public Debt of Canada, Mar. 31, 1924-1930	853
20. Details of the Assets of the Public Debt of Canada, Mar. 31, 1926-1930	853
21. Details of the Gross Liabilities of Canada, Mar. 31, 1926-1930	854
22. Funded Debt Payable in London, New York and Canada, as at Mar. 31, 1930	854-855
22A. List of Securities Guaranteed by Dominion Government, Mar. 31, 1930	856
23. Public Debt of Canada, July 1, 1867, to Mar. 31, 1930	857
Section 2. Provincial Public Finance	858-864
24. Statement Showing the Ordinary Revenues and Expenditures of the Provincial Governments for their respective fiscal years ended 1868-1929	861-863
25. Ordinary Receipts and Expenditures of Provincial Governments per head of Population for their respective fiscal years ended in the census years 1871-1911, and in each year from 1916 to 1929	864
Section 3. Municipal Public Finance	864-868
26. Number of Municipalities in Canada, by Provinces and Classes, 1929	865
Subsection 1. All Municipalities	865-868
27. Summary Statement Showing Total Assessment Valuations of Municipalities, by Provinces, for 1928 and 1929	866
28. Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1923-1929	867
29. Principal Financial and other Statistics of Canadian Cities and Towns with Populations of 10,000 and over, 1929	867-868
Section 4. National Wealth and Income	869-879
Subsection 1. National Wealth	869-873
30. Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1927 and 1928	870
31. An Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1923	871
32. Estimate of National Wealth of Canada, 1928, by Provinces and Classes	872-873
Subsection 2. National Income	873-876
33. Amount of Income Assessed for the Purposes of the Income War Tax, by Provinces, for the fiscal years ended Mar. 31, 1926-1930	874
34. Number of Individual and Corporate Tax Payers, by Size of Income and Amount of Taxes Paid under the Income War Tax Act, fiscal years ended Mar. 31, 1927-1930	875
35. Income Tax Paid, by Occupations of the Tax Payers, fiscal years ended Mar. 31, 1927-1930	876
Subsection 3. Outside Capital Invested in Canada and Canadian Capital Invested Elsewhere	876-879
36. Estimated Total Investments of British and Foreign Capital in Canada, as at Jan. 1, 1927-1929	878
37. Estimated Total Investments of Canadian Capital in British and Foreign Countries, as at Jan. 1, 1927-1929	879
 <b>CHAPTER XXII.—CURRENCY AND BANKING: LOAN AND TRUST COMPANIES.</b>	
Section 1. Canada's Monetary System	880-889
1. Value of Gold Bullion Received for Treatment and Value of Gold Coin and Bullion Issued from the Ottawa Branch of the Royal Mint, 1908-1930	882
2. Statement of Coinage (in Dollars and Cents Denominations) Issued to the Dominion of Canada, 1858-1930	882
3. Composition of Canadian Gold Reserves on Dec. 31, 1905-1930	883
4. Circulation in Canada of Silver and Bronze Coin, Dec. 31, 1901-1930	883-884
5. Dominion Notes Outstanding and Reserves at June 30, 1890-1930	885
6. Gold Held by the Minister of Finance during the year 1919-1930	886
7. Denominations of Dominion Notes in Circulation, Mar. 31, 1925-1930	886
8. Statistics of Bank Note Circulation, 1900-1930	887
9. Circulating Media in the Hands of the General Public, 1900-1930	888-889
Section 2. Banking in Canada	889-916
Subsection 1. The Canadian Banking System in General	890-905
10. Historical Summary Showing Development of the Canadian Banking Business, calendar years 1867-1930	898-899
11. Assets of Chartered Banks in the calendar years 1927-1930	900
12. Liabilities of Chartered Banks in the calendar years 1927-1930	901

## CHAPTER XXII.—CURRENCY AND BANKING; LOAN AND TRUST COMPANIES

—concluded.

	PAGE.
13. Deposits in Chartered Banks in Canada and elsewhere, for the calendar years 1926-1930.....	902
14. Loans of Chartered Banks in Canada and elsewhere, for the calendar years 1926-1930.....	902
15. Bank Reserves, with Liabilities, calendar years 1901-1930.....	903-904
16. Ratio of Bank Reserves to Net Liabilities, calendar years 1901-1930.....	905
Subsection 2. The Individual Chartered Banks of Canada.....	905-910
17. Number of Branches of Chartered Banks in Canada, by Provinces, 1869, 1902, 1905, 1916, 1920, 1926-1930.....	906
18. Number and Locations of Branches of Individual Canadian Chartered Banks in Canada and other Countries as at Dec. 31, 1930.....	906
19. Number of Branches of each of the Canadian Chartered Banks in other Countries, with their Locations, Dec. 31, 1930.....	907
20. Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1925-1930.....	907-908
21. Principal and Total Assets of each of the Chartered Banks of Canada, Dec. 31, 1930.....	908
22. Principal and Total Liabilities of each of the Chartered Banks of Canada, Dec. 31, 1930.....	909
23. Canadian Bank Insolvencies since 1867.....	909-910
24. Bank Absorptions in Canada since 1867.....	910
Subsection 3. The Volume of Business Transacted through the Banks.....	911-913
25. Amount of Exchanges of the Clearing Houses of Chartered Banks in Canada for the calendar years 1926-1930.....	912
26. Bank Debits at the Clearing-House Cities of Canada, by Individual Cities, calendar years 1926-1930.....	913
Subsection 4. Government and other Savings Banks.....	913-916
27. Deposits with Government Savings Banks, June 30, 1868-1906, and Mar. 31, 1907-1930.....	914
28. Total Combined Financial Business of Post Office and Dominion Government Savings Banks, Mar. 31, 1925-1930.....	915
29. Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, June 30, 1868-1906, and Mar. 31, 1907-1930.....	916
Section 3. <i>Loan and Trust Companies</i> .....	916-920
30. Summary Statistics of the Operations of Dominion and Provincial Loan and Trust Companies in Canada, 1929.....	917
31. Liabilities and Assets of Loan Companies Chartered by the Dominion Government, 1914-1929.....	918
32. Liabilities and Assets of Trust Companies Chartered by the Dominion Government, 1914-1929.....	919-920
Section 4. <i>Sales of Canadian Bonds</i> .....	920-922
33. Sales of Canadian Bonds, by Class of Bond and Country of Sale, calendar years 1904-1930.....	922

## CHAPTER XXIII.—INSURANCE.

Section I. <i>Fire Insurance</i> .....	923-933
1. Fire Insurance in Force, by Companies Operating under Dominion Licences, Premiums Received, Losses Paid and Percentage of Losses to Premiums, 1869-1930.....	925
2. Fire Insurance Business Transacted in Canada, by Companies, 1929.....	926-929
3. Assets of Canadian Companies Selling Fire Insurance, or Fire Insurance and other classes of Insurance, and Assets in Canada of Companies other than Canadian Transacting such Business in Canada, 1925-1929.....	929-930

5. Income and Expenditure of Canadian Companies Selling Fire Insurance, or Fire Insurance and other classes of Insurance, and Income and Expenditure in Canada of Companies other than Canadian Transacting such Business in Canada, 1925-1929.....	931
6. Amount of Net Premiums Written and Net Losses Incurred in Canada, by Provinces, by Canadian, British and Foreign Companies Transacting Fire Insurance Business, 1928 and 1929.....	932
7. Dominion and Provincial Fire Insurance in Canada, 1929.....	932
8. Fire Insurance Carried on Property in Canada in 1928 under Section 129 of the Insurance Act, 1917, by Companies, Associations, or Underwriters not Licensed to Transact Business in Canada.....	933
Section 2. <i>Life Insurance</i> .....	933-944
9. Life Insurance in Force and Effected in Canada, by Years, 1869-1930.....	935
10. Life Insurance in Force and Effected in Canada, by Companies, 1929.....	936-937
11. Progress of Life Insurance in Canada 1925-1929.....	937
12. Ordinary and Industrial Life Insurance Policies in Force and Effected in Canada, 1929.....	938
13. Insurance Death-Rate in Canada, 1926-1929.....	938
14. Assets of Canadian Life Companies and Assets in Canada of Life Companies other than Canadian Companies, 1925-1929.....	939
15. Liabilities of Canadian Life Companies and Liabilities in Canada of Life Companies other than Canadian Companies, 1925-1929.....	940
16. Total Cash Income and Expenditure of Canadian Life Companies and Cash Income and Expenditure in Canada of Life Companies other than Canadian Companies, 1925-1929.....	940-941

## CHAPTER XXIII.—INSURANCE—concluded.

	PAGE.
17. Life Insurance Effected through Fraternal Benefit Societies, 1925-1929.....	942-943
18. Dominion and Provincial Life Insurance in Canada, 1929.....	944
Section 3. <i>Miscellaneous Insurance</i> .....	944-947
19. Insurance other than Fire and Life, 1929.....	945
20. Income and Expenditure and Assets and Liabilities of Canadian Companies doing only Insurance Business other than Fire and Life, 1929.....	945
21. Income and Expenditure in Canada of Companies, other than Canadian, doing only Insurance Business other than Fire and Life, 1929.....	946
22. Dominion and Provincial Insurance in Canada, other than Fire and Life, 1929.....	947
Section 4. <i>Government Annuities</i> .....	948-950
23. Government Annuities Fund Statement, years ended Mar. 31, 1927-1930.....	950
24. Valuation, on Mar. 31, 1929 and 1930, of Annuity Contracts Issued Pursuant to the Government Annuities Act, 1906.....	950

## CHAPTER XXIV.—COMMERCIAL FAILURES.

1. Commercial Failures in Canada, with their Assets and Liabilities, According to Bradstreet's and Dun's Records, for the calendar years 1900-1930.....	951
2. Commercial Failures in Canada, by Provinces and Classes, for the calendar year 1930, with Totals for 1911-1930 (Dun).....	952-953
3. Commercial Failures in Canada and Newfoundland, by Branches of Business, 1923-1930 (Dun).....	953
4. Commercial Failures in Canada, by Provinces, for the calendar years 1929 and 1930 (Bradstreet).....	954
5. Causes of Failures in Canada and the United States, by Numbers and Percentages, calendar years 1929 and 1930 (Bradstreet).....	954-955
6. Commercial Failures in Canada, by Provinces, calendar years 1922 to 1930.....	955
7. Commercial Failures in Canada, by Branches of Business, calendar years 1924-1930.....	955
8. Estimated Assets and Liabilities of Commercial Failures in Canada, calendar years 1922-1930.....	956
9. Commercial Failures in Canada, by Provinces and Branches of Business, for the calendar year 1930 with Totals for 1929.....	956

## CHAPTER XXV.—EDUCATION.

Section 1. <i>Public Education</i> .....	957-987
1. Summary of Education in Canada, by Provinces, 1929, or Latest Year Reported.....	960-963
Subsection 1. <i>Elementary and Secondary Education</i> .....	964-973
2. Provincially-Controlled Schools in Canada: Distribution of 1,458,011 Pupils in Seven Provinces, by Age and Grade, 1929.....	964
3. Historical Summary of Enrolment and Average Attendance in Schools in Canada, by Provinces, 1824-1929.....	965-966
4. Total Pupils Enrolled and in Average Attendance and Total in High School Grades, in Cities of 10,000 or over, by Sex, 1929 or Latest Year Reported.....	967
5. Provincially-Controlled Schools in Canada: Comparative Numbers of Boys and Girls Doing Work of Secondary Grade in each of Seven Provinces, 1901-1929.....	968
6. Provincially-Controlled Schools in Canada: Numbers of Pupils Taking Certain Secondary Grade Subjects in each of Six Provinces, 1929.....	969
7. Average Annual Salaries of School Teachers, by Provinces, 1928-1929 or Latest Year Reported.....	969-970
8. Provincially-Controlled Schools in Canada: Number of Teachers in Training in Normal Schools and Colleges, by Provinces, 1902-1929.....	970
9. Canadian Provincially-Controlled Schools: Receipts and Expenditure, by Provinces, 1922-29.....	971-973
Subsection 2. <i>Vocational and Technical Education</i> .....	974
10. Vocational Schools, Teachers and Pupils in Canada, by Provinces, School Year ended June 30, 1930, with Totals for 1929.....	974
Subsection 3. <i>Higher Education</i> .....	975-987
11. Universities of Canada: Foundation, Affiliation and Faculties.....	977-978
12. Universities of Canada: Teaching Staff, Classified as Full Time and Part Time, by Sex, 1928-29.....	979
13. Universities of Canada: Summary of Student Enrolment, by Sex, 1928-29.....	980-981
14. Universities of Canada: Number of Full Time Students in Arts, Pure Science, Letters and Philosophy, by academic years, 1928-29.....	982
15. Number of Degrees Conferred, by Sex of Recipients, 1928-29.....	982
16. Universities of Canada: Financial Statistics, 1928-29.....	983-984
17. Professional and Affiliated Colleges of Canada: Number and Sex of Teaching Staff and Students, by Individual Institutions, 1928-29.....	985-987
Section 2. <i>Scientific and Industrial Research in Canada</i> .....	988-994
Subsection 1. <i>The National Research Council</i> .....	988-993
Subsection 2. <i>The Ontario Research Foundation</i> .....	993-994
Subsection 3. <i>The Advisory Council of Scientific and Industrial Research of Alberta</i> .....	994
Subsection 4. <i>The Saskatchewan Research Council Act 1930</i> .....	994
Subsection 5. <i>The Royal Society of Canada</i> .....	994
Subsection 6. <i>The Royal Canadian Institute</i> .....	994
Section 3. <i>Public Libraries in Canada</i> .....	995
Section 4. <i>The Development of the Fine Arts in Canada</i> .....	995-1009

## CHAPTER XXVI.—PUBLIC HEALTH AND BENEVOLENCE.

1. Number of Public Hospitals and Benevolent Institutions in Canada.....	1013
2. Summary of Canadian Hospitals and Beds, 1930.....	1014
3. Statistics of Hospitals for Mentally Defective Persons in the Nine Provinces of Canada, 1929 or Latest Year Reported.....	1015

## CHAPTER XXVI.—PUBLIC HEALTH AND BENEVOLENCE—concluded.

	PAGE.
Section 1. <i>Public Health Activities of the Dominion Government</i> .....	1015-1017
Section 2. <i>Provincial Public Health Activities</i> .....	1017
Section 3. <i>Other Public Health Activities</i> .....	1018
Subsection 1. <i>The Canadian Red Cross Society</i> .....	1018
Subsection 2. <i>The Victorian Order of Nurses</i> .....	1018
Subsection 3. <i>Mothers' Allowances</i> .....	1019

## CHAPTER XXVII.—MISCELLANEOUS ADMINISTRATION.

Section 1. <i>Public Lands</i> .....	1019-1025
Subsection 1. <i>Dominion Public Lands</i> .....	1019-1023
1. <i>Number of Homestead Entries and Number of Homestead Cancellations from 1874 to Mar. 31, 1931</i> .....	1020
2. <i>Homestead Entries on Dominion Lands in Manitoba, Saskatchewan, Alberta, and British Columbia, fiscal years ended Mar. 31, 1922-1931</i> .....	1021
3. <i>Homestead Entries in Manitoba, Saskatchewan, Alberta and British Columbia, by Nationalities, fiscal years ended Mar. 31, 1925-1931</i> .....	1021
4. <i>Dominion Lands Revenue for the fiscal years ended Mar. 31, 1924-1930</i> .....	1022
5. <i>Land Sales by Railway Companies with Government Land Grants, and by the Hudson's Bay Company, fiscal years ended 1893-1930</i> .....	1022

relate to the fiscal years ended June 30 up to 1906, and from then on to the years ended Mar. 31. Agricultural, dairying, fisheries (1922-26), mineral, manufacturing, banking, insurance, loan and trust companies statistics relate to the calendar years and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1924-1928. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

## CHAPTER I.—PHYSIOGRAPHY.

### PART I.—GEOGRAPHICAL FEATURES.<sup>1</sup>

**Situation.**—The Dominion of Canada comprises the whole northern half of the North American continent except the United States territory of Alaska, and the Coast of Labrador, a dependency of the Colony of Newfoundland. It also includes the Arctic archipelago between Davis strait and the 141st meridian.

The Dominion is bounded on the west by the Pacific ocean and Alaska; on the south by the 49th parallel, the Great Lakes, the St. Lawrence river and additional lines set out by the Ashburton Treaty, signed Aug. 9, 1842; and on the east by the Atlantic ocean, the gulf of St. Lawrence, the territory of the Coast of Labrador (as defined by the award of the Privy Council, Mar. 1, 1927), and Davis strait. As regards the far north, Canada includes all the lands in the area bounded on the east by a line passing midway between Greenland and Baffin, Devon and Ellesmere islands to the 60th meridian of longitude, following this longitude to the pole, and on the west by the 141st meridian of longitude, following this longitude to the pole. The southernmost point is Middle island in lake Erie, in north latitude 41° 41', while from east to west the Dominion extends from about west longitude 57°—at the southernmost point of the boundary with the Coast of Labrador—to west longitude 141°, the boundary with Alaska. Canadian territory thus extends over 84° of longitude and 48° of latitude.

**Area.**—The area of the Dominion (as revised on the basis of the results of recent explorations in the north) is 3,690,043 square miles, a figure which may be compared with that of 3,743,529 square miles for the United States and its dependent territories, 3,776,700 the total area of Europe, 2,974,581 the total area of Australia, 4,277,170 the total area of China inclusive of dependencies, 3,275,510 the area of Brazil, 1,802,577 the area of India, 121,633 the area of the British Isles and 13,491,977 the area of the British Empire. By comparison with the last two figures, Canada is seen to be over 30 times as large as the British Isles and to comprise over 27 p.c. of the total area of the British Empire.

**Political Subdivisions.**—Canada is divided from east to west into the following provinces:—the Maritime Provinces of Prince Edward Island, Nova Scotia and New Brunswick, all three comparatively small in area; Quebec, covering a strip south of the St. Lawrence and the whole territory north of the St. Lawrence and east of the Ottawa to Hudson strait, less the territory of the Coast of Labrador; Ontario, extending northward from the Great Lakes to Hudson bay; Manitoba, Saskatchewan and Alberta, the provinces of the interior continental plain, extending from 49° to 60° north latitude; and British Columbia, the province of the western mountain and Pacific Coast region, also extending from 49° to 60° North of the 60th parallel of latitude, the country is divided into the Yukon Territory and the Northwest Territories, the latter area composed of the provisional districts of Mackenzie, Keewatin and Franklin.

*Prince Edward Island.*—This, the smallest province of the Dominion, lies at the south of the gulf of St. Lawrence and is separated from the mainland of the continent by Northumberland strait. It is about 120 miles in length and,

<sup>1</sup> Revised by J. E. Chalifour, Chief Geographer, and F. H. Peters, Director of the Topographical Survey, both of the Department of the Interior, Ottawa.

with an average width of 20 miles, covers an area of 2,184 square miles, some 200 square miles more than the State of Delaware. The island is nearly cut into three parts by the deep indentation of Malpeque bay north of Summerside and again at Charlottetown by Hillsborough river, which nearly meets Tracadie bay on the north side. Its rich red soil and red sandstone formations are a distinct feature, and no point in the island attains a greater altitude than 306 feet above sea-level. A climate tempered by the surrounding waters of the gulf and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The province is noted for its relative predominance in the fox-farming industry, its lobster canneries, and its production of oats and potatoes.

*Nova Scotia.*—The province of Nova Scotia is 381 miles in length by from 50 to 105 miles in width, a long and rather narrow strip of land lying parallel to the Maine and New Brunswick coast and joined to the latter by the isthmus of Chignecto. It includes at the north the island of Cape Breton, which is separated from the mainland by the narrow strait of Canso. The total area of the province is 21,428 square miles, a little over 2,000 square miles less than the combined area of Belgium and Holland. Cape Breton island, south of the main entrance to the gulf of St. Lawrence and sheltering Prince Edward Island from the Atlantic, is roughly 100 miles in length with an extreme breadth of 87 miles. Its area of 3,120 square miles encloses the salt-water lakes of Bras d'Or, connected with the sea at the north by two natural channels and at the south by the St. Peters ship canal. The ridge of low mountainous country running through the centre of the Nova Scotia mainland, and of which the highest altitude is less than 1,500 feet, divides it roughly into two slopes, that facing the Atlantic being generally rocky, and open to the sweep of Atlantic storms, while the other, facing the bay of Fundy and Northumberland strait, consists for the most part of fertile plains and river valleys, and is noted for its general farming and fruit farming districts which produce the famous Nova Scotian apples. The Atlantic coast is deeply indented with numerous excellent harbours many of which provided splendid homes and refuges for the old sail fishing fleets.

*New Brunswick.*—With a total area of 27,985 square miles, New Brunswick may be compared in size to Scotland with its area of 30,405 square miles. The province is very compact and in shape nearly rectangular, with its depth not greatly exceeding its width. The conformation is in general undulating and of low relief. In the southeastern half of the province the ground elevation does not generally exceed 500 feet above sea-level except for a narrow strip in the south which produces the highlands bordering the bay of Fundy east of Saint John. In the northwestern half the ground elevation is in general from 500 to 1,000 feet above sea-level and reaches its greatest elevation of over 2,700 feet in Northumberland county northeast of Grand Falls. The St. John, rising in the sister province of Quebec and the bordering State of Maine, is a river with many distinctive beauties, while its length of nearly 400 miles makes it quite noteworthy as to size. In the northeastern half of the province there are very extensive areas of Crown lands still carrying valuable stands of merchantable timber. While New Brunswick is essentially a part of the mainland, the bay of Chaleur at the north, the gulf of St. Lawrence and Northumberland strait at the east, the bay of Fundy at the south and Passamaquoddy bay at

the southwest, provide the province with a very extensive sea-coast. To its southwest is a group of islands belonging to the province, the most important of which are Grand Manan, Campobello, and the West Isles. New Brunswick has been called the best watered country in the world; numerous rivers provide access to extensive lumbering areas in its interior and to many of the most attractive hunting and fishing resorts in the Dominion.

*Quebec.*—Quebec might with considerable accuracy be included among the Maritime Provinces, for the gulf of St. Lawrence is really a part of the Atlantic, and altogether salt water washes the coasts of the province for a length of over 2,700 miles. Besides including a narrow strip of land between the St. Lawrence and the International and New Brunswick boundaries, Quebec extends northward from the St. Lawrence and Ottawa rivers to Labrador and Hudson strait, covering over 17° of latitude and an area of 594,434 square miles, about 38 p.c. of which lies south of the isotherm of 60° mean July temperature. The combined areas of France, Germany and Spain are some 5,000 square miles less than the area of Quebec. The conformity of the surface of Quebec is in general that characteristic of the Precambrian rocks, being quite even in general but much diversified by minor hills and hollows. North of the St. Lawrence the land takes the form of a ridge, parallel to the river and rising from sea-level to the height of land at an elevation of from 1,000 to 3,000 feet and then descending gently again to the sea-level of Hudson bay to the northwest; but to the northeast the ridge carries its height to end abruptly in the high headlands of Labrador. South of the river the area is comprised of the St. Lawrence Lowlands between Montreal and Quebec which, rising to the east, produce the highest elevation in the province, of about 4,200 feet, in the Gaspé peninsula. With the exception of the treeless zone extending somewhat south of Ungava bay the whole of the province supports a valuable tree growth varying from the mixed forest in the southwest to the eastern and northern coniferous in the areas of higher latitude. Apart from its importance as the threshold of Canada and the gateway through which ocean vessels must pass on their way to the interior of the continent, Quebec is also noted for its natural resources. The extensive timber limits of its northern areas form the basis for the great pulp and paper industry of the present and the future. Its rivers, many of them as yet comparatively unknown, may be harnessed to supply over one-third of the electric power available in Canada. Its mineral deposits, particularly those of asbestos, have long been known for their quality and extent, while promising discoveries of copper and gold deposits have been made in Rouyn and the neighbouring townships in the western part of the province, and the fisheries of the St. Lawrence river and gulf are well known. Agriculturally, the climate and soil of the upper St. Lawrence River valley and the plains of the Eastern Townships are eminently adapted to general farming operations.

*Ontario.*—The province of Ontario is the section of the Dominion contained between the great international lakes and Hudson bay and between the western boundary of Quebec and the eastern limits of Manitoba. Its most southern point is in north latitude 41° 41', which is a little further south than the northern boundary of the State of California, and its most northern in north latitude 56° 48'. The total area comprised within its limits, of which about 82 p.c. lies south of the isotherm of 60° mean July temperature, is 412,582 square miles, of which its water area of 49,300 square miles

forms the unusually large percentage of nearly 12 p.c. The province is over 17,000 square miles greater in area than are France and Germany together, and when compared with the States to the south, Ontario is found to be almost equal in extent to the combined areas of the six New England States, together with New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan and Wisconsin. Excepting in the southwestern part, the surface conformity of Ontario is influenced by the characteristics of the Precambrian rocks. In northern Ontario a large area with elevations of 1,000 feet or over adjoins the north shore of the Great Lakes and going north a short distance over the Height of Land the slope descends very gently to Hudson bay, which has a wide marginal strip less than 500 feet above sea-level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of lake Superior. The whole province supports a valuable covering of trees, varying from south to north from the mixed forest to the eastern and northern coniferous. Many varieties of climate and soil are encountered, from the distinctively southern conditions found along the shores of lake Erie to the very different ones of Hudson and James bays. Ontario, of all the provinces of Canada, is the centre of the country's manufacturing life, owing to its abundant water-power resources and its proximity to the coal fields of Pennsylvania, but the many resources of its rural districts are not on this account neglected. Mining in the Sudbury, Cobalt and Porcupine districts is a thriving industry, the nickel coming from the Sudbury field amounting to 90 p.c. of the world's production, while most of the gold mined in Canada is found in the province. Fruit-farming in the Niagara district and general farming throughout the entire southern part of the province are carried on extensively under unusually favourable conditions, while timber, pulp and furs are among the most important products of more northern parts.

*Manitoba.*—Manitoba, the most easterly of the Prairie Provinces, and also the oldest of them in point of settlement, includes the area between Ontario on the east and Saskatchewan on the west. Its southerly limit is the International Boundary, while its northerly boundary is the 60th parallel of latitude and Hudson bay, where its coast of over 400 miles includes the harbour and port of Churchill. The total area of Manitoba, of which about 56 p.c. lies south of the isotherm of 60° mean July temperature, is 251,832 square miles—8,566 square miles greater than twice the total area of the British Isles. The conformity of the surface of Manitoba is quite even; commencing on the north with a strip perhaps 100 miles wide bordering on Hudson bay and less than 500 feet in elevation, the surface rises gradually towards the west and south. The bulk of the province has an elevation of between 500 and 1,000 feet, with the greatest height of 2,727 feet attained in Duck mountain, northwest of lake Dauphin. East and north of lake Winnipeg the Precambrian formation intrudes, producing a rock formation, but the remainder of the province is underlain with very fertile soil of great depth. The treeless prairie belt extends into the southwest corner of the province, but the greater portion of the developed area is in the grove belt characterized by groves of poplar interspersed with open prairie patches; to the north there are great areas of northern mixed forest, blending into the northern coniferous, which thins again to some treeless areas along the coast line farther north. The province has been regarded as typically agricultural, its southern lands being specially adapted to this form of industry.

Its northern districts, however, are of importance in the production of timber and also contain large mineral deposits, particularly of copper-gold ore. About three-fifths of the area of this province is underlain with the Precambrian rocks which have been found so rich in minerals in northern Ontario and Quebec.

*Saskatchewan.*—The central prairie province lies between Manitoba and Alberta; it reaches to the International Boundary on the south and its northerly limit is the 60th parallel of latitude, which divides it from the Northwest Territories. The area, of which about 89 p.c. lies south of the isotherm of 60° mean July temperature, is 251,700 square miles, but slightly less than that of Manitoba, and greater by 5,000 square miles than the combined areas of the British Isles and Norway. With the exception of a point of the Precambrian rocks jutting in from the east at the Height of Land well to the north and again covering a narrow strip along the northern boundary, the whole of the province is underlain with generally fertile soil of great depth. The greater part of the developed area in the south is comprised in the great treeless prairie belt, fringed to the north with a zone of poplar interspersed with open prairie, which gradually changes into the northern mixed forest covering all the northerly parts. Apart from the southern prairies, which are extraordinarily smooth, the surface topography is generally of low relief and with a general rising slope towards the west. The bulk of the province has a general elevation of between 1,000 and 2,000 feet, with the maximum elevation of about 4,500 feet on the eastern point of the Cypress hills in the southwest corner. The climate is quite different from that of Eastern Canada, with less precipitation and perhaps slightly more severe features than are encountered in many other parts of the country, but is nevertheless most favourable to plant and animal growth. The northern districts are abundantly watered by lakes and rivers, and rich in timber resources and have prospective mineral wealth, while the southern plains include a large portion of the wonderful western wheat fields.

*Alberta.*—Lying between Saskatchewan on the east and the Rocky mountains and the 120th meridian on the west, and bounded on the north and south by the Northwest Territories and the United States respectively, is the province of Alberta. Its area is slightly greater than that of Saskatchewan or Manitoba, comprising a total of 255,285 square miles, of which about 90 p.c. lies south of the isotherm of 60° mean July temperature. The area of the province is over 3,600 square miles greater than the combined areas of the British Isles and Norway. Like Saskatchewan the southern part of the province is comprised in the dry treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie, which again gives way to the northern mixed forest covering the northerly parts. The Precambrian rocks just touch Alberta at its northeast corner, so that excepting the fringe of mountainous country on its western border the whole of the province is underlain with arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace river, which has already resulted in the extension of settlement farther north than in any other part of Canada, and (2) the wonderful grazing lands in the foothills district, which, rising sharply on the west, commences the ascent which continues to the very peaks of the Rocky mountains. The southern half of the province, rising toward the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half the slope descends until elevations of

well under 1,000 feet are reached at lake Athabaska in the northeast corner. Mount Columbia, with an elevation of 12,294 feet, is the highest point in the province. Considerable coal and oil mining are carried on; lumbering is important in the more mountainous western parts and in the north, while some ranching is still pursued in the less populous sections. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the "Chinook" winds.

*British Columbia.*—British Columbia, the most westerly province of the Dominion, comprises an area of 355,855 square miles, slightly less than three times the area of the British Isles. The predominant feature of the province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys, many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. Apart from the smoother area in the northeast corner which extends up from the "Peace River Block" there is another notably large area of smoother terrain in the Stuart Lake district traversed by the Canadian National Railway running east from Fort George to Prince Rupert. The highest point in the province is Mount Fairweather (15,287 feet). The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and with wonderful scenic aspects. With two ocean ports served by transcontinental railways British Columbia is well situated and equipped to carry on trade with the Orient, while its great stands of fir, spruce and cedar timber constitute a natural resource of great value. The province includes many islands of the Pacific, notably the Queen Charlotte group and Vancouver island; the latter with an area of about 13,500 square miles is noted for its temperate climate and abundant natural resources. The mines, timber, fisheries and agricultural resources of the province are remarkable for their quality and extent. The boundaries of the province extend from Alberta on the east to the Pacific ocean on the west and from the International Boundary, northward to the Yukon.

*Yukon and Northwest Territories.*—The vast area of 1,516,758 square miles is included within the boundaries of Canada's northern subdivisions, the Yukon Territory and the three provisional districts of the Northwest Territories. This is over twelve times the area of the British Isles, nearly half the area of the United States, and more than the combined areas of the Argentine Republic and Chile in South America. The northern territories are as yet largely unexplored and apart from the main through water routes are still unmapped in any accurate way. The territories are known to include mighty rivers like the Mackenzie and the Yukon and great inland bodies of water such as Great Slave and Great Bear lakes; but with the present paucity of accurate knowledge the situation is that the potentialities of this great area are at present unknown. There have been many indications of mineral wealth in the country, which are being added to as definite exploration advances, and the future may well reproduce the great gold rush to the Yukon in 1897. Because a large portion lies within the Arctic circle the tendency has been to associate with the Northwest Territories thoughts of ice and snow, but as our knowledge is increased the argument steadily gains more weight that what have been regarded in the past as the great barren lands of the north are more appropriately described as our great northern prairies. The opening of the port of Churchill, making

the Hudson Bay coast of the district of Keewatin readily approachable, adds considerably to the transportation facilities, which previously have been confined to a regular steamboat summer route down the Mackenzie river. In the future it is likely that travel and transport by air will have a great influence in the further development of these territories, while a net of established radio stations already brings a large area within the realm of quick communication. The production of minerals in the Yukon in 1929 was valued at just under \$3,000,000, while the value of the production of furs in the Northwest Territories in 1927-28 was over \$2,000,000.

**Summary of Land and Water Area.**—The total land and water area of the Dominion, together with its distribution into provinces and territories, is shown in Table 1.

1.—Land and Water Area of Canada, by Provinces and Territories, as in 1931.

Province or Territory.	Land. <sup>1</sup>	Water. <sup>1</sup>	Total. <sup>1</sup>	P.c. of Total Area.

<sup>1</sup>Approximate.

The water area, as given above, is exclusive of Hudson bay, Ungava bay, the bay of Fundy, the gulf of St. Lawrence and all other tidal waters, excepting that portion of the river St. Lawrence which is between Pointe-des-Monts and the foot of lake St. Peter, in Quebec.

## Section I.—Orography.

The conformation of the present surface of the North American continent admits of its apportionment, in Canada, into several orographic divisions. The exposed surface of the old Precambrian continent forms one of the largest divisions and has been called the Canadian Shield, the Archæan Penepain and in its southern portion, the Laurentian Highland. The mountainous country of the west constitutes the Cordilleras, while the mountains of eastern United States, in their continuation across the border, form the Appalachian Highland of Eastern Canada. The Great Plains, with various subdivisions, occupy the area between the mountainous area of the west and the great roughened surface of the Canadian Shield. The St. Lawrence Lowlands lie between the Laurentian and Appalachian Highlands. Within the borders of the Canadian Shield an area on the southern margin of Hudson bay has been referred to as the "clay belt". It occupies a part of the basin that during the glacial period was submerged

OROGRAPHY OF EASTERN CANADA AND LABRADOR.

Prepared by  
Nat. Res. Inst. Sci.  
Dept. Interior

and covered with a coating of clay which smoothed over its inequalities and concealed most of the underlying rocks. Since its emergence the surface has been but slightly altered by drainage channels cut across it.

Orographical maps of Eastern and Western Canada, showing elevations above sea-level, will be found on pages 8 and 10 of this volume.

**Canadian Shield.**—The portion of the Precambrian continent whose exposed surface still forms a large part of Canada has an area of about two and a half million square miles. Its northern border crosses the Arctic archipelago and the eastern lies beyond Baffin island and Labrador and reaches the depressed area occupied by the St. Lawrence river, a short spur or point crossing this valley at the outlet of lake Ontario to join the Adirondack mountains in New York. The southern boundary runs from the spur west to Georgian bay, skirts the north shore of lake Huron and sweeps almost around the ancient depressed area occupied by lake Superior. The western edge, from the lake of the Woods and lake Winnipeg, bears northwest to the western end of lake Athabaska, and passes through the basins occupied by Great Slave and Great Bear lakes, reaching the Arctic ocean east of the Mackenzie River delta. In detail, the surface features of the Canadian Shield are irregular; but, viewed broadly, it has the conformation of a great plain, depressed toward the centre and in the north, and slightly elevated along the eastern and southern borders, where it presents a rather steep outward slope. The general elevation in the eastern portion is under 2,000 feet, and over the larger part of the plain is about 1,000 feet. The highest portion is along the northeastern margin, where it presents a steep face to the sea, rising to a maximum altitude of about 6,000 feet.

**Appalachian Region.**—The continuation of the Green mountains of Vermont into Canada may be traced in the Notre Dame mountains, which approach the St. Lawrence northeast of Quebec and, continuing with more easterly trend, form the highland of the Gaspé peninsula. Over a large part of the region, these hills hardly attain the dignity of mountains, but peaks rising more than 3,500 feet above the nearby coast are found in the Gaspé peninsula. The continuation of the White mountains of New Hampshire is found in the highlands of Maine and New Brunswick, the continuity being shown quite plainly by the rock-folding and other evidences of the great earth movements which caused the topography. An additional ridge apparently forms the present province of Nova Scotia, and although the highlands of that province rise to elevations less than 1,500 feet, the rock structure indicates that it was a mountainous country at no very remote geological period.

**St. Lawrence Lowlands.**—The southern interior of the continent consists of a plain of low relief, bordered on the east by the Appalachian mountains, on the west by the Cordilleran Mountain systems, and on the north by the Laurentian plateau. This plain, in its Canadian portion, is known as the St. Lawrence Lowlands, and extends from a short distance below Quebec city to lake Huron, south of Georgian bay, with a length of 600 miles and an area of 35,000 square miles. To the northeast it becomes reduced in width, and in the vicinity of Quebec is represented by a narrow plateau or shelf on each side of the St. Lawrence river.

**Great Plains.**—A great area, including diverse features, lies to the east of the Cordilleras. The portion that is included under the term Great Plains extends from the southwestern edge of the ancient surface, forming the Cana-

dian Shield, to the eastern edge of the mountainous region of the Cordilleras. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare and generally it is overlain with great depths of soil, through which the streams have cut themselves down into deep coulees and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow; in the dry prairie section there are many places where the absorption from the broad and shallow bodies of water is so great that they have little or no outflowage and consequently the concentration of mineral salts in the water makes it unfit for domestic use. The terrain is generally smooth or gently undulating and with elevations of from 600 to 3,500 feet has a general upward slope toward the south and west where, rising more sharply in the foothills, the real ascent to the high mountains commences.

**Cordilleran Region.**—The western part of the American continent is more or less mountainous. The Andean chain, which extends throughout the length of South America and broadens out in the United States has, in Canada, an average width of about 475 miles. This region, covering about 530,000 square miles, is the most elevated in the Dominion, many of the summits reaching heights of 10,000 feet, with occasional peaks over 13,000 feet above sea-level. The mountainous tract forming the Cordilleras can be divided broadly into three parallel bands; a series of plateaus and mountains, comprised in the Columbia, Interior, Cassiar, and Yukon systems, forming the central part, referred to as the Central Belt; another series of parallel ridges east of the central plateaus, formed of fault rocks and folds and including the Rocky and Arctic systems, known as the Eastern Belt; and a third division between the plateau country and the Pacific, composed of the Pacific and Insular systems, called the Western Belt.

Following is a list of the principal named Canadian Cordilleran peaks exceeding 11,000 feet in elevation:—

<sup>1</sup> These peaks are on the international boundary between British Columbia and Alaska.

<sup>2</sup> These peaks are on or near the Yukon-Alaska boundary.

NOTE.—The highest mountain east of the Rockies, with the exception of the Torngats in Labrador, peaks of which exceed 8,000 feet, is Tabletop mountain (recently re-named Mount Jacques Cartier by the Geographic Board of Canada) in N. lat. 43° 59', W. long. 65° 56', Gaspé district, Quebec, the summit of which is 4,350 feet above sea-level.

## Section 2.—Rivers and Lakes.

**General.**—The waterways of Canada constitute not only one of its most remarkable geographic features, but one of the most vital elements of its national existence. The water area of 180,035 square miles is unusually large, constituting almost 5 p.c. of the total area of the country, whereas the water area of the United States forms but slightly more than 1½ p.c. of its area. The Great Lakes, with the St. Lawrence river, form the most important system of waterways on the continent and one of the most notable fresh water transportation routes in the world. Their value in facilitating the cheap and speedy shipment of grain from the Prairie Provinces cannot be overestimated. These lakes never freeze over, but usually most of their harbours are closed by ice about the middle of December and remain frozen over until the end of March or the beginning of April.

**Drainage Basins.**—The great drainage basins of Canada are the Atlantic (524,900 square miles), the Hudson Bay (1,486,000 square miles), the Arctic (1,290,000 square miles), the Pacific (387,300 square miles) and the Gulf of Mexico (12,365 square miles). Table 2 indicates the drainage areas of the more important rivers.

## 2.—Drainage Basins of Canada.

NOTE.—Owing to overlapping and to the fact that minor basins are omitted, the totals of each drainage basin do not represent an addition of the drainage areas as given. Tributaries and sub-tributaries are indicated by indentation of the names. The Gulf of Mexico basin is that part of the southern area of the Prairie Provinces drained by the Missouri and Mississippi rivers and their tributaries.

**The St. Lawrence River System.**—Most important of the lakes and rivers of Canada is the chain of the Great Lakes with their connecting rivers, the St. Lawrence river and its tributaries. This chain is called the St. Lawrence River system. The Great Lakes, separating the province of Ontario from the United States and connected by a series of canals with the St. Lawrence river, allow vessels drawing not over 14 feet of water to proceed from the Atlantic ocean to the interior of the Dominion as far as Fort William and Port Arthur, twin cities situated on lake Superior, practically half way across the continent.

**Other River Systems.**—Apart from the St. Lawrence, the great waterway of the eastern half of the Dominion, other systems also merit some attention. The Saskatchewan river, for example, flowing eastward from the Rocky mountains to lake Winnipeg and thence northward by the Nelson river into Hudson bay, drains a great part of the plains of the western provinces. In the north, the Mackenzie river, with its tributaries the Slave, Liard, Athabaska and Peace rivers, follows the northerly slope of the Great Plain and empties into the Arctic ocean, its waters having traversed in all a distance of 2,525 miles. The Yukon river, after draining a great part of the Yukon Territory, flows north-

ward through Alaska into the Bering sea after a course of 1,765 miles. The Fraser, Columbia, Skeena and Stikine rivers flow into the Pacific ocean after draining the western slopes of the mountains of British Columbia. Table 3 gives the lengths of the principal rivers with their tributaries, classified according to the course taken by their waters.

### 3.—Lengths of Principal Rivers and Tributaries in Canada.

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

**The Great Lakes.**—Table 4 shows the length, breadth, area, elevation above sea-level and maximum depth of each of the Great Lakes. Particularly notable is the depth of lake Superior and the shallowness of lake St. Clair and lake Erie.

#### 4.—Area, Elevation and Depth of the Great Lakes.

Lake.	Length.	Breadth.	Maximum Depth.	Area.	Elevation above Sea-level.
	miles.	miles.	feet.	square miles.	feet.
Superior.....	383	160	1,180	31,810	602-29
Michigan.....	320	118	870	22,400	581-13
Huron.....	347	101	750	23,010	581-13

Erie.....	241	57	210	9,940	572-52
Ontario.....	180	53	738	7,540	246-17

Lake Superior, with its area of 31,810 square miles, is the largest body of fresh water in the world. As the International Boundary between Canada and the United States passes through the centre of lakes Superior, Huron, Erie, St. Clair and Ontario, only a part of the areas of these lakes given in the above statement is Canadian. The whole of lake Michigan is within United States territory. From the western end of lake Superior to the mouth of the St. Lawrence there is, with the aid of the canal system, a continuous navigable waterway. The total length of the St. Lawrence waterway from the head of the St. Louis river in Minnesota to Pointe-des-Monts, at the entrance of the gulf of St. Lawrence, is 1,900 miles. The tributaries of the St. Lawrence, several of which have themselves important tributaries, include the Ottawa river, 685 miles long, the St. Maurice river, 325 miles long, and the Saguenay (to head of Peribonka), 405 miles long.

**Other Inland Waters.**—In addition to the Great Lakes, there are large bodies of inland water in other parts of Canada. Of these only the following principal lakes, with their respective areas, need be mentioned:—in Quebec, lake Mistassini (840 square miles); in Ontario, lake Nipigon (1,590 square miles); in Manitoba, lake Winnipeg (9,459 square miles), lake Winnipegosis (2,096 square miles) and lake Manitoba (1,817 square miles); in Saskatchewan, Reindeer lake (1,765 square miles); in Alberta, lake Athabaska (2,762 square miles). All these are within the boundaries of the provinces as at present constituted and are exclusive of lakes situated in the Northwest Territories, the largest of which are Great Bear lake (12,200 square miles) and Great Slave lake (11,170 square miles), in the district of Mackenzie.

Table 5 gives a list of the principal lakes of Canada by provinces, with the area of each in square miles. The table corresponds with the delimitation of the provinces as altered by the Boundary Extension Acts, 1912 (2 Geo. V, cc. 32, 40 and 45).

## Section 3.—Islands.

The islands of Canada are among its most remarkable geographic features. They include the numerous unsurveyed and little-known areas of the Arctic regions, the fringe of both large and small islands off the Pacific coast, those of the Maritime Provinces and Quebec in the Atlantic ocean and the gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. Of the Arctic islands, but little need be said. They are known to be of vast extent, Baffin, Victoria and Ellesmere, the three largest, being approximately 199,610, 80,450 and 78,400 square miles in area respectively, but Banks, Devon, Southampton, Somerset, Prince of Wales, Melville and Axel Heiberg are also of considerable size. Their economic possibilities, beyond scattered deposits of coal and other minerals, have not been established. The Pacific Coast islands, with the exception of Vancouver island and the Queen Charlotte group, are small and dot the western coast of British Columbia from Dixon entrance to the southern boundary of the province. Vancouver island is 285 miles long and from 40 to 80 miles broad, covering an area of about 13,500 square miles, the mountain range which forms its backbone rising again to form the Queen Charlotte islands farther north. These islands figure largely in the mining, lumbering and fishing industries of the West.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the island of Cape Breton (an integral part of Nova Scotia), Anticosti and the Magdalen group, included in the province of Quebec, and the islands of Grand Manan and Campobello, part of the province of New Bruns-

wick, in the bay of Fundy. Prince Edward Island is 2,184 square miles in area, Cape Breton 3,120, and Anticosti of about the same extent. Fishing activities in these eastern islands are important, while agriculture in Prince Edward Island and mining in Cape Breton are among the chief occupations of the inhabitants.

Manitoulin island in lake Huron and the Thousand Islands group in the St. Lawrence river, at its outlet from lake Ontario, are the more important islands of the inland waters.

## PART II.—GEOLOGY.

### Section I.—Geology of Canada.<sup>1</sup>

The outstanding feature of Canadian geology is the vast area underlain by formations of Precambrian age. These occupy nearly the whole of Canada east of a line joining lake Winnipeg and Great Bear lake, with the exception of the Maritime Provinces, the extreme southern parts of Ontario and Quebec and a part of Ontario adjacent to the southern coast of Hudson bay. The Precambrian rocks include the oldest known geological formations and are the foundation of a part of the North American continent that has existed as a land mass for numerous long periods throughout all that portion of geological time that has been recorded in sedimentary formations exposed on the face of the earth.

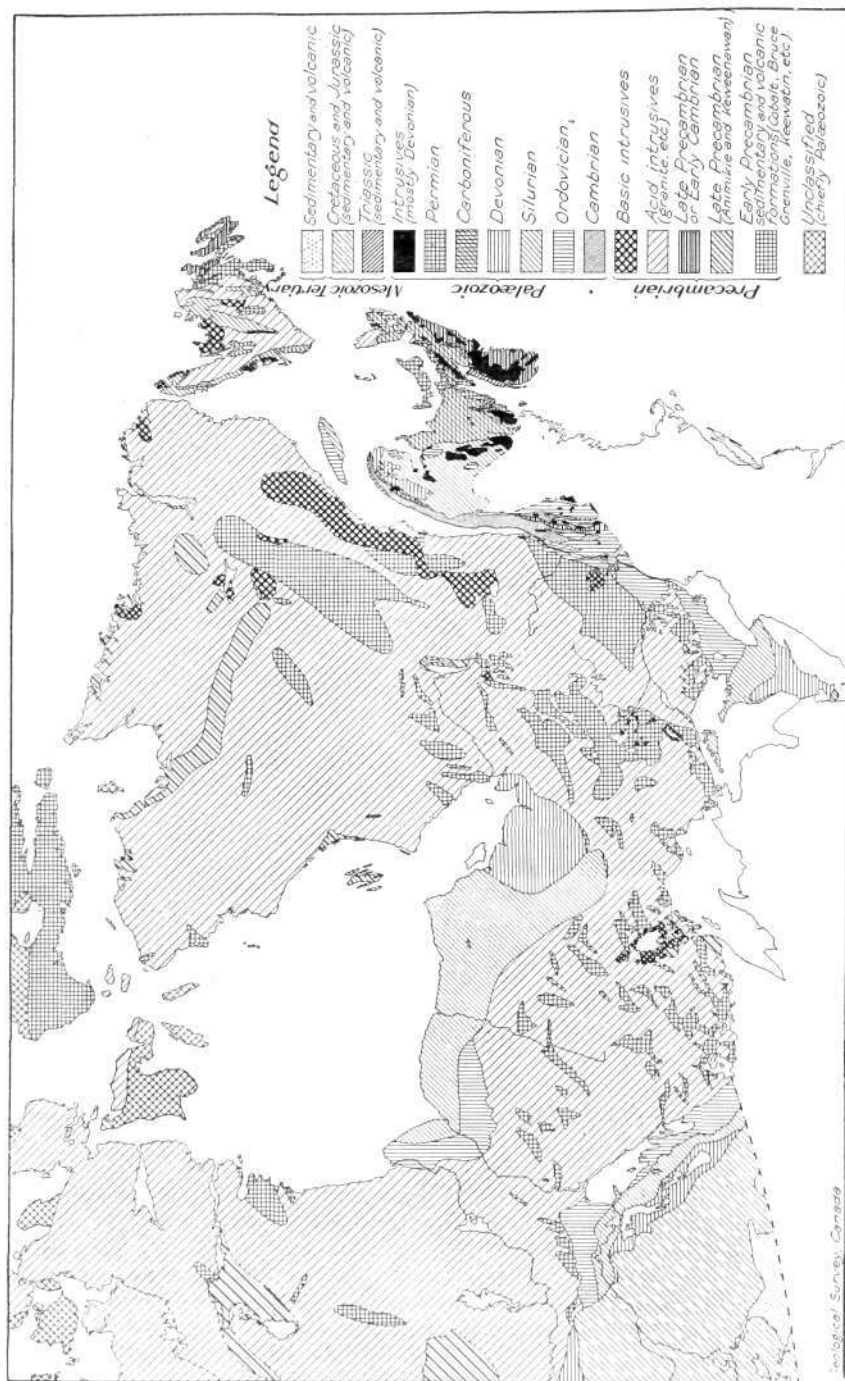

Another prominent feature is the wide extent of nearly flat-lying sedimentary formations of Palæozoic, Mesozoic and Cenozoic age that almost wholly surround the Precambrian area. They form a mantle spread out on a sloping shelf of Precambrian rocks and for a time probably extended over a great part of the Precambrian area. In few places was there even fairly continuous sedimentation throughout the three great geological periods, and the succession of strata is in most places broken and incomplete.

Towards the Atlantic and Pacific coasts, the flat-lying sedimentary series gives way to great assemblages of folded sedimentary and volcanic rocks pierced by granitic bodies and forming the Appalachian system of mountains on the east and the great Cordillera on the west. In the folding, rocks of Precambrian age are brought to the surface. In the extreme north an analogous mountain range stretches from Greenland westward into Ellesmere island.

#### Subsection I.—Topography.

The topography of Canada is the outward expression of geological processes that have been in operation at the surface of the earth and at depth throughout geological time. It is the imprint made by the deposition of sediments, the folding of strata, the intrusion of igneous masses, the ejection of volcanic material, and the dissolving, eroding and transporting of rock matter by surface agencies. The slow rising and sinking of broad continental areas, the forming of great mountain ranges and their gradual levelling, are all involved. The present land form is but a momentary expression of a continent that is undergoing eternal change.

<sup>1</sup> By Wyatt Malcolm, M.A., Geological Survey, Ottawa.

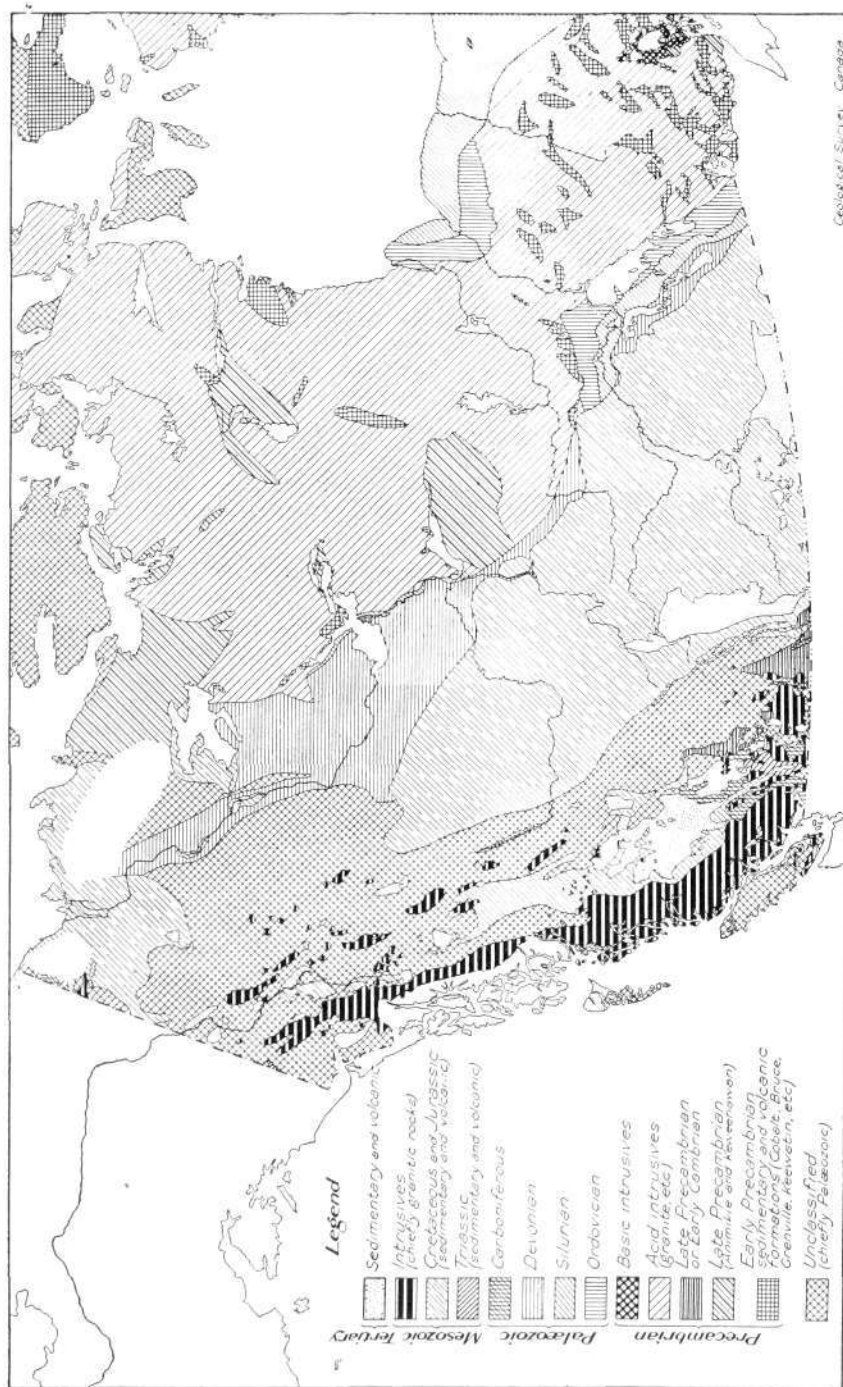

GEOLOGY OF EASTERN CANADA AND NEWFOUNDLAND.

The great area in Eastern Canada underlain by rocks of Precambrian age is known as the Canadian (or Precambrian) Shield or the Laurentian Plateau. It may be regarded as a subdued plateau or perhaps, more strictly speaking, a peneplanated surface that has been rejuvenated by Pleistocene glaciation and uplift. Its average elevation probably does not exceed 1,500 feet, and except in the northeast there are few areas that exceed 2,000 feet. In general, the surface slopes gently to the surrounding plain and there are long stretches of the boundary in which there is no marked difference of elevation between the Precambrian Shield and the adjacent Palæozoic plain; there are other long stretches in which there is an abrupt rise of several hundred feet above the plain or the sea. The greatest known elevations are in the eastern part of Baffin island and along the coast of northern Labrador. In Labrador there are four peaks in the Torngats said to have elevations of 6,000 feet. The Torngats are carved from the edge of an elevated tableland which is highest towards the Atlantic and sinks towards the west. The coast is one of the boldest and most rugged of the world, with nearly vertical cliffs rising 1,000 to 2,000 feet in height. Though the Canadian Shield is an area of low relief and has a remarkably even sky line, the surface is generally rugged, with successions of rocky hills 100 to 200 feet high. Occasional exceptions occur in which there is a relief of several hundred feet, as in the hills on the north shores of lake Huron and lake Superior. The area is dotted with lakes, large and small, of irregular outline and with numerous islands. They are rock basins that spill their waters from one to another by short streams with rapids and falls. In an area of 250 square miles in western Ontario that cannot be considered exceptional, aerial surveys have shown that there are 700 lakes. There are well-defined deep trenches like that occupied by lake Timiskaming, related to faulting or other structural features. The Saguenay river flows in a trench that descends to more than 800 feet below sea-level, and lake Superior, the largest body of fresh water on the face of the earth, fills a basin in the Canadian Shield that reaches about 400 feet below sea-level.

Extending south and west from the Canadian Shield and limited on the east by the Appalachian Mountain system and on the west by the western Cordillera of America, is the great North American plain. The northeastern part of this plain occupies southern Ontario south of a line extending from Georgian bay to the east end of lake Ontario, that part of eastern Ontario lying between the Ottawa and St. Lawrence rivers, and the part of Quebec lying adjacent to the St. Lawrence between Montreal and Quebec and extending in a very narrow belt down the river, including Anticosti island. The part of the plain west of the Canadian Shield is of wide extent, and stretches northward to the Arctic ocean between a line approximately joining lake Winnipeg, lake Athabaska, Great Slave lake and Great Bear lake on the east, and the foothills of the Rocky mountains on the west.

Although these areas are but parts of one great plain and are disconnected in Canada only because the Canadian Shield happens to project across the International Boundary in a narrow belt east of lake Ontario and in a wide zone between lake Huron and the lake of the Woods, they will for convenience of treatment be considered separately. Those parts lying in the basin of the St. Lawrence and the Great Lakes have been designated the St. Lawrence Lowlands, while the western area has been named the Interior Plains.

The part of the St. Lawrence Lowlands lying in the eastern angle of Ontario and in Quebec south of Montreal, and extending down the St. Lawrence, is comparatively flat and lies less than 500 feet above sea-level. On the lower St. Lawrence it is greatly narrowed by the near approach of the Appalachian system to the Canadian Shield. The part lying adjacent to lakes Ontario, Erie and Huron is of less even surface, has its greatest elevation of over 1,700 feet south of Georgian bay, and slopes rather gently to the Great Lakes. A striking topographical feature is the Niagara escarpment. This is an eastward-facing escarpment having a height of 250 to 300 feet and extending from Niagara peninsula northwest to Bruce peninsula.

The Interior Plains region is in general a rolling country with broad undulations and a slope eastward and northward of a few feet per mile, descending from an elevation of 3,000 to 5,000 feet near the mountains on the west to less than 1,000 feet at its eastern border. The elevation of the Canadian Pacific Railway at Calgary is 3,439 feet and at Winnipeg 772 feet. The rolling character of the area is relieved by several flat-topped hills—erosion remnants rising hundreds of feet above the surrounding country—by flat areas that formed the beds of lakes of considerable extent, and by deeply incised river valleys. A striking feature is the broken escarpment of western Manitoba and eastern Saskatchewan, marking the rise of 400 to 1,000 feet from the Manitoba lowland to the upland of the west. A lowland of considerable extent stretches for some distance into Ontario and Manitoba from the south shore of Hudson bay.

The Arctic archipelago consists of large islands, many of which rise prominently from the sea as sloping tablelands, while others are comparatively low.

The Appalachian and Acadian regions occupy practically all that part of Canada lying east of the St. Lawrence, with the exception of the lowland west of a line joining Quebec city and lake Champlain. The Appalachian region is a continuation northward into the province of Quebec of three chains of the Appalachian system of mountains. The most westerly of these ranges stretches northeast into Gaspé peninsula, where it forms flat-topped hills over 3,000 feet high. Mount Jacques Cartier on Tabletop mountain has an elevation of 4,350 feet. The Acadian region, which includes New Brunswick, Nova Scotia, and Prince Edward Island, is an alternation of uplands and lowlands. The northwest part of New Brunswick is an upland with hills and ridges rising to 2,500 feet or higher. Adjacent to the bay of Fundy is a series of ridges rising in places to an elevation of 1,200 feet or more. Between these two New Brunswick uplands is a lowland forming the whole eastern coast of the province and converging towards the southwest. This lowland extends east so as to include Prince Edward Island, the western fringe of Cape Breton island and the mainland of Nova Scotia north of the Cobequid mountains, which have an elevation of 800 to 1,000 feet. South of them lies a long narrow lowland stretching from Chedabucto bay to Minas basin and along the Cornwallis-Annapolis valley between North and South mountains. South of this is a highland sloping to the Atlantic coast and having an elevation at its highest part of about 700 feet. The northern part of Cape Breton island is a tableland 1,200 feet high, culminating in Ingonish mountain with an elevation of 1,392 feet, the highest point in Nova Scotia.

The Cordilleran region, the mountainous area bordering the Pacific, extends northward from the United States through Canada into Alaska, and embraces nearly all of British Columbia and the Yukon and the western edge of Alberta

and the Northwest Territories. The eastern part of the Cordillera is occupied by the Rocky mountains. They consist of overlapping chains with peaks rising to heights of 10,000 to 12,000 feet. They extend northwest and fall away towards the Liard river. North of this river the mountains with a similar trend lie 100 miles farther east and are known as the Mackenzie mountains. The western part of the Cordillera is occupied by the Coast range and the mountains of Vancouver and Queen Charlotte islands. The Coast range rises to heights of 7,000 to 9,000 feet. Between the Rocky mountains and the Coast range lies a vast plateau system having elevations of 3,000 to 4,000 feet, and cut by deep river valleys. The plateau region merges into rugged mountain ranges as it approaches the Rocky mountains; it also breaks into mountains in northern British Columbia, but becomes subdued to a plateau again in the Yukon. A striking feature of the Cordillera is the deep trench that lies immediately to the west of the Rocky mountains, extends northwesterly from the International Boundary into Yukon and is occupied by the headwaters of the Kootenay, Columbia and Fraser rivers and tributaries of the Peace and Liard rivers.

### Subsection 2.—Geology.

**Canadian Shield.**—The Canadian Shield is underlain by rocks of Precambrian age. These consist of series of sedimentary and volcanic formations and igneous intrusives of great variety. They were subjected to mountain-building processes, folded, crushed and metamorphosed, and the mountains were reduced nearly to their present level before the earliest Palæozoic sediments were deposited. The Precambrian period was probably of greater duration than all the subsequent geological periods taken together.

Geologists do not agree on the main subdivisions of the Precambrian formations. There is one great unconformity, which represents a long period of erosion, and which divides the stratified rocks into two groups, the earlier group consisting of a great mass of volcanics with associated sedimentary rocks and the later group consisting more fully of sediments. The earlier group is greatly folded and altered; the later group has in general been less disturbed and altered. In the earlier group the most important series of rocks is that known as the Keewatin. The Keewatin consists essentially of lava flows accompanied in many places by tuffs and basic intrusives, and includes iron formation, which frequently is made up of thin layers of chert-like quartz, alternating with quartzose layers holding magnetite or hæmatite or both. Sedimentary rocks consisting of conglomeratic, sandy and slaty strata are frequently associated with the volcanics and are, in places, of considerable thickness and extent. They may underlie the volcanics, like the Couchiching of the Rainy Lake area; they may be interbedded with the volcanics, like the Doré formation of Michipicoten; or they may overlie the volcanics, like the Timiskaming formation of northeastern Ontario and western Quebec. Between the volcanic and overlying sediments of northeastern Ontario and western Quebec there is an unconformity that is regarded by some geologists as of major importance. The early Precambrian formations occupy numerous areas of various sizes up to several hundred square miles in western Quebec, northern Ontario, eastern and central Manitoba, and to a less degree in Saskatchewan and the Northwest Territories.

The later Precambrian formations consist in a large measure of sedimentary rocks—conglomerates, quartzites and slates. In an area lying immediately north

of lake Huron and stretching northeast to beyond lake Timiskaming lies a succession of sediments known as the Huronian. These consist of: (a) the Bruce series, made up of conglomerates, quartzites and impure dolomitic limestone with an aggregate thickness of 2,700 to 12,000 feet; and (b) the Cobalt series, made up of boulder conglomerate and other materials probably of glacial origin, overlain by quartzite and calcareous quartzite, with an aggregate thickness of 12,000 feet. An erosion interval of considerable time intervened between these two series. These strata are undulating with gentle dips except on the north shore of lake Huron and eastward, where they stand at high angles and represent the core of an ancient mountain range that probably flanked the southern edge of the continent.

In the vicinity of Port Arthur there is a series of nearly horizontal strata, consisting of conglomerate, iron formation and slate. This is the Animikie series. It probably belongs to the Huronian system and may be equivalent in age to the Whitewater series north of Sudbury, consisting of conglomerate, volcanic tuff, slate and sandstone. East of Port Arthur the Animikie is overlain by the Keweenaw series of several hundred feet of red conglomerate, sandstone, shale, calcareous beds, tuffs and lavas.

Strata, presumably of late Precambrian age, are known to occur on lake Athabaska, Great Slave lake, east of Great Bear lake, on Belcher islands, on the east of Hudson bay and at other points in the Ungava peninsula. In the southern part of Ungava peninsula sediments are found that bear a resemblance to the Grenville-Hastings group of southern Quebec and southeastern Ontario.

The Grenville-Hastings group consists of closely folded, highly altered sediments intruded by, and in places interleaved with, granite. They are in general rusty-weathering banded gneisses, quartzose gneisses grading into quartzites, crystalline limestones, amphibolites, pyroxene-rich rocks and volcanic schists. Pegmatite dykes are common and anorthosite occupies large areas. The Grenville-Hastings group forms a belt in the southern part of the Canadian Shield, extending east from Georgian bay. The formations have not as yet been indubitably correlated with the Keewatin and Huronian rocks to the north.

The Precambrian sediments have suffered intrusion at various times by granites. These have been unroofed at different stages in the history of the Precambrian, and pebbles of granite are found in the conglomerates as early as those of Keewatin age. So complete has been the unroofing of the granites that they are exposed over the greater portion of the Canadian Shield. Basic intrusives were common in later Precambrian times. Sills and dykes of diabase cut the late Precambrian sediments around lake Nipigon, to the west of lake Timiskaming and at many other points. A thick laccolith is found in the Sudbury district.

The Canadian Shield was intensely glaciated during Pleistocene times, with the exception of the more elevated parts of the northern Labrador coast, and in general only a scant amount of soil was left, sufficient partially to conceal the rocks and maintain a forest growth. In some areas, as in part of northern Ontario and Quebec, adjacent to the Canadian National Railway, stratified fine sediments were deposited in lakes formed in front of the retreating glacier.

The Precambrian formations are prolific of mineral deposits of great number, variety and extent. These latter occur generally at or near the contact of the intrusives and the intruded rocks. Among them are the gold deposits of Por-

cupine and Kirkland Lake, associated with intrusions of porphyry, the silver deposits of Cobalt, South Lorrain and Gowganda, associated with diabase sills, the enormous nickel-copper deposits of Sudbury, associated with norite of a thick laccolithic intrusion, the auriferous copper sulphides of western Quebec, the copper-zinc sulphides of Manitoba, and the iron ores and iron pyrites of many localities of Ontario; in the Grenville-Hastings area are found deposits of galena, mica, graphite, feldspar, magnesite, fluorite, kaolin, molybdenite, talc and apatite.

**St. Lawrence Lowlands.**—The St. Lawrence Lowlands are divided into two parts by an arm of the Laurentian Plateau that extends southward into New York State, crossing the St. Lawrence between Kingston and Brockville. They are underlain by nearly horizontal Palæozoic sediments dipping gently away from the Canadian Shield and resting on the sloping surface of Precambrian rocks which, prior to the deposition of the Palæozoic strata, had been reduced to a physiographic condition similar to that existing on the Canadian Shield to-day.

The sediments are almost wholly of marine origin, consist mainly of limestone, magnesian limestone and shale, and range in age from late Cambrian to late Devonian.

In the Ottawa-Montreal division the latest strata are Ordovician; these, together with the Potsdam sandstone (Cambrian), have a thickness of about 6,000 feet. In the Great Lakes region of southern Ontario the Ordovician formations are succeeded upward by those of Silurian age and these in turn by strata of Devonian age. The Ordovician formations form a zone extending from Kingston to the Niagara escarpment and stretching northwest to Georgian bay and into Manitoulin island. The Silurian formations are exposed in the Niagara escarpment and westward in a belt 25 to 50 miles wide stretching northwest from Niagara peninsula into Manitoulin island. West of this nearly the whole of the area between lake Erie and lake Huron is underlain by Devonian limestones and shales. Each in turn is exposed over an area farther to the southwest than the older and underlying formation, so that in travelling westward from Kingston to Sarnia one passes over the bevelled edges of successively younger strata. Borings made at Courtright, in the township of Moore, show a thickness of nearly 4,260 feet of sedimentary rocks.

It is evident that the seas in which some of these sedimentary rocks were formed extended northward over the Precambrian rocks through Hudson bay into the Arctic ocean. The presence of outliers, on lake St. John, lake Nipissing, and lake Timiskaming in the south, and on lake Nicholson west of Hudson bay, of broad areas of Ordovician, Silurian and Devonian formations south of Hudson bay, and of Cambrian, Ordovician, Silurian and Devonian formations on the islands of the northern part of Hudson bay and of the Arctic seas, is clearly indicative of wide submergence. On the Arctic islands formations of Carboniferous (with coal seams) and Triassic ages are widespread, and there are patches of Tertiary sediments (with lignite). There is also evidence of the occurrence of rocks of Mesozoic age in Moose River basin.

The St. Lawrence Lowlands were covered by the glaciers of Pleistocene time, and the bedrock is to a great extent concealed by thick deposits of glacial till. In places are found stratified deposits that formed in lakes at the edge of the retreating ice sheet. Marine deposits were laid down in an arm of the sea that extended up the St. Lawrence and Ottawa valleys to a point above Ottawa.

The only intrusives worthy of mention are the igneous rocks of alkali types that form the Monteregian hills in southern Quebec, Mount Royal and seven others to the east. They are circular or oval hills that rise 600 to 1,200 feet above the plain and appear to be stock-like bodies or conduits that may have led to volcanic vents or larger masses of intrusives.

The mineral deposits are such as are usually found in the less altered sedimentary rocks. Petroleum has been produced in southern Ontario for 70 years; natural gas has been produced for 40 years in the counties bordering on lake Erie; salt has been obtained for a great many years from thick beds lying at a depth of about 1,000 feet in the counties bordering on lake Huron and lake St. Clair; gypsum is produced in the Grand River valley; limestone and dolomite, utilized in chemical and metallurgical industries, are widespread; materials for construction, for brick, tile and cement manufacture are abundant.

**Appalachian and Acadian Regions.**—The Appalachian and Acadian regions are composed of geological formations ranging from Precambrian through Palæozoic to Mesozoic. The Palæozoic sediments pass upward from dominantly marine formations into dominantly continental formations. A complete succession is not found and there are several hiatuses in sedimentation.

Sediments, probably of Precambrian age, occur in southeastern Quebec, southern New Brunswick, northern Cape Breton island and on the Atlantic coast of the mainland of Nova Scotia. The thick series of slates and quartzites, known as the Gold-bearing series, forms a belt occupying a very considerable part of the mainland of Nova Scotia, faces the Atlantic coast, and is probably of late Precambrian age.

During the Palæozoic period numerous disturbances took place in sedimentation; there were periods of uplift, of folding, and of erosion. Cambrian formations are found in southeastern Quebec, Ordovician formations are of extensive development in the Appalachian region from Vermont to Gaspé, Silurian and Devonian are well developed in Gaspé and the northwestern part of New Brunswick. Patches of Cambrian, Ordovician, Silurian and Devonian rocks are found in other parts of the Appalachian and Acadian regions.

The system of sediments most widely distributed in the Maritime Provinces is the Carboniferous. The formations are mainly of continental deposition although during Mississippian time a part of the area was submerged and received marine sediments. Towards the close of Devonian time there was a period of intense mountain building and igneous activity. Granite masses of large size were intruded in Nova Scotia and New Brunswick and of smaller size in Gaspé and southeastern Quebec. The upheaval was succeeded by intense erosion, and in early Carboniferous time granite masses were exposed by the removal of the overlying rocks.

The Carboniferous system occupies the triangular lowland forming much of the southeastern half of New Brunswick, the part of Nova Scotia north of Cobequid mountains, part of the lowland to the south of these mountains, southwestern and northeastern Cape Breton island and Prince Edward island. On Prince Edward island the Carboniferous may pass upward into the Permian. In the Carboniferous system are found the coal measures of Sydney and Glace bay, of Inverness, Pictou and Cumberland counties, Nova Scotia, and of the Minto coal field, New Brunswick. The extensive gypsum deposits and the salt beds of Nova Scotia and New Brunswick are found in a formation of Mississippian age, and the bituminous shales of New Brunswick and Nova Scotia are also

of early Carboniferous age. The Carboniferous system has in places been subjected to folding and faulting, but considerable areas have suffered little disturbance since these sediments were laid down.

Sandstone and lava flows of Triassic age are exposed on the bay of Fundy, particularly on the south coast. North Mountain is composed of basic lava flows capping Triassic sandstone. During the Pleistocene period the whole of the Appalachian and Acadian regions, with the exception of the higher parts of Gaspé, were subjected to glaciation.

The most important economic minerals of the Appalachian and Acadian regions are coal, asbestos, and gypsum. Reference has already been made to the occurrence of coal and gypsum. Asbestos occurs in altered peridotite in southeastern Quebec. These are the most productive deposits of the world. Chromite also occurs in the peridotite. Auriferous quartz veins, mainly of the interbedded type, are found on domes and pitching anticlines of the Gold-bearing series of Nova Scotia. Zinc-lead deposits occur in the Devonian shales and limestones of Gaspé peninsula, zinc-lead-copper sulphides in the southern part of Cape Breton island in a series of lava flows, and copper deposits in southern Quebec.

**Interior Plains.**—The Interior Plains are underlain by a series of nearly horizontal sedimentary rocks of Palæozoic, Mesozoic and Tertiary ages. The Palæozoic rocks, consisting mainly of limestone, dolomite and shale of Ordovician, Silurian and Devonian ages, form a belt extending north through Manitoba and northwest through Saskatchewan and northeastern Alberta down the basin of the Mackenzie river. East of the Mackenzie, rocks of Cambrian age are exposed in an area of limited extent. The Palæozoic formations rest upon the gently-sloping shelf of the Canadian Shield and pass westward with a dip of a few feet a mile beneath the shales and sandstones of Cretaceous age. The Cretaceous formations occupy nearly the whole of the plain from western Manitoba to the Rocky mountains and extend northward nearly to the Mackenzie river. There are also large parts of the Mackenzie basin, particularly of the lower half, in which the Devonian limestones are overlain by Cretaceous sediments. The Cretaceous sediments vary from shales predominantly of marine origin in the east to sandstones predominantly of continental origin in the west. Between the two are alternations of shales of marine origin with sandstones of brackish water or fresh water origin.

The Cretaceous beds are overlain in places by sediments of Tertiary age. The most extensive Tertiary formations are found in the hills of southern Saskatchewan and in a belt running north through central Alberta, where they lie in a broad syncline. Glacial till is widespread and clays were deposited in large lakes formed on the retreat of the ice-sheet. A large part of southern Manitoba formed the bed of glacial lake Agassiz.

The Interior Plains region is the great wheat-producing area of Canada. The mining of coal is one of the important industries; bituminous coal and lignite are produced in large quantities in Alberta and lignite in smaller quantities in Saskatchewan. The Cretaceous sediments are the reservoirs of great quantities of natural gas, and these and underlying formations are the source of the oil of the Turner Valley and other oil fields of Alberta. Oil has also been struck in the Devonian rocks north of Norman on the Mackenzie river. Gypsum is obtained from the Palæozoic rocks of Manitoba and also occurs in northern Alberta.

**Western Cordillera.**—In the western Cordillera is a fairly complete succession of sediments of Precambrian, Palæozoic, Mesozoic and Tertiary ages.

The Rocky mountains consist of a series of great fault blocks in which an enormous thickness of Palæozoic and Mesozoic sediments is exposed. Many thrusts of great extent have resulted in an over-riding of the Mesozoic sediments by the Palæozoic, and the erosion of the softer strata of the former has produced longitudinal valleys between the harder Palæozoic blocks. The Palæozoic formations consist mainly of limestones with less amounts of sandstone and shale. A succession with few breaks from the Cambrian through the Ordovician, Silurian, Devonian and Carboniferous is found, and probably extends with certain deviations throughout the length of the Rocky mountains and Mackenzie mountains. Between the Cambrian and Precambrian beds there is apparently little angular unconformity, but the variation horizontally in the Precambrian strata, on which the Cambrian formations rest, and a similar variation in the ages of the over-lying Cambrian strata furnish evidence of a long period of erosion. The Mesozoic strata consist of soft shales and sandstones some of which are coal-bearing. Strata of Triassic, Jurassic, and Cretaceous ages are represented.

The mountains to the west of the Rocky Mountain trench in southern British Columbia are composed of a series of late Precambrian quartzites, slates and magnesian limestones of great thickness. There are wide areas in the vicinity of granitic intrusives in which intensive alteration of these sediments has taken place. The Precambrian rocks extend west as far as Upper Arrow and Shuswap lakes and north from the International Boundary probably half the length of the province. Quartzites, mica schists and crystalline limestones with interbands and broad areas of schists of various kinds and intrusive granite gneiss are found over a wide stretch of the Yukon plateau and are probably of Precambrian age. Slates, quartzites and conglomerates, also probably of the same age, occur in the northern part of the Alaska-Yukon boundary, in the Ogilvie range and in the Kluane district.

On the interior plateau of British Columbia, limestones, quartzites and argillites of Carboniferous age and known as the Cache Creek group are of wide distribution. These are succeeded upward by argillites and limestones and a great mass of volcanic intrusives and effusives of Triassic age, and these are succeeded by sediments and volcanics of Jurassic age. The Triassic and Jurassic formations are widely distributed, are found on the islands to the west, and some at least extend into the Yukon.

Formations of Cretaceous age are found on Vancouver and Queen Charlotte islands and in a belt extending up the Fraser and along the eastern edge of the Coast range into the Skeena valley. They are mainly formations of continental origin and carry coal seams, but also include sediments of marine origin and volcanics.

Very early Tertiary times were characterized by widespread orogenic disturbances in the Cordillera. The Rocky mountains were formed and there was much folding and faulting in places in the interior, followed by intense erosion. Tertiary sediments, partly of continental deposition with seams of lignite and partly of marine deposition, occur at many points throughout the interior of the Cordillera and on Vancouver island. Lava flows capping some of these sediments cover broad stretches of the interior plateau.

In Pleistocene time nearly the whole of the Cordillera with the exception of a large area in the Yukon was subjected to glaciation, and glaciation still persists in the mountainous regions. Volcanics of recent age are found in areas of limited extent.

An episode of great economic importance in the geological history of the West was the intrusion of the granitic rocks of the Coast Range batholith and of acid rocks at different points in the interior, particularly in the southern part of British Columbia in Mesozoic times. Many of the more important mineral deposits of British Columbia, such as the copper deposits of Hidden Creek, Britannia, and Allenby mountain, the gold-silver deposits of Salmon River district and the silver-lead deposits of the Slocan, had their origin in solutions given off by the magmas of these acid intrusives.

The lead-zinc deposit of the Sullivan mine lies in sedimentary rocks of Precambrian age. The Cretaceous and Tertiary formations carry seams of coal and lignite of great importance. There are economic deposits of other minerals in great variety throughout the Cordillera, and British Columbia is one of the leading mineral-producing provinces of Canada. The gold of the once famous Klondike region was found in placers of an unglaciated area and the gold of the Cariboo district occurs mainly in Tertiary placers that were unaffected or little affected by glaciation.

## Section 2.—Economic Geology of Canada, 1929.\*

The purpose of this paper is to call attention to the most important reports and articles treating of the economic geology of Canada and published during 1929. The particular articles here referred to, although recently published, do not necessarily contain the best and most complete information on the subjects treated; for further information it is advisable to consult the Dominion and Provincial Departments of Mines. The reference numbers appearing through the text indicate the publishers as listed at the end of this paper.

**Asbestos.**—In the Bulletin of the Geological Society of America, Stephen Taber described the chrysotile veins of southern Quebec. Evidence is presented to support the theory that the wall rock in immediate contact with the veins has been displaced as the veins were formed instead of being destroyed by replacement or re-crystallization.

**Copper.**—The Pueblo, Tamarack-Carlisle and War Eagle-Leroi copper properties,<sup>1</sup> Whitehorse copper belt, Yukon, were examined by W. E. Cockfield. The rock formations, in order of age, consist of limestone, porphyrite, granite, granodiorite, porphyry dykes and basalt. The principal ore bodies are of the contact metamorphic type and occur in limestone close to or adjoining the granite. Discoveries have also been made in the granite at a considerable distance from the contact. There are two types of ore bodies, those in which the copper is associated with magnetite and hæmatite and those in which the gangue consists chiefly of silicate minerals. Mineralization is patchy.

V. Dolmage studied the Gun Creek map area,<sup>1</sup> Lillooet District, British Columbia, and outlined the origin of the ores of Copper mountain,<sup>5</sup> Similkameen district, British Columbia. Cretaceous sediments and volcanics and

\* Contributed by P. J. Moran, B.Sc., Geological Survey, Ottawa, Ont.

Coast Range granodiorite and derivatives occupy the Gun Creek area. The important metals discovered so far are low grade copper-gold deposits situated in the batholith along the contact. A high grade copper and two gold deposits also occur in the area. The ore bodies of Copper mountain are situated along the contact of a stock composed of gabbro, diorite and other related rocks, thrust up through a series of steeply folded andesite and basaltic breccias. Large white felsite and quartz porphyry dykes cut the stock, breccias and ore bodies. The metallic content of the ore is believed to have originated in the magma of the stock. The deposit is low grade and of the contact metamorphic type. The ores, consisting of chalcopyrite and bornite in a gangue of andesite and basaltic breccia, are refractory.

H. T. James made a comprehensive report upon the Britannia Beach map-area,<sup>1</sup> Howe Sound, Vancouver mining division, British Columbia. The area is situated upon the western flank of the Coast Range batholith. Mesozoic sediments and volcanics are intruded by Jurassic sills, the Coast Range batholith, later basic and acidic dykes and finally by Tertiary basaltic dykes. The Mesozoic succession is represented by residual "roof pendants" In a shear zone about five miles long and 2,000 feet wide extending southeast from Tunnel camp to the batholith at Seymour creek, the only economic deposits are found. The principal minerals are pyrite, chalcopyrite and quartz, with subsidiary amounts in places of sphalerite, barite, anhydrite and galena.

Carl Lausen made a geological reconnaissance of the east end of Great Slave lake.<sup>5</sup> Precambrian rocks consisting of greenstones, granite gneiss, granite, syenite, diabase and sediments were noted. Copper mineralization was observed at different places, but no showings encountered would justify expenditure of money for development.

**Copper-Nickel-Platinum.**—C. V. Corless submitted a few suggestions relative to the origin of the Frood ore deposit.<sup>5</sup> Viewed broadly, this deposit, as far as developed, shows a steady diminution in rock matter and increase in sulphide content with depth, passing from "spotted norite" or "spotted diorite" in the upper levels, to practically clean sulphides at about 3,000 feet. To a depth of 2,000 feet the copper content is fairly uniform; below this depth, an increase is noted until at about 3,000 feet the chalcopyrite constitutes about 65 p.c. of the ore. Gold, silver and platinoids increase somewhat beyond the proportionate increase in base metals. It is pointed out that the above phenomena may probably result from a relatively sudden injection of a large body of fluid magma very rich in sulphides of iron, nickel and copper forced into the earth's crust along some local, not too far from vertical, plane of weakness. Such a body heavily loaded with sulphides encased between walls of rather low conductivity would probably remain fluid for sufficient time to effect the differentiation with depth which is being revealed by development.

A. P. Coleman, E. S. Moore and T. L. Walker present, in the University of Toronto Studies, the results of numerous chemical analyses of samples of rock, taken along several transverse sections across the Sudbury norite-micropegmatite intrusive, to prove that the two types of rock are resultant from magmatic differentiation and are not two separate intrusives, as is maintained by T. C. Phemister in a report published by the Ontario Department of Mines a few years ago. The authors also sum up the evidence that has from time to

time been adduced with regard to the origin of the nickel-copper deposits and reaffirm their opinion that the sulphides in the main differentiated from the norite-micropegmatite sill by the action of gravity on an immiscible silicate-sulphide melt.

R. J. Watson examined the platinum bearing nickel-copper deposit of Lower Shebandowan lake,<sup>3</sup> Thunder Bay District, Ontario. Basic and acidic volcanics and sediments are intruded by two stages of granite. Intrusions of post-Timiskaming peridotite occur in the area. Some of the highly sheared peridotite is replaced by sulphides, calcite and dolomite. In this mineralized zone are found platinum-bearing nickel deposits.

**Coal.**—In the Report of the Scientific and Industrial Research Council of Alberta, R. I. Rutherford outlined the geology of the area between Athabaska and Lesser Slave lakes and the Peace hills, Alberta. LaBiche and Belly River beds of Upper Cretaceous age underlie the Athabaska-Lesser Slave Lake area. Upper Cretaceous and Lower Tertiary formations are found in the Peace hills. Notes upon coal, water supply, sand and gravel were made.

Brulé Mines coal area,<sup>1</sup> Alberta, was examined by B. R. MacKay, Bituminous and semi-bituminous coal seams totalling 26½ feet occur in intensely folded and faulted Lower Cretaceous measures. Commercial coal has only been found in the upper horizon.

Gordon L. Kidd submitted a few remarks upon the geology of the East Couléé coal area, Drumheller field,<sup>5</sup> Alberta.

A report upon the geology and economic deposits of Moose River basin<sup>3</sup> was made by W. S. Dyer. A succession from Precambrian, through Lower, Middle and Upper Devonian, Lower Cretaceous and Pleistocene is represented. Gypsum, lignite, peat, clay and shale are found in the area. Occurrences of sand, gravel and limestone are indicated and the possibilities of finding oil and gas are summarized.

The progress that has been made in delimiting the extent of and further tests that have been made upon lignite coals on the Abitibi river<sup>4</sup> were briefly outlined by A. R. R. Jones.

**Fireclay, Kaolin and Silica.**—W. G. Worcester described Saskatchewan clays<sup>5</sup> as regards classification of clays, geological age, and chemical and pyro-physical properties. Present developments of the White Mud clays are outlined.

R. J. Montgomery and R. J. Watson made a report upon the fireclay, kaolin and silica sand deposits of the Mattagami and Missinabi rivers,<sup>3</sup> Ontario. Sections and logs of test pits and holes and the results of extensive tests made upon the material of the deposits are given.

**Graphite.**—The graphite deposits of Louisa,<sup>7</sup> Wentworth Township, Argen-teuil Co., Quebec, were described by George W. Bain. The main deposits are located near the contact of the limestone and greywacke and are on the flanks or crests of minor crumples on the major anticlines which bring the crystalline limestone to the surface. The graphite is flaky, massive or radiating but never columnar.

**Gypsum and Salt.**—Salt and gypsum occurrences in Alberta<sup>5</sup> are outlined by J. A. Allan. These deposits are believed to be Silurian or Devonian in age.

In the North Mountain area,<sup>1</sup> Cape Breton island, Nova Scotia, T. D. Guernsey found a pre-Carboniferous (possibly Precambrian) complex of ancient sedimentary and volcanic rocks intruded and metamorphosed by granite, basic and acidic dykes, together with a thick series of Carboniferous sediments, composed of conglomerate, limestone, gypsum, sandstone and shale in ascending order. The economic minerals of the area are limestone and gypsum.

W. A. Bell completed a stratigraphical and palæontological study of the Carboniferous-Windsor series of the Horton-Windsor area,<sup>1</sup> Nova Scotia. Bed rock ranges from Precambrian through Palæozoic to Triassic age. Bell outlines the derivation of and localizes the horizon in which gypsum and rock salt appear. A. R. Chambers discussed the genesis and uses of rock salt and the saline deposits of Nova Scotia.<sup>5</sup>

**Gold.**—In the *British Columbia Miner*, the staff of the Hedley Gold Mining Co. described the geology, ore deposits and mining and milling practice of the Nickel Plate mine,<sup>5</sup> Hedley mining district, Similkameen mining division, British Columbia. Contact metamorphic deposits of arsenopyrite, chalcopyrite and pyrrhotite in a gangue of lime-silicates occur in limestone near the junction with sills of white gabbro.

E. L. Bruce studied the Woman, Narrow and Confederation Lakes area,<sup>3</sup> Kenora district, Ontario. Highly metamorphosed Precambrian acid and basic volcanic flows with minor sediments are intruded by basic and acidic dykes and granite. Spectacular showings of gold and gold tellurides occur chiefly in lenticular quartz veins, with little impregnation of the wall rocks. In one or two cases, however, large low-grade zones, with gold in the walls, were observed.

The Pickle Lake-Crow River area,<sup>4</sup> Patricia district, Ontario, was described by M. E. Hurst. Keewatin greenstones, basic intrusives, schists and some sediments are intruded by granite and in places by tongues and irregular bodies of sheared quartz porphyry. Some gold-bearing quartz veins, mineralized with small amounts of pyrite, pyrrhotite, chalcopyrite, arsenopyrite and tourmaline occur in the vicinity of, and cutting, iron formation.

In the Thunder Bay district, Ontario, E. S. Moore studied Savant Lake area,<sup>3</sup> G. B. Langford the Beardmore-Nezah area,<sup>8</sup> and R. J. Watson the Huronian gold mines,<sup>3</sup> Moss township. Acidic and basic volcanics, sediments and iron formation are intruded by granite and related porphyries. Iron, gold, copper, lead, zinc and nickel are found in the Savant Lake area. Gold is found in quartz veins, disseminated in schists and in masses of sulphides in the iron formation. No economic deposits of iron have yet been discovered. The distribution of gold in the Beardmore-Nezah area is widespread. It is found in quartz veins, in greenstones, sediments and iron formation. The associated minerals are arsenopyrite, pyrite, pyrrhotite, chalcopyrite, sphalerite, galena, native copper and tourmaline. Graphite and asbestos also occur in the greenstones. At the Huronian mines, quartz veins follow a shatter zone paralleling a small porphyry dyke and carry chalcopyrite, pyrite, galena, sphalerite, tellurides and a little native gold. Generally the gold appears confined to the quartz and the wall rock is barren.

E. W. Todd made a comprehensive study of the Kirkland Lake gold area,<sup>8</sup> Ontario, outlining the general geology, structure, ore deposits, and mining operations. The bed rocks of the area consist of Keewatin volcanics and iron forma-

tion, Timiskaming sediments and volcanics, and Algonian acidic and basic intrusions. The veins are closely related to fissuring produced by fault movements and consist of sheared and brecciated rocks partially replaced by secondary minerals such as quartz carbonates, sericite and chlorite. Irregular masses of quartz fill openings through the crushed rock in the veins and the gold, accompanied by tellurides and sulphides, occurs in streaks and minute fractures in the masses of secondary minerals. Where the country rock is porphyry or red syenite, the structure consists of angular blocks of these rocks cemented together with gold-bearing quartz.

A revision of "Gold Fields of Nova Scotia"<sup>1</sup> was made by Wyatt Malcolm, bringing available information upon development of these gold deposits strictly up to date. Revival of interest in this field lends particular importance to the appearance of this work.

**Placer Gold.**—The history and future possibilities of placer mining in the Atlin district, British Columbia, was outlined by C. L. Monroe.<sup>5</sup> A number of creeks of known possibilities still remain unprospected. E. C. Annes and N. C. Stines, in the *British Columbia Miner*, describe the geology and operations in connection with the re-opening of the Bullion mine, Quesnel mining division, Cariboo district, British Columbia. The placer ground is located in a pre-glacial channel of the south fork of Quesnel river.

**Lead-Zinc-Copper-Silver-Gold.**—Recent developments in northern Quebec; the Sudbury district, Ontario; northern Manitoba and other areas have revived interest in the base metal possibilities of Canada and diverted prospecting effort to the search for these metals, with the result that important discoveries have been made. Pursuant to this increased activity, examinations of areas containing base metals have been made as follows:—

In British Columbia—Taku,<sup>5</sup> Tulsequah,<sup>5</sup> and Stikine<sup>1</sup> Rivers areas, by F. A. Kerr; Stewart-Bear River<sup>1</sup> and Alice Arm areas<sup>1</sup> by George Hanson; Topley map area<sup>1</sup> by George Hanson and T. C. Phemister; Finlay River area<sup>1</sup> by V. Dolmage; Slocan-Upper Arrow Lakes area<sup>1</sup> by C. E. Cairnes, and H. C. Gunning; Big Bend area<sup>1</sup> by H. C. Gunning; and Kootenay Lake area<sup>1</sup> by J. F. Walker; in the Northwest Territories—Pine Point area,<sup>5</sup> Great Slave Lake district, by J. Mackintosh Bell; in Manitoba—Sherritt-Gordon properties, by J. F. Wright,<sup>1</sup> E. L. Bruce<sup>7,6</sup> and R. C. Rowe<sup>4</sup>; in Ontario—Ben Nevis, Kamiskotia, Boston Creek and other areas<sup>3</sup> in Cochrane and Timiskaming districts, by T. L. Gledhill; Ranger Lake, Garden River and other areas<sup>3</sup> in the vicinity of Goudreau and Sault Ste. Marie, Algoma district, by M. E. Hurst; Woman River-Ridout area,<sup>1</sup> by R. C. Emmons and Ellis Thomson; in Quebec—Central Gaspé area,<sup>1</sup> by F. J. Alcock; and in Nova Scotia—the Sterling mines,<sup>5</sup> Richmond Co., by R. E. Legg.

Kerr found in the Stikine River area, pre-Permian metamorphosed sediments and volcanics, and later sediments and volcanics reaching to the Pleistocene. Part of the series is intruded by a composite batholith which was active from early Triassic through the greater part of the Mesozoic. Mineral deposits of great diversity in type occur in different horizons approximate to the granite intrusion. Important discoveries of silver-lead-zinc, with some copper-gold and placer gold, were made.

In the *British Columbia Miner*, Kerr indicates that the general geology of the Taku and Tulsequah is similar to that found along the Stikine. Replacement deposits of chalcopyrite, galena, zinc blende and pyrite, carrying gold and silver values, were observed. The gold is associated mainly with chalcopyrite and the silver with galena.

The ore bodies of the Stewart-Bear River map area and of the Alice Arm area, as described by Hanson, lie in the belt of mineralization fringing the eastern limit of the Coast Range batholith. Most of the deposits of the Stewart-Bear River area are in vein form; some of the larger are replacement bodies. The majority contain lead, zinc, silver and some gold; a smaller number contain copper and some gold. In the Alice Arm area occur molybdenite veins, high grade silver veins with quartz gangue in argillite, silver-lead veins with quartz-pyrite-calcite gangue in volcanics, sphalerite veins with quartz-calcite gangue in sedimentary rocks and chalcopyrite veins with quartz in volcanics.

Promising deposits of lead-zinc-silver in a quartz-siderite gangue in limestone adjacent to an irregular mass of vein quartz, and deposits of chalcopyrite in a quartz gangue, were observed by Dolmage in the Finlay River area. Schists, sediments and volcanics are intruded by granodiorite. Later sediments and volcanics are also found in the area. Pale amber muscovite in large underformed crystals is found in pegmatite dykes cutting Precambrian and possibly Carboniferous rocks. Development of mica occurrences is encouraging.

Pre-Jurassic granitic rocks, Jurassic sediments, volcanic flows, dykes and sills in the Topley area, are described by Hanson and Phemister. Replacement deposits and veins of sulphides, including chalcopyrite, galena, tetrahedrite, sphalerite, carrying gold and silver and veins containing galena and chalcopyrite, in barite and carbonate gangue, are found.

Cairnes and Gunning reported the Slocan-Upper Arrow Lakes area to be underlain by a complex assemblage of Precambrian and Mesozoic rocks. Some lead and silver mineralization was observed but no outstanding mines have yet been developed. A deposit of pyrrhotite and pyrite, carrying zinc and some lead, occurs in the extreme northwestern part of the area and is known as the Big Ledge property.

Altered Precambrian sediments, greenstones and granite intruded by Mesozoic granite were studied by H. C. Gunning in the Big Bend area. Gold-quartz, quartz-tetrahedrite, copper, lead-zinc, placer gold, stannite, asbestos, talc and mica were found. Zinc-lead deposits, which are the most important, are of two types—in one type pyrrhotite occurs with low silver-gold values and in the other type pyrite is developed with the silver values high but the gold values low.

In the Kootenay Lake area, J. F. Walker described the silver-lead deposits which are associated with pyrrhotite, pyrite, arsenopyrite and chalcopyrite in quartz limestone gangue. The ores occur as irregular pipe-like replacements in limestone.

Vertical and highly inclined irregular masses of galena, zinc blende and pyrite occur in lines parallel to joint planes in Presqu'île dolomite of Devonian age, along eroded shattered axes of low anticlinal folds near Pine Point, Great Slave Lake district. The deposits, as described by J. Mackintosh Bell, show evidence of considerable oxidation to the greatest depth reached in prospecting.

Sink holes characterize the outcrop. Acid and basic gneisses of sedimentary origin intruded by granite and later pegmatites are found in the Sherritt-Gordon area, Manitoba. Elongated sulphide lenses are developed, according to Wright, in fracture zones along a drag fold in acid gneiss close to basic gneiss. The ore consists of coarse-grained pyrrhotite, chalcopyrite, sphalerite and marcasite, associated with quartz, amphibole, chlorite, garnet and biotite.

In the Cochrane, Timiskaming and Algoma Districts, Ontario, studied by Gledhill and Hurst, irregularly-shaped large and small replacement bodies of sulphides carrying one or more of the minerals, chalcopyrite, sphalerite, galena, gold and silver, occur in schistose areas in Precambrian rocks. Other mineralized schistose zones traversed by quartz veins containing some or all of the above-mentioned minerals were observed by Gledhill and Hurst.

In the Woman River-Ridout area, described by Emmons and Thomson, the early Precambrian iron formation, which in the past was examined as a possible source of iron ore and iron pyrites, was examined with regard to its associated deposits of lead, zinc and copper sulphides. These occur in veins that are in general parallel to the bedding of the iron formation, with minor cross veins.

The zinc-lead fields of Gaspé were re-studied by Alcock. The veins of sphalerite and galena in a quartz-carbonate gangue occur in Lower Devonian argillites, limestones and tuffs and are believed to be genetically related to deep-seated intrusive rocks of the area.

Legg described the geology of the Sterling mine as consisting of irregular bodies of intimately mixed sulphides, sphalerite, galena, chalcopyrite and pyrite deposited along lines of weakness in a carbonated shear zone in Precambrian rhyolites.

**Oil and Gas.**—Thos. G. Madgwick outlined the oil and gas situation in the Prairie Provinces,<sup>5</sup> sketching the geology, formations and productive horizons encountered in wells, some outstanding problems in the development of the fields and in bringing wells into production, and gave a summary of operations to the end of 1928.

In the "Transactions of the Royal Society of Canada", R. C. Wallace and G. C. McCartney call attention to the importance of heavy minerals in sand horizons in Manitoba and western Saskatchewan. The progress of examination of these sands to date has shown that there is a likelihood, through detailed work over the whole field, of identifying horizons by means of the heavy mineral content of drill-hole samples.

W. P. Campbell<sup>5</sup> described waters encountered in deep drilling and points out the necessity of having the water-flow into the well shut off effectively as the well is being drilled. A high chloride content is generally a character of deep water. Sulphates and bicarbonates with little chloride indicate surface or shallow waters. Concentration increases with depth.

The stratigraphy of Eastend area, Cypress hills and a portion of southern Saskatchewan<sup>1</sup> was examined by F. H. McLearn. In the Eastend area there do not appear to be any important structures favourable for oil and gas accumulation, and examination has not yet reached the point in southern Saskatchewan where predictions as to oil and gas possibilities may be made.

A preliminary report upon the geology and oil explorations in Cape Breton island was made by the Eastern Gulf Oil Company in the Nova Scotia Report

on Mines. There is evidence in Cape Breton island that oil and gas at one time were present. In some parts, structure and other factors give reason to hope that commercial quantities of oil may exist. A program of preliminary drilling to locate favourable structure must first be made before deep holes are projected.

**Peat.**—An examination of peat bogs in southwestern British Columbia,<sup>1</sup> made by A. Anrep, revealed a number in the vicinity of Vancouver suitable for the manufacture of peat litter and mull.

Vaino Auer discussed some of the problems of peat bog investigation in Canada.<sup>1</sup> He stated that peat bogs in the Dominion should be examined and classified from a number of different points of view, *i.e.*, peat as a fuel, peat as litter, and reclaiming bogs for agriculture and reforestation.

**Phosphate.**—J. A. Allan, in the Report of the Scientific and Industrial Research Council of Alberta, reports upon an investigation of the possible occurrence, in the Jasper Park area, of phosphate and other minerals that are known to occur in rocks of the same age in other parts of the mountains and on the south shore of Great Slave lake. Some shale beds are distinctly phosphate, but no high grade horizons were observed.

**Silver-Gold.**—The Horn silver mine,<sup>1</sup> Similkameen district, British Columbia, was examined by H. S. Bostock. Metamorphosed sediments consisting of phyllites, mica schist and quartzite are intruded by a large body of alkali syenite. Several bodies of hornblende and various dykes of rock types allied to the alkali syenite are found. The ore deposits are apparently embodied in one main fissure vein cutting through the country rock. The vein may be pictured as a sloping sheet, gently warped, and divided into numerous slabs by faults which offset them in irregular, step like manner. The vein consists of a gangue of quartz in which pyrite, sphalerite, chalcopyrite, galena, tetrahedrite, hæmatite, native silver, calcite, and sometimes arsenopyrite are disseminated in variable amounts. Gold values are also present in the ore.

**Tin.**—The Snowflake tin-silver vein,<sup>4</sup> Big Bend area, Revelstoke mining division, British Columbia, was described by V. Dolmage. Precambrian metamorphosed sediments and volcanics are intruded by Mesozoic granite and associated rocks. The veins occur in black, highly carbonaceous (in places graphitic) argillites. Stannite occurs in a quartz gangue associated with pyrite, galena, zinc blende, tetrahedrite, scheelite, wolframite, ruby silver, chalcopyrite and native silver.

**Zinc.**—The staff of the British Metal Corporation (Canada), Limited, outlined the geology, and mining and milling practice at the Tetreault mine,<sup>5</sup> Montauban Township, Portneuf County, Quebec. Grenville quartzites, gneisses and dolomitic limestone are intruded by amphibolite and granite. The ore consisting of an intimate mixture of sphalerite, galena, pyrrhotite, pyrite and a little chalcopyrite, carrying silver and gold values, is confined to altered limestone and occurs along the footwall contact with a gradual dissemination to the hanging wall.

### III.—SEISMOLOGY IN CANADA.<sup>1</sup>

Seismology—the branch of science which treats of earthquakes—has received considerable attention in Canada during recent years. It has been generally recognized that earthquakes are frequent in regions of adjustment of strata and are characteristic of the newer mountain and coast regions where abrupt changes in level are present. Seismological researches, while recording their location, duration and intensity, seek to determine particular causes. They ascertain the physical properties of the earth's crust and interior, as revealed by the peculiarities of the recorded waves after their passage through the earth. Instruments as developed by seismological research for the better recording of earth tremors are being used commercially in many ways, not the least important being for the mapping out of underground densities, in order to locate minerals and oil without frequent and expensive borings.

During the years for which records are available, Canada has been but slightly affected by earthquakes. Historically, a record shows that the St. Lawrence valley was shaken by a great quake in 1663. From time to time other shocks have been felt in that region, notably in 1870 and again on Feb. 28, 1925. In 1899 a great disturbance shook Alaska at Yukatat bay, very close to Canadian territory. On June 28, 1925, an earthquake in Montana, caused tremors which were felt in Alberta. The most serious earthquake for more than two centuries was the St. Lawrence tremor of Feb. 28, 1925. Although very widely felt it cannot be classed as a seriously destructive earthquake such as are experienced in more seismic regions. On November 18, 1929, a serious earthquake occurred about 300 miles south of Newfoundland, the tidal wave from which caused considerable destruction in Newfoundland. This earthquake was felt throughout Eastern Canada, as far west as Ottawa. Considerable damage was caused to the cable lines crossing the disturbed area.

At present five seismologic stations, all maintained by the Dominion Government, are in active operation in Canada, and are situated at Halifax, Ottawa, Toronto, Saskatoon and Victoria. Two of these—at Toronto and Victoria—are under the Meteorological Branch of the Department of Marine, while the three remaining stations are controlled by the Dominion Observatory, of the Department of the Interior, with the assistance and co-operation of the universities at Halifax and at Saskatoon.

The records for Toronto and Victoria are published from Toronto, whence monthly bulletins are issued to seismologic observatories interested, giving full details of all quakes registered. The records for the remaining stations are published from Ottawa. Monthly bulletins are issued to 219 seismologic observatories situated throughout the world. These are supplemented by a yearly publication giving the location of epicentres of all earthquakes of which any trace is registered at Ottawa and for which the total data are sufficient. Reports are received regularly from all the working seismologic stations of the world.

Regular research work in seismology is carried on at Ottawa, where the full time of three seismologists is given to the work of earthquake study alone. The reports are issued in the publications of the Dominion Observatory, Ottawa.

<sup>1</sup> By Ernest A. Hodgson, M.A., Dominion Observatory, Ottawa.

The natural and instrumental data for each station are as follows:—

*Hullfax.*—Lat., 44° 38' N.; Long., 63° 36' W., Alt., 47.3 m. Substrata, carbonaceous slate. Equipment:—Small Mainka Pendulum Seismograph. Mechanical registration. Components N.S., E.W. Mass of each 139.3 kgm. Period of each 10 sec. Damping ratio of each 6:1. Magnification of each, about 60. Time is checked automatically each hour by signal from Western Union Telegraph and is to be depended on to one or two seconds.

*Ottawa.*—Lat., 45° 23' 38" N.; Long., 75° 42' 57" W.; Alt., 82 m. Substrata, boulder clay over Limestone (Ordovician). Equipment:—(1) Bosch Horizontal Seismographs. Photographic registration. Independent components, N.S., E.W. Mass of each 200 gm. Period of each, about 5.5 sec. Damping ratio N.S. 2:1, E.W., 13:1. Magnification of each, 120. (2) Milne-Shaw Horizontal Seismographs. Photographic registration. Independent components, N.S., E.W. Mass of each, 1 lb. Period of each, 12 sec. Damping ratio of each 20:1. Magnification of each, 250. (3) Wiechert Vertical Seismograph. Mechanical registration. Mass, 80 kgm. Period, 6 sec. Damping ratio, 20:1. Magnification, 160. (4) Deformation Instrument. Photographic registration. Components, N.S., E.W. Mass of each, 20 gm. Period of each, about 36 sec. No damping. Used for determination of tilt. The time service at Ottawa is that of the Dominion Observatory and the registration on the record is kept correct to within 0.2 sec.

*Toronto.*—Lat., 43° 40' N.; Long., 79° 24' W., Alt., 115.5 m. Substrata, sand and gravel on boulder clay to a depth of about 15 m., then shale over crystalline rock (Laurentian) to a depth of about 335.5 metres. Equipment:—(1) Milne Seismograph. Photographic registration. E.W. component. Mass, 0.3 kgm. Period, 18 sec. No damping. (2) Milne-Shaw Horizontal Seismographs. Photographic registration. Independent components, N.S., E.W. Mass of each, 1 lb. Period of each, 12 sec. Damping ratio of each, 20:1. Magnification of each, 150. Time markings by Toronto Observatory clock. The registration has an error of 2 sec. The time is checked by meridian transits.

*Saskatoon.*—Lat., 52° 8' N.; Long., 106° 30' W.; Alt., 515m. Substrata, clay and sand. Equipment:—Small Mainka Pendulum Seismograph. Mechanical registration. Components, N.S., E.W. Mass of each, 139.3 kgm. Period of each, approximately 9 sec. Damping ratio of each, 5:1. Magnification of each, about 60. Time by local clock, checked occasionally by telephone with train time.

*Victoria.*—Lat., 48° 24' 50" N.; Long., 123° 19' 28" W. Alt., 67.6 m. Substrata, igneous rock. Equipment:—(1) Milne Seismograph. Photographic registration. E. W. component. Mass, 0.23 kgm. Period, 18 sec. No damping. (2) Milne-Shaw Horizontal Seismographs. Photographic registration. Independent components, N.S., E.W. Mass of each 1 lb. Period of each, 12 sec. Damping ratio of each, 20:1. Magnification of each, 250. (3) Wiechert Vertical Seismograph. Mechanical registration. Mass, 80 kgm. Period, 5 sec. Magnification, 70. Time service of the meteorological station. Registration correct to  $\pm 0.1$  sec.

## PART IV.—THE FLORA OF CANADA.

Under the above heading the Canada Year Book, 1922-23, contained an article prepared by the late J. M. Macoun, C.M.G., F.L.S., and M. O. Malte, Ph.D., and revised by the latter. See p. 25 of the 1922-23 edition or p. 73 of the 1921 edition.

## PART V.—FAUNAS OF CANADA.

The Canada Year Book, 1922-23, contained an article under the above heading by P. A. Taverner of the Department of Mines, Ottawa. See p. 32 of the 1922-23 edition or p. 82 of the 1921 edition.

## PART VI.—THE NATURAL RESOURCES OF CANADA.

The economic life of new countries must at first depend entirely, and later mainly, upon their natural resources. Older countries, after exhausting their most easily obtained resources, turn for a livelihood to manufacturing and similar pursuits, conserving their remaining resources and utilizing those of less developed areas.

Canada is distinctly a new country and her resources are for the most part in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years but exploitation on the present commercial scale is of relatively recent growth. A notable feature, especially in so young a country, has been the effort directed to conservation and, in the cases of those resources which admit of such methods, the actual replenishment or augmentation of the sources of supply by the practice of reforestation, silviculture, fur-farming or the establishment of fish hatcheries.

In recent years numerous surveys and investigations as to the extent and value of the resources have been made. A short summary of important details regarding them follows. Fuller information will be found in the introductions to later chapters—Agriculture, Furs, Fisheries, Forestry, Minerals, Water Powers—of this volume.

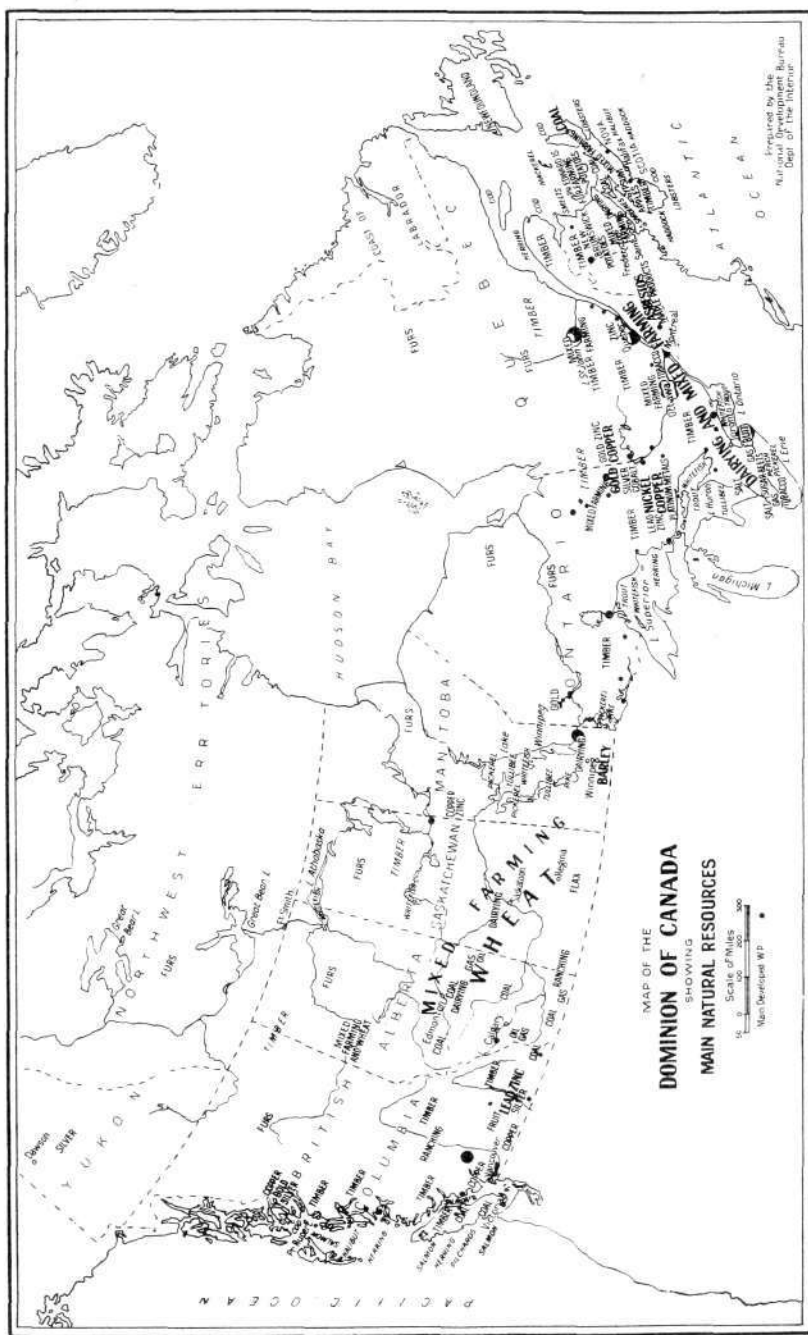

**Agricultural Lands.**—Of the total land area of the nine provinces (1,309,724,800 acres), it is estimated that approximately 358,162,190 acres are available for use in agricultural production. This figure is of course an estimate and is taken to include lands now occupied by agriculturists, including grazing lands, and all lands possible of devotion to similar purposes. The area at present under cultivation is but a fraction of this total, the extent under field crops in 1929, being 61,207,034 acres, while the total area under pasture in the same year was 9,768,320 acres. Statistics of farm lands at the census of 1921 place the area then occupied at 140,887,903 acres; the area of what may be considered as agricultural land still available for occupation was, therefore, 217,274,287 acres. Details are given by provinces in Table 6.

6.—Area of Occupied and Estimated Available Farm Lands in the Nine Provinces of Canada, 1921, with Estimated Land Area, 1930.

Province.	Area Occupied.	Area Available.	Total Agricultural Land.	Total Land Area, 1930.
	acres.	acres.	acres.	acres.
Prince Edward Island.....	1,216,483	41,707	1,258,190	1,397,760
Nova Scotia.....	4,723,550	3,368,450	8,092,000	13,275,520
New Brunswick.....	4,269,560	6,448,440	10,718,000	17,734,400
Quebec.....	17,257,012	26,487,985	43,745,000	365,442,560
Ontario.....	22,628,901	33,821,098	56,450,000	332,500,480
Manitoba.....	14,615,844	10,084,156	24,700,000	143,857,280
Saskatchewan.....	44,022,907	49,435,093	93,458,000	152,304,000
Alberta.....	29,293,053	67,829,947	97,123,000	159,232,000
British Columbia.....	2,860,593	19,757,407	22,618,000	223,980,800
<b>Totals.....</b>	<b>140,887,903</b>	<b>217,274,287</b>	<b>358,162,190</b>	<b>1,309,724,800</b>

Thus, in all the provinces but Prince Edward Island, large areas are still available for settlement, and while the nature of the soil and of the climate may in some cases restrict the variety of crops, in general the grain, root and fodder crops can be profitably grown in all the provinces, while stock raising is carried on successfully both in the more densely settled areas and beyond their frontiers.

DISTRIBUTION OF THE MAIN NATURAL RESOURCES.

The Maritime Provinces are noted for their fruit and vegetable crops, particularly for the oat and potato crops of Prince Edward Island and New Brunswick and the apples of the Annapolis valley in Nova Scotia. Quebec and Ontario are pre-eminently mixed farming communities, various districts specializing in dairying, tobacco, sheep, etc., while the Niagara peninsula in Ontario has long been famous for its fruit crops of both large and small varieties. In Manitoba, Saskatchewan and Alberta the production of grains is still of primary importance but is giving way to more diversified types of agriculture, while the stock-raising industry, once so typical of the prairies, is regaining much of its former importance. In British Columbia the fertile valleys are devoted principally to apple and other fruit crops, and numerous districts along the coast and on Vancouver island are given over to general farming and market gardening.

Of the larger areas of land still available for settlement, the clay belt of northern Ontario and Quebec, which is suited to the growing of splendid crops, is to a large extent undeveloped, and even larger areas in northern Saskatchewan and Alberta await cultivation.

**Forests.**—The forests of Canada rank second only to agriculture in their contribution to the national income. It is estimated that forest products make up about 20 p.c. of all the freight hauled on Canadian railways, and the heavy excess of exports over imports which the wood and paper group provides, amounting to \$228,616,000 for the fiscal year ended March, 1930, constitutes an influential factor in Canada's international balance of trade.

Canada's forest area may be roughly divided into three main parts:—(1) the great coniferous forest of the Pacific slope, (2) the northern forest, principally coniferous, which stretches from the east slopes of the Rockies, north of the prairies and of the Great Lakes to Labrador, and (3) the mixed softwood and hardwood forests extending from lake Superior through southern Ontario and Quebec to the Maritime Provinces. Canada's forest area has been estimated at 1,151,454 square miles, some of which is agricultural land; 17.3 p.c. is covered with accessible mature merchantable timber, 9.7 p.c. with immature but merchantable forest products and 48.2 p.c. with accessible young growth which will eventually be merchantable. The remaining 24.8 p.c. is inaccessible or unprofitable at present. With regard to quantity of timber it has been estimated at 425,000,000,000 feet board measure for saw timber and 1,122,000,000 cords of pulpwood, etc., the stands in Eastern Canada making up 41 p.c., the Prairie Provinces 25 p.c. and British Columbia 34 p.c. of the total, which amounted to over 224,000,000,000 cubic feet. These figures place Canada as the second most important country in the world with regard to total forest area, Asiatic Russia being first and the United States third in this respect. During recent years the annual cut (now estimated at 4,778,000,000 cubic feet) has generally exceeded the new growth, and enormous losses have been caused by fire and other destructive agencies. In spite of the vast extent of the uncut and unburned forests it cannot be said that the measures so far taken by legislation and the application of scientific forestry to preserve them and encourage their regeneration have been sufficient to assure us an adequate supply of timber for the future.

A classification of Canada's forest area is given in Table 7. The total of forest land is divided into the areas at present carrying timber of merchantable value or valuable young growth, and other areas unsuited for present exploitation. It may be pointed out, however, that many of these latter will develop into productive areas as the demand increases and transportation facilities are extended. The totals of forest land given in this table refer to areas which are on the whole better suited for forest production than for any other purpose, although they include about 82,000 square miles of potential agricultural land at present covered with forest.

7.—Area of Productive and Unproductive Forest Land in Canada, 1939.

Province.	Forest Land.				Total Land Area.
	Accessible.		Unprofitable or Inaccessible.	Total Forest Area.	
	Merchantable.	Young Growth.			
	square miles.	square miles.	square miles.	square miles.	square miles.
Prince Edward Island.....	484	240	-	724	2,184

<b>Totals.....</b>	<b>311,234</b>	<b>554,646</b>	<b>285,574</b>	<b>1,151,454</b>	<b>3,510,008</b>

<sup>1</sup> As per Labrador Boundary Award of Mar. 1, 1927.

Forest products have always formed a large part of the raw material used in all kinds of industrial activity. At the present time products of forest origin form a quarter of our total exports, being exceeded only by the products of the farm.

Because of our climate, coniferous trees form over 80 p.c. of our forest resources and over 95 p.c. of our forest products as at present exploited. Because of their universal use in industry, the softwoods are in greatest demand, not only in Canada but in the markets of the world. Canada enjoys the reputation of holding the Empire's reserve of softwood timber, being rivalled in her coniferous forests only by Asiatic Russia and the United States. The Canadian species of both hardwoods and softwoods yield lumber and timber of dimensions and quality that are equal or superior to those produced by forests elsewhere.

Statistics of forest production (operations in the woods) in 1929 place its total value at \$219,570,129, with a corresponding equivalent in standing timber of 3,090,614,647 cubic feet. The most important items are logs for sawing, valued at \$79,278,543, and pulpwood for use and export, valued at \$76,120,063. The total value of sawmill products in 1929 was \$146,989,564 and that of pulp and paper-mill products \$243,970,761.

**Furs.**—Although the rapid advance of settlement has greatly restricted the reservoir of fur-bearing animal life cradled in the vast expanses of northern Canada, yet Canada, after three and a half centuries of exploitation, still holds a foremost place in the ranks of the world's fur producing countries.

Raw furs are at present the only economic return from hundreds of thousands of square miles of the area of the Dominion and are a resource to which all the provinces and territories contribute.

The large uninhabited areas of northern Quebec, Ontario, Manitoba and the Northwest Territories furnish subsistence for many of the most highly prized fur-bearing animals, among the most important of which are the beaver, fisher, various varieties of fox, marten and others. The animals are usually caught in traps during the winter months, when the country is more accessible than during the summer and the pelts are in the best condition. The successful breeding of the fox on fur farms came with the period of rising prices after 1890, and has since developed into an important industry. Prince Edward Island has always been the centre of the industry, but farms are now found in all provinces of the Dominion. On Dec. 31, 1928, 3,631 fox farms were in operation with a total of 77,311 foxes, principally of the "silver" variety.

Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised in captivity—mink, raccoon, skunk, lynx, coyote, rabbit, marten and fisher. Karakul sheep, from which are obtained the furs known as "Persian lamb", "astrachan" and "broadtail", are also being raised successfully in Canada. In 1928 the number of farms engaged in the raising of fur-bearing animals other than foxes was 695. Mink farms are the most numerous of the miscellaneous class, muskrat farms coming second and raccoon third. Over 260 of the fox farms also raise miscellaneous fur-bearing animals in addition to the foxes.

The total value of the raw fur production of Canada for the season 1927-28 was \$18,758,177. This total comprises the value of pelts of fur-bearing animals taken by trappers and of those raised on fur farms. Pelts sold from fur farms in the calendar year 1928 were valued at \$2,389,026 and animals sold at \$3,837,420.

**Fisheries.**—The first of Canada's resources to be exploited by Europeans was the fishing banks of the Atlantic coast. It is believed that for many years before the actual discovery and settlement of North America the cod banks south of Newfoundland and east of Nova Scotia had attracted French fishermen by their abundance of fish. These fishing grounds alone extend along a coast line of more than 5,000 miles, comprising an area of not less than 200,000 square miles, and are in the course of the cold Arctic current, a fact which tends greatly to improve the quality of the fish. The most important fishes of the off-shore fisheries are the cod, halibut, haddock, herring and mackerel, while the inshore and inland fisheries number the lobster, oyster, salmon, gaspereau, smelt, trout and maskinonge among their catches. Other fishing grounds include the inshore expanses of the St. Lawrence river; the Great Lakes, where whitefish and herring form perhaps the most valued catches, and innumerable other inland water areas abounding with trout, pike, bass and other game fish; and the Pacific coast. The fisheries of British Columbia, with its coast line of 7,000 miles, have in recent years shown a rapid development, and the products of the estuarian salmon fish-

eries of the Fraser, Skeena and other rivers now make up two-fifths of the value of fish products of the Dominion, while in addition large catches of halibut, herring and whales are made off the western coast. The total value of the fisheries in the calendar year 1929 was \$53,518,521.

The above statistics give a general survey of the commercial aspects of the fisheries but do not indicate the advantages which Canada has to offer to those who fish for sport. This too has its economic features in a country of such famous game fish as the salmon of the Restigouche, the black bass of the Quebec and Ontario highlands and the trout of the Nipigon. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes.

**Minerals.**—The numerous and varied mineral deposits of the Dominion form another of her most important resources. Mining is an old industry, coal having been produced in Nova Scotia and iron ore in Quebec early in the eighteenth century. The main development in the industry has taken place, however, in the twentieth century, during which there has been a great increase in the per capita production of minerals and mineral products.

There is a great variety of minerals, metallic and non-metallic. The value of the coal raised greatly exceeds that of any other mineral, reaching \$63,065,170 in 1929. Coal will continue for an indefinite period to hold a commanding position in the industry, for Canada's reserves of this fuel are known to be very great. The other leading non-metallic minerals are asbestos, natural gas, gypsum, petroleum and salt. Others that are produced to the annual value of between \$200,000 and \$500,000 each are quartz, magnesite, sulphur, feldspar and fluor spar. In quantity of asbestos produced Canada leads the world, all of the production being from Quebec. Natural gas is produced in Alberta and Ontario and to a less extent in New Brunswick. The decline in the production of petroleum in Ontario has been offset by increased output in Alberta.

The value of the metallic minerals is much greater than that of the non-metallic minerals. Those amounting to more than \$1,000,000 per annum are: copper, gold, nickel, lead, silver, zinc, cobalt and the platinum group of metals. The value of the gold amounted in 1929 to \$39,861,663 and was only exceeded by that of copper, the value of which was \$43,415,251, Canada having risen since the development of the Porcupine and Kirkland Lake mines to third place among gold-producing countries.<sup>1</sup> Lead and zinc mining has made a rapid growth in recent years. Ontario meets about 90 p.c. of the world's requirements in nickel, and has reserves to last for centuries. Platinum and palladium are recovered in the process of refining the copper-nickel ores. British Columbia, Ontario and Quebec are the main copper-producing provinces; in Manitoba large bodies of copper-zinc sulphides are being developed. The total mineral production for 1929 amounted to \$310,850,246, while the 1930 production is provisionally estimated at \$276,865,000, the decline being due to lower values rather than to reduced quantities.

**Water Powers.**—Canada's water area of 180,035 square miles, distributed as it is throughout all parts of the country, provides a large amount of potential electric energy. It is estimated that 20,347,400 h.p. are available at a minimum

<sup>1</sup> In 1930, according to preliminary figures, Canadian gold production exceeded that of the United States. If final figures support the preliminary estimate, Canada has now assumed second place in the world as regards gold production.

yearly flow, 33,617,200 at ordinary six-months flow and that a turbine installation of 43,000,000 h.p. is possible. The present turbine installation of 6,125,012 h.p. represents only about 14 p.c. of the recorded water-power resources. Perhaps the greatest use to which these resources have yet been put has been in the pulp and paper industry, and to a lesser degree in the mining, the electro-chemical, the electro-metallurgical and the flour-milling industries. The water power utilized in the pulp and paper industry alone amounted on Dec. 31, 1930, to 579,826 h.p. Over 94 p.c. of the power available is in Quebec, Ontario, Manitoba and British Columbia; Quebec with 8,459,000 h.p. available at ordinary minimum flow, has the largest resources in the Dominion.

**Game and Scenery.**—Canada's resources as a country for the sportsman and tourist are both unique and varied. With the increasing growth of tourist travel and its demands, great areas of uninhabited land have become accessible, and hitherto almost unknown parts may now be reached and traversed with ease. The valleys of Nova Scotia and New Brunswick, the broken lake country of northern Ontario and Quebec, as well as the mountain districts of British Columbia, offer to the tourist and the fisherman new types of scenic effects and innumerable game preserves, and have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers which form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season.

The Dominion Government maintains, as the medium through which some of the most outstanding natural beauties of the country may be preserved and popularized, the National Parks Branch of the Department of the Interior, administering the eleven parks set aside for this purpose. Under the supervision of this same body are numerous animal reserves and historic sites which have been preserved throughout the country. Several of the provinces also maintain parks for similar purposes.

In these parks, the hunting of game is forbidden, and the wild life resources preserved. Elsewhere, however, there is available for the hunter and angler, at proper seasons, a wealth of game species; the deer and moose of Eastern Canada, the bear and mountain sheep of the Rockies, game animals, birds and fishes in unusual variety, have given the Dominion exceptional advantages for this means of recreation.

A list of the national parks and reserves is given in Table 3. There are also numerous provincial parks, of which the Algonquin park (2,741 square miles) in Ontario and the Laurentides park (3,565 square miles) in Quebec are the most important.

## 8.—Canadian National Parks and Reserves, 1939.

Park.	Location.	Date of Establishment.	Area.
<b>Scenic Parks.</b>			sq. miles.
Banff National Park.....	Alberta, east slope of Rockies.....	1885	2,585
Yoho Park.....	British Columbia, west slope of Rockies.	1886	507

Wawaskey (Antelope).....	Alberta.....	1923	54
Menissawok (Antelope).....	Saskatchewan.....	1922	17
Wood Buffalo Park.....	Alberta and N.W.T.....	1922	17,300 <sup>2</sup>
<b>Historic Parks.</b>			
Fort Anne.....	Annapolis Royal, Nova Scotia.....	1917	(31 acres)
Fort Beauséjour.....	New Brunswick.....	1926	(59 acres)

<sup>1</sup> Reserved by order of the Minister.    <sup>2</sup> Administered by the North West Territories and Yukon Branch of the Department of the Interior.

## PART VII.—CLIMATE AND METEOROLOGY.

## Section 1.—The Climate of Canada.

An article on this subject by Sir Frederic Stupart, Director of the Dominion Meteorological Service, Toronto, appeared in the 1929 edition of the Year Book at pp. 42-51.

## Section 2.—The Factors which Control Canadian Weather.

Under the above heading, Sir Frederick Stupart, Director of the Dominion Meteorological Service, Toronto, contributed an article which appeared at pp. 26-31 of the 1924 edition of the Year Book, also at pp. 36-40 of the 1925 edition.

## Section 3.—The Distribution of Precipitation in Canada.

An article on "The Distribution of Precipitation in Canada", contributed by A. J. Connor, Climatologist, Dominion Meteorological Office, Toronto, appeared at pp. 42-46 of the 1926 edition of the Year Book.

## Section 4.—The Temperature and Precipitation of Northern Canada.

An article on the climate of northern Canada, accompanied by meteorological tables showing the normal temperature and precipitation at selected northern stations, was contributed by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, to the 1930 edition of the Year Book, where it will be found at pp. 41-56.

## Section 5.—The Meteorological Service of Canada.

Under the above heading Sir Frederick Stupart contributed a short article descriptive of the growth and present activities of the Meteorological Service, to the 1922-23 edition of the Year Book (pp. 43-47); to it the interested reader is referred.

## Section 6.—Meteorological Tables.<sup>1</sup>

Tables showing the normal temperature and precipitation at selected Canadian stations in each of the provinces, together with the recorded extremes, also the averages of sunshine, wind and weather at such stations, will be found at pp. 51-63 inclusive of the 1927-28 edition of the Year Book.

Comprehensive new tables have been prepared especially for the present edition. Among these, Table 9 shows by months the normal maximum, minimum and mean temperatures at a large number of selected Canadian stations in each of the provinces. Table 10 gives the normal precipitation by months and Table 11 the normal snowfall by months, together with the total depth of snow which normally falls at these stations in the course of the year. Table 12 presents, for a much smaller number of stations, the normal and total duration of bright sunshine.

<sup>1</sup> Material in this section has been prepared under the authority of the Director of the Meteorological Service of Canada, Toronto, by A. J. Connor, Climatologist.

## 9.—Monthly Averages of Normal Daily Maximum,

NOTE.—For all practical purposes these temperatures may be taken as the average temperature of usually be noon to 1 p.m. in winter and 2.30 p.m. to 3.30 p.m. in midsummer in the case of hour between 9 a.m. and

Minimum and Mean Temperatures—continued.

the warmest or coldest hour of the day, or the average temperature of the whole day. This will be the maximum, the hour of sunrise in the case of the minimum, and the temperature of the 10 a.m. in the case of the mean.

Table with columns for Minimum (M, A, M, J, J, A, S, O, N, D, Year) and Mean (J, F, M, A, M, J, J, A, S, O, N, D, Year) and a final column for C. The table contains multiple rows of numerical data representing temperature readings.

## 9.—Monthly Averages of Normal Daily Maximum.

NOTE.—For all practical purposes these temperatures may be taken as the average temperature of usually be noon to 1 p.m. in winter and 2.30 p.m. to 3.30 p.m. in midsummer in the case of hour between 9 a.m. and

## CHAPTER II.—HISTORY AND CHRONOLOGY.

### PART I.—HISTORY.

In the 1922-23 edition of the Canada Year Book, pp. 60-80, will be found an outline of the history of Canada, not reprinted here for lack of space.

A select bibliography of historical works relating to Canada was contributed by the late Adam Shortt, C.M.G., LL.D., F.R.S.C., Chairman of the Historical Documents Publication Board, Ottawa, to the 1925 edition of the Canada Year Book, where it appears on pp. 53-55.

### PART II.—CHRONOLOGY, 1497 to 1930.

1497. June 24, Eastern coast of North America discovered by John Cabot.
1498. Cabot discovers Hudson strait.
1501. Gaspar Corte Real visits Newfoundland and Labrador.
1524. Verrazano explores the coast of Nova Scotia.
1534. June 21, Landing of Jacques Cartier at Esquimaux bay.
1535. Cartier's second voyage. He ascends the St. Lawrence to Stadacona (Quebec), (Sept. 14) and Hochelaga (Montreal), (Oct. 2).
1541. Cartier's third voyage.
- 1542-3. De Roberval and his party winter at cape Rouge, and are rescued by Cartier on his fourth voyage.
1557. Sept. 1, Death of Cartier at St. Malo, France.
1592. Straits of Juan de Fuca discovered by de Fuca.
1603. June 22, Champlain's first landing in Canada, at Quebec.
1605. Founding of Port Royal (Annapolis, N.S.).
1608. Champlain's second visit. July 3, Founding of Quebec.
1609. July, Champlain discovers lake Champlain.

Airship R-100 arrives at Montreal, being the first trans-atlantic lighter-than-air craft to reach Canada. Aug. 7, Conservative Government of Hon. R. B. Bennett takes office as the fifteenth Ministry since Confederation (for the names of the Ministers see p. 91). Sept. 8-22, First (special) session of the seventeenth Parliament of Canada. Oct. 1, Imperial Conference in London.

## CHAPTER III.—CONSTITUTION AND GOVERNMENT.

The Dominion of Canada is the largest in area and the most populous of the great self-governing Dominions of the British Empire, which also include the Irish Free State (Saorstát Éireann), the Commonwealth of Australia, the Union of South Africa, the Dominion of New Zealand, the island colony of Newfoundland (with the Labrador coast), the colony of Southern Rhodesia, and the island of Malta. These Dominions enjoy responsible government of the British type, administered by executive Councils (or Cabinets), acting as advisors to the representatives of the Sovereign, the executive Councils being themselves responsible to and possessing the confidence of the representatives elected to Parliament by the people, and giving place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist. The Imperial Conference of 1926 defined the group of self-governing communities consisting of Great Britain and the Dominions as "autonomous Communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". The Conference further laid down that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". The Conference also recognized certain treaty-making rights as appertaining to the Dominions. At the Imperial Conference of 1930 the constitutional status of the Dominions was further strengthened by the decisions to repeal the Colonial Laws Validity Act and to establish a voluntary Empire judicial tribunal. It was also definitely laid down that the King appoints his Governors General through the Dominion Governments.

Of these Dominions, Canada, Australia and South Africa extend over enormous areas of territory, each of the first two approximating in area to Europe, and including great provinces or states larger than most of its great Powers. Each province or state has its own problems and its own point of view, so that local Parliaments for each section, as well as the central Parliament for the whole country, are required. These local Parliaments, established when transportation and communication were more difficult and expensive than at present, were chronologically prior to the central body, to which on its formation they either resigned certain powers, as in the case of Australia, or surrendered all their powers with certain specified exceptions, as in Canada and South Africa. Of such local Parliaments, Canada at the present time has nine, Australia six, and South Africa four.

Besides the Dominions above enumerated, the great Empire of India has internationally been accepted as a member of the League of Nations, and in its

internal administration has been placed on the road, formerly traversed by the Dominions which are now fully self-governing, towards responsible government. At the time of going to press, a constitution is being actually formulated for India along Dominion lines. Indeed, the whole evolution of the Empire, throughout all its parts which are more than mere fortresses like Gibraltar or trading stations like Hong Kong, is in the direction of responsible government, to be attained in the dependencies as it has been in what used to be called the colonies, by the gradual extension of self-government in proportion to the growing capacities of their respective populations. It is the recognized aim of British administrators, by the extension of educational facilities and by just administration, to develop these capacities to the utmost, so that in the dependencies, as well as in the Dominions and in the Mother Country, the constitutional history of the future may be a record of "freedom slowly broadening down from precedent to precedent".

A conference on the operation of Dominion legislation and merchant shipping legislation, arising out of the report of the Imperial Conference of 1926, was held in London from Oct. 8 to Dec. 4, 1929. This conference dealt with the power of disallowing or reserving Dominion legislation, the extra-territorial operation of Dominion legislation and merchant shipping legislation, on all which subjects its report was generally in the nature of giving effect to the definition of the equal status of the Dominions as made by the Imperial Conference of 1926.

## **PART I.—CONSTITUTION AND GENERAL GOVERNMENT.**

Under the above heading a brief historical and descriptive account of the evolution of the general government of Canada was given on pp. 89-100 of the Canada Year Book, 1922-23.

## **PART II.—PROVINCIAL AND LOCAL GOVERNMENT.**

Under the heading "Provincial and Local Government in Canada", a brief account of the government of each of the provinces of Canada and of its municipal institutions and judicial organization was published on pp. 101-115 of the 1922-23 edition of the Year Book.

## **PART III.—LEGISLATIVE AND EXECUTIVE AUTHORITIES.**

### **Section I.—Dominion Parliament and Ministry.**

The Dominion Parliament is composed of the King, represented by the Governor General, the Senate and the House of Commons. The Governor General is appointed by the King. Members of the Senate are appointed for life by the Governor General in Council and members of the House of Commons are elected by the people. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the Mother Country, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

### Subsection 1.—The Governor General of Canada.

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at £10,000 sterling per annum and forming a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the executive, summons, prorogues, and dissolves Parliament and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication between His Majesty's Government in Canada and His Majesty's Government in Great Britain has been instituted.

A list of the Governors General from the time of Confederation, with the dates of their appointment and assumption of office, is given in Table I.

1.—Governors General of Canada, 1867-1931.

Name.	Date of Appointment.	Date of Assumption of Office.
Viscount Monck, G.C.M.G.	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.	Oct. 5, 1878	Nov. 25, 1878
The Marquis of Lansdowne, G.C.M.G.	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.	July 30, 1898	Nov. 12, 1898
The Earl Grey, G.C.M.G.	Sept. 26, 1904	Dec. 10, 1904
Field Marshal H.R.H. the Duke of Connaught, K.G.	Mar. 21, 1911	Oct. 13, 1911

General the Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Rattou, G.C.S.I., G.C.I.E., G.B.E.	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough	Feb. 9, 1931	April 4, 1931

### Subsection 2.—The Ministry.

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each of them generally assumes charge of one of the various Departments of the Government, although one Minister may hold two portfolios at the same time, while other members may be without portfolio.

The Prime Ministers since Confederation and the dates of their tenures of office, together with the members of the fifteenth Ministry, as at their assumption of office on Aug. 7, 1930, are given in Table 2. The complete list of the members of the King's Privy Council for Canada, as at Dec. 31, 1930, is added as Table 3.

### 2.—Ministries since Confederation.

NOTE.—A complete list of the members of Dominion Ministries from Confederation to 1913 appeared in the Year Book of 1912, pp. 422-429. A list of the members of Dominion Ministries from 1911 to 1921 appeared in the Year Book of 1920, pp. 651-653. A list of the members of the twelfth and thirteenth Ministries appeared on pp. 76-77 of the 1927-28 Year Book. Members of the fourteenth Ministry are listed at p. 65 of the 1929 Year Book and p. 69 of the 1930 Year Book.

1. Rt. Hon. Sir John A. Macdonald, Premier. From July 1, 1867, to Nov. 6, 1873.
2. Hon. Alexander Mackenzie, Premier. From Nov. 7, 1873, to Oct. 16, 1878.
3. Rt. Hon. Sir John A. Macdonald, Premier. From Oct. 17, 1878, to June 6, 1891.
4. Hon. Sir John J. C. Abbott, Premier. From June 16, 1891, to Dec. 5, 1892.
5. Hon. Sir John S. D. Thompson, Premier. From Dec. 5, 1892, to Dec. 12, 1894.
6. Hon. Sir Mackenzie Bowell, Premier. From Dec. 21, 1894, to April 27, 1896.
7. Hon. Sir Charles Tupper, Premier. From May 1, 1896, to July 8, 1896.
8. Rt. Hon. Sir Wilfrid Laurier, Premier. From July 11, 1896, to Oct. 6, 1911.
9. Rt. Hon. Sir Robert L. Borden, Premier. (Conservative Administration). From Oct. 10, 1911, to Oct. 12, 1917.
10. Rt. Hon. Sir Robert L. Borden, Premier. (Unionist Administration). From Oct. 12, 1917, to July 10, 1920.
11. Rt. Hon. Arthur Meighen, Premier. (Unionist—"National Liberal and Conservative Party"). From July 10, 1920, to Dec. 29, 1921.
12. Rt. Hon. William Lyon Mackenzie King, Premier. From Dec. 29, 1921, to June 28, 1926.
13. Rt. Hon. Arthur Meighen, Premier. From June 29, 1926, to Sept. 25, 1926.
14. Rt. Hon. William Lyon Mackenzie King, Premier. From Sept. 25, 1926, to Aug. 6, 1930.
15. Rt. Hon. R. B. Bennett, Premier. From Aug. 7, 1930.

### FIFTEENTH DOMINION MINISTRY.

(According to precedence Jan. 1, 1931.)

Office.	Occupant.	Date of Appointment.
Prime Minister, President of the Privy Council, Secretary of State for External Affairs.....	Right Hon. R. B. Bennett, K.C.	Aug. 7, 1930
Minister of Finance.....	Right Hon. R. B. Bennett, K.C.	Aug. 7, 1930

In Table 4 are given the dates of the opening and prorogation of the sessions of the various Dominion Parliaments from 1867 to 1931.

## 4.—Duration and Sessions of Dominion Parliaments, 1867-1931.

Number of Parliament.	Session.	Date of Opening.	Date of Prorogation.	Days of Session.	Elections, Writs Returnable, Dissolutions and Lengths of Parliaments. <sup>7</sup>
1st Parliament.....	1st	Nov. 1, 1867	May 22, 1868	118 <sup>1</sup>	
	2nd	April 15, 1869	June 22, 1869	69	Aug., Sept., 1867. <sup>3</sup>
	3rd	Feb. 15, 1870	May 12, 1870	87	Sept. 24, 1867. <sup>4</sup>
	4th	Feb. 15, 1871	April 14, 1871	59	July 8, 1872. <sup>5</sup>
	5th	April 11, 1872	June 14, 1872	65	4 y., 9 m., 15 d. <sup>6</sup>
2nd Parliament.....	1st	Mar. 5, 1873	Aug. 13, 1873	81 <sup>2</sup>	July, Aug., Sept., 1872. <sup>3</sup>
	2nd	Oct. 23, 1873	Nov. 7, 1873	16	Sept. 3, 1872. <sup>4</sup>
3rd Parliament.....	1st	Mar. 26, 1874	May 26, 1874	62	Jan. 2, 1874. <sup>5</sup>
	2nd	Feb. 4, 1875	April 8, 1875	64	1 y., 4 m., 0 d. <sup>6</sup>
	3rd	Feb. 10, 1876	April 12, 1876	63	Jan. 22, 1874. <sup>3</sup>
	4th	Feb. 8, 1877	April 28, 1877	80	Feb. 21, 1874. <sup>4</sup>
	5th	Feb. 7, 1878	May 10, 1878	93	Aug. 17, 1878. <sup>5</sup>
4th Parliament.....	1st	Feb. 13, 1879	May 15, 1879	92	4 y., 5 m., 25 d. <sup>6</sup>
	2nd	Feb. 12, 1880	May 7, 1880	86	
	3rd	Dec. 9, 1880	Mar. 21, 1881	103	Sept. 17, 1878. <sup>3</sup>
	4th	Feb. 9, 1882	May 17, 1882	98	Nov. 21, 1878. <sup>4</sup>
5th Parliament.....	1st	Feb. 8, 1883	May 25, 1883	107	May 18, 1882. <sup>5</sup>
	2nd	Jan. 17, 1884	April 19, 1884	94	3 y., 5 m., 29 d. <sup>6</sup>
	3rd	Jan. 29, 1885	July 20, 1885	173	June 20, 1882. <sup>3</sup>
6th Parliament.....	4th	Feb. 25, 1886	June 2, 1886	98	Aug. 7, 1882. <sup>4</sup>
	1st	April 13, 1887	June 25, 1887	72	Jan. 15, 1887. <sup>5</sup>
	2nd	Feb. 23, 1888	May 22, 1888	90	4 y., 5 m., 10 d. <sup>6</sup>
	3rd	Jan. 31, 1889	May 2, 1889	92	Feb. 22, 1887. <sup>3</sup>
7th Parliament.....	4th	Jan. 16, 1890	May 18, 1890	121	April 7, 1887. <sup>4</sup>
	1st	April 29, 1891	Sept. 30, 1891	155	Feb. 3, 1891. <sup>5</sup>
	2nd	Feb. 25, 1892	July 9, 1892	136	3 y., 9 m., 27 d. <sup>6</sup>
	3rd	Jan. 26, 1893	April 1, 1893	66	
	4th	Mar. 15, 1894	July 23, 1894	131	Mar. 5, 1891. <sup>3</sup>
8th Parliament.....	5th	April 18, 1895	July 22, 1895	96	April 25, 1891. <sup>4</sup>
	6th	Jan. 2, 1896	April 25, 1896	111	April 24, 1896. <sup>5</sup>
	1st	Aug. 19, 1896	Oct. 5, 1896	48	5 y., 0 m., 0 d. <sup>6</sup>
	2nd	Mar. 25, 1897	June 29, 1897	97	
	3rd	Feb. 3, 1898	June 13, 1898	131	June 23, 1896. <sup>3</sup>
	4th	Mar. 16, 1899	Aug. 11, 1899	149	July 13, 1896. <sup>4</sup>
9th Parliament.....	5th	Feb. 1, 1900	July 18, 1900	168	Oct. 9, 1900. <sup>5</sup>
	1st	Feb. 6, 1901	May 23, 1901	107	4 y., 2 m., 26 d. <sup>6</sup>
	2nd	Feb. 13, 1902	May 15, 1902	90	Nov. 7, 1900. <sup>3</sup>
	3rd	Mar. 12, 1903	Oct. 24, 1903	227	Dec. 5, 1900. <sup>4</sup>
10th Parliament.....	4th	Mar. 10, 1904	Aug. 10, 1904	154	Sept. 29, 1904. <sup>5</sup>
	1st	Jan. 11, 1905	July 20, 1905	191	3 y., 9 m., 26 d. <sup>6</sup>
	2nd	Mar. 8, 1906	July 13, 1906	128	Nov. 3, 1904. <sup>3</sup>
	3rd	Nov. 22, 1906	April 27, 1907	157	Dec. 15, 1904. <sup>4</sup>
11th Parliament.....	4th	Nov. 28, 1907	July 20, 1908	236	Sept. 17, 1908. <sup>5</sup>
	1st	Jan. 20, 1909	May 19, 1909	120	3 y., 9 m., 4 d. <sup>6</sup>
	2nd	Nov. 11, 1909	May 4, 1910	175	Oct. 26, 1908. <sup>3</sup>
	3rd	Nov. 17, 1910	July 29, 1911	196 <sup>8</sup>	Dec. 3, 1908. <sup>4</sup>
	1st	Nov. 15, 1911	April 1, 1912	139	July 29, 1911. <sup>5</sup>
12th Parliament.....	2nd	Nov. 21, 1912	June 6, 1913	173 <sup>9</sup>	2 y., 7 m., 28 d. <sup>6</sup>
	3rd	Jan. 15, 1914	June 12, 1914	148	
	4th	Aug. 18, 1914	Aug. 22, 1914	5	Sept. 21, 1911. <sup>3</sup>
	5th	Feb. 4, 1915	April 15, 1915	71	Oct. 7, 1911. <sup>4</sup>
	6th	Jan. 12, 1916	May 18, 1916	127	Oct. 6, 1917. <sup>5</sup>
13th Parliament.....	7th	Jan. 18, 1917	Sept. 20, 1917	207 <sup>10</sup>	6 y., 0 m., 0 d. <sup>6</sup>
	1st	Mar. 18, 1918	May 24, 1918	68	
	2nd	Feb. 20, 1919	July 7, 1919	138	Dec. 17, 1917. <sup>3</sup>
	3rd	Sept. 1, 1919	Nov. 10, 1919	71	Feb. 27, 1918. <sup>4</sup>
	4th	Feb. 26, 1920	July 1, 1920	127	Oct. 4, 1921. <sup>5</sup>
	5th	Feb. 14, 1921	June 4, 1921	111	3 y., 7 m., 6 d. <sup>6</sup>

<sup>1</sup>Adjourned from Dec. 21, 1867, to Mar. 12, 1868, to allow the local Legislatures to meet. <sup>2</sup>Adjourned May 23 till Aug. 13. <sup>3</sup>Period of general elections. <sup>4</sup>Writs returnable. <sup>5</sup>Dissolution of Parliament. <sup>6</sup>Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive. <sup>7</sup>The ordinary legal limit of duration for each Parliament is five years. <sup>8</sup>Not including days (59) of adjournment from May 19 to July 18. <sup>9</sup>Not including days (25) of adjournment from Dec. 19, 1912 to Jan. 14, 1913. <sup>10</sup>Not including days (39) of adjournment from Feb. 7 to Mar. 19, 1917.

## 4.—Duration and Sessions of Dominion Parliaments, 1867-1931—concluded.

Number of Parliament.	Session.	Date of Opening.	Date of Prorogation.	Days of Session.	Elections, Writs Returnable, Dissolutions and Lengths of Parliaments. <sup>7</sup>
14th Parliament.....	1st	Mar. 8, 1922	June 28, 1922	113	Dec. 6, 1921. <sup>2</sup>

<sup>1</sup>Including days (13) of adjournment from Mar. 3 to Mar. 15. <sup>2</sup>Not including days (54) of adjournment from Dec. 15 to Feb. 8. <sup>3</sup>Period of general elections. <sup>4</sup>Writs returnable. <sup>5</sup>Dissolution of Parliament. <sup>6</sup>Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive. <sup>7</sup>The ordinary legal limit of duration for each Parliament is five years.

A brief *résumé* of the history of parliamentary representation follows. Attention may be drawn to the growth in the number of members of both the Senate and the House of Commons since Confederation and to the greatly increased unit of representation in the Lower House.

## Subsection 3.—The Senate.

The British North America Act, 1867, provides in sections 21 and 22 that "the Senate shall consist of seventy-two members, who shall be styled Senators. In relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions—(1) Ontario; (2) Quebec; (3) The Maritime Provinces, Nova Scotia and New Brunswick; which three divisions shall be equally represented in the Senate as follows:—Ontario by twenty-four senators; Quebec by twenty-four senators; and the Maritime Provinces by twenty-four senators, twelve thereof representing New Brunswick and twelve thereof representing Nova Scotia. In the case of Quebec, each of the twenty-four senators representing the province shall be appointed for one of the electoral divisions of Lower Canada specified in schedule A to Chapter I of the Consolidated Statutes of Canada" Further, under section 147 of the same Act, it is provided that "in case of the admission to Confederation of Newfoundland or Prince Edward Island, . . . each shall be entitled to a representation in the Senate of four members" "Prince Edward Island when admitted shall be deemed to be comprised in the third of the three divisions into which Canada is divided by this Act" and on its admission "the representation of Nova Scotia and New Brunswick shall, as vacancies occur, be reduced from twelve to ten members respectively". In case of the admission of Newfoundland, the normal membership of the Senate of 72 members was to be increased to 76, while the maximum number of 78 (sec. 28) was to be 82, sec. 26 containing a provision for the appointment of three or six additional members in certain cases, to represent equally the three divisions of Canada.

By 33 Vict., c. 3, an Act to establish and provide for the government of the province of Manitoba, passed in 1870, the newly formed province was given representation of two members in the Senate, provision being made at the same time for increases in representation to three and four on increases of population, according to the decennial census, to 50,000 and 75,000 respectively. In the following year, British Columbia, on being admitted to the Union by an Imperial Order in Council of May 16, 1871, was given representation by three senators. Two years later, when Prince Edward Island was admitted to Confederation by an Imperial Order in Council of June 26, 1873, it was granted representation in the Senate of four members under the terms of the British North America Act, as cited above. Thus, in 1873, the seven provinces of Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia and Prince Edward Island were represented by a total of 77 members in the Senate, their individual representation at the time being 24, 24, 10, 10, 2, 3 and 4 members respectively.

In 1882, following the 1881 census and an increase of population in Manitoba to 62,260 persons, the representation of this province was increased to three members under authority of the Manitoba Act, 1870. Later, by 50-51 Vict., c. 38, an Act of 1887, the representation of the Northwest Territories in the Senate was fixed at two members. A subsequent increase resulted from the growth of population in Manitoba to 152,506, as shown by the census of 1891, the province being granted a fourth senator under the terms of the Manitoba Act of 1870. An Act passed in the session of 1903, 3 Edw. VII, c. 42, provided for an increase in the representation of the Northwest Territories from two to four members, bringing the total representation at this date to 83 members.

On the establishment of the provinces of Alberta and Saskatchewan out of the former Northwest Territories in 1905, under 4-5 Edw. VII, cc. 3 and 42, provision was made for their representation in the Senate by 4 members each, which might be increased by Parliament to 6 on the completion of the next decennial census. This change in representation brought the membership of the Upper Chamber to a total of 87.

In 1915, by an amendment to the British North America Act (5-6 Geo. V, c. 45), an important change was made with regard to the constitution of the Senate. The number of divisions provided for by section 22 of the original Act was increased from three to four, the fourth comprising the four western provinces of Manitoba, Saskatchewan, Alberta and British Columbia. Each of these provinces was to be represented by 6 members under the Act, the division being thus represented by 24 members and placed on an equality with the others with respect to membership. A corresponding change was made in the number of additional senators provided for by the original British North America Act, by substituting increases of four or eight members for the three or six cited in section 26 of the Act of 1867. Normal representation, therefore, is at present fixed at 96, which number may be increased if necessary to 100 or to a maximum of 104.

The entry of Newfoundland to the Union is still provided for by the above Act, sub-section 6 of sec. 1 of which sets out its representation as six members instead of the four granted by the Act of 1867. Should Newfoundland be admitted to the Dominion, the normal number of senators is to be 102 with a maximum of 110.

In Table 5 the growth of membership in the Senate is shown by divisions and provinces from 1867 to 1915, since when no change has taken place. The names and addresses of the senators from each province are given as at Jan. 1, 1931, in Table 6.

<sup>1</sup>One vacancy.    <sup>2</sup>Senator Lessard died April 11, 1931.

**Subsection 4.—The House of Commons.**

In section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick" Further, under section 51, it was enacted that after the completion of the census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time as the Parliament of Canada provided, subject to and according to the following rules:—

- "(1) Quebec shall have the fixed Number of Sixty-five Members;
- "(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
- "(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;
- "(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
- "(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament."

Again, in section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed".

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

Again, in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province"

**Readjustments in Representation.**—As set out in the above-mentioned provisions of the British North America Act, the first Dominion Parliament of 1867 consisted at its commencement of 181 members, 82 for Ontario, 65 for Quebec, 19 for Nova Scotia and 15 for New Brunswick. To this number were added, under the Manitoba Act of 1870 (33 Vict., c. 3), 4 members to represent the newly created province of Manitoba; also, according to the agreement under which British Columbia entered Confederation, ratified by Imperial Order in Council of May 16, 1871, 6 members were added to represent the new province, making a total of 191 members at the end of the first Parliament of Canada.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15 of 1872), increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21 and of New Brunswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200. To these were added in 1874, as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing that province—bringing the membership of the House of Commons to 206.

The results of the second census of 1881 necessitated the passage of a new Representation Act (45 Vict., c. 3), increasing the representation of Ontario from 88 to 92, and that of Manitoba from 4 to 5, thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24, passed in 1886, 4 members for the Northwest Territories (2 for the then provisional district of Assiniboia and 1 each for the then provisional districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census of 1891 was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20, of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representation of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction in the number of members of the House from 215 to 213.

The fourth census of 1901 resulted in a readjustment in 1903, reducing the representation of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, of Prince Edward Island from 5 to 4. On the other hand, the representation of Manitoba was increased from 7 to 10, of British Columbia from 6 to 7, of the Northwest Territories from 4 to 10. By chapter 37 of the Statutes of 1902, a member had been added for Yukon Territory, so that the net effect of the changes was to keep the membership at 214 in the early years of the present century. The extremely rapid growth of the Northwest Territories, however, led to their division and admission to Confederation in 1905 as the provinces of Alberta and Saskatchewan. In the Acts admitting them—the Alberta Act (4-5 Edw. VII, c. 3) and the Saskatchewan Act (4-5 Edw. VII, c. 42)—it was provided that their representation should be readjusted on the basis of the results of the quinquennial census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation

of Saskatchewan from 6 to 10 and of Alberta from 4 to 7 members, thus raising the total membership of the House of Commons to 221.

The census of 1911, with its very large but very unevenly distributed increase of population, led to considerable changes in representation, enacted by the Representation Act of 1914. The representation of Ontario was reduced from 86 to 82, of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, of Prince Edward Island from 4 to 3. On the other hand, the representation of Manitoba was raised from 10 to 15, of Saskatchewan from 10 to 16, of Alberta from 7 to 12 and of British Columbia from 7 to 13. The net result was an increase of 13 members in the total membership of the House of Commons, bringing the membership to 234. However, in the following session the amendment to the British North America Act, already referred to, resulted in the retention by Prince Edward Island of her fourth member (since she had 4 senators). (See also 5 Geo. V, c. 19). The total membership, therefore, of the House of Commons in the thirteenth and fourteenth Parliaments (elected in 1917 and 1921 respectively) was 235.

As a result of the smaller increase of population shown by the census of 1921, the changes in representation were less far-reaching. Nova Scotia lost 2 members and the West gained 12, 2 of these being added to Manitoba, 5 to Saskatchewan, 4 to Alberta and 1 to British Columbia. The representation of the remaining four provinces was unchanged. Prince Edward Island retained its 4 members because of the provisions of the British North America Act of 1915, to the effect that the members of the House of Commons returned by a province shall never be fewer than its senators. Ontario, again, retained its 82 members because under subsection 4 of section 51 of the British North America Act (quoted p. 97), the proportion which its population bore to the aggregate population of the Dominion had not declined by one-twentieth. Further, by the Quebec Boundaries Extension Act of 1912, it had been stipulated that the population of the added area (Ungava) should not be included for the purpose of determining the unit of representation, so that the 1921 population of Quebec, within its 1911 boundaries, *viz.*, 2,358,412, divided by the fixed number of 65 seats for that province, became the new unit of representation, 36,283.

The number of representatives of each province elected at each of the seventeen general elections since Confederation is given in Table 7.

7.—Representation in the House of Commons as at Dominion General Elections, 1867-1930.

<sup>†</sup>The representation at the general elections of 1926 and 1930 was the same as in 1925.

**The Unit of Representation.**—While the number of members of the House of Commons has been growing fairly steadily since Confederation, the unit of representation—one sixty-fifth of the population of Quebec within its 1911 boundaries—has also been increased after each census in consequence of the expanding population of Quebec. The units of representation, as determined by the decennial censuses taken since Confederation, are as follows:—1871, 18,331 persons; 1881, 20,908; 1891, 22,901; 1901, 25,368; 1911, 30,819; 1921, 36,283, being one-sixty-fifth of the population of Quebec exclusive of Ungava.

**The Representation Act, 1924.**—As a result of the census of 1921, the Representation Act of 1924 (14-15 Geo. V, c. 63), was passed to readjust the representation in the House of Commons. Considerable changes were necessarily made in the boundaries of the theretofore existing constituencies, and a list of such changes was given on p. 73 of the 1924 Year Book. A complete list of the constituencies, with the voters on the list and votes polled at the general election of July 28, 1930, together with the names and addresses of those then elected to the House of Commons of the seventeenth Parliament of Canada, will be found in Table 8. Changes occurring at subsequent by-elections to Mar. 1, 1931, are indicated in the footnotes.

<sup>1</sup>Mr. M. D. McLean having accepted an office of emolument under the Crown, Hon. H. H. Stevens was elected by acclamation, Aug. 25, 1930.

### Subsection 5.—The Dominion Franchise.<sup>1</sup>

It was provided by the B.N.A. Act, 1867, that, until otherwise directed by Parliament, elections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently remained the same for both Dominion and provincial elections until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (1885, c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote on special conditions; each province, of course, continued separately to define the qualifications of voters at provincial elections. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year (1898, c. 14), the provincial franchises were again made applicable at Dominion elections, except that on the constitution of the provinces of Alberta and Saskatchewan it was provided that manhood suffrage, which had already been adopted for the Northwest Territories under an Act to amend the N.W.T.

<sup>1</sup> Contributed by Oliver Mowat Biggar, K.C., formerly Chief Electoral Officer.

Act (1895, c. 16), should continue in force for Dominion purposes independently of any action that might be taken by the newly elected Legislatures of these two provinces (R.S.C. 1906, c. 6, ss. 31-65). In the other provinces the rules as to the qualification of voters varied from time to time. In Manitoba manhood suffrage had been adopted in 1888 (1888, c. 2), and the franchise was extended to women on the same terms as to men in 1916 (1916, c. 36). Alberta and Saskatchewan, on their establishment as provinces, continued the previously existing manhood suffrage and both extended the franchise to women on the same terms as to men in 1916 (Alta. 1916, c. 5; Sask. 1916, c. 37). British Columbia adopted manhood suffrage in 1904 (1903-1904, c. 7), Ontario in 1907 (7 Edw. VII, c. 5), and New Brunswick in 1916 (6 Geo. V, c. 16); in British Columbia (1917, c. 23) and in Ontario (7 Geo. V, c. 5), the franchise was extended equally to women in 1917, and in New Brunswick this was done in 1919 (9 Geo. V, c. 63). In Quebec and Prince Edward Island the provincial franchises throughout the period in question were not so wide; in neither were women admitted to vote and certain property or other special qualifications were required in each. A property qualification was also required in Nova Scotia until 1920 (10-11 Geo. V, c. 49), but between 1918 and 1920 men and women had voted on equal terms (9 Geo. V, c. 3). The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War Times Elections Act (1917, c. 39), which admitted certain near female relatives of serving soldiers and sailors to vote at Dominion elections, and three years later, on the adoption of a New Dominion Elections Act (1920, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. Subject to a modification of the usual rule as to changes of nationality, which was amended in 1921 (1921, c. 29, s. 3) and repealed in 1922 (1922, c. 20, s. 1), the right to vote was conferred by the new Act upon all British subjects, male and female, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired to vote, this last restriction having been removed two years later (1922, c. 20), so far as it applied to general elections. The only adult British subjects who now are denied the right to vote are prisoners undergoing punishment, lunatics in institutions, Indians within the meaning of the Indian Act, and not having served in the Great War, judges appointed by the Dominion Government, persons paid for work on behalf of a candidate in relation to the election, persons expressly disfranchised for corrupt or illegal practices and certain persons who by reason of their race are not permitted, under the law of the province in which they live, to vote at a provincial election in that province. The effect of this last exception is to exclude from the franchise only such Chinese, Japanese and East Indians as reside in British Columbia and did not serve in the Canadian forces during the war, and such Chinese as reside in the province of Saskatchewan and did not so serve. (See also R.S.C. 1927, c. 53, The Dominion Elections Act, as amended by c. 40 of 1929 and c. 16 of 1930.)

**The Use of the Franchise.**—The number of voters on the lists and the number of votes polled at the general elections of 1921, 1925, 1926 and 1930, are given in Table 9.

## 9.—Number of Voters and Votes Polled in the General Elections of 1921, 1925, 1926 and 1930.

Franklin.....	" 1, 1920		546,532	7,500	554,032 <sup>5</sup>
<b>Totals.....</b>			<b>3,510,068</b>	<b>180,035<sup>5</sup></b>	<b>3,690,103</b>

<sup>1</sup> The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

<sup>2</sup> Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland.

<sup>3</sup> Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

<sup>4</sup> Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabaska, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parliament and Order in Council of Oct. 2, 1895.

<sup>5</sup> By an Order in Council of June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act, 1880 (43 Vict., c. 25), the district of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional districts of Yukon, Mackenzie, Franklin and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the province of Quebec, and the remaining area of the Northwest Territories south of 60° N. latitude was divided between Manitoba and Ontario.

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council, and governing with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislatures of all the provinces with the exception of Quebec are now unicameral,<sup>1</sup> consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. For detailed description of the Provincial Governments, the reader is referred to pp. 101-115 of the 1922-23 edition of the Year Book.

The Lieutenant-Governors of the provinces, together with the names of the Ministers of the present administrations, are given in Table II. Details regarding Provincial Legislatures and Ministries since Confederation were given on pp. 75-84 of the 1924 Year Book.

## THE TERRITORIES.

Note.—In 1888 the districts of Alberta, Assiniboia, Athabaska and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given local responsible government, and the old Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these districts was formed into the provinces of Alberta and Saskatchewan on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The remaining areas (the Yukon Territory and the provisional districts of Franklin, Keewatin and Mackenzie) are now administered by the North West Territories Branch of the Department of the Interior, the Deputy Minister of the Department being the Commissioner of the Northwest Territories.

## PART IV.—REPRESENTATIVES IN OTHER COUNTRIES.

## Section 1.—Representatives within the Empire.

The policy of the early North American colonies, of maintaining in London accredited representatives for business and diplomatic purposes, was recognized in the eighteenth century as being a more satisfactory means of communication with the British Government than that provided by occasional official visits or by correspondence. Edmund Burke, the noted British statesman, held the position of agent for the colony of New York for some years following 1771. Of the Canadian colonies, Nova Scotia was the first to adopt this plan, its Legislature having appointed an agent in London in 1761. New Brunswick was similarly represented in 1786, Upper Canada as early as 1794, Lower Canada in 1812 and British Columbia in 1857. For some years after 1845, several of the colonies were represented in London by Crown Agents, appointed by the Secretary of State, and paid by the colonies themselves. This system, however, was of but short duration.

The older provinces of Nova Scotia, Quebec, Ontario and British Columbia still adhere to the practice of former days and are represented in London by Agents-General, as is also the province of Alberta. These officials are appointed by the Legislatures of the provinces under general authority given in the British North America Act and act for their Governments in capacities very similar to that of the High Commissioner, with the exception, perhaps, that their duties have tended to become of a business rather than a diplomatic nature.

**The High Commissioner for Canada.**—With the federation of the provinces of British North America in 1867, a new political entity which could not avail itself of the services of the provincial agents was brought into existence. To supplement the ordinary method of communication between the Canadian and British Governments (which at that time was by correspondence between the Governor General and the Secretary of State for the Colonies, and now between the Secretary of State for External Affairs of Canada and the Secretary

of State for Dominion Affairs in Great Britain), the position of High Commissioner for Canada was created in 1880 (see R.S.C. 1927, c. 92). The duties of the office are defined in the Act as follows:—

“The High Commissioner shall—

“(a) act as representative and resident agent of Canada in Great Britain, and in that capacity, execute such powers and perform such duties as are, from time to time, conferred upon and assigned to him by the Governor in Council;

“(b) take the charge, supervision and control of the immigration offices and agencies in Great Britain, under the Minister of Immigration and Colonization;

“(c) carry out such instructions as he, from time to time, receives from the Governor in Council respecting the commercial, financial and general interests of Canada in Great Britain and elsewhere”

Sir Alexander Galt was the first Canadian High Commissioner, holding office from May 11, 1880, until May, 1883; in 1884 he was succeeded by Sir Charles Tupper. Lord Strathcona and Mount Royal was appointed in 1896. Sir George H. Perley took charge of the High Commissioner's Office in 1914 but was appointed High Commissioner only on Oct. 12, 1917. The Hon. P. C. Larkin was appointed in February, 1922, and after his decease (Feb. 3, 1930), the Hon. G. Howard Ferguson was appointed on Nov. 28, 1930.

The office of the High Commissioner for Canada is in the Canadian Building, Trafalgar Square, London, S.W. 1.

His Majesty's Government in Great Britain in April, 1928, appointed a High Commissioner for Great Britain in Canada, Sir William H. Clark, who resides in Ottawa, and whose position corresponds to that of the High Commissioner for Canada in Great Britain. This appointment was made in consequence of discussions at the Imperial Conference of 1926. The relevant passage in the report of the Inter-Imperial Relations Committee runs as follows:—

“A special aspect of the question of consultation which we considered was that concerning the representation of Great Britain in the Dominions. By reason of his constitutional position, as explained in section IV (b) of this report, the Governor General is no longer the representative of His Majesty's Government in Great Britain. There is no one therefore in the Dominion capitals in a position to represent with authority the views of His Majesty's Government in Great Britain.

“We summed up our conclusions in the following resolution which is submitted for the consideration of the Conference:—

‘The Governments represented at the Imperial Conference are impressed with the desirability of developing a system of personal contact, both in London and in the Dominion capitals, to supplement the present system of intercommunication and the reciprocal supply of information on affairs requiring joint consideration. The manner in which any new system is to be worked out is a matter for consideration and settlement between His Majesty's Governments in Great Britain and the Dominions, with due regard to the circumstances of each particular part of the Empire, it being understood that any new arrangements should be supplementary to, and not in replacement of, the system of direct communication from Government to Government and the special arrangements which have been in force since 1918 for communications between Prime Ministers.’”

## Section 2.—Representatives outside the Empire.

**The Canadian Minister to the United States.**—For many years the diplomatic business between Canada and the United States has been steadily increasing, as the natural result of the proximity of the two countries and the closeness of the business relationships between their citizens. Before the Great War a former British Ambassador at Washington, Lord Bryce, said that between two-thirds and three-quarters of the work of the British Embassy in the United States was occasioned by Canadian affairs.

In January, 1918, a temporary Canadian War Mission was established at Washington under the chairmanship of Mr. Lloyd Harris, and was maintained for some years after the close of the war. Though not a formal diplomatic mission, its duties extended to questions usually dealt with through the diplomatic channel. After the retirement of this mission Canada was represented in Washington by Mr. M. M. Mahoney, who acted as agent of the Department of External Affairs, and, through the courtesy of the British Government, occupied an office at the British Embassy.

In 1920, following discussions between the British and Canadian Governments, it was announced that agreement had been reached upon the appointment of a Canadian Minister at Washington, who would act for the British Ambassador in the latter's absence. No appointment was made until Nov. 26, 1926, when, after decision to omit the arrangement that the Canadian Minister should substitute for the British Ambassador, Hon. Charles Vincent Massey was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in the United States of America to represent the interests of the Dominion of Canada (P.C. 1780 of Nov. 10, 1926). Mr. Massey took up his duties in February, 1927 and held office until July 23, 1930. Major W. D. Herridge, K.C., D.S.O., M.C., was appointed Minister to Washington, Mar. 7, 1931. The Canadian Legation in Washington is situated at 1746 Massachusetts Ave. The United States Government reciprocated in 1927 by appointing Hon. William Phillips its first Minister to Canada. Hon. Mr. Phillips resigned in December, 1929; his successor, Lt.-Col. the Hon. Hanford MacNider, was appointed in August, 1930.

**The Canadian Minister to France.**—For many years the Canadian Government maintained an agency at Paris. The post was first occupied in 1882 by Hon. Hector Fabre, who also represented for a time the Government of Quebec. After his death Hon. Philippe Roy was appointed in May, 1911, with the title of Commissioner-General of Canada in France. In 1928 an exchange of Ministers was agreed upon between Canada and France, and in September of that year Hon. Philippe Roy was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in France to represent the interests of the Dominion of Canada.

The Canadian Legation in Paris is situated at No. 1, rue François premier.

The French Government appointed M. Georges Jean Knight as its first Minister in Canada in 1928. On July 1, 1930 he was reappointed to the French Foreign Office, since when the Canadian post has been vacant.

**The Canadian Minister to Japan.**—In 1928 an exchange of Ministers was agreed upon between the Governments of Canada and Japan, and Hon. H. M. Marler was appointed in 1929 as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan to represent the interests of the Dominion of Canada.

The Japanese Government appointed Mr. Iyemasa Tokugawa as its first Minister in Canada in 1929.

**Canadian Advisory Officer, League of Nations.**—The precedent of appointing permanent representatives at Geneva accredited to the League of Nations was set, it is understood, by Japan, and has found favour especially among those nations which are situated at a distance from Geneva. It was found that, while countries adjacent to the seat of the League were able without difficulty to include in the personnel of their delegations to the Assembly and Council various advisors and assistants at a minimum of expense, distant countries were at a disadvantage in this respect. Canada's duties as a member of the Assembly and of the International Labour Conference, and as one of the eight countries represented on the Governing Body of the International Labour Office, made this disadvantage especially felt. Accordingly the position of Dominion of Canada Advisory Officer, League of Nations, was created by Order in Council P.C. 2174 of Dec. 17, 1924, and Dr. W. A. Riddell was appointed to the post on Jan. 1, 1925.

The duties of the Canadian Advisory Officer are "to establish and maintain as close relations as possible with the Secretariats of the League of Nations and the International Labour Office", to "communicate with the Government of Canada as to all matters arising and requiring its attention", and to "act in all such matters in an advisory capacity to the Government of Canada and to delegates from the Government of Canada to conferences arising out of the organizations before-named"

The office of the Canadian Advisory Officer is situated at 41, Quai Wilson, Geneva.

## PART V.—CANADA AND THE LEAGUE OF NATIONS.<sup>1</sup>

The League of Nations is an association of States which have pledged themselves through signing the Covenant (*i.e.*, the constitution of the League)<sup>2</sup>, not to go to war before submitting their disputes with each other or States not Members of the League to arbitration or inquiry and a delay of from three to nine months. Furthermore, any State violating this pledge is automatically in a state of outlawry with the other States, which are bound to sever all economic and political relations with the defaulting member. The States Members of the League have pledged themselves to co-operate over a wide range of economic, social, humanitarian and labour questions.

The League of Nations came formally into existence on Jan. 10, 1920, through the coming into force of the Treaty of Versailles. The two official languages of the League are English and French. The seat of the League is Geneva, Switzerland. Canada, as a signatory of the Treaty of Versailles, has been a Member of the League from the beginning.

<sup>1</sup> Contributed by N. R. Robertson, Department of External Affairs, Ottawa.

<sup>2</sup> The text of the Covenant of the League of Nations, and the Protocol for the Pacific Settlement of International Disputes, may be obtained from the King's Printer, Ottawa, price 25 cents.

**Membership.**—The 54 States which are Members of the League (November, 1930), together with the dates at which membership was taken out follow:—

Country	Date	Country	Date
Abyssinia.....	Sept. 28, 1923	Japan.....	Jan. 10, 1920

Irish Free State.....	Sept. 10, 1923		
Italy.....	Jan. 10, 1920		

The following ten states are not Members of the League:—United States of America, Brazil, the Union of Soviet Socialist Republics, Turkey, Egypt, Ecuador, Mexico, Afghanistan, Costa Rica, and the Hejaz.

**The Organs of the League.**—The primary organs of the League are:—

1. The Council.
2. The Assembly.
3. The Secretariat.
4. The International Labour Organization.<sup>2</sup>
5. The Permanent Court of International Justice (at the Hague).

*The Council.*—The Council was originally composed of four permanent Members (the British Empire, France, Italy, and Japan) and four non-permanent Members to be elected every year by a majority of the Assembly. The first non-permanent Members, appointed by the Peace Conference and named in the Covenant before the first Assembly met, were Belgium, Brazil, Greece, and Spain. With the approval of the majority of the Assembly, the Council may appoint new permanent and non-permanent Members. At the Assembly of September, 1926, Germany was admitted to the League and given a permanent seat on the Council. At the same time the number of non-permanent seats, already increased to six in 1922, was further increased to nine, the period of office to be three years. In order to institute the new system of rotation, three were elected for one year, three for two years, and three for three years, so that at all subsequent Assemblies three members retire instead of nine at once. Any member of the League not represented on the Council shall be invited to send a representative to sit on it at any meetings at which matters especially affecting it are being discussed. A similar invitation may be extended to States not Members of the League. Canada was a Member of the Council of the League from 1927 to 1930.

<sup>1</sup> Also known as Yugoslavia or (incorrectly) Jugoslavia.

<sup>2</sup> *Re* the International Labour Organization see Section 4 of Chapter XIX of this volume.

The Council meets on the third Monday in January, the second Monday in May, and just before and after the Assembly in September.

The Council is at present (November, 1930) composed of the following States Members of the League:—

**Permanent Members:** British Empire (United Kingdom), France, Germany, Italy, Japan.

**Non-Permanent Members:** Colombia, Guatemala, Irish Free State, Norway, Persia, Peru, Poland, Spain, Venezuela, Yugoslavia.

*The Assembly.*—Every State Member of the League is entitled to be represented by a delegation to the Assembly composed of not more than three delegates and three substitute delegates, but it has only one vote. It meets at the seat of the League (Geneva) on the first Monday in September. It may meet at other places than Geneva, but hitherto it has never done so; extraordinary sessions may be called to deal with urgent matters.

The President is elected at the first meeting of the session, and holds office for the duration of the session.

The Assembly divides itself into the following six principal committees, on each of which every State Member of the League has the right to be represented by one delegate:

1. Juridical.
2. Technical Organizations.
3. Disarmament.
4. Budget and Staff.
5. Social Questions.
6. Political Questions and Admission of New Members.

The decisions of the Assembly must be voted unanimously, except where the Covenant or the Peace Treaties provide otherwise. As a general principle decisions on questions of procedure are voted by majority or in some cases by a two-thirds majority.

*The Secretariat.*—The Secretariat is a permanent organ composed of the Secretary-General and a number of officials selected from among citizens of all Member States and from the United States of America. The Secretary-General, appointed by the Peace Conference, is the Hon. Sir James Eric Drummond, K.C.M.G., C.B.; hereafter the Secretary-General will be appointed by the Council with the approval of the majority of the Assembly. The other officials are appointed by the Secretary-General with the approval of the Council.

The Under-Secretaries-General are: M. J. Avenol, former French Inspector-General of Finance (Deputy Secretary-General); Marchese Paulucci di Calboli Barone, former Italian Minister Plenipotentiary; Herr A. Dufour-Feronce, former German Counsellor of Embassy; M. Yotaro Sugimura, former Japanese Minister Plenipotentiary.

*Budget of the League.*—(1) Scale of allocation of the expenses of the League.

(One gold franc = 1 Swiss franc = 19.3 cents.)

Canada's share of the estimated expenditure during 1931 is therefore 35/986 of the total or 1,123,035.02 gold francs, less certain refunds on prior payments which make the net sum due 1,062,867.99 gold francs, or \$205,083.94.

**Mandates.**—The African and Pacific possessions of Germany and certain territories of the Ottoman Empire were ceded by these countries at the end of the war to the Allied and Associated Powers. The latter had inserted an article (Art. 22) in the Covenant of the League according to which the inhabitants of these territories should be put under the tutelage of "advanced nations who by reason of their resources, their experience, or their geographical position, can best undertake this responsibility" These nations should act as mandatories of the League, and exercise their powers on behalf of the League. They should act on the principle that the well-being and development of the peoples under their tutelage formed a "sacred trust of civilization", and should render the Council an annual report on the territory committed to their charge.

Article 22 furthermore divides the mandated territories into three classes, according to the degree of civilization of their inhabitants, economic and geographic circumstances, and so forth. Class A is composed of the communities detached from the Ottoman Empire, declared to have "reached a stage of development where their existence as independent nations can be provisionally recognized, subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone"

Class B, consisting of the former German colonies in Central and East Africa, should be administered by the Mandatory under conditions which will "guarantee freedom of conscience or religion, subject only to the maintenance of public order and morals, the prohibition of abuses such as the slave trade, the arms traffic, and the liquor traffic, and the prevention of the establishment of fortifications or military or naval bases and of military training of the natives for other than police purposes and the defence of territory, and will also secure equal opportunities for the trade and commerce of other members of the League".

Class C (German South West Africa and Pacific Islands possessions) is composed of territories which, owing to sparseness of population, small size, remoteness from centres of civilization, or geographical contiguity to the territory of the Mandatory Power, "can best be administered under the laws of the Mandatory as integral portions of its territory, subject to the safeguards above mentioned in the interests of the indigenous population".

The Supreme Council, as the organ of the Allied and Associated Powers, allocated the mandates for the territories ceded by Germany and Turkey, subject to the approval of the Council of the League. The mandates and mandatory powers, as determined by the Supreme Council are:—

**A Mandates.**—Mesopotamia (now the Kingdom of Iraq) and Palestine, attributed to Great Britain; Syria (including Lebanon), attributed to France.

**B Mandates.**—Togoland and Cameroon, attributed in part to Great Britain and in part to France. The north-western portion of former German East Africa, attributed to Belgium. The remainder of former German East Africa (now Tanganyika Colony), attributed to Great Britain.

**C Mandates.**—Former German South Pacific possessions (except Nauru and Samoa), attributed to Australia. Samoa, attributed to New Zealand; and Nauru, attributed to the British Empire and administered jointly by Australia, New Zealand, and Great Britain. Former German North Pacific possessions (Yap, etc.), attributed to Japan. Former German South-West Africa, attributed to the Union of South Africa.

**Minorities.**—Poland, Yugoslavia, Czechoslovakia, Roumania and Greece, in treaties signed at Paris during the Peace Conference with the principal Allied and Associated Powers, undertook to recognize and respect certain fundamental, civil, political, and religious rights of minorities incorporated within their boundaries. Similar obligations were imposed on Austria, Bulgaria, Hungary and Turkey in the Treaties of Peace concluded with those countries. These minority rights were placed under the guarantee of the League of Nations. Albania, Estonia, Finland, Latvia, and Lithuania, on entering the League, made formal declaration of their willingness to accept the same obligations with regard to the protection of national minorities.

The system of the protection of minorities by the League of Nations does not establish a general jurisprudence applicable wherever racial, linguistic or religious minorities exist. On the contrary it aims at facilitating the solution of problems arising from the existence of minorities in certain countries in which there was reason to suppose that, owing to special circumstances, these problems might present particular difficulties.

The parties to the various Minorities Treaties recognize, and the Council of the League guarantees, that racial, religious, and linguistic minorities in the

countries mentioned shall enjoy the right to:—(1) nationality, (2) life, personal liberty and freedom of worship, (3) equal treatment in law and fact, (4) the use of their several languages, and (5) a share of the public funds devoted to educational, religious or charitable purposes.

The sole duty of the League in this matter is to watch over the execution of these treaty obligations. The organ of the League appointed by the treaties for this purpose is the Council. In order to facilitate the exercise of this guarantee, the Council has laid down conditions of receivability which must be satisfied by any petition alleging the inraction of the Minorities Treaties before the petition can be communicated to the State concerned or to the Committee of the Council which considers minority petitions.

**Economic and Financial Organization.**—This Organization consists of the Financial Committee, the Economic Committee, the Consultative Committee, and the Economic and Financial Section of the Secretariat.

The Financial Committee advises the Council on all financial questions susceptible of settlement by international action on which its advice has been asked by the Council. Its membership includes high treasury officials, directors of great private banks, eminent economists, and statisticians chosen by the Council for their expert capacity and special knowledge of financial questions. Its activities in the past have included the reorganization of the finances of Austria and Hungary, and the supervision of stabilization loans for Bulgaria, Estonia and Greece. At the present time, through the Gold Delegation of the Financial Committee, it is examining the causes of the fluctuations in the purchasing power of gold and their effects on economic welfare. In co-operation with the Fiscal Committee it is studying the international aspects of national taxation policies, in particular, the question of double taxation.

The Economic Committee consists of fifteen members appointed by the Council for their expert capacity in international economic affairs. They do not represent their Governments. The Committee works through a series of temporary sub-committees created to examine particular problems referred to it by the Council. At the present time such sub-committees are engaged in studying the possible unification of customs nomenclature, the principles of international veterinary regulation, and the specific questions referred to it by the Conference on Concerted Economic Action, *e.g.*, the interpretation of the most-favoured-nation clause, the bases and limits of regional agreements for preferential treatment, indirect protection, and the causes of the prevailing depression in industry and agriculture.

**Organization for Communications and Transit.**—This Organization comprises the Advisory and Technical Commission for communications and transit, a number of permanent and temporary Advisory Sub-Committees, a General Conference meeting in Geneva every four years, and the Communications and Transit Section of the Secretariat.

The function of the Organization is to facilitate international co-operation in transit and communications by the application of Article 23 (e) of the Covenant of the League and to assist the Council and the Assembly in carrying out its duties in this field. Its studies include an examination of the international aspects of ocean and river navigation, railway transport, electrical transmission, calendar reform, and ancillary economic and legal questions.

**Health Organization.**—The Health Organization of the League has developed as an answer to the obligation "to take steps in matters of international concern for the prevention and control of disease" recognized in Article 23 of the Covenant of the League of Nations. It consists of an Advisory Council, the Health Committee, and the Health Section of the Secretariat. The Health Committee of sixteen members appointed by the Council acts as an advisory organ of the Council and Assembly on all health matters and its work is subject to the approval of these bodies on the same basis as that of the other League technical organizations. Its work falls into three stages: first, the study and collection of information; secondly, the formulation of general policies from the data collected; and, thirdly, the preparation of concerted international action in health questions.

The world-wide service of epidemiological intelligence and the collation and comparison of public health statistics illustrate the first stage; the inquiries into the causes of malaria and infant mortality represent the second stage; and the work of the Permanent Standardization Committee, which is devising and maintaining uniform international standards for the preparation and measurement of serological and biological products, is an example of the third phase of the work.

In addition to general inquiries into the incidence of and remedial and preventive measures for tuberculosis, cancer, leprosy, malaria and sleeping sickness, the Health Organization has given technical advice and assistance in the reconstruction of the public health services in China, Bolivia, Greece and Bulgaria.

**Social and Humanitarian Work.**—The work of the League in the field of social and humanitarian questions has been varied and considerable: efforts have been directed, on the one hand, to the suppression of old abuses such as the traffic in women and children and the traffic in opium; to mitigating the sufferings which war had left in its train, such as those caused by typhus epidemics, and to improving the unhappy lot of prisoners of war, of Russian refugees, Armenians, Greeks and Turks, whom conflicts or political upheavals had scattered far from their homes.

Among these tasks some, such as the traffic in women and children and the traffic in opium, have been expressly committed to the League by the Covenant. Others, like the repatriation of prisoners of war or the refugee question, have been taken up by the League either in general accordance with the spirit of the Covenant, or in response to the indication of public opinion. For the purpose of these tasks, the League has created permanent organizations, such as the Opium Committee and the Committee on the Traffic in Women and Children, or provisional organizations such as the High Commissariats for Prisoners of War and for Refugees.

**Permanent Court of International Justice.**—The Permanent Court of International Justice was established by the Protocol of Dec. 16, 1920, in accordance with Article 14 of the Covenant of the League of Nations. It is composed of a body of fifteen judges elected by the Assembly and Council of the League of Nations for a term of nine years, and sits at the Hague. The Court is competent to hear and determine any dispute of an international character which the parties thereto submit to it; it may also give an advisory opinion upon

any dispute or question referred to it by the Council or the Assembly. Article 36 of the Statute of the Court provides that any State may recognize as compulsory the jurisdiction of the Court in all or any classes of legal dispute concerning:—

- (a) The interpretation of a Treaty.
- (b) Any question of international law.
- (c) The existence of any fact which, if established, would constitute a breach of an international obligation, and the nature and extent of the reparation to be made for the breach of the international obligation.

Canada has been a Member of the Court from its inception, and in 1929 accepted, subject to certain reservations, the compulsory jurisdiction of the Court in the cases contemplated in Article 36.

At the 11th Assembly of the League of Nations in September, 1930, the following judges were elected to the bench of the Court for a term of nine years from Jan. 1, 1931:—

M. Adatci, Japan; M. Anzilotti, Italy; M. de Bustamante, Cuba; M. Fromageot, France; Sir Cecil Hurst, Great Britain; M. Altamira y Crevea, Spain; M. Van Eysinga, Holland; M. Guerrero, Salvador; Mr. F. B. Kellogg, United States; Baron Rolin-Jacquemyns, Belgium; M. Negulesco, Roumania; Count Rostworowski, Poland; M. Schucking, Germany; M. Wang Chung-Hui, China; M. Urrutia, Colombia.

Forty-three States have ratified the Protocol establishing the Court; twelve States, including the United States of America, have signed but have not yet ratified the Protocol.

#### Canadian Ratifications of International Agreements and Conventions.—

Canada has ratified or acceded to the following International Agreements and Conventions concluded under the auspices of the League of Nations.

1. Protocol of Signature of the Permanent Court of International Justice (Geneva, Dec. 16, 1920).
2. Optional Clause recognizing the Court's Jurisdiction as described in Article 36 of the Statute (Geneva, Dec. 16, 1920).
3. Declaration recognizing the Right to a Flag of States having no Sea Coast (Barcelona, April 20, 1921).
4. International Convention for the Suppression of the Traffic in Women and Children (Geneva, Sept. 30, 1921).
5. International Convention for the Suppression of the Circulation of and Traffic in Obscene Publications (Geneva, Sept. 12, 1923).
6. Convention of the Second Opium Conference of the League of Nations (Geneva, Feb. 19, 1925).
7. Protocol for the Prohibition of the Use in War of Asphyxiating, Poisonous, and other Gases, and of Bacteriological Methods of Warfare (Geneva, June 17, 1925).
8. Slavery Convention (Geneva, Sept. 25, 1926).
9. International Convention relating to Economic Statistics (Geneva, Dec. 14, 1928).
- 10<sup>1</sup>. Protocol concerning the Revision of the Statute of the Permanent Court of International Justice (Geneva, Sept. 14, 1929).
- 11<sup>1</sup>. Protocol relating to the Accession of the United States of America to the Protocol of Signature of the Statute of the Permanent Court of International Justice (Geneva, Sept. 14, 1929).

<sup>1</sup> Not in force.

## CHAPTER IV.—POPULATION.<sup>1</sup>

The Population chapter of the Year Book contains a *précis* of the results of investigations into the number and the constitution of the population made in the censuses of Canada since Confederation, summarizing the growth and distribution of population between 1871 and 1921, as shown by the successive decennial censuses, in regard to the chief matters investigated at the censuses.

The modern census, now established in all civilized countries as the chief method of measuring periodically the population and its social and economic phenomena, has been described by a modern United States writer as the greatest single peace-time activity in which the government engages, both in respect of the physical extent of its organization and the important part which its results play in the general administration of public affairs.

Under the Canadian constitution, the legal *raison d'être* of the census is to determine representation in the House of Commons; after each decennial census a redistribution of seats in the House, following the course of the movement of population, is made in the manner described on pp. 97-100 of this volume. (See also pp. 72-74 of the 1924 Year Book.) But the census, especially since the introduction of methods of mechanical tabulation, has become far more than a mere counting of heads. It is a great periodical stock-taking of the people and their affairs, designed to show as fully as possible the stage which has been reached in the progress of the nation. Thus the numbers, local distribution, age, sex, racial origin, nationality, language, religion, education, housing and occupations of the people, severally constitute investigations of enormous importance, to which all the continuous and routine statistics collected in the ordinary course of administration must be related if their importance is to be realized. The census, in fine, rounds out and completes the scheme of information upon which the Government relies in conducting the affairs of the country.

On account of the requirements as to parliamentary representation and the payment of provincial subsidies, which are based on population, the Canadian census is taken on the *de jure* principle; *i.e.*, each person is counted as belonging to the locality in which he is regularly domiciled, irrespective of where he may be at the date of the enumeration. Under the *de facto* method adopted in the United Kingdom each individual is counted as belonging to the locality where he is found on the census date. The *de facto* method is undoubtedly simpler, but the *de jure* plan better portrays the permanent condition of the population. The chief difficulty in the application of the latter method is found in connection with holiday resorts, in the segregation of "visitors" and the tracing of "absentees"; a date prior to the opening of the holiday season is accordingly chosen for the date of the census. In the Canadian census, students and inmates of hospitals are assigned to their home localities, while inmates of prisons, jails, lunatic asylums, etc., are counted where found.

### Section 1.—Census Statistics of General Population.

Since the creation of the Dominion of Canada, in 1867, decennial censuses have been taken on the *de jure* plan as of the dates April 2, 1871, April 4, 1881, April 5, 1891, April 1, 1901, June 1, 1911, and June 1, 1921. The population of Canada and its percentage distribution as on these dates, together with the absolute and percentage increases from decade to decade, are given in Tables 1 to 4 immediately following.

<sup>1</sup>This chapter has been revised by E. S. Macphail, Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this branch will be found in Chapter XXVIII, Section I, under "Population."

<sup>1</sup>The population of the Prairie Provinces in 1906, 1916 and 1926 is shown on pp. 127-128 of the 1930 Year Book. For estimated populations, 1824-1935, see Table 7, p. 132. <sup>2</sup>As corrected as a result of the Extension of Boundaries Act, 1912. <sup>3</sup>As corrected by transfer of population of Fort Smith (368) to Northwest Territories. <sup>4</sup>The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and the Yukon Territory, and to extend the boundaries of Quebec, Ontario and Manitoba.

The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of immense areas to form the provinces of Alberta and Saskatchewan and the Yukon Territory, as well as to extend the boundaries of the older provinces of Quebec, Ontario and Manitoba.

**Early Censuses.**—The credit of taking the first census of modern times belongs to Canada. The year was 1665, the census that of the colony of New France. Still earlier records of settlement at Port Royal (1605) and Quebec (1608) are extant; but the census of 1665 was a systematic "nominal" enumeration of the people, taken on the *de jure* principle, on a fixed date, showing age, sex, occupation and conjugal and family condition. A supplementary inquiry in 1667 included the areas under cultivation and the numbers of sheep and cattle. When it is recalled that in Europe the first census dates only from the eighteenth century (those of France and England from the first year of the nineteenth) and that in the United States the census begins only with 1790, the achievement of the primitive St. Lawrence colony in instituting what is to-day one of the principal instruments of government throughout the civilized world may call for more than passing appreciation.

The census of 1665 (the results of which occupy 154 pages in manuscript, still to be seen in the Archives in Paris, with a transcript at Ottawa) showed some 3,215 souls. It was repeated at intervals more or less regularly for a hundred years. By 1685 the total had risen to 12,263, including 1,538 Indians collected in villages. By the end of the century it had passed 15,000, and this was doubled in the next twenty-five years. Not to present further details, some of which will be found in the Chronology on pp. 77-87, it may be said that at the time of the cession (1763) the population of New France was about 70,000, whilst another 10,000 French (thinned to these proportions by the expulsion of the Acadians), were scattered through what are now Nova Scotia, New Brunswick and Prince Edward Island. The British population of Nova Scotia was at this time about 9,000.

Our chief sources of statistics for half a century and more after the cession, are the reports of colonial governors—more or less sporadic—though censuses of the different sections under British rule were taken at irregular intervals. British settlement on a substantial scale in the Gulf provinces and in Ontario dates only from the Loyalist movement which followed the American Revolution, at the end of which, *i.e.*, about the year of the Constitutional Act (1791), the population of

Lower Canada was approximately 163,000, whilst the newly constituted province of Upper Canada under Lieutenant-Governor Simcoe numbered perhaps 15,000, and the addition of the maritime colonies brought the total to well over 200,000. A decade later Canada began the nineteenth century with a population of probably not less than 250,000 or 260,000. Subsequent censuses gave the population of the different colonies as follows: Upper Canada (1824) 150,066, (1840) 432,159; Lower Canada (1822) 427,465, (1844) 697,084; New Brunswick (1824) 74,176, (1840) 156,162; Nova Scotia (1817) 81,351, (1838) 202,575; Prince Edward Island (1822) 24,600, (1841) 47,042.<sup>1</sup>

The policy of desultory census-taking was ended in 1847 by an Act of the Canadian Legislature creating a "Board of Registration and Statistics", with instructions "to collect statistics and adopt measures for disseminating or publishing the same", and providing also for a decennial census. The first census thereunder was taken in 1851, and as similar censuses were taken by New Brunswick and Nova Scotia in the same year, we have a regular measure of population growth in Canada over the past 70 years. The fifties saw a very rapid development, especially in Ontario, whilst the sixties showed only less substantial gains. In the years following Confederation, there was a spurt, the increase between 1871 and 1881 (which included several lean years towards the end) being 635,553, or 17.23 p.c. In neither of the last two decades of the nineteenth century, however, was this record equalled, either absolutely or relatively, the gains in each being under 550,000, or 12 p.c. With the end of the century the population of Canada had reached approximately five and a third millions, or twenty times that of 1800.

**Expansion in the Twentieth Century.**—It is within the confines of the present century that the most spectacular expansion of the Canadian population has taken place. The outstanding feature was, of course, the opening to settlement of the "last best West". The unorganized territories of British North America had been ceded to the Dominion soon after Confederation, and the West had been tapped and traversed by the Canadian Pacific Railway in the eighties and nineties. But though western population was doubled in each of these decades, it was only with the launching of a large-scale immigration movement after 1900 that western settlement and production became a first-rate economic factor. Simultaneously an almost equally striking development occurred in the industrial centres of Eastern Canada, which formed the immediate basis for the move upon the West. At the back, of course, was the heavy inflow of British and other capital—a total of one and a half billions of dollars between 1900 and 1912—which went to finance the large constructive undertakings (chiefly railway, municipal and industrial) which characterized the movement, and which represented at bottom the traditional policy of England in search of cheap and abundant food for her workshop population. The years 1901 to 1911, in brief, form the *decas mirabilis* of Canadian expansion. The immigration movement just mentioned, which had previously run well under 50,000 per annum, rose rapidly to over five times that volume, eventually passing 400,000 in a single year. In the ten years between 1901 and 1911 it exceeded 1,800,000, and though at least a third of these were lost (partly in the return

<sup>1</sup>A résumé of the results of all the censuses taken in Canada between 1665 and 1861 was published as Vol. IV of the census of 1871.

to Europe of labour temporarily attracted by the railway and other developments in progress, and partly in the never-ceasing and natural "drag" of the United States upon a virile and less wealthy people), it formed the chief factor in the gain of 34 p.c. which the total population of Canada registered in that decade, and which was larger than the relative growth of any other country during the same period. The movement was continued and even intensified in the first three years of the second decade of the century, after which a recession set in to which the outbreak of war gave a new and wholly unexpected turn. Nevertheless the decade which closed with the census of 1921 showed over 1,700,000 immigrant arrivals in Canada, and though the proportionate loss of these was very heavy (probably as much as two-thirds), Canada's relative gain for the decade was again among the largest in the world.

**The Census of 1921.**—According to the final results of the 1921 census, the total population of the Dominion on June 1, 1921, was 8,788,483, as compared with 7,206,643 on June 1, 1911, an increase of 1,581,840 or 21.95 p.c. in the decade, as compared with 34.17 p.c. during the decade from 1901 to 1911.

The countries which comprise the British Empire, as also the United States, suffered much less in actual loss of life from the war and its consequences than the continental countries of Europe. None of them actually declined in population during the period, as many continental European countries did. Their percentage increases, however, were in almost all cases lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,885,242, or 5.0 p.c., as compared with an increase of 10.9 p.c. in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,497, or 2.6 p.c., as compared with 6.5 p.c. between 1901 and 1911.

Of the overseas Dominions, New Zealand increased from 1,008,468 to 1,218,913 or 20.9 p.c., as compared with 30.5 p.c., while the white population of South Africa increased from 1,276,242 to 1,519,488 or 19.1 p.c. On the other hand, the Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade of the twentieth century than in the first, increased from 4,455,005 in 1911 to 5,435,734 in 1921, or 22.01 p.c. as compared with 18.05 p.c. The population of the continental United States increased between 1910 and 1920 from 91,972,266 to 105,710,620, an increase of 14.9 p.c., as compared with 21 p.c. in the preceding decade.

Considering now the Dominion of Canada itself, it becomes evident from Table 1 that in this country, as formerly in the United States, there is a distinct movement of population from East to West. In the decade from 1911 to 1921 there occurred in the four western provinces an increase of population from 1,720,601 to 2,480,664 or 44.2 p.c., while the five eastern provinces increased from 5,471,023 to 6,295,189, an increase of 824,166 persons, which, though absolutely larger than the figure for the West, constitutes an increase of only 15 p.c. over the 1911 population. The same conclusion may be deduced from Table 2, which shows that while in 1871 only 2.96 p.c., and in 1881 only 3.88 p.c. of the population of the country dwelt west of the lake of the Woods, the percentage in 1891 was 7.24, in 1901 12.02, in 1911 24.09,

and in 1921 28·37. On the other hand, the three eastern Maritime Provinces, which in 1871 contained 20·80 p.c. of the population of the Dominion, had in 1881 20·14 p.c., in 1891 18·22 p.c., in 1901 16·64 p.c., in 1911 13·01 p.c., and in 1921 only 11·38 p.c. of the population. Ontario and Quebec—the old pre-Confederation Province of Canada—still remain the chief centre of population, their population being in 1921 60·25 p.c. of the total, as compared with 76·24 p.c. in 1871, 75·98 p.c. in 1881, 74·54 p.c. in 1891, 71·34 p.c. in 1901 and 62·90 p.c. in 1911. In other words, the net result of the half century was that in 1921 only three-fifths of the population of the Dominion lived in these provinces, as compared with more than three-fourths in 1871.

In 1881 the "centre" of population east and west was in the county of Prescott, Ontario, not far from Caledonia village. In 1891 it had moved west to the vicinity of Ottawa, where it remained in 1901. In 1911 the county of Victoria, Ontario, contained the centre, and it was in Parry Sound district, Ontario, in 1921.

The populations of the several provinces and electoral districts of Canada, as these districts existed in 1921, were given on pp. 87-91 of the 1925 Year Book, while the 1921 populations of the electoral districts as constituted after the redistribution of 1924 will be found at pp. 100-104 of this volume, together with the names of their representatives in the seventeenth Parliament. Populations for smaller areas (sub-districts, etc.) are given in the great table extending from p. 11 to p. 218 of Vol. I of the Census of 1921.

**Organization for the Census of 1931.**—As of June 1, 1931, a new census of the Dominion will have been taken. The complex nature of the task and the great and growing importance of census results in the general machinery of government combine to make the operation one of paramount importance.

The complete co-operation of the people is essential to a good census and to this end a broad educational campaign has been undertaken in which the radio has, for the first time, played a part as a means of conveying an idea of the scope, methods and purpose of the census and its place in statistical and general administration. In a country like Canada where approximately one-third of the gainfully occupied population is employed in agriculture, the most expensive part of the census organization is that covering the thinly settled rural districts and it is advisable that when once the large organization which is necessary has been created it be made the most of. The peoples' institutions and offices as well as the people themselves will therefore be subjects of measurement.

The nucleus of the organization exists in a small permanent staff constituting one of the branches of the Bureau of Statistics. This branch maintains connection between census and census, so that experience is continuous and cumulative. It makes the detailed plans for taking the census and arranges for the necessary expansion of the personnel as required. In planning the field work the country is first divided into "Census Districts" each in charge of a "Census Commissioner." Districts are further divided into sub-districts varying in population from 600 to 800 persons in rural localities, and from 1,200 to 1,800 in urban centres. A sub-district is the territory allotted to a "Census Enumerator" who conducts the house-to-house or farm-to-farm canvass.

The 1931 census will employ about 260 Commissioners and upwards of 14,000 enumerators. The Commissioners are appointed by the Minister and instructed by an officer of the Bureau; on the other hand the enumerators are appointed and instructed by the Commissioners. All field officers are paid for the most part on a "piece" basis and are required to pass a practical test in the work before appointment.

For the actual compilation work an extra temporary staff of between 700 and 800 clerks will be engaged at Ottawa. All compilation is done by machinery. The numerous facts obtained for each individual are punched, by location, on a specially designed card. The sorting, counting and recording are then done mechanically.

While, as regards the field covered, the 1931 census follows the main lines of its predecessors, it has several important new features. Additional information will be obtained with regard to institutions such as hospitals, asylums, reformatories, child-welfare, etc., which will be useful in aiding in the solution of social problems that are becoming more pressing each year. The unemployment situation will also receive special attention, and new data regarding wholesale and retail trading activities will be gathered with the purpose of giving a bird's-eye view of the great problem of distribution, for the first time in Canada. The agricultural section of the Census will also be improved, commensurate with the part played by this all-important basic industry.

At the present time other countries both in Europe and America are putting forth strenuous efforts to ensure more comprehensive and accurate censuses and a tendency to increase the frequency of census taking, due to the increasing complexity of modern life, the greater demands on Governments, and the great need for comprehensive economic information upon which to base business and commercial policies is obvious.

Every effort is being made at the Dominion Bureau of Statistics to speed up the work of taking the 1931 census and of collating and analysing the results. First results for many cities, towns and counties should be available within three or four months after the count is taken. These will be published as soon as possible. In the meantime the 1921 figures are the latest, but as they will be superseded so soon, the contents of the present chapter have been reduced to a minimum, as explained under Section 2, p. 132.

**Density of Population.**—The density of population in 1921 (*i.e.*, the number of persons per square mile of the land area as in that year), is shown by provinces and for the country as a whole in Table 5. Generally speaking, the density of population decreases as one travels westward, but the enormous area of the province of Quebec (which, as calculated at that time, included the Labrador Coast area, subsequently awarded to Newfoundland) reduced the density of its population to the low figure of 3.42. As among the nine provinces, the density of population is greatest in Prince Edward Island and least in British Columbia.

## 5.—Density of Population in Canada, by Provinces and Territories, 1911 and 1921.

Province or Territory.	1911.	1921.	Province or Territory.	1911.	1921.
Prince Edward Island.....	42.91	40.56	Saskatchewan.....	2.02	3.12
Nova Scotia.....	23.37	24.86	Alberta.....	1.48	2.33
New Brunswick.....	12.61	13.90	British Columbia.....	1.11	1.48
Quebec.....	2.90	3.42	Yukon Territory.....	0.04	0.02
Ontario.....	6.91	8.02	Northwest Territories.....	0.005	0.006
Manitoba.....	1.99	2.63	<b>Canada.....</b>	<b>1.97</b>	<b>2.41</b>

**Elements of Growth.**—The former lack of comprehensive and comparable vital statistics for the whole of Canada, together with the lack of statistics of emigration, makes it difficult to determine how far the growth of population since the commencement of the twentieth century is due to natural increase and how far to immigration. The following estimate (Table 6) may, however, be of interest. During the last decade, in addition to some 60,000 Canadians who died overseas and nearly 20,000 who took their discharge in the United Kingdom, there were also great numbers of residents of Canada—most of them recent immigrants—who left Canada to join the forces of the Mother Country and her allies in the Great War and did not return. The estimated figure given for emigration in the decade 1911-1921 may therefore be regarded as of a distinctly abnormal character.

## 6.—Movement of Population, including Estimated Natural Increase, Recorded Immigration and Estimated Emigration, for the intercensal periods 1901-1911 and 1911-1921.

Decade and Item.	No.
<b>Decade 1901-1911—</b>	
Population, Census of April 1, 1901.....	5,371,315
Natural increase (1901-1911), estimated.....	853,566
Immigration (April 1, 1901, to May 31, 1911).....	1,847,651
<b>Total.....</b>	<b>8,072,532</b>
Population, Census of June 1, 1911.....	7,206,643
Emigration (April 1, 1901, to May 31, 1911), estimated.....	865,889
<b>Decade 1911-1921—</b>	
Population, Census of June 1, 1911.....	7,206,643
Natural increase (1911-1921), estimated.....	1,150,659
Immigration (June 1, 1911, to May 31, 1921).....	1,728,921
<b>Total.....</b>	<b>10,086,223</b>
Population, Census of June 1, 1921.....	8,788,483
Emigration (June 1, 1911, to May 31, 1921), estimated.....	1,297,740 <sup>1</sup>
Net gain in population, 1901-1911.....	1,835,328
Net gain in population, 1911-1921.....	1,581,840

<sup>1</sup>This figure includes also the 60,000 Canadian lives lost at the front and the soldiers (about 20,000) enlisting in the Canadian forces and receiving their discharge in the United Kingdom.

**Annual Estimates of Population.**—While the populations in different countries are actually counted at decennial or quinquennial censuses, annual estimates of populations are required by modern states for many purposes, such as the calculation of birth, death and marriage rates, and of per capita figures of production, trade, finance, consumption, etc. In different countries various methods of obtaining annual figures of postcensal populations

are adopted. For example, in countries so far distant from the other civilized countries of the world as Australia and New Zealand, it is possible, with good vital statistics and records of the comparatively few arrivals and departures, to obtain the actual population at any particular date with approximate accuracy by the simple method of adding births and arrivals and subtracting deaths and departures during the period elapsed since the census. For Canada, on account of her 4,000 miles of common boundary line with the United States, crossed every day by many thousands of people in both directions, this method is impracticable; consequently our annual figure of population must be an estimate pure and simple. This indeed is the case in almost all civilized countries, though their methods of making the estimates vary.

Thus, the method of arithmetical progression is widely used in estimating the populations in the older countries of the world, and also in the United States; this method involves the annual addition to the population of the country and of particular areas within it of one-fifth or one-tenth of the numerical increase in the last quinquennial or decennial intercensal period. This method is not yet applicable to Canada, where immigration is still relatively but variably heavy and the growth of population rapid. The method of geometrical progression, involving the addition each year to the population of a certain percentage of the population at the commencement of that year, is also generally inapplicable to Canada, as in only two decades since 1871 has the application of this method given approximately accurate results.

In making the estimates of Canadian population, the Bureau of Statistics has adopted the method of fitting a series of curves to the populations of the different provinces, as ascertained at the six decennial censuses since 1871, using the curve which is found on trial to fit the population-history of the province, and adding the results for the provinces to obtain the population of the Dominion.

The estimated population of each province for each year from 1924 to 1930 is given in Table 7. (Estimates for the years 1922 and 1923 will be found at p. 95 of the 1929 Year-Book.) The mathematical formulæ used in obtaining the estimate for each province, may be obtained on application to the Dominion Statistician. These formulæ are merely general expressions of long trends of past growth in each province and estimates based upon them are reliable only to the extent that these trends continue uniformly into the future. In such a table of normal growth, good years are not credited with their full addition to the population, while bad years receive more credit than is their due. Nevertheless, the table is believed to represent approximately the broad facts of the situation.

**7.—Census Population of Canada, by Provinces, as at June 1, 1921, with Estimated Populations as at June 1, 1924-1930.<sup>1</sup>**

<sup>1</sup>For estimated population of Canada in each year back to 1867, see Table 6 in Chapter XXI.

<sup>2</sup>Figures of the quinquennial census of the Prairie Provinces, 1926.

<sup>3</sup>Incl. d by per onnel of Royal Canad an Navy, 456.

## Section 2.—Other Census Data and Special Analyses.

In previous editions of the Canada Year Book from 1921 to 1930, the data collected at the census of 1921 and at preceding censuses have been summarized and analyzed under the following headings of sections:—

Section 2—Sex Distribution.

Section 3—Conjugal Conditions.

Section 4—Dwellings and Family Households.

Section 5—Age Distribution.

Section 6—Nationality and Citizenship.

Section 7—Birthplaces.

Section 8—Racial Origin.

Section 9—Religions.

Section 10—Rural and Urban Population.

Section 11—Literacy.

Section 12—School Attendance.

Section 13—Mother Tongue and Language Spoken.

Section 14—Occupations of the People.

Section 15—Blind and Deaf-Mutes.

Section 16—Quinquennial Census of the Prairie Provinces.

Section 17—Population of the British Empire.

Section 18—Land Area and Population of the World.

The above sections have been dropped from this edition for the reason that no new data are at present available. It is expected that the next Year Book will contain considerable material dealing with the census of 1931.

The omitted sections will be found between pages 99 and 129 of the 1930 Year Book, reference being made therein to the more extended treatments in the census volumes or in preceding editions of the Year Book.

## CHAPTER V.—VITAL STATISTICS.<sup>1</sup>

The collection of vital statistics commenced in Canada, as in England, with the registration of baptisms, marriages and burials by the ecclesiastical authorities. These registers, maintained by the priests from the first settlement of the country, have made it possible for the vital statistics of the French colony to be compiled from the year 1610.<sup>2</sup> In the beginning, only one copy of such records was made, but in 1678 the Sovereign Council of Quebec ordered that in future such records should be made in duplicate, and that one copy, duly authenticated, should be delivered to the civil authorities. This arrangement was continued after the cession of the country to Great Britain, and was extended to the newly-formed Protestant congregations by an Act of 1795, but the registration among these latter remained seriously defective, both in Lower Canada and in the new province of Upper Canada.

In English-speaking Canada, vital statistics were from the commencement incomplete, the pioneer settlers often going out into the wilds far from the authority of government and the ministrations of religion. While a law existed in Upper Canada requiring ministers of religion to deposit duplicates of their registers of baptisms, marriages and deaths with the clerks of the peace for transmission to the Provincial Secretary, this law remained practically a dead letter. Again, the efforts made to secure records of births and deaths at the censuses of 1851 and 1861 produced most unsatisfactory and even ridiculous results, as was pointed out by Dr. J. C. Taché, Secretary of the Board of Registration and Statistics, in a memorial published in the report of the Canadian Minister of Agriculture for 1865. Nevertheless, in spite of the inherent unsoundness of securing at a point of time in a decennial census a record of births and deaths occurring over a considerable period of time, this method was persisted in down to 1911, when the obviously untrustworthy character of the results obtained led to the discarding of the data obtained at the inquiry.

The Dominion Government instituted in the early '80's a plan for compiling the annual mortuary statistics of cities of 25,000 population and over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax and Saint John. By 1891 the list had grown to 25, at a time when in most of the provinces the only birth and death statistics were those of the municipalities. Upon the organization of provincial bureaus of vital statistics, however, this work was abandoned, though a conference of Dominion and provincial officials, held in 1893, passed a resolution calling upon the provincial and Dominion authorities to co-operate in the work of collecting, compiling and publishing the vital statistics of the Dominion. This resolution had no immediate practical results in securing accurate or comparable vital statistics.

Since Confederation each of the provinces of the Dominion has enacted its own legislation on vital statistics and administered such legislation according to

<sup>1</sup> This chapter has been revised by E. S. Macphail, Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXVIII, Section I, under "Population."

<sup>2</sup> For a summary of the vital statistics of the Roman Catholic population from 1610 to 1823, see the Statistical Year Book of Quebec, 1921, English or French edition, p. 51. For details by years of this movement of population, see Vol. V of the Census of Canada, 1871, pp. 160-265, and Vol. IV of the Census of Canada, 1881, pp. 134-145.

its own individual methods. While the vital statistics of Ontario were published in considerable detail annually from 1871, the arrangements for the collection of data were unsatisfactory. Only in 1906 was the publication of vital statistics begun in Prince Edward Island (no report for 1912 was ever issued), and in Nova Scotia the publication of vital statistics dates only from 1909. Because of the *lacunæ*, and even more because of the incomparability of information collected, of methods of collection and of standard of enforcement, Canadian vital statistics remained extremely unsatisfactory and impossible of compilation on a national basis, as was pointed out by the 1912 Commission on Official Statistics, which recommended that "for the Dominion, now engaged in building up its national unity, it is important that uniform data should render possible to statisticians the institution of true interprovincial and international comparisons. By effective co-operation of the provinces with the Dominion, this object should be capable of attainment without sacrificing the liberty of each province to satisfy its own special statistical requirements"

The scheme of co-operation, thus outlined, was brought into effect as a consequence of the establishment of the Dominion Bureau of Statistics under the Statistics Act of 1918, which specifically provided that the Bureau should publish an annual report on vital statistics. A scheme was first drawn up in the Bureau and submitted to the various provinces; then Dominion-Provincial conferences on vital statistics were held in June and December, 1918, when comprehensive and final discussions took place.

At the conferences of 1918, it was agreed:—(1) that the model Vital Statistics Act prepared by the Dominion Bureau of Statistics, when accepted by the Legislatures, should form the basis of the vital statistics legislation of the several provinces, thus securing uniformity and comparability; (2) that the provinces should undertake to obtain the returns of births, marriages and deaths on the prescribed forms as approved and adopted at the conference, the Dominion Bureau of Statistics to supply the forms free of charge; (3) that the provinces should forward to the Dominion Bureau of Statistics, at such times as might be agreed upon, either the original returns of births, marriages and deaths, or certified transcriptions of the same; the Bureau of Statistics to undertake the mechanical compilation and tabulation.

Under the scheme outlined above, the vital statistics for all the provinces except Quebec were secured and compiled on a uniform basis for the years 1921 to 1925. The annual reports for these years may be obtained on application to the Dominion Statistician.

Quebec has been included in the registration area as from Jan. 1, 1926, from which date her statistics are on a comparable basis with those of the other provinces. The final reports for 1926, 1927 and 1928 and a preliminary report for 1929, including the statistics of all the nine provinces, have appeared and may be procured from the Dominion Statistician.<sup>1</sup>

<sup>1</sup> The vital statistics of the Yukon and Northwest Territories are duly collected and analysed, but are not presented with those of the nine provinces because the figures are not regarded as complete, the details are in many cases not available and the small and varying population is not known with sufficient accuracy for each year to enable the rates to be calculated. As these Territories contain only about 1/700th of the population of Canada, their vital statistics are a negligible factor in the total. See page 160 for their figures for 1928.

Two important considerations should be borne in mind by the students who use either these tables or the detailed reports for comparative purposes.

First, in spite of the improvements of the past decade, registration generally, and the registration of births in particular, is not universally carried out. The great extent of the country and the isolation of many of its inhabitants partly account for this unsatisfactory situation.

Secondly, the great differences in the age and sex distribution of the population in different provinces, as shown by the census of 1921, make comparisons (of crude birth rates, for instance) as among the provinces unfair and misleading. For instance, in British Columbia in 1921 there were only 773 females of ages 15 to 44 to every 1,000 males of these ages, while in Quebec there were 1,017 and in Prince Edward Island 986. Evidently, in view of the great disproportion between the sexes in British Columbia, the crude birth rate per 1,000 of population in that province cannot properly be compared with the crude birth rate in Quebec, Prince Edward Island or New Brunswick. Again, in consequence of different age distributions of population in the different provinces—the Prairie Provinces, for instance, have very young populations because of the healthy young immigrants whom they attract—a comparison of crude death rates of the provinces is apt to be misleading. In the Prairie Provinces, taken together, only 126 per 1,000 of the 1911 population and 149 per 1,000 of the 1921 population had passed 45 years of age, while in Quebec 178, in Ontario 233 and in Prince Edward Island 264 per 1,000 of the population were in 1921 over 45 years of age. These latter provinces, having much larger proportions of persons of advanced ages, will inevitably have higher crude death rates per 1,000 of population than the Prairie Provinces. A table showing the death rate as adjusted on the basis of the English "standard million" of 1901 has therefore been included (Table 23).

The natural increase of the population of Canada is first dealt with, followed by detailed tables of births, marriages and deaths in the order named.

### Section 1.—Natural Increase.

Summary statistics of the births, marriages, deaths and natural increase per 1,000 of population are given for the years 1924 to 1929 by provinces in Table 1. The figures for 1929 are subject to revision.

The province of Quebec has one of the highest rates of natural increase per 1,000 population in any civilized country but in three of the four years since 1925 Saskatchewan has outranked Quebec in this respect, owing to its younger population and lower crude death rate, as will be seen from the figures. The high rates of natural increase in Quebec and Saskatchewan brought the average for Canada (exclusive of the Territories) up to 17.9 per 1,000 in 1921, 16.6 in 1922, 14.8 in 1923, 15.8 in 1924, 15.3 in 1925, 13.3 in 1926, 13.5 in 1927, 13.2 in 1928 and 12.4 in 1929. The rate of natural increase in 1928 was 11.8 per 1,000 in Australia, 11.1 in New Zealand, 5.0 in England and Wales, 6.5 in Scotland and 5.9 in the Irish Free State, so that Canada compares quite favourably with other British countries.

The rates of natural increase per 1,000 of mean population for other countries in the latest years are as follows, the figures being for 1928 unless otherwise

stated: Denmark, 8·6; Japan, 14·5; Netherlands, 13·7; Norway, 7·4; Finland, 8·0; Italy, 11·2 (1927); Switzerland, 5·3; Sweden, 4·2; Spain, 11·3; France, 1·8; Belgium, 5·1; United States (registration area), 7·7; Union of South Africa (whites), 15·7.

It will be noticed that the natural increase of the population of Canada has shown some tendency to decline in recent years. The decrease to 121,465 shown by the unrevised figures for 1929 gives a rate of 12·4 per 1,000 of the estimated population, which is a sharp decline from the rate of 13·2 for 1928.

Statistics of the births, marriages, deaths and natural increase in cities of 10,000 and over are given for the calendar year 1928 in Table 2, but these are not worked out as rates per 1,000 of population, though the census population in 1921, which is also given, furnishes some guide to the rate of natural increase. Particularly notable in this table is the very large number of births in such cities as Montreal and Quebec, as compared with Toronto, Hamilton, Ottawa and other cities of somewhat corresponding size. This greatly higher birth rate is in part counterbalanced by a considerably higher death rate, but the natural increase in Quebec cities is still considerably higher than in the cities of other provinces.

### BIRTH RATES, DEATH RATES AND RATES OF NATURAL INCREASE IN CANADA AND ITS PROVINCES

1928

PER 1,000 POPULATION

## 1.—Summary of Births, Marriages, Deaths and Natural Increase, by Provinces, for the calendar years 1924-1929.

No. 1.—All figures for 1929 are subject to revision. Birth, marriage and death rates are calculated for 1924-1929 on estimated populations, except that for 1926 the figures of the quinquennial census of the Prairie Provinces are used for these provinces. Figures for 1921, 1922 and 1923 will be found at p. 160 of the 1927-28 Year Book.

Province.	Year.	Births.	Birth Rate per 1,000 Population.	Marriages.	Marriage Rate per 1,000 Population.	Deaths.	Death Rate per 1,000 Population.	Excess of Births over Deaths.	Rate of Natural Increase per 1,000 Population.

**Natural Increase by Sex.**—According to Table 3, the number of male children born in 1928 in Canada exceeded the total male deaths for the year by 63,025, while the gain in the female population during the same period was 64,675. Thus, while the number of male children born exceeded the females by 6,253, the higher mortality among males, *viz.*, 58,480 as compared with 50,577, resulted in a net excess of the natural increase of the females amounting to 1,650. Provisional figures for 1929 are as follows: males, births 120,622, deaths 60,880, natural increase 59,742; females, births 114,293, deaths 52,570, natural increase 61,723.

**Section 2.—Births.**

Throughout almost the whole of the civilized world, the birth rate has in the past generation been on the decline, though the consequent decline in the rate of natural increase has to a considerable extent been lessened by the synchronous decline in the death rate.

The crude birth rate of England and Wales, for example, was 35.4 per 1,000 population on the average of the decennium 1871-80, 32.5 in 1881-90 and 29.9 in 1891-1900. In 1913 the birth rate was 24.1, and, though it rose to 25.5 in 1920, it fell again to 22.4 in 1921, 19.7 in 1923, 18.8 in 1924, 18.3 in 1925, 17.8 in 1926, 16.6 in 1927 and 16.7 in 1928.

Similarly, in France the crude birth rate declined from an average of 25.4 per 1,000 population in the 1870's, 23.9 in the 1880's and 22.2 in the 1890's to 21.4 in 1920 and 19.1 in 1923, rising slightly to 19.0 in 1925 and falling to 18.8 in 1926, 18.2 in 1927 and 18.2 in 1928. In Germany, again, the crude birth rate was 39.1 in the 1870's, 36.8 in the 1880's, 36.1 in the 1890's, 23.0 in 1922, 20.7 in 1925, 19.5 in 1926, 18.4 in 1927 and 18.6 in 1928.

In Canada the crude birth rate still stands at the comparatively high figure of 24.0 per 1,000 in 1929. This, however, is largely due to the influence of Quebec, where the birth rate stood at the very high figure of 30.3 per 1,000 in 1929, as compared with 20.9 per 1,000 in Ontario. In the other provinces the figures varied from 17.4 per 1,000 in British Columbia to 25.9 in Alberta.

Statistics of births and birth rates for the years 1921-29 are given by provinces in Table 4, the provincial figures both of births and birth rates for Quebec being used for the years 1921-25, so as to show national totals. The figures for 1929 are subject to revision.

<sup>1</sup>Provincial figures 1921-25. <sup>2</sup>Exclusive of the Territories. <sup>3</sup>Figures subject to revision.

Table 5 gives the number of living births in cities of 10,000 population and over for the years 1926 to 1929 inclusive. The number of births reported for the cities shows in most cases an increase in recent years, but it appears likely that this is partly due to the increase of births to non-resident parents. The census of 1921 showed that infants under one year of age constituted 2.53 p.c. of the rural population and only 2.24 p.c. of the urban population.

<sup>2</sup>Though Point Grey and South Vancouver were not incorporated into Vancouver until Jan. 1, 1929, their statistics are included in the figures for Vancouver for the years 1926-28 for purposes of comparison.

**Legitimate Birth Rates per 1,000 Married Women of Ages 15-44.**—The test of birth rate most generally accepted by vital statisticians is applied by the comparison of the total number of legitimate births with the total number of married women between the ages of 15 and 44, though a small number of births occur where the mothers are either below 15 or past the 45th birthday. This test was applied to the registration area of Canada for 1921-24 in a table on p. 164 of the 1927-28 Year Book on the assumptions: (1) that the number of married women in the country increased proportionately to the estimated increase of the general population between 1921 and 1924, and (2) that the number of Canadian-born, of British-born and of foreign-born married women increased between 1921 and 1924 proportionately to the estimated increase of the general population.

Two points of great importance were brought out by the table: first, the substantial decline from 199 to 175.7 in the legitimate birth rate per 1,000 married women of ages 15 to 44 in the short period covered; secondly, the fact that in the then registration area as a whole, foreign-born married women had proportionately rather more children than Canadian-born and these considerably more children than British-born.

In Table 6 will be found for each of the provinces the percentages of legitimate children born alive to Canadian-born, British-born and foreign-born mothers respectively. It is noteworthy that children born to foreign-born mothers in 1928 outnumbered children born to Canadian-born mothers in the province of Alberta. For the Dominion as a whole, 72.5 p.c. of the children had Canadian-born mothers, 12.5 p.c. British-born mothers and 15.0 p.c. foreign-born mothers.

It is also significant that the percentage of legitimate children born alive to Canadian-born mothers increased between 1921 and 1928 from 42.3 p.c. to 52.0 p.c. in Manitoba, from 36.1 p.c. to 43.9 p.c. in Saskatchewan, from 30.0 p.c. to 38.0 p.c. in Alberta, and from 29.7 p.c. to 39.8 p.c. in British Columbia. Thus more and more of the children of the West are coming within the class of third generation Canadians.

**6.—Percentages of Legitimate Children Born Alive to Canadian-born, British-born or Foreign-born Mothers, by Provinces, 1928.**

**Sex of Living Births.**—Table 7 shows the number of living male and female births reported for each province in the registration area in the years 1924-29, together with the proportion of male to female births. Prince Edward Island and British Columbia are the only provinces in which female births have in certain years exceeded male births. The preliminary figures for 1929 indicate that among every 1,000 born, 513 were males and 487 females. In other words, there were 1,055 males born to every 1,000 females.

7.—Births (exclusive of Stillbirths) by Sex, and Ratio of Males to Females, for Canada and by Provinces, 1924-1928.

NOTE.—For corresponding figures for 1921-1923, see p. 155, Canada Year Book for 1927-28. The figures for 1929 are subject to revision.

1 Including all the provinces except Quebec. 1924 and 1925 provincial figures.

**Ages of Parents.**—Table 8 shows the age distribution of married fathers and mothers in the years 1926-28. The fathers and mothers in each of these years are arranged according to age and then divided into four equal groups. Each point of age at which a separation comes is called a quartile. To obtain these points of age it is assumed that those in the same year of age are evenly distributed from its lower to its upper limit. In similar manner the deciles divide fathers or mothers in each year into ten equal groups.

In 1928, one-quarter of the married fathers were under 28·15 years of age, one-half under 33·13 years and three-quarters under 38·98 years. One-quarter of the married mothers were under 24·25 years of age, one-half under 28·71 years and three-quarters under 34·16 years. Nine-tenths of the fathers were under 44·21 years and nine-tenths of the mothers under 38·65 years. It will be noted that the general tendency of the quartile and decile points over the three years, while not very marked, is in a downward direction. The movement is clear for the lower age-points and more doubtful for the higher.

### 8.—Quartile and Decile Ages of Married Fathers and Mothers, 1926-1928.

Position in Array by Age.	Fathers.			Mothers.		
	1926.	1927.	1928.	1926.	1927.	1928.
First quartile..... years of age	28·35	28·24	28·15	24·43	24·35	24·25
Second quartile..... "	33·31	33·26	33·13	28·89	28·85	28·71

**Nativity of Parents.**—Table 9 classifies the children born in 1928 by country of birth of parents, and furnishes some idea to what extent the coming generation of Canadian-born will be the product of Canadian-born, British-born or foreign-born parents. The term "country not specified," under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only.

**8.—Number and Percentage of Births (exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1928.**

Country of Birth of Parents.	Number of Births with Father, Mother or Both Parents Born in Specified Country.			Percentage of Births with Father, Mother or Both Parents Born in Specified Country.

<b>Totals.....</b>	<b>236,757</b>	<b>236,757</b>	<b>175,277</b>	<b>100.0</b>	<b>100.0</b>	<b>74.0</b>

<sup>1</sup>Less than one-tenth of one per cent. <sup>2</sup>This figure gives the number of children whose fathers and mothers have the same origin. The difference between this figure (175,277) and the total number of births (236,757) represents the number of children (61,480) whose fathers and mothers are of different origins.

<sup>3</sup>This excludes the percentage (26.0) of mixed parentage, i.e., where the parents were not of the same origin.

<sup>4</sup>Including Galician and Bukovina.

**Illegitimacy.**—The ratio of illegitimate to total births is, generally speaking, low in Canada as compared with other countries.

Out of 236,757 living births in the nine provinces of Canada in 1928, 7,280, or 3.1 p.c., were returned as the issue of unmarried mothers. Preliminary figures for 1929 show a total of 234,915 living births, of which 7,477, or 3.2 p.c., were returned as the issue of unmarried mothers. Out of this number 3,801 were males and 3,676 females—a ratio of 1,034 males to every 1,000 females, as compared with 1,061 males per 1,000 females, for 1928, and a general 1929 rate for all births of 1,055 males to 1,000 females. The somewhat lower 1929 ratio of males to females among the issue of unmarried mothers, as compared with the issue of married mothers, is in contrast with the experience of most other countries, and even with our own records of earlier years.

**11.—Number of Illegitimate Births, Classified by Age of Mother, with the Percentage They Form of Total Living Births, by Provinces, 1928, with Provisional Totals for 1929.**

NOTE.—All figures for 1929 are subject to revision.

## Section 3.—Marriages and Divorces.

## Subsection 1.—Marriages.

About a century ago it was observed in the United Kingdom that the number of marriages tended to be high when the price of wheat was low and to be low when the price of wheat was high. This was quite naturally the case among a population, the majority of which was living at a comparatively low standard of comfort, and where the staple food was thus the chief factor in the cost of living.

More recently, the curve showing marriage rates in the United Kingdom and other English-speaking countries has ceased to bear any constant relation to the price of the staple food of the people, though it still does so in poorer countries. Its place in influencing the marriage rate has, however, been taken by the general level of prosperity. Marriages in such countries as the United Kingdom, the United States, Canada and Australia tend to increase in "good times" and to diminish in "hard times", when great numbers of those who are contemplating marriage are led to postpone such marriage until the advent of better industrial conditions.

Even in the short period covered by the vital statistics of Canada, the truth of the above statement is supported by the evidence. In 1920, a year of great prosperity, the marriages taking place in the nine provinces numbered 80,931 or 9.4 per 1,000 of population; in 1921\* they declined to 69,732 or 8.0 per 1,000; in 1922 to 64,420 or 7.2 per 1,000 population, largely owing to the industrial depression in those years; in 1923, a more prosperous year, they showed an increase to 66,463 or 7.4 per 1,000 of population. Again in 1924 and

1925 the rates fell to 7.1 and 7.0 per 1,000 population respectively, while in 1926 to 1929 the rates rose again to 7.1, 7.3, 7.7 and 7.9 per 1,000 respectively, probably influenced by the return of prosperity. It should be mentioned, of course, that there doubtless occurred in 1920 and 1921 a number of deferred marriages, which under more normal conditions would have occurred in the war years. Summary statistics of marriages contracted in 1921 to 1929 appear in Table 14, the figures and rates for Quebec from 1921 to 1925 being taken from provincial sources.

<sup>1</sup> Provincial figures 1921-25.

<sup>2</sup> 1929 figures are subject to revision.

**Age at Marriage.**—The average age of all bridegrooms in the Dominion in 1928 was 29.3 years and that of all brides 25.0 years. The average excess of the bridegroom's age was thus 4.3 years. It may be noted in Table 15 that when the contracting parties are grouped by age of bridegroom, the average difference in age is less for the younger groups than for the older, grooms under 20 being 0.3 years younger than the brides, while the excess of the bridegroom's age was 1.6 years in the group 20-24, and steadily increased for each quinquennial age group until it was 10.7 years for the bridegrooms 50 years and over. On the other hand, when the parties are grouped by the age of the bride, it is found that, although with less regularity than is shown in the table by age of grooms, the general tendency is for the older brides to marry men nearer their own age than in the case of the younger brides. Since these tables are based upon all marriages contracted during the year, the figures given should not be understood to signify the average ages at first marriage. Out of each 1,000 bridegrooms in 1928, 904 were bachelors, 86 widowers, 10 divorced men; out of each 1,000 brides 930 were spinsters, 60 widows, 10 divorced women. Nineteen twenty-eight is the first year in which as many as 1 p.c. of those marrying have previously been divorced.

## 15.—Difference in Ages of Bridegrooms and Brides, 1928.

Age Group of Bridegroom.	Average Age of Bridegroom.	Average Age of Bride.	Average excess of Bridegroom's Age.	Age Group of Bride.	Average Age of Bride.	Average Age of Bridegroom.	Average excess of Bridegroom's Age.

British Columbia.....	31.5	26.5	5.0
Canada.....	29.3	25.0	4.3

**Nativity of Brides and Bridegrooms.**—In Alberta and British Columbia, the majority of the bridegrooms and brides in the marriages contracted in 1928 were born outside of Canada; in Manitoba the majority of the bridegrooms were born outside Canada but the majority of the brides were Canadians, and in Saskatchewan the same conditions obtained. In the three Maritime Provinces, the Canadian-born brides and grooms showed a marked predominance, varying between 79 p.c. and 97 p.c., and in Ontario over 65 p.c. of grooms and 68 p.c. of brides were Canadian-born. In 1928, taking Canada as a whole, 64.7 p.c. of all grooms and 69.7 p.c. of all brides were born in Canada. Table 17 gives the number of marriages for 1,000 population in each province, as well as the percentage distribution of brides and grooms according to nativity.

## 17.—Nativity, by Provinces, of Persons Married in the Registration Area, 1921-1928.

## Subsection 2.—Divorces.

For many years subsequent to Confederation the number of divorces granted in Canada was very small, 1883, with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in these years.

The effect of the war was to increase very greatly the number of divorces granted in Canada. The causes may be found in the generally unsettling psychological effect of the war period, and the long separations between men on active service and their wives. The provision of new facilities for divorce is also to be considered; owing to a decision of the British Privy Council, divorces in the Prairie Provinces have, subsequently to 1918, been granted by the courts of these provinces, so that Ontario and Quebec have since then been the only provinces in which the applicant for divorce must secure a special Private Act of Parliament. In 1930, however, an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce cases to the Supreme Court of Ontario.

The above-mentioned causes have tended to produce the recent increase in the numbers of divorces granted in Canada, which have grown from 114 in 1918 to 785 in 1928, 816 in 1929 and 875 in 1930, these numbers being those of final decrees, which alone really constitute divorces. More divorces were granted in 1930 alone than in the 46 years from 1868 to 1913. The statistics of divorces granted in the years from 1901 to 1930 inclusive will be found in Table 19. (For divorces in each year prior to 1901 see the 1921 Year Book, p. 825.)

## 19.—Statistics of Divorces Granted in Canada, 1901-1930.

NOTE.—In Prince Edward Island only one divorce was granted from 1868 to 1930; this was in 1913. In consequence of a decision of the British Privy Council, divorces in Manitoba, Saskatchewan and Alberta have, subsequently to 1918, been granted by the courts of these provinces.

1930	207	40	151 <sup>4</sup>	62 <sup>4</sup>	114 <sup>4</sup>	19	27	255

<sup>1</sup> Includes one judicial separation. <sup>2</sup> Includes one not effective till court costs are paid. <sup>3</sup> One by Parliament. <sup>4</sup> Granted by courts. <sup>5</sup> Two granted by Parliament. <sup>6</sup> Includes one in P.E. Island.

## Section 4.—Deaths.

Within the past century and more especially within the past generation there has occurred throughout the countries of the white world a notable decline in the death rate, except where man has brought death upon himself through wars and the aftermath of wars. How far this decline has been due to advances in medical science, how far to better sanitation and how far to the improvement in the general conditions of living as a result of the increase in the productive power of humanity, is in dispute, but concerning the facts there is no doubt.

Perhaps the most impressive testimony regarding this decline in the death rate is furnished by the mortality statistics of Sweden, where vital statistics have been kept with great accuracy for the whole nation ever since 1750. There the crude death rate declined from an average of 27.40 per 1,000 in the decade 1751-60 to 14.29 in the decade 1911-20 and to 12.0 in 1928.

Similarly, in England, the crude death rate, which was 22.5 per 1,000 in the 60's, 21.4 in the 70's and 18.2 in the 90's of the last century, declined to 15.5 in 1906, 13.8 in 1913 and 11.6 and 12.3 (England and Wales) in 1926 and 1927. In Scotland, again, the rate was 22.1 in the 60's, 21.8 in the 70's, 18.6 in the 90's, 16.4 in 1906, 13.0 in 1926 and 13.5 in 1927.

Of course the preceding statements are not to be taken to mean that every year will show a decline in the death rate as compared with the preceding year. There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was 15·3 per 1,000 as against 12·0 in 1917 and 11·9 in 1919. (This was owing to the great influenza-pneumonia epidemic of that year.) Over a period, however, these idiosyncrasies of individual years are reduced to negligibility, and it remains true that from decade to decade there is, generally speaking and under normal conditions, a decline in the crude death rate of the countries of the white man's world.

As for Canada, while the period elapsed since the introduction of complete and comprehensive vital statistics in 1920 has been too short to establish a definite downward trend, the rate of 12·4 per 1,000 for that year in the eight provinces then included in the registration area was substantially higher than in any subsequent year. When the year 1920 is eliminated from the series, there is little evidence of continued trend, but it is significant that the rate for 1929, in spite of exceptionally high mortality from influenza, was only 10·7 per 1,000, approximately equal to the average rate for 1921-23. If provincial figures for Quebec are used for the years 1920 to 1925, a similar comparison can be made for the crude rate of the Dominion as a whole, which was 13·7 in 1920 and 11·6 in the year 1929, the latter figure corresponding closely to the average over the period 1921-23.

### Subsection I.—General Mortality.

Total deaths and crude death rates in recent years are given in Table 20 for the former registration area and for Canada, by provinces. Quebec figures from 1921 to 1925 are added from provincial sources.

#### 20.—Deaths and Death Rates, by Provinces, 1921-1929.

<sup>1</sup> Provincial figures, 1921-1925. <sup>2</sup> Exclusive of the Territories. <sup>3</sup> Subject to revision. <sup>4</sup> The former registration area consisted of all the provinces except Quebec.

**Age Distribution of Decedents.**—The numbers of males and females dying in the nine provinces in 1928 and 1929 (provisional figure) are given by single years of age up to 5 and afterwards by quinquennial age groups up to 90 years of age in Table 21, together with the percentage of the deaths which occurred in each group in each of these years. As illustrating the recent decline in infant mortality, it may be pointed out that the number of males under 1 year dying in 1929, was only 16.2 p.c. of the total number of male deaths, as against 23.6 p.c. in 1921, and of females, 14.8 p.c. as against 20.2 p.c. Similarly, deaths under 5 years of age among males fell from 29.8 p.c. of the total number of deaths in 1921 to 21.1 in 1929 and among females, from 26.5 p.c. to 20.0 p.c., the figures being for the registration area as of 1921 in all cases.

<sup>1</sup> 1929 figures are subject to revision.

The quartile and decile ages of decedents for the years 1926-28 are given for each sex and for the two sexes combined in Table 22. It will be noticed that, in all cases, the ages of decedents have been generally on the increase in both the quartile and decile arrays. The fifth decile and second quartile (or the median) both mark the middle points of the arrays, and the deciles, dividing each half into five groups, give a more detailed picture of the age distribution in each half than do the quartiles. From the decile array it is apparent that for both sexes the greatest age increase has taken place in the third decile. In 1926 three-tenths of the decedents were under 6.95 years of age but in 1928 three-tenths of the decedents were under 16.07 years of age. A further analysis of figures, for males and females, shows that the increase in age for this decile was mainly accounted for by the increase in the age of male decedents.

## 22.—Quartile and Decile Ages of Decedents by Sex, 1926-1928.

Position in Array by Age.	Both Sexes.			Male.			Female.		
	1926.	1927.	1928.	1926.	1927.	1928.	1926.	1927.	1928.

Ninth decile..... "	80-82	80-56	81-00	79-89	79-65	80-00	81-85	81-60	82-20

**Death Rates by Age Groups.**—The death rates per 1,000 persons living in each group were shown in a table on p. 175 of the 1927-28 Year Book for the years 1921-24. The calculations were made on the assumption that the age constitution of the estimated population of the later years was the same as that of the ascertained population of the census year.

In this table there was indicated a declining death rate at the earlier ages, a stationary death rate between 35 and 55, and an increasing death rate after 55. While the Canadian period of observation is too short to establish these as general conclusions, the experience of other countries tends to confirm them as being common to the civilized countries of the world.

When the death rate by sexes in various age groups was considered it was evident that in most age groups the female death rate was lower than that of males, though there are significant exceptions. In 1924, the female death rate was lower in the groups up to 20 and above 55. In the groups from 20-24 and 45-54 it was the same as that for males, but in the groups from 25 to 44 it was distinctly higher.

**Adjusted Death Rate.**—While the crude death rate gives the actual mortality per 1,000 of population, the differing age constitution of the population in different communities and the high mortality among infants and elderly people makes the crude death rate no true test of the relative expectation of life in such communities. Where the age constitution of a particular group is particularly favourable to low mortality, for example, in an army in peace time, the crude death rate will be lower than elsewhere.

When comparisons of the rates of mortality in several communities are made by age groups as is done for the eight provinces in Table 21 on p. 162 of the Canada Year Book, 1925, the effects of differences in age constitution between these communities are eliminated, but by a rather cumbrous process, which does not bring together and express as a single figure the facts of the situation. It has therefore been considered desirable to adopt a particular community as a standard, and to find what the death rates of other communities would have been if the age and sex constitution of their population had corresponded to those of the community taken as a standard. The "standard" population chosen for this purpose in England and Wales and the United States is the "standard million," based on the age and sex distribution per million of the population of England and Wales at the census of 1901. That age and sex distribution was as follows:—

Age Group.	Persons.	Males.	Females.
All ages.....	1,000,000	483,543	516,457
Under 5 years.....	114,262	57,039	57,223
5-9 years.....	107,209	53,462	53,747
10-14 years.....	102,735	51,370	51,365
15-19 years.....	99,796	49,420	50,376
20-24 years.....	95,946	45,273	50,673
25-34 years.....	161,579	76,425	85,154
35-44 years.....	122,849	59,394	63,455
45-54 years.....	89,222	42,924	46,298
55-64 years.....	59,741	27,913	31,828
65-74 years.....	33,080	14,691	18,389
75 years and over.....	13,581	5,632	7,949

The process above described has been applied to the population of the eight provinces, the former registration area of Canada, in Table 23, in which it may be noted that the comparatively high crude death rates in the Maritime Provinces and Ontario, due to an unfavourable age distribution of their populations, are considerably lower when adjusted to the "standard million". The reverse is the case in the Prairie Provinces and British Columbia, where the low crude death rate is due in part to the favourable age distribution of the population. For the registration area as a whole the adjusted death rate is somewhat lower than the crude death rate, indicating that the age distribution of our population is somewhat less favourable to low mortality than was the case with the "standard million" of England and Wales at the census of 1901.

When Quebec is included, the crude rate for the Dominion for 1926 is 11.5 and the adjusted rate 11.1; for 1927 the crude rate is 11.1 and the adjusted rate 10.8, and for 1928 the crude rate is 11.3 and the adjusted rate 11.0. For the province of Quebec alone, the crude rate in 1926 was 14.5 and the adjusted rate 14.0; in 1927 the crude rate was 13.9 and the adjusted rate 13.4, and in 1928, the crude rate was 13.8 and the adjusted rate 13.3.

### 23.—Crude and Adjusted Death Rates in the Former Registration Area of Eight Provinces, by Provinces, 1921-1928.

Adjusted.....	10.2	10.2	10.3	9.5	9.5	10.0	9.7	10.0

**Causes of Death.**—More than 85 p.c. of all deaths recorded in the registration area in the years 1926 to 1929 were due to the 30 causes of death specified in Tables 24 and 25. Attention may be drawn to the decline in the number of deaths from ill-defined diseases as showing the increasing accuracy of diagnoses and of the resulting statistics (Table 24).

Deaths in 1929 showed a considerable increase over any of the years from 1926 to 1928. There were 4,393 more deaths in 1929 than in 1928, influenza showing the largest increase with 2,465. Deaths from diseases of the heart increased by 573, deaths from diseases of the arteries by 293 and deaths from cancer by 279. Suicides increased by 83 and violent deaths other than suicides by 128 as compared with 1928.

In the former registration area, suicides have increased from 431 in 1921 to 724 in 1929, and other violent deaths from 3,666 in 1921 to 4,870 in 1929.

21.—Deaths in the Former Registration Area of Canada, by Principal Causes, 1927-1929, and in the Present Registration Area, 1926-1929.

Int. List No. <sup>1</sup>	Cause of Death.	Former Registration Area.			Present Registration Area. <sup>2</sup>

<sup>1</sup>See footnote 1, Table 24. <sup>2</sup>Canada, including Quebec, which was included in the registration area as from Jan. 1, 1926. <sup>3</sup>Rates for 1929 are subject to revision.

**Vital Statistics of Yukon and Northwest Territories.**—The vital statistics of the Yukon and the Northwest Territories have been collected and compiled for 1924, 1925, 1926, 1927 and 1928. They have not been included with those of the registration area, because of the difficulty of securing complete and accurate information in these isolated areas and the very small numbers affected. In the Yukon Territory the births reported numbered 31 in 1924, 22 in 1925, 27 in 1926, 29 in 1927 and 30 in 1928; marriages 5 in 1924, 17 in 1925, 12 in 1926, 19 in 1927 and 13 in 1928; deaths 38 in 1924, 63 in 1925, 68 in 1926, 33 in 1927 and 46 in 1928. In the Northwest Territories, births reported were 95 in 1924, 57 in 1925, 75 in 1926, 126 in 1927 and 222 in 1928; marriages 37 in 1924, 35 in 1925, 3 in 1926, 20 in 1927 and 30 in 1928; deaths 47 in 1924, 32 in 1925, 51 in 1926, 133 in 1927 and 367 in 1928.

**Deaths in Canadian Cities.**—Table 26 gives the number of deaths in Canadian cities of 10,000 population and over in each of the years from 1926 to 1929. Generally speaking, 1929 was a year of high death rates, the total number of deaths reported for the Dominion being 113,450 (provisional figure) as compared with 107,454 in 1926. The 1929 figures in most cities show a corresponding increase in the number of deaths. It is probable that these cities contained a larger proportion of the total population in 1929 than in 1926 and it is quite likely that the number of non-residents dying in the hospitals of the cities is also on the increase.

DEATH RATES PER 100,000 POPULATION IN THE  
FORMER REGISTRATION AREA (ALL PROVINCES EXCEPT QUEBEC)  
1921 - 1929

EIGHT IMPORTANT CAUSES OF DEATH (RATES PER 100,000)

<sup>1</sup> Provisional figures.

<sup>2</sup> Though Point Grey and South Vancouver were not incorporated into Vancouver until Jan. 1, 1929, their statistics are included in the figures for Vancouver for the years 1926-28.

**Comparative Crude Death Rates of Different Countries.**—In Table 27 will be found a comparative statement of the crude death rates of various countries and provinces for the latest available year. It is worthy of note that two Canadian provinces rank among the four countries or provinces with the lowest death rates in the list, and that Canada has a lower death rate than most other leading countries. The low death rates in the Prairie Provinces are in all three cases due in part to a favourable age distribution of population.

27.—Crude Death Rates of Various Countries in Recent Years.

Subsection 2.—Infantile and Maternal Mortality.

In recent years a great part of the energy devoted by the medical profession and sanitarians to effect a decline in the death rate has gone to reduce infantile mortality, and in this field a large measure of success has been attained. In Canada, both the Dominion, provincial and municipal health authorities have taken part in the struggle to reduce infantile mortality, and usually, in the absence of epidemics, each year is showing an improvement. Even in the nine years for which the figures are available for the former registration area, there is evident a very considerable decline in infantile mortality. In 1920 more than 10 p.c. of all children born, died in the first year of life; in 1921 the proportion dropped to 8.8 p.c. or 14,893 deaths in a total of 168,979 births; in 1922 the infantile death rate showed a further betterment, dropping to 8.7 p.c. or 14,256 deaths in 164,194 births, while in 1923 it showed a slight increase to 8.8 p.c. In 1924, however, there was a considerable improvement, the rate falling to 7.85 p.c. and increasing but slightly in 1925 and 1926 to 7.86 p.c. and 7.99 p.c. respectively. The figure for 1928 was 7.09 p.c., the lowest on record for the former registration area; the provisional figure for 1929 is 7.72. Deaths of children under one year of age in the present registration area constituted 20.9 p.c. of all deaths in 1927, 19.5 p.c. in 1928 and 19.1 p.c. (provisional figure) in 1929, as compared with 22.1 p.c. in 1926. Table 28 summarizes the statistics for the former registration area and for Canada exclusive of the territories for the years 1921-29, the figures for the latest year being provisional.

28.—Infantile Mortality, by Provinces, together with the Rate per 1,000 Living Births, 1921-1929.

<sup>3</sup>Figures subject to revision.

**Infantile Mortality by Causes of Death.**—Twenty principal causes of death accounted in the years 1926 to 1929 for between 91 and 93 p.c. of the infantile mortality experienced in the Dominion, as is shown in Table 29. It is noteworthy that four causes present at birth, *viz.*, premature birth, injuries at birth, congenital debility and congenital malformations, accounted for over 42 p.c. of the infant deaths of 1929. In the previous year 48.83 p.c. of all infants dying were less than one month old, and 35.30 p.c. less than one week old, as is shown in Table 30.

29.—Infantile Mortality in Canada by Principal Causes of Death, 1926-1929.

NOTE.—Figures for the former registration area for the years 1921 to 1924 will be found at pp. 182-3 of the 1927-28 Year Book and for 1925 to 1927 at pp. 177-8 of the 1929 Year Book. Figures for 1929 are subject to revision.

**Infantile Mortality in Canadian Cities.**—Table 31 shows for the cities of 10,000 population and over, in the nine provinces of Canada covered in the present registration area, the numbers of infant deaths and the rates of deaths per 1,000 living births for the years 1926-29. In the latest year, Westmount, Que., had the lowest infant death rate, namely, 39.2, with Vancouver, 41.1, the next lowest. Ottawa and Saint John had comparatively high infant death rates, 120.9 and 115.8 respectively; the death rate in the capital shows a decided increase since 1928 and compares unfavourably with those in the other leading cities of Ontario (Toronto, Hamilton and London with 80.3, 74.2 and 61.6 respectively). The infant death rate of the city of Quebec shows a considerable reduction for 1929 as compared with 1928. The rate for Halifax has increased from 71.6 in 1928 to 110.9.

<sup>1</sup>Though Point Grey and South Vancouver were not incorporated into Vancouver until Jan. 1, 1929, their statistics are included in the figures for Vancouver for the years 1926-1928 for comparative purposes.

<sup>2</sup>Provisional figures.

**Infantile Mortality in Various Countries.**—The rate of infantile mortality to living births has been greatly reduced in civilized countries by the recent advances in medical science and in sanitation. The low record is held at the present time by New Zealand, where in 1928 the rate of infantile mortality was only 36.2 per 1,000 living births as compared with 68 in 1905. Norway, the Netherlands and Switzerland with rates of 51.0, 52.3 and 53.6 in the latest available years, were the lowest among European countries.

As showing the improvement in recent years, it may be stated that the rate of infantile mortality in England and Wales has been reduced from 128 per 1,000 living births in 1905 to 65.1 in 1928, while the rate in Germany has declined from 196 in 1904 to 89.0 in 1928. In the Netherlands, again, the rate has declined from 131 per 1,000 living births in 1905 to 52.3 in 1928. Statistics are given by leading countries and by provinces in Table 32.

**Infantile Mortality in Cities.**—In former times cities were considered to be “the graveyards of population”. The number of deaths, consequent upon the rapid spread of infectious diseases, was generally greater than the number of births, and it was the prevailing opinion that cities would naturally come to an end if they were not being constantly reinforced by fresh young life from the prolific countryside. The unhealthiness of cities was especially destructive of infant life, and it is one of the greatest triumphs of our time that city life is in our days, if not as healthy, yet not necessarily more dangerous to human life and especially to infant life, than life in the country as a whole.

To give particular examples, the rate of infantile mortality in London, England, was 67 per 1,000 living births in 1928, as compared with a rate for England and Wales of 65.1 per 1,000. New York experienced in 1928 an infantile mortality of 65 per 1,000, as against a rate of 69 per 1,000 for the birth registration area of the United States in 1926. Paris on the other hand, had in 1927 an infantile mortality of 86 per 1,000 living births, as compared with 83.7 for France. Again, Berlin in 1928 had an infant mortality of 83 per 1,000 living births, as compared with 89 in Germany, and Vienna an infant mortality in 1924 of 99 per 1,000 living births, as compared with 127.0 for Austria in the same year.

In Canada, Montreal had in 1929 an infantile mortality of 131.8 per 1,000 living births as compared with 120.5 for the province of Quebec. Toronto, too, had in 1929 an infantile mortality of 80.3 per 1,000 living births as against 76.0 for the province of Ontario, while Winnipeg and Vancouver had much lower infantile mortality rates than their respective provinces.

<sup>1</sup> Includes Point Grey and South Vancouver.

The infant mortality in the cities of Canada has been greatly reduced in the years since the inauguration of Dominion vital statistics. Thus the rate for Toronto has fallen from 90 in 1921 to 80 in 1929, that for Winnipeg from 78 to 56, for Vancouver from 56 to 41, for Hamilton from 88 to 74, for Ottawa from 130 to 121, for London from 92 to 62, for Edmonton from 89 to 71, for Halifax from 135 to 111, for Saint John from 147 to 116. Altogether, in the 10 cities of 40,000 population and over in the former registration area of Canada, there were 38,488 living births in 1921 and 3,541 infant deaths, being a rate of 92 per 1,000 living births. In 1929 in these same cities there were 35,067 living births, but only 2,651 infant deaths, or a rate of 75.6 per 1,000 living births.

**Maternal Mortality.**—Of cognate interest with infantile mortality is the maternal mortality arising out of child-birth. This maternal mortality is shown by Table 34 to be at its lowest among mothers in their twenties, and to increase with mothers of more advanced years. The mortality among mothers of different ages per 1,000 living births to mothers at those ages in the eight provinces constituting the registration area in the years 1921 to 1925, is shown for the years 1921 to 1928, while the totals are given for all the provinces for 1926 to 1929. The maternal mortality is shown by age groups for 1929 and by totals for earlier years in Table 35, also by causes for 1929 in Table 36.

## CHAPTER VI.—IMMIGRATION.

While the great majority of French-Canadians can trace their genealogy back to ancestors who left the Old World 250 years ago or even longer, most English-speaking Canadians are comparative newcomers both to Canada and to this continent, though a considerable number of the United Empire Loyalist families had been resident in the old colonies for generations before they moved north to establish English-speaking settlements in what is now the Dominion of Canada. During the middle third of the nineteenth century a great English-speaking migration entered the province of Ontario and made it for the first time more populous than the sister province of Quebec, thus bringing about an agitation for representation by population. Thereafter immigration slackened until the dawn of the twentieth century brought another flood of settlers to the newly opened territories of the great Northwest, resulting in an increase of population between the censuses of 1901 and 1911 greater than the combined increase of the three decades from 1871 to 1901.

### Section 1.—Statistics of Immigration.

Immigration during the second decade of the twentieth century promised at its commencement to be even greater than during the first. In its first three years no fewer than 1,141,547 persons entered Canada for purposes of settlement. If this rate had been maintained, the population of Canada in 1921 would have been in excess of ten millions instead of being less than nine millions. The Great War, which commenced for Canada on Aug. 4, 1914, dried up the sources of our immigration in Great Britain and Continental Europe, where every able-bodied man was needed for the defence of his country. Immigrant arrivals from the United Kingdom in 1918 numbered only some 3,000, as compared with 150,000 in 1913; from Continental Europe, immigrant arrivals numbered less than 3,000 in 1916, as compared with approximately 135,000 in 1914. Since the war, immigration to the Dominion has never approached that of the pre-war period.

Immigration to Canada, as to other new countries, is generally greatest in "boom" periods, when capital as well as labour is leaving the older countries for the newer in order to secure the more remunerative investments generally to be found in virgin territories where the natural resources are still unexploited. In periods of depression, however, the sending abroad of both capital and labour is diminished, both preferring at such times to endure the ills which they know at home rather than take the risks of a new adventure at a distance. This proposition is aptly illustrated by the statistics of Table 2, which show that during the past 34 years immigration was at its minimum in the year of deepest depression, 1897, that it steadily increased from that time until 1908, that a decline took place in the fiscal year ended Mar. 31, 1909, on account of the short depression of 1908, that thereafter immigration steadily increased till 1913, while the fiscal year ended Mar. 31, 1914, showed a decline due to the depression which occurred in the year preceding the war. In the fiscal years 1915 to 1919, political rather than economic conditions restricted immigration, but with the expansion of business at the end of the war our immigration was more than doubled, while the depression which characterized 1921 and 1922 is reflected in the declining immigration of the fiscal years ended Mar. 31, 1922 and 1923. The improvement in business conditions in 1923 was reflected in an increase of

immigration during the fiscal year ended Mar. 31, 1924, when 148,560 settlers entered Canada as compared with less than half that number in the preceding year. The fiscal years ended Mar. 31, 1925 and 1926, showed declines of 24.4 and 35.3 p.c. respectively from the 1924 level, but the fiscal years ended 1927 to 1929 showed distinct improvement in harmony with the general upward trend of business, 1929 being the best post-war year. The fiscal year ended Mar. 31, 1930, showed a slight falling off, the number dropping from 167,722 to 163,288, a decline of 4,434 or 2.6 p.c.

The number of immigrant settlers in Canada is shown by calendar years from 1867 to 1880 in Table 1, and the number of immigrant arrivals in Canada from the United Kingdom, the United States and other countries, is given by years from 1881 in Table 2.

### 1.—Number of Immigrants Settling in Canada in each of the calendar years 1867-1880.

<sup>1</sup> Calendar year. <sup>2</sup> Six months, January to June, inclusive. <sup>3</sup> Nine months ended March 31.

\* The figures of immigration from the United States for the years 1881 to 1891 do not distinguish between immigrants and non-immigrants. As the U.S.-born population of Canada, according to the census, increased only from 77,753 to 80,915 between 1881 and 1891, it would appear that the number of permanent immigrants from the United States in these years must have been comparatively small. No statistics of immigrants from the U.S. were collected for the years 1892 to 1896.

**Sex and Conjugal Condition of Immigrants.**—As shown by Table 3, the 163,288 immigrants who came to Canada in the fiscal year ended Mar. 31, 1930, included 97,062 males and 66,226 females, males constituting 59.4 p.c. of the total. In other words, three male immigrants came to Canada for every two females, and the discrepancy is greater when persons under 18 are left out of account, there being 74,062 adult male immigrants to 47,534 adult female immigrants. This disparity of the sexes among our immigrants is a phenomenon of long standing (Table 4), and taken together with the comparatively small difference between the numbers of the sexes in our total population, goes to indicate that a good deal of our male immigration is of a rather transient character. This conclusion is supported by the fact that 31,165 of the males who immigrated to Canada in 1930 reported themselves as married, as compared with 24,861 of the females. Evidently many of these married immigrants do not bring their wives. It is true they may expect to send for their wives later on, but on the other hand some of the married male immigrants of former years doubtless brought their wives out to join them in 1930.

**3.—Sex and Conjugal Condition of Immigrants into Canada, by Age Groups, fiscal year ended Mar. 31, 1930.**

<sup>1</sup> "Children" since 1926 includes all those under 18 years of age.

**Racial Origin of Immigrants.**—Where there is any considerable immigration into a democratic country, the racial and linguistic composition of the immigrants is of great importance. Canadians generally prefer that settlers should be of a readily assimilable type, already identified by race or language with one or other of the two great races now inhabiting this country and prepared for the assumption of the duties of democratic Canadian citizenship. Since the French are not to any great extent an emigrating people, this means in practice that the great bulk of the preferable settlers are those who speak the English language—those coming from the United Kingdom or the United States. Next in order of readiness of assimilation are the Scandinavians, Dutch and Germans, who readily learn English and are already acquainted with the working of democratic institutions. Settlers from Southern and Eastern Europe, however desirable from a purely economic point of view, are less readily assimilated, and the Canadianizing of the people from these regions who have come to Canada in the present century is a problem both in the agricultural Prairie Provinces and in the cities of the East. Less assimilable still, according to the general opinion of Canadians, are those who come to Canada from the Orient. On the whole the great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those Continental European countries where the population is ethnically nearly related to the British, though for some years there was an increasing immigration of Slavs.

The racial origins of the immigrants who arrived in Canada in the fiscal years ended Mar. 31, 1929 and 1930 are shown in Table 5.

**Nationalities of Immigrants.**—In the latest fiscal year, ended Mar. 31, 1930, British subjects immigrating to Canada numbered 68,083 and American citizens 26,847, or together about 58 p.c. of the total number of immigrants shown in Table 7.

It has been previously pointed out that male immigrants are likely to include a large number of transients, and that the immigration of females is more likely to represent a permanent addition to the population of the country and the national or racial distribution of that addition. Out of 66,226 females immigrating to Canada in the fiscal year ended Mar. 31, 1930, 27,794 or 42 p.c. were British subjects and 10,564 or 16 p.c. American citizens. Thus nearly 60 p.c. were British or Americans by nationality. The remainder were practically all Continental Europeans, among whom Poles, with 10,208 or 15.4 p.c. of the whole, were the largest single group.

**Countries of Birth of Immigrants.**—In Table 8 will be found the countries of birth of the immigrants into Canada in the latest two fiscal years. The figures show that England was the birthplace of more of our 1930 immigrants than any other single country, with 31,109. The United States came second with 24,315, Poland third with 21,624, Scotland fourth with 19,752 and Ireland fifth with 9,799, these last two countries contributing largely in view of their comparatively small populations. Of the immigrants arriving in 1930, 5,556 were born in Germany,

5,415 in Finland, 5,273 in Roumania, 4,976 in Hungary, 4,336 in Czechoslovakia and 3,784 in Wales. The aggregate of settlers born in the four Scandinavian countries was 7,492.

**Ports of Arrival of Immigrants.**—Throughout the greater part of our history, Quebec has been the port at which the greatest number of our immigrants have landed. In the past few years, however, there has been a great increase in the immigrants arriving at the port of Halifax, those entering at this port in 1930 being twice as many as in 1924. This would appear to be due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Figures for recent years are given in Table 9.

9.—Immigrants Arriving in Canada, by Chief Ports of Arrival, fiscal years ended Mar. 31, 1924-30.

**Destinations of Immigrants.**—The immediate destinations of the immigrants arriving in Canada are given for the period from 1901 to 1930 in Table 10, which may be compared with the census tables on pages 124 and 125 showing the increase of population in the decades between 1901 and 1921.

While immigration to the Maritime Provinces during the first thirty years of the twentieth century was comparatively small, totalling 204,981, that to Quebec and Ontario was very large. From 1905 to 1928 Ontario received a larger number of immigrants annually than any other province of the Dominion, while Manitoba was usually second in this respect. In 1929 immigration to Manitoba exceeded that to Ontario by 10,000 persons, but in 1930 the positions were again reversed. The immigration to Eastern Canada (Maritime Provinces, Quebec and Ontario) has almost equalled that to Western Canada (Manitoba, Saskatchewan, Alberta and British Columbia) in the 30-year period.

10.—Destinations of Immigrants into Canada, by Provinces, fiscal years ended June 30, 1901-1906, and Mar. 31, 1907-30.

<sup>1</sup> Includes immigrants destined for the Northwest Territories: 3 in 1927, 39 in 1928, 1 in 1929 and 8 in 1930.

**Occupations of Immigrant Arrivals.**—As stated below in the paragraphs dealing with immigration policy, the settlers most universally acceptable to Canadians are those who settle on the land or those females who enter domestic service. In Table 11 will be found statistics of the occupations of immigrants arriving in Canada during the fiscal years ended Mar. 31, 1929 and 1930.

<sup>1</sup>Includes domestics under 18 years of age.

**Prohibited Immigrants.**—The following is a summary of the classes whose admission to Canada is prohibited under the existing regulations. These regulations, however, do not apply to Canadian citizens or persons having Canadian domicile:—

(1) Imbeciles, feeble-minded persons, epileptics, insane persons, persons of constitutional psychopathic inferiority, persons suffering from chronic alcoholism and those mentally defective to such a degree as to affect their ability to earn a living.

(2) Persons afflicted with tuberculosis or with any loathsome, contagious or infectious disease or a disease which may be dangerous to public health; immigrants who are dumb, blind or otherwise physically defective.

(3) Prostitutes and women and girls coming to Canada for any immoral purpose, pimps, procurers and persons who have been convicted of any crime involving moral turpitude.

(4) Professional beggars or vagrants, charity-aided immigrants and persons who are likely to become public charges.

(5) Anarchists, persons who disbelieve in or are opposed to organized government or who belong to any organization teaching disbelief in or opposition to organized government, persons who have been guilty of espionage or high treason and persons who have been deported from Canada.

(6) Persons over fifteen years of age unable to read. The literacy test, however, does not apply to a father or grandfather over 55 years of age, or to a wife, mother, grandmother or unmarried daughter or widowed daughter.

The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

The operation of the above regulations is illustrated in Tables 12 and 13, which give the numbers of immigrants rejected or deported after admission, the

causes of such rejection or deportation, and the nationalities of those deported, for each of the 10 fiscal years ended 1921 to 1930, together with the totals for the 18 fiscal years 1903-20 and the 28 fiscal years from 1903 to 1930 inclusive.

**Juvenile Immigrants.**—Among the most generally acceptable immigrant arrivals are the juveniles of both sexes who have been trained by highly accredited British organizations for Canadian life before coming to Canada, the boys being taught the lighter branches of farm work, and the girls instructed in domestic occupations. On arrival in Canada the boys are placed on farms, while the girls are placed either in town or country, but the organizations remain the guardians of the children until they have reached maturity, and in addition the children are subject to efficient and recurrent government inspection until they reach their nineteenth year. This inspection is under the control of the Supervisor of Juvenile Immigration.

Under the British Empire Settlement Agreement the term "children" is now applied to boys from 14 to 19 years of age and girls from 14 to 17 migrating to Canada under provincial or approved society auspices. These organizations have been assisted by the Oversea Settlement Agreement, which provides free transportation for the boys and girls from the British Isles migrating to Canada under their auspices. Juvenile immigrants of this type totalled 4,033 boys and 248 girls in the fiscal year ended Mar. 31, 1930.

The number of juveniles immigrated to Canada in each year since 1901 is given in Table 14.

**Oriental Immigration.**—The immigration to Canada of the Asiatic races, able because of their low standard of living to underbid the white man in selling his labour, is fundamentally an economic rather than a racial problem, affecting most of all those parts of the country which are nearest to the Orient and the classes which feel their economic position threatened. A record of Oriental immigration since the commencement of the century is given in Table 15.

#### 15.—Record of Oriental Immigrants, fiscal years ended 1901-1930.

<sup>1</sup>Nine months.

**Chinese Immigrants.**—Oriental immigration to the Pacific Coast of North America appears to have commenced with the coming of Chinese immigrants about the time of the discovery of gold in California in 1849, and British Columbia appears to have received its first Chinese immigrants some time before 1870. The original occupations of these immigrants were as laundrymen and domestic servants. As early as 1872 Chinese were employed in the coal mines of the province and the Legislature was already considering the imposition of a poll tax on Chinese, the same proposition coming up later in the Dominion Parliament with the design of preventing the employment of Chinese labour in railway construction. A Royal Commission was appointed by the Dominion

Government in 1884 to investigate Chinese immigration, and this Commission recommended the imposition of a head tax of \$10 upon Chinese entering Canada, together with registration and special legislation regulating Chinese domestic servants. This led to the passage of legislation in 1885 (48-49 Vict., c. 71), providing that thereafter Chinese of the labouring class should be required, as a condition of entering into Canada, to pay a head tax of \$50 each. On Jan. 1, 1901 (63-64 Vict., c. 32) this tax was increased to \$100, and on Jan. 1, 1904 (3 Edw. VII, c. 8), after another Royal Commission had reported on this matter, the head tax was further increased to \$500. This tax was paid by all Chinese immigrants except consular officers, merchants and clergymen and their families, tourists, men of science, students and teachers. In spite of this restrictive legislation, the number of Chinese enumerated at the decennial censuses rose from 4,383 in 1881 to 17,312 in 1901, to 27,774 in 1911 and to 39,587 in 1921. Of this latter number, 37,163 were males and only 2,424 females. Some 60 p.c. of all the Chinese in Canada, *viz.*, 23,533, were residents of British Columbia.

<sup>1</sup>Nine months.

The Chinese Immigration Act of 1923 (13-14 Geo. V, c. 38), restricts the entry to or landing in Canada of persons of Chinese origin or descent, irrespective of allegiance or citizenship, other than government representatives, Chinese children

born in Canada, merchants (defined by what regulations the Minister of Immigration and Colonization may prescribe) and students—the last two classes to possess passports issued by the Government of China and endorsed by a Canadian immigration officer. As a result no Chinese were admitted to the country as immigrants in the fiscal years ended 1925, 1926 and 1927; three are shown by the above table to have been admitted in 1928, one in 1929, but none in 1930.

*Japanese Immigrants.*—Japanese immigration to Canada commenced about 1896, and a total of some 12,000 came in between then and 1900, but at the census of 1901 the total number enumerated as domiciled in the Dominion was only 4,738; in 1911, 9,021; in 1921, 15,868, 15,006 of these latter being domiciled in British Columbia. The immigration of Japanese was especially active in the fiscal years 1906 to 1908, in which three years a total of 11,565 entered the country. In the latter year an agreement was made with the Japanese Government, under which the latter undertook to limit the number of passports issued to Japanese immigrants to Canada. The statistics of Table 15 show how Japanese immigration to Canada has been restricted.

*East Indian Immigrants.*—East Indian immigration to Canada, like Japanese, is shown by Table 15 to have been negligible down to 1907, when no fewer than 2,124 East Indian immigrants arrived. However, as a consequence of the operation of a Regulation under section 38 of the Immigration Act of 1910, East Indian immigration has since that date been comparatively small. A resolution of the Imperial War Conference of 1918 declared that "it is the inherent function of the Governments of the several communities of the British Commonwealth that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities". However, it was recommended that East Indians already permanently domiciled in other British countries should be allowed to bring in their wives and minor children, a recommendation which was confirmed so far as Canada was concerned, by Order in Council of Mar. 26, 1919. However, in the ten fiscal years ended Mar. 31, 1921 to 1930, only 10, 13, 21, 40, 46, 62, 60, 56, 52 and 58 East Indian immigrants respectively were admitted, or 418 in the decade.

*Expenditure on Immigration.*—The sums expended by the Dominion Government on immigration in each of the fiscal years ended 1868 to 1930 inclusive, as stated in the Public Accounts issued annually by the Department of Finance, are shown in Table 17.

#### 17.—Expenditure on Immigration in the fiscal years ended 1868-1930.

**Recent Emigration from Canada.**—An important factor tending to offset our immigration activities is a movement from Canada to the United States which has attained considerable proportions at certain periods. The quota system of immigration regulation, applied by the United States Government against immigrants generally but not against the Canadian born, had the effect of limiting immigration to the United States and thereby encouraging Canadians to enter the United States. No record of this movement had ever been kept by the Canadian Government, and, while its seriousness was recognized, its magnitude, as indicated by the United States returns, was questioned on the ground that these returns did not make allowance for Canadians returning to Canada after a more or less extended period of residence in the United States. The Canadian Department of Immigration and Colonization was convinced that a very considerable return movement was taking place, but until 1924 no attempt was made to ascertain the exact magnitude of that movement. In that year immigration officers were instructed to take note of Canadians returning to Canada from the United States after having left Canada to reside in that country. The results are tabulated in Table 18.

Another circumstance which has in the past occasioned a considerable movement from Canada to the United States has no doubt been the practice of Europeans entering Canada, declaring themselves to be *bona fide* immigrants, but really with the intention of entering the United States as soon as the quota restrictions would permit them to do so. The tightening-up of the American regulations concerning persons entering the United States from Canada and the active co-operation of the Canadian Department of Immigration and Colonization in discouraging this traffic, seem to have effectually met this situation.

Table 18 shows the number of Canadians returned from the United States from April 1, 1924, to Mar. 31, 1930.

**Non-immigrants entering Canada.**—The increase in the facilities for travel in recent years, especially in the use of the motor car and the improvement of roads and highways leading across the International Boundary, involves a great increase in the inspectional work of the Immigration Department. The activities

of the Inspection Service are given in Table 19 for the latest fiscal years for which figures are available. This shows that the non-immigrants (chiefly tourists) admitted in the fiscal year ended Mar. 31, 1930, reached the huge number of 32,400,000, a remarkable figure when it is considered that the normal population of the Dominion is estimated to be about 10,000,000. These non-immigrant admissions have grown by 4,250,000 or 16 p.c. in the last two fiscal years.

<sup>1</sup> Number reported incomplete.

In Table 20 will be found the number of trans-oceanic passengers classified as returning Canadians and other non-immigrants who entered Canada through ocean ports in the two latest fiscal years ended Mar. 31, 1929 and 1930. In the non-immigrants admitted at ocean ports, as shown in Table 19, are included tourists and others who have come by water from the United States and Newfoundland, while in Table 20 are included only those who have come across the Atlantic or Pacific oceans. The grand total of such persons was 53,793 in 1930.

**20.—Returning Canadians and Other Non-immigrants Entering Canada via Ocean Ports, by Class of Travel, fiscal years ended Mar. 31, 1929 and 1930.**

### Section 2.—Immigration Policy.<sup>1</sup>

The crest of the wave of immigration into Canada was in the years preceding the Great War, when the total immigration reached 402,432 in the fiscal year ended Mar. 31, 1913. This movement was largely due to the policy of giving free government lands to those who would undertake to live upon them and perform certain residence and development duties, and to the opportunities for all classes of labour in railroad and other construction work. The homestead entries for the period of the fiscal years 1901 to 1914, inclusive, numbered 434,862, and represented the enormous area of more than 70,000,000 acres of fertile land in the provinces of Manitoba, Saskatchewan, Alberta and certain portions of British Columbia, granted free to settlers as an inducement toward the development of the country.

The war interrupted the flow of immigration, and with the return of peace new conditions called for new policies. First and most pressing of these was the problem of re-absorbing into civil life the hundreds of thousands of returning soldiers. The realization that Canada had been somewhat optimistic in its railway undertakings had also been borne in upon the public, and immigration policies had to be so shaped as to avoid the necessity of further railway construction. While the ordinary channels of employment were filled with returning soldiers, and free government lands were located at such distances from railways that settlement upon them could not be generally encouraged, the Department of Immigration and Colonization found it necessary to restrict its activities almost exclusively to those who were in a position to buy land, or were prepared to take farm employment, and to household workers. This strictly selective policy, combined with certain restrictive regulations which were a natural aftermath of the war, and other conditions such as the high cost of transportation and the depreciation of European currencies, resulted in a relatively small movement of immigrants to Canada.

During 1923, it became increasingly evident that popular opinion in Canada favoured a resumption of immigration activities on a considerable scale. The Government announced its intention of encouraging the migration of the largest possible number of those classes of settlers which Canada could absorb. This elicited favourable comment in the British press, which welcomed a resumption

<sup>1</sup> Prepared by R. J. C. Stead, Director of Publicity, Department of Immigration and Colonization.

of Canadian immigration activities. While there were would-be immigrants into Canada who were not suited for the Dominion owing to physical, moral or industrial unfitness or because they belonged to races that could not be assimilated without social or economic loss to Canada, there were in Great Britain and Continental Europe tens of thousands of workers (not agriculturists) who, it was believed, would be an asset to Canada if steady employment could be found for them.

Recognition of the fact that there were many families in Great Britain and Ireland who would make good settlers in Canada but were hampered by the high cost of transportation, resulted in an arrangement with the British Government, under which assistance in bearing the transportation expenses of selected immigrants, by means of reduced passage in the case of adults and free passage in the case of children under 17, was provided. The agreement provided assistance to four classes of British immigrants, *viz.*: (a) married agriculturists and their families; (b) single farm labourers; (c) houseworkers; (d) juvenile immigrants. The assistance to juvenile immigrants (class "d") was limited to those between 14 and 17 years of age. All assistance was for third class ocean and colonist rail transportation, repayable without interest. One feature of the Empire Settlement Agreement provided for nomination in Canada, so that any British subject residing in Canada might nominate a relative, friend or acquaintance who on arrival would be engaged in farming or in housework. Provision was also made for nomination by description where British help was wanted and the nominator was not acquainted with a suitable migrant.

The first assisted passage agreement was made in April, 1923. Others followed in 1924 and 1925, continuing the principle of loan to the adult, where necessary, of the entire cost of transportation. On Jan. 1, 1926, a new passage agreement came into effect, under which the cost to the adult migrant was reduced to a point where the majority could and did pay the rate. This Empire Settlement Agreement provided ocean passage, third class, from any port in the United Kingdom to Halifax, Saint John or Quebec for £3. The Empire Settlement rate to Toronto was £4:10; Winnipeg, £5:10; Regina, Moose Jaw or Saskatoon, £6; Calgary or Edmonton, £6:10, and Vancouver, £9. In the autumn of 1926 the £3 ocean rate was reduced to £2, with a corresponding reduction of £1 in the rate to the other mentioned destinations. The balance of the fare was made up of contributions and rebates by the British Government, the Canadian Government and the steamship companies. Houseworkers were required to provide a minimum of £2 and might be loaned the balance where necessary. The adults of agricultural families might be given loans where necessary, while children under 19 belonging to agricultural families received free passage.

Provision was also made by arrangement with the British Government for assisting 3,000 selected British families to locate on farms in Canada, in addition to the passage assistance already outlined. This was made possible by a loan of £300 per family advanced by the British Government, and repayable over a period of 25 years with interest at 5 p.c. per annum. The families were personally selected by the Canadian authorities and approved by the British authorities. Settlement was made under the direction of the Land Settlement Branch of the Department of Immigration and Colonization on farms owned by the Government. Payment of the purchase price of the farm was extended over 25 years with interest at 5 p.c. per annum.

During 1927 an agreement was completed between the British Government, the Canadian Government, and the Government of New Brunswick, providing for the placement of 500 British settlers and their families on improved farms in New Brunswick during the period from Mar. 1, 1928 to Mar. 31, 1934. The plan follows the general scheme of the 3,000 British families settlement plan except that in this case the Canadian co-operation is being given by the province and the Dominion working together, instead of exclusively by the Dominion Government. The Dominion Government, through its Department of Immigration and Colonization, recruits and selects the settlers in the British Isles and, co-operating with the Government of New Brunswick, places the settlers in that province and extends settlement service through its Land Settlement Branch. The Government of New Brunswick acquires the necessary farms and sells them to the settler on terms calling for 25 annual payments with interest amortized at the rate of 5 p.c. per annum. The British Government provides funds for acquiring stock and equipment, and for seed, feed and initial payments on farms, which sums are payable on the same terms as the price of the land.

As a result of negotiations carried on during the latter part of 1928, a general third class ocean passage rate of £10 was established for British migrants coming to Canada. This became effective Jan. 18, 1929, replacing the previous rate of £18:15. The £2 ocean rate is continued for families proceeding for settlement on the land under an approved settlement scheme, with free passage for all members of such families under 19 years of age. Boys between 14 and 18 years of age accepted under any government scheme for juvenile farm workers or proceeding under the auspices of a recognized voluntary society, and girls between 14 and 17 years of age proceeding to suitable homes under the same arrangements, receive free transportation.

Agreements for the settlement of British boys on farms in Canada have been entered into between the Canadian Government, the British Government and the Governments of a number of the provinces. In British Columbia, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick and Nova Scotia, reception centres have been established for the reception of British boys, who are then distributed to suitable farm homes in the province, where they can gain experience in Canadian farming methods, at the same time saving up some capital.

The Governments of Manitoba, Ontario, New Brunswick and Nova Scotia are co-operating in a scheme whereby a boy, settled under the above arrangement, who has reached the age of 21 years, has established his proficiency in farm work, and has saved up approximately \$500, becomes eligible for a loan amounting to \$2,500 for the purchase of a farm of his own. This loan is repayable over a period of 20 years with interest at 5 p.c.

Medical inspection prior to sailing was introduced in 1928 with a two-fold object: (1) to prevent hardship to the migrant by putting the inspection back as near as possible to his place of origin, thus doing away with the migrant selling his home and making a long and expensive journey to Canada with the chance of being turned back at the port of entry in Canada; (2) to protect Canada against having to deal with numerous mentally or physically defective immigrants who would require hospital or other care at Canadian ocean ports.

On the continent of Europe medical inspection is conducted at ports of sailing. In the British Isles greater facilities are provided by the use not only of Canadian doctors, but also of several hundred British doctors known as roster doctors. In the British Isles the intending migrant may go to a doctor in his own district at any time within four months of his sailing. All medical inspection is free of charge to the migrant.

In order to assure to Canadians first opportunities of employment, an Order in Council was passed on Aug. 7, 1929, prohibiting the landing in Canada of any immigrant coming under contract or agreement, express or implied, to perform labour or service of any kind in Canada, but this regulation does not apply to farmers, farm labourers or houseworkers. Under the Order, the Minister of Immigration and Colonization may admit any contract labourer if satisfied that his labour or service is required in Canada. In August, 1930, having regard to the world depression in business and industry, immigration from Europe was suspended except in the case of: (a) practical farmers with sufficient capital to immediately establish and maintain themselves upon farms in Canada, and (b) wives and children under 18 years of age of family heads already established in this country. No change was made in the regulations applicable to immigrants from the British Isles or the United States, but the Department of Immigration and Colonization discontinued solicitation of immigrants generally, and requires that those applying for admission, unless farmers with capital, shall have sufficient means to maintain themselves until employment is secured.

## CHAPTER VII.—SURVEY OF PRODUCTION.

**The Definition of "Production".**—The term "production" is used here in its popular acceptance, *i.e.*, as including such processes as the growing of crops, extraction of minerals, capture of fish, conversion of water power into electrical current, manufacturing, etc.—in economic phrase, the creation of "form utilities". It does not include various activities which are no less "productive" in a broad and strictly economic sense, such as (a) transportation, refrigeration, merchandising, etc., which add to commodities already worked up into form the further utilities of "place", "time" and "possession", and (b) personal and professional services, such as those of the teacher and the doctor, which are not concerned with commodities at all, but are nevertheless essential to any civilized society—representing, in economic language, the creation of "service utilities".

As showing the importance of these latter activities, it may be pointed out, for comparison with the figures in the accompanying tables, that steam railway gross earnings in 1928, the latest year for which complete statistics of production are available, amounted to \$563,732,259, street railway gross earnings to \$55,632,761, and telephone and telegraph earnings to \$69,897,887, all of which, from a broad point of view, may be considered as "production". It may be further noted that of 3,173,169 persons ten years of age and over employed in 1921 in gainful occupations in Canada, 247,410 were engaged in transportation, 310,439 in trade, 61,301 in finance, 214,452 in domestic and personal service, 181,391 in professional service, 94,541 in public administration and 7,807 in recreational service, a total of 1,117,341 or 35 p.c. of the whole. In other words, only about 65 p.c. of usefully and gainfully employed persons are engaged in "production", according to the definition adopted in the present statement. Since the remaining 35 p.c. are probably as "productive", in the broader sense of the term, as the 65 p.c., we may therefore add seven-thirteenths to the total to obtain a rough estimate of the value in dollars of the total productive activity of the Canadian people, according to the economist's definition of production, which approximates to the concept of national income. Since the net value of the commodities produced in Canada, according to the general survey of production, which follows as Table I, and the figures published for earlier years in the 1929 and 1930 Year Books totalled \$2,939,000,000 in 1922, \$3,051,000,000 in 1923, \$3,018,000,000 in 1924, \$3,365,000,000 in 1925, \$3,640,000,000 in 1926, \$3,902,000,000 in 1927, and \$4,123,000,000 in 1928, the grand total money value of the productive activities of the gainfully occupied population of Canada may be estimated at \$4,520,000,000 in 1922, \$4,696,000,000 in 1923, \$4,643,000,000 in 1924, \$5,178,000,000 in 1925, \$5,600,000,000 in 1926, \$6,010,000,000 in 1927 and \$6,342,000,000 in 1928.

**The Relation of "Production" to National Income.**—The above figures of total production are necessarily larger than the national income, since a considerable deduction must be made therefrom for the purpose of keeping the national capital engaged in production unimpaired, before the remainder can be placed at the disposal of individuals. Machinery that is either obsolete or obsolescent must be replaced, buildings and other equipment kept in a good state of repair, etc. In other words, full and adequate provision must be made out of the year's products for the annual depreciation of the equipment used in their production before any part of that product can be allocated to individuals. On this basis, probably not more than 90 p.c. of the annual value of

the productive activities of the Dominion is annually available for consumption as the national income. The national income of the people of Canada in 1928 was thus in the neighbourhood of \$5,800,000,000. (See also entry "National Income" in the index.)

**Difficulties in Differentiating between the Branches of Production.**—

There is an increasing demand for a survey of production that will differentiate as between the more important branches and at the same time give a purview of the whole which will be free from overlapping. This is somewhat difficult to present with clearness, in view of the varying definitions that attach to industrial groups from different points of view. For example, brick, tile and cement are frequently included in "mineral production" as being the first finished products of commercial value resulting from the productive process; frequently, however, they are regarded as "manufactures" in view of the nature of the productive process—either allocation being correct according to the point of view. The tables show the total values of all commodities produced in Canada in the latest years; the values are given as in the producers' hands.

**"Gross" and "Net" Production.**—The values of products are shown under two headings, namely, "gross" and "net" "Gross" production shows the total value of all the individual commodities produced under a particular heading. "Net" production represents an attempt to eliminate the value of materials consumed in the productive process. For purposes of ordinary economic discussion, the net figures should be used in preference to the gross, because of the large amount of duplication which the latter includes on account of the necessity of making the individual items self-contained.

**Interpretation of Items.**—The primary industries of agriculture, fishing, forestry, mining, etc., are separated in this statement from the secondary or manufacturing processes. The close association between the two and the overlappings that are apt to occur have already been pointed out. As further explaining the procedure that has been followed in drawing up the tables, the following notes are appended:—

*Agriculture.*—Dairy factories are included under this heading; farm dairy products (gross) include the milk consumed whole and sold to dairy factories, and the butter, etc. made on the farm.

*Forestry.*—Forestry production is understood to consist of the operations in the woods as well as those of sawmills and pulp-mills, the latter being limited to the making of first products such as lumber, lath, shingles, pulp and cooperage stock.

*Fur Production.*—The item of fur production is limited to wild-life production. To obtain a total of the peltries produced in Canada, it would be necessary to add to the wild-life output the production of pelts on fur farms.

*Mineral Production.*—Under mineral production all items are included that might be allocated to "manufactures" Considerable overlapping exists as between "mineral production" on the one hand and "manufactures" on the other. The Bureau presents the detailed statistics of these groups (the chief of which are smelters, brick, cement, lime, etc.) in its reports on mineral production, since their product is the first to which a commercial value is ordinarily assigned.

*Total Manufactures.*—The figure given for this heading is a comprehensive one including the several items listed with the extractive industries above, though also frequently regarded as "manufactures", *viz.*, dairy

factories, fish-canning and curing, sawmills, pulp-mills, shipbuilding and certain mineral industries. This duplication is eliminated from the grand totals as well as from "manufactures, *n.e.s.*", listed in Table 5.

*Manufactures, n.e.s.*—The figures given for manufactures, *n.e.s.*, are exclusive of the value of the products of all manufacturing processes closely associated with the extractive industries that are frequently included under this heading; hence it is obvious that the grand total is equivalent to an amount obtained by adding the values for manufactures, *n.e.s.*, and for the other eight divisions.

### Section 1.—The Leading Branches of Production in 1928.

The net value of Canadian production was greater in 1928 than in any other year on record, being 6·8 p.c. more than in 1927 and about 14 p.c. more than in 1920. The marked increase in 1928 is accounted for by the active industrial conditions evident in many lines throughout the year. The net value of commodities produced in Canada during 1928 was \$4,122,500,000, compared with \$3,901,500,000 in 1927 and \$3,640,000,000 in 1926.

**The Main Branches of Production in 1928.**—If "net" production is taken as signifying the value left in the producers' hands after the elimination of the value of the materials consumed in the production process, all of the branches of production except agriculture and trapping showed increases in the net production of 1928 as compared with 1927, while the decline in trapping was insignificant. A substantial gain was recorded in construction, where net output in 1928 was \$319,000,000, an increase of \$35,900,000 or 13 p.c. Manufacturing, however, took first place in absolute increase, as the net output of the manufacturing industries in 1928 was \$1,819,000,000 as against \$1,636,000,000 in 1927, an increase of \$183,000,000 or 11 p.c. Mineral production was valued at \$275,000,000 as compared with \$247,000,000 in 1927, an increase of \$28,000,000 or 11 p.c. The decline in agricultural production was nearly \$22,000,000 or 1·4 p.c., the total for 1928 being \$1,501,000,000. An important increase took place in electric power, where the gain was 8 p.c. A slight decrease was shown in trapping, while in the custom and repair industries, estimated for purposes of comparison, an appreciable increase was indicated.

**Relative Importance of the Several Branches of Production.**—In view of the increase in manufacturing production in 1928, the lead of manufactures over agriculture, which was 7·5 p.c. in 1927, was increased to 21 p.c. in 1928. Agricultural production in 1928 represented 36·4 p.c. of the net output of all branches, while the value added by the manufacturing processes in 1928 was 44·1 p.c. of the total net production. However, a number of the industries listed under manufactures are also included in the several extractive industries with which they are associated. When this duplication is eliminated, the output of the manufacturing industries not elsewhere included was 34·9 p.c. of the total net production of 1928. Forestry held third place with a percentage of 7·9 p.c. Construction was in fourth place, with a percentage of 7·7 p.c., followed by mining, with a percentage of 6·7 p.c.; in 1927 mining represented 6·3 p.c. and forestry 8·0 p.c. The electric power group had an output of 2·7 p.c. of the total net production. Repair work, fisheries and trapping followed, with percentages in 1928 of 2·0, 1·3 and 0·4, respectively.

A summary of gross and net production is given by industries for the years from 1924 to 1928 in Table 1; a detailed itemized statement of the net value of production in 1926, 1927 and 1928 is given in Table 2.

<sup>1</sup> The gross value of agricultural production here exceeds that given on page 215 in Chapter VIII of this edition of the Year Book, by the amount paid to patrons of dairy factories for milk and cream.

<sup>2</sup> Statistics of custom and repair industries were not collected after 1922, and the totals for that year were repeated in 1923 and 1924. The totals for 1925 to 1928 were estimated according to the percentage change in the data for manufacturing.

<sup>3</sup> The item "manufactures" includes dairy factories, sawmills, pulp-mills, fish-canning and curing, shipbuilding, electric power and certain mineral industries also included under other headings. This duplication, amounting in 1924 to a gross of \$503,446,583 and a net of \$279,310,956, in 1925 to a gross of \$603,132,346 and a net of \$324,348,686, in 1926 to a gross of \$650,369,405 and a net of \$315,033,730, in 1927 to a gross of \$677,458,550 and a net of \$345,247,482, and in 1928 to a gross of \$730,780,507 and a net of \$382,078,720 is eliminated from the grand totals.

<sup>4</sup> The proportion of manufactures, freed from all duplication (as explained in note 3) to the grand total of net production was 34.86 p.c., and under like conditions the proportion of all secondary production to the grand total of net production was 44.61 p.c.

<sup>5</sup> This figure exceeds by \$26,534,207 that given in the Manufactures chapter as the net production of manufactures in 1926. This difference is due to certain duplications in the central electric station industry not having been eliminated when the 1926 figures were first compiled.

## 2.—Detailed Itemized Statement of the Net Values of Production in Canada during 1926, 1927 and 1928.

Classification.	Net Production.		
	1926.	1927.	1928.
<b>Agriculture—Field Husbandry—</b>

Miscellaneous including central electric stations.....	155,303,597	148,500,166	162,766,668
Totals, Manufactures <sup>4</sup> .....	1,519,179,246 <sup>4</sup>	1,635,923,936	1,819,046,025
Totals, Secondary Production.....	1,839,010,569	1,993,369,936	2,220,692,025
<b>Grand Totals.....</b>	<b>3,649,355,665</b>	<b>3,991,565,288</b>	<b>4,122,509,582</b>

<sup>4</sup> The item "total manufactures" includes the following industries which are also shown elsewhere, the amount of the duplication being deducted from the grand totals.

Dairy factories.....	31,950,139	33,176,852	34,793,938
Sawmills and pulp-mills.....	108,408,256	106,283,436	110,703,209
Fish-canning and curing.....	14,156,635	12,719,763	15,688,965
Shipbuilding.....	8,817,323	10,944,127	12,342,892
Mineral industries.....	62,817,544	78,090,007	96,232,897
Electric power.....	88,963,733	104,033,297	112,326,819
Totals.....	315,083,730	345,247,482	382,078,720
Totals, Manufactures (with duplications eliminated).....	1,204,095,516	1,290,676,454	1,436,967,305

<sup>4</sup> This amount is greater by \$26,534,207 than the total elsewhere published as the net production of manufactures in 1926. This difference is due to certain duplications in the central electric station industry not having been eliminated when the 1926 figures were first compiled.

### Section 2.—The Provincial Distribution of Production.

During the post-war period of recovery, since 1921, the trend of net production has exhibited considerable variation in the different provinces. In Prince Edward Island, the lowest point was reached in 1922, followed by substantial recovery from 1924 to 1926, with moderate declines in 1927 and 1928. The depression in Nova Scotia was maintained from 1920 to 1925 but production in 1926, which was fairly well maintained in 1927, showed a marked reversal of the trend in preceding years. The increase in net production of about 21 p.c. in 1928 was significant when viewed in relation to this previous advance. The trend in New Brunswick showed increases in 1925 and 1926, with a slight recession in 1927 and a further decrease in 1928 offsetting most of the gain since 1924.

In Quebec the decline in 1921 was very severe. During the subsequent period the chief features were a substantial gain in 1923, a minor recession in 1924 and a marked recovery in 1925, continued in 1926, 1927 and 1928. The decline of 1921 was also very severe in Ontario, but since that year continuous increases have been recorded. The increase in 1924 over the preceding year was very slight, but aside from this partial interruption, a steady rate of increase was maintained from 1922 to 1928.

The special feature in the case of Manitoba was the marked increase in 1924 over 1923. The increase of 1926 was followed by a decline in 1927 but the 1928 figure showed an increase of nearly 18 p.c. While a decline was shown in Saskatchewan in 1921, the total of 1920 was exceeded in 1922 and again in 1925 since when, except for a temporary decline in 1926, the gross value of production has shown very satisfactory increases. High points in the net value of production in Alberta were attained in 1923 and 1927 but in 1928 there was a decline of about 10 p.c. In British Columbia, steady increases were shown during the recovery from 1922 to 1926, the upward trend being fairly continuous. In 1927 there was a moderate increase and the 1928 figures established a new high.

The values of gross and net production are given by provinces for the years 1924 to 1928 in Table 3. It will be seen that in the four years the total net production of the Dominion increased from \$3,018,182,081 to \$4,122,509,882, or by \$1,104,327,801, which is 36.6 p.c.

3.—Gross and Net Value of Production in Canada, by Provinces, 1924-1928.

**Relative Production in Different Provinces, 1928.**—It will be seen from Table 3 that Ontario and Quebec held first and second places among the provinces in the net value of production in 1928, and that the percentage of production of each of these provinces to the total was higher than in 1927. The net output in the two provinces during 1928 represented 38.2 p.c. and 23.8 p.c. of the total respectively, compared with 37.7 p.c. and 23.6 p.c. in 1927. Saskatchewan held third place with a percentage of 10.0 in 1928, compared with 10.4 in 1927. Alberta occupied fourth place in 1928 with a percentage of 8.3

while British Columbia was fifth with a percentage of 7.8 and Manitoba sixth with a percentage of 5.7. Nova Scotia, New Brunswick and Prince Edward Island were next in importance in the order named, with percentages of 3.5, 2.1 and 0.6, respectively. The Yukon Territory contributed 0.1 p.c. to the total.

### Section 3.—Leading Branches of Production in each Province, 1928.

**The Maritime Provinces.**—Production in *Nova Scotia* in 1928 was principally in the manufacturing, agricultural and mining industries, which were accountable for 28.3 p.c., 25.4 p.c. and 21.2 p.c. respectively of the net output of the province; the contribution of manufactures, aside from processes carried on in connection with the extractive industries, was 28.3 p.c. In *New Brunswick* agriculture took first place as a producer of new wealth, the proportion being 35.0 p.c., while forestry furnished an output of 26.2 p.c. Manufacturing occupied third place with an output of 20.0 p.c., followed by fisheries with 5.9 p.c. and construction with 6.0 p.c. Agriculture, including fur farming contributed 83.8 p.c. of the net output of *Prince Edward Island*. Increases in seven branches of production in the Maritime Provinces, counterbalanced decreases in forestry and trapping. The net result was that the value of production was 9.7 p.c. greater in 1928 than in the preceding year, while Nova Scotia alone showed an increase of nearly 21 p.c.

**Quebec.**—The product derived from manufactures in Quebec was greater than that from any other industry. Manufactures, aside from the output of establishments associated with the extractive industries, contributed 45.8 p.c., while the net output of the entire manufacturing division, referred to the same base, was 57.4 p.c. Agriculture, with 23.3 p.c., forestry with 10.8 p.c. and construction with 10.3 p.c. occupied second, third and fourth places. With the exception of agriculture, increases were shown in each of the branches of production in 1928 as compared with 1927. The increases over 1927 in manufactures and in the generation of electrical energy reached 9 p.c. and 7 p.c., respectively.

**Ontario.**—The net production from the manufactures of Ontario, when stripped of all duplication, was \$775,000,000 or 49.3 p.c. of the total, compared with \$393,000,000 or 25.6 p.c. from agriculture. Construction held third place with 7.9 p.c. of the total, and mining followed with 6.3 p.c. The forestry output was 5.5 p.c. of the net production of the province. Increases over 1927 were achieved in all the main divisions of production except construction. The net output of manufactures increased by \$97,000,000, and agriculture showed a gain of \$2,698,000. Except in forestry and fisheries, Ontario led the other provinces and divisions in the productivity of the main branches of industry. The province yielded precedence in forestry operations to Quebec alone, while British Columbia, Nova Scotia and New Brunswick obtained a greater income from fisheries. About 50 p.c. of the net manufacturing output of the country was contributed by Ontario, and 26 p.c. of the agricultural income was derived from the same source.

**The Prairie Provinces.**—About 88.2 p.c. of the output of *Saskatchewan* was obtained from farming, which also largely predominated as a producer of new wealth in *Manitoba* and *Alberta*, the proportions being 57.6 p.c. and 72.7 p.c., respectively. Mineral production, chiefly coal mining, held second place in

Alberta, with an output of 9.5 p.c. of the provincial total. Manufacturing was second in importance in Manitoba, representing 24.9 p.c. of the provincial total. Larger grain yields accounted for the increase in the net production of Manitoba, while agricultural income showed a decline in Saskatchewan and Alberta. Despite the decline in Alberta, the net value of production in the three Prairie Provinces showed an increase over 1927 of \$5,693,000 or 0.5 p.c.

**British Columbia.**—The net production from manufacturing in British Columbia during 1928 was about \$133,700,000, but over 58 p.c. of this amount was derived from manufacturing processes closely associated with the primary industries, especially logging and fishing. The remainder, \$55,800,000, was 16.9 p.c. of the net output of the province. Aside from manufacturing, forestry constituted the chief source of new wealth—about 26 p.c. of the total output of the province was contributed by the forest. Mining and farming followed in order, with percentages of 20.1 and 14.1, respectively. The general increase in the net output of production in the province during 1928 indicated that the improvement in business conditions was well distributed throughout the main branches of industry.

Details showing the gross and net values of production, by industries, in the various provinces in 1928, together with percentages, are given in Tables 4 and 5.

4.—Gross and Net Values of Production in Canada, by Industries and Provinces, 1928.

NOTE.—For Dominion totals, see Tables 1 and 2.

<sup>1</sup>The duplication between the primary industries and manufactures deducted in computing the grand totals was as follows:—Prince Edward Island, \$679,416; Nova Scotia, \$11,285,012; New Brunswick, \$13,506,983; Quebec, \$121,470,575; Ontario, \$157,802,460; Manitoba, \$14,418,268; Saskatchewan, \$7,542,731; Alberta, \$10,752,788; British Columbia, \$74,997,881; Canada, \$412,456,114.

<sup>2</sup>Includes the trapping industry of the Northwest Territories.

## CHAPTER VIII.—AGRICULTURE.

Agriculture, including stock raising and horticulture, is the chief single industry of the Canadian people, employing, in 1921, 32·8 p.c. of the total gainfully occupied population and 33·16 p.c. or nearly two-fifths of the gainfully occupied males. In addition, it provides the raw material for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement on the occupied and the available agricultural lands in Canada, see p. 39 of this volume.

This chapter of the present volume begins with a statement of current governmental activities in connection with agriculture, including those of the Dominion and Provincial Experimental Stations. Then come statistics of agriculture, including agricultural revenue and wealth, field crops, farm live stock and poultry, fur farming, dairying, fruit, special crops, farm labour and wages, prices and miscellaneous. Since Canadian exports of agricultural commodities are sold in the world market, the chapter closes with a review of the world's statistics of agriculture, compiled from the publications of the International Institute of Agriculture.

The Canada Year Book, 1924, contained, on pages 186 to 191, an article on the "Development of Agriculture in Canada", by Dr. J. H. Grisdale, Deputy Minister, Department of Agriculture, Ottawa. To this the interested reader is referred.

### Section I.—The Government in Relation to Agriculture.

It is provided in section 95 of the British North America Act that "in each province the Legislature may make laws in relation to agriculture in the province"; it is also "declared that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the Legislature of a province relative to agriculture shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada".

As a result of this provision, there exist at the present time Departments of Agriculture with Ministers of Agriculture at their heads, both in the Dominion and in each of the nine provinces, though in most provinces the portfolio of agriculture is combined with one or more other portfolios in the hands of a single Minister. A short sketch of the functions of the various Departments follows.

#### Subsection 1.—The Dominion Department of Agriculture.

The Dominion Department of Agriculture was constituted in 1868 under authority of 31 Vict., c. 53, with numerous functions that were by no means purely agricultural, including (1) agriculture; (2) immigration and emigration; (3) public health and quarantine; (4) the marine and immigrant hospital at Quebec; (5) arts and manufactures; (6) the census, statistics and the registration of statistics; (7) patents of invention; (8) copyright; (9) industrial designs and trade marks.

In the course of time the purely agricultural work of the Department came to demand greater attention; the non-agricultural functions were one by one entrusted to other Departments of the Government, while specialization became the order of the day within the Department of Agriculture itself. At the present

time it includes the following branches:—(1) Experimental Farms; (2) Dairy and Cold Storage; (3) Health of Animals; (4) Live Stock; (5) Seed; (6) Entomological; (7) Fruit; (8) Publications; (9) Agricultural Economics.

For the Acts of Parliament administered by the Dominion Department of Agriculture, see in the index "Acts of Parliament administered by Dominion Government Departments". For the publications of the Department, covering a wide field of information, see in the index the entry "Publications of Dominion Departments"

### Subsection 2.—Provincial Departments of Agriculture.

*Prince Edward Island.*—The Department of Agriculture is presided over by the Minister, and the staff consists of a Deputy Minister, a Live Stock Superintendent, a Superintendent of Women's Institutes and a Dairy Superintendent. Assistance is given in co-operative marketing, promoting the live stock industry and encouraging exhibitions, the formation of boys' and girls' clubs and the welfare of agriculture generally.

*Nova Scotia.*—Agriculture in the province of Nova Scotia is administered by the Department of Agriculture. The Department is divided into twenty main branches:—(1) administration, (2) agricultural college, (3) demonstration farm, (4) demonstration poultry plant, (5) poultry, (6) government creameries, (7) government cheese factory, (8) dairying, (9) horticulture, (10) apiculture, (11) live stock, (12) entomology, (13) botany, (14) soils and fertilizers, (15) agricultural associations and societies, (16) exhibitions, (17) extension service, (18) women's institutes, (19) field crops, (20) marketing. During the past year the Information Branch of the Department of Agriculture has been broadcasting over CHNS (the radio station of the *Halifax Herald*) a series of radio talks on timely agricultural subjects by experts in the various lines of technical agriculture.

*New Brunswick.*—The branches of the Department of Agriculture of New Brunswick are as follows:—(1) industry, immigration and farm settlement, (2) elementary agricultural education, (3) agricultural societies and live stock, (4) dairying, (5) horticulture, (6) soils and crops, (7) poultry, (8) bee-keeping, (9) women's institutes, (10) agricultural representatives.

*Quebec.*—The Quebec Department of Agriculture has been reorganized during the course of the year and now comprises a certain number of branches and sections as follows:—*Agricultural Economics Branch*, including the following sections:—publicity; co-operation, markets and statistics; demonstration farms; agricultural surveys; field husbandry; drainage, home economics, bee-keeping and sugar making; agricultural societies. *Live Stock Branch*, including the following sections:—dairy; veterinary; swine; sheep; horses; poultry; farm buildings. *Horticulture Branch*, including the following sections:—fruit growing; truck crops; vegetable canning; flower growing; phytopathology; entomology; botany. *Agricultural Representatives Branch*:—78 agricultural representatives' offices are now established in rural counties of Quebec. The above organizations are all under one General Director of Branches.

There are other activities which are not included in the above organization, such as:—agricultural education; agricultural merit competition; provincial dairy school.

*Ontario.*—The Ontario Department of Agriculture includes the following branches:—agricultural and horticultural societies, live stock, institutes, dairy, fruit, crops, co-operation and markets, statistics and publications, agricultural representatives, colonization and immigration. The Department conducts the Ontario Agricultural College, the Ontario Veterinary College, and the Experimental Farm at Guelph, the Agricultural School at Kemptville, the Ridgetown Experimental Farm, the Horticultural Experimental Station at Vineland, and the Demonstration Farm at New Liskeard.

*Manitoba.*—The Manitoba Department of Agriculture includes an agricultural extension service, a dairy branch, a publications and statistics branch, a live-stock branch, a game branch, a co-operative marketing branch, and a weeds branch. It also conducts the Manitoba branch of the Employment Service of Canada.

*Saskatchewan.*—The work of the Department of Agriculture is chiefly administrative. It includes the following principal branches:—live stock, field crops, dairy, bureau of statistics, co-operative organization and markets and the debt adjustment bureau. The live-stock branch provides the organization for examining and licensing stallions, purchasing and selling cattle, sheep and hogs to farmers on credit terms, and registering brands for live stock. Purebred sire areas are being created under statutory authority in order to eliminate undesirable sires and improve the quality of live stock. The poultry industry is promoted through the flock culling service, the turkey grading service and the approved hatchery policy. The field crops branch aids in promoting better crops and providing control measures for suppressing insect and weed pests. The dairy branch directs the grading of cream at all the creameries, promotes herd improvement through cow-testing and administers the provisions of the Dairy Products Act with respect to licensing creamery operators, cream testers, and the bonding of creameries. The Bureau of Statistics, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers data annually respecting the crops and live stock of the province. The co-operative organization and markets branch grants charters to co-operative associations under the Co-operative Associations Act, promotes co-operative stock shipping and poultry marketing and maintains an exchange service by a weekly news letter through which buyer and seller are brought together. An apiary division has been organized to assist bee-keeping which is developing substantially. Agricultural societies are organized by the Department and grants are paid through the Department, while direction of the activities of societies is centred in the College of Agriculture of the University of Saskatchewan.

*Alberta.*—The Alberta Department conducts the following main services:—agricultural schools and demonstration farms, field crops, dairy, live stock, veterinary, poultry, apiaries, fairs and institutes, branding, game regulation, women's bureau service, provincial publicity bureau, crop reports and statistics, marketing services, district agriculturists and moving picture bureau, also a branch looking after the fur farm leases of the province.

The attention of the Department has recently been given to the development of apiculture and a Provincial Apiarist has been appointed. Increased encouragement is being given to the live-stock industry through the "Pure-

bred Bulls Purchase Act." Increasing efforts are being made to cope with the weed menace and encouragement is being given to the sale and production of registered seed. The poultry industry is also receiving increased attention. Money is expended each summer in connection with soil survey work, and effort is being directed towards the improvement of agricultural machinery.

*British Columbia.*—On April 1, 1930, the Department of Agriculture was reorganized into five main divisions, as follows: executive, plant industry, animal industry, markets, colonization and land settlement. In charge of these main divisions are officials who formerly directed a number of smaller branches.

The district agriculturist system has been reorganized with eight district agriculturists under the Director of Plant Industry, and eight under the Director of Animal Industry.

Some of the special lines of work conducted by the Department during the year were: fruit and vegetable trial plots, in which improved varieties of shipping and canning strawberries were tried out; fertilizer demonstration work, with cannery peas. In the Livestock Section, special work has been done with animal parasites, also herd improvement in co-operation with cow-testing associations, etc.

For the publications of the provincial Departments of Agriculture, see in the index the entry "Publications of Provincial Governments"

### **Subsection 3.—Dominion and Provincial Agricultural Experimental Stations.**

Amongst the most important contributions of Canadian Governments to the development of agriculture throughout the country, is the maintenance of agricultural experimental stations, where research work in both plant and animal breeding and adaptation to climatic conditions is carried on. Already this work has had a profound effect in the improvement of Canadian agriculture. The introduction during recent years of Marquis wheat is an outstanding example, and it is of interest to note that other newer wheats, particularly Garnet, also originated by the experimental farms, may in the near future replace the Marquis in large areas. Among the earlier experiments undertaken, the results of which have passed permanently into good Canadian farm practice, may be mentioned those relating to early seeding, summer fallowing, the use of farmyard manure, the fertilizing value of clover crops and the introduction of suitable grasses and clovers. Both the common red clover and alfalfa now enter into rotations as the result of experiments and efforts to obtain hardy strains and to discover means of resistance to winter-killing. Further experiments with earlier-ripening and drought-resisting cereals are now being carried on, each new discovery increasing the cultivable area of Canada. Other researches relate to the production of frost-resisting fruit trees for the Prairie Provinces. This research work has already had a profoundly ameliorating effect upon Canadian agriculture. Statements regarding the work now under way at the Dominion Experimental Farms and Stations and at Provincial Agricultural Colleges and Experimental Stations follow.

#### **(A) Dominion Experimental Farms and Stations.<sup>1</sup>**

Inaugurated in 1886 by Act of Parliament (49 Vict., c. 23), the Dominion Experimental Farms system was at first made up of the Central Farm at Ottawa

<sup>1</sup> Revised by Dr. Frank T. Shutt, Assistant Director, Experimental Farms Branch, Ottawa.

and four branch farms:—one at Nappan, Nova Scotia, for the Maritime Provinces; one at Brandon for Manitoba; one at Indian Head for the Northwest Territories; and one at Agassiz for British Columbia.

The opening up and rapid settlement of the Dominion have led to a corresponding increase in the number of experimental farms and stations.<sup>1</sup> These, with an experimental fox ranch, now total 27, with a total acreage of 14,764.70, as compared with the original five farms, with a total acreage of 3,472, established in 1886. The following table shows the present number of farms and stations, with the acreage of each and the date of establishment.

DOMINION EXPERIMENTAL FARMS AND STATIONS, 1930.

Farm or Station.	Province.	Acreage.	Date Established.
Central Farm, Ottawa.....	Ontario	825.5	1886
Kapuskasing Station.....	Ontario	1,270	1910
Harrow Station.....	Ontario	198.3	1909
Charlottetown Station.....	P. E. I.	173.1	1909
Summerside Fox Ranch.....	P. E. I.	12	1925
Nappan Farm.....	Nova Scotia.....	465	1886
Kentville Station.....	Nova Scotia.....	452.9	1912
Fredericton.....	New Brunswick.....	525	1912
Ste. Anne de la Pocatière Station.....	Quebec.....	251	1911
Cap Rouge Station.....	Quebec.....	345.3	1911
Lennoxville Station.....	Quebec.....	600	1914
Farnham Station.....	Quebec.....	95	1912
La Ferme Station.....	Quebec.....	1,200	1916
L'Assomption Station.....	Quebec.....	160	1928
Brandon Farm.....	Manitoba.....	842	1886
Morden Station.....	Manitoba.....	614	1915

Rosthern Station.....	Saskatchewan.....	650	1908
Scott Station.....	Saskatchewan.....	520	1910
Swift Current Station.....	Saskatchewan.....	800	1920
Lacombe Station.....	Alberta.....	396	1907
Lethbridge Station.....	Alberta.....	500	1906
Invermere Station.....	British Columbia.....	49.6	1912
Windsor Station.....	British Columbia.....	425	1923
Summerland Station.....	British Columbia.....	545	1914
Agassiz Farm.....	British Columbia.....	1,400	1886
Sidney Station, Vancouver Island.....	British Columbia.....	130	1912

In addition there are eight sub-stations, viz.:—Wainwright, Fort Vermilion and Beaverlodge, Alberta; Fort Smith, Resolution, Providence and Good Hope, Northwest Territories; Horse Farm, St. Joachim (operated from Cap Rouge), Quebec. There is also the Dominion Range Experiment Station at Manyberries, Alberta. Experimental work under the Division of Illustration Stations is conducted on 12 farms in Prince Edward Island, 15 in Nova Scotia, 19 in New Brunswick, 63 in Quebec, 19 in Ontario, 14 in Manitoba, 31 in Saskatchewan, 19 in Alberta and 15 in British Columbia. Small experimental plots are also being operated at several points along the line of the Hudson Bay Railway.

*Organization of the System of Experimental Farms.*—The Central Farm at Ottawa, as its name implies, is the centre or headquarters of the system. Thereat are stationed the Director, having control and general supervision of the whole, and the chief technical officers, each having charge of his special line of work, both at the Central Farm and the branch farms. At Ottawa, the policy to be

<sup>1</sup>The five original farms established in 1886 are known as "Experimental Farms"; those added since are styled "Experimental Stations". No distinction in the work is implied by these titles.

pursued throughout the system is settled by agreement after discussion by the Director, the technical officers, and the superintendents on whose branch farms the work is to be conducted. The technical staff at Ottawa supervises the actual experimental work at the Central Farm. At the branches, the superintendents are in charge of the carrying out of the various lines of general experiment, and also conduct experiments of local importance.

The Divisions at Ottawa, which represent the different lines of work carried on throughout the system, and have each a technical officer in charge, are as follows:—(1) Animal Husbandry; (2) Bacteriology; (3) Bees; (4) Botany; (5) Cereals; (6) Chemistry; (7) Extension and Publicity; (8) Economic Fibre Production; (9) Field Husbandry; (10) Forage Plants; (11) Horticulture; (12) Illustration Stations; (13) Poultry and (14) Tobacco. Briefly the main lines of the work of these Divisions are as follows:—

*Animal Husbandry.*—This Division engages in work with beef cattle, dairy cattle and dairying, horses, sheep and swine, and undertakes experiments in the breeding, feeding, housing and management of each of these classes of live stock. Under this Division also is operated the work in breeding cattle and hybrid buffalo at Wainwright, Alberta.

*Bacteriology.*—The work of this Division is of two types, routine and research. The former includes the bacteriological analysis of water, milk, foods and feeding stuffs, soils and soil condiments, and the manufacture and furnishing of nitro-cultures for legume growing. The main work is of an investigational nature, in which close co-operation with the other Divisions is maintained in research work having a bacteriological bearing.

*Botany.*—The work of this Division falls into two classes, economic botany and plant pathology. The former includes the study of medicinal, poisonous and economic plants. Different varieties and strains of fibre plants are also studied and special attention is given to the life history and control of weeds. The Division also has charge of the arboretum at the Central Farm. In plant pathology, in addition to the pathological laboratory at Ottawa, there are laboratories at Charlottetown, P.E.I.; Kentville, N.S.; Fredericton, N.B.; Ste. Anne de la Pocatière, Que.; St. Catharines, Ont.; Summerland and Saanichton, B.C. In addition, three large laboratories for the study of rusts and other grain diseases are maintained at Edmonton, Alta., Saskatoon, Sask. and Winnipeg, Man. Investigations are being conducted into diseases affecting forest trees, fruit trees, cereals, small fruits, potatoes, vegetables and tobaccos.

*Cereals.*—In the Cereal Division, the work comprises the production, by cross-breeding and selection, of new varieties of grains and the testing of these as to their suitability for various parts of Canada. All approved varieties are made available for propagation by farmers. Among the more important varieties produced in this Division and now widely grown in Canada are Marquis and Huron wheats, Banner Ottawa 49 oats, and Arthur peas. Two interesting varieties originated by this Division are the Garnet and Reward wheats, now being tested by farmers; they ripen not quite as early as Prelude but yield better. The Division also carries on extensive milling and baking tests. The expansion of breeding work especially for disease resistance, and the creation of an extensive plan of co-operative experiments with farmers, are two developments of recent years.

*Chemistry.*—The work of the Division of Chemistry comprises the analysis of fodders and feeding stuffs, fertilizers, soils, well waters, insecticides, fungicides, etc. It also assists other Divisions in chemical problems and does a large amount of investigational and analytical work for other Branches and Departments. Field tests with various kinds and quantities of fertilizers are carried on by this Division at a number of the branch farms and stations.

*Extension and Publicity.*—This Division acts as a connecting link between the experimental farms and the farmer, by making the work of the farms as widely known as possible. Two chief means used are exhibits at as many fairs as possible each year and extension of the departmental mailing lists.

*Economic Fibre Plants.*—The Division studies the areas in Canada suitable for fibre production, the best varieties and strains of seed of fibre plants (flax and hemp), cultural methods, harvesting, retting and scutching processes, etc. Chiefly for demonstrational purposes, the Division is conducting extensive co-operative trials at Forest, Ont., Ste. Anne de la Pocatière, Que., Kentville and Lunenburg, N.S.

*Field Husbandry.*—This Division applies, under field conditions, the results obtained by other Divisions directly engaged in scientific research. Some of the main lines of work under way are tests of fertilizers, moisture requirements of various crops, methods of drainage, rotations and cultural methods. Data of cost of production of field crops are gathered in connection with this work. Range land investigations are also under way.

*Forage Plants.*—The Division has for its work the originating and variety testing of grasses, leguminous forage plants, field roots and Indian corn; plant breeding with these; the collection of genera and species likely to be of value as forage plants; the study of the possibilities and methods of growing root seed, including sugar beets, in Canada, and the distribution for trial of seed of varieties newly obtained and not available commercially.

*Horticulture.*—The work of the Division of Horticulture falls under four main heads:—vegetable gardening, orcharding and small fruits, ornamental gardening and plant breeding. In the three first named, the testing of varieties is a main feature, with a view to ascertaining the hardiest, earliest, best-yielding and most disease-resistant sorts. In plant breeding, the aim is the improvement of existing sorts by cross-breeding. Greenhouse work is also given special attention at Ottawa. Canning experiments and demonstrations are carried on. Much co-operative work with farmers in orchard experiments, blueberry culture, etc., is under way.

*Illustration Stations.*—This Division forms another connecting link between the experimental farms and the farmer. The stations are now 207 in number. Each is located on the farm of a representative farmer, who does the work according to directions framed to illustrate the best rotations, the best varieties of crops and the best cultural methods, as determined by the work of years on the experimental farms.

*Poultry.*—The scope of the work of the Poultry Division has been greatly extended during the last few years. It now covers the following main lines of investigation:—artificial and natural incubation, poultry breeding, systems of

breeding and rearing, production of heavy-laying strains, feeding for eggs and table, and housing of poultry. Poultry survey work, *i.e.*, the endeavour to get groups of farmers in various localities to keep accurate records of their poultry costs and returns, is already showing results in the better housing, breeding and care of the farm flock. Egg-laying contests and registration work are carried on. Investigations in poultry diseases are extensively conducted in co-operation with the Health of Animals Branch.

*Tobacco.*—The Tobacco Division deals with the breeding, variety tests and cultural methods, the warehousing and marketing of tobacco. A complete analysis of the soils of the tobacco-producing regions of Canada is being made. During the growing season, inspectors examine the tobacco fields of as many growers as possible, with a view to suggesting the best cultural methods and means of combating diseases and insect pests. Co-operative trials amongst farmers are extensively conducted.

In addition to the work done by the Divisions of Extension and Publicity and Illustration Stations, the results of the work of the experimental farms are made available to the farmer:—(1) by correspondence; (2) by publications; (3) by "Seasonable Hints," a 16 page pamphlet, brought out every three months, with a circulation of about 490,000 and now in its fifteenth year; and (4) by articles in the press. The farm officers devote considerable time each year to lecturing, demonstrating, judging at fairs and assisting at short courses in agriculture. Excursions to the various farms are also a valuable means of bringing the work to the attention of the farmer.

### (B) Provincial Agricultural Colleges and Experimental Stations.

Under the above heading, outlines of the work done at provincial agricultural colleges and experimental stations were given by provinces at pp. 198-203 inclusive of the 1930 Year Book. The interested reader is referred to that volume, and to the following provincial publications for information concerning courses and programs of work at these institutions:—

*Nova Scotia.*—Annual Report of the Department of Natural Resources for Nova Scotia; College Prospectus of the College of Agriculture, Truro, N.S.

*Quebec.*—The Annual Report of Macdonald College, Ste. Anne de Bellevue, Quebec, and the prospectuses and annual announcements of the School of Agriculture, Ste. Anne de la Pocatière, and the Oka Agricultural Institute, Lake of Two Mountains, Quebec.

*Ontario.*—Annual Report of the Ontario Agricultural College and Experimental Farm, Guelph, Ont.

*Manitoba.*—Annual Report of the Manitoba Agricultural College, Winnipeg, Man.

*Saskatchewan.*—Annual Report of the College of Agriculture, University of Saskatchewan, Saskatoon, Sask.

*Alberta.*—Annual Report of the College of Agriculture, University of Alberta, Edmonton, Alta.

*British Columbia.*—Annual Report of the Faculty of Agriculture, University of British Columbia, Vancouver, B.C.

## Section 2.—Statistics of Agriculture.<sup>1</sup>

**Census Statistics.**—At each of the six decennial censuses of Canada taken since Confederation, statistics of the agricultural activities carried on throughout the country have been secured. The scope of these statistics has been extended from time to time and those of the census of 1931 omit few important phases of agriculture with which a census could deal successfully. In all the later censuses the statistics of number, acreage and condition of farms, the value of farm property, the acreage sown, the yield of crops, the value of that yield, the number of fruit trees and the production and value of fruit, the number and value of live stock, etc., have been collected on a basis which allows comparison between the different censuses. Among the extensions in the scope of the census of 1921 were such matters as the details of birthplace, age, length of residence in Canada and experience of farm operators, the chief items of farm expenditure, an attempt for the first time to obtain the quantities of vegetables grown for sale, a classification of live stock according to age, etc., the number and value of young animals raised on farms, and an enumeration of farm facilities, including tractors, automobiles, telephones and gas and electric lighting. The schedules for 1931 have been designed to secure more complete information on farm workers and farm population; the degree to which mechanization of farms is proceeding; and the proportion of crops sold or to be sold. As a result of these extensions, comparisons with future censuses will be on a much more detailed basis than in the past, and the trend of agricultural development will be seen with greater accuracy. The statistics of agriculture collected in the census of 1921, which are at present the latest available except as regards the Prairie Provinces, are published in full detail in Volume V of the census series, while a few of the most significant features showing the growth of the agricultural industry from 1871 to the present will be found on pp. xxvi-xxvii of the introduction to this Year Book, in the "Statistical Summary of the Progress of Canada." A census of the three Prairie Provinces was taken in 1926 in connection with the census of population of that year, the results being published for each of these provinces separately as Part II of the respective census reports.<sup>2</sup> Censuses of these three provinces were also taken in 1906 and 1916.

**Crop-Reporting Service.**—The voluntary crop-reporting service of the Dominion Government, which has been in operation since 1908, has for its object the issue of accurate, timely and independent reports on crop conditions throughout the Dominion:—first, in the interests of the general body of Canadian farmers; secondly, for the information and guidance of other interests allied to and dependent upon agriculture (interests represented by statesmen, economists, bankers, grain dealers, transportation agents and others); and thirdly, for reporting to the Institute of Agriculture at Rome (to which Canada is an adhering country), in return for reports on the production of other countries

<sup>1</sup> Revised under the direction of Dr. T. W. Grindley, Chief of the Agricultural Branch, Dominion Bureau of Statistics. This Branch is concerned with both primary and secondary statistics of agriculture, with the statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, annual crop and live-stock estimates, values of farm lands, wages of farm labour, and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock and reports on the milling industry and cold-storage holdings. A list of the publications of this Branch is given in Chapter XXVIII, Section I, under "Production."

<sup>2</sup> For a comparison of some of the agricultural statistics of the census of 1926 with previous census figures, see pp. 271-273 of the 1929 Year Book.

and of world totals which influence prices and consequently affect the interests of Canada. A description of the crop-reporting service will be found in the *Canada Year Book*, 1925, p. 205. Supplementing the monthly reports from crop correspondents, the Bureau issues telegraphic crop reports utilizing the services of agriculturists throughout the Dominion. Previous to 1930, these were issued for the whole of Canada five times during the growing season. Beginning with the summer season of 1930 (and continuing in 1931), the telegraphic reports from the Prairie Provinces were issued every week from the first of June to the first of September, while the reports on a Dominion-wide basis were issued every two weeks during the same period. The program of reports for 1931-32 is given in the *Monthly Bulletin of Agricultural Statistics*, January, 1931, pp. 46-47.

**Annual Statistics.**—In addition to the crop-reporting service, annual statistics of the areas under field crops and of the numbers of farm live stock are collected. These arrangements have been in force since 1918, and are carried out by the Dominion Bureau of Statistics in co-operation with the Provincial Governments. The statistics are secured by a simple schedule calling for a statement of the areas sown to field crops and of the numbers of farm animals alive on June 15. These statements are at present received from about one-fifth of the farmers of Canada, and they form the basis of the totals for the whole of Canada, the totals being calculated according to the proportion which exists between the number of returns and the total number of farms. The results for wheat, oats, barley, rye and flax in the three Prairie Provinces are ready for publication in August, while the results for the remaining crops and for the numbers of farm live stock are published in December. The areas, thus determined, when multiplied by the average yields per acre as reported by crop correspondents, form the basis of the total estimated production for each crop.

In 1930, in seven of the provinces, the schedules were distributed and collected through the agency of the rural schools, under plans which have been found effective in securing a larger sample of the farms of the country than could be obtained in any other way. In British Columbia the schedules were sent direct to the farmer through the mail. For Ontario, returns were collected through the rural post offices.

**Monthly Bulletin of Agricultural Statistics.**—Originally established in 1908 as the "Census and Statistics Monthly", but changed to its present title in April, 1917, this publication is now in its twenty-fourth year. It is the official organ not only for the monthly crop reports and annual statistics previously described, but also for statistics of dairying, fur farming, fruit, hives and honey, hops, tobacco, maple products, sugar beets, beet sugar, flax fibre, clover and grass seeds, exports, visible supplies, prices, values, foreign agriculture and other subjects in considerable variety.

**Presentation of Agricultural Statistics.**—In the current edition of the *Year Book*, statistics of agriculture are presented under the following headings:—(1) Agricultural revenue and wealth; (2) Acreage, yield, quality and value of principal field crops; distribution of the wheat and oat crops, etc.; (3) Farm

live stock and poultry; (4) Fur farming; (5) Dairying; (6) Fruit production; (7) Special agricultural crops; (8) Farm labour and wages; (9) Prices of agricultural produce; (10) Agricultural statistics of the census; (11) Miscellaneous agricultural statistics; (12) World's principal agricultural statistics.

**Subsection I.—Agricultural Revenue and Wealth.**

**Revenue.**—Table I shows under principal headings the gross agricultural revenue of Canada, by provinces, for the years 1925 to 1929. It is important to note that the figures represent gross values, as no distinction is made between crops used as materials for other kinds of production, such as the feeding of live stock, and no allowance is made for the costs of production.<sup>1</sup>

<sup>1</sup> Including Yukon Territory.

Table 1 shows that in 1929 the estimated agricultural revenue of Canada was \$1,631,124,000 as compared with \$1,806,020,000 in 1928, \$1,825,950,000 in 1927, \$1,714,477,000 in 1926, and \$1,709,815,000 in 1925. The total for 1929 shows a decrease of \$174,896,000 or 9.7 p.c. as compared with 1928. The decrease was mainly due to field crops.

Comparing the provinces for 1929, Ontario leads with a total revenue of \$509,208,000, and the provinces next in order are:—Quebec, \$313,698,000; Saskatchewan, \$299,304,000; Alberta, \$223,246,000; Manitoba, \$119,472,000; British Columbia, \$56,889,000; Nova Scotia, \$43,412,000; New Brunswick, \$39,919,000; and Prince Edward Island, \$25,976,000.

**Wealth.**—Table 2 shows approximately, by provinces, the gross agricultural wealth of the Dominion in 1929.

2.—Estimated Gross Agricultural Wealth of Canada, by Provinces, 1929. ('000' omitted.)

<b>Totals.....</b>	<b>3,515,061</b>	<b>1,832,694</b>	<b>665,172</b>	<b>556,730</b>	<b>62,043</b>	<b>20,711</b>	<b>1,631,124</b>	<b>7,939,477</b>

The values of buildings, lands, implements and machinery for the census year 1921 were considerably more than the values previously used in these calculations, which were based upon the census of 1911. The increase for the three items during the decade amounted to \$1,115,986,000. There has, however, undoubtedly been a fall in the value of land during the latest eight years, consequent upon the fall in the prices of agricultural products and live stock, and there may also have been some change in the values of buildings, machinery and implements, but to what extent it is impossible to state. The estimates collected from crop correspondents of the value per acre of land, including buildings, show a drop in the value of land per acre from \$40 in 1921 to \$37 in 1929, and to \$32 in 1930, resulting from decreases in most of the provinces.

The rates of change thus shown have been applied to the census data, with the result that the census figure of \$3,702,370,000, the value of land in 1921, becomes \$3,316,061,000 as the estimated value in 1923 to 1929.

Altogether, the gross agricultural wealth of Canada for 1929 may be estimated at \$7,939,477,000, as compared with \$8,022,719,000 in 1928. The decrease of \$83,242,000 or about 1 p.c. is due entirely to reduced valuations of agricultural production, although live stock, poultry and animals on fur farms each show an increase.

### Subsection 2.—Acreage, Yield, Quality and Value of Field Crops.

**The Chief Field Crops of the Last Twenty Years.**—In Table 3 will be found a summary statement of the acreage, yield and value of the field crops of wheat, oats, barley, rye, buckwheat, flaxseed, potatoes, hay and clover and alfalfa for the latest 10 years. Comparative figures back to 1908, given at pp. 230-232 of the 1929 Year Book, indicate the recent growth of Canadian agriculture. In particular may be noted the tripling of the wheat crop, the almost doubling of the oat crop, the tripling of the barley crop, the thirteen-fold increase in the rye crop, the 40 p.c. addition to the hay and clover crop and the seven-fold increase in the alfalfa crop within the past 22 years, though the 1930 crops do not, by any means, represent maximum yields, for all the above have attained higher levels of yield in intervening and in many cases immediately preceding years. On the other hand, the acreage and yield of the potato crop have not shown a wide variation throughout the period, presumably because this crop is produced mainly for home consumption. Those who desire figures for earlier years will find certain information on acreage, yield and value on page xxiv of the Introduction.

<sup>1</sup> Comparative figures for the years 1908-1920 are given in the Canada Year Book 1929, pp. 230-232. The total value of wheat for 1913 should be \$139,090,000 instead of the \$19,090,000 shown on p. 230 of the 1929 Year Book, the error being due to the dropping out of a figure.

**Total Areas and Values, 1925-1930.**—Table 4 shows for Canada and the provinces, over stated years, the total estimated areas and values of field crops, Table 5 the field crops of Canada compared as to quantity and value, and Tables 6 and 6A the areas, yields, quantities and values of the principal field crops, with five-year averages, in Canada and by provinces.

Manitoba.....	240,001	238,483	222,039	240,485	252,689	253,950	264,300
Saskatchewan.....	333,393	333,393	332,403	428,927	408,670	406,100	419,000
Alberta.....	230,725	309,589	288,962	285,719	289,973	319,338	396,400
British Columbia.....	71,756	63,484	53,719	56,141	62,192	63,865	66,604
Indian Reserves.....	35,992	28,111	31,990	36,601	39,202	47,237	39,839
<b>Totals.....</b>	<b>9,377,711</b>	<b>9,364,634</b>	<b>9,398,449</b>	<b>9,399,291</b>	<b>9,528,643</b>	<b>9,768,320</b>	<b>9,889,513</b>

The above figures are not entirely comprehensive since the figures for the four western provinces are "seeded pasture" only. Most of the area used for pasture in these provinces is "natural" and data on land used in this way can only be properly secured by the quinquennial census. At the 1926 census, the acreages of improved and natural pasture in the three Prairie Provinces were as follows:—

Province.	Improved Pasture.	Natural Pasture.
	acres.	acres.
Manitoba.....	311,818	3,553,590
Saskatchewan.....	305,164	13,612,460
Alberta.....	302,417	12,210,316

The figures for the Maritime Provinces, Quebec and Ontario include all pasture, seeded and natural.

The area under grazing leases in the Western Provinces as at March 31, 1930, is reported by the Dominion Lands Administration Branch of the Department of the Interior as follows:—

Province.	Number of Leases.	Acres.
Manitoba.....	244	95,885
Saskatchewan.....	6,952	3,463,408
Alberta.....	3,917	3,208,289
British Columbia.....	366	453,752
<b>Totals.....</b>	<b>11,479</b>	<b>7,221,334</b>

**Average Yields per Acre.**—Table 8 gives for the years 1923 to 1930 the average yields per acre of the various field crops, together with the 10-year average yields for the period 1920-1929.

8.—Annual Average Yields per Acre of Field Crops for Canada from 1923 to 1930, with Decennial Averages for the years 1920-1929.

**Stocks of Grain in Canada.**—Table 11 shows the quantities of grain in farmers' hands on July 31, 1930, as compared with July 31, 1928 and 1929. Adding the stocks in the elevators and flour mills, Table 12 shows the total quantities of grain in store at the close of each of the crop years ended July 31, 1928, 1929 and 1930.

**11.—Stocks of Grain in Farmers' Hands on July 31, 1930, as Compared with July 31, 1928 and 1929, with Total Production for the Previous Years.**

**Distribution of Wheat and Oat Crops.**—The distribution of the wheat crop of Canada for the years ended July 31, 1929 and 1930, is calculated in Table 13.

## 13.—Distribution of the Canadian Wheat Crops, by crop years, 1928-29 and 1929-30.

**Note.**—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to 4½ bushels of wheat. For similar calculations extending over a series of years both for wheat and oats, see the Year Book 1920, pp. 263-266, and the April issues of the Monthly Bulletin of Agricultural Statistics for each of the years 1920 to 1930.

Item.	Crop year ended July 31, 1928.	Crop year ended July 31, 1930.	Item.	Crop year ended July 31, 1929.	Crop year ended July 31, 1930.

Imports.....	1,346	1,386	Carried over July 31, 1929 and July 31, 1930.....	104,383	110,741
Available for distribution.....	603,249	396,357	Balance fed on farms or otherwise disposed of..	3,023	11,103

Table 14 presents similar data for oats. The bulk of this crop is consumed as food for live stock, and the table shows approximately how the remaining portion of the crop is disposed of, including the quantities exported as grain,

outmeal and rolled oats, the quantity retained for seed and the quantity milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry-over represents grain in the elevators, in farmers' hands, in transit, etc., and the balance is the quantity used in Canada for feeding to live stock, this amount being estimated at 303,262,000 bushels in 1924-25, 394,997,000 bushels in 1925-26, 308,431,000 bushels in 1926-27, 321,753,000 bushels in 1927-28, 339,207,000 bushels in 1928-29, and 245,464,000 bushels in 1929-30.

#### 11.—Distribution of the Canadian Oat Crops, by crop years, 1928-29 and 1929-30.

Exports as grain.....	12,828	2,000			

**Per Capita Consumption of Wheat in Canada.**—According to calculations published in the Monthly Bulletin of Agricultural Statistics for April, 1930 (p. 108), the average per capita consumption of wheat ground for human food in Canada during the ten years 1920 to 1929 was 4.7 bushels. The lowest average was 4.2 bushels in 1922 and the highest 6.7 bushels in 1920. In the last named year, however, the grinding did not represent the year's consumption, but included a large carry-over into the next year. The average consumption in 1929 was estimated at 4.5 bushels. Details for the years 1919-27 were given at p. 241 of the 1929 Year Book.

#### Subsection 3.—Farm Live Stock and Poultry.

The growth of the live-stock and poultry industries in Canada from decade to decade is indicated in summary statistical form in Table 15, while some authoritative details will be found in the article, "The Development of Agriculture in Canada", contributed by Dr. J. H. Grisdale to the 1921 Year Book, where it appears at pp. 202-210.

#### 15.—Summary Statistics of the Numbers of Live Stock and Poultry in the Dominion of Canada, Censuses of 1871-1921.

**Egg Production.**—Table 20 gives the results of calculations indicating approximately the number and value of eggs produced on farms in Canada for the years 1923-29. The estimates relate only to hens' eggs produced on farms, and therefore do not include eggs of urban poultry, or eggs of farm turkeys, ducks, etc. In 1920 the production of eggs elsewhere than on farms amounted to 24,319,832 dozen, or 16.8 p.c. of the total production of eggs in that year, as ascertained at the census.

### Subsection 4.—Fur Farming.<sup>3</sup>

**Origin of Fur Farming Industry.**—A short account of the origin of the fur farming industry in Canada was given on p. 249 of the 1929 edition of the Year Book. A fuller description of the rise of the industry in Prince Edward Island, its

<sup>3</sup> Revised by Miss F. A. Brown, Chief, Fur Statistics Branch, Dominion Bureau of Statistics. A list of publications of this Branch will be found in Chapter XXVIII. For further particulars regarding fur farming the reader is referred to the Report on Fur Farms, 1928, which may be obtained from the Dominion Statistician, Ottawa.

original home, was given in the Census and Statistics Monthly for May, 1914, at p. 110, while a still more detailed account of the earlier history of the industry was given in a publication of the Commission of Conservation, Ottawa, entitled "Fur Farming in Canada", by J. Walter Jones, B.A., B.S.A., the second edition of which was published in 1914.

**Fur Farms of Canada.**—The term "fur farm" includes farms devoted entirely to the raising of fur-bearing animals (principally silver foxes), together with parts of farms where the raising of fur-bearing animals is carried on as a distinct branch of the operations. Such farms increased in number from 429 in 1919 to 4,099 in 1928, or, if muskrat and beaver farms are included, to 4,326, and the industry is still rapidly growing both in numbers of farms and in numbers and varieties of fur-bearing animals on those farms. Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised in captivity—mink, raccoon, skunk, marten, fisher and rabbit. Karakul sheep, from which are obtained the furs known as "persian lamb", "astrachan" and "broadtail", are also being raised in Canada. Muskrat farms are now the most numerous of the miscellaneous class, mink farms coming second and raccoon third. A few of the fox farms also raise miscellaneous fur-bearing animals in addition to the foxes.

**Capital Investment.**—The earliest Dominion-wide statistics of fur farms were collected for the year 1919, and since then annual statistics have been obtained. Statistics showing the increasing numbers and values of fur-bearing animals on fur farms are given in Tables 21 and 22, the former showing an increase of over fifteen fold in numbers since 1920, and the latter almost a four-fold increase in values from \$4,722,905 to \$16,401,453. The capital investment in lands and buildings in 1928 was \$6,574,838, making a grand total investment of \$22,976,291 in the industry in that year.

**Annual Revenue.**—The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. Table 23 shows that the sales of animals increased from \$763,221 in 1920 to \$3,837,420 in 1928, while Table 24 indicates that in the same eight years sales of pelts have increased from \$388,335 to \$2,389,026.

**The Provincial Distribution of Fur Farming.**—The statistics of Table 25, showing the capital investment in the industry by provinces, indicate that Prince Edward Island no longer holds its earlier margin of supremacy in the industry, though its farms are still the most highly capitalized, the average Prince Edward Island farm having nearly \$5,160 worth of fur-bearing animals and \$1,780 invested in land and buildings as compared with \$3,670 and \$1,680, respectively, for Ontario, the next province in importance. Between 1926 and 1928 over 1,600 new farms were added in the Dominion as a whole.

Subsection 5.—Dairying Statistics.<sup>1</sup>

Dairying is one of the oldest and is now one of the most important industries of Canada. The first permanent introduction of cows into Canada was undoubtedly made by Champlain at Quebec between 1608 and 1610. In 1629 he had 60 to 70 cattle on his farm at Cap Tourmente. In 1660, Colbert, the great French Minister, sent to New France representatives of the best dairy cows of Normandy and Brittany. In 1637 there were 3,107 head of cattle in New France and in 1671, 866 in Acadia. The first cattle in what is now Ontario were taken thither by La Motte Cadillac in 1701. In 1823 a herd of 300 cattle was driven north to the Red River Settlement and sold to settlers, while cattle in British Columbia date from 1837. Modern dairying owes its development and expansion to the factory system for the making of cheese and butter, to the introduction of the centrifugal cream separator from Denmark in 1882, and to the facilities afforded by improved methods of cold storage, which came under government organization in 1895.

**Creamery Butter.**—The first creamery in Canada was established at Athelstan, Huntingdon Co., Quebec, in 1873, while the first cream separator was installed at Ste. Marie, Beauce Co., Quebec, in 1882. The first Ontario creamery was established in 1875, and what was probably the first cream separator in Ontario was installed at Belleville in 1883. Butter reached its maximum exportation in the year ended June 30, 1903, with 34,128,944 lb. The latest figures for the year ended Dec. 31, 1930, show an export of 1,180,400 lb. The quantity of creamery butter made in Canada in 1929 was 170,810,230 lb. (Table 26), valued at \$65,929,782, an increase in quantity from the preceding year of 2,783,191 lb., or 1.6 p.c. and an increase in value of \$1,227,244 or 1.9 p.c. The average price per lb. for the whole of Canada was 38.6 cents in 1929, compared with 38.5 cents in 1928.

**Factory Cheese.**—The early French colonists made butter and cheese, of which the *fromage raffiné*, still made on the Isle of Orleans, is probably a survival. The United Empire Loyalists introduced cheese- and butter-making into the districts settled by them, and in 1801 sent their surplus butter and cheese to the United States. The first modern cheese factory in Canada was established in Oxford Co., Ontario, in 1864, while shortly afterwards factories were established in the Burkville and Belleville districts of Ontario; in Missisquoi Co., Quebec; near Sussex, New Brunswick, and in Annapolis Co., Nova Scotia. These factories were established before 1870, and after that date the number

<sup>1</sup>For fuller particulars see the Bureau's Report on Dairy Statistics, obtainable from the Dominion Statistician.

rapidly increased. In 1868 the quantity of cheese exported from Canada was 6,141,570 lb. In 1904 cheese reached its maximum exportation with 233,980,716 lb., and the exports of cheese for the year ended Dec. 31, 1930, amounted to 80,163,700 lb. The production of factory cheese in 1929 totalled 118,746,286 lb., with a value of \$21,471,330, a decrease in quantity from the previous year of 17.8 p.c., and in value of 29.6 p.c. (Table 27). The average prices per lb. were 18 cents in 1929 and 21 cents in 1928.

**Condensed Milk and Milk Powder.**—Within recent years there has been a large increase in the production of condensed milk. The first milk-condensing plant was established at Truro, N.S., in 1883, and there are now in Canada 30 plants for the manufacture of condensed and evaporated milk and milk powder. The quantity of condensed milk made in Canada in 1929 was 25,482,419 lb., value \$2,710,090, a decrease in quantity of 2,246,576 lb., or 8.1 p.c., as compared with 1928. The quantity of evaporated milk made was 53,995,117 lb., valued at \$5,060,229, an increase of 4.5 p.c. in quantity and 5.1 p.c. in value compared with 1928. The quantity of milk powder and skim milk powder made in 1929 was 14,955,151 lb., valued at \$1,776,741. Of the 30 condenseries in operation in Canada in 1929, 26 were situated in Ontario. The total value of products of condenseries in Canada was \$14,686,802. Table 28 shows the quantities and values of products other than butter and factory cheese for the years 1927, 1928 and 1929.

**Total Production of Dairy Factories.**—In Table 29 are shown the total values of all the products of dairy factories by provinces for the five years 1925 to 1929. For Canada as a whole, the figures show a decline in the latest year of nearly 2.1 p.c. which is more than accounted for by the decreased value of the products of Ontario and Quebec dairy factories. Practically all the other provinces show increases for 1929 as compared with 1928.

29.—Total Value of All Products of Dairy Factories, by Provinces, 1925-1929.

The total values of dairy products in 1901 and various subsequent years are shown in the "Statistical Summary of the Progress of Canada", immediately following the Table of Contents.

**Dairy Butter and Home-made Cheese.**—The statistics of the foregoing tables relate entirely to the products of dairy factories. In addition, there is a large production of butter on farms, generally described as home-made or dairy butter, and a small production of home-made cheese. No annual statistics are collected of these products; the census of 1911, however, showed that the production of dairy butter in 1910 was 137,110,200 lb., value \$30,269,497, and of home-made cheese 1,371,092 lb., value \$154,088. According to the census of 1921 the production of dairy butter in 1920 was 103,487,506 lb., worth \$50,180,952, and of home-made cheese 533,561 lb., worth \$123,283. The production of dairy butter in 1929 is estimated at approximately 88,000,000 lb., of the value of \$28,929,000, thus making the total estimated production of butter, including dairy butter, in 1929, 258,810,230 lb., valued at \$94,858,782.

**Total Values of Dairy Products.**—The total value of the dairy products of Canada in 1920 was estimated at \$288,836,093, including creamery butter \$63,625,203, dairy butter \$50,180,952, factory cheese \$39,100,872, home-made cheese \$123,283, miscellaneous factory products \$22,827,460 and milk consumed fresh or otherwise used \$112,978,323. For 1929 the total is estimated at \$291,742,857, comprising: creamery butter \$65,929,782, dairy butter \$28,929,000, factory cheese \$21,471,330, home-made cheese \$82,800, miscellaneous dairy factory products \$22,091,945 and milk consumed fresh or whole \$153,238,000. Details by provinces are given for 1929 in Table 30, with Dominion totals for the four preceding years.

Subsection 6.—Fruit Farming.

The wild fruits of Canada are numerous and varied. Currants, gooseberries, raspberries and strawberries grow wild almost as far north as the Arctic circle, the flavour being unexcelled by that of cultivated varieties. The blueberry grows in great profusion over a large part of Eastern Canada, while the cranberry is found over wide areas throughout the Dominion. Other wild fruits include the saskatoon or juneberry of the Prairie Provinces, the choke cherry, the pin or bird cherry, the buffalo berry, the blackberry, the salmon-berry and the cloud-berry. Wild plums are found all through the eastern provinces and wild grapes as far northwestward as Manitoba.

It is usual in the farms of Eastern Canada to find orchard or garden fruits produced for household needs, if not for sale as ordinary farm products. Fruit growing as a specialized form of agriculture is a comparatively recent development. The building of the railways and the introduction of refrigerator cars provided the means by which perishable fruits might be rapidly distributed throughout the Dominion from districts where climatic and soil conditions were particularly favourable to the cultivation of fruit. While commercial fruit growing is by no means restricted to a few districts and is often a feature of agricultural production in suburban areas, certain districts are nevertheless noted as being the more important centres of fruit production. The Annapolis and adjacent valleys in Nova Scotia, the Niagara peninsula of Ontario and the Okanagan valley in British Columbia are outstanding, but the northern shore of lake Ontario, the Georgian Bay district, the areas adjacent to Montreal, the lower British Columbia mainland and Vancouver island are also noted for their fruit crops.

Small fruits such as strawberries, raspberries, currants and gooseberries are produced widely throughout Canada. For 1929 the strawberry crop attained the record quantity of over 14,400,000 quarts worth \$1,797,000, in spite of the fact that the average price obtained was only 12c per quart. A better average price was obtained for raspberries than in any year since 1925, and the total value of this crop was greater than in any year since 1923. The smaller fruits grown for sale generally find a market in nearby towns or cities, although many ship-

ments are made from rural districts by rail or water to more distant centres of consumption. Apples, which are the most important Canadian fruit, meet with ready sale in British and European markets, where their attractive appearance, flavour and good keeping qualities have gained a wide reputation. Practically all varieties of fruit are prepared in canneries located near the centres of production and are shipped to both domestic and foreign markets.

**Origin and Growth of Fruit Growing.**—In Nova Scotia the apple-growing industry has assumed great importance, the bulk of the crop being annually exported to Great Britain. There are records of the growth of apples in Acadia from 1635. The census of 1698 showed that at Port Royal alone there were 1,584 apple trees distributed amongst 54 families, of which many had orchards of from 75 to 100 trees. At Beaubassin in 1698 the census showed 32 acres in fruit trees. The first apples exported from the province are said to have been shipped by sailing vessel from Halifax to Liverpool in 1849, the price realized being \$2 per barrel. In 1856 a shipment of 700 barrels was made by schooner to Boston, U.S.A., the price realized being \$2.75 per barrel. The first experimental commercial shipments of apples to England from the Annapolis valley were made in December, 1861, but proved disappointing. The first steamer to carry apples direct from Annapolis Royal to London was the *Neptune*, which sailed on April 2, 1881. The shipment consisted of 6,800 barrels, and arrived in London in 14 days. This venture was fairly successful, and from that time the business has continued to increase in volume. Up to 1890, however, the production of apples in Nova Scotia rarely exceeded 100,000 barrels, but after that date there were pronounced increases in acreage and production, and in 1909 the production reached 1,000,000 barrels. A record crop of about 1,900,000 barrels was produced in 1911, when 1,734,876 barrels were marketed, and further records were made in 1919, when the gross crop exceeded 2,000,000 barrels, and in 1922, when 1,891,850 barrels were packed and sold from the Annapolis valley and adjacent valleys, which comprise a district of about 100 miles long by from six to eleven miles wide.

There are records to show that in 1663 apples were being produced in the province of Quebec, and it is here that the celebrated Fameuse apple is thought to have originated. The capabilities of this province for the production of apples of the finest appearance and best quality are very great; but at present there are not sufficient apples grown for the local demand, and large quantities are therefore annually imported.

In Ontario, where the commercial production of all descriptions of fruit capable of cultivation in Canada has reached its highest development, apples have been grown from the middle of the eighteenth century; but commercial orcharding has developed only within the past 50 or 60 years, and was only made possible when the building of the railways permitted trees and fruit to be transported rapidly. The great winter apple districts include the border of Lake Ontario extending back 30 miles and more from the lake, the shores of Lake Huron and Georgian bay, several miles in depth, and the southwestern part of the province. Farther east and north, and including an area east of the Lake Huron district, there are large areas of land where the hardier varieties of apples are most suitable. In the Niagara fruit-growing district, besides apples, peaches, pears, plums and cherries, small fruits and grapes are produced upon a large

scale. In this district the acreage of grapes has more than doubled since 1920 and is still increasing rapidly, due to the development and rapid expansion of the native wine industry; in 1929, grapes were second in importance among Canadian fruit crops and the estimated value of native wines produced, chiefly in this district, has increased from \$706,000 in 1921 to \$5,541,000 in 1929.

In British Columbia commercial fruit growing is of comparatively recent origin; but the development of commercial orcharding has been very rapid, especially during the post-war years. The first apple trees were planted about 1850, but not until after the completion of the Canadian Pacific Railway in 1886 were there many trees planted for commercial purposes. The census of 1891 gave the area devoted to all kinds of fruit as 6,500 acres; in 1921 the census showed a total fruit acreage of 43,569 acres in the province. The most noted fruit district is the Okanagan valley, where there are some of the finest orchards in the Dominion. The boxed apples from British Columbia are found in season on all the important markets in Great Britain and Europe. Pears, plums, peaches, apricots, cherries and small fruits are grown on a large scale.

The Fruit Marks Act, first passed by the Dominion Parliament in 1901, made the grading of commercial apples compulsory. In 1923 all previous legislation of this kind was replaced by the Fruit Act (13-14 Geo. V, c. 15), which provides for government inspection, imposes penalties for dishonest packing, and defines the grades under which the different descriptions of fruit shall be sold.

**Census Statistics.**—Statistics of the number of bearing and non-bearing fruit trees in 1921 were published on p. 252 of the 1925 edition, together with comparative figures for 1911 and are summarized in Table 31; from these it may be seen that only for peaches was there an increase during the decade in the number of bearing trees. Nevertheless, when the statistics of production also collected at the census are consulted, there is evident a great increase since 1910 in the production of apples, peaches, plums and cherries. This may indicate that to-day fruit growing is on a much more scientific basis than in the past, and that the yield per bearing tree is larger because of the greater attention given to the selection of stock and the care of trees.

**Annual Statistics of Fruit Production.**—For each of the years 1919 to 1929, the Dominion Bureau of Statistics and the Fruit Branch of the Dominion Department of Agriculture have collected and published in co-operation statistics, (1) of the quantities and values of commercial fruits produced in Canada, and (2) of the varieties and values of fruit trees, bushes and plants sold by nurserymen in Canada. Table 32, following, shows the estimated production and value of commercial fruits in Canada for each of the seven years 1923-1929.<sup>1</sup>

**32.—Estimated Production and Value of Commercial Fruits in Canada, 1923-1929.**

*Note.*—1930 figures are in process of compilation at the time of going to press, and will appear in the June, 1931, issue of the Monthly Bulletin of Agricultural Statistics.

**Tree Nursery Industry.**—The first Canadian commercial nursery was established near Fonthill, Ont., and it was followed within a few years by the establishment of a nursery in Toronto by a Rochester, N.Y., firm. Since that time the industry has steadily spread as the country has developed, until to-day there are approximately 170 firms growing or dealing in nursery stock of all kinds, including fruit trees. Canadian nurserymen have made great advancement in the type and

<sup>1</sup>Reports of fruit production have been published in pamphlet form by the Dominion Bureau of Statistics in 1922, 1924, 1925, 1926, 1927, 1928 and 1929. The first report for the year 1919 was published in the Monthly Bulletin of Agricultural Statistics, August, 1920, pp. 211-222.

hardiness of stock used for grafting and budding purposes, greatly enhancing the resistance of the trees against winter injury, an important factor in Canadian orcharding. The great problem of mixing varieties has been solved by the recent investigations carried out by the various experimental stations, leading to a system of identifying the different varieties in the nursery row. Identification of the varieties of apples has proved possible of accomplishment by any person after a few months' study of the varietal characteristics, while other fruits under study, such as peaches and pears, are proving equally easy to identify.

Table 33 shows the total numbers and values of fruit trees, bushes and plants sold by nurserymen for the four years 1926-29. For 1919 and 1920, see the Canada Year Book of 1921, p. 257; for 1921 and 1923, see the Canada Year Book of 1926, p. 241; and for 1924 and 1925, see the Canada Year Book of 1929, p. 257.

**Floriculture.**—Data collected at the 1921 census show that in that year 9,957,243 square feet were under glass in greenhouse and hothouse establishments, which also possessed 3,126 acres not under glass. The receipts of these establishments in that year totalled \$4,026,427, of which \$2,778,473 or 69 p.c. were for flowers and flowering plants and \$1,247,954 or 31 p.c. for vegetables and vegetable plants. According to a recent survey, provisional figures indicate an area under glass in 1928 of 15,764,234 square feet. The production and value of floricultural and decorative plants grown in Canada and sold during the year ended May 31, 1929, was ascertained by this survey to have been \$2,542,490 as indicated by Table 34.

	1930	482,467	25	120,617	2.27	1,458,050	1,575,667

The table shows that for the whole of Canada there was an estimated decrease of 3,490,649 lb. of maple sugar, an increase of 11,286 gal. of maple syrup and a decrease of \$368,036 in the combined value of the two products in 1930 as compared with 1929.

**Sugar Beets and Beetroot Sugar.**—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time two companies are operating in Canada, the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg in Ontario, and the Canadian Sugar Factory, Ltd., with a plant at Raymond, Alberta.

<sup>1</sup> For details see Monthly Bulletin of Agricultural Statistics for June, 1930, pp. 192-193.

Table 36 shows the area, yield and value of sugar beets grown in Canada in the years 1911-1929.

1926.....	30,073	8-90	267,754	8-54	2,286,761	70,388,105
1927.....	25,961	7-96	206,713	9-73	2,012,134	60,969,131
1928.....	34,323	7-14	244,930	8-33	2,041,465	64,653,348
1929.....	32,556	7-23	235,465	8-84	2,080,996	69,399,213

At the estimated average wholesale price of 4-81c. per lb., the total value of the beetroot sugar produced in 1929 is \$3,335,344, as compared with 5-17c. per lb. and \$3,340,571 in 1928, 6-06c. per lb. and \$3,694,303 in 1927, 6-1c. per lb. and \$4,269,076 total value in 1926, and 7-1c. per lb. and \$5,206,624 total value in 1925.

The estimated production of sugar beets in the principal beet-sugar producing countries of the world was, in 1929, 66 million short tons from 7,355,660 acres. The production in 1929 of the largest beet-growing countries was, in thousands of short tons, as follows:—Germany, 12,256; Russia, 9,282; United States 7,691; Czechoslovakia, 6,861; France, 5,924; Poland, 5,492; Italy, 3,160; Netherlands, 2,277; Great Britain, 2,249; Hungary, 1,776; Belgium, 1,735; Roumania, 986; Denmark, 1,002.

**Tobacco.**<sup>1</sup>—According to the census, the total area under tobacco in 1921 was 16,628 acres. Statistics for 1929 show an acreage of 43,138. The farm value of the crop, amounting to \$4,358,898 in 1924, \$7,002,400 in 1925 and \$7,379,480 in 1926 showed an increase to \$9,112,278 in 1927, a decrease to \$6,833,511 in 1928, a further decrease to \$6,276,133 in 1929 and to \$7,050,457 in 1930.

Table 37 summarizes the acreages, the average yields per acre and the total yields of tobacco in Canada, also for the provinces of Quebec and Ontario, for the census years 1900 and 1910 and continuously from 1920 to 1930. For the years 1911 and 1921 the census figures for the acreage alone are also given. In Quebec the estimated yield of 943 lb. per acre has been exceeded only once, *viz.*, in 1921 when it was 1,166 lb. per acre. In Ontario and in Canada as a whole the preliminary figures for 1930 exceeded those of 1929 by 9-8 p.c. and 7-8 p.c. respectively. Yields in 1929, except in Quebec, were very low and this, following on the low prices obtained for the crop in 1928, was discouraging to the industry. While yields have been substantially better in 1930, the prices except for the higher grade cigarette tobaccos have been downward compared with 1929, and this trend has been more pronounced in Quebec than in Ontario.

<sup>1</sup> For further details, see Monthly Bulletin of Agricultural Statistics for March, 1930, pp. 75-77.

1923	3,300	20,000	272,650	741	50,000	111,375	4,440	165,815
1924	5,760	69,120	1,785,800	181	172,800	535,500	3,750	712,050
1925	6,200	68,200	1,440,000	2,325	136,400	201,600	116,250	454,250
1926	4,025	48,300	-	2,075	96,600	-	111,250	207,850
1927	4,260	36,000	-	4,260	108,240	-	213,000	321,240
1928	6,880	41,280	-	6,880	165,120	-	344,000	509,120
1929	6,280	32,970	-	4,500	156,607	-	236,250	393,857
1930	6,143	62,232	-	6,146	96,634	-	273,670	370,554

The area sown to flax for fibre in Canada for the year 1930 was 6,143 acres, of which about 4,843 acres were in the province of Ontario.

**Hives and Honey.**—A table on page 277 of the 1925 Year Book shows the production and value of honey and beeswax in 1920, according to the census of 1921. The principal honey-producing provinces were Ontario and Quebec, which between them produced in 1920 more than 94 p.c. of the recorded total of 6,461,450 lb., valued at \$1,633,251.

There are at present no uniform annual statistics of hives and honey for all the provinces, but a synopsis of the existing provincial estimates for recent years was given in the Monthly Bulletin of Agricultural Statistics for March, 1930, pp. 77-80. These estimates showed a large increase since 1920, the total estimated honey production in 1929 being about 30,979,000 lb. and the average value per lb. 11 cents.

### Subsection 8.—Farm Labour and Wages.

**Average Wages of Farm Help.**—The average wages paid to farm helpers in Canada for the year 1930 show a considerable decrease compared with 1929. The cost of farm labour reached its highest point in 1920. In the next two years there was a rapid drop, so that the average of yearly wages including board for male help in 1922 was nearly 28 p.c. less than in 1920. Since 1922 the trend has been slightly upward, the average for 1925 representing an increase of 8 p.c. in the three years. In 1926 there was a very slight reduction, followed by increases in 1927 and 1928, and a slight decrease in 1929. In 1930, however, there was a decided reduction in the average of yearly wages and board, amounting to 11 p.c. for men and 12 p.c. for women.

In Table 40 the value of wages and board is given for the years 1914, 1920, 1925, 1928, 1929 and 1930, both for the summer season and for the year, distinction being made in all cases between wages and board.

## Subsection 9.—Prices of Agricultural Produce.

The average monthly cash prices of representative grades of Canadian wheat, oats, barley, flax and rye in the Winnipeg market, basis in store at Fort William and Port Arthur, will be found for each month from January, 1928, to December, 1930, in Table 41, where the general downward trend in prices over the latest twelve months is particularly noticeable. The average yearly prices of British-grown wheat, barley and oats in the home market are furnished in Table 42; in

this table British currency is converted into Canadian currency at par of exchange (£=\$4.86 $\frac{1}{2}$ ). The average monthly prices of flour, bran and shorts at Montreal, Toronto, Winnipeg, Minneapolis and Duluth are given for 1930 in Table 43.

The yearly average prices per cwt. of Canadian live stock at Toronto, Montreal, Winnipeg and Edmonton are given for the years 1927, 1928 and 1929 in Table 44, and the average monthly prices in 1930 at these centres and at Calgary in Table 45.

**41.—Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flax and Rye, basis in store at Fort William and Port Arthur, 1928-1930, and Yearly Average Prices for crop years ended July 31, 1926-1930.**

NOTE.—For similar figures for 1923-26, see p. 247 of the 1926 Year Book.

**Index Numbers of Agricultural Prices.**—Records of the average prices received by farmers for agricultural produce have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office and the Dominion Bureau of Statistics. From these records, annual index numbers have been calculated for each crop and for the field crops as a whole. In calculating the index numbers in the present instance the base period used is 1926. Index numbers have been calculated of the yields of the various crops from year to year. From these data index numbers of the value of all field crops, weighted according to the quantity produced in each case, have been obtained. These calculations have been made with prices for the year 1926 as a base in Table 46. The diagram on p. 259 shows the trend of prices since the pre-war year 1913, using that year as a base; the recovery of agricultural prices from their low level of 1922 and 1923 and the subsequent fluctuations to 1930 will be noticed.

## 46.—Index Numbers of Producers' Prices of Agricultural Commodities, 1913-1930.

NOTE.—Average Prices, 1926 = 100.

For the formulæ used in the calculation see Monthly Bulletin of Agricultural Statistics, March, 1928, p. 94.

<sup>1</sup> Prices quoted are per bushel, except for potatoes and turnips, etc., which are per cwt., and the last five items, which are per ton. For details of index numbers by provinces, see Monthly Bulletin of Agricultural Statistics, January, 1931, pp. 26-32.

The general index number fell from 1924 to 1928, especially from 1926 to 1928, and recovered strongly in 1929 but declined rapidly to reach the record low, for the period under review, of 56.3 in 1930. The commodities responsible for the decline from 1927 to 1928 were the cereals and potatoes. The root and forage crops held fairly steady and there were increases in peas and beans.

The severe decline of 1930 was characterized by marked reductions in the prices obtained for all the agricultural commodities listed. Reductions in the prices of the cereals wheat, oats, barley and rye were drastic; wheat, which has the greatest weight in the index, was mainly responsible for the decline of 46 points in the general index between 1924 and 1930, as well as for the temporary recovery in 1929. Legumes, roots and most forage crops fared better as regards prices obtained in 1930 than the cereals, but reductions were still severe. Fodder corn and sugar beets held up fairly well under the circumstances.

### Subsection 10.—Agricultural Statistics of the Census.

A selection of the more important agricultural statistics of the census of 1921 was published at pp. 269-271 of the 1929 edition of the Year Book. Further, certain agricultural statistics of the Prairie Provinces collected at their quinquennial census of 1926 were published at pp. 271-273 of the same volume. The complete agricultural statistics of the census of 1921 are published in Volume V of the publications of the census of that year, while the detailed agricultural statistics of the census of the Prairie Provinces of 1926 will be found in the reports of the census of that year, issued separately for the provinces of Manitoba, Saskatchewan and Alberta.

**Area Suitable for Agriculture.**—Various estimates of the areas of agricultural land in Canada have been made. Such estimates must necessarily be of a very tentative character, especially in view of the fact that every advance in the art of evolving more frost-resistant and drought-resistant species of cultivated grains, etc., increases the area of potential agricultural land, while the same result follows from the introduction of improved methods of tilling the soil, as in dry-farming. Of the grand total land area of Canada, now estimated at 2,246,405,120 acres, 1,309,724,800 acres are within the nine provinces, and Table 47, based partly upon the census of 1921, is presented as a fair estimate of the possible farm land in these provinces under present conditions.

### Subsection 11.—Miscellaneous Agricultural Statistics.

**Agricultural Irrigation.**—Following legislation enacted at the 1930 session of the Dominion Parliament, the control of all waters formerly administered by the Department of the Interior under the provisions of the Irrigation Act has passed to the Provincial Governments concerned, the dates of transfer being, to Manitoba July 15, 1930, and to Alberta and Saskatchewan Aug. 1, 1930, although by special agreement in the two latter provinces the administration of the water resources was continued by federal officers until Sept. 30, 1930. Irrigation and all matters pertaining thereto are now wholly under the control of the various Provincial Governments and carried on under provincial legislation.

INDEX NUMBERS OF AVERAGE PRICES OF FIELD CROPS, 1913-1930  
*Annual Average Prices 1913=100*

The construction of large irrigation projects in the Prairie Provinces has been confined, up to the present, to Alberta. Table 48, furnished by the Dominion Water Power and Hydrometric Bureau, Department of the Interior, gives statistics of the larger irrigation projects in Alberta for the year 1930.

48.—Major Irrigation Projects in Southern Alberta, 1930.

Project.	Source of Supply.	Irrigable Area.	Length of Canals.	Area Irrigated in 1929.
		acres.	miles.	acres.

<b>Totals.....</b>		<b>1,017,227</b>	<b>5,555</b>	<b>249,236</b>

In addition to the irrigated tracts enumerated in Table 48 there were at September 30, 1930, in Alberta and Saskatchewan, about 620 privately owned projects, making possible the irrigation of a further 96,000 acres.

**Average Value of Farm Lands.**—Statistics showing the average value of farm lands in Canada in 1910, in 1914 and in more recent years are given in Table 49. The values are as estimated by crop correspondents and show the rise in land values between 1914 and 1920, the general decline with moderate fluctuations since the latter date and the rapid fall in 1930 to a point below the 1910 level for the country as a whole. The figures are interesting as indicative of the trend of land values.

49.—Average Values per Acre of Occupied Farm Lands<sup>1</sup> in Canada, as Estimated by Crop Correspondents, 1910, 1915-30.

<sup>1</sup> Orchards and Fruit Lands, 1930, with 1929 in brackets:—Nova Scotia \$94 (\$118); Ontario \$110 (\$147); British Columbia \$291 (\$314).

<sup>2</sup> Actual returns were not collected from crop correspondents in Saskatchewan for 1924, and the estimate of 1924 is interpolated.

**Subsection 12.—International Agricultural Statistics.**

**World Production of Cereals and Potatoes.**—Table 50, constructed from data published by the International Institute of Agriculture, shows the area and yield of wheat, oats, barley, rye, corn, and potatoes for the years 1929 and 1930 in countries of the Northern Hemisphere, and for the years 1927-28 and 1928-29 in countries of the Southern Hemisphere. The annual average acreages and yields are also given for the five-year period, 1924-28 (1923-24 to 1927-28), and the areas and yields of 1930 (1929-30) are compared in percentages with those of the five-year period.

**Wheat.**—For 44 countries the production of wheat in 1930 was 3,671,839,000 bushels from 244,746,000 acres, as compared with 3,385,223,000 bushels from 238,012,000 acres in 1929 and 3,476,981,000 bushels from 228,792,000 acres, the five-year average, 1924-28 (1923-24 to 1927-28). Although there was only a slight increase in wheat acreage between 1929 and 1930 the total production increased 286,616,000 bushels or 8.5 p.c. As compared with the five-year average, the 1930 acreage was 6.9 p.c. greater and the production 5.6 p.c. greater.

**Oats.**—The statistics of 35 countries show a total production in 1930 of 3,006,029,000 bushels from 113,587,000 acres, as compared with 3,483,412,000 bushels from 102,238,000 acres in 1929 and with 3,465,999,000 bushels from 104,291,000 acres, the five-year average. The 1930 area was 11.1 p.c. more and the production 13.7 p.c. less than in 1929. As compared with the five-year average, the 1930 area was nearly 9 p.c. more and the production 13.3 p.c. less.

**Barley.**—In 39 countries, the total yield in 1930 was 1,440,656,000 bushels from 61,113,000 acres, as compared with 1,506,709,000 bushels from 62,778,000 acres in 1929 and 1,252,723,000 bushels from 51,096,000 acres, the five-year average. The area in 1930 was 2.6 p.c. less and the yield 4.4 p.c. less than in 1929 and compared with the five-year average, the acreage in 1930 was 13 p.c. more and the yield 15 p.c. more.

**Rye.**—The statistics available for 31 countries show that the production in 1930 was 995,331,000 bushels from 48,616,000 acres, as compared with 1,009,649,000 bushels from 47,287,000 acres in 1929, and 888,953,000 bushels from 46,865,000 acres, the five-year average. The area in 1930 was 2.8 p.c. greater and the production 1.4 p.c. less than in 1929. Compared with the five-year average, the 1930 acreage was 3.7 p.c. and the production 12 p.c. more.

**Corn.**—In 18 countries, the production in 1930 was 2,709,903,000 bushels from 146,549,000 acres as compared with 3,538,564,000 bushels from 143,640,000 acres in 1929, and 3,476,941,000 bushels from 143,585,000 acres, the five-year average. The area for 1930 was 2.0 p.c. more and the production 23.4 p.c. less than in 1929, and compared with the five-year average, the 1930 area was 2.0 p.c. more and the production 22.0 p.c. less.

**Potatoes.**—In 32 countries, the total yield in 1930 was 3,073,805,000 bushels from 42,882,000 acres, as compared with 4,394,584,000 bushels from 44,881,000 acres in 1929, and with 4,835,517,000 bushels from 42,710,000 acres, the five-year average. The 1930 acreage is 4.5 p.c. less and the production 30 p.c. less than in 1929, while as compared with the five-year average, the 1929 acreage was 0.4 p.c. more and the production 36.4 p.c. less.

**World Exports and Imports of Wheat and Flour.**—Statistics showing the exports and imports of wheat and wheat flour for the principal countries of the world in the crop year ended July 31, 1930, with comparative figures for the previous crop year, are shown in Table 51. This information is taken from data published by the International Institute of Agriculture. During the crop year 1929-30, a total of 518,330,000 bushels of wheat is shown as exported, as compared with 811,658,000 bushels in the previous year. The four chief exporting countries made the following contributions during the crop year 1929-30, figures for the previous year being shown within brackets, in bushels:—Canada, 155,766,000

(354,425,000); Argentina, 144,738,000 (214,054,000); United States, 95,455,000 (107,701,000); Australia, 40,781,000 (81,309,000). Exports of wheat flour amounted to 36,771,000 barrels and 43,171,000 barrels respectively during the crop years 1929-30 and 1928-29. Shipments from the United States totalled 12,889,000 barrels in 1929-30 as compared with 13,329,000 barrels in 1928-29; from Canada 6,778,000 and 11,809,000 barrels respectively and from Australia 4,676,000 and 5,846,000 barrels. Canada was the largest exporter of wheat, the second largest exporter of wheat flour and the largest exporter of wheat and wheat flour expressed as wheat in both years.

The total imports of wheat for the crop year ended July 31, 1930, amounted to 515,716,000 bushels, as compared with 681,621,000 bushels for the previous year. Great Britain and Northern Ireland imported 190,076,000 bushels in 1929-30, as compared with 192,519,000 in 1928-29; Germany, 52,546,000 bushels as compared with 93,599,000 bushels; Italy, 45,139,000 bushels as compared with 89,848,000 bushels and France 32,459,000 bushels as compared with 52,491,000 bushels. Great Britain and Northern Ireland imported 6,371,000 barrels of wheat flour as compared with 4,771,000 in the previous year, Czechoslovakia, 1,701,000 barrels as compared with 1,985,000 barrels and the Netherlands, 1,408,000 barrels as compared with 1,729,000 barrels.

**World's Live Stock.**—The statistics of Table 52, compiled from data published by the International Institute of Agriculture, show as nearly as possible the world situation with regard to live stock about 1929. For many countries, the figures are the result of careful enumeration, while for others, they represent only quite approximate estimates.

## CHAPTER IX.—FORESTRY.<sup>1</sup>

### Section I.—Physiography, Geology and Climate as Affecting the Forests.

The Dominion of Canada may be roughly divided into three main drainage areas—the Pacific slope west of the Rocky mountains; the Great Plains region draining into the Arctic ocean and Hudson bay; and the basin of the Great Lakes and the St. Lawrence, together with the Maritime Provinces. Each of these three regions supports a distinct type of forest growth.

**The Pacific Slope.**—The Pacific slope is characterized by numerous systems of mountains running approximately parallel and extending from the southeast to the northwest. The Rocky mountains vary in elevation from 5,000 to 13,000 feet above sea-level, with numerous peaks extending well above 10,000 feet. Between this system and the Pacific are: the Columbian system, comprising the Selkirk, Monashee and Caribou mountains; the Interior Plateau system; the Cassiar and Yukon systems; the Pacific system, comprising the Cascade, Coast and lesser ranges, terminating with the sunken Insular system whose upper elevations form Vancouver island, the Queen Charlotte group and other coast islands. The chief rivers follow the valleys between these ranges, breaking through in some cases along the shorter cross valleys from east to west.

The Rocky mountains are formed chiefly of Palæozoic rocks, as are also the islands off the coast. The Coast range is almost entirely granitic and the Selkirks are Precambrian or Cambrian. The intervening ranges are of mixed formations, varying from rocks of sedimentary origin to granites. The best soil in British Columbia is concentrated in valley bottoms or alluvial deltas, and the purely agricultural area has been estimated at about 10 p.c. of the land area.

The climate along the coast is mild and humid, with a mean annual temperature varying from 44° to 49° F. The precipitation is the heaviest in Canada, varying from 40 to 120 inches. The greater part of this precipitation falls during autumn and winter however, only 30 p.c. falling during the growing season, to which fact is sometimes ascribed the scarcity of deciduous-leaved forest growth, which requires more moisture during the growing season. In any case, coniferous tree growth in this region is the most luxuriant in Canada, and the forests have the most rapid rate of growth, the largest individual trees and the heaviest stands of timber extending from sea-level up to elevations of 3,500 or 4,000 feet. The Interior Dry belt of British Columbia has a low annual precipitation, varying from 10 to 20 inches. Extremes of temperature from 100° F. to -45° F. make this a region unfavourable to tree growth. The winds from the Pacific, which precipitate most of their moisture on the Coast and Cascade mountains, cross this interior plateau, leaving its southern part in a semi-arid state, and give up a large part of what moisture remains when they reach the Selkirk and

<sup>1</sup> Material in this Chapter has been prepared in co-operation with Roland D. Craig, F.E., of the Forest Service of the Department of the Interior, by R. G. Lewis, B.Sc.F., Chief of the Forest Products Branch of the Dominion Bureau of Statistics. This Branch collects and compiles statistics relating to forest production and publishes four annual printed reports covering the lumber industry, the pulp and paper industry and the wood-using and paper-using industries of Canada. These printed reports are usually preceded by a number of preliminary mimeographed reports, one for each important industry or group of industries. For detailed list of publications see Chapter XXVIII.

MAP OF THE  
DOMINION OF CANADA  
SHOWING  
FOREST BELTS

Rocky mountains, forming what may be termed the Interior Wet belt, centred in the Columbia valley. Here the precipitation averages over 30 and sometimes reaches 60 inches, taking the form of snow in higher altitudes. Temperatures vary from 100° F. to -17° F. In the Rocky Mountain range itself, the climate is more extreme and variable than to the westward.

**The Great Plains.**—East of the Rockies lies the Great Plains region, composed of a variety of topographical types. From the foothills of the Rockies, the country slopes gradually eastward and northward. The prairie country extends from the International Boundary to the 55th parallel along the foothills, gradually tapering down toward the east to a point near the lake of the Woods. Of this area, 105,000 square miles is now almost entirely treeless, with rich fertile soil, and is at present a purely agricultural or pastoral country. Whether its present treeless condition is due to climatic or other causes is problematical, but the presence of isolated patches of tree growth in situations well protected from fire, the ease with which these natural groves can be increased and new plantations established by artificial planting and protection from prairie fires, would seem to indicate that repeated burning accounts, at least in part, for its present treeless state. The underlying rocks are of the Cenezoic and Mesozoic eras. The climate of Alberta is extremely variable in winter, due to a warm, dry wind known as the *Chinook*, which blows from the south and southwest and extends its influence from the International Boundary to the Peace river and eastward to Regina in Saskatchewan. In summer the isotherms run almost due north and south in Alberta. Rainfall varies from 15 to 20 inches. The temperature in Manitoba has an absolute recorded range of 150° F., with a mean range of 71°. Saskatchewan and Alberta are more temperate, especially where they are affected by the *Chinook*. North of the treeless prairies is a region largely unexplored, covered at first by a comparatively light forest growth which toward the north and east gives way to the sub-Arctic "tundra"—a region of muskeg and bare, glacier-worn rocks of the Laurentian and Precambrian types.

These Laurentian rocks in Canada form the Archæan or Canadian Shield, with a distinct type of topography. This rock formation covers a huge irregular triangle with its apex near the Thousand islands in the St. Lawrence, from which point one arm extends northwesterly to the mouth of the Mackenzie river and the other northeasterly down the St. Lawrence valley to include the Labrador peninsula. This entire region has been reduced to a peneplain condition by repeated glacial action which has worn down the high elevations and scoured out most of the soil except in isolated depressions. It is covered with innumerable lakes, muskeg or bog, and rivers. The southern portion of the Shield is to a great extent agricultural land, actual or potential, much of which is still heavily forested. Toward the north tree growth becomes lighter and the climate as a rule becomes too severe for continuous successful agriculture. Still further toward the north, tree growth ceases and the region merges into the same belt of sub-Arctic "tundra" already mentioned.

**The St. Lawrence Basin and the Atlantic Slope.**—The basin of the St. Lawrence and Great Lakes contains a variety of topographical and geological types. The north shores of lake Superior and Georgian bay, the upper Ottawa River valley and the southern part of Labrador, are part of the Laurentian Shield already described. Here the climate is tempered in part by the presence of the lakes and the gulf of St. Lawrence, but is, nevertheless, severe and variable.

To the south, soil and climate improve, and the southwestern peninsula of Ontario, the north shore of lake Ontario and the St. Lawrence valley are all essentially agricultural land. The rock here is of sedimentary origin, mostly of the Palæozoic age.

The Maritime Provinces, with a general slope towards the Atlantic, are varied in topography and geology. The climate resembles that of southern Ontario, being modified by the presence of the ocean. Precipitation is above 35 inches annually. This region supports a type of forest similar to that of the southern portion of the Archæan Shield.

### Section 2.—Main Types of Forest Growth.

Physiographic, climatic and soil conditions in Canada seem to favour the coniferous type of forest. While the more fertile portions of Ontario, Quebec and the Maritime Provinces supported a heavy virgin growth of hardwoods, the greater part of Canada's forest area is covered with spruce, pine, balsam, Douglas fir and other coniferous softwoods. Three main groups of forest growth in Canada follow the main physiographic divisions already mentioned. These groups are the Cordilleran, the Great Plains and the Eastern forests.

**The Cordilleran Forest.**—The Cordilleran forest, which covers the greater part of the Pacific slope, may be subdivided into the Coast belt, the Interior Dry belt, the Interior Wet belt and the Rocky Mountain belt. The Coast belt includes several distinct forest types, their character being determined by variations in climatic and topographic conditions, among which altitude and precipitation have had the greatest effect on forest growth. Douglas fir and red cedar are the principal species in the southern portion of the belt at altitudes up to 2,000 or 2,500 feet. With these are associated hemlock, white pine, amabilis and lowland fir. Toward the north and at higher altitudes, Douglas fir disappears and red cedar and hemlock are the important trees, with amabilis fir and yellow cypress as subsidiaries. In the Queen Charlotte islands and along the northern part of the coast, Sitka spruce and western hemlock form a lowland type.

In the Interior Dry belt western yellow or "bull" pine predominates at low altitudes, bordering on the grass lands. Douglas fir gradually increases in importance until it predominates at elevations up to 3,500 and 4,500 feet. Western larch covers a limited area usually between the true yellow pine and Douglas fir types. At the northern latitudinal and upper altitudinal limits of the Douglas fir type, an Engelmann spruce type develops, which merges into a spruce-alpine fir type at still higher altitudes. Lodgepole pine has taken the place of Douglas fir, Engelmann spruce, and, in some cases, yellow pine on burned-over areas, and has become to a considerable extent established as a distinct type.

Forest types similar to those of the coast have developed in the Interior Wet belt. In the southern portion of this belt, red cedar predominates in the wetter situations, mixed with Douglas fir, Engelmann spruce, white pine, hemlock, western larch, alpine fir, lowland fir and cottonwood. On the benches and lower valley slopes, hemlock and cedar are the important species. Engelmann spruce replaces hemlock at higher elevations, cedar gradually disappears and the spruce-alpine fir type stretches up to timber line. To the north, Engelmann spruce and alpine fir are more prominent and the other species are gradually eliminated.

The Rocky Mountain belt includes portions of the Dry Belt types to the south and those of the Interior Wet belt farther north. Otherwise the typical forest of the Rocky mountains is made up of Engelmann spruce and some white spruce, with an increasing proportion of alpine fir as the altitude increases. This type has suffered so severely from fire, especially on the dry eastern slopes, that lodgepole pine has established itself permanently in some cases and temporarily in others on burned-over areas.

In the sub-Arctic belt, comprising the Yukon plateau and that part of the Rocky Mountain system north of 58°, the general elevation is over 4,000 feet, the climate is severe, the growing season short and precipitation scant. As a result, tree growth is slow and confined to favourable sites in valleys. The timber is small and of poor quality. It is, however, of great local value in the mining industry and to trappers. The principal type is the spruce-alpine fir, with lodgepole pine on poorer sites, and poplar and willow on richer soils on burned-over areas.

Most of the commercially important species of the Cordilleran region are confined to British Columbia. The spruce-fir-lodgepole pine type of the northern interior extends across the Rockies into the foot-hills of Alberta. Certain species, such as Douglas fir, Engelmann spruce, lowland and alpine fir and lodgepole pine, are also found in western Alberta, but in few cases do they extend any great distance eastward.

**The Forests of the Great Plains.**—The Great Plains region may be divided into the Prairie, Northern Forest and sub-Arctic belts. There are no great variations in altitude in the region, and latitude and soil conditions, especially drainage, determine the distribution of forest types. The Prairie belt in southern Alberta, Saskatchewan and Manitoba extends north from the International Boundary for 200 to 400 miles. Patches of tree growth in protected situations are made up chiefly of aspen poplar, with some white spruce and jack pine. North of this purely agricultural and pastoral area is the great Northern Forest belt, from 300 to 400 miles wide, which extends from Alaska to Labrador, covering the greater part of the Laurentian Shield as far as the limits of commercial tree growth. Originally, white spruce predominated over this entire belt and it still forms the most important type commercially, although it has suffered severely through forest fires. In the East, balsam fir is an important associate, and the spruce-balsam fir type makes up most of the pulpwood resources of Eastern Canada. The black spruce type, frequently associated with eastern larch (tamarack), occupies poorly-drained areas within this belt. Enormous areas have been burned over by forest fires. Aspen poplar has replaced the spruce and balsam on the best soil in these areas, and is now the most prevalent species, although it will eventually be replaced by conifers where natural reproduction is possible. Over vast areas, however, there is no immediate prospect of securing a return to coniferous forest by natural agencies. Jack pine has taken possession of the dryer, lighter soils, in some cases permanently. Paper birch comes in with aspen poplar toward the east, and balsam poplar occurs in the moister situations. Jack pine, aspen and balsam poplar reach a higher development along the Peace river in northern Alberta than they do elsewhere in America. Along its northern margin this belt merges into the sub-Arctic "tundra", with tree growth confined to narrow strips along waterways.

Vigorous tree growth and fairly large timber are found along these shallow valleys as far north as 67°, indicating that soil conditions, especially drainage, are more important than climate in defining the limits of tree growth. To the northward, balsam fir disappears early from the forest growth, followed by balsam poplar, jack pine, aspen and paper birch, leaving white spruce, black spruce, tamarack or larch, and willow to define the northern limit of tree growth. This may be roughly indicated by a line drawn from the mouth of the Mackenzie river on the Arctic ocean to the mouth of the Churchill river on Hudson bay and across the Labrador peninsula at about 58° N. latitude.

**The Eastern Forests.**—In southeastern Canada a number of belts of forest growth with distinctive characteristics are recognized. The hardwood belts include the Carolinian zone, confined to the north shore of lake Erie and the western part of lake Ontario. This is important only as forming the northern fringe of a type which covers a large area in the central Eastern United States, and includes a number of species such as tulip, sassafras, etc., not found elsewhere in Canada. North of this zone, still in the purely agricultural and pastoral area, the original forests were of the commercially important hardwoods, such as maple, elm, basswood, oak, yellow birch, hickory and beech, with patches of pine, hemlock and other conifers on the lighter soils. This area has been largely cleared and devoted to agriculture, and the original forest type is to be seen only on farmers' woodlots.

Since the beginning of the lumbering industry in Canada, the region north of this belt, extending, roughly speaking, to the height of land between the St. Lawrence and Hudson Bay waters, has been the centre of the most extensive exploitation, and still occupies that position as far as Eastern Canada is concerned. The forest types which still exist in this region vary considerably owing to soil and other conditions, but generally speaking white pine occupies the better situations on the lighter soils, and reaches its highest development in this belt. With it is frequently associated the red or Norway pine. On heavier soils, spruce, hemlock and the tolerant hardwoods also form an important part of the stand. Cedar, tamarack and black spruce form typical stands in poorly drained situations. Hardwood ridges, carrying chiefly maple and yellow birch, occur in the southern part of this belt. These, with hemlock, extend north to a line running approximately from the northeast corner of lake Superior to the mouth of the Saguenay river. The extensive lumbering operations of the past century, together with repeated forest fires, have greatly modified these original types. The exclusive cutting of white and red pine, practised until recently, has resulted in the displacement of these species by spruce, balsam fir, jack pine and the hardwoods, the spruce-balsam fir pulpwood areas being the most valuable type remaining. Jack pine has come in extensively on burned-over areas on lighter soils and in some cases has taken permanent possession of such sites. On account of its value for railway ties and pulpwood and the ease with which it can be grown it is not at all an undesirable species to perpetuate. Aspen and paper birch are also rapidly becoming established as temporary types. Along its northern border, this mixed hardwood and softwood type merges into the northern forest belt already described, with the disappearance of first the hemlock and the tolerant hardwoods and then the white and red pines.

The Acadian belt covers the Maritime Provinces and the south shore of the St. Lawrence in Quebec. The forest is similar to that of the New England states,

being characterized by red spruce. With this are found varying proportions of white spruce and balsam fir. In the mixed softwood and hardwood type, which also occurs in this belt, white pine and hemlock occur, with yellow birch, maple and beech representing the commercial hardwoods. Cedar is fairly abundant in the western portion of this region. Burned-over areas in the Acadian belt are chiefly occupied by aspen and white birch as temporary species.

### Section 3.—Important Tree Species.

In Canada there are approximately 160 different species and varieties of plants reaching tree size. Only 31 of these are coniferous, but their wood forms 80 p.c. of our standing timber and 95 p.c. of our sawn lumber. While the actual number of species of deciduous-leaved trees seems large in comparison to their commercial importance, out of a total of some 90 species and varieties only four or five are worthy of comparison with the conifers. A detailed description of the more important species of Canadian forest trees was given on pp. 282-285 of the 1924 Year Book.

### Section 4.—Forest Resources.

**Areas.**—The total land area of Canada, revised according to the Labrador Boundary Award of 1927, is estimated at 3,510,008 square miles, of which 560,000 square miles is considered as being suitable for agricultural or pastoral purposes. According to the 1921 census about 220,134 square miles of this agricultural land was occupied and about 115,770 square miles was improved.

The total area covered by existing forests has been estimated at 1,151,454 square miles, of which about 82,260 square miles is land which, if cleared, would be suitable for agriculture. Under the most economic arrangement about 52,000 square miles of this last area would be cleared and devoted to field crops and pasturage and the remaining 30,000 square miles would be, and no doubt will be, left under forest cover in the form of farmers' woodlots. This leaves an area, of about 1,100,000 square miles of land which could be utilized to the best advantage under forest.

Of the total area under forest at the present time, amounting to 1,151,454 square miles and including the 82,260 square miles of agricultural land, about 200,000 square miles carries mature merchantable timber, 111,234 square miles carries immature but nevertheless merchantable timber and 554,646 square miles carries young growth which if protected from fire and other damage will eventually produce merchantable timber. All this area is so situated as to be commercially exploitable at present. The remaining 285,574 square miles is considered as inaccessible or unprofitable to operate under present conditions. As the result of the constant and inevitable improvement in conditions affecting profitable exploitation, such as the extension of settlement and transportation facilities, the increasing world scarcity of forest products, and the ever increasing demand for these products, due to the development of industry and the discovery of new uses for wood, and the improvements in the methods, equipment and machinery used in logging and manufacturing forest products, most of this inaccessible timber will eventually become commercially exploitable.

In Canada as a whole about 6.6 p.c. of the total forest area has been permanently dedicated to forest production. Previous to the transfer of natural resources to the Western Provinces in 1930, some 33,023 square miles of this reserved area comprised National Forests. Most of these are likely to be continued as provincial forests. In British Columbia the forest reserves and parks include 11,890 square miles; in Ontario 23,855 square miles; and in Quebec 9,489 square miles, making a total of 78,257 square miles.

Of the total forest area 9.6 p.c. has been permanently alienated, being owned in fee simple by private individuals or corporations. On 13.2 p.c. of the area the Crown still holds title to the land but has alienated the right to cut timber under lease or licence. So far 77.2 p.c. has not been alienated in any way. It may be said that 90.4 p.c. of Canada's forest area is still owned by the State and, subject only to certain temporary privileges granted to limit holders, may at any time be placed under forest management and dedicated to forest production.

**Volume of Standing Timber.**—In 1928 the total stand of timber in Canada was estimated to be approximately 224,304 million cubic feet, of which 177,362 million cubic feet was of coniferous species and 46,942 million cubic feet of broad-leaved species.

During the years 1924-1928 the average annual depletion due to use was approximately 2,000 million cubic feet of conifers and 900 million cubic feet of hardwoods. The annual loss from fire is estimated at 240 million cubic feet of conifers and 60 million cubic feet of hardwoods. Though no widespread epidemics of insects or fungous diseases have occurred, two local infestations of hemlock looper in Ontario and Quebec were successfully checked by means of poison-dusting from aircraft. Nevertheless there is a constant and considerable endemic loss from both insects and decay. However, in the absence as yet of any basic data on which to estimate the depletion from these causes, it may be taken as perhaps 800 million cubic feet. The total annual depletion during the five-year period is therefore estimated to have been about 4,000 million cubic feet. To what extent this loss has been replaced by growth increment is not known, but, considering the preponderance of the younger age classes in the reproduction, it is believed there has been a considerable net depletion in the merchantable age classes.

Another real difficulty being met with is the matter of dividing the existing stand into merchantable timber and that which is inaccessible or unprofitable, since merchantability depends not only on the location, but on the density of the stand, the demands of the market for certain species or qualities of product, and the regulations governing cutting. Light stands covering large areas may in the aggregate carry very large amounts of timber and still not be exploitable at a profit. For some species, such as aspen and white birch, which comprise three-quarters of the hardwoods, there is very little demand, and therefore these cannot properly be classed as merchantable, though accessible as far as location is concerned.

In June, 1929, a conference of the Dominion and provincial forest authorities was held in Ottawa and it was decided to undertake a national inventory of the forest resources of Canada, each authority conducting the necessary stock-taking surveys on the land under its jurisdiction. In connection with the inventory, definite data are being secured regarding the depletion due to use, fire, insect

damage, etc., and the increment accruing. Five years was set as an objective for the completion of an inventory of at least the more accessible parts of the area.

This national inventory, which is being organized under the direction of the Department of the Interior, and related studies of increment and decrement should shortly begin to throw new light on many problems.

Under present conditions it is doubtful whether more than 100,000 million cubic feet of conifers and 15,000 million cubic feet of hardwoods can be considered as merchantable.

**Section 5.—Forest Administration.**

**Subsection 1.—Administration of Dominion and Provincial Timber Lands.**

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber land outright. Under this system the State retains the ownership of the land and control of the cutting operations. Revenue is derived in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut), annual ground rent, and royalty dues collected as and when the wood is removed. Both ground rent and royalty dues may be adjusted at the discretion of the Governments so that the public may share in any increase in stumpage values, or, as has happened, reductions may be made in the rates if conditions demand them.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 76 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. has been sold, and 20 p.c. is in holding exceeding 1,000 acres. The percentage of privately-owned forest land in the other provinces is as follows:—Quebec, 7 p.c.; Ontario, 3.3 p.c.; Manitoba, 11.3 p.c.; Saskatchewan, 10.4 p.c.; Alberta, 15.7 p.c. and British Columbia, 13 p.c.

Until 1930 the Dominion Government administered the Crown lands, including timber lands, in the provinces of Manitoba, Saskatchewan and Alberta, in the Railway Belt and Peace River Block of British Columbia, and in the Yukon and Northwest Territories, but the forests as well as the other natural resources in the western provinces have now been transferred to provincial control. In all cases timber lands are now administered by the provinces in which they lie. As new regions are explored, their lands are examined and the agricultural land disposed of. Absolute forest land is usually set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province in Canada. The ownership of forests by towns and communities, so common in Europe, is now beginning in Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on this basis.

**Timber Lands Under Dominion Control.**—The National Parks of Canada Branch of the Department of the Interior administers the Dominion parks, now embracing some 12,822 square miles. These are primarily national playgrounds and game preserves, the timber being practically withdrawn from commercial use. The North West Territories Branch of the Department of the Interior administers and protects forest land lying north of the provincial areas. The Department of Indian Affairs administers, in trust for the Indians, all timbered areas within their reservations. Under the Board of Railway Commissioners, a Chief Fire Inspector has charge of fire protection along nearly all the railway lines in Canada.

**Forest Administration in the Prairie Provinces.**—Upon transfer of the resources in 1930, each province took steps toward the creation of an adequate forest service with a Provincial Forester in charge. In Manitoba the service is under the Department of Mines and Natural Resources, and in its forest regulations framed under the Manitoba Forest Act, the former Dominion Forest Reserves and Crown Timber Regulations are very largely incorporated. In Saskatchewan and Alberta, a closely similar policy is being followed. In every case the central object of policy is to safeguard the regeneration of valuable species in the natural forest types.

Approximately 27,335 square miles of forest lands in the Prairie Provinces are privately owned.

**British Columbia.**—In the province of British Columbia, the Forest Branch of the Department of Lands has administered timber lands since 1912. All unalienated lands in the province which are examined and found to be better suited to forest than to agricultural production are dedicated to forest production, and all timber lands carrying over a specified quantity of timber are withdrawn from disposal until examined by the Forest Branch. During the last few years, 10,182 square miles have been set aside permanently for forest purposes. The present practice is to sell cutting rights for a stated period by public competition, but licences to cut, which are renewable annually in perpetuity, have been granted for a large proportion of the accessible timber. The royalties are adjusted periodically on the basis of prevailing industrial conditions. About 3,000 square miles of timber land are privately owned.

**Ontario.**—Forest administration is carried out in Ontario under the Department of Lands and Forests, which is subdivided into two divisions, each under a

separate Deputy Minister. The Lands and Forests Division controls timber sales and the Forestry Division has charge of reforestation, protection, air service, forest surveys and investigations. The Forestry Board, consisting of representatives from forest industries, the Toronto University Faculty of Forestry and the Deputy Minister of Forestry, functions in an advisory capacity.

In recent years the sale of saw timber has been by tender after examination with conditions covering the removal within a specified period, disposal of *débris*, etc. Much of the merchantable timber is at present held under licences granted in the past and renewable indefinitely. Pulpwood areas are usually disposed of by individual agreements for longer periods than in the case of saw timber. Manufacture in Canada was made a condition in the disposal of all softwood saw timber in 1897, of all pulpwood in 1900 and of all hardwood in 1924. In some individual pulpwood agreements the licensee must undertake not only to erect a pulp-mill but also a paper-mill within the province, the type of mill being stipulated in the agreement. In this province about 7,972 square miles of forest land have been disposed of outright.

**Quebec.**—The Forest Service of the Department of Lands and Forests administers the timber lands in Quebec; its powers include classification of land, disposal of timber and regulation of cutting operations. Forest protection has been since 1924 under a separate organization, the Forest Protective Service. Licences are granted after public competition and are renewable from year to year, subject to changes in royalty by the Government at any time. Grants of land in fee simple, made in some cases under the French *régime* in Quebec, are responsible for the private ownership of about 34,173 square miles of forest land.

**New Brunswick.**—The Forest Service, under the Department of Lands and Mines, and a special Forestry Advisory Commission, form the forest authority in New Brunswick. The Forestry Advisory Commission, consisting of the Minister of Lands and Mines, the Deputy Minister, the Chief Forester, a lumberman representing the licensees of Crown Lands, and one representing the private timberland owners, is appointed to advise on matters of policy. At present timber lands are disposed of as in the other provinces, but in the past several grants of forest land were made to railway companies, private concerns and individuals, who now own in fee simple about 10,675 square miles of forest land.

**Nova Scotia.**—In Nova Scotia the greater part of the forest land, amounting to 12,300 square miles, has passed into private ownership, but the system of disposal of timber by licences to cut is now being followed. What remains vested in the Crown is administered by the Chief Forester under the Minister of Lands and Forests. Under the Minister, the Chief Forester has charge of forest protection, surveying and scaling throughout the province.

### Subsection 2.—Forest Fire Protection.

The protection of forests from fire is undoubtedly the most urgent and most important part of the work of the different agencies administering forest lands in Canada. With the exception of the National Parks, the Northwest Territories and the Yukon, which remain under Dominion control, this work is now the function of the individual provinces. Up till the end of the fire season 1930, the Forest Service of the Department of the Interior was responsible for fire protection in the Prairie Provinces of Manitoba, Saskatchewan, and Alberta,

and the Railway Belt of British Columbia. However, by reason of the transfer of natural resources from Dominion to provincial control, their administration is now a matter of provincial concern.

With the exception of the small province of Prince Edward Island, each of the Provincial Governments now administering its own forests, maintains a fire protection organization which co-operates with owners and licensees for the protection of all timbered areas, the cost being in part distributed or covered by special taxes on timber lands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes and provides for closed seasons during dangerous periods. An interesting development in this connection in the province of Quebec is the organization of a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes in the way of money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction in Canada. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners. These officers co-operate with the railway fire-ranging staffs employed by the various railway companies, the compulsory control of all lines coming under the jurisdiction of the Board being one of the requirements of the Dominion Railway Act.

The most important single development in forest fire protection in late years has been in the use of aircraft for the detection and suppression of incipient forest fires. Where lakes are numerous, flying boats can be used for detection and for the transportation of fire fighters and their equipment to fires in remote areas. Where safe landing places are few and no other lookout system has been developed, as in northern Alberta, land machines are used for the detection and inspection of fire only; but in the Laurentian area where lakes are numerous, flying boats are used both for observation and control. Specially developed aircraft equipped with wireless are employed on forest fire-protection operations, which thus enable the observer to report the location of the fire as soon as it has been detected. Aircraft are now being used extensively for exploring remote areas and mapping forest lands by means of aerial photography. Waste lands and the various forest types can be mapped more accurately and more economically by this means than by ground surveys. As a general rule aircraft are used in the more remote districts, while lookout towers connected by telephone lines or equipped with wireless are established in the more settled and more travelled forest areas. While these agencies have to a large extent supplanted the old canoe, horseback and foot patrol for detection of fires, a large ground staff with its equipment stored at strategic points will always be necessary for the fighting of larger fires, and the maintenance of systems of communication and transportation and of fire lanes and fire guards in the forest.

The most important improvement in forest fire-fighting equipment has been the portable gasoline pumps. These pumps, which each weigh from 45 to a little

over 100 pounds, can be carried to a fire by car, canoe, motor boat, automobile, aircraft, pack saddle or back pack. They can deliver efficient water pressure up to seven thousand feet from a water supply and, when used in relays, at a much greater distance. Smaller hand pumps are also used effectively in many cases.

In addition to these improved measures, legislation has also tended to reduce the fire menace. The establishment of closed seasons for brush burning and seasons during which permits are required for setting out fires and for travel in the forest during dangerous dry periods, have been of enormous value as preventive measures.

None of these measures would be effective without the support of the general public, and in 1900 the Canadian Forestry Association was founded, its chief object being the securing of popular co-operation in reducing the forest fire hazard. This Association now has a membership of 32,000 and an income of \$136,000, mostly secured by voluntary private subscription. Fifteen of the Association's paid lecturers tour the country, using special railway lecture cars and motor trucks equipped with self-contained motion picture equipment, showing special films taken by the Association. Two high class sporting and outdoor magazines, one in French and one in English, are published monthly by the Association as educational media. Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The different Dominion and provincial forest authorities also carry on extensive publicity work independently and in co-operation with the Canadian Forestry Association.

Another interesting development in forest protection has been the establishing of special meteorological stations for the study of the effects of weather conditions on the fire hazard, and the broadcasting of special forecasts of hazardous fire weather.

### Subsection 3.—Scientific Forestry.

Up to the present the practice of forestry in Canada has consisted chiefly in the administration and protection of existing forest areas. Some 35 square miles is now being planted out annually, largely in connection with farmers' woodlots, shelter belts, and reclamation work, although several commercial reforestation projects are being carried on by paper companies and by the Ontario Government on denuded Crown lands. The great forestry problem in Canada, however, is the management of Crown forests, first under provisional and later more intensive working plans, so as to ensure a sustained yield. To this end, forest research activities are now assuming great importance. Silvicultural investigations are receiving marked attention both from the Dominion service and some of the provincial services.

Some 200 technical foresters find employment either under the Dominion and provincial forest services or in many of the paper and lumber companies. In addition to administrative work, these men carry on forest surveys either for the estimating of timber stands and making of maps, or to determine natural growth and reproduction conditions and factors. They also direct any planting or nursery work and the regulation of commercial logging operations along forestry lines.

The Research Division of the Dominion Forest Service has established permanent forest experiment stations at Petawawa, Ontario and at Lake Edward, near Grand'Mère, in Quebec, and carries on similar experimental work at other points throughout Canada. A considerable amount of this work is done in co-operation with provincial forest services and with pulp and lumber companies.

The Forest Service of the Department of the Interior is now conducting a National Forest Inventory in co-operation with the various Provincial Governments. It is expected that in so far as the commercially accessible timber is concerned, this inventory will be completed by 1934. An important feature is that the Forest Service is conducting special rate-of-growth surveys in each province to determine the nature and extent of the natural reproduction, and the annual increment now being secured under varying conditions of site and type, following cutting or forest fires. The valuable silvical data thus obtained will provide a sound basis for future forest policies.

Another important phase of forest research is found in the work of the Dominion Forest Products Laboratories in determining the best methods of forest utilization, that is, the converting of standing timber into saleable commodities with a minimum of waste.

These Laboratories, established by the Dominion Forest Service at Ottawa, and in connection with the University of British Columbia, at Vancouver, carry on investigatory work in forest products, covering the strength, durability and other mechanical, physical and chemical qualities of Canadian woods, methods of seasoning, preservation from decay, and chemical utilization in wood distillation and other industries. A special pulp and paper division of the laboratories is located in Montreal, the recognized business centre of the industry, in the Cellulose Institute of the Canadian Pulp and Paper Association. The division is in close co-operation in this connection with the Association and with McGill University. Much credit is due to the forestry departments of some of the pulp companies for pioneering work in forest research.

Education in forestry and allied subjects and opportunities for research are offered by four Canadian universities and by other agencies. The University of Toronto, the University of New Brunswick at Fredericton, and the University of British Columbia at Vancouver, provide four-year courses leading to a professional degree. The School of Forestry and Surveying in connection with Laval University at Quebec provides, in the French language, a combined course of four years' duration, leading to diplomas in both sciences. The Government of Quebec has established a school in paper-making at Three Rivers in the heart of the paper industry; several agricultural colleges provide short courses in farm forestry, and a school for forest rangers has been established at Berthierville by the Quebec Forest Service.

The practice of forestry by individuals and private concerns is encouraged by the furnishing of expert advice by Dominion and provincial services and by the distribution of tree-planting material. The Dominion Forest Service maintains two nurseries in Saskatchewan, one at Indian Head and the other at Sutherland, near Saskatoon. Over 7,000,000 trees are distributed annually to farmers and ranchers in the Prairie Provinces for planting woodlots and wind-breaks. If certain conditions are fulfilled, the material and instructions are provided free except for transportation charges. A total of 116,000,000 trees have been distributed.

The province of Ontario provides material under similar conditions, and distributes to woodlot owners at least 7,000,000 trees annually, from its five nurseries. As many more are being provided for the creation of county forests, demonstration forests and plantations on denuded Crown lands. To encourage the establishment of communal forests by towns and other municipalities, the Provincial Government undertakes to plant free of charge any area purchased by the municipality for this purpose. The Government also assists counties which purchase areas of not less than 1,000 acres of land for forest purposes. As a result of these inducements there are at present scattered throughout the province 50 communal forests owned by municipalities and eight of the larger county forests. Farm land used for forestry purposes, while so used, is exempt from taxation up to 10 p.c. of the total farm area but not exceeding a total of 20 acres.

In Quebec, a forest nursery at Berthierville serves as a demonstration station for the School of Forestry and as a location for the forest ranger school. It provides trees for sale and distribution in the province, comprising seedlings and transplants for forest planting, and larger trees for ornamental purposes. The capacity of the nursery has been raised to 10,000,000 trees. Provision is made by legislation for the creation of communal forests, and there are now 74 of these containing 584,798 acres.

### Section 6.—Forest Utilization.<sup>1</sup>

**Historical.**—The forest has always played a large part in the life of the pioneer in Eastern Canada, providing him with building material and fuel but opposing his agricultural efforts. The material removed in clearing the first fields was usually more than sufficient for his needs, and in many cases what would now be valuable timber was piled and burned by the early settler. Local trade in lumber began in New France shortly after 1650. The first attempts at forest conservation took the form of setting aside areas of timber for the use of the navy, and the first exports were of shipbuilding material and spars. Sawmills were established along the St. Lawrence before the close of the seventeenth century. While there was no recorded transatlantic trade in forest products other than naval supplies, shipments of lumber and staves were made to the French West Indies during the French *régime*. Shipbuilding became an important local industry and gave rise to considerable forest exploitation.

Transatlantic trade began to develop after the Conquest, stimulated by bounties and tariff privileges granted with the object of reducing England's dependence on Baltic supplies, especially in connection with naval material. This trade, however, did not develop satisfactorily until the beginning of the nineteenth century, when Napoleon succeeded in interfering seriously with imports of wood into England from the Baltic. The export of timber from Canada increased enormously, and the square timber trade in white pine and oak spread from the St. Lawrence and Richelieu valleys to lake Champlain and Upper Canada and especially into the Ottawa valley. This trade reached its height in the '60's and has steadily declined since that date.

Sawmilling on a large scale followed the square timber trade and the establishment of small custom mills followed in the wake of the settler. The building of wooden ships in the St. Lawrence valley and the Maritime Provinces developed

<sup>1</sup> An article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., appears at pp. 318-323 of the 1925 edition of the Canada Year Book.

hand in hand with the lumber industry, providing a local demand for timber and a means of exporting it overseas. The British preferences were reduced and finally abolished about 1860.

The export trade in sawn lumber to the United States developed from 1820 to 1830 and gradually replaced the more wasteful overseas square timber trade, but it was not until after Confederation that the export of sawn lumber by sea exceeded that of square timber.

Encouraged by the free entry of raw materials into the United States, an important trade developed, especially in Ontario, in the exportation of saw logs to be sawn into lumber in American mills. The Provincial Government prohibited the exportation of this material, when cut on Crown lands, about 1900 and effectively checked this economic loss. Similar legislation has since been passed by the Dominion and the different Provincial Governments and has been extended to pulpwood and other raw or unmanufactured forest products.

The lumber industry which began in Quebec and New Brunswick and extended into Upper Canada has since moved gradually through "Old" Ontario along the Upper Ottawa and its tributaries, around Georgian bay, into "New" or northern Ontario and through the Lake of the Woods and Rainy River districts. It is still an important industry in these regions. Lumbering to the north of the prairies, where the timber was never particularly large nor abundant, has progressed with the settlement of the district, but the production does not usually exceed the local demand. In 1908 British Columbia provided less than a fifth of Canada's lumber production, but in 1928 this proportion had increased to 53 p.c., showing the rapid westward movement of the centre of production. British Columbia has added several new tree species to the lumber market and at present possesses the heaviest stands and the largest individual trees in Canada.

Remarkable developments in the manufacture of pulp and paper in the twentieth century have caused a second wave of forest exploitation to sweep over Eastern Canada, and have given rise to an industry which has already surpassed the manufacture of lumber and is to-day the most important manufacturing industry in Canada and the source of the greatest single item in our exports next to wheat.

### **Subsection 1.—Woods Operations.**

Differences throughout Canada in forest conditions give rise to differences in logging methods. Generally speaking, throughout Eastern Canada the climate is such that the cutting and hauling of logs can be carried on most economically during the fall and winter months. The trees are felled and the logs hauled to the nearest stream or lake, where they are piled on the ice or sloping banks. The presence of connected systems of lakes and streams makes it possible in most cases to float the logs from the forest to the mill at a minimum cost during the annual spring freshets. The logging industry east of the Rocky mountains is therefore almost entirely seasonal. In many cases lumbermen co-operate in river-driving operations, and improvement companies, financed by the logging operators, build river improvements to facilitate the passage of the floating logs, the logs being finally sorted and delivered to their respective owners. In British Columbia the scarcity of drivable streams and the greater average size of the logs give rise to entirely different logging methods. Logs are assembled by

different cable systems operated by donkey engines and are transported to the mills or to water chiefly by logging railways and in some cases by motor trucks. These operations are more or less independent of frost, snow or freshet, and are carried on in most cases throughout the entire year.

In Eastern Canada logging operations are usually carried on by the mill owners or licensees of timbered lands, often through the medium of contractors, sub-contractors and jobbers. In the better settled parts of the country a considerable quantity of lumber is sawn by custom sawmills or small mills purchasing logs from the farmers. Unmanufactured pulpwood, poles, ties and other forest products have a market value, but saw-logs, being as a rule the property of the mill-owner, are not generally marketed as such in Eastern Canada. In British Columbia logging is carried on more frequently as a separate enterprise by limit-holders, who cut and sell logs on the market. In many cases mill operators are not limit-holders, but buy their entire supply of raw material from logging concerns.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants, but that they also provide logs, pulpwood and bolts for export in the unmanufactured state and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, which all go to swell the total.

Table 2 gives the total value of the products of woods operations in Canada for the years 1924 to 1928 inclusive. The imports and exports of forest products in the fiscal years ended Mar. 31, 1927-30, are shown in Tables 12 and 13 of the chapter on External Trade.

<sup>1</sup> The figures for 1924 and 1925 include sawn ties, which are included under "logs and bolts sawn" in the 1926 to 1928 estimates. <sup>2</sup> The value of woods operations for 1929, which has just been made available at the time of going to press, is \$219,670,129.

It has been estimated that operations in the woods in Canada in 1928 involved the investment of \$188,000,000 in logging equipment, gave employment for a part of the year to 103,000 men and distributed over \$80,000,000 in wages and salaries. In estimating the annual drain on our forest resources, certain

converting factors have been used. Each of these factors represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree. By the use of these factors it has been estimated that the total drain on our forest resources in 1928 due to consumption for use amounted to 2,988,038,430 cubic feet. To this must be added the volume of material destroyed by fire, insects and fungi, which would bring the total depletion to an average of more than 4,000,000,000 cubic feet per annum. Table 3 gives the reported or estimated production of forest products, by kinds, together with the respective converting factors, the equivalent in standing timber and the estimated value in each case for 1928. Table 4 shows the extent of the drain on our forest resources in 1927 and 1928, by provinces.

The following statement summarizes the quantities and values, in the calendar year 1928, of the main products of the woods which are sold without further manufacture and of the two principal industries utilizing the forest resources, and shows the value of the forests as a source of wealth in Canada.

It is estimated that in the further manufacture of wood and paper into such products as sash, doors, furniture, caskets and paper goods, at least \$75,000,000 is added to the value of these products.

### Subsection 2.—The Pulp and Paper Industry.

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. Paper was first manufactured in Canada about a hundred years ago, but prior to 1860 no wood-pulp was used or produced. Rags, straw, esparto grass, cotton waste and other substances were the raw materials used. The first paper-mill was established at St. Andrews in Quebec (then Lower Canada) in 1803 by a party of Americans who obtained concessions from the seigneurs. Upper Canada's first mill, which is still in operation, was built in 1813 at Crook's Hollow (now Greensville) near Hamilton, and the Maritime Provinces entered the industry in 1819 with a mill at Bedford Basin near Halifax.

In 1866, Alexander Buntin installed at Valleyfield, Quebec, what is claimed as the first wood grinder in America and began the manufacture of wood-pulp by the mechanical process. During the same year Angus Logan and Co. built the first chemical wood-pulp mill in Canada at Windsor Mills in Quebec. During the next decade the use of wood-pulp in paper-making was extensively developed, and in 1887 Charles Riordon installed the first sulphite mill in Canada at Merritton in the Niagara Peninsula; by the beginning of the century the output of the industry had exceeded \$8,000,000. In 1907 the Brompton Pulp and Paper Co. at East Angus in Quebec, built the first mill in America to manufacture chemical pulp by the sulphate or kraft process.

The gross output of the industry increased rapidly and steadily until the boom years following the Great War, when it jumped to a peak of over \$232,000,000 in 1920. This was followed by a drop in 1921, but since that year there has been a steady recovery, resulting in a total for 1929 of \$243,970,761, which exceeds the abnormally high total value reported in 1920.

There are to-day three classes of mills in the industry. These in 1929 numbered 34 mills making pulp only, 46 combined pulp and paper-mills, and 28 mills making paper only. The present tendency is toward the building of the larger combined mills of the type known as "self-contained newsprint mills", and also toward the merging of individual companies into a comparatively small number of large groups.

The rapid development of this industry is due chiefly to the existence in Canada of abundant water powers adjacent to extensive forest resources of pulpwood species. Summary statistics for the combined pulp and paper industry are given on p. 298.

The industry in Canada includes three forms of industrial activity, the operations in the woods, with pulpwood as a product, the manufacture of pulp and the manufacture of paper. These three stages cannot be treated as entirely distinct nor can they be separated from the different stages of the lumber industry. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and many lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. So far as operations in the woods are concerned, it is often impossible to state whether the timber being cut will eventually be made into lumber or into pulpwood.

On account of legislation already referred to, pulpwood cut on Crown lands must in every province be manufactured into pulp in Canadian pulp-mills. The pulpwood which is exported to the United States is cut from private lands. Table 5 shows the annual production of this commodity from 1908 to 1929, together with the quantities used by Canadian pulp-mills and the quantities exported.

<sup>1</sup> Including 32,874 cords imported in 1928 and 37,082 cords imported in 1929. <sup>2</sup> Exports of pulpwood in the calendar year 1930 were 1,330,466 cords.

# PULPWOOD PRODUCTION MANUFACTURE AND EXPORT

1908 - 1929

## AVERAGE VALUE PER CORD

The exportation of raw pulpwood, as shown in the preceding table, has increased only 32 p.c. since 1912, while the quantity consumed in Canadian pulp-mills has increased more than six-fold during the same period. In 1908, almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form. In 1929, with an increase of over 493 p.c. in total production, the proportion exported has fallen to less than one-fifth.

The manufacture of pulp forms the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills for the purpose of providing their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export.

The supply of rags for paper-making is distinctly limited and the material too expensive for the manufacture of cheap paper. Early paper-makers experimented with fibres from the stems, leaves and other parts of numerous annual plants, but the small proportion of paper-making material recoverable from such sources led to experiments in the use of wood. Different species were tried, and finally spruce and balsam fir were found to be the most suitable for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of "cutting-up" and "rossing" mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulp wood is measured by the cord (4' by 4' by 8' of piled material), which is approximately equivalent to 500 feet board measure or to 90 cubic feet of solid wood.

There are in Canada four methods of preparing wood-pulp, one of which is mechanical and three chemical. In the mechanical method, green coniferous woods are preferred; spruce and balsam fir form about 98.2 p.c. of the total, with hemlock and jack pine. The barked and cleaned wood is held by hydraulic pressure against the surface of a revolving grindstone, the sticks lying with their length parallel to the axis of the stone. The stone is constantly washed by water, which carries away the pulp in suspension. Mechanically prepared pulp or "groundwood" is used only for the cheaper grades of paper and board which are required only for a comparatively short time. It contains all the wood substance, a large proportion of which is not durable. Mixed with chemical pulp, it is used for news, wall, cheap book, manila, tissue, wrapping, bag, and building papers, and for box boards, container boards and wall boards.

There are three methods of producing chemical fibre in use in Canada—the sulphite, sulphate (or kraft) and the soda processes, so-called because of the chemicals used in each case to dissolve out the non-fibrous or non-cellulose components of wood substance. Cellulose, which forms about 50 p.c. of wood substance, is the ideal paper-making material. It is a singularly inert substance, largely unaffected by ordinary chemical agents, atmospheric conditions, bacteria and fungi. High grade paper, being almost pure cellulose, will remain in perfect

condition for centuries. Not only do the chemicals used separate out the cellulose, but they remove the fats and resins so troublesome in paper-making, and break down the substance which holds the cellulose fibres together, so that they can be later felted together into a strong sheet of paper.

The previously barked and cleaned pulpwood is chipped in a machine which reduces the wood to particles about an inch long and a quarter of an inch thick, or smaller. These chips are screened, crushed and fed into digesters, where they are cooked in the presence of the various chemicals referred to. The cooked chips are then "blown" into pits below the digesters and washed in preparation for screening.

The sulphite process, which is the most important in use in Canada, depends on the action of a bisulphite liquor (a comparatively weak acid solution of calcium and magnesium bisulphite) on the non-cellulose wood component.

The woods used in this process in Canada are all coniferous. Spruce and balsam form 92.5 p.c., and hemlock 6.5 p.c.

Sulphite fibre is used in the manufacture of most of the newsprint paper, in which it forms about 20 p.c. of the pulp used, adding strength to the remaining 80 p.c. of groundwood pulp. It is used for the better classes of white paper and boards, either pure or in mixture with other fibres.

The soda process is the oldest chemical process, and depends on the action of an alkaline solvent, caustic soda, on the non-fibrous components.

The resultant fibre is used in the manufacture of the best class of book, magazine and writing papers, as a filler mixed with stronger pulp. The result is a paper which lacks strength but can be readily finished to a good surface.

The manufacture of sulphate or kraft pulp is a comparatively recent modification of the soda process. It was first used in America by the Brompton Pulp and Paper Co., at East Angus, Quebec, in 1907. The process was first introduced with the intention of reducing the manufacturing cost of soda pulp by substituting salt cake (sodium sulphate) for the more expensive soda ash (sodium carbonate). Subsequent developments showed that, by an adaptation of this process, the superior strength of coniferous wood fibre could be taken advantage of, and at the present time the woods used are almost exclusively coniferous. Spruce and balsam head the list with about 67 p.c. of the total, followed by jack pine with about 27 p.c., and other conifers in smaller proportions. The fibres so obtained are long, flexible and very strong, and are used in the manufacture of so-called kraft papers used for wrapping, bags, etc. Sulphate pulp is also used in place of sulphite in making newsprint.

**Pulp Production.**—Table 6 shows the total production of pulp in Canada from 1908 to 1929 inclusive, together with the production of groundwood pulp and the production of fibre by the three chemical processes described. Statistics of values are not available from 1908 to 1916.

1929	4,021,229	129,033,154	2,420,774	51,617,360	1,501,273	76,198,051

<sup>1</sup> These totals include some unspecified pulp and screenings.

The steady growth of this industry up to 1920, when 1,960,102 tons of pulp were produced, will be seen from the above figures. There was a drop in production in 1921, but production in 1922 more than overtook the previous year's drop. Since then, with the exception of 1924, each year has shown consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons.

During 1929 there were 34 mills manufacturing pulp only and 46 combined pulp and paper-mills. These 80 establishments turned out 4,021,229 tons of pulp, valued at \$129,033,154, as compared with 3,608,045 tons of pulp, valued at \$121,184,214, in 1928. Of the 1929 total for pulp 2,992,268 tons, valued at \$78,255,415, were made in the combined pulp and paper-mills for their own use in manufacturing paper. Of the remainder, 165,364 tons, valued at \$8,058,363, were made for sale in Canada, while 863,597 tons, valued at \$42,719,376, were made for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as such.

About 60 p.c. of the production in 1929 was groundwood pulp and about 23 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite made up 8 p.c. and sulphate fibre 6 p.c. The remainder was screenings (for which a considerable market has developed in recent years in connection with the manufacture of fibre boards), together with soda fibre and other wood-pulp. Table 7 shows the production of pulp by provinces in the last five years.

## 7.—Production of Wood-Pulp in Canada, by the Chief Producing Provinces, 1925-1929.

<sup>1</sup> Includes other provinces.

Quebec produced over 54 p.c. of the pulp in 1929, with 31 p.c. from Ontario, 8 p.c. from British Columbia and 7 p.c. from the Maritime Provinces and Manitoba.

**Pulp Exportation.**—The following table gives the quantities of pulp exported by the principal pulp-producing countries of the world in 1929. Figures for 1913, the year immediately preceding the war, and for 1928 are shown for comparison. Figures of the exports of wood-pulp from Canada in the fiscal years ended Mar. 31, 1927-30, will be found in Table 12 of the chapter on External Trade. In the calendar year 1930 the exports of wood-pulp from Canada were 15,204,406 cwt.

## 8.—Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1928 and 1929.

Country.	Year ended Dec. 31—				
	1913.	1928.	1929.

<b>Totals, Principal Countries.</b>	—	<b>9,612,641,000</b>	<b>11,130,362,000</b>	<b>6,812,621,000</b>	<b>4,318,341,000</b>

The total exports of the eleven principal pulp-exporting countries of the world in 1929, were 11,130,362,000 lb. or 5,560,316 short tons, of which Canada contributed about 15 p.c. While the exports of Sweden, the leading exporter, are only about double those of 1913, Canada's exports during the same period have almost tripled in spite of the increasing proportion of our total pulp production which is being further manufactured into paper in Canadian mills.

**Paper Production.**—The paper-making stage of the industry involves the consumption of wood-pulp and other paper stock in the manufacture of paper and other pulp products. Accurate annual statistics for this part of the industry are only available for the years 1917 to 1929 inclusive. These are given in Table 9.

During 1929 there were 46 combined pulp and paper-mills and 28 mills making paper only. These 74 establishments produced 3,197,149 tons of paper, together with certain miscellaneous pulp products, with a total value of \$193,193,022, as compared to 2,849,199 tons, valued at \$184,462,356, in 1928. Newsprint paper forms about 85 p.c. of the annual paper production in Canada. In 1929, the production of newsprint paper was 2,725,331 tons, valued at \$150,800,157, making Canada the largest producer of newsprint in the world. The estimate for 1930 is 2,499,631 tons (Preliminary figure).

1926	155,469	8,825,904	44,006	5,068,203	2,266,143	158,277,078
1927	161,497	8,985,788	46,585	4,433,926	2,468,691	168,445,548
1928	193,061	10,656,200	50,940	5,069,950	2,849,199	184,462,356
1929	250,061	13,639,645	56,881	5,287,012	3,197,149	193,193,022

Newsprint made up about 85 p.c. of the total paper production in 1929, with 8 p.c. of paper boards, 3 p.c. of wrapping paper, a little over 2 p.c. of book and writing paper and nearly 2 p.c. of other miscellaneous papers.

## VARIATIONS IN PAPER PRODUCTION

1917-1929

## 10.—The Production of Paper in Canada, by Provinces, 1929.

Province.	Quantity.	Value.
	tons.	\$
Quebec.....	1,780,720	107,504,475
Ontario.....	1,080,028	66,822,230
British Columbia.....	229,724	13,236,274
New Brunswick and Manitoba.....	106,877	5,640,043
<b>Totals.....</b>	<b>3,197,149</b>	<b>193,193,022</b>

Quebec produced 55.7 p.c. of the total quantity, Ontario 33.8 p.c., British Columbia 7.2 p.c., and New Brunswick and Manitoba 3.3 p.c.

**World Production of Newsprint.**—The world production of newsprint in 1929 has been estimated at 7,304,000 short tons, of which North America supplied over 60 p.c. and Canada alone over 37 p.c. The estimated production in 22 leading countries was as follows:—

## 11.—Estimated Production of Newsprint Paper in 22 Leading Countries, 1929.

Country.	Production.	Country.	Production.	Country.	Production.
	tons.		tons.		tons.
Canada.....	2,725,000	France.....	210,000	Spain.....	30,000

Finland.....	215,000	Czechoslovakia.....	47,000	<b>Total.....</b>	<b>7,304,000</b>

**Exportation of Newsprint Paper.**—In the fiscal year 1908, exports of printing paper were for the first time separately recorded, and valued at \$2,833,535. In the fiscal year 1913, when quantities were first shown, Canada exported 146,791 short tons valued at \$5,692,126. In 1929 our exports of newsprint amounted to 2,515,495 tons valued at \$148,865,648, and ranked second only to wheat among the exports of the Dominion. For exports of newsprint and other paper in the fiscal years ended Mar. 31, 1927-30, see Table 12 of the chapter on External Trade.

As early as 1913 Canada led the world in the exportation of newsprint, and since that date her exports have increased almost ten-fold in quantity, while those of Germany, her nearest competitor, have increased about five-fold. The exports of the United States have decreased in quantity during the period and those of Great Britain have remained about the same. The following table shows the exportation of newsprint from the 13 principal exporting countries in 1913, 1927, 1928 and 1929, amounting in the aggregate in 1929 to 7,811,572,000 lb. or 3,905,786 short tons, of which Canada contributed over 64 p.c. or more than all the other 12 countries combined. Canada's exports of newsprint paper undoubtedly exceed those of the rest of the world, being estimated for the calendar year 1930 at the figure of 4,662,022,000 lb.

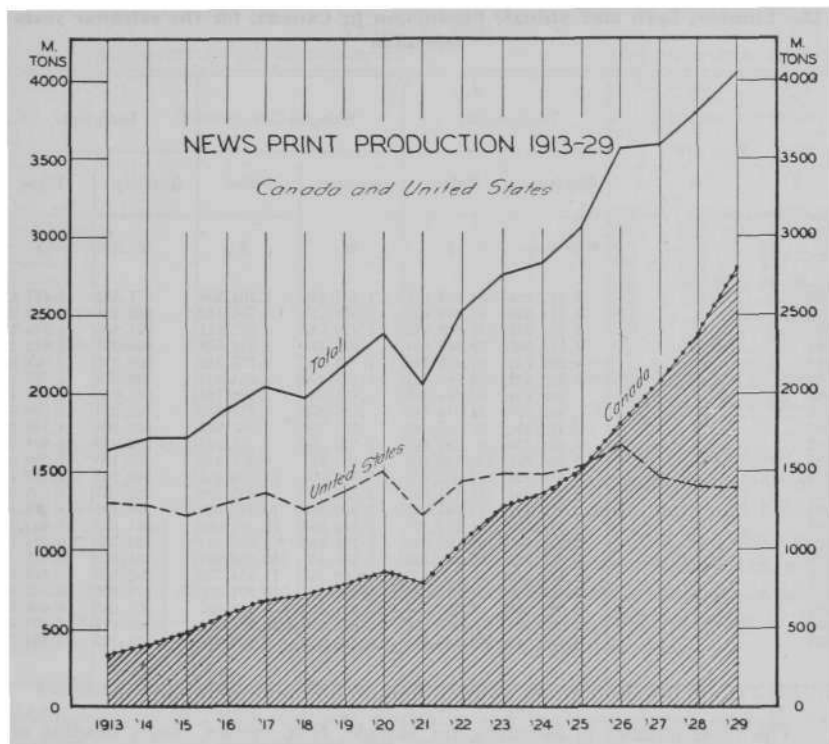

### 12.—Exports of Newsprint Paper from Principal Paper-producing Countries of the World, 1913, 1927, 1928 and 1929.

NOTE.—Countries arranged in order of importance of export, 1929.

**Statistics of the Combined Pulp and Paper Industries.**—While the manufacture of pulp and that of paper are properly two industries, the existence of combined pulp and paper-mills makes it impossible to separate many of their statistics. Considering the manufacturing part of the industry as a whole, there were altogether 108 mills in operation in 1929, as compared with 110 in 1928. The capital invested in 1929 amounted to \$644,773,806, the employees numbered 33,584 and their salaries and wages amounted to \$50,214,445. If we disregard the pulp made "for own use" in the combined pulp and paper-mills, the total value of the raw materials used in the industry as a whole amounted to \$96,874,749 and the gross value of production to \$243,970,761. The difference between these two or the net value of production represents the value added by manufacture and amounted in 1929 to \$147,096,012. Pulp and paper is now the most important manufacturing industry in Canada, foremost in wage and salary distribution since 1922, when it exceeded that of the sawmills. It has been the leading industry in gross value of production since 1925, when it replaced the flour mills, and also first in net value of production since 1920, when it outstripped the sawmills in this respect. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for the capital invested, men employed, wages paid nor primary products sold in connection with the woods operations which form such an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the \$13,314,738 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry toward a favourable trade balance for Canada in 1929 amounted to \$195,541,990, representing the difference between exports and imports of pulpwood, pulp, paper and paper products.

The United States market absorbs annually all of Canada's pulpwood exports and over 84 p.c. of her pulp and paper shipments, and the remaining portion goes to the United Kingdom and other widely distributed overseas markets. Almost half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

### Subsection 3.—The Lumber Industry.<sup>1</sup>

The manufacture of lumber, lath, shingles and other products of the sawmill is the second most important industry in Canada depending on the forest for its raw materials. Annual statistics covering this and other forest industries were collected and published by the Forest Service of the Department of the Interior from 1908 to 1916. Since that date the work has been carried on by the Dominion Bureau of Statistics, in co-operation with the Forest Service.

The production of sawn lumber in Canada in 1920 reached a total of over four billion feet, board measure, the highest cut recorded since 1912. This was followed in 1921, however, by a period of depression which was general throughout all fields of industrial activity. The production of lumber in 1921 decreased by over a third and the average value by over \$10 a thousand feet. Since that year there have been annual increases in cut for Canada as a whole except in 1927. The tendency toward a decrease in production in Eastern Canada has been more or less made up by the increased cut each year in British Columbia, which now produces over half the total. Table 13 gives the production of lumber, lath and shingles in each year from 1908 to 1929.

<sup>1</sup> An article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., appears at pp. 318-323 of the 1925 edition of the Canada Year Book.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills, and mills for cutting-up and barking or rossing of pulpwood operating in 1929 was 3,161, as compared with 2,967 in 1928. The capital invested in these mills in 1929 was \$181,586,699, the employees numbered 46,466 and their wages and salaries amounted to \$36,157,555. The logs, bolts and other raw materials of the industry were valued at \$83,743,952 and the gross value of production was \$146,989,564. The net production or the value added by manufacture in 1929 was \$63,245,612.

The lumber industry in 1929 was the sixth most important manufacture in Canada in gross value of products, being exceeded by pulp and paper, slaughtering and meat packing, flour milling, the automobile industry and central electric stations. It ranked first in total number of employees, third in wage and salary distribution, third in value of capital invested, and fifth in net value of products.

The production of sawn lumber increased in quantity from 1928 to 1929 by 9.3 p.c. Lath production decreased by 26.6 p.c., and shingle production by 5.5 p.c. Other increases were reported in the production of sawn ties, pulpwood, fuel, staves, pickets, poles, box shooks, veneer, and heading, and decreases in spoolwood and miscellaneous products. The total gross value of production increased from \$139,424,754 in 1928 to \$146,989,564 in 1929, as shown in Table 14.

## 14.—Production of Lumber and other Sawmill Products in Canada, by Provinces, 1929.

Province.	Lumber Production.		Other Sawmill Products.	Total all Products.
	Quantity.	Value.	Value.	Value.
	M ft. b.m.	\$	\$	\$
Prince Edward Island.....	5,093	121,838	18,091	139,929
Nova Scotia.....	125,626	2,577,875	627,342	3,205,217
New Brunswick.....	363,114	9,294,941	2,869,663	12,164,604
Quebec.....	625,838	16,464,529	11,878,097	28,342,626

British Columbia.....	2,400,500	51,196,464	13,440,837	64,637,301
<b>Totals.....</b>	<b>4,741,941</b>	<b>113,349,886</b>	<b>33,619,678</b>	<b>146,969,564</b>

British Columbia comes first in total production, contributing over half the total cut in lumber and 81.5 p.c. of the shingles. Ontario comes second, Quebec third and New Brunswick fourth. Douglas fir was the most important kind of lumber sawn, being produced almost entirely in British Columbia. Spruce is sawn in every province and comes second, with white pine, hemlock and cedar next in order of importance. Cedar is the most important shingle wood sawn. The conifers form about 95 p.c. of the total cut of all kinds of wood in this industry, with only 5 p.c. deciduous-leaved trees or hardwoods.

**Lumber Exportation.**—The square timber trade reached its maximum development in the '60's, declined gradually and has now almost entirely disappeared. With its decline came the increased exportation of deals and other sawn lumber, first to Great Britain and later to the United States. Our trade with this latter country has been from the first largely confined to planks, boards and dimension stock. During the American Civil War our exports of forest products of all kinds to the United States for the first time exceeded those to Great Britain, but in late years this has become invariable. The total quantity of sawn lumber exported from Canada has changed little in the last 25 years, averaging about two billion feet board measure per annum. The exports in 1929 amounted to 1,762,431,000 feet board measure, valued at \$49,572,861, of which the United States took 78 p.c. and Great Britain about 10 p.c. The exports of lumber increased in 1929 as compared with 1928, while the exports of shingles and lath declined.

## Subsection 4.—Summary of Primary Forest Production.

For the purpose of comparing primary industries such as agriculture, fishing, forestry and mining, forestry production is here understood to consist of the total value of the products of woods operations, together with the value added by manufacture in sawmills and pulp-mills, but not in paper-mills. Forestry production under this system of classification, amounted to \$323,654,008 in 1928 or about 14 p.c. of the total primary production for the Dominion, which was estimated at \$2,283,895,997. Forest production, therefore, stood in second place in this respect, being exceeded by agriculture with \$1,501,271,463 or 66 p.c. and followed by mining, with \$274,989,487 or 12 p.c.

### Subsection 5.—Other Forest Industries.

Sawmills and pulp-mills draw their supplies of raw material direct from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries which use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, others manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries which use wood indirectly in the manufacture of articles which do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors and other millwork and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling stock, musical instruments, brooms and brushes, etc. The fourth class could be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

### Subsection 6.—Manufactures of Wood and Paper.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in comparing manufacturing industries and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1929 the gross value of production for all classes of manufactured products amounted to \$4,063,987,279, of which total the wood and paper group contributed \$725,819,740 or nearly 18 p.c. It was exceeded in this respect by the vegetable products with about 19 p.c. and the iron and steel group with slightly over 18 p.c. Of the ten groups of industries into which the industrial census is divided, the wood and paper group, which includes the manufacture of lumber, pulp and paper as well as the wood- and paper-using industries, was highest in number of establishments with 7,405, in capital invested with \$1,152,075,234, in total number of employees with 164,182 and in salary and wage distribution with \$192,235,448.

In few industries did manufacture add, in 1929, a higher percentage to the raw material used than in the wood- and paper-using industries; in the manufacture of pulp and paper this percentage is 151 and in the lumber industry, 75. By the manufacture of lumber into planing-mill products its value is increased by 78 p.c. For the wood and paper group as a whole the net value of production or the value added by manufacture in 1929 was \$411,616,451, or 131 p.c. of the value of raw materials used. In respect also of the net value of production the wood and paper group of industries surpasses all the other groups of manufactures. Further details are given in the Manufactures chapter on pp. 426 and 427 of the present volume.

The forests of Canada contribute an important part to her total export trade. During the fiscal year ended Mar. 31, 1930, exports of forest origin amounted to \$289,566,675 and made up 25.8 p.c. of the total value of exports for the period, amounting to \$1,120,258,302. Exports of forest origin were exceeded only by those of farm origin, which made up 34.3 p.c. of the total and were followed by products of mineral origin with 23.3 p.c. Forest products are also prominent among the individual items of exportation. Newsprint paper is second only to wheat on the list and sawn lumber and wood-pulp come fourth and fifth. The gross contribution of the forest toward a favourable trade balance for Canada amounted to \$229,018,309 during the same period.

#### Subsection 7.—Forest Depletion and Increment.

**Fire Losses.**—No accurate summing up of forest fire losses in Canada's forests has ever been made, but it has been estimated that 60 p.c. of the original forest has been burned, 13 p.c. has been cut for use and 27 p.c. remains. Though the loss of merchantable timber has been greatly reduced in recent years by forest protective services and the education of the public, it still constitutes a serious drain on our resources. At a low estimate fire destroys annually about 300 million cubic feet of merchantable timber and the young growth on 530,000 acres.

Since the historic Miramichi fire which burned along the valley of the Miramichi river in New Brunswick in 1825 there have been a number of disastrous forest fires. About 1845 vast areas, west of lake Superior, were burned over. Some years later a very extensive fire burned along the height of land from lake Timiskaming to Michipicoten. In 1871 a fierce fire swept over more than 2,000 square miles of forest, from lake Nipissing westward along the north shore of Georgian bay. About the same time the greater part of the Saguenay and Lake St. John district, in Quebec, was swept by one of the most destructive fires on record. Two other fires in 1891 and 1896 devastated more than 2,000 square miles of country in the southern Algoma district. In Quebec, the country along the line of the Quebec and Lake St. John Railway also suffered by a number of disastrous forest fires.

During more recent times, a series of disastrous fires swept over northern Ontario. A number of isolated fires around the mining camp of Porcupine culminated, on July 11, 1911, in a conflagration which resulted in the loss of 72 lives and property damage estimated at \$3,000,000. In 1916, fires in the same general region were responsible for the deaths of at least 224 people. In 1922 a third fire destroyed the town of Haileybury and other centres. In 1908, a fire originating in the forest around Fernie, British Columbia, destroyed that city. Every year thousands of acres are devastated by fires of less individual importance, which in the aggregate are rapidly depleting our forest resources.

Speaking generally, there are two annual periods in Canada when the forest fire hazard is highest—in the spring, after the disappearance of the snow, when the forest floor is dry and the green underbrush has not yet developed, and again in the fall when the green growth is dead and the ground is covered with dry leaves. Statistics collected by the different government administrations and the Quebec protective associations show that over 95 p.c. of the fires of known origin are due to human carelessness and therefore preventable. Campers,

settlers and railways are responsible for most of the fires whose origin is determined. Other causes, including lumbering operations, lightning and incendiarism, account for smaller proportions.

**Losses through Insects and Fungi.**—From 1912 to 1923 the spruce bud-worm caused tremendous damage to the spruce and balsam fir forests in Eastern Canada. In Quebec, it was estimated that 100 million cords of pulpwood were destroyed by this insect, and in New Brunswick the loss was placed at 15 million cords. In this region the active stage of the infestation is now practically over, but the insect is now causing damage in northern Ontario and Cape Breton Island. Other insects though not as destructive as this one, entail a heavy drain on the forest. The hemlock looper and a new species closely related to the spruce bud-worm are causing considerable damage in eastern coniferous forests. During the last few years, dusting by aeroplane has been developed on a practical basis by the Entomological Branch of the Department of Agriculture and promises to be effective in the control of defoliating insects. The loss caused by the various forms of rot and other fungous diseases is probably not less than that caused by insects under normal conditions. The butt rot is especially prevalent in balsam fir, and the value of the hardwoods is also greatly decreased by rot.

**Summary of Losses and Increment.**—The annual consumption of standing timber for use amounts to about 2,900,000,000 cubic feet. At a very low estimate, fire destroys annually about 300,000,000 cubic feet of merchantable timber and the young growth of various ages on 530,000 acres. The destruction occasioned by insects, fungi and windfall is not known, but is estimated at 800,000,000 cubic feet per annum. It may be safely estimated that the forests of Canada are being depleted at the rate of upwards of 4,000,000,000 cubic feet per annum. With about 665,800 square miles of timber in a growing condition, an average annual increment of 10 to 11 cubic feet per acre would be quite possible under forest management and would cover this depletion, but in view of the destruction of young growth which occurs and the deterioration of the forests and the soil, caused by repeated fires, there is little hope that this increment is being produced at the present time throughout Canada, although particular areas are producing greatly in excess of this quantity, and extensive reproduction and rate of growth surveys being conducted by the Dominion Forest Service indicate that the increment is greater than previously anticipated.

## CHAPTER X.—THE FUR TRADE.<sup>1</sup>

**Historical Sketch.**—The place which the fur trade held during the French régime in Canada, when for a century and a half it was at once the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said with truth to have held the West until the Dominion had grown to absorb it, bequeathing to the civilization which came after, a native race accustomed to the white man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the following paragraphs.

From the earliest times the Basque and Breton fishermen from the "Banks" had traded for furs. As the French court demanded more and more furs, adventurers came for the fur trade exclusively. Pont-Gravé and Chauvin built Tadoussac in 1599 as a centre for this trade with the Indians of the Saguenay, and when trade routes were discovered farther inland, the founding of Quebec and Montreal followed. The French Government from the first granted monopolies of the fur trade, always on the condition that the company should bring to Canada a stated number of settlers. But settlement and the fur trade could never go together—settlement, by driving fur-bearing animals farther afield, made trade increasingly expensive—and the great profits of the fur trade, together with its freedom and romance, took all the adventurous from the rational pursuits of settlers. Trade spread west and south by the river routes, convoys bringing the furs yearly to Montreal and Quebec. The de Caen Company, in the seventeenth century, sent yearly to France from 15,000 to 20,000 pelts. "Beaver" was made the Canadian currency.

In the meantime, English navigators had been seeking a Northwest Passage to the Orient. By 1632 their efforts came to an end with little practical result. Hudson bay, however, had been accurately charted, so that when the first English fur-trading ships came some 30 years later, they sailed by charted routes to a safe harbour. The first expedition came at the instigation of Radisson and Grosseillers, two French *coureurs des bois* who had travelled in the rich fur country north of lake Superior. They had sought aid in France but being repulsed turned to England. The charter of the "Adventurers of England trading into Hudson's Bay" was obtained in 1670 by Prince Rupert, uncle of Charles II, who became first Governor of the company (whence the name Rupert's Land). During the struggle with the French, beginning about 1685, no dividends were paid, but with the English victory the company resumed payments. Forts were built on Hudson bay and James bay at the mouths of rivers; the company, as monopolist, waited for the furs to be brought to its posts.

With the Seven Years' War, the fur trade from the south passed out of the hands of the French, and until 1771 the English were busy re-discovering the old French routes to the West. A period of open competition followed. The discoverer of a new fur district was soon followed by competitors who undersold him

<sup>1</sup> Revised by Miss F. A. Brown, Chief of the Fur Statistics Branch, Dominion Bureau of Statistics. This Branch publishes a detailed Annual Report on the Production of Raw Furs (Wild Life), obtainable from the Dominion Statistician.

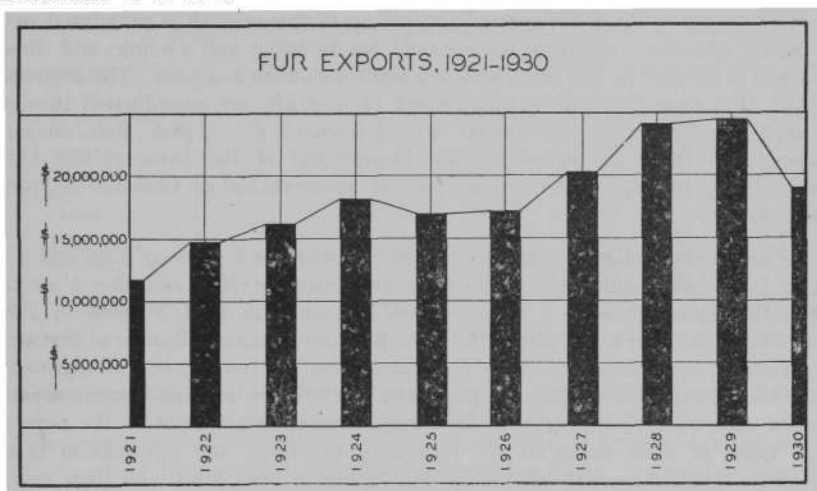

and were undersold by him until some or all were ruined and left for new fields. The Northwest Company, founded in 1783-4, was a result of such competition. No capital was deposited, but each party supplied a proportion of the articles needed for trade. The Northwest Company pursued a vigorous policy, founding posts to control all the best fur districts. The Hudson's Bay Company felt the keenness of the competition, and was forced to abandon its ancient policy of waiting for furs to be brought to the bay. By 1816, the rivals had absorbed or ruined eleven other partnerships, and were themselves on the verge of ruin. Finally, in 1821, the two were joined under the name of the older company. The Northwest Company brought with it full control of the Pacific and Arctic watersheds, to be added to the lands draining into Hudson bay, and over the whole region the Hudson's Bay Company secured legal recognition of its monopoly of the fur trade. There followed 40 years of great prosperity. The company's rights of exclusive trading in Indian territory expired in 1859, and ten years later it surrendered its other privileges. In return, Canada granted £300,000 to the company, as well as lands about its trading posts, and one-twentieth of the land in the fertile belt between the North Saskatchewan river and the United States boundary. The Hudson's Bay Company thereupon became a trading company, with no extraordinary privileges.

**The Modern Industry.**—Great changes have come over the trade in recent years. The railway has revolutionized conditions wherever its influence reaches. Steamboats now ply upon the larger lakes and rivers. Rising values have led to new processes of treatment and to the utilization of products once rejected. Competition has been encouraged, and new territory is eagerly sought as in the days prior to 1821. The modern competition, though it ranges throughout Canada, has centred at Edmonton, on the edge of the great preserve. Winnipeg is now the chief collecting and distributing point of the Hudson's Bay Company, and Montreal collects the furs of the Ottawa valley and the Quebec hinterland.

During the Great War, the important market changed from London to the United States. Of the \$5,100,000 worth of undressed furs exported to England and the United States in 1914, England received \$3,000,000; in 1919, out of \$13,300,000 worth, only \$3,700,000 went to England. The English market is now regaining its former place in the fur trade and in the fiscal year 1930 took \$10,314,193 worth of raw furs, while the United States took \$7,603,282 out of a total export of \$18,706,311. (Figures of exports in recent fiscal years will be found in Table 12 of the chapter on External Trade.) A century ago the value of furs exported exceeded that of any other Canadian product; the total output is not declining, but exports for the year 1930 were only about 1.7 p.c. of our total exports of Canadian merchandise. The following graph shows the trend of exports over the past ten years; it will be seen that, on the whole, it has been definitely upward in face of the fact that the general trend of fur prices has been downward. Of the total exports of raw furs in 1930, nearly 55 p.c. went to the United Kingdom and 41 p.c. to the United States.

At the close of the war, Montreal took a position as an international fur market, holding the first Canadian fur auction sales in 1920, when 949,565 pelts, valued at \$5,057,114, were disposed of. At the auction sales held in Montreal in 1929, 2,399,708 pelts were sold for \$7,303,836. Sales are also held at Winnipeg and Edmonton. A growing industry is that of the dressing and dyeing of furs

In 1929 the number of fur skins treated in Canadian plants was 7,633,909, compared with 7,974,020 in 1928. The plants in operation numbered 10 in 1929, 12 in 1928 and 11 in 1927.

Improved methods of capture, together with the advance of lumbering, mining and agricultural settlement, have driven fur-bearing animals farther and farther afield. Close seasons have been declared for Russian sable, Bolivian chinchilla and Canadian beaver, but even this has been insufficient, as is shown by the continued decrease of the numbers of the animals. The fur trade has taken other methods to supply the demand by re-naming common and despised furs and by encouraging the use of the furs of domestic animals. About 40 years ago, Persian lamb, astrachan and broadtail, the product of the Karakul sheep, came into general use. A few of these sheep were imported into Canada some years ago, but the Canadian industry has not progressed as a source of supply for pelts. Of fur-bearing wild animals the fox has proved the best suited to domestication. The successful breeding of the fox on fur farms came in the period of rising prices after 1890, with the introduction of woven wire fencing. Other animals have been domesticated, though less successfully than the fox—raccoon, mink, marten, skunk, muskrat and beaver. For a review of the fur farming industry of Canada, see pp. 235 to 238 of this volume.

**Conservation.**—The conservation of the wild life of Canada has been made a special object of government policy through the organization, in 1916, of the Advisory Board on Wild Life Protection, to co-ordinate the efforts of various Departments and Branches of the Dominion Government in matters relating to the conservation of the wild-life resources of Canada. The Northwest Game Act and the Migratory Birds Convention Act are the most important subjects to which the attention of the Board is specially directed and upon which it makes recommendations. In addition, the Board investigates and studies all problems relating to the protection and better utilization of all fur-bearing animals, "big game" mammals and to bird life, whether game birds, insectivorous birds or others. The Board serves entirely without remuneration and during the whole period of its existence has incurred no expenditure.

In all provinces and territories of the Dominion, regulations governing the taking of fur-bearing animals are in force, and most kinds are protected during certain seasons of the year. In cases where special protection is necessary to avoid extermination of the species, the killing of the animals is prohibited over a period of years. Licences are required for trapping and trading, and direct revenue is derived by the provinces and territories from raw furs. The activities of the Dominion as a whole, with respect to wild life, are co-ordinated through biennial conferences of provincial and Dominion game protection officials. These conferences are called by the Department of the Interior, and have assisted in evolving efficient plans for the preservation of Canada's wild-life resources.

**Fur Trade Statistics.**—Statistics of the number and value of raw furs and skins taken were collected at the decennial census of 1881 and thereafter till 1911, the figures showing a value of \$987,555 taken in 1880, \$768,983 in 1890, \$899,645 in 1900 and \$1,927,550 in 1910. In 1920 the Dominion Bureau of Statistics commenced the annual collection of returns from fur traders, but arrangements were subsequently made with the provinces, whereby the provincial game departments undertook to supply annually to the Bureau, statements of the number and value of pelts taken in the respective provinces, the information being based on royalties, export taxes, etc. The figures of pelts taken and their values are given for the available years in Table 1. The high value shown for 1920 is due to the inflated prices of that time.

Details by provinces of the number of pelts taken in the two latest years are given in Table 2, and details by kinds in Table 3. In the latter it will be noted that fox, taken together, is the leader, followed by muskrat and mink. Beaver, ermine (weasel) and marten each contributed over \$1,000,000 to the fur production of Canada in the latest year. The total number of pelts in 1928-29 was 5,150,328, an increase of 1,549,175 over the preceding season. This increase was mainly due to three kinds, which have a large annual production but are among the lower priced furs, *viz.*, ermine (weasel), which increased by 390,846, or 78 p.c.; muskrat, which increased by 822,876, or 42 p.c.; and squirrel, which increased by 418,163, or 156 p.c. On the other hand, many of the higher priced furs—beaver, coyote, fisher, blue fox, patch or cross fox, red fox, white fox, lynx, marten, raccoon and wolf—show decreases in number of pelts. Thus the value of pelts shows a slight decline in the latest year.

**1.—Summary of the Numbers and Values of Pelts of Fur-bearing Animals Taken in Canada, years ended June 30, 1920-1929.**

Year ended June 30.	Pelts.	
	No.	Value of Pelts. \$
1920.....	3,670,004	21,387,005 <sup>1</sup>
1921.....	2,936,407	10,151,594
1922.....	4,366,790	17,438,867
1923.....	4,963,996	16,761,567
1924.....	4,207,593	15,643,817
1925.....	3,820,326	15,441,564
1926.....	3,686,148	15,072,244
1927.....	4,289,233	18,804,126
1928.....	3,601,153	18,758,177
1929.....	5,150,328	18,745,473

<sup>1</sup> Fur prices in this year were abnormally high. Any comparison of this figure with those of later years should take this into account.

2.—Numbers and Values of Pelts of Fur-bearing Animals Taken in Canada, years ended June 30, 1928 and 1929.

<sup>1</sup> Coyote or prairie wolf pelts for Manitoba are included with wolf pelts.

## CHAPTER XI.—THE FISHERIES.<sup>1</sup>

### Section 1.—The Early Fisheries.

Fishing is one of the earliest and most historic industries of Canada. From a date which precedes authentic record, the Normans, the Bretons and the Basques were on the cod banks of Newfoundland. Cabot, in 1498, when he first sighted the mainland of North America, gave it the name of "Bacalaos", the Basque word for cod fish, which he found already in use among those hardy seamen. Cape Breton, one of the oldest place-names in America, is another memorial of the early French fishermen—and the Spaniards and the Portuguese were but little behind. Fernandez de Navarrete mentions all three as frequenters of the Grand Bank before 1502. The fishing was by hand lines over barrels made fast to the bulwarks to prevent fouling, the vessels remaining during fine weather, then returning to France with from 30,000 to 50,000 cod. Voyages along the coast soon showed the cod as plentiful inshore as on the outer banks, and it became common for a crew to anchor in a bay, erect a hut on shore, and make daily excursions to the fishing grounds—the product being salted and dried on land and at the end of the season shipped to France. Jacques Cartier, in the gulf of St. Lawrence in 1534, found traces everywhere of these early "Captains Courageous" and their rivalries in arms, as well as in the capture of the teeming product which had tempted them so far from home. An establishment of the kind just mentioned was founded at Tadoussac by Chauvin in 1599. Soon the fishermen began to stay all winter and thus to erect permanent fishing settlements. Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has never since ceased to yield a perennial harvest to both Europe and America.

By the Treaty of Utrecht in 1713, Britain became the owner of Newfoundland and excluded France from fishing and drying fish on certain sections of the coast, but France retained the fisheries of Cape Breton and the gulf. The Seven Years' War (1756-1763) put a stop to continuous fishing. At its close, the Robin family of Jersey came to Canada, and gradually acquired the former French fishing stations. Until the arrival of the Loyalists, all other fishing but cod was neglected. Inshore fisheries alone (including those of the Labrador coast) were developed during this phase; no deep-sea fishing vessel put out from Lunenburg, now the chief centre of the deep-sea fishery, until 1873.

### Section 2.—The Canadian Fishing Grounds.

The fishing grounds of the Dominion of Canada are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence,

<sup>1</sup> Revised by Miss F. A. Brown, Chief, Fisheries Statistics Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with Advance Summaries on Fish Caught, Marketed and Prepared, by Provinces. These may be obtained from the Dominion Statistician.

fully ten times that size, and other ocean waters, comprise not less than 200,000 square miles, or over four-fifths of the area of the fishing grounds of the North Atlantic. In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas, they represent only a part of the fishing grounds of Canada. The Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered; whilst throughout the interior is a series of lakes which together contain more than half of the fresh water on the globe, Canada's share of the Great Lakes alone amounting to over 34,000 square miles, a total which of course does not include lake Winnipeg (9,457 square miles), lake Manitoba and others of even greater area.

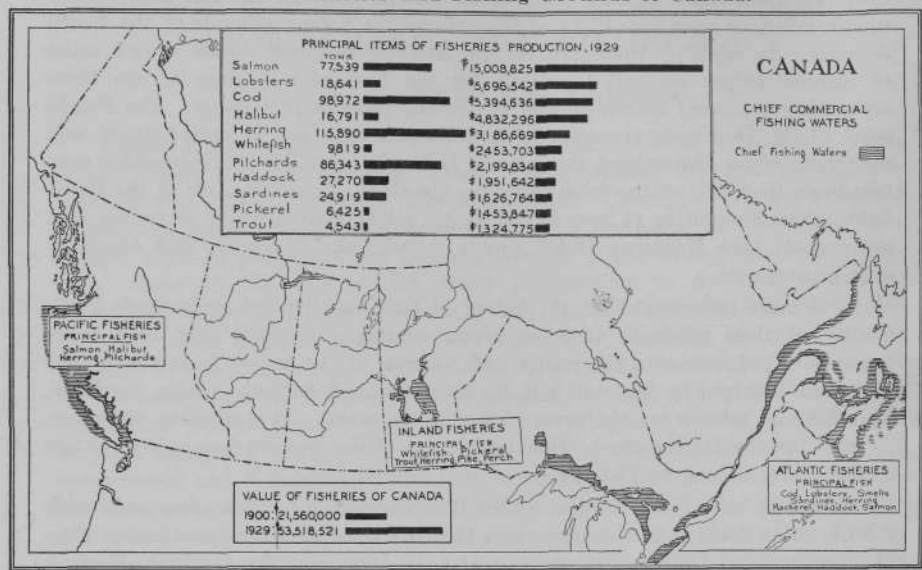

Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters from which they are taken. Judged by this standard, the Canadian cod, halibut, herring, mackerel, whitefish and salmon are the peers of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada.

It will be seen from the above that it is impossible to deal adequately with the Canadian fisheries in the aggregate; they are those of a continent rather than of a country, and are of corresponding diversity. Omitting the enormous Hudson Bay and peri-Arctic region, which extends from Ungava to Alaska and the fish resources of which are not known, the Canadian fisheries may be divided into Atlantic, inland and Pacific fisheries.

**Atlantic Fisheries.**—These were the first Canadian fisheries in point of time, and until 1918 they remained the most important in aggregate value of product. Cod, halibut, haddock, hake, herring, mackerel, lobster, oyster, and hair seal fisheries are included. The estuarine and inland waters of the Maritime Provinces and of Quebec are sometimes considered as distinct; if they are added the list of products would embrace the salmon, the shad, the gaspereau (alewife), the smelt, the striped bass, the tom cod, the trout and the maskinonge. Conditions are fairly uniform throughout these fisheries, which are commonly divided into the inshore and deep-sea fisheries. The inshore or coastal fishery is carried on in small boats, usually motor-driven, with crews of two or three men, and in small vessels with crews of from four to seven men. The means of capture employed by boat fishermen are gill nets and hooks and lines, both hand lines and trawls; trap nets, haul seines and weirs are operated from the shore. Haddock as well as cod is a staple product; during the spring and summer it is split and salted, but the important season is the autumn, when the fish are shipped fresh or else smoked and sold as finnan haddie. The deep-sea fisheries are worked by vessels of from 40 to 100 tons, carrying from 12 to 20 men, operating with trawl lines from dories. The fleets operate on the various banks, such as Grand Bank, Middle Ground and Banquereau. The vessels, built by native hands, remain at sea sometimes for months at a time, and, in the hands of sailors who have no superior, seldom come to grief. When they return, the fish, principally cod, which have been split and salted on board, are taken ashore, washed and dried. The West Indies are the chief market for this product. No cod fish in the world stands the tropical climate like that cured by Nova Scotian fishermen. Steam trawling, as it is carried on in the North Sea, was introduced on the Atlantic coast of Canada

## Fisheries Production and Fishing Grounds of Canada.

several years ago. There are now several steam trawlers operating from Nova Scotian ports. They operate practically the whole year and their catches are utilized entirely for the fresh fish trade.

Lobstering is another distinctive industry. In 1870, there were three lobster canneries on the Atlantic coast of Canada; to-day the canneries number almost 400 and give work to nearly 6,000 people; 30,000,000 lobsters is a normal catch. The difficulty of enforcing regulations as to the capture of undersized and spawning lobsters offers a constant problem in connection with the output, but the resulting decline is now thought to have been arrested. Oysters, once plentiful everywhere, are now found in somewhat diminished quantities. In New Brunswick the canning of sardines, locally young herring and not a distinct type of fish, is second only to lobstering.

The fishing population of the Maritime Provinces is a specialized and stable industrial class. The coast fisheries are operated from April to November, or to January in sheltered districts, and, though the larger vessels work all winter, several thousand men are available for a time each year for other employment. This they find about the small plots of land, which most of them own or occupy, in the lumber camps of New Brunswick or about the collieries of Nova Scotia. A few from Lunenburg and other centres engage in the West Indian trade. Apart from restrictions of weather and close seasons the prevailing method of paying the men on shares has a further tendency in years of low catches or prices to drive them into secondary occupations.

**Inland Fisheries.**—The Great Lakes and tributary waters of the St. Lawrence form a second great division of the Canadian fisheries. Whitefish, trout, perch, pickrel and lake herring are the most important commercial fishes of Ontario, though pike, sturgeon and coarse fish yield a fair return. The value of the inland fisheries of Quebec lies chiefly in the output of the eel and pickrel

fisheries. The season on the Great Lakes lasts from six to eight months, and, though fishing through the ice is followed by many, a large number depend on miscellaneous employment between the seasons. Moving westward, lake Winnipeg, lake Winnipegosis, lake Manitoba and the smaller lakes to the north and west furnish most of the fish products of Manitoba. Whitefish and pickerel are the chief products, but pike, tullibee, goldeye and many other varieties abound. In Saskatchewan and Alberta, commercial fishing is confined to the regions north of the Saskatchewan river, where whitefish in large quantities are taken. The problem of transportation is keenly felt; some of the greatest lakes of the continent—Reindeer, Athabaska, Great Slave, Great Bear—and hundreds of smaller bodies of water are still beyond reach from a marketing point of view. The lakes of the West, however, repeating the part which the St. Lawrence played in the days of the French régime and the cod banks in the history of New England, have assisted greatly in the settlement of the country by providing a much needed food supply for the pioneers.

**Pacific Fisheries.**—In British Columbia there is an interior fishing region which corresponds in the main to the prairie section; in the early history of the province it is doubtful if the fur trade (which opened the door by way of the Rocky mountains to later enterprise) could have established its footing but for these fisheries. The great piscatorial wealth of British Columbia, however—the source from which she produces approximately two-fifths of the fish products of Canada, and has built up a trade which reaches to the ends of the earth—is the estuarian salmon fisheries of the Fraser, the Skeena, the Nass and other rivers of the Pacific slope. Every species of this king of food fishes (which, however, is not the true salmon) known to the waters of the Pacific is to be found in the British Columbia coast waters—the sockeye, the spring, the coho, the pink and the chum salmon. Of these the sockeye is by far the most important, owing to its abundance and its prevailing deep red colour and excellent texture, which have created so keen a demand for it in the British market. On the Fraser river, which used to be the chief source of supply, but has now yielded place to the Skeena and other northern waters, the yield varies to a considerable extent from year to year. The run begins late in July and is at its height in the opening weeks of August, though the northern rivers have a somewhat earlier season. The spring or quinnat salmon is a much larger fish; it was the species first used in the United States for canning. The run begins early in the spring and continues until July. The cohoes are smaller, running like the sockeye in compact schools during September and October on the Fraser and earlier on the northern streams. The chum salmon is salted and canned, the salted product going chiefly to the Orient. The pink salmon, again, follows the sockeye. Many of the employees in this fishery are Chinese, Japanese and Indians, the Chinese preponderating in the canneries and the Indians and Japanese in fishing operations.

Until recent years the other coastal fisheries of British Columbia were only slightly developed. Halibut abounds off Vancouver island and between the Queen Charlotte islands and the mainland, and though the first endeavour to establish an industry was unsuccessful, by 1903 British Columbia supplied 10,000,000 pounds of the 25,000,000 taken on the whole Pacific coast north of California. The former figure has since trebled. Similarly, the herring industry remained undeveloped until recently. There is also the whale fishery, which has now two stations on

the Queen Charlotte islands. The yearly catch includes whales of many kinds—sulphur bottom, finback and humpback, with an occasional sperm whale. Whale hunting is carried on in fast boats with Svend Foyn harpoon guns—a method which was introduced from Norway. Every scrap of the whale is used—oil, whalebone and meal are its most important products. Black and ling cod, oulachon, flounders, skate, soles, smelts, pilchards and sturgeon are also abundant in British Columbian waters.

A word might be added with regard to the fur-seal fisheries of the Pacific, whose historic headquarters was the city of Victoria. The industry has disappeared, in part through the scarcity of the animals and in part through the workings of the Pelagic Sealing Treaty of 1911.<sup>1</sup> The hair-seal fleets of the North Atlantic make St. John's, Newfoundland, their headquarters.

**Game Fish.**—The above is a purely industrial and commercial survey. Fishing for sport, however, has its economic side in a country of such famous game fish as the salmon of the Restigouche, the black bass of the Quebec and Ontario highlands and the trout of the Nipigon. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes. Several hundred guides find employment here during the summer months.

### Section 3.—The Government and the Fisheries.

Upon the organization of the Government at Confederation, the administration of the Canadian fisheries and marine was placed in the charge of a Department of the Dominion Government, which then exercised complete jurisdiction over the fisheries under the supervision of a Cabinet Minister, with a large staff of inspectors, overseers and guardians to enforce the fishery laws. Early in 1930 a change in departmental organization was effected, whereby two departments, each in charge of a Cabinet Minister, were created to administer respectively the Marine and the Fisheries.

In 1882, 1898, 1913 and 1920, decisions in the courts considerably altered the status of jurisdiction as between the Dominion and the provinces. To-day the Dominion controls the tidal fisheries of the Maritime Provinces and British Columbia and the fisheries of the Yukon and Northwest Territories. The non-tidal fisheries of the Maritime Provinces, the Prairie Provinces and Ontario and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are controlled by the respective provinces, but the right of fisheries legislation for all provinces rests with the Dominion Government. See the Fisheries Act (R.S.C. 1927, c. 73). The expenditure of the Dominion on the fisheries in the fiscal year 1929-30, including Civil Government salaries, contingencies, etc., was \$2,433,738, and the revenue \$197,565.

**Conservation.**—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion, the enforcement of close seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion,

<sup>1</sup>For the text of this treaty, see pp. lxxxvii-cciii of the Statutes of Canada, 1912.

in 1929, operated 30 main hatcheries, 10 subsidiary hatcheries and 5 salmon-retaining ponds at a cost of \$360,884, and distributed 570,287,381 eggs, fry or older fish, mostly B.C. salmon, Atlantic salmon, pickerel and whitefish. The young fish are distributed gratis if the waters in which they are to be placed are suitable and are open to public fishing.

**Direct Assistance.**—Since 1927 fish collection services have been operated on several stretches of the Atlantic coast by the Fisheries Branch of the former Department of Marine and Fisheries or by the present Department of Fisheries. Fishermen in the territories covered by the fish collection boats are thus enabled to sell their catches promptly and have them delivered to purchasers at central points at small cost, and are also able to spend their time in catching fish instead of in preparing their catches for the dried and cured-fish markets. Again a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, ice conditions along the coast and prevailing prices. Further, under authority of the Fish Inspection Act (R.S.C. 1927, c. 72), systems of instruction in improved methods of fish curing and barrel making have been in operation for several years.

**Scientific Research.**—Stations under the direction of the Biological Board of Canada for the conduct of biological research into the numerous complex problems furnished by the fisheries are established at Halifax, N.S., St. Andrews, N.B., and Nanaimo and Prince Rupert, B.C.; Toronto, McGill, Queen's, Manitoba, British Columbia and the chief Maritime Province universities send workers to these stations, chiefly professors and trained specialists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish and numerous other practical problems have been taken up and scientific memoirs and reports issued.

**International Problems.**—The chief international fisheries problem is the question of the rights of the United States, whose fishermen were granted, by the Treaty of Versailles, certain privileges in the Canadian inshore fisheries. Losing these by the war of 1812, the United States, after 1818, surrendered all but their liberty to call at Canadian ports for shelter, wood, water, or to make repairs, and to fish around the Magdalen islands and on the north shore of the gulf of St. Lawrence from Mont Joli eastward, and to dry and cure their fish in any of the unsettled bays on this portion of the North Shore.

Questions of interpretations to be placed on certain parts of the Treaty of 1818 were set at rest for the years 1854-1866, by the Reciprocity Treaty. This treaty provided for the free admission into either country of the fish products of the other, and the fishermen of each country were allowed to fish in Atlantic territorial waters of the other, with the exception of specified rivers and other grounds.

In 1871, the Treaty of Washington revived the fishery provisions of the Reciprocity Treaty of 1854, and provided for a commission to determine the compensation to be paid by the United States to Great Britain as the difference in the value of the concessions mutually granted. This commission sat at Halifax in 1877, handing down the "Halifax Award," the amount of which was \$5,500,000. In 1885, however, the United States terminated the fisheries articles of this treaty, and a period of disagreement followed. A settlement was negotiated in 1888, when the plenipotentiaries of the two nations agreed to the "Unratified Treaty of 1888", which contained the provision that United States fishing vessels were to be

granted, without fee, annual licences authorizing them to purchase provisions and outfits in Canadian ports, to tranship catches and to ship crews. Out of this treaty grew the so-called *modus vivendi* licences. Since it was recognized that the treaty could not receive official sanction before the commencement of the fishing season, it was agreed that the United States fishing vessels, on payment of \$1.50 per registered ton, should receive annual licences conveying the above privileges. The treaty was rejected by the United States Senate, but Canada continued to issue *modus vivendi* licences up to 1918, when arrangements were made for reciprocal privileges in the ports of either country. The arrangement was discontinued in the United States on July 1, 1921. In the following year the *modus vivendi* licences were revived in Canada, but the system was terminated on Dec. 31, 1923, and the United States fishing vessels are now limited to the provisions of the Treaty of 1818.

On the Great Lakes also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State Governments interested. Much the same situation has developed in British Columbia, where the sockeye of the Fraser are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners, and by trap nets and other methods forbidden in Canadian waters. In 1906 an International Commission first discussed the question, while in 1922 the prohibition of sockeye fishing in the Fraser for five years, with a view to conservation, was recommended by a Parliamentary Commission.

*The Halibut Fishery.*—The halibut fishery on this side of the Pacific is engaged in only from Canadian and United States ports, but owing to the fact that it is largely carried on beyond territorial waters, neither country alone can control it. At the same time it is in the interests of both countries that the fishery should be permanently maintained in a flourishing condition. The question of finding an adequate method of dealing with the matter was therefore one of those referred to the Canadian-American Fisheries Conference that was appointed in 1918 by the Governments of the two countries to consider a settlement of outstanding fishery questions between Canada and the United States. In 1922 Canada proposed that the halibut question should be considered by itself. This was agreed to, and resulted in the treaty signed Mar. 2, 1923, "For the Protection of the Pacific Halibut" Under this treaty a close season is provided for halibut fishing from Nov. 16 in each year to Feb. 15 following, both dates inclusive. This treaty was ratified on Oct. 21, 1924, and became effective Nov. 1, 1924 (see c. 75 of the Revised Statutes of Canada, 1927). A further convention, signed by the plenipotentiaries of both countries at Ottawa on May 9, 1930, extended the close season for halibut fishing to cover the period Nov. 1 in each year to Feb. 15 following, both dates inclusive, such convention to remain in force for a period of five years and thereafter until two years from the date when either country shall give notice to the other of its desire to terminate it.

**Fishing Bounties.**—An important though indirect aftermath of the Washington Treaty remains. By an Act of 1882 (45 Vict., c. 18), for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution annually among fishermen and the owners of fishing boats

of \$150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42), increased the amount to \$160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1929, payment was made under authority of the Deep Sea Fisheries Act (R.S.C. 1927, c. 74), on the following basis:—to owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty, \$7.50 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$6.65 each. The claims paid numbered 9,546, compared with 9,390 paid in the previous year. The total amount paid in 1929 was \$159,763. Details of the distribution of bounties for the years 1926 to 1929 are as follows:—

#### 1.—Government Bounties Paid to Fishermen for the calendar years 1926-1929.

**Fisheries Statistics.**—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Branches of the Dominion and Provincial Governments, having jurisdiction with regard to fisheries, throughout Canada. These Branches comprise: the Fisheries Department of the Dominion Government, exercising jurisdiction over the fisheries of the Maritime Provinces, the Territories and British Columbia; and the Fisheries Branches of Ontario, Quebec, Manitoba, Saskatchewan and Alberta, which have jurisdiction over the fisheries of their respective provinces, excepting that in the case of Quebec the fisheries of the Magdalen islands are under the jurisdiction of the Dominion authorities. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work. Under the arrangement above referred to, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local officers of the Fisheries Branches, checked in the Department of Fisheries and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditions and correct reports.

#### Section 4.—The Modern Fishing Industry.

The existing fishing industry of Canada is in the main the growth of the past half century. No comparable figures of production are available prior to the Confederation of the provinces, but about 1836 the production of fish in what

are now the three Maritime Provinces had an estimated value of something like \$1,500,000, while the production of Lower Canada was probably worth \$1,000,000. In 1870 the total was \$6,500,000 and this was again more than doubled by 1878. In the '90's it passed \$20,000,000, and in 1912, \$34,000,000. The highest figure was reached in 1918, with over \$60,000,000, but this was in a period of greatly inflated prices. Between that year and 1921 the total value of the products of the fisheries decreased, and in the latter year was back to \$34,000,000. From 1921 to 1926 a steady increase to \$56,000,000 took place and since then the value has fluctuated around the \$50,000,000 mark (these figures represent the total values of fish marketed, whether in a fresh, dried, canned, or otherwise prepared state).

The number of employees, which was 87,000 in 1928, decreased to 80,000 in 1929, and the capital invested in the industry, \$60,000,000 in 1918 and \$62,000,000 in 1929, has shown the same general trend, but with less marked fluctuations, as the value of the products.<sup>1</sup>

Among individual fish products, the cod and the salmon long disputed the primacy; if the record is taken back to early times, the cod is the most valuable fishery; in the past 20 years, however, the salmon has definitely taken the lead, and the heavy pack and high price of lobsters have more than once sent cod down to third place as in 1927 and 1929, while halibut takes fourth place among the chief commercial fishes. These changes have, of course, affected the relative standing of the provinces. British Columbia now occupying the leading place that in earlier times belonged to Nova Scotia, and producing in recent years nearly half the total value. The yearly record of production since 1870, the total production by provinces for the past six years, and the record by principal fish products for the past five years in descending order of importance, are shown in Tables 2, 3 and 4. The aggregate value of production in 1929, \$53,518,521, shows a decrease of 2.8 p.c. from the figure of \$55,050,973 in 1928. The catch was 8.3 p.c. smaller, while average prices were 5.5 p.c. higher, the higher prices of salmon being the predominating factor.

## 2.—Total Values of the Fisheries of Canada, 1870-1929.

NOTE.—From 1870 to 1906 inclusive, years ended June 30; from 1908 to 1917 (a) inclusive, years ended Mar. 31; since and including 1917 (b), calendar years. No statistics are available for the nine months period ended Mar. 31, 1907.

**Operations in 1929.—Detailed Record of Production.**—The total value of the products of the Canadian fishing industry in the calendar year 1929 was \$53,518,521, as compared with \$55,050,973 in 1928, \$49,123,609 in 1927, \$56,360,633 in 1926, \$47,942,131 in 1925, \$44,534,235 in 1924 and \$42,565,545 in 1923. In Tables 5 and 6 will be found a statement for the whole of Canada of each fish and fish product marketed in 1929, with comparative figures for the preceding year—Table 5 dealing with sea fish and Table 6 with products of the inland fisheries. In Table 7 an analysis is made of the change in the value of each product from the preceding year due to variations in price and quantity respectively. On the whole, prices were higher in 1929. In Tables 8 and 9 the numbers of the fish-canning and curing establishments are shown, together with the materials used and values of the products.

**Capital and Employees.**—In 1929, capital investments in the fisheries were as follows:—(a) in vessels, boats, nets, weirs, traps, wharves, ice-houses, etc., used in the primary operations of capturing the fish, \$33,935,002, of which \$28,162,312 was invested in the sea fisheries and \$5,772,690 in the inland fisheries; (b) in fish-canning and curing establishments (land, buildings, machinery, supplies on hand, cash and operating accounts), \$28,644,442—grand total \$62,579,444. The number of employees engaged in the primary operations of fishing was 64,083 in 1929, and in canning and curing establishments, 16,367, a total of 80,450. The total salaries and wages bill in canneries and fish-curing establishments was \$5,411,855. Tables 10 and 11, herewith, show the items included in the above totals, with comparative figures for 1928, while Table 12 analyses the salaries, wages and earnings of the employees in canneries, etc.

**Trade.**—For reasons already noted, the domestic consumption of fish is relatively small in Canada, and the trade depends largely upon foreign markets. Perhaps 60 p.c. of the annual catch is an average export. In the fiscal year 1930 fish worth \$14,928,048 went to the United States and \$4,107,761 to the United Kingdom. The most important single export is canned salmon (to Great Britain and European markets), followed closely by cod, dry-salted (to the West Indies, South America, etc.). For fresh fish, especially whitefish and lobsters, the United States is the chief market. Canadian imports of fish in 1930 amounted to \$4,120,306. A general review of the import and export trade in fish for 29 years past is given in Table 13, whilst Table 14 gives a comparative record of exports by countries during 1929 and 1930. Table 15 shows the leading items of export for the calendar years 1927-29. For a complete analysis of imports and exports, as well as of production, see the annual report "Fisheries Statistics", issued by the Dominion Bureau of Statistics.

13.—Value of Exports and Imports of Fish and Fish Products, fiscal years 1902-1930.

NOTE.—In this table "Exports" include seal skins and fish oils, and "Imports" include turtles, whalebone, shells, mother of pearl, seal skins, fish oils and ambergris, in addition to Fishery Products as shown in Tables 12 and 13 of the External Trade section of this volume.

## CHAPTER XII.—MINES AND MINERALS.<sup>1</sup>

An article on the general geology of Canada, referring to the chief mineral-bearing areas of the Dominion, will be found at pp. 18-29 of the present edition of the Year Book. This is followed by an account of the chief discoveries and investigations of mineral-bearing ores in 1929, at pp. 29-36; similar articles for earlier years were published in previous editions. These articles furnish references to more detailed sources of information in the publications of the Dominion and Provincial Governments and in the scientific journals.

The Mines and Minerals chapter of the Year Book is divided into six sections:—(1) a sketch of the administration of mineral lands and mining laws, (2) a summary of general production, (3) the industrial organization of the mining industries, (4) production of the metallic minerals, (5) production of the non-metallic minerals, (6) production of clay products and structural materials.

For more detailed information on the mineral production of Canada the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which are here briefly described:—

**Statistics of Mines and Minerals.**—The compilation and publication of statistics of the production of mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent out to the mining producers are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

**Annual and Monthly Statistical Reports.**—Detailed statistics of the mineral production of the Dominion are published annually in a comprehensive report of over 300 pages which includes tables of Dominion-wide production, capital invested in the mining industry, number of employees, salaries and wages, fuel and machinery used in mining, together with tables showing imports and exports of minerals and their products, and a *résumé* of general mining conditions. The latest of these reports available for distribution at the time of writing covers the calendar year 1929, and may be obtained from the Dominion Statistician on request.

A summarized preliminary report on mineral production is also prepared annually for presentation at the annual meeting of the Canadian Institute of Mining and Metallurgy about Mar. 1 of each year, and giving fairly detailed preliminary figures for the preceding calendar year. (The 1930 report is now available.) Further, a bulletin issued each year at the beginning of

<sup>1</sup> Revised by W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXVIII, Section 1, under "Production".

January gives the most accurate estimate then possible for the mineral production of the year just closed. In addition to the above, annual bulletins giving the detailed production of each mineral are issued as soon as the final figures become available in each case.

Monthly statistics of the physical production of 16 of the leading minerals of Canada have been compiled for the past two years and are published in a monthly bulletin. These figures indicate the current trend of activity in mining operations.

**Coal Statistics.**—In a country like Canada, coal is perhaps the most important of all minerals, from the point of view of the general public. This special position is recognized in the statistics by the publication of an Annual Report on Coal Statistics for Canada, giving complete details of coal-mining operations in the various coal-producing provinces and showing the imports and exports of coal by kinds and by ports of entry and exit, together with industrial statistics in relation to coal mining. Monthly bulletins and Quarterly Reports on Coal and Coke Statistics are also issued, giving coal and coke production and imports and exports, the quarterly printed reports showing in detailed form production of coal by areas, and imports and exports by ports of entry and exit.

### **Section I.—Mineral Lands Administration and Mining Laws.**

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of the Yukon and Northwest Territories as well as those lying within Indian Reserves and National Parks in the Prairie Provinces and British Columbia. Since the transfer of the natural resources to the Prairie Provinces all other mineral lands lying within the boundaries of the several provinces are administered by the respective Provincial Governments.

#### **Subsection I.—Dominion Mining Laws and Regulations.**

Dominion lands to which these regulations apply are those administered by the Department of the Interior, within the Yukon Territory and the Northwest Territories.

Titles issued for Dominion lands, the property of the Dominion Government in the territories of Canada, reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

**Coal.**—The maximum area which may be granted under lease to one applicant is 2,560 acres, and the length of the location must not exceed four times its breadth. Rental is \$1 an acre per annum, and royalty on coal disposed of is 5 cents per ton. In unsurveyed territory, the location must be staked by the applicant personally, and personal application must be made to the mining recorder for a lease. Such location must be marked on the ground by two legal posts, one at each end of the longest dimension, and a line must be marked out joining the posts. In surveyed territory, personal application only is necessary. The lease conveys the coal-mining rights only, but surface rights necessary for purposes of operation may be obtained by arbitration in the case of lands already disposed of, or under lease from the Crown if vacant. There is no limit to the area which may be acquired by assignment.

**Petroleum and Natural Gas.**—The maximum area which may be acquired under application by one applicant is 1,920 acres in the Yukon Territory and 2,560 acres or 4 square miles in the Northwest Territories. No person shall be permitted to acquire a greater area except by assignment. The rental for the first year shall be 50 cents an acre and that for subsequent years \$1 per acre. In the Yukon Territory a prospecting permit may be issued for one year to cover a maximum area of 1,920 acres the rental of which shall be 10 cents per acre accompanied by a cash bond at the rate of 40 cents for each acre. The issue of such permit is conditional upon prospecting operations, equivalent to the cash deposit, being conducted on the location during the year. Rental on leases in the Yukon Territory for the second and third years may be satisfied by actual drilling operations also for the fourth and fifth years under specified conditions. In the Northwest Territories a preliminary permit may be obtained to prospect a maximum area of 2,560 acres, rental payable on one-half of the area only. Upon discovery of oil being made, a final lease of one-half of the area required, to be selected by the permittee, will be issued.

**Placer.**—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person more than 17 years of age. Claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, \$200 in the Yukon Territory and \$100 elsewhere. Royalty 2½ p.c.

**Alkali.**—Deposits comprise natural surface accumulations of soluble mineral salts and associated marls, at or near the surface. Area which may be leased, 1,920 acres. Term of lease, 20 years, renewable. Fee, \$10 for the issue of a lease. Rental, 25 cents an acre per annum. The lessee shall expend in actual development or improvements on the property leased not less than \$10,000 during the first three years of the term of the lease. Not less than \$2,500 shall be so expended during the first and during the second years of the term. Royalty, from 12½ cents to 25 cents a ton of salts shipped.

**Carbon-Black.**—The recorded owner of a lease of natural gas rights acquired under the regulations may obtain a permit to use the gas for the production of carbon-black, if the location affected is situated in an isolated part of the country where there is no market for the sale of such gas. The permittee must expend \$15,000 during each of the first and second years of the term of the permit in the erection and completion of an efficient plant. Gasolene content, if sufficient, must first be extracted. Royalty, 5 p.c. of the value of the gas at the well. Minimum value of such gas, 2 cents per 1,000 cubic feet.

**Quarrying.**—Dominion lands containing limestone, granite, slate, marble, gypsum, marl, gravel, sand, clay or building stone, may be leased at an annual rental of \$1 an acre. The maximum area to one applicant shall be 40 acres. A railway company or municipality, requiring material for construction or maintenance of railway or municipal works, may acquire more than one location. The location must be staked out, if situated in unsurveyed territory.

**Dredging.**—A dredging lease conveys the exclusive right to sub-aqueous mining and dredging in a specified area of a river bed to be described, the location to be 5 miles or less in the western provinces and territories and 10 miles or less in the Yukon. The term of the lease is 15 years in the Yukon and 20 years elsewhere, renewable. Rental per annum in the Yukon: \$100 per mile the first year, and for each subsequent year \$10 per mile. Outside the Yukon: \$50 per mile the first year, and \$10 for each subsequent year. Royalty, 2½ p.c. in the Yukon, and elsewhere 2½ p.c. on the value of products exceeding \$10,000. Dredge to be installed within three years from the date of the lease in the Yukon, and within one year from such date elsewhere. Outside the Yukon, expenditures in prospecting and development work may be accepted in satisfaction of rental for a limited term of years, and, for this purpose, operations may be consolidated over an unbroken extent of a river not exceeding 15 miles.

**Quartz.**—“Mineral” under this heading means all deposits of gold, silver, and all naturally occurring useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen and oil shales.

Under the new regulations, effective April 1, 1929, any prospector or locator of a mineral claim, whether an individual, mining partnership or a company, must first be the holder of a miner's licence, the fee for which is \$5 for an individual, from \$5 to \$20 for mining partnerships, and larger amounts for mining companies proportionate to their capitalization. A licensee may stake out three claims per annum for himself, and six more for two other licensees, not exceeding nine in all, in any mining division, or double these numbers in the Northwest Territories. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51·65 acres, being 1,500 feet square. Entry is granted by mining recorder, fee \$5 for a claim located by a licensee on his own licence, and \$10 if located on behalf of another licensee. Grant is renewable from year to year on 40 days' work being done on the location each year. All work done is subject to inspection. When 200 days' work has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense and certain other requirements complied with, a lease is issued for a term of 21 years, renewable, the rental for the full term being \$50. The cost of the survey, reckoned as 30 days' (and in the Northwest Territories 40 days') work, may be counted as work done on the claim. A maximum of nine claims may be grouped for purposes of representation work. When the profits of a mine exceed \$10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to the profits made.

For copies of any of the regulations above referred to, application may be made to the Supervisory Mining Engineer, Territorial Mining Lands Service, Interior Department, Ottawa.

### Subsection 2.—Provincial Mining Laws and Regulations.

**Nova Scotia.**—All minerals in Nova Scotia, except limestone, gypsum and building materials, are the property of the Crown in the right of the province of Nova Scotia. They are dealt with under the provisions of the Mines Act (c. 22, R.S.N.S., 1923), and amending Acts of 1927 (c. 17), and 1929 (c. 22), and are administered by the Minister of Public Works and Mines, at whose office in the Parliament Buildings, Halifax, all records of mining titles are kept.

The chief mineral product of Nova Scotia is coal, which is subjected to a royalty of 12½ cents per long ton. Coal used in mining operations, or used for domestic purposes by workmen employed about the mine, is exempted from royalty.

Licences to search for mineral, good for a year, are issued at a nominal fee. More permanent holding is obtained by lease, which, in the case of minerals other than gold and silver, is granted for 20 years (subject to payment of an annual rental and the performance of work), the lease carrying the right to three successive renewals of 20 years each. A lease for gold and silver is given for 40 years, subject to a small annual rental and performance of work.

Other important minerals of Nova Scotia are gold, salt, lead, zinc, copper, diatomaceous earth, manganese, antimony, gypsum and limestone.

Full information concerning minerals and mining laws may be obtained by writing the Department of Public Works and Mines at the above address.

**New Brunswick.**—In grants of Crown land with few exceptions since about the year 1805, all mines and minerals are reserved to the Crown and regarded as property separate from the soil. Prior to this time, most of the grants reserved only gold, silver, copper, lead and coal. Royalties levied are 10 cents per long ton on coal and 5 p.c. on petroleum and natural gas. Prospectors must obtain a licence which costs \$10 and is good for the calendar year. It entitles the prospector to stake up to 10 claims of 40 acres each. Claims must be registered within 30 days and 25 days' work done on each claim within the year, after which a mining licence, renewable annually on the payment of \$10 per claim, will be granted. Administration is carried on subject to the provisions of the Mining Act (c. 35, R.S.N.B., 1927). For full information apply to the Department of Lands and Mines, Fredericton, N.B.

**Quebec.**—The mining lands of Quebec are administered by the Minister of Mines, subject to the provisions of the Quebec Mining Act (c. 80, R.S.Q., 1925).

In townships the Crown retains full mining rights on lands granted subsequently to July 24, 1880, and, in the case of gold and silver, on lands granted previous to that date. All mining rights belong to the Crown in most of the seigneuries.

Mining lands up to 200 acres in extent can be acquired by staking the ground as prescribed by the Mining Act. Claims must be recorded and 25 days' work per claim done within 12 months, when a mining licence is granted upon payment of 50 cents an acre and a recording fee of \$10. The licence is renewable annually. When a mineral occurrence of importance has been found, the mining rights can be purchased as a mining concession for \$5 per acre for superior minerals and \$3 per acre for inferior minerals.

Mining operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated up from 3 p.c. A mining inspector is appointed in each mining division for the administration of the mining laws and regulations.

**Ontario.**—Ontario owns and administers for mining purposes, through her Department of Mines, all the Crown lands within her boundaries except Indian lands, which are under the Dominion Government. Mining lands are subject to the provisions of the Mining Act, (c. 45, R.S.O. 1927). Title is a grant in fee

simple, except in forest reserves, where the lands are leased. A resident mining recorder is appointed for each mining division created in the mineral areas. There is a tax on mining lands in unorganized territory of 5c. per acre per annum. Other taxation is on the net profits, the rate being 3 p.c. up to \$1,000,000; 5 p.c. from \$1,000,000 to \$5,000,000, etc. The first \$10,000 of profit is exempt. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the Recorder, or, on appeal, by the Mining Court of Ontario.

A miner's licence is necessary to stake out or acquire Crown lands for mining purposes; fee \$5 per year for an individual; for companies, \$100 on each million dollars capital. The holder may stake out for himself three claims in any and every mining division, and six additional for not more than two other licence holders. A mining claim in unsurveyed territory is a square of 20 chains to a side (40 acres) with lines N-S and E-W astronomically. Where land is subdivided into lots a claim may be an eighth, a quarter or a half lot, *i.e.*, up to 50 acres.

There are special provisions regarding petroleum, natural gas, coal and salt on the James Bay slope, where these substances may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres.

Full information concerning the mineral resources of the province and the mining laws may be obtained by writing the Department of Mines, Parliament Buildings, Toronto, Ontario.

**Manitoba.**—With the transfer of the natural resources to the province of Manitoba on July 15, 1930, control of most of the public lands—now known as provincial lands—passed from Dominion Lands Administration to that of the Department of Mines and Natural Resources of the Manitoba Government.

During the 1930 session, the Legislative Assembly of Manitoba enacted a "Provincial Lands Act" wherein all mines and minerals are reserved to the Crown out of every disposition of provincial lands. Further provision is made for the right to enter, locate, prospect and mine such minerals in a manner and on such terms and conditions as are set forth in the Mines Act (c. 27, 1930) and regulations thereunder. The Mines Act of 1930 repealed an Act existing since 1897 but preserved the regulations passed thereunder governing general mining operations.

Mining lands and rights are administered by the Mines Branch, Department of Mines and Natural Resources, subject to the provisions of the Mines Act. Regulations under this Act put into force by Order in Council govern the administration and leasing of—

1. Mineral claims—gold, silver, copper, zinc, etc.
2. Boring permits—Coal, natural gas, oil shale, petroleum and salt.
3. Quarrying locations—granite, limestone, marble, slate or any building stone, gypsum, gravel, marl, peat and sand.

A miner's licence is necessary to prospect, stake out or acquire Crown lands for mining purposes; fee of \$5 for an individual and larger amounts for mining

partnerships and mining companies. A licensee may stake out for himself three mineral claims and six more for two other licensees, not exceeding nine in all in any mining division. He may also obtain one boring permit or one quarrying location.

A mineral claim in unsurveyed territory is a square of 1,500 feet (51.65 acres) with lines N.-S. and E.-W. astronomically. A boring permit allows of 640 acres to be taken up and a quarrying location up to 51.65 acres.

In the case of a mineral claim, entry is granted by the mining recorder, fee \$5 for a claim located by the licensee on his own licence and \$10 if recorded on behalf of another licensee. After recording, 25 days' work per claim must be done within twelve months and the grant is renewable from year to year on 25 days' work being done on the claim each year. A maximum of nine claims may be grouped for the purpose of this work. When 125 days' work has been done and confirmed, a survey made by a Manitoba land surveyor at the grantee's expense, and certain other requirements complied with, a lease is granted. The cost of the survey may be reckoned as one year's work done on the claim.

The provisions regarding substances searched for under authority of a boring permit make it possible to obtain a lease for 21 years for the location if the holder has proved during the term of the boring permit (which is one year) that he has discovered any one of such substances in commercial quantities on the land included in the permit. The lease is subject to annual rental, and also to the expenditure of \$2.50 per acre per annum, in obtaining oil shale, coal, natural gas, petroleum or salt.

Lands containing granite, limestone, marble, slate or any building stone, together with clay, gravel, gypsum or sand may be leased at an annual rental, together with an expenditure of \$2.50 per acre per annum in taking out the material.

For a copy of the regulations governing the disposal of mineral rights, application may be made to the Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg, Manitoba.

Mining recorders' offices are located at Winnipeg, The Pas and Kisissing (Cold Lake).

**Saskatchewan.**—On Sept. 1, 1930, the province of Saskatchewan came into control of its natural resources, which, since 1905, had been controlled and administered by the Dominion Government. Until such time as it is found necessary or expedient, the Dominion mining laws and regulations will remain in force in the province of Saskatchewan. These regulations are shown at the beginning of this section of the Canada Year Book.

The Saskatchewan Mines Act provides for the competency of mine managers and pit bosses, for the reporting of accidents and generally for the welfare and safety of those employed in the production of minerals.

**Alberta.**—Since the Dominion Government in 1930 transferred control of the natural resources lying within the boundaries of Alberta to the Provincial

Government, the leasing or disposal of mineral lands or rights is administered under provincial laws and regulations. However, until new conditions necessitate change, mineral lands or rights within the province are being administered by the Provincial Government in accordance with the Dominion mining laws and regulations in force at the time of the transfer.

The Coal Mines Regulation Act of the province of Alberta and regulations made thereunder make provision for the safe operation of mines in the province, applying to mines of coal, ironstone, shale, clay and other minerals. Operations must be under the control of officials who hold certificates granted after suitable examination. A staff of inspectors is provided to administer the regulations. Monthly reports of operations must be returned to the Minister.

The Coal Sales Act requires that all coal mines shall be registered by name and all coal produced in Alberta sold under the registered name. The Coal Miners Wages Security Act requires all coal operators to provide bond to insure the payment of wages, unless exemption is obtained through the Board of Public Commissions.

**British Columbia.**—The Department of Mines, organized under the provisions of c. 163, R.S.B.C., 1924, and amendments, administers the mineral lands of the province, and has charge of all matters relating to mining, including the Bureau of Mines and all offices established under the Bureau of Mines Act and all Government offices in connection with the mining industry.

The terms of the mining laws are favourable to the prospector, with small fees and rentals. On a lode mine of 51 acres an expenditure of \$500 in work, which may be spread over 5 years, is required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding \$5 per acre. Any person over the age of 18 and any joint stock company can obtain a "free miner's certificate" on payment of a fee, which for the individual is \$5 per annum, while for the joint stock company it is either \$50 or \$100, depending on capitalization. Mineral claims located under the provisions of the Mineral Act must not exceed 1,500 feet square.

**Placer.**—Placer mining is governed by the "Placer Mining Act", and by the interpretation clause its scope is defined as "the mining of any natural stratum or bed of earth, gravel, or cement mined for gold or other precious minerals or stones".

**Placer Claims.**—Placer claims are of 3 classes, as follows:—(1) Creek diggings,—200 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) bar diggings,—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) dry diggings, over which water never extends,—250 feet square.

A placer claim must be worked by the owner, or someone on his behalf, continuously during working hours. Discontinuance for 72 hours, except in close season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner is deemed abandonment. To hold a placer claim over one year, it must be again recorded before expiration of the year.

**Placer Leases.**—Leases of unoccupied Crown lands may be granted by the Gold Commissioner of the district. Placer leases are of 4 classes, as follows:—

(1) Creek lease—on rivers or on abandoned or unworked creeks, half a mile in length—annual rental, \$37.50; annual expenditure required on development, \$250. (2) Bench lease—80 acres—annual rental, \$25; annual expenditure required on development, \$250. (3) Dredging lease—on the bed of any river below low water mark, 5 miles—annual rental, \$25 per mile; annual expenditure required on development, \$1,000 per mile; the value of any new plant or machinery employed to count as money expended in development. (4) Precious stone diggings—10 acres.

## Section 2.—Summary of General Production.

Since 1886, the first year that the Geological Survey issued complete returns of mineral production, Canada has shown a fairly steady growth in mineral output. In that year the per capita production was only \$2.23; in 1901, five years after the Yukon discoveries, production totalled \$12.16 per capita. There was a falling-off from 1902 to 1904. Thereafter, owing to the discovery of silver in the Cobalt area, the development of the copper and nickel ores of the Sudbury district, the opening up of the gold mines of Porcupine and Kirkland Lake in Ontario, the improvements in metallurgical practice which led to the recoveries of large quantities of lead and zinc from British Columbia ores, and the discoveries and developments in Quebec and Manitoba, the per capita production rose to \$31.73 in 1929.

In 1929, the latest year for which world figures are available, Canada stood first in the production of asbestos and nickel, third in output of gold and silver, fourth in lead and copper, sixth in zinc and eleventh in the production of pig iron and coal. During that year Canada produced 85 p.c. of the world's nickel, 68 p.c. of the world's asbestos, a little less than half the world's cobalt, 10 p.c. of the gold, 9 p.c. of the silver, 8 p.c. of the lead, 5 p.c. of the zinc, and 16 p.c. of the copper. Figures of total production fail to convey a correct impression of the magnitude of the industry on account of the diversity of the products and of the units involved, while the varying prices attendant upon fluctuating market conditions vitiate comparisons on the value basis.

Preliminary figures of the 1930 output, valued at \$278,470,563, reflected the lower prices for metals and the general falling-off in demand for coal and other non-metals. More gold, copper, zinc, natural gas, petroleum, stone, and sand and gravel were produced than ever before and the silver and lead output exceeded that of the previous year, but the production of coal, asbestos, gypsum, lime, cement and clay products were all lower than in 1929. In addition to the mining and metallurgical development of our known ore bodies, prospecting in outlying areas has been carried forward on a much greater scale than formerly. The development of the aeroplane has provided an agent of rapid transportation in regions where the canoe and dog team were the only other means available, whilst photography from the air is providing reliable maps of large regions formerly entirely unexplored.

### Subsection 1.—General Statistics of Mineral Production.

In Table 1 will be found the total values of the minerals produced in Canada in each year since 1886, while Table 2 gives the details of the mineral production of 1928 and 1929, with the percentage of increase or decrease in the latter year.

An interesting comparison of the mineral production of the two years, as to quantities and values, is furnished in Table 3, which shows that the increase of 13.1 p.c. in the value of product in the latter year, as compared with the former, was due to an increase of 8.4 p.c. in quantities mined and 4.7 p.c. in average values.

### 1.—Value of Mineral Production in Canada, calendar years 1886-1930.

Calendar Year.	Total Value.	Value per capita.	Calendar Year.	Total Value.	Value per capita.	Calendar Year.	Total Value.	Value per capita.
	\$	\$		\$	\$		\$	\$

## Subsection 2.—Provincial Distribution of Mineral Production.

The principal mineral-producing province of Canada in 1929 was Ontario, with an output valued at \$117,662,505. British Columbia came second with a mineral production valued at \$68,162,878. Quebec was third with \$46,358,285 and Alberta ranked fourth with \$34,739,986. Nova Scotia was fifth with \$30,904,453 and Manitoba, Yukon Territory, New Brunswick, and Saskatchewan followed in the order named, with productions of from \$5,423,825 down to \$2,253,506. The record of the respective provinces from 1899 on is given in Table 4.

<sup>1</sup> Includes a small production from Prince Edward Island.

<sup>2</sup> Figures for 1930 are subject to revision.

The quantities and values of the minerals produced in each province during 1929 are shown in Table 5. Coal accounts for 91 p.c. of the value of mineral production in Nova Scotia, with gypsum the item of next importance. Coal and gypsum are also the most important mineral products of New Brunswick, which is also one of the provinces with a production of natural gas and petroleum. Quebec is the only province in which asbestos is produced, and in 1929 this was her principal mineral, while the successful development of the Rouyn mining district made copper the second most important mineral product. Other important minerals of Quebec are cement, stone and other structural materials, gold, zinc, magnesite, silver and lead. Gold represented 28 p.c. of the value of Ontario's mineral production in 1929, and with other metals, of which nickel,

copper, silver and cobalt are the chief, made up nearly 72 p.c. of the total for the province. As the most populous province, Ontario has a large production of the various structural materials, and there is also a large production of natural gas and of salt. Aside from cement and other structural materials, gypsum is the principal mineral product of Manitoba although this province has become a producer of gold, which metal in 1929 accounted for 9 p.c. of the total mineral production of the province. Saskatchewan's mineral production is small and coal constitutes about half the total. Coal is the principal product in Alberta, accounting for 66 p.c. of the total, while natural gas, petroleum and cement are the other most important products. The metals, chiefly copper, lead, zinc, silver and gold, make up the greater part of the value of the minerals produced in British Columbia, although there is also a large production of coal. Silver, alluvial gold and lead are the principal mineral products of the Yukon Territory.

### 5.—Mineral Production of Canada, by Provinces, calendar year 1929.

NOTE.—The mineral production of the Yukon Territory during the calendar year 1929 was as follows in quantities and values:—Gold, 35,892 fine oz., \$741,954; Lead, 8,395,603 lb., \$424,012; Silver, 3,279,530 fine oz., \$1,737,922; Coal, 458 tons, \$1,848; Total, \$3,905,736.

## Section 3.—Industrial Statistics of Mining—Capital, Labour, Wages, etc., in Principal Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines, and since 1921 by the Dominion Bureau of Statistics. Previous to that year the annual statistics of mines were confined chiefly to a presentation of the quantity and value production of each of the minerals. The recent treatment has been extended to include a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc and

nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid and gross and net production. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

**The Growth of the Mining Industry in Recent Years.**—Industrial statistics of the mining industry were collected for the first time in 1922, showing the capital employed, the number of employees, the salaries and wages paid, the cost of fuel and electricity, and the net value of the product. In connection with the item of capital, operators were requested to report *only the capital actually invested in the enterprises*, including (1) cost of lands, buildings, plant, machinery and tools, (2) cost of materials on hand, supplies, finished products and ore on dump, and (3) cash, trading and operating accounts and bills receivable. It should be specially noted that no estimate of undeveloped ores was included in the capital.

The substantial growth of the mining industry in the past few years is clearly established by the summary statistics of Table 6, which show that the capital invested in the mining industry has increased from \$493,694,823 in 1922 to \$867,021,033 in 1929, the number of employees from 62,249 to 95,102, the salaries and wages from \$75,026,501 to \$124,490,511, the cost of fuel and electricity from \$11,096,564 to \$26,751,585, and the net value of products from \$182,858,578 to \$315,181,388. The metallic mining industries have shown the greatest progress, their capital, number of employees, salary and wage bill, and net value of products having all more than doubled between 1922 and 1929, in a period of declining prices. Details are given in Table 6.

<sup>1</sup> Gross value less freight and treatment charges. <sup>2</sup> Electricity was not included in 1922. <sup>3</sup> Includes a small production from P.E.I.

A summary of the principal statistics of the mining, metallurgical, structural materials and clay products industries operating in Canada in 1929 is presented in Table 7. The values of the metallic production given in Tables 6 and 7 are as reported by the operating companies, and are in each case the settlements received for shipments. The totals, therefore, indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc and silver, the values are computed by using the average prices for the year in the principal metal markets. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net value of the products of these plants includes therefore the net value of the metals recovered from these imported ores and to this extent the net value of production shown in Tables 6 and 7 includes products not of Canadian origin. For this reason, the total of metallic production in Table 7 is greater instead of less than that in Table 2.

The total production of the fuel industries in Table 7 is less than the total production of fuels in Table 2, because the production of the industries is confined to that for which the operators receive some economic return, while the production of the fuel commodities includes all of those commodities produced whether the producer actually receives payment in any form for them or not. Thus in coal mining, the value of production in Table 7 includes only coal sold,

supplied to employees for domestic consumption, or used in making coke and briquettes, whereas the figures of coal production as shown in Table 2 include, in addition to the above, coal consumed for power and other purposes in the coal-mining operations and also the difference between coal put on the bank and lifted from the bank. Petroleum producers have a larger monetary return than the actual value of the petroleum produced because many oil wells also produce large quantities of natural gas. On the other hand, the natural gas industry receives a smaller return than the total value of all natural gas produced because some of the gas is produced by the petroleum industry, because of leakage or other loss in piping gas to the consumers, and because a small amount of natural gas is produced by private individuals or groups from their own wells for their own consumption without any industrial organization intervening between production and consumption.

For other non-metallic minerals and structural materials and clay products, returns to the producing industries are the same in each case as the total value of the mineral commodities produced.

Of the industries engaged in exploiting the mineral resources of Canada in 1929, coal mining was the greatest in the number of employees engaged, although the non-ferrous metallurgical industry exceeded coal mining slightly in the amount of capital involved and in the net value of production. Auriferous quartz mining was third in net production and in capital invested and second in number of employees and amount of salaries and wages. Other large mineral industries with a net production valued at over \$10,000,000 in 1929 were silver-lead-zinc mining and milling, copper-gold-silver mining and milling, cement manufacturing, asbestos mining and milling and stone quarrying.

<sup>1</sup> Includes kaolin and other clays.

### Subsection 1.—Metallic Mineral Industries.

The metal-mining and milling section included, in 1929, 478 active mining operators and 7 metallurgical companies. Employees numbering 31,125 were engaged in the metallic group, receiving salaries and wages amounting to \$50,279,511. The capital employed was \$427,498,173, and the net value of bullion, concentrates or residues shipped from the mines, and products made by the smelters, was \$163,050,366. This included some production by the smelters from imported ores.

Alluvial gold mining carried on throughout the various parts of the Yukon and British Columbia employed 488 persons who received \$586,193 in salaries and wages for six to eight months' activity. There were 85 auriferous, quartz mines operating, of which 38 produced bullion or shipped ores, and the remainder carried on development work only. The provinces in order of

importance, with the number of operating mines in each, were:—Ontario, 52; British Columbia, 17; Nova Scotia, 7; Quebec, 6; and Manitoba, 3. The employees numbered 8,660 and received \$14,258,733 in salaries and wages.

The copper-gold-silver industry continued to expand in 1929. The number of employees in the industry increased from 4,777 in 1928 to 5,243 in 1929, while the salaries and wages increased from \$6,764,309 to \$8,498,755.

The silver-cobalt mining industry, located mainly about Cobalt, with important outlying fields in South Lorrain, 20 miles to the south, and at Gowganda, 50 miles to the west, produces the major portion of the silver output of Ontario. In 1929 in the Cobalt area there were 26 properties on which operations were carried on; in the South Lorrain field 3 mines were operated and in Gowganda 3 mines. Activity in this industry has declined in recent years owing to the drop in the price of silver and the depletion of the mines.

The nickel-copper industry, the mines and smelters of which are situated in the vicinity of Sudbury, enjoyed greater activity during 1929. Employees in the mines and mills in 1929 numbered 3,219, receiving \$5,105,875 in salaries and wages, as compared with 1,963 workers, receiving remuneration of \$3,136,838, in the preceding year.

The silver-lead-zinc industry showed increases in the number of employees, salaries and wages, capital invested, and in the number of operating mines. The greatest activity was centred in the Kootenay section of British Columbia, where the most important Canadian lead-zinc mines are situated. British Columbia reported 145 operating mines. The Yukon was represented by 9 mines. Eight Quebec properties carried on operations, while the industry was represented in Ontario by 5 properties. There was one lead-zinc property operating in Nova Scotia. The employees in 1929 numbered 4,153, with salaries and wages of \$6,482,392, as compared with 3,680 receiving \$5,531,634 in 1928.

The capital employed by the metallurgical works amounted to \$146,699,085. Employees numbered 8,119, who received \$13,772,393 in salaries and wages. The estimated cost of ores and concentrates treated in the smelters was \$41,416,446, while the gross value of the products of the metallurgical industry was \$109,854,468.

### Subsection 2.—Non-Metallic Mineral Industries.

The non-metallic minerals group is divided into two sub-groups, *viz.*, *Fuels*, including the coal mining, natural gas and petroleum industries; and *Other Non-Metallic Minerals*, of which the asbestos, gypsum and salt-producing industries are the most important. The whole group in 1929 included 873 active concerns with 40,080 employees receiving \$55,602,313 in salaries and wages. The capital employed was \$317,302,496, and the aggregate value of production \$93,596,188.

**Coal Mining.**—There were 413 coal mines operating in Canada during 1929, of which 281 were in Alberta, 58 in Saskatchewan, 36 in Nova Scotia, 11 in New Brunswick, 26 in British Columbia and 1 in the Yukon. The total capital employed was nearly \$142,000,000, of which \$56,000,000 was invested in Nova Scotia, \$56,000,000 in Alberta and \$24,000,000 in British Columbia. The average number of wage-earners employed throughout the year was 28,227. Earnings per man-day were \$5.49, as compared with \$5.57 in the previous year, and the total of salaries and wages amounted to \$42,376,378, or \$944,433 less than the 1928 total of \$43,320,811.

**Asbestos.**—The asbestos industry was represented by 7 firms operating 14 mines at which there were mills for the grading of the product. The amount of capital employed was \$33,248,957. Employment was furnished to 3,391 persons, and salaries and wages amounted to \$4,410,535.

**Other Non-Metallic Mineral Industries.**—Other industries of importance from the standpoint of employment furnished were:—(1) petroleum production, with 2,221 employees, (2) natural gas production, with 1,953 employees, (3) gypsum mining, with 987 employees, and (4) salt mining, with 424 employees.

### **Subsection 3.—Structural Materials and Clay Products Industries.**

The average number of employees in the group in 1929 was 23,897, the salary and wage account being \$18,608,687. The average number on the payrolls of the cement industry increased from 2,407 in 1928 to 2,546 in 1929. The chief division of the clay products industry consisted of 173 establishments actively engaged in the manufacture of brick and tile. In the clay products industry, the average yearly wage for all workers advanced from \$998 in 1928 to \$1,036 in 1929, as 5,530 employees received \$5,727,014 in salaries and wages.

The sand and gravel and the stone production industries have shown marked expansion during the period since 1922. From that year to 1929 production of sand and gravel increased in value from \$3,503,000 to \$7,318,000 and salaries and wages paid from \$685,000 to \$2,505,225, while stone production during the same period increased in value from \$5,990,000 to \$12,067,000 and salaries and wages in the stone industry from \$2,673,000 to \$5,460,000.

## **Section 4.—Production of Metallic Minerals.**

### **Subsection 1.—Gold.**

Canada has been a gold-producing country for over 70 years. The discovery of gold in paying quantities was an epoch-making event in the history of British Columbia. In the late '50's, alluvial gold was discovered along the Thompson river, and in 1858 the famous Fraser River rush took place. The extraordinarily rich deposits of Williams and Lightning creeks, in the Cariboo district, were discovered in 1860, and three years later the area had a production of alluvial gold valued at \$4,000,000. In the northern part of the province, the Atlin division of the Cassiar district was discovered in 1892. While British Columbia still produces some gold from alluvial operations, the chief source of the gold production of the province is now lode-mining of ores in which gold is associated with other metals.

The discovery of gold in the Yukon river was reported in 1869, and bar-mining on the tributaries of the Yukon was conducted with increasing profit between 1881 and 1886. Ten years later, rich discoveries were made in creeks of the Klondike river, a right-bank tributary joining the Yukon at what is now Dawson city, and one of the greatest rushes in history was made to this locality. The richest streams in the district were Bonanza creek and its principal tributary, the Eldorado.

Gold was discovered in Nova Scotia in 1860. Two years after the discovery, gold valued at nearly \$142,000 was recovered from the quartz veins; a steady, though in recent years declining, output has been reported since that time.

Although Quebec produced gold as early as 1823, production consisted only of the small quantities recovered in the treatment of the lead and zinc ores

of the Notre-Dame-des-Anges district and from the gravels of the Chaudière river. Important discoveries of copper-gold deposits, however, were more recently made in the northwestern part of the province, adjacent to the Kirkland Lake district of Ontario, and development already carried out indicates a substantial gold production. Smelting facilities became available for this region with the opening of the Noranda smelter in December, 1927, and the production for Quebec since then shows the resulting increase (Tables 8 and 9).

Although gold was first discovered during 1866 in Hastings Co., no permanent gold industry was established in Ontario until recent years. Gold has been found and worked at many points in Ontario from the lake of the Woods in the west to the Hastings district in the east, a distance of roughly 900 miles. The gold production of the province has increased greatly during the last 19 years, the Porcupine area having been the principal producer since 1912, and the increase in production of the Kirkland Lake camp during the past few years has added materially to the total output.

The presence of gold-bearing ores in Manitoba has been known for a decade or more. Discoveries have been made in two districts, the first north of The Pas, where the gold occurs in both auriferous quartz and copper ores, and the second east of lake Winnipeg in the Rice Lake area, where the discoveries are mainly auriferous quartz.

Gold production in Canada attained its former maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. For the provinces, the years in which the greatest yields were obtained were as follows:—Nova Scotia, 1902; Quebec, 1930; Ontario, 1930; Manitoba, 1930; Alberta, 1896; British Columbia, 1913 and Yukon, 1900. The quantities and values of gold produced in Canada are given for 1911 and subsequent years in Tables 8 and 9, establishing a new record of production with 2,107,073 fine oz. The annual production of gold now ranks second in value among the minerals of Canada, being exceeded by coal only.

<sup>1</sup> Subject to revision.

With the exception of the years 1891 and 1893, when its output was surpassed by that of Nova Scotia, British Columbia was the chief gold producer for a period of 39 years, or up to the year 1897. Its production was then less than that of the Yukon, which Territory held first place until 1907, when British Columbia regained the first rank and continued to lead during the next seven years, with the exception of 1912, when the Yukon was again the greatest producer. As a result of the development of the Porcupine and Kirkland Lake areas, Ontario passed the other provinces in 1914, and still holds the first place in gold production.

**Ontario.**—Though gold had been mined in various parts of the province, the production of the metal was comparatively small until 1912, when the first permanent camp was established in the Porcupine area. The total recorded production of gold in Ontario for the period 1887-1912 was 210,040 fine oz., of which more than 40 p.c. was obtained in the year 1912. The production rose from 219,801 fine oz. in 1913 to 492,481 fine oz. in 1916, but fell during the next two years, owing to scarcity of labour. The yield rose to 1,000,340 fine oz. in 1922 and in 1930 reached the record total of 1,736,855 fine oz.

**Porcupine Area.**—The Porcupine district, the most important gold-mining area of Canada, lies about 150 miles northwest of Cobalt, the present productive portion being limited to the townships of Tisdale and Deloro, an area of a few square miles.

Ordinarily from 95 to 97 p.c. of the gold in the ores mined at the Porcupine field is extracted chemically by dissolving it in a weak solution of sodium cyanide, the details of the process varying at the different mines. There are five steps in the cyanide process, which are briefly as follows:—(1) the reduction

of the ore to a size where the gold particles are freed from enclosing rock; this is carried to a point where the ore is ground about as fine as cement; (2) the dissolving of the gold in sodium cyanide solution; (3) the separation of the solution containing the dissolved gold from the leached ore; (4) the precipitation of the gold from the solution by zinc dust; and (5) the refining of the precipitates.

**Kirkland Lake Area.**—Of the other gold-producing localities, Kirkland Lake, in Timiskaming district, has been the most important. The first gold discovery in the vicinity of Kirkland lake was made in 1911 on a claim now forming part of the Wright-Hargreaves mine. The geological formation is similar, as regards age relationship, to that of the Porcupine district. The rocks are Precambrian, the Keewatin predominating. Unlike the Porcupine, most of the productive veins are found within the porphyry, which is a syenitic variety. Three principal zones of mineralization have been indicated by exploration:—(1) the main or central zone, which runs in a northeasterly direction along the southern expanse of the lake and along which is a group of important producing mines; (2) a southerly zone which lies three-quarters of a mile to the south; and (3) a northerly zone known as the Goodfish Lake gold area.

**British Columbia.**—The production of gold in British Columbia has varied considerably at different periods. Rapid increases took place between 1858 and 1863, when 189,318 fine oz. were obtained by placer mining. Thereafter a decline occurred until 1893, when a low level of 13,360 fine oz. was reached. Then the introduction of lode mining resulted in a rapidly increasing production until 1902, when previous records were surpassed by an output of more than 288,000 fine oz. With the exception of the maximum output of 297,459 fine oz. in 1913, the record of 1902 has not since been equalled. Though the bulk of the gold obtained in the Cordilleran region has been derived from the placer deposits of the central portion of the region from the Klondike on the north almost to the International Boundary on the south, yet a large amount, averaging 178,039 fine oz. between 1913 and 1921, was obtained by lode mining, largely of the copper-gold ores of the Rossland and Yale boundary districts. The copper concentrates of the Britannia mine also contain gold, as does the blister copper made at Anyox. The output of gold in British Columbia has been in part maintained by the successful operation of the Premier mine on the Portland canal, while the Nickel Plate property, operated by the Hedley Gold Mining Co., has been a consistent producer of gold bullion and arsenical gold concentrates, which are exported to the United States for treatment. The Pioneer gold mine in the Lillooet district has reported a substantial production of gold during the past two years and provision is being made to expand production.

**World Production.**—A sketch of the development of the gold-mining industry since the discovery of America may take the form of a reference to four successive periods. During the first period, extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851 respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it shaded off to 5,201,000. The production of the period was contributed chiefly by the United States, Australia and Russia.

In the fourth period, extending from 1891 to the present time, the outstanding features were the entry of South Africa as an important and then as the leading producer, and the phenomenal increase in the output of most of the gold-producing countries through the introduction of the cyanide process. The output was 6,320,000 fine oz. in 1891, and a steady increase was recorded until 1915, when a maximum of 22,737,000 fine oz. was produced. Thereafter the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum production of 15,451,945 fine oz. in 1922, increased to 17,790,597 fine oz. in 1923, to 19,025,942 in 1925 and to 19,755,622 in 1928.

In 1929 the world's chief producers were the Union of South Africa, with a production of 10,412,326 fine oz. or 53·4 p.c., the United States, producing 2,056,629 fine oz. or 10·5 p.c., and Canada, producing 1,928,308 fine oz. or 9·9 p.c. As Australia, Rhodesia and British India were also important producers, over 72 p.c. of the world production of 1929 was produced in the British Empire. Preliminary figures for 1930 show that Canada has exceeded the United States in gold production and now ranks second to South Africa.

Detailed statistics of world gold production for 1928 and 1929 follow:—

### Subsection 2.—Silver.

Although no official statistics of the production of silver were published prior to 1887 the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of \$4,800,000, were produced in the Port Arthur district in Ontario. From 1887 to 1893 the annual production ranged in value between \$300,000 and \$400,000, and was derived chiefly from Ontario and Quebec. The next three years saw a rapid increase in production, due to the development of the silver-lead deposits of British Columbia, and in 1896 a production worth over \$2,000,000 was recorded. From 1896 to 1905 the production varied in value between \$2,000,000 and \$3,500,000, rising rapidly during the next five years to \$17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district. Since then there has been a falling-off in quantity, but owing to the higher price of the metal the value of the annual production increased to a maximum of \$20,693,704 in 1918. The post-war depression and the decline in the value of silver caused a low value of production in 1921, but the industry recovered, and Canada in 1929 retained its place as the third largest producer of silver in the world, ranking after Mexico and the United States and followed fairly closely by Peru.<sup>1</sup>

The silver production of Canada is chiefly credited to the rich silver-cobalt ores of northern Ontario, the copper-gold-silver and the silver-lead-zinc ores of

<sup>1</sup> Preliminary figures for 1930 are 26,435,935 fine oz. valued at \$10,086,367 compared with a production of 23,143,261 fine oz. valued at \$12,264,303 in 1929.

British Columbia and the silver-lead ores of the Yukon Territory. A certain amount of silver also occurs in combination with the gold ores of northern Ontario and the nickel ores of the Sudbury district.

**Ontario.**—The production of silver in Ontario in 1929 was 8,890,726 fine oz., valued at \$4,711,462, practically the whole of which was derived from the rich silver-bearing ores of the Cobalt district, but small quantities were obtained from the products of the nickel refineries and from gold bullion.

The Cobalt camp was discovered in 1903, when the Timiskaming and Northern Ontario Railway was being built from North Bay to the head of Lake Timiskaming. This was at Long lake, subsequently christened "Cobalt lake", and the surrounding area became known as the Cobalt silver camp.

From 1904 to 1911 the output of silver increased rapidly year by year. In 1911 the province of Ontario reported a production from that camp of 31,507,791<sup>1</sup> fine oz., the value of which was \$15,953,847. In 1912 the output was nearly as great, being 30,243,859<sup>1</sup> fine oz., but prices had gone up and the value was greater, namely, \$17,408,935. Since that time the production has been declining, but the life of the camp has been prolonged by the finding of "blind" veins and by improvements in the methods of extraction which have permitted the working of ores of a grade too low for profit by the former methods.

The Gowganda camp, which lies about 55 miles northwest of Cobalt, has been the source of much high-grade silver ore, mainly from the Miller Lake-O'Brien and Castle-Trethewey mines. This section was more or less handicapped by its distance from the railway and lack of facilities for transportation until a good road was completed from the railway at Elk Lake, on a branch line of the Timiskaming and Northern Ontario Railway. In addition a hydro-electric power transmission line has been extended from Elk Lake to Gowganda. With these added facilities, a number of mines in the camp enlarged their operations. The history of the South Lorrain camp, which lies about 18 miles to the south-east of Cobalt, on the shore of lake Timiskaming, is characteristic. It was worked for some time and then closed, the conclusion having been reached that the camp was worked out. The Keeley mine turned out later to be extremely rich, producing in 1924 nearly 2,000,000 fine oz. of silver.

**British Columbia.**—In 1926 for the first time since 1905 this province surpassed Ontario in silver production. Most of the British Columbia output of silver is now derived from the ores of the Sullivan mine near Kimberley and the Premier mine at Premier. Other sources of silver in this province are the silver-lead-zinc ores of East and West Kootenay, and the gold-copper ores of the Boundary and the Coast districts.

Comparing the quantity rather than the value, production in 1930 was the greatest on record and amounted to 11,836,632 fine oz.,<sup>2</sup> although this record was nearly equalled in 1927 with a production of 11,040,445 fine oz. Small amounts were recovered with alluvial gold and from gold bullion, but the Sullivan

<sup>1</sup> These figures are taken from reports of the Ontario Department of Mines, by which silver production, until recent years, was computed on a different basis from that used in Table 12 following.

<sup>2</sup> Preliminary figures.

and Premier mines were responsible for the greater part of the output from this province. The Sullivan, primarily noted for its lead and zinc production, is the largest producer of silver in Canada. Silver was also recovered from the copper ores and concentrates which were exported for treatment in foreign smelters and from blister copper made at the Trail and Anyox smelters.

**Yukon Territory.**—The production of silver from the Yukon Territory in 1929 amounted to 3,279,530 fine oz., derived chiefly from the silver-lead ores exported from the Mayo district. For some years the difficulties and high cost of transportation involved in the export of these ores were a serious obstacle to the successful operation of the mines. However, in the summer of 1925 the Treadwell Yukon Co. of Keno Hill, the largest producer in the district, completed a concentrating plant which has since been kept working at full capacity. By eliminating much of the waste from the ores, concentration reduces the transportation costs. Ores from neighbouring mines are treated at this mill and this feature is of great assistance to the smaller operators in the district. The quantity of silver obtained from placer gold is gradually decreasing.

**World Production of Silver.**—The world production of silver was estimated at 261,715,021 fine oz. for 1929, an increase of 25.4 p.c. over the pre-war figure of 1913, given as 208,690,446 fine oz. The silver production of Canada in 1929 was 23,143,261 fine oz. For the quantity and value of the world's production in 1928 and 1929, see Table 10 of this chapter.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1887 in Table 11, while statistics of the quantities and values produced in the various provinces are given for 1911 and subsequent years in Table 12.

<sup>1</sup> Preliminary figures.

**Subsection 3.—Copper.**

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. In 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and in 1929 reached the record of 248,120,760 lb., while the preliminary estimate for 1930 indicates a further increase of 22 p.c. in that year to 303,356,644 lb. In 1929, the value of the copper produced in Canada exceeded that of gold for the first time, so that in that year copper was the second most important mineral product of the Dominion, but in 1930, owing to the decrease in price of copper, gold production returned to the second position.

**Ontario.**—The Sudbury deposits were first noted in 1856, but did not attract attention until 1883-4, during the period of the construction of the Canadian Pacific Railway, when a railway cutting was made through the small hill on which the Murray mine was afterwards located. During the first few years the deposits were developed for their copper content alone; not until 1887 was the presence of nickel determined and the true value of the ores made known. The nickel-copper ores of the Sudbury area are the source of nearly all the copper produced in Ontario. Under the International Nickel Co. of Canada, which is an amalgamation of the former International Nickel Co. and the Mond Nickel Co., an extensive program of expansion in the mining and metallurgical facilities of the district has been nearly completed. The Frood and Frood Extension mines, where large masses of immensely rich ore have been opened up, were brought under one control. The ore supplies are chiefly drawn from the Frood, Creighton, Levack and Garson mines. Copper-nickel matte is pro-

duced at Coniston and in a large new smelter at Copper Cliff. Much of this matte goes to the nickel refinery at Port Colborne, the remainder being shipped either to the refinery at Swansea, Wales, or to the works at Huntington, West Virginia, where monel metal is made. A subsidiary company, the Ontario Refining Co. Ltd., has completed a copper refinery at Sudbury where refined copper is produced from the blister copper which is separated from the nickel at Port Colborne. The company also operates the Acton precious metals refinery situated near London, Eng., where it recovers, in a refined state, the precious metal content of concentrates produced at both the Swansea and Port Colborne nickel refineries. The Falconbridge Nickel Mines, operating a mine in Falconbridge township, make a copper-nickel matte which is shipped to Norway for refining.

**British Columbia.**—The production of copper in the province during 1929 amounted to 103,903,738 lb., which was 42 p.c. of the total Canadian production for the year. This total included the blister copper produced at Anyox by the Granby Consolidated Mining, Smelting and Power Co., Ltd., the blister copper and copper in copper sulphate made by the Consolidated Mining and Smelting Co., Ltd., at Trail, and the copper estimated as recoverable from the ores and concentrates exported. The principal copper-producing mines in British Columbia are the Britannia mine on Howe sound, which ships its concentrates to Tacoma, the Hidden Creek mine on Portland canal, and the Copper Mountain mine, the last two mentioned being owned and operated by the Granby Consolidated. The Hidden Creek ores are smelted at the Anyox smelter, and the Copper Mountain ores, after being concentrated at Allenby, are shipped to the Trail and United States smelters.

**Manitoba.**—Much development has been carried on in the Flin Flon district of Manitoba in the last ten years, and large bodies of ore have been proven on the Flin Flon property of the Hudson Bay Mining and Smelting Co., and the Sherritt-Gordon property. About 135 miles of branch line from the Hudson Bay Railway provides these properties with transportation facilities. A smelter has been built at Flin Flon, while a large hydraulic development on the Churchill river provides the necessary power. During the 4 years 1917-1920, with the high prices prevailing for copper, ores containing 9,866,328 lb. of copper were shipped by the Mandy mine.

**Quebec.**—Until 1894, when Ontario took the lead, Quebec was the chief copper-producing province of Canada, the principal mines being the Eustis and Huntingdon properties in the Eastern Townships. These mines produced ores from which both copper and sulphur were recovered. There is still a small annual production from this field. Recent discoveries in the Rouyn camp of northwestern Quebec, however, have resulted in a greatly increased production of copper in 1929. These deposits lie in an easterly extension of the formations found in the Kirkland Lake area of Ontario. The first discoveries in the district were located as gold prospects; the existence of large bodies of copper and zinc ores was subsequently proved and now the production of copper exceeds in value that of gold. A branch line from the Canadian National Railways was completed into the camp during 1926, and subsequently a branch of the Timiskaming and Northern Ontario Railway was also extended to the camp. The construction of a copper smelter at the Noranda mine was completed and production began in December, 1927. Hydro-electric power is supplied from power plants on the Quinze river.

**World Production of Copper.**—World production of copper was estimated at 2,104,110 short tons in 1929, as compared with 1,891,610 tons in the preceding year. Canada had an output of 124,060 tons in 1929, producing about 5.9 p.c. of the world's estimated total.

**13.—Quantities and Values of Copper Produced in Canada, by Provinces, calendar years 1911-1930.**

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272. For production in Manitoba and Yukon between 1913 and 1920, included in totals, see 1928 Year Book, p. 345.

<sup>1</sup> From the Year Book of the American Bureau of Metal Statistics, New York.

<sup>2</sup> The final official statement indicated a production of 52,229 tons in Canada during 1924, 55,725 tons in 1925, 66,547 tons in 1926, 70,074 tons in 1927, 101,348 tons in 1928 and 124,060 tons in 1929.

## Subsection 4.—Lead.

Lead is obtained in Canada largely from the deposits of British Columbia. From 88,665 lb. in 1891 the production advanced to over 39,000,000 lb. in 1897, an average increase of about 6,500,000 lb. per year. Owing to the low price of silver in 1898 and labour troubles in the Slocan in 1899, the output in the latter year fell to 21,900,000 lb., but rose to 63,200,000 lb. in 1900. This increase was due to the development of two or three mines in the Fort Steele mining division, although all the lead-producing districts except Ainsworth showed a material increase in production. The output fell to 18,100,000 lb. in 1903, owing to the condition of the market affecting the production of the low-grade silver-lead ores of the East Kootenay district. An Act was passed in October, 1903, providing for the payment of bounties on lead contained in lead-bearing ores mined in Canada, and, as a direct result of the bounty, the output increased to 56,900,000 lb. in 1905, but fell off gradually to 23,800,000 lb. in 1911. A steady improvement has since been experienced, a record total of 337,946,688 lb. being reached in 1928, while production for 1929 was nearly as great at 326,522,566 lb. and the preliminary estimate for 1930 is 333,067,797 lb.

**British Columbia.**—In the East Kootenay district, the Consolidated Mining and Smelting Co. operates many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc and 5 ounces of silver to the ton. In the West Kootenay district the ores are chiefly argentiferous galena and zinc-blende, occurring as veins in granites and slates. The ores range from 7 p.c. to 75 p.c. of lead, with considerable values of silver. The Consolidated Mining and Smelting Co. has extended its facilities for mining, milling and smelting. This accounts to a considerable extent for the rapid growth in lead production during the last few years.

**Ontario.**—Lead mining in Ontario is intimately associated with the successful operations of the Galetta mine and smelter. Recent discoveries in the Sudbury Basin area have disclosed bodies of lead-zinc ore. These properties are under development but very little production has come from them as yet.

## 15.—Quantities and Values of Lead Produced from Canadian Ores, calendar years 1901-1930.

NOTE:—For figures for the years 1887-1900, see 1929 Year Book, p. 367.

1915	46,316,450	2,593,721	5.600	1930*	333,067,797	13,109,451	3.927

<sup>1</sup> Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amount recovered. Since 1912 the data given represent the quantity of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported. From 1901 to 1908, average prices at New York; 1909 and 1910, average prices at Toronto; from 1911 to 1925, average prices at Montreal; 1926-1930 the average yearly price at London, Eng., were used in making up the values shown. <sup>2</sup> Preliminary figures.

**World Production.**—The world production of lead in 1929 was about 1,935,101<sup>1</sup> short tons. The principal producers were the United States with 35.5 p.c., Mexico 14.2 p.c., Australia 10 p.c., Canada 8.2 p.c., Spain 7.6 p.c. and Germany 5.6 p.c.

#### Subsection 5.—Nickel.

With the exception of the nickel in the ores shipped from the Cobalt district the Canadian production of nickel is derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. A brief description of the history and development of the nickel-copper mining industry would be found under copper in Subsection 3 of this section. From 830,477 lb. in 1889 the production of nickel increased continually to a war time peak of 92,500,000 lb. in 1918. After a slump to 19,293,000 lb. and 17,597,000 lb. in 1921 and 1922 respectively there was an increase to 73,857,114 lb. in 1925, followed by a drop to 65,714,294 lb. in 1926. In 1928 production at 96,755,578 lb. exceeded that of the war year 1918, while 1929 showed a further increase to 110,275,912 lb. Preliminary figures for production in 1930 are 103,768,857 lb.

In recent years the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending their efforts in that direction accounts very largely for the marked increase in production during the past few years. The automobile industry, electrical machinery, cooking utensils, new submarine cables and various nickel alloys are all helping to absorb this increased production.

**Sudbury.**—The nickel-bearing rocks of the Sudbury district, with a width of about two and one-half miles, form a wide ellipse 36 miles long and 13 miles broad. The ores consist mainly of a mixture of pyrrhotite and chalcopyrite associated with norite, a basic intrusive rock. The nickel occurs in the pyrrhotite as pentlandite and varies somewhat in amount. The ore mined in the district varies considerably in richness, the average metal content being about 2 to 4 p.c. of nickel, 1 to 3 p.c. of copper and 45 p.c. iron, although portions of the new Froid deposit are much richer than this especially in copper. Cobalt, gold, silver, platinum and palladium are nearly always present in very small quantities.

**World Production.**—The world production of nickel was about 63,800 short tons in 1929, of which output 87 p.c.<sup>2</sup> was Canadian in origin, while the remainder was derived from New Caledonia, India and Norway. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

<sup>1</sup> From the Year Book of the American Bureau of Metal Statistics. <sup>2</sup> These figures, taken from the Imperial Institute's Statistical Summary, include some nickel produced in the U.S. as a by-product from the electrolytic refining of Canadian copper; such nickel is not included in Table 16.

### 16.—Quantities and Values<sup>1</sup> of Nickel Produced in Canada during the calendar years 1901-1930.

NOTE.—For figures for the years 1889-1900, see 1929 Year Book, p. 368.

<sup>1</sup> A change in the method of computing the value of nickel produced accounts for the drop in value after 1923. <sup>2</sup> Preliminary figures.

#### Subsection 6.—Cobalt.

The major portion of the world's supply of cobalt has for almost two decades been derived from the silver-cobalt-nickel arsenides of the Cobalt district, the cobalt produced by refineries in southern Ontario having practically controlled world production until recent years. Large deposits of cobalt-bearing ores occur in central Africa, and the introduction into the world's markets of cobalt from this source has limited the market for the Canadian product to the extent that since 1926 Canadian production has dropped to about half of the world production.

The ore bodies at Cobalt, discovered in 1903, carry silver, cobalt, nickel, bismuth and arsenic. The Deloro smelter treats ores and residues and disposes of cobalt oxide, metallic cobalt and unseparated oxides of nickel and cobalt. The cobalt residues from the cyanide process are for the most part treated in Canada, though some are shipped abroad for treatment. The smelter output of cobalt, computed as the metallic cobalt and cobalt in oxides and salts, together with the cobalt recovered in ores exported from the mines, and including cobalt in speiss residues exported, amounted in 1929 to 929,415 lb. valued at \$1,801,915, as against 1,116,492 lb. valued at \$2,328,517 in 1925. Production in 1930 is estimated at 694,163 lb.

#### Subsection 7.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia. The metallic recoveries from Canadian ores were 197,267,087 lb. in 1929, as compared with 5,600,000 lb. in 1913. From an insignificant position in 1913, the country advanced to the sixth rank among the world's producers in 1929, with an output of about 5.3 p.c. of the world total. Production in 1930 is estimated at 267,665,479 lb. and constitutes a record.

**British Columbia.**—The principal zinc-mining regions are situated in the Kootenay district of British Columbia, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, where

the ore worked is a replacement deposit of considerable size. Other active mines are located in the Ainsworth and Slocan divisions of the West Kootenay district.

**Other Provinces.**—There has been considerable exploration and development of zinc-bearing deposits in Eastern Canada during recent years. The majority of these ores are of the replacement type and are often characterized by a close association of copper, zinc and gold. In northwestern Manitoba the Flin Flon and Sherritt-Gordon mines are operating on ores of this nature. Shipments of zinc concentrates have been made from the Errington mine of the Sudbury district, Ontario, during 1929 and 1930. Important deposits of zinciferous ore have been developed in the Rouyn district of Quebec; among the more prominent properties producing or developing this class of ore are the Abana, Amulet and Waite-Ackerman-Montgomery. Zinc ores, usually complex, have been extensively mined in eastern Quebec and at the Sterling mine in Cape Breton, Nova Scotia.

The urgent demand for zinc during the Great War was largely responsible for energetic and aggressive action on the part of the Consolidated Mining and Smelting Co., owners of the Trail plant, in producing this metal; with this object in view the erection of an electrolytic zinc refinery was commenced in 1915, rushed to completion and put into operation early in 1916. The company had then to turn its attention to solving the problem of recovering the values in the complex lead-zinc ores of the famous Sullivan mine. This was largely a problem of concentration in order to separate the finely divided lead and zinc ores. From the opening of the zinc refinery in 1916 regular shipments of zinc ore were made from the Sullivan and other mines, but it was not until four years later that the problem of concentration was satisfactorily solved by the application of oil flotation methods. Since that time the production of lead, zinc and silver has rapidly increased. Recent enlargements to the plant at Trail have enabled further increases in production to be made.

<sup>1</sup> Estimated foreign smelter recoveries and refined zinc made in Canada.

<sup>2</sup> Preliminary figures.

**Subsection 3.—Iron.<sup>1</sup>**

The fact that iron ore is widely distributed in Canada has long been known, and extensive deposits have been discovered from time to time. The development of the iron-mining industry, however, has been retarded by the abundant supply of the higher-grade ores of Wabana, Newfoundland, and of the Mesabi range of the State of Minnesota. The production of pig iron and of steel ingots and castings in 1929 was larger than in any other year except the war years.

**Nova Scotia.**—The Wabana section of Newfoundland, containing one of the largest deposits of iron ore in the world, is operated by the British Empire Steel Corporation. The probable reserves in that area have been estimated at 3,635,000,000 tons, and the Wabana ore consists of an exceptionally high-grade hæmatite. Ore to the amount of 763,168 tons was shipped in 1929 to the blast furnaces of the company at Sydney, where the proximity of the adjacent coal-field favours the economical production of pig iron and steel. Development work carried on also at Torbrook, in Annapolis Co., indicates that the deposits there are very extensive; the ore is red hæmatite, containing a good percentage of iron rather high in phosphorus. An important iron ore field is the Arisaig district in Antigonish Co.

**New Brunswick.**—The most important deposits so far discovered are those in the Austin Brook district of Bathurst Co., where mining experts state that great masses of iron ore have been located.

**Quebec.**—It is estimated that there are many millions of tons of iron magnetite sands, containing a high percentage of iron, along the north shore of the St. Lawrence at Moisie, Mingan, Natashkwan and other places in Saguenay Co. The sands contain a high percentage of titanium, rendering the briquetted iron sands unfavourable for blast-furnace treatment. There are a number of deposits of bog iron ore in the St. Lawrence valley, remarkably free from sulphur and phosphorus. The bog iron ores were successfully used in charcoal blast furnaces at Radnor Forges and Drummondville for many years. Iron ore deposits also exist along the Gatineau river in Hull township, within a few miles of the city of Ottawa. The Bristol mine, in Pontiac Co., has been proved to contain large deposits of magnetite, but the ore is high in sulphur and would require roasting. It is known that Ungava or New Quebec contains large deposits of both magnetite and hæmatite.

**Ontario.**—The iron and steel industry in Ontario is chiefly dependent on imported ores, but several companies have demonstrated what can be done by the beneficiation of low-grade Canadian ores. The Moose Mountain iron range is situated about 35 miles north of Sudbury; over 100,000,000 tons of magnetite have been proved by the owners. The Atikokan district, west of Sabawa lake, contains approximately 15,000,000 tons of magnetite, while the Atikokan mine, to the east of the lake, has shown 10,000,000 tons. The deposits of non-Bessemer ore in the Michipicoten district are extensive, and millions of tons of red hæmatite were taken from the Helen mine. The Magpie mine produced siderite, which was roasted before being shipped to the blast furnaces at Sault Ste. Marie owned by the Algoma Steel Co. However, no discoveries have been made

<sup>1</sup> A sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-1923 Year Book.

in Ontario of deposits of iron ore which do not require special treatment before being charged to the blast furnaces. This makes Ontario ore more expensive to treat than the high-grade ore readily available from the Mesabi range in the State of Minnesota.

**British Columbia.**—Owing to the lack of a local iron-smelting industry, the production of iron ore in British Columbia has not reached important dimensions. On the northeast coast of Texada island there are extensive deposits estimated to contain 5,000,000 tons of magnetite. The Glen iron mine on the south side of Kamloops lake, estimated to contain reserves of 8,000,000 tons, has been worked intermittently for several years, the ore being shipped to Tacoma and to the Revelstoke Smelting Works.

<sup>1</sup> Including a small production from Quebec in certain years. <sup>2</sup> Owing to the fact that much of the pig iron produced in Canada is used by the firms producing it for further manufacture in their own plants, no attempt has been made since 1926 to place a nominal value on such production. <sup>\*</sup> Preliminary figures.

**Section 5.—Production of Non-Metallic Minerals.**

**Subsection I.—Fuels.**

**Coal.**

The fuel situation of Canada is somewhat anomalous, as in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported from the United States. The Canadian coal areas are situated in the eastern and western provinces, while Ontario and Quebec are more easily and

economically supplied with coal from the nearer coal fields of Pennsylvania and Ohio.<sup>1</sup> The anomaly of the situation is accentuated if we consider that Canada's present coal consumption is about 35,000,000 tons annually, as against reserves of 1,234,289,000,000 metric tons, sufficient for an unthinkable long period at the present rate of consumption.

**Coal Resources.**—A summary of the known coal resources of Canada was given on pages 391 to 394 of the 1922-23 Year Book; the accompanying table is reproduced as Table 19.

<sup>1</sup> See "Coal, Coke and By-Products", published by the Imperial Mineral Resources Bureau.

<sup>2</sup> The coal of all classes mined in Alberta to 1911, amounting to 20,000,000 tons, has been deducted.

<sup>3</sup> A=anthracite, B=bituminous, L=lignite.

<sup>4</sup> Extensive investigation has been carried on by the Ontario authorities in connection with the lignite deposits of the Moose River basin, James Bay region, and drilling was carried on throughout 1930.

In view of the abnormal conditions prevailing in Canada during the later years of the war period, and also of the falling-off of production in the United States, the Government, on July 12, 1917, appointed a Fuel Controller for Canada, charging him in the first place with the duty of stimulating shipments to Canada, and eventually extending his powers until they included the work of controlling prices and directing coal-mining operations in Canada. The Fuel Controller concluded his duties in March, 1919, but in the summer of 1922 it was again found necessary to provide machinery to handle the administrative problems directly related to the tiding-over of a threatened fuel shortage. The Dominion Fuel Board, with the Deputy Minister of the Department of Mines as chairman, was constituted on Nov. 25, 1922, to meet the need for a standing

<sup>1</sup> See map showing the sources of the coal supply of different parts of Canada, p. 386 of 1922-23 Year Book.

organization definitely responsible for the systematic study of the fuel position of the Dominion. The Board issued an interim report in 1923, and has since issued, in co-operation with the Department of Mines, various studies on particular fuels, notably a report, "Coke as a Household Fuel in Central Canada", published in 1925.

The coal production in 1929 amounted to 17,496,557 short tons, valued at \$63,065,170, or an average of \$3.60 per ton. This represented a decrease of 67,736 tons, or 0.4 p.c., as compared with the previous year. Nova Scotia produced 7,056,133 tons of coal in 1929, as compared with 6,743,504 tons in 1928. In the west Alberta produced 7,150,693 tons, including 3,387,844 tons of lignite, 3,094,147 tons of bituminous and 668,702 tons of sub-bituminous. Saskatchewan also produced 580,189 tons of lignite. In British Columbia the bituminous coal mined amounted to 2,490,378 tons in 1929. The preliminary figures for 1930 show decreases in all these coal-producing areas except the Yukon. The quantity of coal mined annually in five provinces and the Yukon Territory from 1909 to 1930 is shown in Table 20.

### 20.—Production of Coal in Canada, by Provinces, calendar years 1909-1930.

Note.—For annual production by provinces from 1874 to 1908, see 1911 Year Book, p. 418.

<sup>1</sup> Preliminary figures.

The coal imported for consumption, less re-exports, in the calendar year 1929 amounted to 18,136,727 tons, as compared with 17,200,043 tons in the previous year. The exports of coal of domestic production in 1929 amounted to 842,972 tons, valued at \$4,375,328, or an average of \$5.19 per ton, as compared with 863,941 tons, valued at \$4,469,999, in 1928. The imports of anthracite and bituminous coal for the fiscal years from 1901 to 1930 are given in Table 21, and the exports from 1901 to 1930 in Table 22.

### 21.—Imports into Canada of Anthracite, Bituminous and Lignite Coal for Home Consumption, calendar years 1911-1936.

NOTE.—Anthracite dust is included under anthracite coal. For previous years, see 1911 Year Book, p. 420.

**Coal Consumption.**—In 1929, Canada produced 17.50 million tons, exported 0.84 million tons, imported from the United States 17.66 million tons and from Great Britain 0.84 million tons, and from Russia, Newfoundland and Japan 0.12 million tons. Thus there was available for consumption a total of 35.27 million tons, including 4.02 million tons of anthracite, 26.63 million tons of bituminous, 3.95 million tons of lignite and 0.67 million tons of sub-bituminous coal. The table on the annual consumption of coal shows that Canada actually used 34.84 million tons of coal during the year, or an average of 3.556 tons per capita.

The sources of the coal consumed in Canada in the calendar years 1911-1929 are shown in Table 23; detailed figures of coal made available for consumption

in 1929 are given in Table 24; the difference between the totals of the two tables in the latest year is accounted for by the fact that coal received is not necessarily "cleared for consumption".

**23.—Annual Consumption of Canadian and Imported Coal in Canada, 1911-1929.**

NOTE.—For the years 1886 to 1910, see 1921 Year Book, p. 354.

**Natural Gas.**—The production of natural gas has increased in value from \$1,346,471 in 1910 to \$9,977,124 in 1929. The producing wells in the east are in the counties of Welland, Haldimand, Norfolk, Kent, Essex, Lambton, Elgin and Bruce, in Ontario, and near Moncton, New Brunswick. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost (about 6 miles south and east of the town of Foremost), Bow Island and Wetaskiwin. Wainwright was supplied with gas from the Maple Leaf well in the Fabyan field; gas from the Barnwell and Bassano fields was also used. The

quantity of gas sold or used in 1929 was 28,378,462 M cubic feet. Of the total value, Ontario was credited with about 50 p.c. Estimated production for 1930 was 29,104,570 M cubic feet valued at \$9,635,704.

**Petroleum.**—The production of crude petroleum in Canada during 1929 was the greatest on record and amounted to 1,117,368 barrels, as compared with 624,184 barrels produced in 1928. Of this production 121,194 barrels came from Ontario, 7,499 from New Brunswick and 988,675 from Alberta. Alberta thus produced over 88 p.c. of the total for Canada and accounted for the increased production in 1929.<sup>1</sup> The Turner Valley field is the principal source of production in Alberta and embraces territory in which, beginning with the famous Royalite No. 4 well, a number of productive wells have recently been brought in. The wells in this field give a wet gas from which a very high grade of crude naphtha is separated. The producing horizons in Western Canada were formerly considered to be the Dakota and Kootenay shale formations of the Upper and Lower Cretaceous periods, but the Royalite No. 4 well proved that much better producing horizons existed in a lower formation, a brown porous dolomitic limestone, below the Kootenay formation. The Red Coulee field in southern Alberta near the International Boundary began producing some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton, where the oil is heavy and of a lower grade. Altogether 54 oil wells were in operation in Alberta at the close of the year 1929, while drilling was in progress on 108 other wells. These drilling operations were distributed over the Turner Valley, Wainwright, Ribstone, Red Coulee and other fields. No less than 312,251 feet of well-drilling was done in Alberta during 1929, while a further 16,200 feet of drilling was done for structural information.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. The oil districts are all situated within an area underlain by Devonian strata, and the petroleum is largely obtained from the horizons in the Onondaga at varying depths in the different localities.

#### Subsection 2.—Other Non-Metallic Minerals.

**Asbestos.**—Canada produces more asbestos than any other country. The value of the annual output of asbestos has increased from less than \$25,000 in 1880 to \$13,172,581 in 1929, so that, except for coal, asbestos is now the most important non-metallic mineral product.<sup>2</sup> In 1929, world production amounted to about 420,000 long tons; of this tonnage Canada produced 273,263 long tons or 65.0 p.c., Rhodesia 38,066 tons or 9.1 p.c., South Africa 28,717 tons or 6.8 p.c., Russia, 26,000 long tons or 6.2 p.c., Cyprus, 14,110 tons or 3.4 p.c., and the United States 2,800 tons.

**Quebec.**—The Eastern Townships has for many years been the most productive asbestos-mining area in the world. The most important deposits are those at Black lake, in Coleraine township; at Thetford and Robertsonville, in Thetford township; at East Broughton, in Broughton township, and at Danville, in Sipton township. The veins of chrysotile asbestos traverse the serpentine in all directions, and as a rule the fibre lies at right angles to the walls of the veins. The veins vary in width from  $\frac{1}{4}$  inch to  $\frac{1}{2}$  inch, and occasionally fibre has been obtained several inches in length. The fibre is of good quality and

<sup>1</sup> Preliminary figures for 1930, for Canada, established a further high record of 1,492,471 barrels.

<sup>2</sup> Preliminary figures for 1930 are \$8,390,163.

well adapted for spinning. In the East Broughton deposits, the serpentine occurs enclosed in a highly quartzose slate, probably of Precambrian age. In the Danville area, asbestos up to  $\frac{1}{2}$  inch in length occurs abundantly, and the serpentine is impregnated with fine, short fibre, giving a first-class milling material.

Open-cut methods of mining are adopted almost invariably throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibricing, screening and grading of the mine product. In addition, 10 plants in Canada manufacture asbestos products, including the following commodities:—asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil and hydraulic operations.

### 26.—Production of Asbestos in Canada, calendar years 1909-1930.

NOTE:—Figures for the years 1896-1908 are given in the 1911 Year Book, p. 424.

Year.	Totals. <sup>1</sup>		Year.	Totals. <sup>1</sup>	
	tons.	\$		tons.	\$
1909.....	87,300	2,301,775	1920.....	199,573	14,782,201

1919.....	159,236	10,975,369	1930 <sup>2</sup> .....	242,112	8,390,863

<sup>1</sup> The quantity and value of sand, gravel and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years.

<sup>2</sup> Preliminary figures.

**Gypsum.**—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness and Victoria counties, Nova Scotia; Hillsborough, New Brunswick; Paris, Ontario; Gypsumville, Manitoba, and Falkland and Mayook, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. Nearly 50 p.c. of Canada's production is exported in crude forms from the Nova Scotia deposits, which are conveniently situated for ocean shipping and account for about 75 p.c. of the total Canadian production. Beds of gypsum are associated with the lower Carboniferous limestones in New Brunswick and Nova Scotia. The mineral occurs in Ontario in the salt-bearing Salina formation of Upper Silurian age. Production during 1929 was 901,383 tons valued at \$1,223,985 and preliminary figures for 1930 are 726,662 tons valued at \$990,659.

**Salt.**—Practically the whole of the production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia are claiming much attention and some shipments have been made from deposits near McMurray in Alberta. The deposits of Ontario occur in the Salina formation of Upper Silurian age, in which the beds of the mineral sometimes reach a thickness of 250 feet. The Canadian production was 330,264 tons in 1929,<sup>1</sup> as compared with 299,445 tons in 1928, 268,672 tons in 1927, 262,547 tons in 1926, 233,746 tons in 1925 and 207,979 tons in 1924.

<sup>1</sup> Preliminary figures for 1930 are 263,851 tons.

## Section 6.—Production of Clay Products and Other Structural Materials.

**Brick and Tile.**—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Here the widespread clays of glacial and post-glacial age that occur over considerable areas of the St. Lawrence Lowlands have furnished the materials for numerous brick and tile industries. Production in these industries fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick construction has reduced the production of brick so that while the value of construction undertaken in both 1928 and 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in each of the later years was only about half that of 1912. On the other hand, as will be seen from Table 27 below, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1929 was 453,865,000, as compared with 421,301,000 in 1928 and 894,372,000 in 1912. Preliminary figures for 1930 are 323,509,000.

**Cement.**—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superior qualities of uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica and alumina. The lime is usually furnished by limestone or marl, and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated with good facilities for a supply of fuel and for shipment of the product to the markets. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta and British Columbia. As may be seen from the table following (Table 27), the production of cement in 1929 established a record, and, while production was reduced in 1930, it still exceeded that of 1928. The industry thus shows a healthy recovery from the unfavourable conditions from which it suffered during the war and post-war periods. Whereas in pre-war years Canada was an importer of Portland cement, she is now an exporter of this commodity.

27.—Production of Portland Cement, by Quantities and Values, calendar years 1910-1930, and Imports and Exports, fiscal years ended Mar. 31, 1910-1930.

<sup>1</sup> The barrel of cement=350 lb. or 3½ cwt.   <sup>2</sup> "Production" as used here means quantity and value of sales.   <sup>3</sup> Preliminary figures.

**Stone, Sand and Gravel.**—While the Mineral Branch of the Dominion Bureau of Statistics presents details of the production and industrial organization of the stone industry separately from that of sand and gravel, for the sake of brevity they are here discussed together. Production of these materials has increased greatly in recent years, and the expansion in the stone industry has been chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased in 1929 to 7,615,636 tons, while during the same period the production of sand and gravel increased from 11,666,374 tons to 27,846,945 tons, used chiefly for railway ballast, concrete and road work and building sand. The preliminary figures for 1930 show a further increase for stone to 9,878,106 tons and for sand and gravel to 29,006,338 tons. Among the developments in Canada which appear to have resulted in the increased production of these materials may be mentioned:—(1) the tendency in construction work for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated above by a decline in brick production and an increase in that of cement; (2) the vast improvement during the past decade in the mileage and character of roads and highways in Canada; and (3) the improvement of railway road-beds, since, in addition to the ordinary requirements of gravel for mere maintenance of railways, lines are being better constructed to provide for heavier traffic and many of the most important stretches of railway are being re-ballasted with crushed stone.

## CHAPTER XIII.—WATER POWERS.

The fresh water area of Canada is officially estimated at 180,035 square miles—an area substantially larger than the whole land area of the British Isles, and certainly larger than the fresh water area of any other country in the world. As many parts of this well-watered country are situated at a considerable height above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the water from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

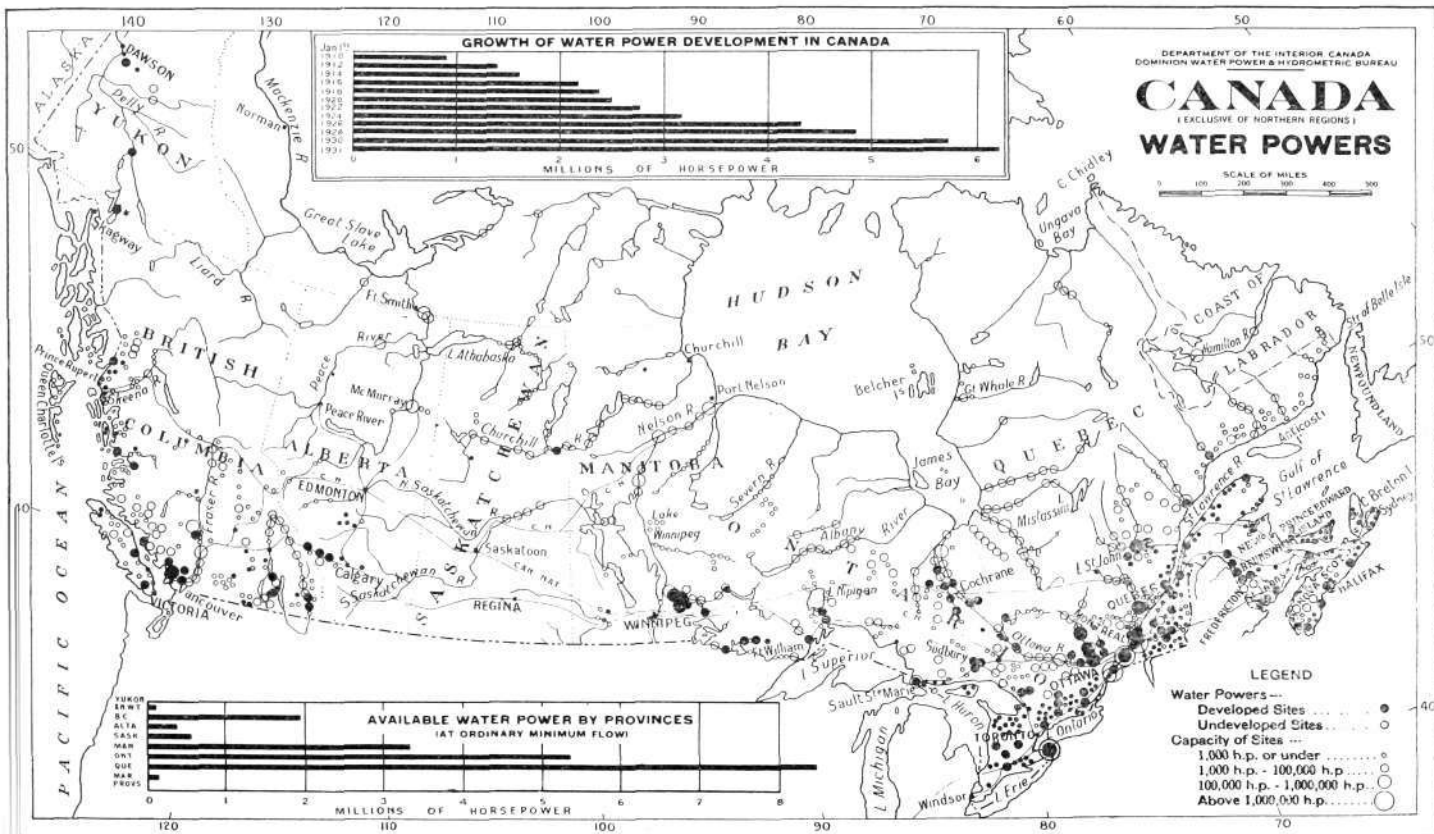

This Water Power chapter of the Year Book is divided into three sections; the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric Commissions in other provinces.

### Section 1.—The Water Powers of Canada.<sup>1</sup>

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was largely secured by the combustion of coal, and was therefore looked upon as a secondary product, whereas when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as a basic commodity, and statistics concern themselves with kilowatt hours of electrical energy produced as being just as important as returns covering the production of pig iron, coal or cotton, and take note of undeveloped water power as being a source of raw material just as important as uncut forests or untapped oil fields. The relationship of power to production is of such vital consequence that every nation, besides considering its own power-producing resources, is deeply interested in the similar resources of other countries, and the method of their development. To facilitate a study of world power conditions two Plenary World Power Conferences composed of representatives from 47 member states have already been held to consider the technical, economic and statistical aspects of power development. Arrangements for the future re-convening of the Conference have been provided.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. Over 96 p.c. of the total main plant equipment of the central electric stations of

<sup>1</sup> By J. T. Johnston, Director, Dominion Water Power and Hydrometric Bureau, Department of the Interior.

MAP SHOWING DEVELOPED AND UNDEVELOPED WATER POWERS OF CANADA.

Canada is hydro power, and this equipment generates almost 99 p.c. of the total electrical output. Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table I shows the provincial distribution of available and developed power in Canada at Jan. 1, 1931.

1.—Available and Developed Water Power in Canada, by Provinces, Jan. 1, 1931.

<b>Totals.....</b>	<b>20,347,400</b>	<b>33,617,200</b>	<b>6,125,012</b>

The figures in columns 2 and 3 of the above table represent 24-hour power and are based upon rapids, falls and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or less power capacity, which are not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The figures in column 4 represent the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures in columns 2 and 3 for the purpose of deducing therefrom the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated as in column 3. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,000,000 h.p. In other words, the present turbine installation represents only a little more than 14 p.c. of the present recorded water-power resources.

The above figures may be said to represent the minimum water-power possibilities of the Dominion. To illustrate, detailed analysis of the water-power resources of the provinces of New Brunswick and Nova Scotia have dis-

closed most advantageous reservoir facilities for regulating stream flow. It is estimated that the two provinces possess within their respective borders 200,000 and 300,000 commercial h.p. (These figures provide for a diversity factor between installed power and consumers' demands.)

**Recent Increase in Turbine Installation.**—Table 2 shows the yearly increase in turbine installation by provinces from 1900 to 1930 inclusive. During the four years immediately preceding the war nearly 1,000,000 h.p. was installed, during the following eight years approximately the same installation occurred, while in the last eight years the gain was 3,116,667 h.p.

## 2.—Hydraulic Turbine Horse Power Installed in Canada, by Provinces, as at Dec. 31, 1900-1930.

NOTE.—Turbine horse power in Saskatchewan is reported as 30 from 1910 to 1917, 35 from 1918 to 1929, and 42,035 in 1930; installation in the Yukon was 5 from 1900 to 1906, 2,055 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910; 13,195 from 1911 to 1913 and 13,199 from 1914 to 1930. These figures are included in the totals for Canada.

**Distribution of Developed Water Power.**—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper-mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures below, which indicate that 9.5 p.c. of the developed power is installed by pulp and paper companies, in comparison with 5.4 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and over 90 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries is developed by central electric stations, converted into electricity and delivered to the various industrial plants.

During the past eight years, 1923 to 1930 inclusive, 3,116,667 h.p., or more than half of Canada's present total installation of 6,125,012 h.p., was installed. At the present time there are new developments, either in course of construction or actively projected, which will add over 3,150,000 h.p. to this total, and there is every indication that the development of water power will make continued progress in the future.

### 3.—Developed Water Power in Canada: Distribution by Provinces and Industries, and per 1,000 Population, as at Jan. 1, 1931.

Note.—The figures in this table are preliminary and are subject to correction when official data are complete.

Province.	Turbine Installation.				Population June 1, 1930.	Average Installation per 1,000 Population.

Column 2 includes only hydro-electric stations which develop power for sale.

Column 3 includes only water power *actually developed* by pulp and paper companies. In addition to this total, pulp and paper companies purchased from the hydro-power central electric stations, totalled in Column 2, electric energy estimated at about 944,000 h.p. making a total of about 1,824,000 h.p. actually developed for the manufacture of pulp and paper. A considerable amount of off-peak power and surplus power is also purchased for use in electric boilers.

Column 4 includes only water power *actually developed* in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations totalled in Column 2.

Column 5 totals all water wheels and hydraulic turbines installed in Canada.

Column 6 shows the population of Canada at June 1, 1930, as estimated by the Dominion Bureau of Statistics.

Column 7 averages the developed water power per 1,000 population.

## Section 2.—Central Electric Stations.<sup>1</sup>

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electric appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horse-power, kilowatt hours generated and number of customers for the 13 years ended 1929, together with the number of persons employed and the amount expended for salaries and wages. According to *Power Resources of the World*, published by the London World Power Conference, 1929, the output of electric

<sup>1</sup> Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch see Chapter XXVIII.

current in Canada for 1927 was the second largest in the world, ranking next to the United States. Canada's output in 1927 was larger than that of Germany, the next highest producer, by 2,105 million kilowatt hours. Based on preliminary figures from the larger central electric stations a total production of 18,211,000,000 kilowatt hours is estimated from all stations in 1930.

The rapid increase in the production of electric energy by central electric stations is largely due to the growth of the pulp and paper industry. In 1924 the motors in the pulp and paper-mills operated on power purchased from central electric stations had a rated capacity of 315,464 h.p., or 12.4 p.c. of all power equipment in manufacturing industries (the central electric station industry excluded), and in 1928 their rated capacity had more than doubled, increasing to 859,017 h.p., which was 42 p.c. of the total power for all manufacturing industries. Also the pulp and paper industry has been using an increasing amount of electricity for heating water, and practically all the electric energy is used 24 hours per day throughout the year as against an average working day for other manufactures of 8 to 9 hours. Although the low rates are important factors in increasing the average consumption per capita for all purposes to 1,670 kilowatt hours (excluding exports), which is more than twice the average in the United States and over six times the average in Great Britain, the large consumption by the pulp and paper industry, mines and electro-chemical industries is an important factor.

There are some interesting factors affecting the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada as compared with the United States. Also the pulp and paper industry is proportionately a smaller industry in the United States than in Canada; on a power basis, the proportions are approximately 7 p.c. and 42 p.c. respectively. The average consumption for domestic use is more than twice as high in Canada as in the United States. The total consumption for domestic, or residential use, in both countries, however, is only between 12 and 15 p.c. of the total output of central electric stations.

#### 4.—Summary of Statistics of Central Electric Stations, calendar years 1917-1929.

<sup>1</sup> Excluding non-generating stations in 1920 and subsequent years. <sup>2</sup> Revised to exclude duplications.

<sup>3</sup> Not including auxiliary plant equipment which is included in installation shown in central electric stations on p. 407.

**Equipment of Central Electric Stations.**—The primary power equipment of all central electric stations aggregated 4,925,555 h.p. in 1929. This included water wheels and turbines, steam reciprocating engines and turbines and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 96 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 4 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 171,888 h.p., or 3.4 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 99 steam reciprocating engines installed in central electric stations in 1929, only 13 in number, or about 13 p.c., were over 500 h.p. The steam turbines averaged over 2,530 h.p. with 9 units averaging 7,827 h.p., but there were only 62 steam turbines in the industry and these were confined to 28 stations, whereas the 762 water wheels and turbines averaged 6,193 h.p.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces lignite coal is used for the steam engines, and gasoline, oil distillates and producer gas for the internal combustion engines.

Of the 346 internal combustion engines in central electric stations in 1929, 218, or 63 p.c., were in Saskatchewan, 51 in Alberta and 33 in Manitoba.

During 1929 the fuel stations produced 268,141,000 kilowatt hours at a cost for fuel of \$2,191,632, an average of 0.82 ct. per kilowatt hour. This production was, however, only 1.5 p.c. of the total output, hydro-electric stations producing about 98.5 p.c. The auxiliary equipment in central stations consumed fuel valued at \$324,263 and produced 88,364,000 k.w. hours.

**Provincial Distribution of Electrical Energy.**—The distribution by provinces of the electrical energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1925 to 1929. In the latter year about 84 p.c. of the total generated electrical energy was produced in the leading industrial provinces of Ontario and Quebec. From Table 7 it is seen

that the total of electrical energy generated for export in the fiscal year ended Mar. 31, 1930, was 1,497,106,389 kilowatt hours; in the calendar year 1930 it amounted to 1,490,644,653 kilowatt hours, or 8.3 p.c. of the total amount generated in central electric stations.

**Electric Light and Power.**—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the production of electrical energy for export is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

Electrical energy produced for export increased from 538,331,425 kilowatt hours in the fiscal year ended Mar. 31, 1911, to 1,604,212,276 kilowatt hours in 1929, but declined to 1,497,106,389 kilowatt hours in the fiscal year 1930. Figures by companies for the last four fiscal years are given in Table 7.

### Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a "key industry" in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This "public ownership" movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given below. In more recent years, Manitoba, Nova Scotia, New Brunswick and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

#### Subsection 1.—The Hydro-Electric Power Commission of Ontario.<sup>1</sup>

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the "Hydro"—is an organization of a large number of partner municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public agitation to ensure the provision of adequate supplies of electrical power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1929 electrical service was supplied by the Commission to about 607 municipalities comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts, are performed by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electrical energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually*, through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years.

When a municipality wishes to become a partner in the Hydro system, the Commission submits an estimate of the cost of power, delivered to the municipi-

<sup>1</sup> Revised by Arthur V. White, Consulting Engineer, Engineering Department of the Hydro-Electric Power Commission, Toronto, Ontario.

pality. Then the question of joining the "Hydro" is voted upon under a civic by-law, which, if passed, is followed by another to provide the money necessary for construction of the municipal distribution system.

The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service "at cost". Like any other efficient business concern, the Commission and the municipal electric utilities make provision from the charges for electrical service for repairs and replacements and for obsolescence and contingencies. In addition, the sinking fund provisions ensure that as the successive issues of capital are retired, the charges for interest will be reduced. Power bills for the wholesale service given by the Commission are rendered each month to the municipal utilities at an interim estimated rate, and "credit or debit adjustment" is made at the end of the year when the Commission's books are closed and the actual cost of providing the service is determined.

The rates charged by the municipal utilities for retail service are under the control of the Commission and are designed to ensure that each class of consumer bears its appropriate share of the expenses of the undertaking. The form of rate schedule for each class of service is designed to ensure, as far as is practicable, that each consumer is charged with the cost of the service he receives.

**Power Supplies.**—The constantly expanding power demands of the undertaking have been met by the Commission constructing its own generating plants, by the making of long-term contracts for the purchase of power from other organizations and by acquisition of existing privately-owned generating plants. The initial requirements of the undertaking were supplied under a contract with the Ontario Power Co. of Niagara Falls, which reserved to the Commission, in 1908, a maximum of 100,000 h.p. In 1916, power was purchased from the Canadian Niagara Power Co. as well, and in the following year the Commission, through purchase, acquired the Ontario Power Co. It was at this time that the Queenston-Chippawa development was begun. In 1920, the Toronto Power Co. was purchased. In 1926-7 contracts for the supply of power up to a maximum of some 360,000 h.p. were negotiated with the Gatineau Power Co.

To supply the needs of municipalities in various parts of the province, the Commission has from time to time constructed and acquired a number of smaller generating plants, and has negotiated contracts for the purchase of power. In 1929 the bulk of its energy supplies, aggregating 4,992,937,029 kilowatt-hours, were derived from some 25 hydro-electric developments owned and operated by the Commission. Provision for the needs of the near future had been made at the end of 1929 up to an aggregate of about 1,700,000 h.p.

The largest of the plants constructed by the Commission is the Queenston-Chippawa development on the Niagara river. Diverting water from above the rapids in the upper river and returning it to the river below the rapids in the lower gorge, this plant has the distinction of being the only one to make use of the maximum head capable of economic utilization, *viz.*, about 300 feet, of the 327 feet difference in elevation between lake Erie and lake Ontario. The general

scheme of development comprises: an intake structure in the Niagara river at Chippawa; the deepening and enlarging of the Welland river with a reversal of its flow for 4 miles; the construction of a canal 8½ miles long from Montrose on the Welland river to the forebay and screen house, which are situated on the cliff above the power house, where the banks on the lower Niagara river rise more than 300 feet above the water level, about one mile south of the village of Queenston. Construction work was started in 1917 and the first unit went into commercial operation in January, 1922. The total capacity of the development is 550,000 h.p. and its cost about \$76,000,000.

**Hydro-Electric Power Commission Statistics.**—The Canada Year Book of 1910 (p. xliii) described the turning on, Oct. 11, 1910, at Berlin (now Kitchener), Ontario, of electrical energy generated by Niagara falls. The small initial load of less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p. and in 1929 it was over 1,136,000 h.p.

Table 8 shows in broad outline the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated in 1929 \$314,000,000.

**8.—Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, 1910-1929.**

<sup>1</sup> Includes also reserves for Bonnechère storage and insurance. <sup>2</sup> The Eastern Ontario System was a consolidation in 1929 of the St. Lawrence, Central Ontario and Trent, and Rideau Systems.

**Statistics of Urban Municipal Electric Utilities of Ontario Supplied by the Commission.**—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking.

Statistics of the assets and liabilities of the electric departments of urban municipalities served by the Hydro-Electric Power Commission are given in Table 13. These show, for 1929, total assets of \$106,909,146, as compared with liabilities of \$48,095,708. Of the difference, \$28,103,391 is allotted as reserves, leaving a surplus of \$30,710,047. The item, "Equity in Hydro Systems", listed under both assets and reserves, relates to the sinking fund equity acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt to total assets, the equity in Hydro systems is not taken into account. It will be noted that, whereas between 1925 and 1929 total assets have increased by \$29,188,052, liabilities have increased by only \$5,735,352.

In Table 14 will be found details of the earnings and expenses of the electrical distributing systems of the urban municipalities served by the Hydro-Electric Power Commission, for the five years from 1925 to 1929. The first item of expense, "power purchased", is the municipalities' share of the Commission's costs for generation, purchase, and transmission of the power in bulk; all other expenses and earnings relate to local distribution within the municipalities. A very rapid growth will be noted.

**14.—Statement of Earnings and Expenses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission for the calendar years 1925-1929.**

<sup>1</sup> Profits from sale of merchandise. There is no rural revenue now.

**Rural Electrical Service in Ontario.**—During the past few years substantial progress has been made in Ontario in the field of rural electrification and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of "grants-in-aid", 50 p.c. of the initial capital cost of distribution lines and equipment. Rural extensions are now being made at the rate of about 1,900 miles per year. Below will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission.

**15.—Statistics Relating to Electrical Service in Rural Power Districts Operated by the Hydro-Electric Power Commission of Ontario, years ended Oct. 31, 1925-1929.**

**Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.**

**Quebec.**—The Quebec Streams Commission, originally created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (*see* R.S.Q., 1925, c. 46) and by 20 Geo. V, c. 34, is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams.

The Commission has not undertaken the direct production of electric power, but has provided assistance to companies engaged in such work by a systematic collection of data on the flow of the principal rivers in the province and on the meteorological conditions prevailing, by investigation of numerous water-power sites and the determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by the construction of storage dams by which water is held in large reservoirs during flood periods and is used to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 17,000 second-feet, on the St. Francis, lake Kenogami, the Métis, the Ste. Anne de Beaupré and the North rivers.

The entire cost to the Commission of the storage works on these rivers has been about \$9,000,000 and the annual revenue now derived from them exceeds \$750,000.

Other reservoirs have been built and paid for by the benefiting companies instead of being financed by the Commission, namely:—

In the Gatineau River watershed, two large storage reservoirs, Baskatong and Cabonga, were completed in 1927 and 1929, and have a combined capacity of 140 billions of cubic feet, making it possible to increase the flow of the Gatineau river from 3,000 second-feet to 10,000 second-feet. This work was paid for by the Gatineau Power Company.

In 1930, on the Lièvre river, a storage reservoir of 18 billions of cubic feet has been completed at Cedar Rapid, one mile and a half above Notre-Dame-du-Laus, and will be operated to maintain a regulated flow of 3,500 second-feet at High Falls. The cost of this dam was paid by the James MacLaren Company, of Buckingham.

In the same year, on Mattawin river, St. Maurice District, a storage reservoir of 33 billions of cubic feet was built at Taureau Rapid, 80 miles from the mouth of the river, with a view of a better and more complete regulation of the flow of the St. Maurice river. This work was paid for by The Shawinigan Water and Power Company.

These reservoirs are the property of the Commission and are operated by the Commission.

**Nova Scotia.**—The Nova Scotia Power Commission was created in 1919 with powers similar to those of the Ontario Commission. It is authorized to "generate, accumulate, transmit, distribute, supply and utilize electrical energy and power in any part of the province of Nova Scotia, and do everything incidental thereto or deemed by the Commission necessary or expedient therefor" Its main operations, however, are undertaken with the approval of the Lieutenant-Governor in Council.

The Commission has already constructed several important hydro-electric developments and is now operating the following systems:—*St. Margarets Bay*—sells power by wholesale in Halifax and vicinity; *Mushamush*—sells power by wholesale and retail in Lunenburg Co.; *Sheet Harbour*—sells power by wholesale in Pictou Co., also supplies demands of a groundwood pulp mill at Sheet Harbour; *Mersey System*—supplies demands of pulp and paper-mill at Brooklyn, Queens Co., also supplies town of Liverpool and vicinity; *Tusket System*—sells power by wholesale in Yarmouth, also supplies demands of Cosmos Imperial Mills, Ltd., at Yarmouth; *Roseway System*—sells power by wholesale in Shelburne.

The total installed capacity is 61,450 h.p., and there are about 131 miles of main transmission lines. The total capital expenditure to Sept. 30, 1930, was about \$13,000,000.

**New Brunswick.**—The New Brunswick Electric Power Commission operates under authority of 10 Geo. V, c. 53 and amendments thereto, and has powers somewhat similar to those of the Hydro-Electric Power Commission of Ontario, except that the plant and equipment operated by the Commission are the property of the province and not of the municipalities.

The Commission owns and operates an 11,000 h.p. hydro-electric plant at Musquash, twelve miles west of Saint John, and purchases auxiliary power from the New Brunswick Power Co. at Saint John and the Bathurst Company, Ltd.,

on the Nepisiguit river. It operates 100 miles of 66,000 volt line between Musquash and Moncton, 37 miles of 32,000 volt line from Nepisiguit to Newcastle, together with 500 miles of primary distribution lines.

The Commission also has under construction a powdered fuel plant at Newcastle Creek on the Grand lake. This plant will have an initial installed capacity of 5,000 k.w. It is expected that the plant will be ready for operation July 1, 1931. Power will be supplied to the city of Fredericton and the town of Marysville by means of a 33,000 volt transmission line 38 miles long.

The Commission sells power *en bloc* to Saint John, Moncton and Sussex, and retails directly in several towns and villages between Saint John and Dorchester, also between Moncton and Shediac, Moncton and Albert and along the Saint John River valley from Saint John to Gagetown. This system serves, directly or indirectly, about 16,500 customers. The total plant investment of the Commission amounts to \$4,200,000 and the total annual revenue is about \$500,000.

**Manitoba.**—The Manitoba Power Commission dates from the passage of the Electrical Power Transmission Act of 1919 (c. 30 also c. 61 Consolidated Amendments, 1924) which authorizes the Commission to make provision for generating electrical energy, to enter into contracts for the purchase of power in bulk from generating agencies and for its transmission and sale to municipalities, corporations, and individuals. In 1929, legislation was passed whereby the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of generating stations, transformer stations, protective devices, switching and metering equipment, transmission lines and cables or other equipment required for the generation and transmission of electrical power or energy to municipalities, farms and other customers.

The Commission has built an extensive transmission system under authority of this Act. Power is purchased from the Winnipeg municipal plant and transmitted over high tension steel tower lines to Portage la Prairie, Brandon and Morden. From this main system power is transmitted to the territory south of the Winnipeg-Brandon main line to the International Boundary by means of two parallel high tension wood pole lines running east and west which are tied in by cross lines, thus forming a series of loops. This system is also tied into the main line at Portage la Prairie and Brandon forming another large loop and insuring the best possible service to all this section of Manitoba and those sections to be connected to the system at a later date.

The Commission has built and operates a system serving the territory along the western boundary of the province. Power is supplied from the Commission's plant at Virden to the town of Virden, and south to Reston, Pipestone and Melita; also north and west to Elkhorn, Miniota, Crandall, and Arrow River.

In August, 1930, the Commission purchased the municipally owned plant at Birtle and has just completed enlarging and equipping it with machinery and apparatus sufficient to take care of the needs of this power area until it is connected to the main system. Lines have been completed and service established in Foxwarren, Binscarth, and St. Lazare.

During the summer of 1930 the Commission consummated a contract with the town of Dauphin for a supply of power for the Gilbert Plains-Grandview area. A high tension wood pole line has been completed, distribution systems installed in Gilbert Plains and Grandview, which towns are now taking power from the Commission.

A contract has also been entered into with the Winnipeg Electric Company whereby power is supplied for the Winnipeg Beach-Gimli-Teulon area, extensions to which have been completed. These towns are now being supplied with power by the Commission.

The Commission owns and has operated the Diesel and small water-power plant at Minnedosa since 1921. A wood pole line from the sub-station at Brandon has been completed and the Minnedosa area is now being supplied from the main system.

On December 31, 1930, the Government purchased the Canada Gas and Electric Company's holdings in the city of Brandon, so that in addition to supplying this city with electricity, the Commission will also supply steam heat and gas service.

It is the intention of the Commission to supply all power areas from the main system just as soon as their loads are sufficient to justify the cost of building an extension.

**Saskatchewan.**—The Saskatchewan Power Commission was established upon the passage of the Power Commission Act, 1929, which authorizes the Commission to manufacture, sell and supply electrical energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy. The Commission is further given certain control and regulatory powers in connection with the operation of electric public utilities in the province, and is charged with the responsibility for the administration of the Electrical Licensing Act, 1929, providing for the adoption of a standard electrical code and for the licensing of supply houses, electrical contractors, journeymen and electricians.

The Commission first acquired the steam-generating municipal plant of the city of Saskatoon and enlarged it by the construction of a new 10,000 k.w. steam plant. During the year 1929, it also acquired plants at Humboldt and Rosthern, and installed a plant at Shellbrook; acquired plants at Wynyard, Elfros and Wadena, enlarged the Wynyard plant and built a transmission line connecting Wynyard with Elfros and Wadena; acquired plants at Leader and Prelate, installed a larger plant at Leader, and built a transmission line connecting Leader with Sceptre.

During the year 1930 an extensive program has been carried out by the Commission.

The steam generating municipal plants in the cities of North Battleford and Swift Current were acquired and enlarged or improved. In these cities, as in the city of Saskatoon, the Commission supplies power in bulk at cost to the city authorities, who operate the distribution systems and retail power to consumers.

With the Commission's steam generating plant at Saskatoon as the source of supply, a transmission line running in an easterly direction now connects with Humboldt, the plant at this town being maintained as a standby. Transmission lines also run from Saskatoon in a northerly direction to Shellbrook and Duck Lake, in a westerly direction to Radisson, and in a southwesterly direction to near Rosetown.

From Rosetown southeasterly to the city of Moose Jaw a transmission line has also been constructed by the Commission, with four branches. For this line power is purchased from the generating plant of the National Light and Power Company Limited in Moose Jaw.

The line built in 1929 from Leader to Sceptre has been extended to Success; and the line built in 1929 from Wynyard to Elfros has been extended to Foam Lake. The Leader and Wynyard generating plants have been enlarged.

The Commission purchases power from Herbert Electric Limited at Herbert for the purpose of its line to Morse; from Shaunavon Electric Limited near Congress for its line to Mossbank; from the Calgary Power Company Limited at Macklin for its line to Salvador; from the Montreal Engineering Company Limited at Qu'Appelle for its line to Montmartre, and at Carnduff for its line to Gainsborough; from the Canadian Utilities Limited at Nokomis and Semans for its line to Punnichy, and at Saltcoats for its line to Langenburg. A contract has also been made with this company for interchange of power at Rosetown.

The Commission has installed a generating plant at Tisdale and constructed a transmission line running north to Nipawin.

All the transmission lines before mentioned supply power to all the towns and villages on such lines.

The municipal generating plant and distribution system at the town of Unity have been acquired and are now operated by the Commission.

Plants purchased by the Commission during the year 1930 but not yet taken over for operation are those at Maple Creek and Lanigan.

The number of consumers served directly by the Commission in 101 towns and villages is approximately 6,000, and the number supplied in the cities of Saskatoon, North Battleford and Swift Current, where the cities operate the distribution systems, is approximately 16,103. The Commission owns and operates about 1,100 miles of transmission lines.

The total plant investment of the Commission as at December 31, 1930, was \$6,290,431.

**British Columbia.**—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electrical energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. A commission called the Water Board regulates the rates which are charged by public utility companies.

## CHAPTER XIV.—MANUFACTURES.<sup>1</sup>

Manufacture is defined as the operation of making wares from raw materials by the hands, by tools or by machinery, thus adding, in the phraseology of the economist, new utilities, and therefore additional value, to the already existing utilities and values of the raw material. Manufacture, in primitive societies and in the pioneer stages of new communities, is normally carried on within the household for the needs of the household, as was the case among the early settlers of Canada in the seventeenth and eighteenth centuries, when domestic manufactures were carried on in combination with the cultivation of the soil, mainly at the times of the year when agricultural operations were suspended. At a later period in the evolution of society, small manufactures were carried on in specialized workshops for the needs of the immediate locality or neighbourhood, as was generally the case in Eastern Canada in the first half of the nineteenth century. Later still, as a consequence of the introduction of machinery operated by steam or electric power—the so-called “industrial revolution”—and of the cheapening of transportation, manufacture has to an ever-increasing extent been concentrated in factories, often employing hundreds and even thousands of persons and producing for a national or even an international market. So far as Canada is concerned, this “industrial revolution” may be said to have commenced shortly before Confederation and to be still in progress. The growth of manufacturing production since 1870 is outlined in this article and the accompanying Table 1, while the increasing importance of Canadian manufacturing for the international market may be illustrated by the fact that Canadian exports of manufactured produce increased from less than \$3,000,000 per annum on the average of 1871-1875 to \$614,000,000 in the post-war fiscal year ended Mar. 31, 1920. Exports of “fully or chiefly manufactured” products in the fiscal year ended Mar. 31, 1930, amounted in value to \$477,642,392, and exports of “partly manufactured” products to \$213,261,833.

### Section 1.—The Evolution of Canadian Manufacturing Industries.

**Early Manufactures.**—The type of manufactures established in a community will in the beginning be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, probably the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were also necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need for protection. At a census of occupations taken in 1681, we find enumerated a comparatively large number of tailors and shoemakers, masons and carpenters, gunsmiths and edge tool makers.

The earlier manufactures were necessarily of a rather crude and primitive type, concerned with the production of commodities which were too bulky to bear the heavy transportation charges of those days, when only one round trip

<sup>1</sup> Revised by J. C. Macpherson, Chief, Industrial Statistics Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the manufacturing industries, comprising vegetable products, textiles and miscellaneous industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch see Chapter XXVIII, Section I, under “Production”.

per year could be made between France and Quebec, and vessels were constantly subject to the storms of the North Atlantic and very frequently to the attacks of the English. Indeed, although the colonial policy of France under the old régime aimed at preventing the manufacture in Canada of any article which could be imported from the mother country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 years out of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. On the occasion of the English capture of a convoy in 1705, the colonists were driven to manufacture rough cloth out of whatever fibres they could obtain, such as the Canadian nettle and the inner bark of the basswood. Such events led to the introduction of sheep raising and the manufacturing of homespun woollens. The number of sheep in the colony increased from 1,820 in 1706 to 12,175 in 1720, 28,022 in 1765, 84,696 in 1784 and 829,122 in Lower Canada alone in 1827. This increase in sheep approximately measures the growth of the manufacture of homespun woollens. In the same year, according to census records, there were in Lower Canada 13,243 spinning-wheels, while 1,153,673 French ells of home-made cloth, 808,240 French ells of home-made flannel and 1,058,696 French ells of home-made linen were produced. In 1842 Upper Canada produced 433,527 yards of home-made cloth, 166,881 yards of home-made linen and 727,286 yards of home-made flannel and, in 1848, 624,971 yards of fulled cloth, 71,715 yards linen and 1,298,172 yards flannel. Nova Scotia in 1851 produced 119,698 yards fulled cloth, 790,104 yards non-fulled cloth and 219,352 yards flannel. Such production of homespun goods did not materially interfere with the market for the more elaborate factory-made goods imported from the United Kingdom, but supplied the daughters of pioneer families with useful work in their own homes.

In the days when ships were built of wood, Canada was advantageously situated with respect to their production. Pont-Gravé built two small vessels at Port Royal in 1606 and one at Tadoussac in 1608. Talon, in 1666, built on his private account a ship of 120 tons, and in 1672 a vessel of over 400 tons was on the stocks at Quebec. Ships were built for the French navy and for the West India trade. Under the British régime shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865, when 105 Quebec-built ships with a tonnage of 59,333 were placed on the register. Thereafter iron and steel ships gradually supplanted the wooden vessels, but the forests of Canada have since provided the raw material for the pulp and paper and other important industries.

The manufacture of mineral products has been of comparatively recent date. Iron deposits in the St. Maurice region were worked as early as 1733, and furnaces set up there for smelting in 1737 were in fairly constant operation until 1883. The iron and steel used in manufacturing in Canada, as well as the coal which has supplied the manufacturing industries with power, has in the main been imported from the United States, chiefly because the principal manufacturing centres of this country in the St. Lawrence and Great Lakes region are fairly conveniently situated with regard to the coal and iron supplies of the United States and far away from the coal and iron supplies of the Maritime Provinces. In recent years the shortage of coal has been made up for by the increasing use of electric power, while the great bulk of the pig iron used in Canadian manufactures is now made in domestic blast furnaces.

**The Introduction of the Factory System.**—In Canada, as in the United States and in Great Britain, it was inevitable that manufactures, carried on in the household or in small adjoining workshops, should be supplanted in the leading industries of the country by manufactures carried on in factories. A factory has been defined as "an establishment where several workmen are collected for the purpose of obtaining greater and cheaper conveniences for labour than they could procure individually at their homes, for producing results by their combined efforts which they could not accomplish separately and for preventing the loss occasioned by carrying articles from place to place during several processes necessary to complete their manufacture". Such factories began to exist in Canada in the 60's and the 70's of the last century and have now become the dominant type of Canadian manufacturing industry.

**Encouragement of Manufactures by Protective Tariffs.**—In all new and developing countries producing food products and raw materials in abundance, there comes, at a certain stage, a movement for working up these commodities within the country. Thus a movement to promote a rise of manufacturing industries in Canada took place in the 50's of the last century, and in 1858 the Canadian Legislature enacted a protective tariff against which English exporters of manufactured goods vehemently protested. Canada, however, claimed the right to raise her revenue in the manner which suited herself and Great Britain did not contest the point. From that day to this, there has been an element of protection in Canadian tariff legislation. For a considerable time, the protection afforded to Canadian manufacturers was described as "incidental protection", and after Confederation the tariff was reduced in deference to the low tariff sentiment prevailing in the Maritime Provinces, which were commercial rather than manufacturing communities. However, after a commercial depression which took place in the 1870's the people of Canada, at the general election of 1878, voted in favour of a higher tariff.

The policy of protection was definitely adopted in 1879, when the manufacturer was given an increase in the duty on his finished product, offset in some cases, it is true, by higher duties on his raw materials. Sugar and molasses products comprised some twelve tariff items, seven bearing a compound duty, the average *ad valorem* duty imposed being 26.25 p.c. On the lines of cotton goods likely to be manufactured in Canada, duties were raised from 17½ p.c. to rates, specific and *ad valorem*, equivalent, on the importations of 1881, to 30 p.c. The duties on woollens, which were all in the 17½ p.c. schedule in 1878, were practically doubled. On some of the 36 iron and steel articles enumerated in the schedule, the duties were specific, on some compound, but on the whole there was an average duty of 16.17 p.c. Pig iron, previously free, was made to pay \$2 a ton. The duty on iron billets, bars and rods was increased from 5 p.c. to 10 p.c. and 17½ p.c., while manufactured iron and steel products and machinery were given 25 p.c. to 35 p.c. protection. On coal, both bituminous and anthracite, a duty of 50 cents a ton was imposed. The average *ad valorem* rate of duty on dutiable imports in 1880 was 26.1 p.c. as compared with 21.4 p.c. in 1878. The maximum percentage was reached in 1889, when the rate was 31.9 p.c. By 1896 there was a slight drop in the rate to 30.0 p.c., and the declining trend continued until 1918 and 1919, when a rate of 21.5 p.c. was

recorded. In 1923 the rate was 24.9 p.c., in 1927, 24.1 p.c., and in 1930, 24.6 p.c. The average *ad valorem* rate of duty on all imports was 16.7 p.c. in 1923 and 15.9 p.c. in 1930. These rates are based on the gross sums collected; if the refunds and drawbacks were allowed for, the net rate of customs duty would be substantially lower.

**Growth of Canadian Manufactures Prior to the War.**—Until the later '90's, the growth of Canadian manufacturing industry was not particularly rapid, though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the values of manufactured commodities from \$221,600,000 in 1870 to \$469,800,000 in 1890. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from \$368,700,000 in 1890 to \$1,166,000,000 in 1910 and to \$1,381,500,000 in 1915. The fundamental advantages of the position of Canada, her abundant raw material, her inexhaustible water power, her growing home market in the expanding West, had contributed to this result.

In the present as in the past, Canadian manufacturing production has been chiefly dependent upon the use of Canadian raw material, though this is less true than formerly. Raw cotton, for example, is imported from the Southern States, hides from Argentina, rubber from the Straits Settlements and Malay peninsula, sugar from Fiji and the British West Indies and wool from England, Australia and New Zealand, to supply the raw material for Canadian manufacturing industries.

**The Influence of the War.**—The influence of the war upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had previously been imported. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great prosperity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure, not only to produce munitions and military supplies for the armies of the Allies, but also to make the manifold varieties of goods required for the stimulated civilian consumption. The world shortage of staple commodities, coupled with a strong domestic demand, gave Canadian industries in general a pronounced stimulus toward greater production, and in a great number of cases the capacity of manufacturing plants was increased; this increase created a demand for greater supplies of raw material. Incidentally, factory methods became more specialized and a high degree of administrative and mechanical efficiency was attained, and Canada, partly owing to the absorption of the energies of Europe in the war, assumed a new position as one of the leading manufacturing countries of the world. The inflation of the war period also led to unprecedented figures of values produced.

The great boom in Canadian manufactures described above reached its height in the summer of 1920, statistics for that year showing a gross value of products which was not exceeded until 1929. Even the net value of manu-

factured products in 1920 was not exceeded until 1928. Statistics for 1921, as published in Table 1, show a great decline in values from those of 1920, which does not mean a corresponding decline in quantity of production, though a certain decline undoubtedly took place. There was also some decline in 1922, followed, however, by a general improvement during 1923. During the early months of 1924 the general outlook was good, but final statistics for that year were a little below those of 1923. The statistics for 1925, 1926, 1927, 1928 and 1929 show a steady and notable growth in both gross and net values of products. However, the monthly reports of employers as to numbers employed would indicate that this steady expansion has been halted during 1930, owing to the world-wide recession in business which set in toward the end of 1929, with the result that Canadian manufacturing production in 1930 will probably drop back to near the 1927 level.

#### **Subsection 1.—Growth of Manufacturing Production in the Dominion and the Provinces Since 1870.**

The growth of large-scale production in manufactures during the past half-century is evident from the statistics of Table 1, though this tendency has been less marked in Canada than in more highly developed industrial communities, with larger populations able to absorb a larger amount of standardized commodities. Even so, in the electoral district of South Toronto, the most important manufacturing centre of Ontario, the census of 1911 showed that one-half of the industrial establishments employed 90 p.c. of the workers. In the period immediately preceding the Great War many consolidations of independent manufacturing plants were effected, with large economies in the purchase of materials and in selling expenses.

The historical Table 1 shows fairly well the advance of the "Industrial Revolution" (which might better be called "evolution") in Canada. The average capital per manufacturing establishment, the average number of employees per establishment and the average value of product per establishment, if allowance be made for the inflation of values and generally disturbed conditions of the war period, have continued to increase. If the consolidation of industry lessens the chances of an employee becoming a master, it must also be remembered that the amounts paid to employees in salaries and wages have also increased, so that the position of the average employee has been greatly ameliorated, though the lack of statistics of Canadian retail prices before 1890 prevents any detailed comparison of the purchasing power of the average wages of the worker of 1870 and of the employee of the present time.

**The Censuses of Manufactures.**—The comparability of the statistics of various censuses is seriously affected by the different methods employed in census-taking. In the censuses of 1870, 1880 and 1890, all manufacturing establishments were included, the instructions to enumerators running as follows:—"An industrial establishment is a place where one or several persons are employed in manufacturing, altering, making up or changing from one shape into another materials for sale, use or consumption, quite irrespectively of the amount of capital employed or of the products turned out. All repairs, mending

or custom work are understood to be industrial products and are to be entered accordingly, by value, in the returns of industrial establishments<sup>1</sup>

In the statistics of 1900, 1905 and 1910, however, only establishments employing five hands and upwards were included. The 1901 instructions were that no manufacturing establishment or factory was to be recognized for census purposes if it did not employ at least five persons, either in the establishment itself or as piece-workers employed outside of it. This, however, did not apply to cheese and butter factories nor to certain mineral industries. The 1911 instructions stated that every factory in operation during the whole or part of 1910, and employing five or more persons, was to make a full report. All flour mills, saw and shingle-mills, lime kilns, brick and tile works, butter and cheese factories, fish-curing plants, electric light and power plants whatsoever were nevertheless to be included. The statistics for 1915 included only establishments having an output of \$2,500 or over, irrespective of the number of persons employed, except in the case of flour and grist-mills, butter and cheese factories, fish-preserving factories, sawmills, brick and tile yards, lime kilns and electric light plants, where all plants were included.

Under the Statistics Act of 1918, the policy of including mines, fisheries, manufactures and other industrial production in the decennial census was given up and an annual "Census of Industry" substituted therefor. (See First Annual Report of the Dominion Statistician, 1919, pp. 30-36.)

In the Census of Industry for 1917, the limit of output was withdrawn and all establishments reporting to the Bureau were included, the effect being an increase in the number of establishments included from 21,306 in 1915 to 34,392<sup>1</sup> in 1917—an increase due mainly to change of method, rather than to a change in the actual number of industrial establishments existing in the Dominion. The statistics in regard to a large number of the custom and repair industries were not collected for 1922, resulting in the dropping from the compilation of the entire group of "construction, hand trades and repairs". Again, several custom industries, such as the custom clothing industry in the textile group, were not included for 1922. For 1923, again, statistics of ship- and bridge-building and of various clay products industries were collected and included for the first time. The result has been that, in order to restore the desired comparability between statistics of various years, a complete revision of all figures from 1917 to 1924 had to be made. Considerable changes have resulted, but statistics of these years are now free of all inaccuracies due to changes in methods of collection or compilation. In 1925 statistics of the non-ferrous metal smelting industry were for the first time included in the figures for manufacturing. In 1926 certain duplications in the gross revenue of central electric stations were eliminated in a net figure and the difference shown as "cost of material", while the method of compiling the number of employees was changed for 1925 and subsequent years in the following respect:—the yearly average of employees for each establishment was computed by dividing the sum of employees reported in each month by the number of months in operation instead of, as formerly, by 12 whether the industry was seasonal and only operated part of the year or not.

<sup>1</sup> The subsequent decision to omit the group of "construction, hand trades and repairs" from the census of manufactures, together with other less important changes, accounts for the reduction of the number of manufacturing establishments in 1917, as appearing in Table 1, to 22,838, a comparable figure with the 23,397 establishments recorded in 1929.

These changes have created a slight incomparability with the statistics for the preceding years.

**Censuses of Manufactures in Recent Years.**—The census of manufactures has been taken annually since 1917 by the Dominion Bureau of Statistics, instead of quinquennially as theretofore. The last of the quinquennial censuses was taken in 1916 for the calendar year 1915, and annual censuses have been taken in the years from 1918 to 1930 for the years 1917 to 1929.

In any comparison between the results of the 1915 quinquennial census and the subsequent annual censuses, the rapid rise and fall in prices must be borne in mind, and in comparisons between these annual censuses themselves the same factor must be taken into account. Thus, the new Canadian weighted index number of wholesale prices, compiled by the Dominion Bureau of Statistics, with 1926 as a base, was 155.9 in 1920, as compared with 133.9 in 1919, 127.4 in 1918, 114.3 in 1917 and 70.4 in 1915. In 1921, however, there was a great decline to 110.0—a decline of approximately 29.4 p.c. from the preceding year. Under such circumstances, it was inevitable that up to 1920 phenomenal advances in the money value of manufactured products should have been recorded, and that wages and salaries paid should also have greatly advanced since 1915. It was equally inevitable that in all these respects 1921 should show a great decline, due in much larger measure to the fall in values than to the decrease in the volume of production. In 1922 the index number showed a further drop to 97.3, but afterwards there was a rise from 98.0 in 1923 to 99.4 in 1924 and 102.6 in 1925. In 1926, 1927, 1928 and 1929, however, there was a drop again to 100.0, 97.7, 96.4 and 95.6 respectively, this last being the lowest figure since 1916. This would indicate that the comparatively small decline in the gross production of manufactured goods in 1922 was entirely due to declining values and that the increased production of 1923 resulted from larger quantities, the slight recession in 1924 being due to lessened volume. The 1925 total was swelled by increases in both values and volume, while gross production in 1926, 1927, 1928 and 1929 showed large increases in spite of a definite decline in price levels. (See Table 4.)

In Table I are presented statistics showing by provinces the development of Canadian manufacturing industries during the 59 years from 1870 to 1929. Particularly notable is the increase in the manufactures of British Columbia from \$2,900,000 in 1880 to \$277,000,000 in 1929 and of Manitoba from \$3,400,000 in 1880 to \$165,000,000 in 1929. Saskatchewan also shows an increase from \$2,400,000 in 1905 to \$81,000,000 in 1929 and Alberta from \$5,000,000 in 1905 to \$108,000,000 in 1929. Thus the West is rapidly becoming an important contributor to Canadian manufacturing production.

<sup>1</sup>Statistics of the construction, and custom and repair industries have not been collected since 1921; the figures for these industries for 1917 to 1921 have consequently been deducted from the totals as previously published. The industries excluded comprise custom clothing, dyeing and laundry work, boot, jewellery, automobile and bicycle repairing, blacksmithing, and custom and repair work by foundries.

Statistics of the non-ferrous metal smelting industry were included in manufactures for the first time in 1925. The introduction in 1926 of the use of the gross and net revenue of the Central Electric Station industry as gross and net production and the inclusion of the difference with "cost of materials", impairs the comparability of 1926 and later figures for the "cost of materials" and "net value of products" with those of earlier years.

## Subsection 2.—Thirteen Years of Manufacturing in the Industrial Groups.

The commodities required of the manufacturers of a country in time of war differ considerably from those needed in time of peace. Thus, while under the stimulus of inflated values, manufacturing as a whole reached a peak value of gross production in 1920, not exceeded until 1929, the "iron and its products" group reached a high point of gross production in 1918, the last year of the war. The "chemicals and allied products" group reached its greatest development under war conditions, when the value of gross production was twice as great as in 1928. On the other hand, the central electric station industry has shown rapid and consistent growth, uninterrupted by changes from war to peace conditions or the consequent drastic changes in price levels, throughout all the years from 1917 to 1929 covered by this record. In the 13 years the gross value of production by this industry has risen from \$44,500,000 to \$147,500,000, while the capital investment has grown from \$356,000,000 to \$1,056,000,000. The "non-ferrous metals" group has also shown striking progress since the war. The statistics for this group are not comparable throughout the 13 years, owing to the fact that the non-ferrous metal smelting and refining industry was included for the first time in 1925. But the gross production of the group in 1924, the last year before the smelters were included, almost equalled that of the peak year 1920, while since 1925 the expansion has been very rapid.

## Subsection 3.—Summary Statistics of Manufacturing Production.

**Summary Statistics of Manufactures.**—In Table 3 will be found an analysis of the most important statistics of manufactures for the seven years from 1922 to 1928 here brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. Corresponding figures for the years from 1917 to 1922 were given at p. 384 of the 1926 Year Book, but the inflation of values in the war and immediate post-war periods makes the figures for these years largely incomparable. One very important figure, however, where the trend of development

## 3.—Summary Statistics of Manufactures, 1922-28.

<sup>1</sup> A change in the method of computing the number of employees in 1925 and later years increased the number somewhat over that which the method previously used would have given. There was therefore a proportionate reduction in the averages for 1925 and later years per employee and wage-earner, as compared to what these averages would have been under the former method.

<sup>2</sup> The figures of power in this table represent the installation in manufactures exclusive of central electric stations, which are also excluded from the number of establishments and of employees in working out the averages. These figures are thus not comparable with those given on pp. 384-385 in the 1926 Year Book.

<sup>3</sup> These are piece workers employed outside the establishments and are not included in general statistics of number of employees or of earnings.

proceeds clearly and uninterruptedly throughout the 12 years, is concerned with the use of power. In the analysis here given the aim is to show the position of power as a factor in general manufacturing production. Therefore the power installation of central electric stations has been excluded. Unfortunately this was not done for the earlier years shown in the 1926 Year Book. When this change is made it will be found that the total horse-power employed increased from 1,664,578 in 1917 to 3,592,184 in 1928 or by 116 p.c. in 11 years. In the same period the horse-power used per establishment increased from 75 to 161 and the horse-power per wage-earner from 3.04 to 6.45, indicating the rapidly increasing contribution of power to manufacturing production.

The increases from \$143,929 to \$204,469 in average capital per establishment between 1922 and 1928, and in average number of employees from 21.1 to 28.2 are very significant figures. It is also noteworthy that the percentage of salaried employees to total employees has declined between 1922 and 1928 from 16.0 to 13.9—or approximately from one-sixth to one-seventh. In other words, there were in 1928 six wage-earners employed to each salary earner, as compared with five wage-earners to each salary earner in 1922. This is probably due to the fact that in the depression of 1920-22, wage-earners, with a less secure tenure of their positions, were laid off to a proportionately much greater extent than salary earners, so that the proportion of salary earners on the 1922 staffs was abnormally large.

**Value of Products.**—The gross value of manufactured products in 1928 was reported as \$3,769,850,364; the cost of materials was \$1,950,804,339, leaving \$1,819,046,025 as the value added by manufacture. As the finished products of one branch or manufacture are constantly used as materials in other branches in the ascending scale of modern industry, it follows that they are counted over and over again, swelling in this manner the total gross value of products. The total value of manufactured products, strictly defined, would include:—(1) the value of all raw materials obtained from the extractive and primary production industries which have entered into the manufacturing output, and (2) the entire value added to these raw materials by manufacturing processes from the time they first entered any factory up to the close of the census year. This total value would be very much greater than the \$1,819,046,025 shown as having been added by manufacture, but not so great as the \$3,769,850,364 shown as the gross value of production.

**Volume of Manufacturing Production in Recent Years.**—An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. This is a difficult subject of research, particularly on account of the constant changes in the commodities manufactured and in their relative proportions. It is, however, a matter in which tentative conclusions are better than none, and accordingly an estimate of the volume of manufacturing production in recent years has been attempted in Table 4, on the following plan. First, the gross value of the manufactured commodities produced in 1917, the first year of the annual census of manufactures, is taken as 100, and later years given as a percentage of this. Gross values, although they include numerous duplications, are used since the purpose is to determine changes in the volume of manufactured commodities produced irrespective of the relative value of the raw materials used. A better figure than gross values would be the one outlined

above, *i.e.*, the sum of the values of all original raw materials used plus the values added in the various ascending stages of manufacture. But unfortunately such a figure is not available. Next, the average index number of the wholesale prices of the 276 manufactured commodities used in the Bureau's index number of wholesale prices is given for each year, and, in the next column, reduced to a percentage relative to 1917. Finally, the values, expressed as a percentage, are divided by the prices, also expressed as a percentage, and the quotient is considered to indicate the volume of manufacturing production. In the table which follows may be noted the decline in the volume of production between 1918 and 1920, in spite of increasing values, the recovery in the volume of production in 1922, 1923 and 1924, in spite of diminished values, and the increase in both volume and values in 1925, when the volume of manufacturing production, thus estimated, was about one-eighth greater than in 1917. In 1929, although the prices of manufactured goods were more than 18 p.c. below the level of 1917, total value had increased by 41 p.c. and volume by 73 p.c.

#### 4.—Volume of Manufacturing Production, 1917-1929.

**Consumption of Manufactured Products.**—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period approximately corresponding to 1928 was \$4,025,861,300, a figure obtained by adding to the value of manufactured products in 1928 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1929, and deducting the value of the corresponding exports for the same period. In this table, as in the preceding one, more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Iron, vegetable and textile products led the other groups in the value of finished goods made available for consumption. The large amount of vegetable products made available for consumption was due to the large production, as the exports

were larger than the imports, while textiles and iron and steel products, in addition to a large production showed an excess of imports over exports of \$150,000,000 for textiles and \$256,000,000 for iron and steel products.

**5.—Consumption of Manufactured Products, by Groups, 1928, with Totals for 1922-1927.**

Note.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years.

<sup>1</sup> For 1928 exports include all exports of partly and fully manufactured goods whether of domestic or foreign origin, but for 1927 and previous years exports are of Canadian produce only, since foreign exports for previous years have never been analysed as raw materials, partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption for the years 1922 to 1927 inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

**Section 2.—Production of Industrial Groups and Individual Industries.**

One of the factors in the progress of Canada is the possession of many natural resources, favourable to industrial growth. It is upon the country's agricultural resources, forests, minerals and wild life that Canada's industries are mainly based. The sea and lake fisheries also make an important contribution of raw materials to the manufacturing industries of the Dominion. Nevertheless, the industrial development of Canada was a matter of small beginnings and gradual growth over a period of many years, and the comparatively small home market, restricted at the present time to a population of about ten millions, a large part of it in scattered agricultural areas, is still one of the difficulties of the situation. Yet Canada is now not merely the second largest manufacturing country in the British Empire; her exports to the other Dominions consist largely of manufactured goods. The exports of manufactured and partly

manufactured goods to the United States exceed the exports of raw materials. The rate at which this movement is to continue will depend almost entirely upon growth within the Dominion—upon the further development of the many-sided physical assets of the country.

### Subsection I.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently the central electric stations industry was taken out of the miscellaneous class and now forms a class by itself.

**Vegetable Products.**—With the exception of rubber, coffee and spices, sugar factories and rice mills, the industries of this group are dependent mainly upon domestic farm products as raw materials. The milling industry, which has existed to meet domestic needs for more than 300 years, is one of the Dominion's oldest industries, but it is only within recent times that its progress has become spectacular. The war, and the demand it created gave a great impetus to this trade, and the 423 flour mills, many of them of the most modern type and highest efficiency, have now attained a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has been adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 11,808,775 barrels in the crop year ended July 31, 1929, to 6,778,023 barrels in the following crop year. The flour manufactured from Canadian hard spring wheat is of very high baking quality and a recovery of purchasing power in Europe and the Orient would contribute toward the return of flour exports to their former volume. Other industries contributing largely to food manufacture are sugar refineries, bread, biscuits, etc., and, to a lesser degree, plants engaged in the canning of fruits and vegetables.

Raw material imported from tropical countries forms the basis for an industry of a different character. Canada is now among the leading countries of the world as a manufacturer of rubber goods. Existing plants represented in 1929 a capital of over \$73,000,000 and gave employment to more than 17,700 workers receiving \$20,000,000 in wages and salaries and producing goods to the value of over \$97,000,000.

The beverage industries—breweries, distilleries and wineries—which are important elements of the vegetable products group, have expanded from a production of \$30,000,000 in 1922 to \$111,000,000 in 1929, owing partly to the modification of prohibition laws in Canada and also to the fact that a large part of their production was exported to the United States. The tobacco industries, another important factor in the vegetable products group, had a total production in 1929 of nearly \$85,000,000.

**Animal Products.**—Another form of food manufacture—that of slaughtering and meat-packing—has also made great strides. It comes as a surprise to many that slaughtering and meat-packing was until lately at the head of all the single industries in regard to the value of the products, and is now only surpassed by the

pulp and paper and flour-milling industries. Another industry which manufactures a product of farm animals and has been for many years of leading importance in Canada is the butter and cheese industry. Originating in the agricultural districts of the Maritime Provinces, the Eastern Townships of Quebec, and the southern counties of Ontario, it is now developing rapidly in the Prairie Provinces and in the more recent northern settlements of Quebec and Ontario. For an industry so large in the aggregate, it is unique in having shown very little tendency toward consolidation in large units, the gross production of \$126,000,000 in 1929 coming from no fewer than 2,767 plants, mostly small and scattered at convenient points throughout the farming communities. Many of the plants are operated on the co-operative basis. The leather industries also have long been established on a considerable scale, mainly, of course, because the large number of cattle raised and slaughtered provide a ready supply of hides. There are large tanneries in the eastern provinces, and no fewer than 191 boot and shoe factories were in operation in 1929, chiefly in Quebec and Ontario, representing a total capital of over \$31,000,000 with an annual output of \$49,000,000, and employing 15,563 men and women. The canning and preserving of fish also calls for reference. Concentrated naturally upon the Pacific and Atlantic coasts, 730 establishments were engaged in 1929 in the canning, curing and packing of various kinds of fish.

**Textiles.**<sup>1</sup>—Although the production of cotton and woollen fabrics, hosiery, knitted goods, men's and women's clothing and so forth amounted in 1929 to a gross total valued at over \$426,000,000, considerable quantities of yarns and cloth are still imported into Canada. Canadian textile factories are capable of supplying ordinary domestic needs without undertaking the production of the highest grade materials such as are manufactured in Great Britain, where for several centuries hereditary skill has been developed. The imports of manufactured or partly manufactured textiles during the fiscal year ended Mar. 31, 1930, were \$146,032,889 or 34 p.c. of the gross value of the manufactured product during the calendar year 1929.

While the most important industry in the textile group in Canada is the manufacture of cotton yarn and cloth, the products of which in 1929 were valued at over \$78,000,000, the chief development of textile industries has been in the manufacture of clothing and wearing apparel from both domestic and imported piece goods and yarns. Thus in 1928, if the men's and women's factory clothing, corsets, men's furnishing goods, hats and caps and hosiery, knit goods and fabric gloves industries be grouped together, the total products amounted to about \$228,000,000 or 54 p.c. of the production in the whole textile group in Canada.

The woollen industry may be divided into four sections, according as the chief product of value is cloth, yarn, carpets and mats, or miscellaneous goods. Of the 119 plants in operation during 1929, 41 were engaged chiefly in manufacturing cloth, 27 in making yarns, 22 in making carpets and rugs and 26 in making miscellaneous woollen goods. The total value of woollen goods manufactured by the four classes of mills during 1929 amounted to \$35,180,000, as compared with \$34,700,000 in 1928.

<sup>1</sup> A sketch of the cotton industry, which is the most important of the textile group, is given under the heading of "Typical Individual Manufacturers" at p. 429 in the Manufactures section of the Canada Year Book, 1924.

**Wood and Paper.**—An outstanding feature of the general expansion of Canadian commerce since the opening of the century has been the change in the industries associated with forestry. Lumber output has fluctuated greatly and actually decreased in recent years, as a result of the post-war depression. For example, in 1911 the output of manufactured lumber was 4,918,000 M board feet, valued at \$75,831,000, as compared with 4,741,941 M feet, valued at \$113,349,886, in 1929. In contrast with this is the progress in pulp and paper production. The census of 1881 recorded only 36 paper and 5 pulp-mills in existence in Canada. In 1929 there were 108 pulp and paper-mills, consuming more than 5,278,422 cords of pulpwood in the year and using hydro power to the extent of about 1,400,000 h.p. Production of wood pulp in 1917 was 1,464,308 tons and in 1929, 4,021,229 tons. Production of newsprint in 1917 was 689,847 tons, in 1921, 805,114 tons, in 1923, 1,252,000 tons and in 1924, 1,388,081 tons. In 1929 the production was 2,725,331 tons, an increase of 13 p.c. over 1928. Included in the totals are hanging and poster papers. Canadian production in 1929 exceeded that of the United States by 1,300,000 tons or 95 p.c., so that Canada now occupies first place among the countries of the world in the production of newsprint paper.

**Iron and Steel.**—The primary production of iron and steel in Canada has always been handicapped by the fact that nowhere in Canada have workable deposits of coal and iron ore been found in juxtaposition. The nearest approach is in Nova Scotia, where there is an abundant supply of coal, while iron ore is obtained from Newfoundland. In Central Canada, where the secondary iron and steel industries are chiefly located, there are at present neither supplies of coal nor high-grade deposits of iron ore. There is a possibility, however, that high-grade bodies of ore may be found, and eventually the huge reserves of low grade ores now known to exist may be utilized.

Iron ore, which was imported chiefly from Newfoundland and the State of Minnesota, was converted into pig iron in 1928 by the following companies:—Steel Company of Canada, Ltd., at Hamilton, Ont.; the Algoma Steel Corporation at Sault Ste. Marie, Ont.; the Canadian Furnace Co. at Port Colborne, Ont.; and the Dominion Iron and Steel Co. Ltd., at Sydney, N.S. These 4 blast furnace plants, together with 23 steel furnaces, 12 rolling mills and one smelter for making ferro-manganese, accounted for a capital of \$114,292,363 and a gross production valued at \$62,071,674. There were, in 1929, no fewer than 1,169 establishments handling iron and steel products, aside from the numerous custom and repair shops engaged in re-conditioning iron and steel goods. The plants represented a capital of \$754,989,105 and had a gross output valued at \$738,012,980. A great deal of this output is represented by agricultural implements, for which there is a large domestic demand, by factory and railway equipment and commercial and passenger motor vehicles. The output of automobiles has increased rapidly in recent years, the total production in 1922 being valued at \$81,956,429, in 1925 at \$110,835,380, in 1926 at \$133,598,456, and in 1929 \$177,315,593, so that this industry had in recent years a greater production than any other in the iron and steel group and in 1929 stood fourth in gross production among all the industries of Canada.

**Non-Ferrous Metals.**—During 1929 there were 408 plants in Canada manufacturing products from metals other than iron and steel. Employment showed an increase from 18,222 in 1922 to 21,409 in 1923, 27,735 in 1925, and 39,867 in 1929.

One of the leading industries in this group in recent years has been the manufacture of electrical apparatus and supplies; this industry had in 1929 a gross production of \$113,796,002. The industry is showing rapid growth in keeping with the widely increasing development and utilization of hydro-electric energy in Canada. The development of cheap electric power has done much to popularize the use of electrical equipment for both domestic and industrial purposes, and the future demand for such apparatus will probably be limited only by the development of adequate power.

The non-ferrous smelting and refining industry has shown a marked expansion in recent years, due to the increased capacity of the Trail smelter and the great activity of the copper smelter at Anyox, British Columbia, the enlargement of the nickel-copper smelting facilities and the proposed new copper refinery in the Sudbury district of Ontario, the new copper smelter at Noranda, and the activities of the aluminium plant at Arvida, Quebec. A new smelter which will smelt the ores from the Flin Flon and Sherritt-Gordon mines is practically completed at Flin Flon, Manitoba.

Another industry of some importance consisted of 102 firms engaged principally in the rolling, casting, and manufacturing of brass and copper, the principal products being castings and machinery fittings, brass steam fittings, plates and sheets, rods and wire cloth. The selling value of the products was \$36,115,581, while the materials were worth \$21,118,038.

**Non-Metallic Minerals.**—The gradual recovery in business conditions since 1921 is demonstrated by developments in the non-metallic mineral group. The recent expansion is accentuated by the growth of the petroleum products industry, which in 1929 produced over 40 p.c. of the gross value of the entire production of the group. This industry included, in 1929, 10 blending plants and 15 plants for the refining of crude oils. The refining plants were located with a view to economy of distribution, based on the greatest accessibility to the source of supply and the proximity of the markets. The refineries on the eastern and western coasts obtain their crude petroleum from South America, Mexico and the United States by tank steamers, bringing transportation costs to a minimum. Those situated in the central part of the Dominion are necessarily supplied by rail or pipeline. The more general use of the automobile has resulted in a continually expanding demand for gasoline and lubricating oils. The installation of oil-using equipment in industrial plants for generating power and in buildings of various kinds for heating purposes has also increased the consumption of fuel oil.

The coke and gas industry of Canada is chiefly centred in the larger cities, especially in parts of the country where manufacturing predominates. Coke, coal gas and carburetted water gas are the most important products, but pintsch gas is made at many divisional points along the railways to meet the demand for lighting purposes on passenger trains. Acetylene gas is used in several small towns where the size of the municipality is not sufficient to warrant a coal gas plant. The facility with which by-products, such as coke, tar and light oils, are turned out in connection with large-scale production, becomes an incentive to plant expansion, provided that a demand is assured by increasing population and industrial development in the vicinity. The burning of coke in the house furnace, the necessity of enriching the soils with nitrates, the increase of re-

frigerating operations and the extended use of tar products have prompted the larger plants to increase their output. The industry is also intimately connected with the iron and steel industry and depends upon the demand of the non-ferrous smelting plants. By-product coke plants are maintained at Sydney, Hamilton and Sault Ste. Marie by the three principal iron and steel companies and by the Hamilton By-Product Coke Co. The Crow's Nest Pass Co., and the Granby Consolidated Mining, Smelting and Power Co. also operate plants for the manufacture of metallurgical coke.

Other industries of a varied nature included in this group are the manufacture of asbestos products, the glass industry, the manufacture of abrasives, the preparation of ornamental and monumental stone, the bottling of aerated waters and the manufacture of various clay products and cement.

**Chemicals.**—New developments in Canada's chemical industries serve to focus attention on the growth of these great enterprises. At the present time the expansion in this field is more noticeable than at any other period since the abnormal expansion during 1914-1918, when war demands necessitated the establishment of many new lines of production.

At Trail, B.C., large chemical plants are shortly to be erected. The sulphuric acid plant, using the gases from the zinc roasting process, will be enlarged. Nitrogen obtained through the liquefaction of air will be converted to ammonia, and both ammonium phosphate and ammonium sulphate will be made, as well as superphosphate of lime for use as fertilizer. New superphosphate plants are being built at Hamilton, Ont., and Belœil, Que.

At Sandwich, Ontario, where caustic soda and chlorine have been made for many years by the electrolysis of brine, by-product hydrogen formerly wasted is being saved and made into ammonia by the Casale process. This ammonia is shipped to Belœil and there oxidized to nitric acid for use in the manufacture of explosives and fertilizers.

In the Sudbury area, owing to the growth of the nickel-copper industry which uses large quantities of acid sodium sulphate in the smelting process, a new chemical plant is being erected to make acid sodium sulphate from the Saskatchewan natural sulphate. This is a notable development in that the new works will produce only a material that was formerly considered to be a waste product. This development involves the enlargement of the sulphuric acid plant using the waste gases from the smelter.

The growth of the ten main groups of chemical industries in Canada may be realized by noting that the total gross production of these industries in 1921 was about \$89 millions and in 1929 nearly \$138 millions.

The chemical industries of the Dominion may be arranged in the following order of importance, based on the gross value of product:—(1) acids, alkalies, salts and compressed gases, (2) paints, pigments and varnishes, (3) soaps, washing compounds and toilet preparations, (4) medicinal and pharmaceutical preparations, (5) explosives, ammunition, fireworks and matches, (6) coal tar products, (7) inks, dyes and colours, (8) fertilizers, (9) wood distillates, and (10) a miscellaneous group of industries not otherwise classified. These industries con-

tribute in no small measure to the diversification of Canadian manufactures and add appreciably to the volume of production. If the larger definition of chemical industries be taken as including all industries using chemical processes, the field covered represents not less than one-fifth of the aggregate of Canadian manufactures.

**Central Electric Stations.**—Beginning with 1926, central electric stations have been taken out of group 9—Miscellaneous Industries—and shown as a separate group. The purpose of the separation is to facilitate the presentation of the statistics of the power installed in manufacturing establishments. Practically all other industries produce either wholly finished goods or products which are used as materials for further processes of manufacture. The product of the central electric station industry is not a material in the same sense, but is electrical energy which supplies the power for many of the manufacturing processes, as well as for mining enterprises, electric railways and the various lighting and domestic services. Included in the establishments reported as central electric stations, in addition to the plants where power is generated from water, steam or some other primary source, are numerous distributing plants which buy power at high voltage from the generating establishments and transform and distribute it to local consumers. In such cases, where the distributing stations are separate organizations from the generating system, there is therefore a duplication in the gross revenue reported from the sale of power. The economic function performed by the distributing station is similar to that of a manufacturing industry which transforms materials to meet the requirements of the consumer. Therefore the cost of power purchased by distributing stations is regarded as a cost of material, and a figure of net revenue is given from which all duplications are eliminated. This treatment has been applied to the figures for 1926 and later years and introduces a slight element of incomparability with figures for previous years.

The principal statistics of each of the manufacturing industries of Canada during 1928 are presented in Table 6 on pp. 424-429.

### Subsection 2.—Manufactures Classified by the Purpose of the Products.

**Production of Manufactured Goods According to the Purpose Classification.**—In addition to the classification according to the chief component material of the products, used by the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented for the years 1922 to 1927 in summary form, and for 1928 in more detail, in Table 7.

During the period covered by the table, the gross production of the food industries dropped from 27.5 p.c. of the total of all industries in 1922 to 22.1 p.c. in 1928. On the other hand the gross production of the group "vehicles and vessels", which includes automobiles, rose from 6.3 p.c. of the total for 1922 to 8.9 p.c. in 1928. Producers' materials also rose from 2.6 p.c. to 28.7 p.c. The percentage of the clothing industries remained about stationary, being 9.5 p.c. in 1928 as compared with 9.7 p.c. in 1922.

In analysing the relative standing of the two purpose groups which are perhaps of greatest interest, it is noted that the gross production of the food industries in 1928 was 22 p.c. of the output of Canadian manufacturing concerns, as compared with an output of 9.5 p.c. for the clothing industries. The greater production of the food group was in part due to the higher cost of raw materials, the value added by manufacturing being 12.5 p.c. of the total for all industries in the case of the food group and 9.9 p.c. for the clothing group. The clothing industries gave employment to approximately 14,000 more employees than the food industries.

### 7.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for 1922-27<sup>1</sup> and in Detail for 1928.

<sup>1</sup> For details for the years 1922-1927 see previous editions of the Canada Year Book as follows:—1924, p. 363; 1925, p. 410; 1926, p. 396; 1927-28, p. 426; 1928, p. 423; 1930, p. 410.

<sup>2</sup> In the original compilation of manufacturing statistics for 1922 certain industries, notably ship-building, bridge-building, and some non-metallic mineral industries were excluded. Later these industries were included and the statistics by provinces and groups for 1922 appearing in Tables 1 and 2 were revised accordingly, but a similar revision has not been worked out for the purpose classification.

7.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for 1922-27 and in Detail for 1928—continued.

Subsection 3.—Manufactures Classified by Origin of the Materials.

**Classification of Manufacturing Production According to the Origin of the Materials Worked Upon.**—The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 8 for the years 1926 to 1928. By this means Canadian manufacturing production may be analysed from a new angle, one by means of which interesting comparisons may be made with the external trade classification according to origin.

The manufacturing statistics for 1924 were the first to be analysed upon the origin basis. While the period available for review only covers, therefore, the short space of the four years from 1924 to 1928, interesting changes have taken place in the relative importance of the industries based on materials from the different origins. Since the purpose of such a comparison is to dis-

cover the relative importance of the manufactures developed to work upon materials from the different origins, the figures of net value of products or the value added to the raw materials by the manufacturing processes will give a more accurate measure of the importance of the industrial groups than the figures of gross value of products. The values added by the manufacture of materials of farm origin, while increasing in amount, have dropped from 30.7 p.c. of the total for all industries in 1924 to 28.4 p.c. in 1928. Similarly, industries of the forest origin group have decreased from 23.8 p.c. in 1924 to 21.3 p.c. in 1928. The values added by industries of the mineral origin group on the other hand have increased from 27.9 p.c. of the total for all industries in 1924 to 34.1 p.c. in 1928. This rapid increase in the relative importance of the industries of the mineral group is probably due to a number of influences. The expansion of the motor vehicle industry, the rapid growth in the use of electrical equipment, increasing activity in construction which absorbs large quantities of steel, cement and various other manufactured mineral products, and the development of metallurgical plants in Canada are some factors in the growing importance of the mineral group of industries. Another factor in this trend is the growing appreciation and development of the wealth of the mineral resources of Canada. Not only do the various mining activities make the raw materials for mineral industries more readily available, but those activities also require large quantities of machinery, electrical apparatus and other finished products of mineral origin.

In the year 1928, the industries of the mineral group exceeded those of any other group in the net value of products with 34.1 p.c. of the total, as compared with 28.4 p.c. for the farm and 21.3 p.c. for the forest origin groups. These three principal groups stood in the same order of importance with regard to employees engaged and salaries and wages paid. In the matter of capital invested the mineral group also leads with 29.5 p.c. of the total, followed by the forest group with 24.2 p.c., central electric stations with 20.0 p.c., and the farm group with 19.9 p.c.

#### Subsection 4.—The Forty Leading Manufacturing Industries.

**The Forty Leading Industries in 1928.**—All of the ten foremost industries of Canada expanded their production during the year 1928 as compared with the previous year. The pulp and paper industry again exceeded all others in gross value of products. Indeed there was very little change in the order of the ten leading industries when compared on this basis with 1927. The automobile industry rose from sixth to fourth place, the expansion of \$34,000,000 in the gross value of its products being partly due to the fact that production was abnormally low in the previous year, as production was largely suspended in one of the principal plants in Canada, pending a change of models. Petroleum products moved up from fifteenth place in 1927 to eleventh in 1928. The gross value of the products of the sugar refining industry were over \$8,000,000 less in 1928 than 1927, but this was the only important industry to show an appreciable decline.

The net values of products provide a better measure of an industry's contribution to the national income than gross values do. On the basis of net value, or value added by manufacture, the order of importance of the industries in 1928 was very different from that based on gross value. The pulp and paper industry was foremost in this respect also, but it was followed by central electric stations, non-ferrous metal smelting, sawmills, electrical apparatus, printing and publishing, rubber goods, castings and forgings, automobiles, cigars and cigarettes, and breweries.

The central electric station industry represented the greatest investment of capital, while next in order were pulp and paper, sawmills, non-ferrous metal smelting, and iron blast furnaces and steel mills.

As a measure of the employment provided by an industry the salaries and wages paid are probably a better guide than the number of employees reported, especially in industries where operations are seasonal. In the amount of salaries and wages paid the pulp and paper industry came first, being followed by sawmills, railway rolling stock, automobiles, castings and forgings, central electric stations, printing and publishing, electrical apparatus, rubber goods, and cotton yarn and cloth.

**The Forty Leading Industries in 1929.**—The early completion of part of the compilation of the Census of Manufactures for 1929 permits the inclusion, before going to press, of Table (9A) of the forty leading industries in that year. It will be noticed that, compared with 1928, there has been a change in the order of the ten leading industries when arranged according to gross production. In 1929, pulp and paper was again in the lead with an appreciable increase in production but slaughtering and meatpacking was in second place with a gross production of nearly \$186,000,000. The flour and grist mills, and butter and cheese industries both suffered reductions as regards gross values of production. Automobiles held its previous position, *viz.*, fourth, but with a substantially increased production. Without doubt the most important change has been in connection with the railway rolling-stock industry, which has risen from thirteenth place in 1928 to eighth place in 1929, and shows an increase in the value of gross production of from \$73,000,000 to \$126,000,000 or nearly 73 p.c. Rubber goods and footwear shows only a slight decline in production, but in 1929 ranked twelfth in importance in place of eighth, as in 1928. Machinery is an industry which shows a more than proportionate advance. In 1928 this industry ranked twenty-fifth with a gross production of \$51,000,000; in 1929 the value of the gross production had risen to \$66,000,000 and the industry occupied the nineteenth place.

The net value of products provides a better measure of an industry's contribution to the national income than gross values do. On the basis of net value, or value added by manufacture, the order of importance of the industries in 1929 was very different from that based on gross values. The pulp and paper industry was foremost in this respect, also, but it was followed by central electric stations, non-ferrous metal smelting, electrical apparatus, sawmills, printing and publishing, automobiles, castings and forgings, rubber goods, railway rolling stock, cigars and cigarettes, and machinery in the order given.

## 9A.—Principal Statistics of Forty Leading Industries, 1929.

The central electric station industry represented the greatest investment of capital, while next in order were pulp and paper, sawmills, non-ferrous metal smelting and iron blast furnaces and steel mills.

As a measure of the employment provided by an industry the salaries and wages paid are probably a better guide than the number of employees reported, especially in industries where operations are seasonal. In the amount of salaries and wages paid the pulp and paper industry came first, being followed by railway rolling stock, sawmills, castings and forgings, automobiles, electrical apparatus and supplies, printing and publishing, and central electric stations, all of which industries paid out, in salaries and wages, amounts in excess of \$20,000,000 during the year.

### Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1928 amounted to \$3,022,886,410, or over 80 p.c. of the gross value of manufactured products of the Dominion. Of this amount, Ontario contributed \$1,949,724,119 and Quebec \$1,073,162,291. The proximity of Ontario to the coal fields of Pennsylvania, the water-power resources of the two provinces and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had, in 1928, the third largest gross manufacturing production, \$270,851,669, and Manitoba the fourth, \$159,435,094. Alberta, Nova Scotia and New Brunswick followed with \$100,744,401, \$84,948,608 and \$67,413,742 respectively, succeeded by Saskatchewan with a production of \$59,125,280 and Prince Edward Island with \$4,445,160.

#### Subsection 1.—The Manufactures of the Maritime Provinces, 1928.

Table 10 contains statistics of the ten leading industries of each of the Maritime Provinces for the year 1928. In Prince Edward Island the manufacture of butter and cheese, with a gross production in 1928 of \$1,247,128, was the leading industry, followed by fish-curing and -packing, with a gross production of \$756,210. Manufacturing in Nova Scotia and New Brunswick is, of course, to a considerable extent dominated by the steel industry in the former and the forest industries in the latter, although there is a large sugar refinery in each province. Fish-curing and -preserving, the manufacture of biscuits and confectionery, electric light and power production, and butter and cheese making are also of considerable relative importance. The sawmilling industry of New Brunswick, with a gross value of products in 1928 of \$9,709,633 or over 14 p.c. of the total manufacturing production of the province, provided almost 7 p.c. of the total of the gross production of the industry throughout the Dominion.

## 10.—Statistics of Ten Leading Industries of each of the Maritime Provinces, 1928.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are:—in Prince Edward Island, tobacco and cigars, coffins and caskets, slaughtering and meat-packing and railway rolling stock; in Nova Scotia, petroleum, sugar refineries, coke and gas and wire products; in New Brunswick, sugar refineries and railway rolling stock. The statistics for these industries are included in the grand totals.

## Subsection 2.—The Manufactures of Quebec, 1928.

The pulp and paper mills of Quebec, the most important manufacturing unit in the province, produced goods to the gross value of \$127,223,217 in the calendar year 1928. This amount exceeded by nearly \$71,000,000 the gross value of the products of the cotton yarn and cloth mills (\$56,545,069), which in their turn showed an excess of value of products of over \$3,000,000 when compared with establishments engaged in the manufacture of cigars and cigarettes (\$53,324,554). These three industries were followed in order of gross value of products by the generation of electric light and power, the manufacture of railway rolling stock, the making of butter and cheese, of men's clothing, and of leather boots and shoes.

The importance of the pulp and paper industry in Quebec is shown by a comparison with the industry throughout the Dominion. The Quebec industry, in addition to supplying nearly 12 p.c. of the total gross value of all products manufactured in the province, furnished nearly 55 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed over 71 p.c., the gross value of cigars and cigarettes formed 87 p.c., the value of railway rolling stock 57 p.c., and the value of the boot and shoe products (the eighth industry in order of value of products) over 59 p.c. of the Dominion totals for these products. Thus Quebec is an outstanding manufacturing province rather on account of her great individual industries than because of the diversification of her industrial activities.

## 11.—Statistics of Forty Leading Industries of the Province of Quebec, 1928.

NOTE.—Leading industries having fewer than 3 establishments are sugar refineries, cement and bridge-building.

## Subsection 3.—The Manufactures of Ontario, 1928.

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1928 represented nearly 52 p.c. of those of the whole Dominion, while those of Quebec, the second province in importance in this respect, amounted to about 28 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show:—in 1926, 52 p.c.; 1920, 50 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c. and

1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production more than equal to that of the remainder of the Dominion.

The automobile manufacturing industry of Ontario in 1928 came first in the value of its products, which amounted to \$162,363,825 as compared with \$106,486,641 for the flour and grist milling industry, which held second place. Other important industries in descending order, with the value of their products in 1928, were:—slaughtering and meat-packing, \$90,500,960; rubber goods, \$76,152,513; and pulp and paper, \$74,220,178. As compared with 1927, automobile manufacturing showed an increase of nearly \$34,000,000, while flour and grist mill products decreased by over \$1,000,000. Slaughtering and meat-packing increased by over \$1,000,000, rubber goods by over \$3,000,000, while pulp and paper manufacturing decreased about \$90,000 from the figures for 1927.

As an indication of the greater diversification of industry in Ontario as compared with Quebec, the percentages which the 40 leading industries bear to the total manufacturing of the province are higher in nearly every particular in Quebec than in Ontario, especially in the capital employed and the number of establishments and employees. Outstanding among the industries in which the province of Ontario is pre-eminent is that of automobile manufacturing, which is carried on practically in this province alone. Other important industries in which Ontario leads, with the percentage which its production bore to that of the Dominion in 1928, are as follows:—agricultural implements, 95 p.c.; leather tanneries, 87 p.c.; rubber goods, 78 p.c.; furniture and upholstering, 78 p.c.; fruit and vegetable canning, preserving, etc., 62 p.c.; electric apparatus and supplies, 77 p.c.; castings and forgings, 65 p.c.; steel and rolled products, pig iron, etc., 59 p.c.; slaughtering and meat-packing, 52 p.c.; flour and grist mill products, 54 p.c.; hosiery, knit goods, etc., 70 p.c.

## Subsection 4.—The Manufactures of the Prairie Provinces, 1928.

The flour-milling industry is outstanding among the manufactures of the Prairie Provinces. During 1928, as will be seen from Table 13, the gross value of the products of flour mills was greater in each province except Manitoba than that of any other industry and amounted to \$18,788,855 in Manitoba, \$15,781,289 in Saskatchewan and \$21,005,113 in Alberta, a combined total of over 17 p.c. of the gross value of the products of manufactures in these provinces. The second industry in point of gross production was slaughtering and meat-packing, with products valued at \$21,328,420 in Manitoba and \$16,152,956 in Alberta. Butter- and cheese-making showed a gross value of production of \$3,749,518 in Manitoba, \$6,966,282 in Saskatchewan and \$6,810,805 in Alberta.

The importance of these industries, based on such natural resources of the Prairie Provinces as grain-growing and cattle-raising areas, is evident. Attention may also be drawn to the generation of electric light and power in all three provinces and to the refining of petroleum in Alberta.

### 13.—Statistics of Ten Leading Industries of Manitoba, Saskatchewan and Alberta—1928.

Note.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are:—in Saskatchewan, petroleum refining and sheet metal products; in Alberta, railway rolling stock and cement. The statistics for these industries are included in the grand totals for the provinces.

#### Subsection 5.—The Manufactures of British Columbia, 1928.<sup>1</sup>

British Columbia was in 1928 the third most important manufacturing province in the Dominion, producing goods to a gross value of \$270,851,669. About 23 p.c. of this production, or \$62,536,200, is seen in Table 14 to be that of the sawmilling industry; the predominance of forest products industries

<sup>1</sup> Including Yukon Territory.

in the industrial life of the province is emphasized if to this figure be added \$18,714,056, the gross value of products of the pulp and paper industry and \$3,825,208, that of the planing mills and sash and door factories. Second in importance among the industries of the province is that of fish-curing and -packing, with a gross value of products of \$24,261,345, followed by the pulp and paper industry, electric light and power generation, and slaughtering and meat-packing.

#### 14.—Statistics of Twenty-five Leading Industries of British Columbia, 1928.<sup>1</sup>

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are non-ferrous metal smelting, sugar refining, cement and explosives. The statistics for these industries are included in the grand total of all industries in the province.

## Section 4.—Principal Factors in Manufacturing Production.

### Subsection 1.—Capital Employed.

In a retrospective study of capital employed in Canadian manufactures since 1900, the remarkable increase denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands and over, and while the rise of wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1928 in all establishments irrespective of the number of employees was \$4,780,296,049, as compared with \$4,337,631,558 in 1927, and with \$3,190,026,358 in 1921, an increase of 49 p.c. in 7 years.

The provincial distribution of the manufactures of Canada may be illustrated by the investments of capital. Capital employed in Ontario during 1920 was 49.5 p.c. of the total, 50.6 p.c. in 1921, 52.5 p.c. in 1923, 50.4 p.c. in 1925, 49.2 p.c. in 1927, and 47.6 p.c. in 1928. The percentage employed in the plants of Quebec was 30.5 in 1920, 30.8 in 1921, 29.5 in 1924, 30.6 in 1926, 31.7 in 1927 and 33.1 p.c. in 1928. British Columbia held third place in 1928 with a capital of 7.7 p.c. of the total, while Manitoba, Nova Scotia, New Brunswick and Alberta followed in the order named, with proportions of between 4 p.c. and 2 p.c. each. (Table 15.)

From a survey of the industrial groups in which the capital of the country is invested, it appears that the wood and paper group led in 1928, with an investment of 24.2 p.c. of the total. The central electric station industry was second with 20.0, the iron and steel group third with 14.7, and the vegetable products group fourth with 11.1 p.c. (Table 16.)

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportions of fixed and liquid assets. In 1921, lands, buildings and machinery constituted 60 p.c. of the total capital, while in 1923 the proportion had increased to 64 p.c., in 1924 to 65 p.c. and to 66 p.c. in 1926, 1927 and 1928. The fixed assets amounted to \$3,142,419,861 in 1928, while quick assets, including the materials on hand, stock in process, cash and sundries, were valued at \$1,637,876,188. Details by industrial groups and by provinces are given in Table 17.

**Subsection 2.—Employment in Manufactures.**

The total number of persons engaged in those manufacturing industries of Canada for which statistics were obtained in 1928 was in that year 658,023, as compared with 618,933 in the same industries in 1927 and 456,076 in 1921. The 1928 employees included 91,243 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 566,780 wage-earners, the average number employed, as derived from the manufacturers' records of the numbers on the pay-rolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12 whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which are in operation only a limited number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, especially in seasonal industries, but also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method exerted a reducing influence on apparent average wages and on all other averages per wage-earner and per employee.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table 13. Then, taking the percentage of those employed in each year to those employed in 1917, and dividing it into the volume of manufacturing production in each year (see Table 4 of this report for method

used in obtaining this figure), the quotient gives a tentative conclusion regarding the efficiency of production per person employed in years subsequent to 1917, as compared with that year. This index of the efficiency of production per employee is, of course, affected by the change explained above in the method of computing the number of employees in 1925 and subsequent years as compared with 1924 and previous years. Inasmuch as the change increased the apparent number of employees in 1925 and later years, it proportionately decreased the index of the efficiency of production. How far the increased efficiency of recent years may be due to the use of improved appliances of production (the horse-power used per wage-earner employed increased from 3.04 in 1917 to 6.45 in 1928), how far to increased efficiency in the employees and how far to improvements in methods of organization, is a problem which cannot be solved for the country as a whole with our present information. It may, however, be possible for those having intimate knowledge of the business of individual firms to solve this problem with approximate accuracy for their own particular plants. The table here published may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices.

1928.....	91,243	566,790	658,023	105.8	157.1	148.6

Statistics of employment in manufacturing industries during 1928 derived from the Census of Manufactures, are shown in Table 6 of this chapter, (pp. 424-429). According to these statistics, the 23,379 establishments covered employed 91,243 salaried employees and 566,790 wage-earners, a total of 658,023 persons. Out of every 1,000 persons employed in manufacturing, 139 were classed as salary earners and 861 as wage-earners; the former earned 23.2 p.c. and the latter 76.8 p.c. of the total amount paid out as remuneration for services.

**Provincial Distribution of Employees in 1928.**—An analysis of the returns by provinces shows that 49,162 or 53.8 p.c. of all employees on salaries were employed in Ontario; of this number 36,204 were males and 12,958 were females. The proportion that the male salary workers in Ontario bore to the total number of such workers was 51.8 p.c., while female office employees

constituted 60.6 p.c. of the total. In Quebec, which, with 25,246 persons, recorded the second largest number of salaried workers, were situated 28.8 p.c. of the male and 24.0 p.c. of the female salaried employees. British Columbia also had a higher proportion of male than female salaried employees, having 6.4 p.c. of male to 4.5 p.c. of female salary earners. Of the total salaries, \$94,376,781 or 54.0 p.c. was reported in Ontario, \$49,485,152 or 28.3 p.c. in Quebec, and \$10,587,954 or 6.1 p.c. in British Columbia.

The male wage-earners numbered 441,189 and the female 125,591; 48.4 p.c. of the former and 46.0 p.c. of the latter were employed in Ontario. Quebec manufacturers reported 29.8 p.c. of the males as compared with 38.6 p.c. of the females, while British Columbia had 8.5 p.c. of the males and 4.6 p.c. of the females. As to earnings, Ontario firms paid out 51.2 p.c. of the total, Quebec 29.0 p.c. and British Columbia 8.3 p.c.

**Distribution by Industries.**—The wood and paper industries, with 19,952 salaried employees, reported a larger number of these than any other group, having 21.9 p.c. of the total and paying 23.1 p.c. of the aggregate salaries; 24.4 p.c. of the total wage-earners belonged to this group, which paid out 23.9 p.c. of the wages. Only 8.9 p.c. of the total females working for wages were in the wood and paper industries, as compared with 28.8 p.c. of the total males on wages. The textile industries had 18.4 p.c. of the wage-earners, who earned 14.5 p.c. of the wages; the number of female workers in these industries formed 50.0 p.c. of the total females and the males only 9.3 p.c. of the aggregate of male wage-earners. In the iron and steel group, 18.4 p.c. of the total workers were paid 23.8 p.c. of the total wages. The number of men employed in these industries constituted 22.9 p.c. of the total male wage-earners in 1928, while only 2.6 p.c. of the total female wage-earners were engaged in iron and steel plants.

**Monthly Record of Employment in Manufactures, 1928.**—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled by the Census of Industry, is given by sex in Table 20, which shows that the peak of employment was in September, when manufacturing generally was at a high level. The number engaged in factories increased steadily from the beginning of 1928 until September; thereafter there was a small monthly reduction until the end of the year. During the period of continuous expansion up to September, 95,500 persons were added to the pay rolls of the reporting manufacturers.

While employment for male operatives expanded from the beginning of the year to its maximum in August, the number of female workers was greatest in September, chiefly on account of seasonal activity in the vegetable and fruit preserving group, which employs a considerable proportion of women. Textiles, the one group in which the majority of workers are women, also reported more than average employment during the autumn. Indicative of the expansion of industrial operations during 1928 is the fact that in every month of that year the number of wage-earners employed exceeded the total for the corresponding month of the previous year and this excess was greatest in the later months of the year.

**Days in Operation and Hours Worked.**—During 1928, each plant, on the average, operated full time 229 days. The average day was 8.5 hours and the average week 49.6 hours. The time in operation and the average number of hours worked are shown by provinces and industrial groups in Table 21.

<sup>1</sup> Information on these points is incomplete for dairy factories in Prince Edward Island and Quebec and for all central electric stations. These establishments have therefore been eliminated in working out the averages.

Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries, 1928.

The total amount disbursed by manufacturers in salaries and wages during 1928 was \$755,199,372 paid to 658,023 workers, as compared with \$693,932,228 paid to 618,933 persons in 1927 and \$653,850,933 paid to 581,539 persons in 1926. Of the 1928 aggregate, \$174,770,879 or 23.2 p.c. was paid to 91,243 salaried employees who constituted 13.9 p.c. of the total number, and \$580,428,493 or 76.8 p.c. was paid in wages to 566,780 wage-earners, who formed 86.1 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1928 was \$1,915, compared with \$1,899 in 1927, \$1,867 in 1926, \$1,843 in 1925, \$1,831 in 1924 and \$1,824 in 1923. The average wage paid was \$1,024 in 1928, \$997 in 1927, \$1,003 in 1926, \$971 in 1925, \$972 in 1924 and \$959 in 1923.

The increase of 9.2 p.c. recorded in aggregate wages in 1928 as compared with the preceding year was accompanied by a 6.2 p.c. gain in the number of operatives employed, while the average wage increased by 2.7 p.c. Employees on salaries increased by 6.7 p.c. and aggregate salaries by 7.6 p.c., while average salaries advanced by 0.8 p.c.

The proportion of female wage-earners per 1,000 was 222 and of male operatives 778 during 1928, while in each 1,000 salary earners 234 were women and 766 were men. The proportion of females among wage-earners was slightly less, while that among salaried employees was greater than in the preceding year. The number of male salary-earners increased by 6.0 p.c. in 1928 as compared with 1927, while there was a gain of 9.1 p.c. in the number of women office help employed. The percentages of increase among wage-earners were 6.6 for the males and 4.9 for the females.

#### Average Earnings, by Provinces, of Persons Employed in Manufactures.—

Table 22 shows the number of salary and wage-earners and the average salary and wage paid in 1928 by manufacturers in the various provinces, also average earnings in 1927.

There were successive rises in average salaries from Prince Edward Island to Quebec, which showed the highest average of all the provinces, while the mean in British Columbia and Ontario was slightly lower than in Quebec. In the Prairie Provinces, the averages were also smaller, especially in Saskatchewan and Alberta, where salaries were, on the whole, below those in New Brunswick. In British Columbia and the Yukon the average was \$1,955. Over 60 p.c. of the total female salary earners were employed in Ontario, as compared with only 52 p.c. of the total male salaried workers; in Quebec and British Columbia, on the other hand, the proportion of women workers was lower than that of men.

There were general increases in average wages from the eastern provinces through to Manitoba, where the mean for the year, \$1,132, was the highest in the Dominion, being \$158 greater than the general average. In the western provinces there was an unusually small proportion of women workers, while many of the male employees were engaged in the better-paid wood and paper, electric light and power industries. In the four provinces situated to the east, average wages in manufacturing were lower than the mean for the Dominion, while from Ontario westward the opposite was the case.

The seasonal nature of some of the leading manufactures, notably fish-preserving and lumbering, tended to reduce the mean wage in the Maritime Provinces. These industries, in which 37 p.c. of the reported wage-earners in these provinces were engaged, worked on the average only 102 and 91 days respectively during 1928. Quebec, where the mean wage was below the general average, reported a larger proportion of female workers than the other provinces; of these a considerable number were employed in the textile, food and other industries. That province had 38.6 p.c. of the total number of women employed in manufacturing in the Dominion, as compared with 29.8 p.c. of the aggregate male operatives, but the 31.7 p.c. of the total wage-earners reported in Quebec received only 29.0 p.c. of the total wages. On the other hand, in Ontario, where the mean was higher than the general average, 48.4 p.c. of the total males and 46.0 p.c. of the total females, or 47.9 p.c. of the general aggregate, were paid 51.2 p.c. of the total wages disbursed. The fact that average wages in Alberta and British Columbia were lower than in Manitoba and Saskatchewan was partly a result of the seasonal nature of some of the industries in the former provinces, especially fish and fruit-preserving and saw-milling in British Columbia.

**Average Earnings in 40 Leading Industries.**—Table 23 is a record of employees by sex and of average salaries and wages paid in the 40 leading industries of Canada during 1928, together with the average number of days the establishments in each industry operated. Averages for 1927 are also given.

**Average Salaries.**—In 3 industries the average salaries exceeded \$2,500; in 15 they were from \$2,000 to \$2,500; in 19 they ranged between \$1,500 and \$2,000, while in only 3 were they below \$1,500 during 1928. None of the six groups paying the highest salaries—sugar refineries; leather tanneries; pulp and paper; rolled products, pig iron, steel products and ferro-alloys; petroleum products and distilleries—reported a proportion of female workers equal to the general percentage in the 40 industries, while the numbers employed were rather small except in the pulp and paper industry. In the groups paying an average salary of over \$2,000, only the automobile, hosiery and knitted goods, furniture and upholstery, printing and bookbinding, coffee and spices, and paints and varnishes industries employed more than the general proportion of female office help. The lowest salaries, ranging between \$1,000 and \$1,500, were reported in the butter and cheese, fish-curing and packing, and coke and gas industries. Various factors contributed to reduce the mean yearly remuneration of these groups. Fish-preserving plants operate during a very short active season; butter and cheese factories, which also work less than the average number of days, are mainly situated in small towns and country places; while in coke and gas plants the percentage of women on salaries was above the average.

**Average Wages.**—The highest wages, varying between \$1,300 and \$1,700, were paid in the automobile, rolled products, pig iron, steel products and ferro-alloys, non-ferrous metal smelting, petroleum refining, coke and gas products, central electric stations, printing and publishing, railway rolling stock, and sugar refining industries, in all of which the proportion of female workers was below the general average. In 19 industries, the wages paid averaged between \$1,000 and \$1,300; in 11 groups, they averaged between \$500 and \$1,000; while in one highly seasonal industry—fish-curing and packing—they were under \$500. In

this industry, the number of days in operation throughout the Dominion during 1928 averaged only 102; the proportion of female workers was also high, being 38.8 p.c., as compared with the general proportion of 19.8 p.c. in the 40 industries. In the textile divisions wages were generally low, employees in men's clothing factories receiving the highest remuneration in the group with an average wage of \$994. The proportion of women workers employed in these trades was large, while the number of days in operation was above the average. Sawmills worked on the average 91 days, employing males almost exclusively; these employees were paid an average wage of \$715 during the season of 1928.

**23.—Employees by Sex in Forty Leading Canadian Manufacturing Industries during 1928, with Averages of Salaries and Wages Paid and of Number of Days Operated by Plants in each Industry for 1927 and 1928.**

**Real Earnings of Employees in Recent Years.**—The total amount paid to the employees in industrial plants during 1928 was \$755,199,372, as compared with \$509,382,027 in 1917. The wage payments in 1928 were \$580,428,493, while the salaried employees received a remuneration of \$174,770,879. The average yearly wage of the wage-earner was \$1,024 in 1928, as compared with \$760 in 1917, an increase of 34.8 p.c. in average earnings. When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 16.4 p.c. between 1917 and 1928. The details of the computation are given in Table 24.

#### 24.—Average Yearly Earnings and Real Wages of Wage-Earners in Manufacturing Industries, 1917-1928.

**Percentage of Wages and Salaries to Value of Products.**—An interesting inquiry is that regarding the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must in the long run come are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant, and are alone available for payment of wages and salaries; of interest, rent and taxes; and of charges for fuel, power, lighting, repairs, and all other overhead charges. While amounts paid on some of these accounts are not readily ascertainable, amounts paid in wages and salaries are available from the statistics of the Census of Manufactures. These figures are given for 1917 and subsequent years in Table 25, and show the increasing part of the manufacturer's dollar which has gone to his salaried and wage-earning employees. In the eight latest years, salaries seem to bear a particularly large percentage to the total net production, although a steady decline has taken place since 1924; on the other hand the percentage of wages to total net product was almost the same in 1928 as in 1917.

#### 25.—Percentages of Wages and Salaries Paid to Total Net Value of Manufacturing Production, 1917-1928.

**Subsection 4.—Size of Manufacturing Establishments.**

An essential characteristic of the recent evolution of industry has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market, and the development of more efficient methods of business administration has made it possible for the individual manufacturer to supervise effectively a larger plant. An increase in the scale of production of the typical manufacturing establishment has been experienced in all industrial countries which have been affected by the so-called "Industrial Revolution", and not least in Canada, where the rise of the factory system in industry has taken place approximately since Confederation.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those which handle expensive raw materials appear to operate on a larger scale. Both measures are subject to two limitations: firstly, they depend on the fluctuation of business activity and the demand of the consumer; secondly, over any lengthy period of time there is the difficulty of comparability resulting from changes in the method of the census.

Thus, while it is possible in a general way to state that the average size of the manufacturing establishment in Canada has increased between 1870 and 1928, the 1928 figures are not on the same basis as the 1870 figures, especially since they do not include all the small custom and repair establishments included at the earlier date. The same difficulty arises right up to the most recent times. It is only in the last few years that the statistics have been so analysed as to be strictly comparable, and the results of this analysis are given in Tables 26 to 29.

**Size as Measured by Gross Value of Products.**—In Tables 26 and 27 the size of the establishments reporting to the Census of Manufactures is shown by the gross value of products—Table 26 giving comparative figures for 1922 (the first year for which the figures are available) and 1928, and Table 27 the figures by provinces for 1928.

The comparative Table 26 shows that while in 1922 the 420 establishments which had each a gross production of over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 686 establishments producing over \$1,000,000 each in 1928 had an aggregate value of products of \$2,281,557,030, or 61 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of six years when the general trend of prices of manufactured goods was slightly downward.

Size of Establishments as Measured by Number of Employees.—In Tables 28 and 29 the establishments reporting to the Census of Manufactures are classified by the number of their employees. In the comparative Table 28, it is shown that out of a total increase of 131,913 employees in our manufacturing industries between 1923 and 1928, 64,306, or almost 49 p.c., were in establishments with over 500 employees.

28.—Number of Establishments and of Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923 and 1928.

**Subsection 5.—Power and Fuel.**

**Power.**—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

Central electric stations, which generate electricity for both lighting and power purposes, are included in Table 30 with the other groups of industries and are included also with the industries of each province. The note with Table 30 explains the duplications in power equipment involved where other manufacturing plants are operated by power purchased from central electric stations. Internal combustion engines include all gasolene engines, natural, coal and producer gas engines, and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

Comparisons with the data for 1927 show an increase of 558,664 h.p. or 9.8 p.c. in 1928 in the total primary power equipment installed in manufacturing establishments, by far the largest increase being in the central electric stations, where the increase was 468,504 h.p., there being a decrease in primary power installation in some of the other groups due to the replacement of steam equipment by electrical equipment operated by purchased power. The water-power development of central electric stations increased by 470,519 h.p., while the steam power installed was slightly reduced. In the provinces with large water-power developments the greatest total primary power increases were made, Quebec leading with an increase of 311,262 h.p., Ontario coming second with an increase of 97,375 h.p., British Columbia third with an increase of 74,144 h.p. and Manitoba fourth with an increase of 55,185 h.p. In the utilization of hydraulic power Quebec exceeded Ontario for the first time in 1925. In 1928, Quebec exceeded Ontario or any other province in the total of installed primary power from all sources.

The rapid increase in the development of power in Canada and in its utilization in manufacturing industries is illustrated by the summary figures for the years 1921 to 1928 in Table 30. The total primary power increased by 3,102,798 h.p. or 99 p.c. in the 7 years, while the total installation of electric motors increased 1,582,478 h.p. or 156 p.c. in the same time.

**36.—Totals, for Canada, of Power Installed in the Manufacturing Industries, 1921-1928, with Details by Provinces and Groups of Industries for 1928.**

Note.—Total power equipment employed (Col. 8) is the sum of total primary power (Col. 4) and electric motors operated by purchased power (Col. 5). Since the power purchased (Col. 5) is generated by primary equipment already included in Col. 4, there is a duplication by the amounts of Col. 5 in the total power equipment figures of Col. 8 as applied to the totals for Canada and for each of the provinces. In the case of each of the groups of industries, however, since this purchased power is practically all generated by central electric stations, there is no duplication in the figures of total power equipment employed (Col. 8). The net growth in the power developed in Canada is shown in Col. 4 for the years 1921 to 1928.

**Fuel.**—The fuel used in industrial establishments in 1928 included 6,639,736 tons of bituminous coal, valued at \$37,871,736, constituting 63.3 p.c. of the total fuel cost. The other chief fuels in order of value were:—fuel oil, comprising 12.2 p.c., gas (principally natural gas) 9.1 p.c., wood 4.1 p.c., anthracite coal 3.5 p.c. and coke 3.0 p.c. Out of a fuel account of nearly \$60,000,000, Ontario expended \$28,800,000 or 48.2 p.c. of the total. The manufacturing concerns of Quebec expended \$17,300,000, those of British Columbia \$3,500,000 and those of Nova Scotia nearly \$3,000,000.

The groups of industry in which fuel was most extensively used in 1928 were:—wood and paper, \$14,428,000; non-metallic minerals, \$12,861,000; iron and steel, \$10,647,000; and vegetable products, \$6,794,000. Fuel is used quite generally throughout the industrial field for the generation of power by means of internal combustion and steam engines. The principal industries where fuel is used as a material that enters into the actual composition of the product are the manufactures of coke and gas. The most important industries where heat is applied directly to materials to transform them or to facilitate their manipulation are foundries and machine shops, blast-furnaces and steel mills, smelting plants, brick-, tile-, lime- and cement-making, petroleum-refining and the glass industry.

The total annual expenditure on fuel increased by \$8,120,355 or 15.7 p.c. in the 7 years from 1921 to 1928, covered by the summary figures in Table 31. The fuels which have shown the greatest proportionate increases are gas and oil.

<sup>1</sup> Includes other kinds of fuel which, in 1928, were as follows: lignite coal, \$1,572,452; gasoline, \$448,616; other fuels, \$303,666.

**Section 5.—Manufacturing Industries in Cities and Towns.**

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully employed population. In the West, the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 32, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production which is produced in cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for over 80 p.c. of the total, while in British Columbia and Prince Edward Island, where sawmilling, fish-packing, and dairying are leading industries, the proportion falls to less than 55 p.c. In the Prairie Provinces manufacturing is largely confined to a few large urban centres.

The seven chief manufacturing cities of Canada in 1928, in the order named, were Toronto, Montreal, Hamilton, Winnipeg, Vancouver, Oshawa and Ottawa, with a gross production of over \$60,000,000 each. Statistics showing the trend of production in these cities, during the last 8 years for which the figures are available, are given in Table 33.

According to the census of 1921, Hamilton is proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully employed population was employed in manufacturing industries, as compared with 30 p.c. in Montreal and Toronto, 17 p.c. in Winnipeg and Vancouver and 13 p.c. in Ottawa.

Nineteen other important cities with a gross production of manufactured goods of between \$60,000,000 and \$20,000,000 each in 1928 were as follows, in descending order of the value of their products:—Kitchener, London, Three Rivers, Quebec, Ford City, Calgary, Niagara Falls, Windsor, Peterborough, Shawinigan Falls, Brantford, New Toronto, Sarnia, Sault Ste. Marie, St. Boniface, Walkerville, Edmonton, Saint John and Lachine. Statistics of the manufactures of all cities and towns with a gross production of \$200,000 and over and with three or more manufacturing establishments are given for 1928 in Table 34.

**32.—Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1928.**

Province.	Cities and Towns with a Gross Production of over \$1,000,000 each.	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each.	Total Production in Cities and Towns Producing over \$1,000,000 each.	Total Production in each Province.	Production in Cities and Towns as a Percentage of Total Production in each Province.

## CHAPTER XV.—CONSTRUCTION.

Construction is the most conspicuous example of a great industry carried on in almost complete dependence on a local demand. The building industry is not only the most widespread in its operation; it is one which expands most rapidly in good times, when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed on account of the increasing substitution of reinforced concrete for wood and brick construction. Nevertheless in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number of the men are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

### **Relation of Construction Industry to General Business Conditions.—**

Statistics showing activity in construction are of particular interest both to those engaged in the industry itself and to those concerned with the supplying of its raw materials, such as lumber, steel, cement, paint, glass and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913, construction, mainly financed with borrowed money, contributed in large measure to produce the "boom" of those years.

During the war period the industry was at a low ebb, except for the construction of munition plants, but after the war the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table 4. The urgent requirements due to the practical suspension of the industry during the war were fully met in the post-war years, but the peak of the prosperity cycle in 1929 is reflected in the highest value of construction contracts on record, aggregating \$576,651,800, exceeding 1928 by no less than \$104,619,200, and the former peak year, 1912, by \$113,568,800. In 1930, the total value of construction contracts awarded declined to \$456,999,600, which was \$119,652,200 or 20·7 p.c. less than in 1929. (See Table 2.)

**Construction in Transportation and Public Utility Industries.—**The expenditure for construction by the transportation and public utility systems is incorporated in their general maintenance and structural accounts. The maintenance of way and structures account of the steam railways in 1929 totalled \$94,021,972 as compared with \$97,763,472 in 1928, while investments in the road bed and equipment of new lines in 1929 totalled \$38,111,226 and in additions

and betterments on old lines, \$106,926,685. There were 504 miles of new lines opened for operation during 1929, 672.3 miles completed but not opened for traffic and 552.7 miles under construction. Total track mileage in 1929 was 55,868 as compared with 55,455 in 1928, a net increase of 413 miles. The expenditure of electric railways on maintenance of way and structures account increased slightly from \$4,444,335 in 1928 to \$4,560,916 in 1929. There was a net increase of \$9,416,397 during 1929 in the capital investment of electric railways.

As for the telephone systems of Canada, the pole line mileage increased from 207,566 in 1928 to 220,525 in 1929, and the wire mileage from 3,982,867 to 4,476,213 in the same period. The property and equipment account was \$263,201,651 in 1928 and \$291,589,148 in 1929.

The pole line mileage of the telegraph systems decreased from 53,777 in 1928 to 52,835 in 1929 owing to the elimination of duplicating lines, while the wire mileage increased from 337,971 to 360,883. The telegraph and cable companies reported new construction valued at \$3,050,123 and alterations and repair work costing \$1,796,632, or a total expenditure for construction of \$4,846,755 for the year.

**Contracts Awarded.**—A record of contracts awarded during the years 1911-30, as compared by MacLean Building Reports, Ltd., is given in Table 1. The aggregate for 1930, while 20.7 p.c. less than for the record year 1929, and slightly less than the previous maxima established in 1928 and 1912, still showed construction operations at a high level considering the disturbed economic situation. When immigration was exceptionally great in 1912, an extensive building program was necessary to care for the rapidly growing population, while railway construction was also very active. In 1928, the increase was largely accounted for by residential building and industrial contracts were considerably ahead of 1927. Although residential construction declined in 1929, the tremendous increase in engineering construction and the significant advances in building for business purposes combined to make the record total. While construction operations of all types declined in 1930 when compared with 1929, the declines were most pronounced in the industrial, residential and business types, whereas engineering construction continued very active and was nearly double that of any year prior to 1929, as may be seen from Table 2.

**1.—Summary of the Value of Construction Contracts Awarded in Canada, 1911-1930, as Compiled by MacLean Building Reports, Ltd.**

**Building Permits.**—The estimated value of construction in 61 cities of Canada, as indicated by their building permits, is shown for the years 1925 to 1930 inclusive in Table 3. These cities had in 1921 about 32.6 p.c. of the population of Canada, while their 1930 building permits aggregated \$166,379,325 or 36 p.c. of the total contracts awarded, as shown in Table 1. In Table 3 the 35 cities for which statistics of building permits are available since 1910 are indicated by an asterisk (\*), and the totals for these cities are given beneath the totals for the larger group.

Table 4 shows the value of the building permits issued by 35 cities in the years 1910-1930. The average weighted index numbers of wholesale prices of building materials since 1913 are also given, as are the average indexes of wages in the building trades since 1910, the latter being compiled by the Department of Labour, and the former by the Dominion Bureau of Statistics. These indexes are introduced to show as far as possible the fluctuations in building costs with their effect upon construction work. Attempts have been made to determine the relative proportion of material and wage costs in general building, but representative data could not be obtained.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North and South Vancouver. South Vancouver and Point Grey were annexed to Vancouver city as from Jan. 1, 1929.

The construction contracts in 1930 as shown in Table 2 decreased by 20.7 p.c., whereas the building permits of 61 cities in Table 3 decreased 29.2 p.c. The more favourable showing of construction contracts was due in large measure to the high level of activity in engineering construction, which is covered only to a very limited extent by building permits. In fact, an unusually large proportion of the construction carried on during 1930 consisted of hydro-electric undertakings, the building of highways, bridges, sewers, waterworks, etc.

### 3.—Value of Building Permits Taken Out in 61 Cities for the calendar years 1925-1930.

NOTE.—Asterisks indicate the 35 original cities, statistics for which are available since 1910.

## CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings:—historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries, principal commodities imported and exported; trade in raw and manufactured products; Canada's position in international trade; main historical tables and tables showing current trends (Tables 1 to 35); and comparison of the volumes of imports and exports (Table 36). The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

### Section I.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on by Governments permeated by the mercantile spirit, for "ships, colonies and commerce" Owing to this fact, was resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering state arrived to take over the import and export trade, which thereafter flowed in new channels perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal for the most part, returned to France, and the trade of the colony fell into the hands of the traders from England, Scotland and New England, who had swarmed into the country at the heels of the invading armies. Some of their descendants are still among the leaders in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British

North America was, however, a factor which could not permanently be ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 Great Britain made considerable concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government, and, coming at a time when all important parties in Great Britain had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials, and import from Great Britain the manufactured commodities which they required.

**The Abolition of Preference and the Reciprocity Treaty of 1854.**—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent throwing open of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction between Great Britain and the United States during the Civil War period and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the ten-year period for which it had been negotiated, and ceased to operate 12 months later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent absorb each other's products.

**Tariff Policy since Confederation.**—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became conterminous with British North America, the area of internal free trade was thereby extended, while protection against outside com-

petition was generally maintained. However, the protective tariff of the old province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the world-wide depression which commenced in 1873, and the consequent falling off in a revenue based upon trade, necessitated an increase of the general rate to 17½ p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from 17½ p.c. to 20 p.c., the rates on cotton goods from 17½ p.c. to rates, specific and *ad valorem*, equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods and woodenware, to 25 p.c. Pig iron, previously free, now paid \$2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and 17½ p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards, but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements, and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, binder-twine, barbed wire, pig iron, flour, and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced, but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This "reciprocal" tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India, while Belgium and Germany, in virtue of their trade treaties with Great Britain, were also admitted to the benefits of the "reciprocal" tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunis and Venezuela, on account of most-favoured-nation treaties between these countries and Great Britain, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the "reciprocal" tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga and Spain, under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation by Great Britain of her most-favoured-nation treaties with Germany and Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and later of a remission of 33¼ p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

*Customs Tariff of 1907.*—In 1907 a new customs tariff was introduced, establishing three scales of duties, British preferential (the lowest), intermediate and general, the intermediate tariff being set up as a basis for negotiation with foreign countries in the interest of Canadian trade. This tariff of 1907 is still in operation, with modifications. Under it, the British preferential tariff applied in 1930 to nearly the whole of the British Empire except Australia. With Australia, however, there is an exchange of preferences on a restricted list of goods.<sup>1</sup> To the British West Indies, under an agreement of June, 1920, rates of duties were granted even lower than those of the ordinary preferential tariff—in nearly all cases a remission of 50 p.c. of the duty ordinarily charged. This trade agreement of 1920 was replaced in 1925 by a more extensive one (see p. 482). The regular British preference was further increased in 1923 (13-14 Geo. V, c. 42) by a discount of 10 p.c. of the amount of duty computed under the British preferential tariff, when goods paying 15 p.c. duty or over are conveyed without transshipment from a port of a country enjoying the British preferential tariff into a sea or river port of Canada. The British preferential tariff was extended to Newfoundland by Order in Council of June 26, 1928. Prior to that time the general tariff applied to Newfoundland except that her fish were admitted free.<sup>2</sup>

The intermediate tariff applied in 1930 to the products of the following countries:—France with her colonies and protectorates, Belgium, Italy, and the Netherlands (all these under special treaties), Argentina, Colombia, Cuba, Denmark, Japan, Norway, Spain, Sweden, Switzerland and Venezuela (under reciprocal most-favoured-nation-clause treatment). New commercial treaties with France (including her colonies and protectorates) and Italy were approved at the 1923 session of Parliament (13-14 Geo. V, cc. 14 and 17), a commercial convention with Belgium at the 1924 session (14-15 Geo. V, c. 9), agreements with Australia, Finland and the Netherlands (including the Dutch colonies) at the 1925 session (15-16 Geo. V, cc. 30, 11 and 19), and a trade convention with Czechoslovakia at the 1928 session (18-19 Geo. V, c. 18). Under c. 52 of 1928, most-favoured-nation agreements with Estonia, Hungary, Latvia, Lithuania, Portugal, Roumania and Yugoslavia became effective in 1928. The present situation with regard to Canadian tariff arrangements with foreign countries is shown in the following table<sup>3</sup>:—

Country.	Treaty or Convention.	Date.
Argentine Republic.....	Treaty of Amity, Commerce and Navigation with Great Britain.....	Feb. 2, 1825.

Venezuela.....	Treaty of Amity, Commerce, and Navigation between Great Britain and Colombia (of which Venezuela was then part).....	April 18, 1825.

<sup>1</sup> In consequence of adopting a new tariff Aug. 1, 1929, Roumania began a revision of her trade treaties. The most-favoured-nation arrangement with Canada was to be terminated as from May 26, 1930, but was extended to Sept. 1, 1930. It is understood that reciprocal most-favoured-nation treatment is still practised.

*Dumping Duties*<sup>1</sup>.—In the Canadian custom tariff there is also an anti-dumping clause. In 1930 the statutory provisions relative to the levying of special or dumping duty were amended. Special or dumping duty is now leviable upon goods exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada is less than the fair market value of the same article when sold for home consumption in the usual and ordinary course in the country whence exported to Canada at the

<sup>1</sup> Revised in the Customs and Excise Division, Department of National Revenue.

time of its exportation, or is less than the fair market value, or value for duty thereof, as determined or fixed under the provisions of the Customs Act, R.S.C., 1927, c. 42 (see also sections 36, 37, paragraphs "a" and "e" of 41, and section 43, Statutes of 1930, c. 2).

It is provided that the special duty shall not exceed 50 p.c. *ad valorem* in any case and that goods of a class subject to duty under the Excise Act shall be exempt.

It is provided, however, that on importations from Australia under The Australian Trade Agreement Act, 1925, special duty shall not exceed 15 p.c. *ad valorem* in any case.

Provision is also made for levying of additional special or dumping duty not exceeding 50 p.c. when it appears that any person owning or controlling or interested in a business in Canada and also in any other country, or carrying on a business in any other country and owning, controlling or interested in a business operating in Canada is enabled thereby to import goods for further manufacture, or assembling, or for resale and disposes of such imported goods, whether in the form as imported or as further processed, assembled or manufactured, at prices below the duty paid value thereof as entered at Customs plus, if any, the cost of processing, assembling or further manufacture in Canada. The Minister may declare that goods of such class or kind were and are an importation subject to additional special or dumping duty not exceeding 50 p.c.

The Governor in Council is given power to prohibit the importation of any goods exported directly or indirectly from any country not a contracting party to the Treaty of Versailles executed at Paris, France, on the 28th June, 1919.

In the event of producers of goods, other than agricultural products, increasing prices in consequence of the imposition of any duty under the provisions of the Customs Tariff the Governor in Council is given the power to reduce or remove such duty.

**Drawbacks.**—Drawbacks of 99 p.c. of duties paid on imported materials are allowed by the customs laws and regulations in cases where articles manufactured from such materials are afterwards exported.

**Surtax.**—In 1903, the Customs Tariff Act of 1897 was amended to provide for a surtax of one-third of the duty on goods the product of any foreign country which treats imports from Canada less favourably than those from other countries. This surtax was at once applied against certain German goods, but was removed on Mar. 1, 1910, when Canada obtained the conventional rates of the German tariff on a specified list of goods. Under the Customs Tariff Act of 1914, the rate of surtax is left to be fixed in each case by the Governor in Council, but is not to exceed 20 p.c. *ad valorem*.

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

**Empire Tariff Preferences on Canadian Goods.**<sup>1</sup>—*Great Britain*—Soon after the inauguration of the British preferential tariff by Canada, there com-

<sup>1</sup> Revised by Wm. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce. A pamphlet "Empire Tariff Preferences on Canadian Goods" recently issued by the Foreign Tariffs Division of the Commercial Intelligence Service gives more detailed information on this subject.

menced a movement for specially favourable treatment by Great Britain to "Empire" products. The feeling that Great Britain should give special treatment to such products was in evidence at the Colonial Conference of 1902 and at the Imperial Conferences of 1907 and 1911, but the British Government of 1902 was not ready for the issue, while those of 1907 and 1911 had been elected on a free trade platform. With the Great War, however, there came a change. In 1915 Great Britain imposed customs duties (the so-called "McKenna" duties) on motor cars, motorcycles, musical instruments, watches and clocks, and parts for these articles, all subject to 33½ p.c. *ad valorem* general tariff and two-thirds of this amount (or 22½ p.c.) *ad valorem* British preferential tariff. Cinematograph films, which come under a specific rate of duty, were also affected, with a preferential rate of two-thirds of the general rate. These duties were allowed to expire on Aug. 2, 1924, but were restored on July 1, 1925. Preferential treatment has been extended to include Empire-grown raw tobacco, dried fruits, sugar and articles containing sugar, silk and artificial silk. Certain articles such as arc-lamp carbons, optical and scientific instruments, scientific glassware, wireless tubes, certain chemicals and similar goods are subject to what are called "key industry" duties when imported from foreign countries but are free from Empire countries. Lace and embroidery, cutlery, gloves, incandescent gas mantles, packing and wrapping paper, pottery, buttons and hollow-ware have been subjected to "safeguarding" duties for periods of 5 years beginning at fixed dates in each case, with a preference of about ¼ off for Empire products. There are certain other dutiable goods with varying Empire preferences. Concessions have been granted on nearly all dutiable goods. It is to be noted that Great Britain levies import duties on a limited range of merchandise and the concessions, of course, are within the scope of the tariff.

*Other Empire Countries.*—Without the formality of trade agreements, New Zealand, Southern Rhodesia, Zambesi Basin of Northern Rhodesia, Cyprus, Fiji, and Western Samoa accord preferences to practically all Canadian goods. Under the terms of the latest trade agreement between Canada and the British West Indies, Bermuda, British Guiana and British Honduras, made in 1925 but brought formally into force in 1927 for a ten-year period, Canada grants to these colonies specific preferences on sugar and other selected tropical products as well as a 50 p.c. reduction on the general tariff in return for substantial reciprocal concessions on flour, lumber, motor vehicles, machinery, etc. Preferences on Canadian goods up to 66½ p.c. are included in some cases. There are preferences for specified Canadian goods entering Australia as provided for in a trade agreement. The Irish Free State, Union of South Africa, Southwest Africa, Walfish Bay, Basutoland, Bechuanaland Protectorate, Swaziland, British Borneo, Mauritius, and Gibraltar (spirituous goods only), accord preferences on limited lists of goods, varying much in the different countries.

## Section 2.—The Commercial Intelligence Service.<sup>1</sup>

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial

<sup>1</sup> Revised by H. W. Cheney, Secretary, Commercial Intelligence Service, Department of Trade and Commerce.

conditions, variations in markets and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

**Organization at Ottawa.**—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions:—Trade Inquiries—where trade reports and information on foreign markets are filed in order to answer foreign and Canadian trade inquiries; Editorial—where the Commercial Intelligence Journal is compiled; Foreign Tariffs—where all the latest tariff data are kept and tariff inquiries answered; and the division handling the Directory of Canadian Exporters—where Canadian exporters are listed, with their agents abroad, commodities handled, ratings, cables and codes used, etc., and where the Foreign Importers' Directory is kept up to date by periodical reports from the Canadian Trade Commissioners.

Also, in order to keep abreast of Canadian industrial development, each Canadian Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to the Canadian manufacturer regarding opportunities and conditions of trade in his territory.

**Organization Abroad.**—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office and cable address of the Trade Commissioner in each case, is given below:—

## CANADIAN GOVERNMENT TRADE COMMISSIONERS.

Note.—Cable address of Trade Commissioners is "Canadian" unless otherwise stated.

<i>Argentine Republic</i> (Territory includes Chile and Uruguay).....	E. L. McColl, B. Mitre 430, Buenos Aires (1).
<i>Australia</i> .....	D. H. Ross. Address for letters—Box 196C, G.P.O., Melbourne. Office—Safe Deposit Building, Melbourne. Commercial Agent: B. Millin, The Royal Exchange, Sydney, N.S.W.
<i>Belgium</i> (Territory includes Roumania, Bulgaria, Hungary).....	Jean J. Guay, 98 Boulevard Adolphe Max, Brussels.
<i>Brazil</i> .....	A. S. Bleakney. Address for letters—Caixa Postal 2164, Rio de Janeiro. Office, Ed. Da "A Noite", Sala 302, Praca Maua.
<i>British West Indies</i> —	
<i>Trinidad</i> (Territory includes Barbados, Windward and Leeward Islands, British Guiana).....	L. S. Glass. Address for letters—P.O. Box 125, Port of Spain.
<i>Jamaica</i> (Territory covers Jamaica, Hayti, the Bahamas and British Honduras).....	F. W. Fraser, P.O. Box 225, Kingston. Office—Jamaica Mutual Life Insurance Building.
<i>China</i> .....	L. M. Cosgrave. Address for letters—P.O. Box 300. Office—Daily News Building, 17 The Bund, Shanghai.
<i>Cuba</i> (Territory includes San Domingo and Porto Rico).....	James Cormack. Address for letters—Apartado 1945. Office address—Calle Obrapia 35, Havana, Cuba.
<i>Egypt</i> (Territory includes the Sudan, Mesopotamia, Cyprus, Syria, and Persia).....	Yves Lamontagne. Address for letters—P.O. Box 1770, Cairo. Office—22 Shari Kasr el Nil, Cairo.
<i>France</i> (Territory includes French Colonies in North Africa).....	Hercule Barré, 3 rue Scribe, Paris (9). Cable add., Cancocmac.
<i>Germany</i> (Territory covers Germany—except the Rhine Valley—Czechoslovakia, Austria, Poland, Estonia, Latvia, Lithuania, and Soviet Russia).....	J. D. Wilgrès, Gutrufhaus, Neuerwall 10, Hamburg 36.
<i>Greece</i> (Territory includes Turkey).....	Henri Turcot, 1 Corai Street, Athens.

CANADIAN GOVERNMENT TRADE COMMISSIONERS—*concluded.*

Note.—Cable address of Trade Commissioners is "Canadian" unless otherwise stated.

<i>Hongkong</i> (Territory includes South China, the Philippines, British North Borneo, and Indo-China).....	Paul Sykes, P.O. Box 80. Office, Exchange Building, Hongkong.
<i>India and Ceylon</i> .....	R. T. Young, P.O. Box 2003, Office—8 Esplanade Mansions, Government Place East, Calcutta.
<i>Irish Free State</i> .....	J. H. English, 66 Upper O'Connell Street, Dublin.
<i>Italy</i> (Territory includes Spain, Portugal, Gibraltar, Canary Islands, Malta, Italian Colonies in Africa, Albania and Yugoslavia).....	A. B. Muddiman, Via Manzoni Nr. 5, Milan (102).
<i>Japan</i> — Tokyo.....	J. A. Langley, Commercial Secretary. Address for letters—P.O. Box F101, Tokyo Central. Office—Imperial Life Assurance Building, Marunouchi, Tokyo.
Kobe.....	Richard Grew. Address for letters—P.O. Box 230. Office—Chamber of Commerce Building, Kobe.
<i>Mexico</i> (Territory includes Central American Republics).....	C. Noel Wilde. Address for letters—Apartado Num. 126-bis, Mexico City. Office—Edificio Banco de Londres y Mexico, Num. 30. Cable address, Cancoma.
<i>Netherlands</i> (Territory includes the Rhine valley and Switzerland).....	J. C. MacGillivray, Beursplein 26B, Rotterdam.
<i>Netherlands East Indies</i> (Territory includes Straits Settlements, Federated Malay States, and Siam).....	G. R. Heasman, P.O. Box 84, Batavia, Java.
<i>New Zealand</i> .....	C. M. Croft. Address for letters—P.O. Box 33, Auckland. Office—Yorkshire House, Shortland Street, Auckland.
<i>Norway</i> (Territory includes Scandinavian countries and Finland).....	F. H. Palmer, Jernbanetorvet 4, Oslo.
<i>Panama</i> (Territory includes Venezuela and Colombia).....	J. A. Strong, Box No. 222, Panama City.
<i>Peru</i> (Territory includes Bolivia and Ecuador).....	Acting Trade Commissioner, Casilla 1212, Lima. Office—Calle Coca 478.
<i>South Africa</i> .....	C. S. Bissatt, P.O. Box 683. Office—Westminster House, Adderly Street, Cape Town. Cable address, Cantracom.
<i>United Kingdom</i> — London (Territory covers Home countries, South-eastern Countries, and East Anglia).....	Harrison Watson, Canadian Building, Trafalgar Square, S.W. 1, England. Cable address, Sleighing, London.
London (Territory—for fresh fruit only—covers United Kingdom, Norway, Denmark, Sweden, France, Holland, Belgium, Germany, and Spain).....	J. Forsyth Smith, Fruit Trade Commissioner, Walter House, Bedford Street, Strand, W.C. 2. Cable address, Canfrucom.
Liverpool (Territory covers North of England, Lincolnshire, North Midlands, and North Wales).....	Harry A. Scott, Trade Commissioner, Century Bldgs., 31 North John Street.
Bristol (Territory covers West of England, South Wales, and South Midlands).....	Douglas S. Cole, Sun Building, Clare Street.
Glasgow (Territory covers Scotland and Northern Ireland).....	Gordon B. Johnson, 203 St Vincent Street. Cable address, Cantracom.
<i>United States</i> — New York City (Territory covers New England, Atlantic seaboard States, Pennsylvania; also the Bermudas).....	Frederic Hudd, 44 Whitehall Street. Cables, Cantracom.
Chicago (Territory covers the Middle West and the Mississippi valley).....	R. S. O'Meara, Willoughby Tower, 8 S. Michigan Avenue.
San Francisco (Territory covers the Pacific Seaboard and Rocky Mountain States).....	H. R. Poussette, 310 Sansome Street.

**Commercial Intelligence Journal.**—The Commercial Intelligence Journal, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is \$1 per annum in Canada and \$3.50 outside of the Dominion.

Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the Commercial Intelligence Journal.

### Section 3.—Statistics of External Trade.<sup>1</sup>

**NOTE.**—For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of the terms used should be carefully kept in mind.

**Fiscal Years.**—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

**Quantities and Values.**—In all the following tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

**Imports: Valuation.**—"Imports" means "Imports entered for consumption" "Entered for consumption" does not imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

The value of imported merchandise is the fair market value or the price thereof when sold for home consumption in the principal markets of the country whence, and at the time when, the same were exported directly to Canada. The "price" and "value" of the goods in every case are stated as in condition packed ready for shipment, the fair value being shown in the currency of the country of export, and the selling price to the purchaser in Canada shown in the actual currency in which the goods were purchased. In the case of goods that are the manufactures or produce of a foreign country the currency of which is substantially depreciated, the value stated is the value that would be placed on similar goods manufactured or purchased in the United Kingdom and imported from that country, if such similar goods are made or produced there. If similar goods are not made or produced in the United Kingdom, the value stated is the value of similar goods made or produced in any European country the currency of which is not substantially depreciated.

**Canadian Exports: Valuation.**—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, flour ground from imported wheat, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence originally shipped.

**Foreign Exports: Valuation.**—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

<sup>1</sup>Revised by W. A. Warne, Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the Annual Report of the Trade of Canada, the Condensed Preliminary Report of the Trade of Canada (annual), the Quarterly Report of the Trade of Canada, the Calendar Year Report of the Trade of Canada, the Summary of the Trade of Canada (monthly), etc. For complete list of the publications of the Branch see Chapter XXVIII, Section 1, under "External Trade."

*Countries to which Trade is Credited.*—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of trans-shipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of trans-shipment or transfer from one means of conveyance to another.

*Discrepancies in Trade Statistics between Canada and Other Countries.*—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and the valuations of other countries.

(2) Even where the statistics cover the same period of time, there are quantities of goods in transit at the beginning and end of the period. Such goods are included in the statistics of the exporting country but not in the statistics of the importing country.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. Thus about 40 p.c. of Canada's exports to overseas countries are shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are to a large extent routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium and France are included in Canadian imports from those countries, but are not included by those countries in exports to Canada.

For a more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, published by the Dominion Bureau of Statistics.

### Subsection I.—Historical Statistics of Canadian Trade.

A general view of the trade of Canada in the fiscal years from 1868 to 1930 is furnished in Table I (p. 513), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising through different methods adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce after 1920 has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past ten years, re-exports of foreign products from bonded warehouses have no longer been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. From 1915 to 1929, except in the fiscal year ended Mar. 31, 1921, there was an annual excess of total exports over imports entered for consumption. In the fiscal year ended Mar. 31, 1930, however, there was an excess of imports.

The percentage of exports to imports rose to a peak of 164.62 in 1918, owing to the exportation of war supplies, then dropped to 97.60 in 1921, rose again to 143.28 in 1926 and has since declined to 109.72 in 1929 and 91.72 in 1930.

The values of coin and bullion imported and exported are shown in Table 3. Amounts collected in export duties from 1868 to 1892, and in import duties from 1868 to 1930, together with the cost of collection expressed as a percentage of the total duties, are stated by years in Table 4. Tables 5 and 6 show respectively our exports of Canadian produce and our imports for home consumption, furnishing figures of our trade with the United Kingdom, United States and other countries since 1868. These figures show the overwhelming predominance of the two great English-speaking countries in our foreign trade; in the fiscal year ended Mar. 31, 1930, for example, 71.2 p.c. of our exports of domestic produce was shipped to these two countries, which, in the same year, together provided 83.1 p.c. of our imports for home consumption. Tables 7 and 8 show respectively by years the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1907, and the *ad valorem* rates of duty collected on imports from these and from all countries from 1868 to 1930.

Importations of important raw materials used in Canadian manufacturing industries are given in Table 9 for the fiscal years ended 1911 to 1930.

The statistics in the following table indicate the trend of Canadian trade by main groups in 1914 (pre-war year), 1921 (peak year of post-war inflation) and 1930, (a) with all countries; (b) with the United Kingdom; and (c) with the United States.

SUMMARY OF THE TRADE OF CANADA BY MAIN GROUPS, FISCAL YEARS ENDED  
MAR. 31, 1914, 1921 AND 1930.

**Subsection 2.—General Analysis of Current Import and Export Trade.**

The external trade of Canada, in common with that of every other country in the world, suffered a severe decline, both in volume and in value, following the war. The decline in value, owing to lower prices, was very much greater than that in volume, as is shown in Table 37 on pp. 582-583 of the 1930 Year Book.

Allowing for the price changes, the physical volume of Canada's imports was greater for the fiscal year 1930 than for any previous year, while, owing largely to reduced exports of grains, the volume of exports declined in 1930. The particulars are set forth in the following table:—

Fiscal Year.	Imports.		Exports (Canadian).	
	Declared Value.	Based on 1926 Average Value.	Declared Value.	Based on 1926 Average Value.
	\$	\$	\$	\$
1924.....	893,367,000	855,692,000	1,045,351,000	1,189,945,900
1925.....	796,933,000	805,247,000	1,099,067,000	1,121,360,900
1926.....	927,329,000	927,329,000	1,315,356,000	1,315,356,000
1927.....	1,030,893,000	1,100,530,000	1,252,158,000	1,233,685,000
1928.....	1,108,956,000	1,190,832,000	1,228,349,000	1,302,285,000
1929.....	1,265,679,000	1,403,856,000	1,363,710,000	1,548,578,000
1930.....	1,248,274,000	1,465,155,000	1,120,258,000	1,254,974,000

Canada's total foreign trade during the year ended Mar. 31, 1930, showed a decrease compared with 1929 of 9.8 p.c., but compared with 1928 an increase of 1.4 p.c. The decrease compared with the year 1929 in imports amounted to 1.4 p.c., and in exports to 17.6 p.c. The decrease in exports was mainly accounted for by the smaller exports of grains, particularly wheat, to the United Kingdom and Continental Europe, due partly to lower yields but also reflecting temporary marketing policies as well.

If the exports of barley, flaxseed, oats, rye, wheat and wheat flour are eliminated from the Dominion's domestic exports for 1929 and 1930, it will be noted that the exports of "all other commodities" show an increase for 1930 over 1929 of \$23,892,074. The particulars are set forth in the following table:—

**CANADA'S DOMESTIC EXPORTS, LESS EXPORTS OF BARLEY, FLAXSEED, OATS, RYE, WHEAT AND WHEAT FLOUR, FISCAL YEARS ENDED MAR. 31, 1929 AND 1930.**

Item.	1929.	1930.	Increase (+) Decrease (-).

Totals, Domestic Exports.....	1,363,709,672	1,120,258,302	- 243,451,370
Totals, Exports "All Other Commodities".....	817,527,241	841,419,315	+ 23,892,074

**Statistical Tables of Current Trade.**—Tables 10 to 18 (pp. 521-587) deal with the current trade statistics of the Dominion. Tables 10 and 11 are sum-

many tables, showing by groups our trade with the United Kingdom, the United States and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13 for imports of all important articles. Table 14 shows by main classes imports as dutiable and free and exports as of Canadian and foreign produce for the five fiscal years ended 1930. Table 15 shows imports and exports for the fiscal year ended 1930 by degree of manufacture and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries under the preferential, treaty rate and general tariffs in 1929 and 1930.

### Subsection 3.—Trade with the United Kingdom and the British Empire.

**Trade with the United Kingdom.**—The following table gives a summary of the trade of Canada with the United Kingdom during the year ended Mar. 31, 1930. Values of exports and imports are shown by principal commodities and group totals, together with increases or decreases in 1930 as compared with 1929.

The table shows clearly the extent to which Canadian imports from the United Kingdom are made up of textiles and alcoholic beverages, while the major portion of domestic exports to the United Kingdom is made up of vegetable and animal products, such as grains, meats, furs and dairy products. With reference to the exports of Canadian grains to the United Kingdom, attention is directed to discrepancies in the trade figures, discussed on pp. 486 and 487 of this volume. The commodities making up our export and import trade with the United Kingdom are dealt with in much greater detail in Tables 12 and 13 of this chapter.

#### SUMMARY OF CANADIAN TRADE WITH THE UNITED KINGDOM, BY GROUPS AND PRINCIPAL COMMODITIES, YEAR ENDED MAR. 31, 1930, WITH INCREASES OR DECREASES AS COMPARED WITH 1929.

**Trade of Canada with the British Empire.**—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended by Order in Council from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. Australia receives special concessions under the Trade Agreement of 1925 and the British West Indies under the agreement of 1925 referred to on p. 482. The British Preferential Tariff enacted in 1897, as well as trade treaties and agreements negotiated with British and foreign countries, have had the effect of stimulating Canada's external trade. When the British preference became effective in 1897 Canada's total imports from the United Kingdom in that year amounted to only \$29,401,000, compared with an import in 1887 valued at \$44,741,000, and in 1873 at \$67,997,000. From 1873 to 1897 imports from the United Kingdom decreased \$38,596,000 or 56.7 p.c., while from 1897 to 1930 they increased \$159,779,000 or 543.4 p.c. Thus since the introduction of the British Preferential Tariff a downward trend in imports from the United Kingdom has changed to one strongly upward. But in spite of the encouragement offered by the Preferential Tariff a study of the figures in the following table will show that trade with the United Kingdom, and with the British Empire as a whole, has not grown so rapidly as that with foreign countries, with the result that in both imports and exports the percentage of the total trade of Canada carried on with the British Empire has declined. The proportion of trade with parts of

the Empire other than the United Kingdom has increased but not sufficiently to overcome the decreased percentage with the United Kingdom. The trade of Canada with the British Empire for the fiscal years 1886, 1896, 1906, 1914, 1922, 1929 and 1930 was as under:—

## TRADE OF CANADA WITH THE BRITISH EMPIRE.

## Subsection 4.—Trade with the United States and Other Foreign Countries.

**Trade with the United States.**—During the fiscal year 1930, nearly 68 p.c. of Canadian imports came from the United States, including large importations in all the main groups of commodities. Iron and Its Products was the most important group, including automobile parts and engines for Canadian automobile factories, machinery for the expanding industries and mineral development of Canada, and rolling-mill products for further manufacture in Canadian factories, as well as finished motor vehicles and farm implements. The second most important group was Non-Metallic Minerals, which includes coal and petroleum products. Imports of coal are remaining about stationary, while imports of petroleum are expanding rapidly with the increase in motor vehicles. Among Canadian exports to the United States, the Wood and Paper Products group was by far the most important. Indeed newsprint paper constituted almost one-quarter of the total exports to the United States. Since the recent expansion of newsprint mills in Canada exports of newsprint have increased, while those of pulpwood and wood-pulp have declined somewhat. Recent mineral development in Canada resulting in largely increased exports of raw gold, copper and nickel has made Non-Ferrous Metals the second most important group of exports, while the Animal Products group, including fish, cattle, furs and meats, was third. Values of imports and exports of the main groups and principal commodities in trade with the United States are shown in the following table:—

## SUMMARY OF CANADIAN TRADE WITH THE UNITED STATES, BY GROUPS AND PRINCIPAL COMMODITIES, YEAR ENDED MAR. 31, 1930, WITH INCREASES OR DECREASES AS COMPARED WITH 1929.

For a more detailed treatment of the commodities making up our export and import trade with the United States, see Tables 12 and 13 of this chapter.

**Canadian Trade via the United States.**—Imports from overseas countries via the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports, (2) additional concessions to goods imported under the Preferential Tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported via a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1930 imports via the United States have decreased from 9.5 p.c. to 2.4 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries via the United States shows a slight decline since 1927, the percentages for the past nine fiscal years being:—1922, 32.8; 1923, 41.1; 1924, 36.2; 1925, 39.3; 1926, 39.2; 1927, 39.5; 1928, 38.9; 1929, 36.7; 1930, 33.8. Details by countries are given in Table 21 of this chapter.

**Trade with Other Foreign Countries.**—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1930 are shown in the following table. Imports from the United States have increased from 44.6 p.c. to 67.9 p.c. of total imports, while imports from other foreign countries have remained fairly constant. In the case of Canadian exports, on the other hand, those to the United States have remained about 35 p.c. to 45 p.c. of the total, while those to other foreign countries have increased from 4.5 p.c. to over 20 p.c. of total Canadian exports.

TRADE OF CANADA WITH THE UNITED STATES AND OTHER FOREIGN COUNTRIES.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 22 to 35, giving the trade of Canada in leading commodities with 42 British and foreign countries for the fiscal years 1929 and 1930.

### Subsection 5.—Geographical Distribution of Canadian Trade by Continents and Countries.

**Geographical Distribution of Canadian Trade by Continents.**—During the fiscal year ended Mar. 31, 1930, Canada sold more goods to the continent of North America than to Europe. The large reduction in the exports of grain products was a major factor in the relative distribution of Canadian exports among the continents, and accounted for greatly decreased exports to Europe and Asia, while exports to North and South America, in which grain products play a small part, increased over those of 1929. Imports from North America decreased, those from Europe remained about the same, while those from South America, Oceania and Africa continued to increase. Summary statistics are given in the following table:—

TRADE OF CANADA, BY CONTINENTS, 1926, 1929 AND 1930.  
(With proportion of Trade with each Continent.)

**Imports from Principal Countries.**—The relative order of the four leading countries which supplied Canada with goods in the fiscal year ended Mar. 31, 1930, was unchanged from 1929, although in the case of the first three countries the values decreased. The principal countries from which Canada increased her imports over the previous year were New Zealand (butter), Peru (crude oil and sugar), Argentina (corn and flaxseed) and British East Africa (sugar). Countries besides the United States, the United Kingdom and France from which imports fell off were Fiji (sugar), Cuba (sugar) and British India (tea and jute fabrics). While the countries which provided Canada's 1930 imports did not alter very much as compared with 1929, during the eight years from 1922 to 1930 there have been some very significant changes. Germany has risen from 19th to 4th place, imports from that country having increased tenfold. Imports from New Zealand and Australia have increased greatly under the trade agreements with those countries, New Zealand having risen from 22nd to 5th place and Australia from 30th to 17th. Increased importations of crude oil from Colombia have raised

that country from 35th to 13th place. On the other hand the diversion of imports of raw sugar and other tropical products from Cuba and Santo Domingo to countries willing to make more favourable trade agreements with Canada has resulted in Cuba dropping from 4th to 21st place and Santo Domingo from 10th to 29th place in the import trade.

## CANADA'S IMPORTS FROM THIRTY-FIVE LEADING COUNTRIES, 1930.

**Exports to Principal Countries.**—An analysis of Canada's total domestic exports by countries, 1930, demonstrates that the decreases when compared with 1929 occurred chiefly in the exports to those countries that purchase large quantities of grains, principally wheat, from Canada, such as the countries of Europe and China and Japan in the Orient. Indeed if the exports of grains during the two years be eliminated from exports to such countries, it will be found that exports of other commodities were well maintained, while in the case of some countries where grain products form an insignificant part of Canada's exports there were increases, as in exports to the United States, Argentina and

New Zealand. When compared with 1922, a number of important changes have occurred in the relative importance of various countries as a market for Canada's goods. The United States has replaced the United Kingdom as Canada's principal customer. Germany has risen from 12th to 4th place; Argentina from 17th to 6th; New Zealand from 13th to 7th; and China from 23rd to 8th place. Italy has dropped from 3rd place in 1922 to 13th in 1930; Australia from 6th to 10th; while Cuba, Trinidad and Tobago, British Guiana and Barbados seem to be growing less important as markets for Canadian products, since the value of exports to these countries in 1930 was either less or but little greater than in 1922.

**Statistical Tables of Trade by Countries.**—Statistics showing the course of import and export trade during the latest five fiscal years by countries with which Canada carries on trade will be found in Tables 19 (imports) and 20 (exports). Table 21 shows by countries the values of goods imported into and exported from Canada via the United States for the latest two fiscal years.

Finally, the trade of Canada with the leading countries with which she trades (other than the United Kingdom and the United States, which are exhaustively dealt with in Tables 12 and 13), is analysed by countries and by leading commodities in Tables 22-35, for the latest two fiscal years. Historical tables showing our trade with these and other countries in each year since Confederation will be found on pp. 17-23 of the annual report of the Trade of Canada for 1930, published by, and obtainable from, the Dominion Bureau of Statistics.

### Subsection 6.—Principal Commodities Imported and Exported.

The following table gives in summary form the values of the principal commodities which constituted the import and export trade of Canada in the fiscal year 1930. The commodities are classified under the nine main groups. Increases or decreases in value in 1930 as compared with 1929 are shown. The table illustrates the extent to which exports predominated in the Vegetable, Animal, Wood and Non-Ferrous Metal groups, while imports exceeded exports in the Textile, Iron, Non-Metallic Mineral, Chemical and Miscellaneous groups.

For further information respecting Canada's trade in principal commodities with all countries, fiscal years 1927-1930, see Table 13 for imports and Table 12 for exports.

**Canada's Principal Imports.**—An analysis of 62 leading commodities imported for Canadian industries in 1930, indicates that about one-third of Canada's total imports is for use in the various industries of the country. Of these 62 commodities imported for Canadian industries, amounting to \$351,238,000 in 1930, 50·7 p.c. were raw materials, 22·2 p.c. partly manufactured and 27·1 p.c. fully manufactured goods, such as automobile engines and parts, iron and steel articles for agricultural implements, etc. The total value of these 62 commodities imported in 1930 was \$40,663,000 less than in 1929, whereas total imports were only \$17,406,000 less.

Compared with the previous year, imports of crude petroleum increased \$13,000,000, of electric apparatus nearly \$11,000,000 and of machinery nearly \$9,000,000, while imports of automobile parts decreased \$20,000,000, of farm implements \$10,000,000 and of automobiles \$8,000,000.

The following statement gives the values of Canada's leading imports for the fiscal years 1890, 1900, 1910, 1920 and 1930, the commodities being arranged by order of importance in 1930. It is an interesting study to note the changing relations over this period of forty years between the values of commodities when thus listed by rank. Machinery, which now heads the list with imports valued at \$69,000,000, was in sixth place ten years ago, when its imports were valued at \$36,700,000. Forty years ago, imports of machinery ranked eleventh. On the other hand, woollen goods which to-day are tenth by order of value, ranked an easy first in 1890 and retained a position among the first three commodities imported until 1920. During the entire period, coal has kept a fairly uniform position among the first three commodities. Sugar and its products, which held a fairly high position prior to 1910, rose to first place in 1920, but in 1930 dropped to thirteenth place.

**Canada's Principal Exports.**—During 1930 the declared value of the 54 commodities exported, for which there were quantity statistics, amounted to \$913,856,000 or 81.6 p.c. of the total domestic exports, while the total value of the identical commodities at 1929 average export prices totalled \$912,450,000, thus indicating that the decrease was not due to lower export price, but to a falling off in the physical volume of Canada's exports.

The chief reasons for the reduction in Canada's exports during the fiscal year 1930 as compared with 1929 were the smaller grain crops and the unusual situation which arose in the marketing of these products. Thus the chief commodities to show decreases in exports were:—wheat \$213,000,000, wheat flour \$20,000,000, barley \$15,000,000, rye \$9,000,000 and oats \$6,000,000; while decreases also occurred in automobiles of \$8,000,000, and cheese of \$7,000,000. The principal increases in exports occurred in raw gold \$22,000,000, copper ore and blister \$11,000,000, aluminium bars \$5,000,000, potatoes \$5,000,000, apples \$3,000,000 and printing paper \$3,000,000.

## CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1893, 1900, 1910, 1920 AND 1930

From the above statement, it is seen that wheat has been the leading export for more than twenty years. There have, however, been many changes in the order of all other commodities listed. The newer industries such as printing paper and automobiles, which first appear in the 1910 column above, indicate, by their very rapid development and the corresponding way in which they have relegated older industries to subordinate positions in our export trade, how well manufactures based on natural or acquired advantages have fitted into the national economy. The former industry ranked twentieth in 1910, but has now assumed second place; the latter, fortieth in 1910, has risen to seventh place.

#### Subsection 7.—Trade in Raw and Manufactured Products.

**Relation Between Trade in Raw and Manufactured Products.**—The industrial development of a country is indicated by the character of the goods it

imports and exports. In the early years of Canada's development the imports were made up chiefly of manufactured products and the exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed, a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting to a considerable degree of products which have undergone some process of manufacture. Thus, the imports of partly and fully manufactured goods increased from \$129,693,000 to \$959,997,000 between 1900 and 1930, while exports of such goods increased during the same period from \$98,906,000 to \$690,904,000. Since the opening of the present century Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century. While Canada has not gone so far as the United States in increasing exports of manufactured goods but curtailing imports, while curtailing exports of raw materials but increasing imports, she has made considerable progress in this regard since 1914 (the last pre-war fiscal year), though the tendency since 1924 has been slightly in the opposite direction, as the following table shows. This tendency in percentages is accounted for by the fact that, while imports of raw materials have increased since 1924, they have not increased so much as imports of manufactured goods. Similarly, while exports of manufactured goods have also increased, they have not increased so rapidly as exports of raw materials.

STATEMENT SHOWING PROPORTION OF RAW MATERIALS AND PARTLY AND FULLY MANUFACTURED GOODS IMPORTED INTO AND EXPORTED FROM CANADA AND THE UNITED STATES, 1900, 1914 AND 1920-1930.

The table on p. 506 shows how Canada's imports and exports, analysed into the three categories of raw materials, partly manufactured goods, and fully or chiefly manufactured goods, are distributed among the continents and leading countries of the world as well as the United Kingdom, other British Empire countries, the United States, and other foreign countries. This latter analysis clearly demonstrates that the imports into Canada from the British Empire, except the United Kingdom, consist chiefly of raw and semi-manufactured products, while the exports are made up mainly of manufactured products.

In trade with industrialized continents such as Europe and Asia, Canadian imports are largely manufactured goods and exports raw materials or only partly manufactured, while in trade with South America, Oceania, Africa and North America (if the United States be excluded) the situation is the reverse.

See also Table 15 of this chapter on this subject.

CANADA'S IMPORTS AND EXPORTS BY CONTINENTS AND LEADING COUNTRIES  
ACCORDING TO DEGREE OF MANUFACTURE, YEAR ENDED MAR. 31, 1929.

NOTE.—Values in millions of dollars. Totals for continents include trade with other countries than those specified.

### Subsection 3.—Canada's Position in International Trade in the Calendar Years 1913 and 1929.

Canada continues to hold her position in international trade, as indicated by the following table giving "Comparison of the Trade of the Principal Countries of the World". In 1913 the Dominion occupied eighth place in imports among the leading trading countries, but in 1929 she occupied fifth place. In export trade, Canada in 1913 was in tenth position, but in 1929 she had moved up to fifth position. In aggregate trade, Canada in 1913 was in ninth position, but in 1929, as in 1926 to 1928, she was in fifth position. In imports, exports and aggregate trade Canada came next after the four leading trading countries, each of which has from four to twelve times our population, viz., the United States, the United Kingdom, Germany and France.

In trade per capita, Canada has made a very creditable showing since 1913. In that year she occupied fifth place in imports per capita and in 1929 she occupied fifth place, being exceeded by New Zealand, the Netherlands, Switzerland and Denmark. In exports per capita, Canada in 1913 occupied seventh place, but in 1929 she had advanced to third place, being exceeded by New Zealand and Denmark. In aggregate trade per capita, Canada in 1913 was in sixth place among the leading commercial nations of the world, but in 1929 she had moved up to fourth place, New Zealand being in first place, Denmark second and Netherlands third.

*Canada's Share in World Trade.*—Since 1913 Canada has made remarkable progress in the expansion of her export trade to the world's markets, and at the same time in supplying her requirements from all parts of the world. The following table showing "Canada's Share in Imports of Principal Countries" indicates that while the total imports of the 40 countries listed increased from 1913 to 1928 by 53.3 p.c., the share of those imports provided by Canada increased by 236.0 p.c. In 1913 Canada provided only 1.95 p.c. of the total imports of these countries, while in 1928 this share had increased to 4.15 p.c.

## CANADA'S SHARE IN IMPORTS OF PRINCIPAL COUNTRIES, CALENDAR YEARS 1913, 1922 AND 1928.

(Values in Thousands of Dollars.)

The other side of this trade expansion is shown in the table, "Canada's Share in Domestic Exports of Principal Countries", which indicates the increasing proportion of the exports of some 40 countries taken by Canada. While the total

exports of these countries increased from 1913 to 1928 by 57.1 p.c., exports to Canada increased 112.7 p.c. or from 3.39 p.c. to 4.59 p.c. of the total exports of these countries.

CANADA'S SHARE IN DOMESTIC EXPORTS OF PRINCIPAL COUNTRIES, CALENDAR YEARS 1913, 1922 AND 1928.

In the interpretation of these and all tables showing trade between Canada and other specified countries, it should be borne in mind that there are numerous and, in some instances, quite large discrepancies between the figures of trade with a specified country as shown by Canada and as shown by that country.

These arise chiefly through inability in all countries to trace the actual origin of imports and final destination of exports. These discrepancies in trade with the 40 leading countries for the year 1928 were as follows:—

Principal Countries of—	Canada's Imports from.	Recorded Exports to Canada.	Canada's Exports to.	Recorded Imports from Canada.
	\$	\$	\$	\$
Europe.....	277,395,000	244,492,000	640,163,000	546,957,000
North America.....	850,429,000	883,063,000	550,314,000	525,133,000
South America.....	29,281,000	18,400,000	29,416,000	12,686,000
Asia.....	31,304,000	27,268,000	69,936,000	56,220,000
Oceania.....	19,334,000	21,929,000	31,639,000	39,911,000
Africa.....	1,697,000	877,000	14,449,000	12,732,000
Totals.....	1,209,440,000	1,196,029,000	1,335,892,000	1,193,639,000

When the figures of our imports from the principal countries of the different continents are compared with their recorded exports to Canada, it is found that the totals are fairly near together. On the other hand, our exports to these principal countries are quite markedly greater than their recorded imports from Canada. The nearness of our import figures to their export figures is doubtless largely attributable to the facts that but a small proportion of our imports from overseas countries come *via* United States and that we value our imports at their cost in the country whence they are imported, taking no account of freight, insurance and interest during the period in transit. On the other hand, the discrepancy between our exports and the imports recorded from Canada by the leading countries appears to be due in large measure to the fact that so large a percentage of our exports is sent out through the United States. If, therefore, in the foregoing table showing "Canada's Share in Imports of Principal Countries" these discrepancies in their recorded imports from Canada be eliminated, it would appear that Canada's share in their imports in 1928 should amount to \$1,336,000,000 or about 4.65 p.c. of their total imports.

#### Subsection 9.—Main Historical Tables and Tables showing Current Trends in External Trade.

In this subsection are assembled in summary form the main tables of Canadian trade since Confederation, while the figures of trade in the latest years are given in greater detail by countries and commodities. Tables 1 to 9 inclusive are of a historical character, while Tables 10 and 11 give in summary, and Tables 12 and 13 in detailed form, our exports and imports for the four latest fiscal years. In Table 14 imports are divided into dutiable and free, and exports into Canadian and foreign produce. Table 15 analyses our trade in the latest year by main groups of origin and degrees of manufacture. Table 16 classifies that trade according to purpose. Table 17 gives trade by provinces and customs ports, and Table 18 by tariffs. Tables 19 and 20 deal with our imports and exports by countries in the latest five years, while Table 21 shows the value of our imports and exports transported *via* the United States. Tables 22 to 35 show by commodities our principal imports from and exports to the more important trading countries other than the United Kingdom and the United States; our trade with these countries is exhaustively dealt with in Tables 12 and 13.

AGGREGATE EXTERNAL TRADE OF CANADA

<sup>1</sup> Nine months.    <sup>2</sup> Not including exports of foreign produce.

3.—Movement of Coin and Bullion, fiscal years, 1868-1930.

Note.—Up to 1919 "silver bullion in bars, blocks, ingots, drops, sheets and plates, unmanufactured", was included in "coin and bullion", but since that time it has been regarded as "merchandise". The figures from 1899 have been revised in accordance with the new arrangement.

<sup>1</sup> No record for 1919 imports and exports.

**4.—Duties Collected on Exports, 1868-1892, and on Imports for Home Consumption, 1868-1930, with Percentage of Expense of Collection to Gross Customs Revenue Collected, fiscal years, 1868-1930.**

NOTE.—Duties on exports were not collected after the year 1892. The figures in this table are the gross figures of duties collected; the net national revenue from customs taxation, because of the drawbacks paid where commodities on which duties have been collected are afterwards exported in a more highly manufactured state, is considerably smaller. For statistics of net customs revenue see Statement of Customs Duties, Table 4, in Chapter XXI on Public Finance.
