

Many millions the
Crown is a symbol of
unity. By the grace of God
and by the will of the free peoples of
the British Commonwealth I have
assumed that Crown. In me, as your
King, is vested for a time the duty of
maintaining its honour and integrity.

“ to the ministry of kingship I
have, with your sharing, dedicated my-
self with the Queen at my side in words
of the deepest solemnity ”

Excerpt from the text of the Address of His Majesty King
George VI, delivered over an international radio network,
May 12, 1937.

Her Majesty
Queen Elizabeth

The King's Procession passing through the Nave to the West Door of Westminster Abbey, after the Coronation. The King, now in his robe of purple velvet, is wearing the State Crown and bears in his right hand the Sceptre with the Cross, and in his left the Orb; all Peers are wearing their Coronets.

CANADA
DOMINION BUREAU OF STATISTICS
GENERAL STATISTICS BRANCH

THE
CANADA YEAR BOOK
1937

THE OFFICIAL STATISTICAL ANNUAL OF THE RESOURCES,
HISTORY, INSTITUTIONS AND SOCIAL AND ECONOMIC
CONDITIONS OF THE DOMINION

Published by Authority of
The Honourable WILLIAM D. EULER, M.P.,
MINISTER OF TRADE AND COMMERCE

OTTAWA
J. O. PATENAUDE, I.S.O.,
KING'S PRINTER
1937

PREFACE.

The Canada Year Book had its beginning in the first year of the Dominion, when the semi-official "Year Book and Almanac of British North America"—being (to quote its sub-title) "an Annual Register of political, vital and trade statistics, customs tariffs, excise and stamp duties, and all public events of interest in Upper and Lower Canada, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland and West Indies"—was founded. Subsequently the title was changed to "The Year Book and Almanac of Canada,—an annual statistical abstract of the Dominion and a register of legislation and of public men in British North America" It was published annually from 1867 to 1879.

In 1886, after the passing of a general Statistics Act, the "Statistical Abstract and Record of Canada" was instituted as an official book of reference respecting the institutions, population, finance, trade, and general conditions of the Dominion. The work was prepared in the General Statistical Office of the Department of Agriculture and was continued annually until 1904 under the direction of Dr. George Johnson, F.S.S. To use Dr. Johnson's words, the main feature of the Statistical Abstract was "the collection into one book of the information of various kinds scattered through the blue books issued by the several Departments". He goes on to say, "This book has become the *vade mecum* of public men . . . in Canada as well as in all other civilized countries" In 1905, the General Statistical Office was amalgamated with the Census Office. The Year Book was remodelled by Dr. Archibald Blue, Chief Officer, and continued as "The Canada Year Book, Second Series"

In the re-organization of statistics which followed the report of the Royal Commission on Statistics of 1912, and the establishment of the Dominion Bureau of Statistics in 1918, the improvement of the Year Book was made a primary object and this progress has been continued down to the present time.

With the growth of the administrative functions of government and the consequent increase in the content and variety of the statistical data made available, it is becoming more and more difficult to keep the size of the Year Book within convenient limits and the policy has been adopted of replacing material which is unchanged from year to year by adequate references to earlier editions, but every care is taken to keep the framework intact and well balanced. Some of the space thus saved has been given to necessary revisions, additions, important new material, and special features, among the chief of which are the following: Chapter I, treating of the physiography of the country, has been largely re-written and a special section on Economic Geology, prepared by F. J. Alcock, Ph.D., Mines and Geology Branch, Department of Mines and Resources, is included. The regular section on Geology, which will be revised in the near future, has been omitted this year. A special article, "Faunas of Canada", prepared for the Year Book by R. M. Anderson, Ph.D., Chief of the Division of Biology of the National Museum of Canada, appears at pages 29 to 52. The results of the Quinquennial Census of 1936 are included with the treatment of Population in Chapter V, and a special section on "Occupations of the Canadian People" rounds out the treatment of data from the 1931 Census which appeared mainly in the 1934-35 Year Book but was supplemented by later material in the 1936 Year Book. Agricultural statistics of the Quinquennial Census are given in Chapter VIII—Agriculture—which also includes a short article on "Agricultural Progress in Canada and the Dominion Experimental Farms System".

Re-organization of the work of several Departments of the Dominion Civil Service in 1936, under the new Departments of Transport and of Mines and Resources, has provided an opportunity to revise and recast the statistics concerned

with these phases of administration. The necessity for maintaining statistical continuity with the past makes difficult such wholesale recasting. In the present instance statistical series have, in certain cases, been definitely broken and a new departure was unavoidable, but, as far as possible, continuity has been maintained in the changes that have been made. Chapter XVIII—Transportation and Communications—for instance, has been entirely recast and it is felt that the treatment now gives a clearer picture of the relationships of the different services involved. A section on "The Press" is included at the close of the chapter.

In the Public Finance Chapter, an attempt has been made on pp. 811-817 to give, in condensed tabular form, a summary of the Dominion Government Tax System as of July, 1936. The important section on Subsidies and Loans to the Provinces, has also been expanded.

The operations of the Bank of Canada are now established in the financial system of the country and it has therefore been considered advisable this year to recast Chapter XXII—Currency and Banking. Adjustments will, no doubt, be necessary from time to time but it is felt that the main features of the new outline will serve for some time to come. A special article on "The Bank of Canada and Its Relationship to the Canadian Financial System" appears at pages 881 to 885. This should contribute to a clear understanding of the position and functions of the Bank on the part of the general public.

A list of special articles appearing in past editions from the year 1918 to 1935 will be found at page vi immediately preceding the map of Canada.

The accession of King George VI to the Throne and the Coronation of the new King on May 12 are marked by the reproduction as frontispiece of an official photograph of the ceremony in Westminster Abbey, by official portraits of King George and Queen Elizabeth, and an excerpt from His Majesty's address to his peoples, delivered after the Coronation on May 12, 1937.

All parts of the volume have been carefully revised by the most competent authorities and include the latest information appearing to the date of going to press.

In the absence of the Editor, S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., (seconded to the Government of Palestine), the present volume has been edited under the immediate direction of the Dominion Statistician by A. E. Millward, B.A., B.Com., W. H. Lanceley, and R. F. Clarke, M.C., D.L.S., of the editorial staff of the General Statistics Branch of the Bureau. Charts, graphs and layouts except as otherwise credited have been made by, or under the supervision of, J. W. Delisle, draughtsman of the Dominion Bureau of Statistics.

Grateful acknowledgments are hereby tendered to the numerous officials of the Dominion and Provincial Governments, and other individuals, who have assisted in the collection of information. Credit is apportioned to the various persons and services concerned by means of footnotes to those chapters and sections that have been contributed, or in the compilation of which co-operation has been received.

While every care has been taken in preparation, there are doubtless imperfections and, with a view to the improvements of future editions, the Dominion Statistician will be glad to hear of any errors that may have escaped notice, and to receive suggestions with regard to omissions or to method of treatment.

R. H. COATS,
Dominion Statistician.

SPECIAL ARTICLES IN THE CANADA YEAR BOOK, 1918-36.

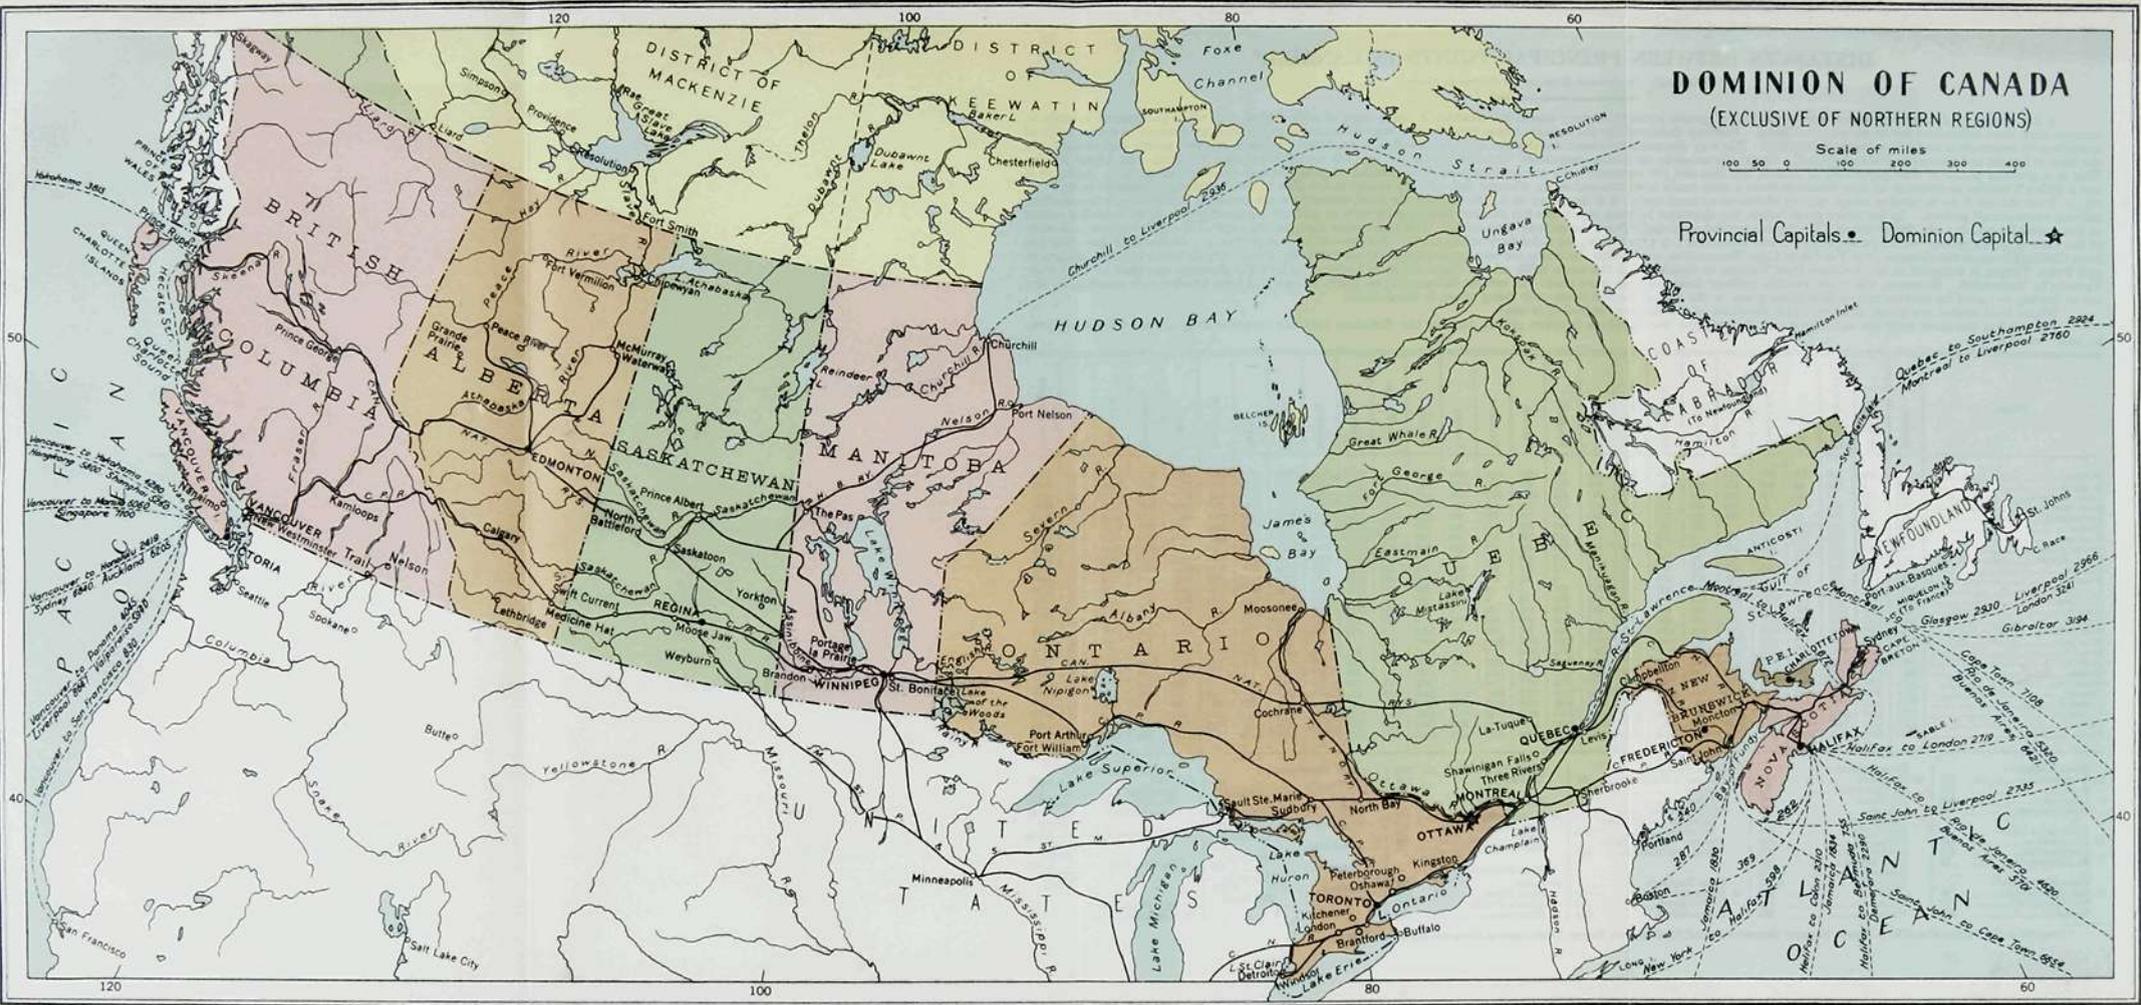

(Not repeated in this edition.)

	VOLUME.	PAGES.
Fifty Years of Canadian Progress, 1867 to 1917. By Ernest H. Godfrey, F.S.S., Editor, Dominion Bureau of Statistics, Ottawa	1918	23-72
History of the Great War. By Brig.-General E. A. Cruikshank, LL.D., F.R.C.S., Director of the Historical Section, General Staff, Department of Militia and Defence, Ottawa. With appendices.....	1919	1-73
Reconstruction in Canada. By S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., Editor, Canada Year Book, Dominion Bureau of Statistics, Ottawa.....	1920	1-64
The Flora of Canada. By J. M. Macoun, C.M.G., F.L.S., and M.O. Malte, Ph. D., Department of Mines, Ottawa.....	1922-23	25-32
Faunas of Canada. By P. A. Taverner, Department of Mines, Ottawa..	1922-23	32-36
History of Canada. Revised and abridged from that prepared under the direction of Arthur G. Doughty, C.M.G., LL.D., Deputy Minister, Public Archives of Canada, for the 1913 Year Book.....	1922-23	60-80
The Constitution and General Government of Canada. By the Editor	1922-23	89-100
Provincial and Local Government in Canada. By various authors....	1922-23	101-115
Development of Agriculture in Canada. By Dr. J. H. Gridale, Deputy Minister, Department of Agriculture, Ottawa.....	1924	186-191
A Sketch of the History of the Canadian Lumber Trade. By A. R. M. Lower, M.A., Public Archives, Ottawa.....	1925	318-323
The Co-operative Movement in Canada. By Miss Margaret Mackintosh, Department of Labour, Ottawa.....	1925	704-720
Legislation Respecting Combinations in Restraint of Trade. By F. A. McGregor, Registrar, Combines Investigation Act, Department of Labour, Ottawa.....	1927-28	765-770
Wages Statistics of the Census of 1921. By Miss M. E. K. Roughsedge, Dominion Bureau of Statistics.....	1927-28	774-783
The Climate of Canada. By Sir Frederic Stupart, Director of the Meteorological Service, Toronto.....	1929	42-51
Occupations of the People. By Miss M. E. K. Roughsedge, Dominion Bureau of Statistics.....	1929	134-147
The Temperature and Precipitation of Northern Canada. By A. J. Connor, Meteorological Service, Toronto.....	1930	41-56
Seismology in Canada. By E. A. Hodgson, M.A., Dominion Observatory, Ottawa.....	1931	37-38
The Development of the Fine Arts in Canada. By Newton MacTavish, M.A., D.Litt., Ottawa.....	1931	995-1009
Droughts in Western Canada. By A. J. Connor, Meteorological Service, Toronto.....	1933	47-59
Standard Time and Time Zones in Canada. By C. C. Smith, Dominion Observatory, Ottawa.....	1934-35	50-53
Canada on Vimy Ridge. By Col. A. Fortescue Duguid, D.S.O., B.Sc., R.C.A., Department of National Defence, Ottawa.....	1936	50-60

DOMINION OF CANADA (EXCLUSIVE OF NORTHERN REGIONS)

Provincial Capitals • Dominion Capital ★

DISTANCES BETWEEN PRINCIPAL POINTS IN CANADA.*

NOTE.—Generally, the distances given are the shortest by railway.

A knowledge of distances in miles between principal points constitutes very useful information in these days of wide travel, but when an attempt is made to compile such data difficulties are at once encountered. Railway distances are the logical choice, even though road distances are of increasing interest to a vast body of travellers by automobile and are a useful alternative. Railway distances represent usually the shortest practicable land distances between two points and even to-day the bulk of freight and passenger traffic is by rail. Again, distances by air (sometimes called "bee-line" distances) are only useful in practice to those who travel by air. This is a growing phase of transportation, of course, but has not yet assumed such proportions that its tabulation should displace the more usual one. Again, it is not a difficult matter to estimate air-line distances from a map made to convenient scale, whereas the ordinary reader is not able to obtain railway distances easily.

Even though it be decided to adopt railway distances as most useful, it is necessary to decide whether the most travelled route between two places or the shortest railway route should govern. In the tables given below, the distances between points are the shortest distances by railway and not necessarily the most travelled routes or the routes by which main trains travel. They are compiled principally from the railway time tables. The main table includes the capital of each province and some of the main shipping points chosen principally, but not altogether, by population; the subsidiary tables include distances of local importance. Included in the distances from Charlottetown is the distance from Borden to Cape Tormentine, over which the trains are transported by ferry; similarly, the train ferry distance between Mulgrave and Point Tupper is included in the distance from Halifax to Sydney. In the main table all the distances from Victoria include the distance travelled by boat from Victoria to Vancouver. However, wherever possible, railway distances only were used. In certain distances from Three Rivers and from Quebec it is possible, by the use of ferries, to travel by shorter routes than those given in the tables, the rail route only being taken in these cases.

Where boat routes are given, the best approximation of the distance travelled is used.

The air-line distances used are not necessarily the straight line distances between points, but are the distances over the routes usually travelled by aeroplanes in good weather.

SYNOPSIS.

CHAPTER I.—PHYSIOGRAPHY.

	PAGE.
Part I.—Geographical Features	1-15
1. Land and Fresh-Water Area of Canada, by Provinces and Territories, as in 1936..	7
Section 1. <i>Orography</i>	8-10
2. Mountain Peaks over 11,000 Feet in Elevation, with Latitude and Longitude.....	8-9
Section 2. <i>Rivers and Lakes</i>	11-15
3. Areas, Elevations and Depths of the Great Lakes.....	11
4. Areas of Principal Canadian Lakes, by Provinces.....	12-13
5. Drainage Basins of Canada.....	13
6. Lengths of Principal Rivers and Tributaries in Canada.....	14-15
Section 3. <i>Islands</i>	15
Part II.—Geology	16-28
Section 1. <i>Geology of Canada</i>	16
Section 2. <i>Economic Geology</i>	16-28
1. Economic Geology of the Canadian Shield.....	19-20
2. Economic Geology of the St. Lawrence Lowlands.....	21
3. Economic Geology of the Arctic Archipelago and Hudson Bay Lowland.....	22
4. Economic Geology of the Appalachian and Acadian Region.....	25
5. Economic Geology of the Great Plains Region.....	26
6. Economic Geology of the Cordilleran Region.....	28
Part III.—Seismology in Canada	29
Part IV.—The Flora of Canada	29
Part V.—Faunas of Canada	29-52
Part VI.—Lands, Scenic and Game Resources of Canada	53-58
1. Land Area of Canada, Classified as Agricultural, Forested or Unproductive.....	54
2. Details Regarding Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1936.....	55-57
Part VII.—Climate and Meteorology	58-59
Section 1. <i>The Climate of Canada</i>	58
Section 2. <i>The Factors which Control Canadian Weather</i>	58
Section 3. <i>The Distribution of Precipitation in Canada</i>	59
Section 4. <i>The Temperature and Precipitation of Northern Canada</i>	59
Section 5. <i>The Meteorological Service of Canada</i>	59
Section 6. <i>Meteorological Tables</i>	59
Section 7. <i>Droughts in Western Canada</i>	59
Section 8. <i>Standard Time and Time Zones in Canada</i>	59

CHAPTER II.—HISTORY AND CHRONOLOGY.

Part I.—History	60
Part II.—Chronology, 1497 to 1937	60-69

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

Part I.—Constitution and General Government	70
Part II.—Provincial and Local Government	70
Part III.—Legislative and Executive Authorities	70-94
Section 1. <i>Dominion Parliament and Ministry</i>	70-88
Subsection 1. The Governor General of Canada.....	71
1. Governors General of Canada, 1867-1937.....	71
Subsection 2. The Ministry.....	71-75
2. Ministries since Confederation and Members of the Sixteenth Ministry.....	72
3. Members of the King's Privy Council for the Dominion of Canada, according to Seniority therein, as at Mar. 1, 1937.....	73
4. Duration and Sessions of Dominion Parliaments, 1867-1937.....	74-75
Subsection 3. The Senate.....	75-78
5. Growth of Representation in the Senate, 1867-1937.....	77
6. Representation in the Senate of Canada, by Provinces, as at Mar. 1, 1937.....	77-78
Subsection 4. The House of Commons.....	78-86
7. Representation in the House of Commons as at Dominion General Elections 1867-1935.....	80
8. Electoral Districts, Voters on Lists and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Eighteenth General Election, Oct. 14, 1935.....	81-86
Subsection 5. The Dominion Franchise.....	86-88
9. Number of Voters and Votes Polled at the General Elections of 1925, 1926, 1930, and 1935.....	88
Section 2. <i>Provincial Governments</i>	88-94
10. Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation and Legislative Process by which Admission was Effected.....	89
11. Lieutenant-Governors of Provinces, 1867-1936, and Present Ministries.....	90-94

CHAPTER III.—CONSTITUTION AND GOVERNMENT—concluded.

Part IV.—Representatives in Other Countries.	PAGE. 94-97
Section 1. <i>Representatives within the Empire.</i>	94-96
Section 2. <i>Representatives outside the Empire.</i>	96-97
Part V.—Canada and the League of Nations.	98-99

CHAPTER IV.—POPULATION.

Section 1. <i>Census Statistics of General Population.</i>	101-108
1. Population of Canada, by Provinces and Territories, in the Census Years 1871 to 1931.....	101
2. Percentage Distribution of Canadian Population, by Provinces and Territories, 1871 to 1931.....	101
3. Population of Canada, by Provinces and Territories, in 1871 and 1931, Numerical Increase in each Decade from 1871 to 1931 and Total Increase.....	102
4. Population of Canada, by Provinces and Territories, in 1871, and Increase Per Cent, by Decades, from 1871 to 1931.....	102
5. Area and Density of Population of Canada, by Provinces, 1901-31.....	106
6. Densities of Population in Various Countries in Recent Years.....	107
7. Movement of Population, Including Estimated Natural Increase, Recorded Immigration and Estimated Emigration for the Inter-Censal Periods 1901-11, 1911-21 and 1921-31.....	108
Section 2. <i>Sex Distribution.</i>	108-110
8. Sex Distribution of the People of Canada, by Provinces, 1871-1931.....	108
9. Masculinity of the Population of Various Countries in Recent Years.....	110
Section 3. <i>Conjugal Condition.</i>	110
10. Conjugal Condition of the Population, by Numbers and Percentages, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921 and 1931.....	110
Section 4. <i>Age Distribution.</i>	111
11. Proportion per 1,000 of the Population by Age Periods, 1871, 1881, 1891, 1901, 1911, 1921 and 1931.....	111
12. Proportion per 1,000 of the Population by Age Periods, by Provinces, 1931, with Totals for 1921.....	111
Section 5. <i>Racial Origins.</i>	112-113
13. Origins of the People According to the Censuses of 1871, 1881, 1901, 1911, 1921 and 1931.....	113
Section 6. <i>Religions.</i>	113-115
14. Religions of the People at each Decennial Census, 1871-1931.....	114-115
Section 7. <i>Birthplaces.</i>	115-116
15. Birthplaces of the Population of Canada, According to the Censuses of 1871-1931.....	116
Section 8. <i>Citizenship and Naturalization.</i>	116-118
16. Citizenship of Native-Born, British-Born, and Foreign-Born Residents in Canada in 1931, by Sex, According to Allegiance.....	117
Section 9. <i>Language Spoken and Mother Tongue.</i>	118
Section 10. <i>Rural and Urban Population.</i>	118-127
17. Rural and Urban Populations, by Provinces and Territories, Decennial Censuses 1891-1931 and Numerical Increases 1921-1931.....	120
18. Urban Populations of Canada, Classified by Size of Municipality Groups, 1911, 1921 and 1931.....	121
19. Populations of Cities and Towns having over 5,000 Inhabitants in 1931, Compared with 1871-81-91-1901-11-21.....	121-123
20. Populations of Towns and Villages having between 1,000 and 5,000 Inhabitants in 1931, Compared with 1901, 1911 and 1921.....	123-126
21. Rural and Urban Farms, Farm Populations and Average Numbers of Persons per Farm, by Provinces, 1931.....	127
Section 11. <i>Literacy.</i>	127
22. Literacy of the Population of 10 Years of Age or Over, by Provinces, 1931.....	127
Section 12. <i>School Attendance.</i>	128
Section 13. <i>Blind and Deaf-Mutes.</i>	128
23. Deaf-Mutes, by Number and Proportion per 10,000 Population, by Provinces, 1881-1931.....	128
Section 14. <i>Dwellings and Family Households.</i>	128
Section 15. <i>Occupations of the People.</i>	128-146
24. Numbers and Percentages of the Population, Classified According to Sex, Census Years 1901-31.....	129
25. Number of Females to Every 1,000 Males in Gainful Occupations, by Provinces, Census Years 1901-31.....	130
26. Numbers and Percentages of the Gainfully Occupied Males and Females 10 Years of Age or Over, by Age Groups, Census Years 1911-31.....	130
27. Numbers and Percentages of the Population 10 Years of Age or Over, in Gainful Occupations, Classified According to Age and Sex, Census Years 1921 and 1931.....	131
28. Numbers and Percentages of the Gainfully Occupied Males and Females 10 Years of Age or Over, by Occupation Groups, Census Years 1891-1931.....	132
29. Numbers of Gainfully Occupied Males and Females, 10 Years of Age or Over, by Occupation Groups, for the Provinces, 1931.....	135
30. Percentage Distribution of the Gainfully Occupied 10 Years of Age or Over, Classified According to Sex, by Occupation Groups, for the Provinces, 1931.....	135-136
31. Occupations with 10,000 or More Males and Occupations with 2,500 or More Females, 1931.....	137
32. Percentage Distribution of the Gainfully Occupied Males and Females 10 Years of Age or Over, Classified According to Age, by Occupation Groups, 1931.....	138

CHAPTER IV.—POPULATION—concluded.

	Page.
33. Numbers and Percentages of Gainfully Occupied Females 10 Years of Age or Over, Classified According to Conjugal Condition, by Occupation Groups, 1931	139
34. Numbers and Percentages of the Gainfully Occupied Males and Females 10 Years of Age or Over, Classified According to Birthplace, by Occupation Groups, 1931	141
35. Percentages of Immigrant Gainfully Occupied Males and Females 10 Years of Age or Over, Classified According to Racial Origin, by Occupation Groups, 1931	142
36. Percentages of Immigrant Gainfully Occupied Males, Arriving in Canada since 1921, 10 Years of Age or Over, Classified According to Racial Origin and Period of Arrival, by Occupation Groups, 1931	143
37. Numbers and Percentages of the Gainfully Occupied 10 Years of Age or Over, Classified According to Sex, by Industrial Status, 1931	144
38. Percentage of the Gainfully Occupied 10 Years of Age or Over, Classified According to Industrial Status and Sex, by Occupation Groups, 1931	144
39. Numbers and Percentages of the Gainfully Occupied 10 Years of Age or Over, Classified According to Sex, by Industry Groups, 1931	145
40. Numbers and Percentages of the Gainfully Occupied Males and Females following Clerical and Labourer Occupations, by Industry Groups, 1931	146
Section 16. <i>Quinquennial Census of the Prairie Provinces</i>	146-152
41. Summary of the Population of each of the Prairie Provinces, as Shown by the Quinquennial Census of 1936, with Comparative Figures for census years 1905-31	147
42. Population of each of the Prairie Provinces, by Electoral Districts, Quinquennial Census of 1936	147
43. Populations of the Prairie Provinces by Sex, census years 1901-36	148
44. Conjugal Condition of the Population of the Prairie Provinces 15 years of Age or Over, by Age Groups and Sex, Quinquennial Census, 1936	148
45. Population of each of the Prairie Provinces Classified by Age Groups and Sex, Quinquennial Census, 1936	149
46. Racial Origins of the Population of the Prairie Provinces, 1926, 1931, and 1936	149-150
47. Populations of the Prairie Provinces, by Birthplace, census years, 1916-36	150
48. Rural and Urban Populations of the Prairie Provinces, by Numbers and Percentages, census years 1921-36	151
49. Rural and Urban Populations of the Prairie Provinces, Classified by Sex, 1931 and 1936	151
50. Population of Cities, Towns, and Villages in the Prairie Provinces, having over 1,500 Population in 1936, Compared with census years 1906-31	152
Section 17. <i>Annual Estimates of Population</i>	152-153
51. Estimates of the Population of Canada for Inter-Censal Years, by Provinces, 1900-36	153
Section 18. <i>Area and Population of the British Empire</i>	154
Section 19. <i>Area and Population of the World</i>	154

CHAPTER V.—VITAL STATISTICS.

Section 1. <i>Births</i>	157-167
1. Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1933-35, with Averages for 1921-25, 1926-30 and 1931-35	158
2. Live Births in Cities and Towns of 10,000 Population and Over, 1931-35, with averages, 1926-30 and 1931-35	159-160
3. Percentages of Legitimate Children Born Alive to Canadian-Born, British-Born or Foreign-Born Mothers, by Provinces, 1933-35	160
4. Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1926-35	161
5. Quartile and Decile Ages of Married Fathers and Mothers, in Canada, 1926, 1932-34	162
6. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1934 and 1935	163
7. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1934 and 1935	164-165
8. Numbers of Illegitimate Births, Classified by Age of Mother, by Provinces, 1935, Percentages to Total Live Births, and Totals of Illegitimate Births, by Sex, 1933, 1934, and 1935, with Averages or Totals, 1926-35	165
9. Stillbirths, Classified by Age of Mother, by Provinces and Legitimacy of Child, 1935, with Averages or Totals, 1926-35, and Ratios to Totals, 1933, 1934, and 1935	166
10. Crude Birth Rates of Various Countries of the World and of Provinces of Canada in Recent Years	166-167
Section 2. <i>Marriages and Divorces</i>	167-171
Subsection 1. <i>Marriages</i>	167-170
11. Differences in Ages of Bridegrooms and Brides, 1934	168
12. Average Ages of Parties Contracting Marriage, by Provinces, 1933 and 1934	168
13. Percentage Distribution by Nativity of Persons Married in Canada, by Provinces, 1933, 1934, and 1935 with Averages for 1921-25, 1926-30, and 1931-35	169
14. Crude Marriage Rates of Various Countries of the World and of Provinces of Canada in Recent Years	170
Subsection 2. <i>Divorces</i>	170-171
15. Statistics of Divorces Granted in Canada, 1911-36	171
Section 3. <i>Deaths</i>	171-188
Subsection 1. <i>General Mortality</i>	172-179
16. Numerical and Percentage Distribution of Deaths in Canada by Sex and Age Groups, 1934-35	173
17. Quartile and Decile Ages of Decedents, by Sex, 1926, 1933, and 1934	173
18. Crude and Standardized Death Rates in Canada, by Provinces, 1928-35, with Averages, 1921-25, 1926-30, and 1931-35	175

CHAPTER V.—VITAL STATISTICS—concluded.

	PAGE.
19. Deaths in Canada, by Principal Causes, 1931-35.....	176
20. Death Rates per 100,000 Population in Canada, by Principal Causes, 1931-35.....	177
21. Deaths in Cities and Towns of 10,000 Population and Over, 1931-35, with Averages, 1926-30 and 1931-35.....	177-178
22. Crude Death Rates of Various Countries and of the Provinces of Canada in Recent Years.....	179
Subsection 2. <i>Infantile and Maternal Mortality</i>	179-188
23. Infantile Mortality, by Provinces, together with the Rate per 1,000 Live Births, 1931-35, with Averages for 1921-25, 1926-30, and 1931-35.....	181
24. Infantile Mortality in Canada, by Principal Causes of Death, 1926, 1934-35.....	181-182
25. Proportion per 1,000 Deaths of Infants under One Year of Age Occurring at each Age Period, 1934-35.....	183
26. Deaths and Death Rates of Children Under One Year of Age (Exclusive of Stillbirths) in Cities and Towns of 10,000 and Over, 1932-35, with Averages, 1926-30.....	184
27. Infantile Mortality per 1,000 Live Births in Various Countries of the World and Provinces of Canada in Recent Years.....	185
28. Infantile Mortality per 1,000 Live Births in Certain Cities of the World in 1934 or the Most Recent Year.....	186
29. Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1933-35, with Five-Year Averages for 1926-30 and 1931-35.....	186
30. Maternal Deaths in each Province, by Age Groups, 1935, with Totals and Rates per 1,000 Live Births for 1933-35 and Five-Year Averages for 1926-30 and 1931-35.....	187
31. Maternal Deaths in each Province, by Causes of Death, 1935.....	187-188
Section 4. <i>Natural Increase</i>	188-192
32. Summary of Births, Marriages, Deaths, and Natural Increase, by Provinces, for the calendar years 1933-35, with Averages 1921-25, 1926-30 and 1931-35.....	190
33. Natural Increase and Rates of Natural Increase in Cities and Towns of 10,000 Population and Over, 1931-35, and Averages, 1926-30 and 1931-35.....	191-192
34. Births, Deaths and Natural Increase in Canada, by Provinces and for each Sex, 1935, with Totals, 1931-35, and Averages 1926-30 and 1931-35.....	192

CHAPTER VI.—IMMIGRATION AND COLONIZATION.

Section 1. <i>Statistics of Immigration</i>	193-210
1. Numbers of Immigrant Arrivals in Canada, calendar years 1852-1936.....	194
2. Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar years 1908-36.....	195
3. Sex and Conjugal Condition of Immigrants into Canada, by Age Groups, calendar years 1934 and 1935.....	195
4. Sex Distribution of Immigrants as Adult Males, Adult Females, and Children, calendar years 1929-35.....	195
5. Racial Origins of Immigrants into Canada, calendar years, 1926-35.....	196-197
6. Languages of Immigrants Ten Years of Age or Over, calendar years 1931-35.....	197
7. Nationalities of Immigrants, calendar years 1931-35.....	198
8. Countries of Birth of Immigrants, calendar years 1931-35.....	199
9. Immigrants Arriving in Canada, by Chief Ports of Arrival, calendar years, 1930-35.....	200
10. Destinations of Immigrants into Canada, by Provinces, calendar years 1929-36.....	200
11. Occupations and Destinations of Immigrants Arriving in Canada, Classified by Occupation and Sex, According to Destination, calendar year 1935.....	201-202
12. Rejections of Immigrants upon Arrival at Ocean Ports, by Principal Causes and Nationalities, calendar years 1930-35.....	204
13. Deportations of Immigrants after Admission, by Principal Causes and by Nationalities, fiscal years ended 1925-36, with Totals 1903-24 and 1903-36.....	204
14. British Juvenile Immigrants, fiscal years ended 1901-36.....	205
15. Record of Oriental Immigrants, fiscal years ended 1901-36.....	205
15A. Record of Oriental Immigrants, calendar years, 1929-35.....	205
16. Record of Revenue Receipts and Registrations for Leave of Chinese Immigrants, fiscal years ended Mar. 31, 1912-36, with Totals, 1886-1900 and 1901-11.....	206
17. Expenditures on Immigration in the fiscal years ended June 30, 1868-1906 and Mar. 31, 1907-36.....	208
18. Canadians Returned from the United States, calendar years 1924-36.....	209
19. Numbers of Passengers of British Nationality Changing Their Permanent Residence Between the United Kingdom and British North America, calendar years 1924-35.....	209
20. Returning Canadians and Other Non-Immigrants entering Canada via Ocean Ports, by Class of Travel, calendar years 1934 and 1935, with Totals for calendar years 1930-33.....	210
Section 2. <i>Colonization Activities</i>	210

CHAPTER VII.—SURVEY OF PRODUCTION.

Section 1. <i>The Leading Branches of Production in 1934</i>	213-216
1. Gross and Net Values of Production in Canada, by Industries, 1930-34.....	214
2. Detailed Itemized Statement of the Net Values of Production in Canada during 1932, 1933 and 1934.....	215
Section 2. <i>The Provincial Distribution of Production</i>	216-218
3. Gross and Net Values of Production in Canada, by Provinces, 1930-34.....	217
Section 3. <i>Leading Branches of Production in Each Province, 1934</i>	218-220
4. Gross and Net Values of Production in Canada, Classified for each Province, by Industries, 1934.....	219
5. Percentage of the Value of the Net Production in each Industry to the Total Net Production of each Province, 1934.....	220

CHAPTER VIII.—AGRICULTURE.

	PAGE.
Section 1. <i>The Government in Relation to Agriculture</i>	221-231
Subsection 1. <i>Agricultural Progress in Canada and the Dominion Experimental Farms System</i>	221-228
Subsection 2. <i>Provincial Departments of Agriculture</i>	228-231
Subsection 3. <i>Provincial Agricultural Colleges and Experimental Stations</i>	231
Section 2. <i>Statistics of Agriculture</i>	232-282
Subsection 1. <i>Agricultural Revenue and Wealth</i>	233-236
1. <i>Estimated Gross Annual Agricultural Revenue of Canada, Itemized by Provinces, 1931-35</i>	233-235
2. <i>Estimated Gross Agricultural Wealth of Canada, by Provinces, 1935</i>	235
Subsection 2. <i>Acres, Yields and Values of Field Crops</i>	236-248
3. <i>Acres, Yields and Values of Principal Crops Grown in Canada, 1927-36</i>	236-237
4. <i>Total Acres and Values of Field Crops in Canada, by Provinces, 1931-36</i>	237
5. <i>Acres, Yields and Values of Principal Field Crops of Canada, Itemized by Provinces, 1935 and 1936</i>	238-244
6. <i>Estimated Acres under Pasture in Canada, 1930-36</i>	245
7. <i>Provincial Lands under Grazing Leases, 1934-36</i>	245
8. <i>Annual Average Yields per Acre of Field Crops for Canada, 1929-36, with Long-Time Averages</i>	246
9. <i>Areas and Yields of Wheat, Oats, Barley, Rye and Flaxseed in the Prairie Provinces, 1934-36</i>	246
10. <i>Stocks of Grain in Farmers' Hands on July 31, 1936, as Compared with July 31, 1935 and 1934, with Totals of Production of the Previous Years' Crops</i>	247
11. <i>Detailed Stocks of Grain in Canada on July 31, 1934, 1935 and 1936</i>	247
12. <i>Distribution of the Canadian Wheat Crops, by crop years, 1934-35 and 1935-36</i>	248
13. <i>Distribution of the Canadian Oat Crops, by crop years, 1934-35 and 1935-36</i>	248
Subsection 3. <i>Farm Live Stock and Poultry</i>	249-253
14. <i>Summary Statistics of the Numbers of Live Stock and Poultry on Farms in the Dominion of Canada, Censuses of 1871-1931</i>	249
15. <i>Numbers and Values of Farm Live Stock in Canada, by Provinces, as at June 1, 1933-36</i>	249-250
16. <i>Average Values per Head of Farm Live Stock in Canada, as Estimated by Crop Correspondents, 1934-36</i>	251
17. <i>Numbers and Values of Farm Poultry in Canada, by Provinces, as at June 1, 1935 and 1936</i>	251-252
18. <i>Estimated Quantities and Values of Canadian Wool Clip, 1927-36</i>	253
19. <i>Annual Production of Farm Eggs in Canada, by Provinces, 1934-36</i>	253
Subsection 4. <i>Dairying Statistics</i>	254-257
20. <i>Totals, Dairy Production of Canada Expressed in Pounds of Milk, 1926-36, and by Provinces, 1936</i>	254
21. <i>Production of Butter and Cheese in Canada, 1926-36, and by Provinces, 1936</i>	255
22. <i>Quantities and Values of Miscellaneous Products of Dairy Factories, 1934-36</i>	256
23. <i>Value of Dairy Production of Canada, 1926-36, and by Provinces, 1936</i>	257
24. <i>Apparent Consumption of Butter and Cheese in Canada, 1932-36</i>	257
Subsection 5. <i>Horticulture</i>	258-260
25. <i>Estimated Quantities and Values of Commercial Fruit Production in Canada, 1926-35, with 5-Year Averages, 1926-30 and 1931-35</i>	258-259
26. <i>Numbers and Values of Fruit Trees, Bushes and Plants, Sold by Nurserymen in Canada, years ended May 31, 1933-36</i>	260
27. <i>Quantities and Values of Floricultural and Ornamental Nursery Stock Grown in Canada and Sold during the years ended May 31, 1935 and 1936</i>	260
Subsection 6. <i>Special Agricultural Crops</i>	261-263
28. <i>Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1934-36</i>	261
29. <i>Acres, Yields and Values of Sugar Beets in Canada and Quantities of Refined Beetroot Sugar Produced, 1926-35</i>	261
30. <i>Acres and Yields of Tobacco in Canada, by Provinces, 1926-35</i>	262
31. <i>Acres, Yields and Values of Flaxseed, Fibre, and Tow, in Canada, 1927-36</i>	262
32. <i>Production and Value of Honey and Beeswax in Canada, by Provinces, 1934 and 1935</i>	263
Subsection 7. <i>Farm Labour and Wages</i>	264-265
33. <i>Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930, and 1934-36</i>	264-265
Subsection 8. <i>Prices of Agricultural Produce</i>	265-269
34. <i>Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flaxseed, and Rye—basis, in store at Fort William and Port Arthur—Aug., 1934—Dec., 1936, and Yearly Average Prices for crop years ended July 31, 1926-36</i>	266
35. <i>Monthly Average Prices of Flour, Bran and Shorts at Principal Markets, 1936</i>	266-267
36. <i>Yearly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1935</i>	267
37. <i>Monthly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1936</i>	267-268
38. <i>Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1914-36</i>	269
Subsection 9. <i>Agricultural Statistics of the Census</i>	270-273
39. <i>Population, Farm Holdings, Areas, Values and Live Stock, Manitoba, Saskatchewan and Alberta, 1911-36</i>	272-273
Subsection 10. <i>Miscellaneous Agricultural Statistics</i>	274-275
40. <i>Major Irrigation Projects in Southern Alberta, 1934 and 1935</i>	274
41. <i>Average Values per Acre of Occupied Farm Lands in Canada, as Estimated by Crop Correspondents, 1910 and 1918-36</i>	275

CHAPTER VIII.—AGRICULTURE—concluded.		PAGE.
Subsection 11. International Agricultural Statistics.....		275-282
42. Acreages and Yields of Cereals and Potatoes in Countries of the World, 1935 and 1936, with Five-Year Averages for 1930-34.....		276-280
43. Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1933 and 1936.....		281
44. Numbers of Live Stock in Principal Countries, circa 1934.....		281-282
 CHAPTER IX.—FORESTRY. 		
Section 1. <i>Forest Regions</i>		283-287
Section 2. <i>Important Tree Species</i>		287
Section 3. <i>Forest Resources</i>		287-290
1. Estimate of Total Accessible Stand of Timber in Canada, Classified by Type and Merchantable Size, by Provinces and Regions, with Estimate of Grand Total Stand, 1936.....		290
Section 4. <i>Forest Administration</i>		290-297
Subsection 1. Administration of Dominion and Provincial Timber Lands.....		290-292
Subsection 2. Forest Fire Protection.....		292-294
Subsection 3. Scientific Forestry.....		294-297
Section 5. <i>Forest Utilization</i>		297-312
Subsection 1. Woods operations.....		297-299
2. Values of Woods Operations, by Products, 1930-34.....		298
3. Quantities of Wood Cut in Operations in the Woods in Canada, Equivalents in Standing Timber and Total Values, by Chief Products, 1934, with Comparative Totals from 1924-34.....		299
4. Equivalent Volumes of Standing Timber Cut in Canada and Values of Products of Woods Operations, by Provinces, 1933 and 1934.....		299
Subsection 2. The Pulp and Paper Industry.....		300-308
5. Production, Consumption, Exports and Imports of Pulpwood, calendar years 1926-35.....		301
6. Pulp Production, Mechanical and Chemical, calendar years 1926-35.....		303
7. Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1929-35.....		303
8. Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1934 and 1935.....		304
9. Summary of Paper Production in Canada, calendar years 1926-35.....		305
10. Production of Paper in Canada, by Provinces, 1935.....		305
11. Estimated Quantities of Newsprint Produced in Leading Countries, 1934 and 1935, and the Five-Year Average, 1931-35.....		306
12. Exports of Newsprint Paper from Principal Paper-Producing Countries of the World, 1913, 1933, 1934 and 1935.....		307
Subsection 3. The Lumber Industry.....		308-310
13. Quantities and Values of Lumber, Lath, and Shingles Produced in Canada, calendar years 1926-35.....		308
14. Quantities and Values of Lumber, and Values of Other and All Sawmill Products Made in Canada, by Provinces, 1934 and 1935.....		309
15. Exports of Planks, Boards, and Square Timber, by Importing Countries, calendar years 1933-36.....		310
Subsection 4. Other Forest Industries.....		310
Subsection 5. Manufactures of Wood and Paper.....		310-311
Subsection 6. Forest Depletion and Increment.....		311-312
 CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION. 		
Section 1. <i>The Fur Trade</i>		313-314
Section 2. <i>Fur Farming</i>		314-317
1. Numbers of Fur Farms, Values of Land and Buildings and Values of Fur-Bearing Animals, by Provinces, 1933-35.....		315
2. Numbers of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1927-35.....		316
3. Values of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1927-35.....		316
4. Values of Fur-Bearing Animals Sold from Fur Farms in Canada, 1927-35.....		317
5. Values of Pelts Sold from Fur Farms in Canada, 1927-35.....		317
Section 3. <i>Statistics of Total Production and Trade in Furs</i>		317-320
6. Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, years ended June 30, 1920-35.....		318
7. Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, years ended June 30, 1934 and 1935.....		319
8. Kinds, Numbers, Total Values and Average Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1934 and 1935.....		319
9. Exports of Canadian Raw Furs by Leading Countries and Kinds of Fur, years ended June 30, 1931-35.....		320
10. Imports of Raw Furs by Leading Countries Whence Imported and Kinds of Fur, years ended June 30, 1931-35.....		320
 CHAPTER XI.—THE FISHERIES. 		
Section 1. <i>The Early Fisheries</i>		321
Section 2. <i>The Canadian Fishing Grounds</i>		321
Section 3. <i>The Government and the Fisheries</i>		321-324
1. Government Bounties Paid to Fishermen for the calendar years 1932-35.....		323

CHAPTER XI.—THE FISHERIES—concluded.

	PAGE.
Section 4. <i>The Modern Fishing Industry</i>	324-336
2. Total Values of the Products of the Fisheries of Canada, 1870-1935.....	325
3. Total Values of the Products of the Fisheries, by Provinces, calendar years 1930-35.....	325
4. Quantities and Values of the Chief Commerical Fishes, calendar years 1931-35..	326
5. Value of the Fisheries Production of Canada in 1935 compared with 1934, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.....	327
6. Quantities and Values of Sea Fish and Products Marketed, calendar years 1934 and 1935.....	327-330
7. Quantities and Values of Inland Fish Marketed, calendar years 1934 and 1935.....	330
8. Numbers of Fish-Canning and -Curing Establishments, by Provinces, 1934 and 1935.....	331
9. Values of Materials Used and of Products of Fish-Canning and -Curing Establishments, 1931-35.....	331
10. Numbers and Capital Values of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, and of Establishments Processing the Products, 1934 and 1935.....	332
11. Numbers of Persons Employed in the Fisheries of Canada and in Processing Establishments Connected Therewith, 1933-35.....	333
12. Employees and Salaries and Wages in Fish-Canning and -Curing Establishments, 1920-35.....	333
13. Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-36.....	334
14. Exports of the Fisheries, the Produce of Canada, by Principal Countries, calendar years 1934 and 1935.....	334
15. Exports of the Fisheries of Canada, by Quantities and Values, calendar years 1933-35.....	335-336

CHAPTER XII.—MINES AND MINERALS.

Section 1. <i>Mineral Lands Administration and Mining Laws</i>	337-344
Subsection 1. Dominion Mining Laws and Regulations.....	337-340
Subsection 2. Provincial Mining Laws and Regulations.....	340-344
Section 2. <i>Summary of General Production</i>	344-353
Subsection 1. General Statistics of Mineral Production.....	345-349
1. Value of Mineral Production in Canada, calendar years 1886-1936.....	345
2. Mineral Production of Canada, calendar years 1934 and 1935.....	346-347
3. Value of Mineral Production of Canada, in 1935 Compared with 1934, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.....	348-349
Subsection 2. Provincial Distribution of Mineral Production.....	350-353
4. Mineral Production of Canada, by Provinces, calendar years 1911-36.....	350
5. Detailed Mineral Production of Canada, by Provinces, calendar year 1935.....	351-353
Section 3. <i>Industrial Statistics of Mines and Minerals—Capital, Labour, Wages, etc., in Principal Industries</i>	354-361
Subsection 1. Principal Factors in the Mineral Industries.....	355-356
Subsection 2. Growth of the Mining Industry in Recent Years.....	357-358
6. Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1929-35 and by Provinces, 1935.....	358
Subsection 3. The Principal Mineral Industries.....	359-361
7. Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1934 and 1935.....	359-361
Section 4. <i>Production of Metallic Minerals</i>	362-377
Subsection 1. Gold.....	362-367
8. Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-36.....	363
9. Values of Gold Produced in Canada, by Provinces, calendar years 1911-36.....	364
10. Quantities and Values of World Production of Gold, 1891-1935.....	366
11. Quantities and Values of the World Production of Gold and Silver, by Countries, calendar years 1934 and 1935.....	367
Subsection 2. Silver.....	368-370
12. Quantities and Values of Silver Produced in Canada calendar years 1911-36.....	368
13. Quantities and Values of Silver Produced in Canada, by Provinces, calendar years 1911-36.....	369
14. Quantities and Values of World Production of Silver, with Annual Average Prices, 1860-1935.....	370
Subsection 3. Copper.....	370-372
15. Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-36.....	372
16. Copper Production of the Leading Countries and of the World, 1913-35.....	372
Subsection 4. Lead.....	373
17. Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-36.....	373
Subsection 5. Nickel.....	374
18. Quantities and Values of Nickel Produced in Canada, calendar years 1911-36.....	374
Subsection 6. Cobalt.....	374-375
Subsection 7. Zinc.....	375
19. Quantities and Values of Zinc Produced in Canada, calendar years 1911-36.....	375
Subsection 8. Iron.....	376-377
20. Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys, and Steel Ingots and Castings, calendar years 1911-36.....	376
Section 5. <i>Production of Non-Metallic Minerals</i>	377-384
Subsection 1. Fuels.....	377-382
21. Production of Coal in Canada, by Provinces, calendar years 1911-36.....	378
22. Imports into Canada of Anthracite, Bituminous and Lignite Coal for Home Consumption, calendar years 1911-35.....	378

CHAPTER XII.—MINES AND MINERALS—concluded.

	PAGE.
23. Exports of Coal, the Produce of Canada, calendar years 1911-35.....	379
24. Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-35.....	379
25. Coal Output, Exports, Receipts from Other Countries and Coal Made Available for Consumption in Canada during 1935.....	380
26. Coal Produced in the Principal Countries of the World, 1913, 1921-35.....	380-381
27. Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-36.....	381
28. Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-36.....	382
Subsection 2. Other Non-Metallic Minerals.....	382-384
29. Quantities and Values of Asbestos Produced in Canada, calendar years 1911-36..	383
Section 6. <i>Production of Clay Products and Other Structural Materials</i>	384-386
30. Production, Imports, Exports and Apparent Consumption of Portland Cement, by Quantities and Values, calendar years 1910-36.....	385
31. Production of Sand, Gravel and Stone in Canada, Showing the Principal Purposes, calendar years 1933-35.....	386

CHAPTER XIII.—WATER POWERS.

Section 1. <i>The Water Powers of Canada</i>	387-391
1. Available and Developed Water Power in Canada, by Provinces, Jan. 1, 1937....	389
2. Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1900-36.....	390
3. Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Jan. 1, 1937.....	391
Section 2. <i>Central Electric Stations</i>	392-395
4. Summary Statistics of Central Electric Stations, calendar years 1917-35.....	393
5. Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1935.....	394
6. Electrical Energy Generated in Central Electric Stations, by Provinces, calendar years 1930-35.....	394
7. Electrical Energy Generated or Produced for Export under Authority of the Electricity and Fluid Exportation Act, fiscal years ended Mar. 31, 1933-36....	395
Section 3. <i>Public Ownership of Hydro-Electric Power</i>	395-404
Subsection 1. The Hydro-Electric Power Commission of Ontario.....	396-401
8. Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, fiscal years ended Oct. 31, 1910-35.....	397
9. Distribution of Power to Systems of the Ontario Hydro-Electric Power Commission, fiscal years ended Oct. 31, 1931-35.....	397
10. Capital Investments in Ontario's Hydro Undertakings, fiscal years ended Oct. 31, 1931-35.....	398
11. Accumulated Reserves of the Ontario Hydro-Electric Power Commission and of the Local Electric Utilities of the Co-operating Municipalities, fiscal years ended Oct. 31, 1931-35.....	398
12. Consolidated Statement of Assets, Liabilities, Reserves and Surpluses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1931-35.....	399-400
13. Statement of Earnings and Expenses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1931-35.....	400
14. Statistics Relating to Electrical Service in Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1931-35.....	401
Subsection 2. Hydro-Electric and Power Commissions in Other Provinces.....	401-404

CHAPTER XIV.—MANUFACTURES.

Section 1. <i>The Evolution of Canadian Manufacturing Industries</i>	405-418
Subsection 1. Growth of Manufacturing in Canada since 1870.....	406-411
1. Historical Summary of Statistics of Manufactures for the Dominion, 1870-1934..	407
2. Summary Statistics of Manufactures, by Provinces, for Representative Years 1917-35.....	408-409
3. Summary Statistics of Manufactures, by Industrial Groups, for Representative Years 1917-35.....	409-411
Subsection 2. Summary Statistics of Manufacturing Production.....	412-418
4. Summary Statistics of Manufactures for Representative Years 1917-35.....	413
5. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1925, 1926, and 1928-34.....	415
6. Consumption of Manufactured Products, by Groups, 1934, with Totals for 1922-34..	418
Section 2. <i>Production of Industrial Groups and Individual Industries</i>	418-440
7. Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Manufacturing Industries in the Five-Year Period 1929-34....	419
Subsection 1. Manufactures Grouped by Chief Component Materials.....	420-431
8. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials and Values of Products of Canadian Manufacturing Industries, 1934.....	426-431
Subsection 2. Manufactures Classified by the Purpose of the Products.....	432-434
9. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-34 and in Detail for 1934.....	432-434
Subsection 3. Manufactures Classified by Origin of the Materials.....	435-438
10. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Material Used, by Main Groups for Representative.....	436-438

CHAPTER XIV.—MANUFACTURES—concluded.

	PAGE.
Subsection 4. The Forty Leading Manufacturing Industries.....	438-440
11. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1934.....	439
11A. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1935.....	440
Section 3. <i>Provincial Distribution of Manufacturing Production</i>	441-448
Subsection 1. The Manufactures of the Maritime Provinces, 1934.....	441-442
12. Statistics of the Leading Industries of each of the Maritime Provinces, 1934.....	441-442
Subsection 2. The Manufactures of Quebec, 1934.....	442-443
13. Principal Statistics of the Forty Leading Industries of the Province of Quebec, 1934.....	443
Subsection 3. The Manufactures of Ontario, 1934.....	444-445
13. Principal Statistics of the Forty Leading Industries of the Province of Ontario, 1934.....	445
Subsection 4. The Manufactures of the Prairie Provinces, 1934.....	445-447
15. Principal Statistics of the Leading Industries of Manitoba, Saskatchewan and Alberta, 1934.....	446-447
Subsection 5. The Manufactures of British Columbia, 1934.....	447-448
16. Principal Statistics of the Leading Industries of British Columbia and the Yukon Territory, 1934.....	448
Section 4. <i>Principal Factors in Manufacturing Production</i>	448-469
Subsection 1. Capital Employed.....	448-450
17. Distribution of Capital Employed in the Manufacturing Industries of Canada, in Percentages, by Provinces and Industrial Groups, Representative years 1917-34.....	449
18. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and by Groups of Industries, 1934, and Totals for Representative Years 1923-34.....	450
Subsection 2. Employment in Manufactures.....	450-45
19. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-34.....	452
20. Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1934.....	453
21. Total Numbers of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and by Sex, for Representative Years 1922-34.....	454
22. Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1934, by Provinces and Groups and for each of the Forty Leading Industries.....	455-456
Subsection 3. Wages and Salaries in Canadian Manufacturing Industries, 1934.....	457-461
23. Employees on Salaries and Wages in Manufacturing Industries, 1934, and Average Salaries and Wages, 1933 and 1934 by Provinces and Groups.....	457
24. Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1934, together with Comparative Figures of Average Salaries and Wages Paid in 1933, and Totals and Averages Paid in Previous Representative Years.....	459
25. Average Yearly Earnings and Index Numbers of Earnings, Cost of Living, and Real Wages of Wage-Earners in Manufacturing Industries, 1917-34.....	460
26. Percentages of Wages and Salaries Paid to Total Net Values of Manufacturing Production, 1917-34.....	461
Subsection 4. Size of Manufacturing Establishments.....	461-465
27. Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922, 1929, 1933 and 1934.....	462
28. Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1934.....	462-463
29. Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923, 1929, 1933 and 1934.....	463
30. Establishments and Employees in Canadian Manufactures, by Provinces, and Average Number of Employees per Establishment, 1934.....	464
31. Size of Establishments of some of the Leading Industries, Grouped According to the Gross Value of Products, and the Number of Persons Employed, 1934.....	465
Subsection 5. Power and Fuel.....	466-469
32. Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-34, with Details by Provinces and Industrial Groups for 1934.....	467
33. Fuel and Electricity Used in the Manufacturing Industries of Canada, 1921-34, with Details by Provinces and Groups, 1934.....	469
Section 5. <i>Manufacturing Industries in Cities and Towns</i>	470-473
34. Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1934.....	470
35. Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1930-34.....	471
36. Statistics of Manufactures of Municipalities, each with a Gross Production of \$1,000,000 or Over, and with Three or more Establishments, 1934.....	471-473

CHAPTER XV.—CONSTRUCTION.

	PAGE.
1. Principal Statistics of the Construction Industry in Canada, by Provinces, 1935..	477
2. Percentage Distribution of the Principal Statistics of the Construction Industry, by Provinces, 1935.....	477
3. Description, Classification and Value of Construction in Canada, 1935.....	478
4. Average Monthly Employment of Wage-Earners and their Remuneration by Groups and Provinces, 1935.....	478-479
5. Summary of the Value of Construction Contracts Awarded in Canada, 1911-36, as Compiled by MacLean Building Reports, Ltd.....	479
6. Construction Contracts Awarded in Canada, 1931-36, by Provinces and Types of Construction, as Compiled by MacLean Building Reports, Ltd.....	480
7. Values of Building Permits Taken Out in 58 Cities for the calendar years 1931-36	481-482
8. Values of Building Permits Issued by 35 Cities in the calendar years 1910-36 and Index Numbers of the Building Construction Industries.....	483

CHAPTER XVI.—EXTERNAL TRADE.

Section 1. <i>The Development of Tariffs</i>	484-494
Subsection 1. Historical Sketch of External Trade and Tariffs.....	484-487
Subsection 2. Tariff Relationships with Other Countries.....	487-494
Section 2. <i>The Commercial Intelligence Service</i>	495-497
Canadian Government Trade Commissioners.....	495-497
Section 3. <i>Statistics of External Trade</i>	497-581
Subsection 1. Recent Changes in the Value and Quantum of World Trade.....	499-503
I. Value, Percentage, Price and Quantum of Trade of Twenty-one Leading Countries of the World, calendar years 1929 and 1932-34.....	502-503
Subsection 2. Historical Statistics of Canadian Trade.....	503-505
Subsection 3. General Analysis of Current Import and Export Trade.....	505-506
II. Summary of the Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1914, 1927, 1933, 1935, and 1936.....	506
Subsection 4. Trade with the United Kingdom and the British Empire.....	507-510
III. Canada's Trade with the British Empire.....	508
IV. Comparison of the Average <i>ad valorem</i> Rates of Duty on Dutiable Imports from the United Kingdom and the United States with Dutiable Imports of Alcoholic Beverages and Tobacco Eliminated and Imports Free of Duty under the British Preference Added to Dutiable Imports from the United Kingdom, fiscal years 1922-36..	509
Subsection 5. Trade with the United States and Other Foreign Countries.....	510
V. Canada's Trade with the United States and Other Foreign Countries	512
Subsection 6. Geographical Distribution of Canadian Trade by Continents and Countries	512-514
VI. Canada's Trade by Continents, fiscal years 1931-36.....	513
VII. Percentages of Total Imports into Canada from Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1933-36.....	514
VIII. Percentages of Total Domestic Exports from Canada to Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1933-36.....	514
Subsection 7. Principal Commodities Imported and Exported.....	515-519
IX. Canada's Leading Imports, fiscal years 1890, 1900, 1910, 1920, 1930, 1936.	515-516
X. Canada's Leading Domestic Exports, fiscal years 1890, 1900, 1910, 1920, 1930, 1936.....	518-519
Subsection 8. Proportions of Trade in Raw and Manufactured Products.....	519-521
XI. Canada's Imports and Exports, by Continents and Leading Countries, according to Degree of Manufacture, year ended Mar. 31, 1936.....	520-521
Subsection 9. Main Historical Tables and Tables showing Current Trends in External Trade.....	521-577
1. Aggregate External Trade of Canada, fiscal years 1868-1936.....	524
2. Ratio of Exports to Imports and Values per Capita of Exports, Imports and Total Trade, fiscal years 1868-1936.....	525
3. Movement of Coin and Bullion, fiscal years 1868-1936.....	526
4. Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1935, with Percentages of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1868-1936.....	527
5. Exports to the United Kingdom, to the United States and to Other Countries, of Merchandise the Produce of Canada, fiscal years 1868-1936.....	528
6. Imports from the United Kingdom, from the United States and from Other Countries, of Merchandise Entered for Home Consumption, fiscal years 1868-1936.....	529
7. Percentage Proportions of Imports from the United Kingdom and the United States, respectively, to Totals of Dutiable and Free in the fiscal years 1911-36.....	530
8. Average <i>ad valorem</i> Rates of Duty Collected on Dutiable and Total Imports from United Kingdom, the United States, and All Countries, fiscal years 1868-1936.....	530
9. Imports for Home Consumption of Certain Raw Materials Used in Canadian Manufactures, fiscal years 1911-36.....	531
10. Exports to the United Kingdom, to the United States and to All Countries, of Classes of Merchandise the Produce of Canada, by Values and Percentages, fiscal years 1933-36.....	532
11. Imports from the United Kingdom, from the United States and from All Countries, of Classes of Merchandise Entered for Home Consumption, by Values and Percentages, fiscal years 1933-36.....	533
12. Principal Exports of Canadian Produce from Canada to United Kingdom, United States and All Countries, fiscal years 1933-36.....	534-545
13. Principal Imports into Canada for Consumption from United Kingdom, United States and All Countries, fiscal years 1932-35.....	546-555

CHAPTER XVI.—EXTERNAL TRADE—concluded.

	PAGE.
14. Imports (Dutiable and Free) and Exports of Canadian and Foreign Produce, by Main Classes, and Totals of Duties Collected during the fiscal years ended Mar. 31, 1932-36.....	566-567
15. External Trade of Canada, by Main Groups and Degree of Manufacture, According to Origin, fiscal year ended Mar. 31, 1930.....	568-569
16. Summary of the External Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended Mar. 31, 1936.....	570
17. Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at certain Ports and by Provinces, fiscal years ended Mar. 31, 1935 and 1936.....	571-572
18. Imports of Canada, by Values Entered for Consumption from British Empire and Foreign Countries, Dutiable and Free, under the General, Preferential and Treaty Rate Tariffs, fiscal year ended Mar. 31, 1936.....	573
19. Values of Imports into Canada of Merchandise Entered for Consumption, from the British Empire and from Foreign Countries, fiscal years ended Mar. 31, 1932-36.....	573-575
20. Values of Exports of Canadian Produce, from Canada to the British Empire and to Foreign Countries, fiscal years ended Mar. 31, 1932-36.....	575-576
21. Values and Percentages of Canadian Imports and Exports from and to Stated Countries, passing through the United States, fiscal years ended Mar. 31, 1935 and 1936.....	577
Subsection 10. Comparison of the Volume of Imports and Exports.....	578-581
22. Comparison of the Values and Volumes of the External Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1926 and 1931-36.....	579-581
Section 4. <i>The Tourist Trade of Canada</i>	581-583
23. Estimated Tourist Expenditures in Canada and of Canadians Abroad, calendar years 1924-36.....	582
Section 5. <i>Balance of International Payments, 1920-36</i>	583-585
24. Estimated Balance of International Payments, 1935 and 1936.....	585

CHAPTER XVII.—INTERNAL TRADE.

Section 1. <i>Interprovincial Trade</i>	586-588
1. Railway Revenue Freight Traffic Movement in Canada and the Provinces, calendar years 1934 and 1935.....	587-588
Section 2. <i>Grain Trade Statistics</i>	588-596
2. Summary of the Distribution of Canadian Grain, crop year ended July 31, 1936.....	591-592
3. Numbers and Storage Capacities of Canadian Grain Elevators, licence years 1935 and 1936.....	592-593
4. Quantities of Canadian Grain Inspected during the crop years ended July 31, 1933-36.....	593-594
5. Shipments of Grain by Vessels from Fort William and Port Arthur for the navigation seasons 1935 and 1936.....	594
6. Shipments of Grain by Lake and All-Rail Routes from Fort William and Port Arthur for the crop years ended July 31, 1935 and 1936.....	594
7. Canadian Grain Handled at Eastern Elevators, by crop years ended July 31, 1931-36.....	595
8. Canadian Grain Handled at Eastern Elevators, by Classes of Ports, during the crop year ended July 31, 1935.....	595
8A. Canadian Grain Handled at Eastern Elevators, by Classes of Ports, during the crop year ended July 31, 1936.....	596
9. Flour Mills of Canada, with Their Equipment and Capacities, by Provinces, 1935, with Totals, 1934.....	596
Section 3. <i>Marketing of Live Stock and Animal Products</i>	597-603
10. Animals in Canada, Animals Killed or Sold by Farmers and Wool Produced in Canada, by census years, 1871-1931.....	597
11. Index Numbers of Animals on Farms in Canada, calendar years 1921-36.....	597
12. Total Receipts of Live Stock and Disposition of Slaughter and Store Stock at Principal Markets in Canada, calendar years 1934 and 1935.....	598
13. Live Stock from Several Provinces of Canada, Marketed through Stockyards, Packers, etc., calendar year 1935.....	599
14. Grading of the Live Stock from Several Provinces of Canada, Marketed at the Stockyards, calendar year 1935.....	599-600
15. Principal Statistics of the Slaughtering and Meat-Packing Industry of Canada, decennially 1871-1921, annually 1930-35.....	601
16. Live Stock Slaughtered at Canadian Inspected Establishments, by months, 1934 and 1935.....	601
17. Total and Per Capita Consumption of Meats and Live-Stock Products in Canada, calendar years 1931-35.....	602-603
Section 4. <i>Cold Storage</i>	603-605
18. Cold Storage Warehouses in Canada, by Provinces, 1936.....	604
19. Stocks of Food on Hand in Cold Storages and Dairy Factories, by Months, 1935 and 1936.....	604-605
Section 5. <i>Bounties</i>	605-606
Section 6. <i>Patents, Copyrights and Trade Marks</i>	606-608
20. Numbers of Canadian Patentees, by Province of Residence, for the fiscal years ended Mar. 31, 1925-36.....	607
21. Statistics of Patents Applied for, Granted, etc., fiscal years ended Mar. 31, 1931-36.....	607
22. Statistics of Copyrights, Trade Marks, etc., fiscal years ended Mar. 31, 1931-36.....	608
23. Receipts, Expenditures and Surplus on Account of Patents, Copyrights and Trade Marks, fiscal years ended Mar. 31, 1930-36.....	608
Section 7. <i>Weights and Measures</i>	608-609
24. Inspections by the Weights and Measures Service, fiscal years ended Mar. 31, 1935 and 1936.....	609

CHAPTER XVII.—INTERNAL TRADE—concluded.

PAGE.

Section 8. <i>Electricity and Gas Inspection</i>	609-610
25. Numbers of Electricity Meters in Use, fiscal years ended Mar. 31, 1915-36.....	610
26. Numbers of Gas Meters in Use, by Kinds of Gas Consumed, fiscal years ended Mar. 31, 1916-36.....	610
27. Quantity of each Kind of Gas Sold in Canada, fiscal years ended Mar. 31, 1920-36.....	610
Section 9. <i>Merchandising and Service Establishments</i>	611-625
Subsection 1. Wholesale and Other Bulk or Non-Retail Merchandising.....	611-613
28. Bulk Merchandising (Wholesale and Other Non-Retail) in Cities of 20,000 Population or Over, 1930.....	612
29. Total Sales and Indexes of Sales of Wholesalers Proper, by Provinces and Kinds of Business, 1930-35.....	613
Subsection 2. Retail Trade and Service Establishments.....	614-625
30. Retail Merchandise Trade in Cities of 20,000 Population or Over, 1930.....	614-615
31. Total Sales and Indexes of Sales of Retail Merchandise Trade, by Provinces and Kinds of Business, 1930-35.....	616-619
32. Numbers of Chains and Chain Stores in Selected Kinds of Business, 1923, 1930, 1934 and 1935.....	619
33. Principal Statistics for Chain Stores, 1930-35.....	620
34. Retail Sales of New Motor Vehicles in Canada, calendar years 1932-36, with Total for 1930.....	620
35. Comparison of Sales and Financing of New Vehicles in Canada, 1932-36.....	621
36. Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by months, 1929, 1930 and 1932-36.....	622
37. Adjusted Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by Kinds of Business, January, 1934, to December, 1936.....	623
38. Motion Picture Theatres, Employees, Salaries and Wages, and Total Receipts, by Provinces, 1930, 1934 and 1935.....	624
39. Principal Statistics for Motion Picture Theatres, by Provinces and Cities, 1933 and 1934.....	625
Section 10. <i>Control and Sale of Spirituous Liquors in Canada</i>	626-629
40. Gross Sales and Net Profits of Liquor Control Boards, Additional Revenues Paid Directly to Governments, and Total Net Revenue from Liquor Control, 1933-35.....	628
41. Apparent Consumption of Spirits in Canada, fiscal years ended Mar. 31, 1922-36.....	629
42. Apparent Consumption of Malt Liquors, fiscal years ended Mar. 31, 1922-36.....	629
43. Apparent Consumption of Wines in Canada, fiscal years ended Mar. 31, 1922-36.....	629

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Part I.—Governmental Control Over Agencies of Transportation and Communication.....	631-633
Part II.—Railways.....	633-664
Section 1. <i>Steam Railways</i>	633-658
Subsection 1. Mileage and Equipment.....	636-638
1. Record of Steam Railway Mileage as at June 30, 1835-1919, and Dec. 31, 1919-35.....	636
2. Operated Steam Railway Mileage, by Provinces, Dec. 31, 1927-35.....	637
3. Rolling-Stock of Steam Railways, calendar years 1929-35.....	637-638
Subsection 2. Finances of Steam Railways.....	638-651
4. Capital Liability of Steam Railways, as at June 30, 1901-19, and Dec. 31, 1919-35.....	638
5. Mileage, Capital Liability, Earnings and Operating Expenses of Individual Steam Railways for the calendar year 1935.....	639
6. Capital Invested in Road and Equipment of Canadian Steam Railways, calendar years 1930-35.....	640
7. Earnings and Operating Expenses of Steam Railways per Mile of Line and per Train Mile, for the years ended June 30, 1915-19, and the calendar years 1919-35.....	640
8. Distribution of Operating Expenses of Steam Railways, calendar years 1932-35.....	641
9. Steam Railway Employees, Totals and Averages of Salaries and Wages, and Ratio of Salaries and Wages to Operating Revenues and Expenses, 1912-35.....	641
10. Areas of Land Granted to Steam Railways by the Dominion and Provincial Governments up to Dec. 31, 1935.....	642-643
11. Analysis of the Total Financial Aid Given to Steam Railways up to Dec. 31, 1935.....	643
12. Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1935.....	644
13. Canadian Government Investments in Railways, including Loans, to Mar. 31, 1936, and for the fiscal year 1936.....	644-645
14. Gross Revenues, Operating Expenses, Net Revenues, Interest on Funded Debt, and Deficits of the Canadian National Railways, calendar years 1923-35.....	646
15. Long-Term Debt of Canadian National Railways (Including Appropriations for Canadian Government Railways), Showing Principal Outstanding at ends of calendar years 1922-35.....	647-648
16. Reconciliation between Public Accounts, Mar. 31, 1936, and Canadian National Railways' Balance Sheet, Dec. 31, 1935, with Respect to the Railways' Obligations to the Dominion Government.....	649
17. Funds Received and Expended by Canadian National Railways, calendar years 1923-35.....	649-650
18. Assets of the Canadian National Railways System, as at Dec. 31, 1932 and 1935.....	650-651
Subsection 3. Steam Railway Traffic.....	651-658
19. Summary Analysis of Statistics of Passenger and Freight Services and Receipts, for the years ended June 30, 1915-19, and the calendar years 1919-35.....	652-653
20. Canadian National Railways (Canadian and U.S. Lines) Train Traffic Statistics, for the calendar years 1934 and 1935.....	654-655

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.

	PAGE.
21. Commodities Hauled as Freight on Steam Railways during the calendar years 1931-35.....	655-656
22. Numbers of Passengers, Employees and Others Killed and Injured on Steam Railways, calendar years 1920-35.....	657
23. Numbers of Persons Killed and Injured on Steam Railways in the calendar years 1933-35.....	658
Section 2. <i>Electric Railways</i>	659-662
Subsection 1. Equipment of Electric Railways.....	659-660
24. Mileage and Equipment of Electric Railways, calendar years 1932-35.....	660
Subsection 2. Finances of Electric Railways.....	660-661
25. Financial Statistics of Electric Railways, calendar years 1919-35.....	660
26. Mileage, Capital, Earnings, Operating Expenses, Passengers, Employees, and Salaries and Wages of Electric Railways in Canada, calendar year 1935.....	661
Subsection 3. Traffic of Electric Railways.....	662
27. Summary of Statistics of Electric Railway Operation, calendar years 1919-35.....	662
28. Numbers of Passengers, Employees, and Others Killed and Injured on Electric Railways, calendar years 1919-35, with Totals from 1894 to June 30, 1919.....	662
Section 3. <i>Express Companies</i>	663-664
29. Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1919-35.....	664
30. Revenues, Expenses, and Operating Mileage of Express Companies, by Companies, calendar years 1934 and 1935.....	664
31. Business Transacted by Express Companies in Financial Paper, calendar years 1931-35.....	664
Part III.—Road Transportation	665-675
Section 1. <i>Provincial Motor Vehicle and Traffic Regulations</i>	665-666
Section 2. <i>Roads and Vehicles</i>	666-669
Subsection 1. <i>Roads and Highways</i>	667
1. Classification of Canadian Highways, by Provinces, 1935.....	667
Subsection 2. <i>Motor Vehicles</i>	667-669
2. Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1904-35.....	668
3. Types of Motor Vehicles Registered in Canada, by Provinces, calendar years 1934 and 1935.....	669
4. Apparent Consumption of Automobiles in Canada, 1917-35.....	669
Section 3. <i>Finances of Road Transportation</i>	670-673
5. Capital, Maintenance and General Expenditures on Provincial Highways or Provincially Subsidized Highways in Canada, calendar years 1931-35.....	671
6. Provincial Government Funded Highway Debt and Annual Charges Thereon, 1933-35.....	672
7. Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, calendar years 1934 and 1935.....	672-673
Section 4. <i>Road Traffic</i>	673-675
8. Sales of Gasoline in Canada, by Provinces, calendar years 1931-35.....	674
9. Deaths Resulting from Motor Vehicle Accidents in Canada by Provinces, calendar years 1926-35.....	675
10. Persons Killed or Injured in Motor Vehicle Accidents, as Reported by Provincial Motor Vehicle Authorities, showing Status of Person, 1935.....	675
Part IV.—Waterways	676-701
Section 1. <i>Equipment and Facilities</i>	676-684
Subsection 1. <i>Shipping</i>	676-677
1. Numbers and Net Tonnages of Vessels on the Registry of Shipping of Canada, by Provinces, Dec. 31, 1926-35.....	676-677
Subsection 2. <i>Aids to Navigation and Miscellaneous Works</i>	677-678
2. Comparative Statement of Marine Danger Signals, fiscal years ended Mar. 31, 1925-36.....	677
3. Duration of the Season of Open Navigation in the St. Lawrence Ship Channel, calendar years 1911-36.....	678
Subsection 3. <i>Canals</i>	678-679
4. Canals of Canada, Length and Lock Dimensions, 1937.....	679
Subsection 4. <i>Harbours</i>	679-681
5. Dimensions of Graving Docks Owned by the Dominion Government.....	681
6. Dimensions and Cost of Graving Docks Subsidized under the Dry Dock Subsidies Act, 1910.....	681
Subsection 5. <i>Government Administrative Services</i>	682-684
7. Steamboat Inspection, by Inspection Divisions, fiscal years ended Mar. 31, 1935 and 1936.....	682-683
8. Number of Seamen Shipped and Discharged at Canadian Ports, calendar years 1908-35.....	683
9. Canadian Wrecks and Casualties, years ended June 30, 1911-17, and calendar years 1918-35.....	684
Section 2. <i>Financial Statistics of Waterways</i>	684-690
10. Capital Expenditures of the Dominion Government on Aids to Navigation, Canals, and Harbours, to Mar. 31, 1936.....	685
11. Expenditures of the Dominion Government for Maintenance and Operation of Aids to Navigation, Canals and Harbours, fiscal years ended Mar. 31, 1934-36.....	686
12. Revenue of the Dominion Government from the Operation of Aids to Navigation, Canals and Harbours, fiscal years ended Mar. 31, 1934-36.....	687
13. Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1934-36.....	688

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.		PAGE.
Section 3. <i>Water Traffic and Services</i>		690-701
Subsection 1. <i>Shipping</i>		690-695
14. Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years ended Mar. 31, 1911-36.....		691
15. Numbers and Tonnages of Sea-Going and of All Vessels (Exclusive of Ferriage), Entered and Cleared at each Principal Canadian Port, fiscal year ended Mar. 31, 1936.....		693-694
16. Totals of Numbers and Tonnages of All Vessels (Exclusive of Ferriage), Entered and Cleared at Canadian Ports, 1923-36, with Details by Provinces for the fiscal year ended Mar. 31, 1936.....		695
Subsection 2. <i>Canal Traffic</i>		696-701
17. Total Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1911-36.....		696
18. Tonnage of Canal Traffic, by Canals and Classes of Products, navigation seasons 1935 and 1936.....		696-697
19. Principal Commodities Carried through Canadian Canals, navigation seasons 1933-36.....		697
20. Canal Traffic, by Direction and Origin, navigation seasons 1935 and 1936.....		698
21. Freight Traffic Using the St. Lawrence, Welland and Sault Ste. Marie Canals, navigation season of 1936.....		699
22. Traffic to and from the East and West Coasts of Canada <i>via</i> the Panama Canal, years ended June 30, 1921-35.....		700
23. Summary of Commercial Traffic through the Panama Canal, years ended June 30, 1915-36.....		701
Subsection 3. <i>Harbour Traffic</i>		701
Part V.—Air Navigation		701-710
1. Statistical Summary of Civil Aviation in Canada, 1931-36.....		702
Section 1. <i>History and Administration</i>		703-705
Subsection 1. <i>Historical Sketch</i>		703-705
Subsection 2. <i>Administration</i>		705
Section 2. <i>Airports and Aircraft</i>		706-708
Subsection 1. <i>Ground Facilities</i>		706-707
2. Air Harbours in Canada, 1936.....		707-707
Subsection 2. <i>Aircraft</i>		707-708
3. Licensed Civil Aircraft in Canada, Dec. 31, 1936.....		708
Section 3. <i>Finances and Employees</i>		708-709
4. Investment for Civil Aviation in Canada, 1936.....		708
5. Revenues and Expenses of Aviation in Canada, 1936.....		708
6. Employees and Salaries and Wages in Civil Aviation, 1936.....		709
Section 4. <i>Traffic</i>		709-710
7. Operations of Civil Aircraft in Canada, 1936.....		709
8. Commercial Air Traffic in Canada, by Provinces, 1936.....		710
9. Results of accidents in Civil Aviation in Canada, 1936.....		710
10. Operation and Accident Averages in Commercial Aviation in Canada, 1936.....		710
Part VI.—Wire Communications		711-716
Section 1. <i>Telegraphs</i>		711-713
1. Summary Statistics of all Canadian Telegraphs, calendar years 1920-35.....		711
2. Statistics of Chartered Telegraph Companies for the calendar years 1930-35.....		712
Section 2. <i>Telephones</i>		713-716
Subsection 1. <i>Systems and Equipment</i>		713-714
3. Telephones in Use, Classified by Business, Residential, Rural and Public Pay, Mileages of Wire and Pole Line, and Numbers of Employees, 1911-35.....		714
4. Telephones in Use, by Provinces, Dec. 31, 1935.....		714
Subsection 2. <i>Telephone Finances</i>		715
5. Summary Financial Statistics of Telephones in Canada, years ended June 30, 1911-18, and Dec. 31, 1919-35.....		715
6. Financial Statistics of Telephones in Canada, by Provinces, 1935.....		715
Subsection 3. <i>Telephone Calls</i>		716
7. Local and Long-Distance Calls and Averages per Telephone and per Capita, calendar years 1928-35.....		716
Part VII.—Wireless Communications		716-720
Section 1. <i>Radiotelegraphy</i>		716-718
1. Government-Owned Radio Stations in Canada, fiscal year ended Mar. 31, 1936.....		717-718
2. Business and Cost of Maintenance of Radiotelegraph Stations for the fiscal years ended Mar. 31, 1935 and 1936.....		718
Section 2. <i>Radiotelephony</i>		719-720
Subsection 1. <i>Regulation of Radiotelephony</i>		719
3. Wireless and Radio Stations in Operation in Canada, Mar. 31, 1932-36.....		719
Subsection 2. <i>Canadian Broadcasting Corporation</i>		720
Part VIII.—The Post Office		721-727
1. Numbers of Post Offices in Operation, by Provinces, Mar. 31, 1931-36.....		722
2. Statistics of Gross Postal Revenues of Offices Collecting \$10,000 and upwards, fiscal years ended Mar. 31, 1935 and 1936.....		722-724
3. Revenues and Expenditures of the Post Office Department for the quinquennial fiscal years ended 1890-1910, and fiscal years ended Mar. 31, 1911-36.....		724

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—concluded.		PAGE.
4. Operations of the Money Order System in Canada, fiscal years ended Mar. 31, 1911-36.....		725
5. Money Order Statistics, by Provinces, and Total Postal Notes, fiscal years ended Mar. 31, 1932-36.....		725-726
6. Mileage Flown and Weight of Mail Carried by Air, fiscal year ended Mar. 31, 1936.....		727
Part IX.—The Press.....		727-729
1. Number of Publications in Canada, by Frequency of Issue, 1926-35.....		728
2. Circulation of Daily, Semi-Weekly, and Weekly Publications in Canada, 1926-35.....		728
3. Circulation of Daily, Semi-Weekly, and Weekly Publications, in Cities of 20,000 Population or Over, 1935.....		729
CHAPTER XIX.—LABOUR AND WAGES.		
Part I.—Labour.....		730-780
Section 1. <i>Occupations of the Wage-Earning Population.....</i>		730-732
1. Numerical and Percentage Distribution of Wage-Earners, by Provinces, 1931.....		730
2. Numerical and Percentage Distribution of Wage-Earners, by Industrial Groups for Canada, 1931.....		731
3. Numerical and Percentage Distribution of Wage-Earners, by Occupational Groups for Canada, 1931.....		731
4. Numerical and Percentage Distribution of Wage-Earners, by Age Groups, for Canada, 1931.....		732
Section 2. <i>The Dominion Department of Labour.....</i>		732-735
Section 3. <i>Provincial Labour Departments and Bureaus.....</i>		735-739
Section 4. <i>Canada and the International Labour Organization.....</i>		739-740
Section 5. <i>Organized Labour in Canada.....</i>		740-743
5. Membership of Trade Unions in Canada, 1911-35.....		741
6. International Trade Unions Operating in Canada, showing Numbers of Branches and Members, December, 1935.....		742-743
7. Canadian Central Labour Bodies Operating in Canada, showing Numbers of Branches and Members, December, 1935.....		743
Section 6. <i>Fatal Industrial Accidents.....</i>		744
8. Fatal Industrial Accidents in Canada, by Industries, 1932-36.....		744
Section 7. <i>Workmen's Compensation in Canada.....</i>		745-749
9. Compensation Paid and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1917-36.....		745
10. Compensation Paid by the New Brunswick Workmen's Compensation Board, 1920-36.....		746
11. Compensation Paid and Accidents Compensated by the Quebec Workmen's Compensation Commission, 1928-36.....		746
12. Benefits Awarded and Accidents Reported by the Ontario Workmen's Compensation Board, 1915-36.....		747
13. Compensation Paid and Accidents Compensated by the Manitoba Workmen's Compensation Board, 1917-35.....		748

Subsection 2. Minimum Wages for Male Employees.....	784-785
Subsection 3. Wages and Hours of Labour under Collective Agreements and Schedules of Wages and Hours Made Obligatory by Order in Council in Certain Provinces.....	785-787
3. Minimum Wage Rates for Female Employees in Canada Under Orders of Provincial Minimum Wage Boards, as at Dec. 31, 1935.....	786-787
Section 3. <i>Cost of Living of Wage-Earners</i>	788
4. Changes in the Cost of Living in Canada from 1914 to 1936.....	788
Section 4. <i>Earnings in the Census Year, 1931</i>	788-789
5. Wage-Earners, Ten Years of Age or Over, by Sex, Showing Total and Average Earnings and Average Number of Weeks Employed During the Twelve Months Prior to the Dates of the Censuses, by Provinces, 1911-31.....	789

CHAPTER XX.—PRICES.

Section 1. <i>Wholesale Prices of Commodities</i>	790-797
Subsection 1. Historical Review of Canadian Prices.....	790-791
1. Annual Index Numbers of Wholesale Prices in Canada, 1867-1936.....	791
Subsection 2. The Index Number on a Post-War Base (1926).....	791-797
2. Weighted General Wholesale Price Index Numbers, by Months, 1927-36.....	792
3. Annual Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), by Groups (Chief Component Material Classification), 1913-35 with Monthly Figures for 1935-36.....	793
4. Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Purpose, Yearly Averages, 1914-36, and Individual Months, 1935-36.....	794
5. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Yearly Averages 1930-36.....	795
6. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Months, 1933-36.....	795-797
Section 2. <i>Retail Prices of Commodities</i>	797-801
7. Index Numbers of Retail Prices, Rents and Costs of Services (on the 1926 Base) 1913-36.....	798
8. Index Numbers of Retail Prices, Rents and Costs of Services, by Months, 1933, 1935, 1936, and January-March, 1937.....	799
9. Prices of a Family Budget of Staple Foods, Fuel and Lighting, and Rent, for Sixty Cities in Canada, 1920, 1926 and 1928-36.....	800
10. Index Numbers of a Family Budget of Staple Foods, Fuel and Lighting, and Rent in Canada, by Provinces, 1927-36.....	801
Section 3. <i>Index Numbers of Security Prices</i>	801-804
11. Investors Index Numbers of Common Stocks (on the 1926 Base), by Months, 1936.....	803
12. Weighted Index Numbers of Prices of Mining Stocks (on the 1926 Base), by Months, January, 1935, to March, 1937.....	804
Section 4. <i>Prices of Services</i>	804-805
13. Average Daily Hospital Charges in Canada and Index Numbers Thereof (on the 1913 Base), 1913 and 1921-35.....	805
Section 5. <i>Index Numbers of Bond Yields</i>	805-806
14. Index Numbers of Dominion of Canada Long-Term Bond Yields, by Months, 1919-37.....	806
Section 6. <i>Wholesale Price Index Numbers of Principal Imports and Exports</i>	807
15. Canadian Index Numbers of Wholesale Prices and Average Valuations for all Commodities, Imports and Exports, calendar years 1913-36.....	807

CHAPTER XXI.—PUBLIC FINANCE.

	PAGE.
Section 1. <i>Dominion Public Finance</i>	809-833
Subsection 1. The Current Balance Sheet of the Dominion.....	817-818
1. Balance Sheet of the Dominion of Canada, as at Mar. 31, 1935 and 1936.....	818
Subsection 2. Receipts and Disbursements.....	818-828
2. Details of Revenue Receipts, fiscal years ended Mar. 31, 1932-36.....	819-820
3. Details of Expenditures, fiscal years ended Mar. 31, 1932-36.....	820-822
4. Principal Items of Dominion Expenditure, 1868-1936.....	823-825
5. Principal Items of Receipts (Consolidated Fund) and Total Receipts, 1868-1936.....	826
6. Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account and Total Expenditure, 1868-1936.....	827
7. Per Capita Revenue Receipts and Expenditure, by Principal Items, 1932-36.....	827-828
Subsection 3. War Tax Revenue.....	828-830
8. War Tax Revenue Received by the Receiver General, fiscal years ended Mar. 31, 1915-36.....	829
9. Summary of Excise War Taxes Collected by the Department of National Revenue, fiscal years ended Mar. 31, 1931-36.....	829
10. Excise War Taxes Collected by the Department of National Revenue, by Provinces, fiscal year ended Mar. 31, 1936.....	830
Subsection 4. Inland Revenue.....	830-833
11. Details of Excise Duties Collected, fiscal years ended Mar. 31, 1931-36.....	832
12. Statistics of Distillation, fiscal years ended Mar. 31, 1931-36.....	832
13. Quantities of Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, fiscal years ended Mar. 31, 1911-36.....	833
Subsection 5. Subsidies and Loans to Provinces.....	833-836
14. Subsidies of Dominion to Provincial Governments, fiscal years ended 1931-36.....	835
15. Total of Subsidy Allowances to Provincial Governments from July 1, 1867, to Mar. 31, 1936.....	835
16. Loans to Provincial Governments Under the Relief Acts, by Provinces, fiscal years ended Mar. 31, 1933-37.....	836
17. Loans to Provincial Governments Outstanding, on Account of Housing, by Provinces, as at Mar. 31, 1920-36.....	836
Subsection 6. National Debt.....	837-846
18. Summary of the Public Debt of Canada and Interest Payments Thereon, July 1, 1867 to Mar. 31, 1936.....	839
19. Details of the Active Assets of the Public Debt of Canada, as at Mar. 31, 1925-36.....	840
20. Details of the Gross Liabilities of Canada, as at Mar. 31, 1925-36.....	840-841
21. Funded Debt and Treasury Bills of the Dominion, Interest Payable Thereon, Date of Maturity, Rates of Interest and Centres at Which Loans are Payable, as at Mar. 31, 1936.....	841-842
22. The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913-36.....	843
23. Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-36.....	844
24. Securities Guaranteed by the Dominion Government, as at Mar. 31, 1936.....	844-846
Section 2. <i>Provincial Public Finance</i>	846-854
Subsection 1. Provincial Revenues and Expenditures.....	847-851
25. Ordinary Revenues and Expenditures of Provincial Governments for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1934.....	849-850
26. Ordinary Revenues and Expenditures of Provincial Governments per Head of Population for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1934.....	850-851
Subsection 2. Provincial Debts and Assets.....	851-854
27. Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, fiscal years 1916 to 1934.....	852
28. Debt of Provincial Governments at ends of their respective fiscal years in 1935 and 1936, showing Bonded Debt with Offsetting Sinking Funds, Treasury Bills, Other Direct Liabilities, Available Assets Offsetting Direct Liabilities and Indirect Liabilities in 1935.....	853
Section 3. <i>Municipal Public Finance</i>	854-860
29. Numbers of Municipalities in Canada, by Provinces and Classes, 1934.....	855
30. Tax Receipts of Municipalities in Canada, by Provinces, 1913-34.....	856
31. Summary Statement Showing Total Assessment Valuations of Municipalities, by Provinces, 1930-34.....	857
32. Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-34.....	858
33. Principal Financial and Other Statistics of Canadian Cities and Towns with Populations of 10,000 or Over, 1934.....	859-860
Section 4. <i>National Wealth and Income</i>	860-872
Subsection 1. National Wealth.....	860-863
34. Estimate of the National Wealth of Canada, with Percentage and Per Capita Distributions of Component Items, 1929 and 1933.....	862
35. Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929 and 1933.....	863
Subsection 2. National Income and Income Tax Statistics.....	864-871
36. Total and Per Capita Production of the Gainfully Occupied Population in 1933 and 1934, Based upon the Survey of Production, 1933 and 1934, and the Percentage of Persons Occupied in the Production of Form Utilities as Found at the Census of 1931.....	866
37. Amounts of Income Assessed for the Purposes of the Income War Tax, by Individuals and Corporations, fiscal years ended Mar. 31, 1921-35.....	867
38. Amounts of Income Assessed for the Purposes of the Income War Tax, by Provinces, fiscal years ended Mar. 31, 1932-36.....	867

CHAPTER XXI.—PUBLIC FINANCE—concluded.

PAGE.

41. Income Tax Paid, by Occupations of the Taxpayers, fiscal years ended Mar. 31, 1933-36.....	870
42. Amount Received from Special Five Per Cent Tax on Interest and Dividends, fiscal year ended Mar. 31, 1936.....	871
Subsection 3. Outside Capital Invested in Canada and Canadian Capital Invested Elsewhere.....	871-872
43. Estimated British and Foreign Investments in Canada, Jan. 1, 1935.....	872
44. Estimated Total Investments of Canadian Capital in British and Foreign Countries, as at Jan. 1, 1935.....	872

CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE.

Part I.—Currency and Banking.....	873-911
Section 1. <i>Historical Sketch</i>	873-879
Section 2. <i>The Bank of Canada</i>	879-886
Subsection 1. The Bank of Canada Act and its Amendment.....	879-880
Subsection 2. The Bank of Canada and Its Relationship to the Canadian Financial System.....	881-885
Subsection 3. Bank of Canada Operations.....	885-886
1. Liabilities and Assets of the Bank of Canada, Mar. 31, 1935 and Dec. 31, 1935 and 1936.....	885
Section 3. <i>Currency</i>	887-891
Subsection 1. Canadian Coinage.....	887-888
2. Particulars of Canadian Coinage Current in 1937.....	887
3. Circulation of Canadian Coin at Dec. 31, 1926-36.....	887
4. Annual Receipts of Gold Bullion at the Ottawa Mint, and Bullion and Coinage Issued, calendar years 1926-36.....	888
Subsection 2. Dominion and Bank of Canada Notes.....	888-890
5. Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932, and 1934-36.....	890
Subsection 3. Chartered Bank Notes.....	890-891
6. Note Circulation in the Hands of the Public, 1926-36.....	891
Section 4. <i>Monetary Reserves</i>	892
Subsection 1. Bank of Canada Reserves.....	892
Subsection 2. Chartered Bank Canadian Cash Reserves.....	892
7. Cash Reserve of the Chartered Banks in Canada, 1926-36.....	892
Section 5. <i>Commercial Banking</i>	893-909
Subsection 1. Historical.....	893-896
8. Bank Insolvencies in Canada since 1867.....	894-895
9. Bank Absorptions in Canada since 1867.....	895
Subsection 2. Combined Statistics of Chartered Banks.....	897-905
10. Historical Summary Showing Development of the Canadian Chartered Banking Business, calendar years 1867-1936.....	898-899
11. Assets of Chartered Banks, 1929, 1932, and 1934-36.....	900
12. Liabilities of Chartered Banks, 1929, 1932, and 1934-36.....	901
13. Ratio Comparisons of Certain Assets and Liabilities of Chartered Banks, 1926-36.....	901
14. Classification of Deposits, According to Size, in Chartered Banks in Canada, as at Oct. 31, 1934-36.....	902
15. Classification of Loans, According to Purpose, by Chartered Banks in Canada, as at Oct. 31, 1934-36.....	902
16. Amounts of Exchanges of the Clearing Houses of Chartered Banks in Canada for the calendar years 1932-36.....	903-904
17. Bank Debits at the Clearing-House Centres of Canada, by Individual Centres, calendar years, 1932-36.....	905
Subsection 3. Statistics of Individual Chartered Banks.....	905-909
18. Principal and Total Assets of Individual Chartered Banks, as at Dec. 31, 1935 and 1936.....	906
19. Principal and Total Liabilities of Individual Chartered Banks, as at Dec. 31, 1935 and 1936.....	906
20. Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1931-36.....	907
21. Numbers of Branches of Chartered Banks in Canada, by Provinces, Dec. 31, 1868, 1902, 1903, 1920, 1926, 1930, 1933-36.....	908
22. Numbers of Branches of Individual Canadian Chartered Banks in each Province and in Other Countries at Dec. 31, 1936.....	908
23. Numbers of Branches of each of the Canadian Chartered Banks in Other Countries, with their Locations, Dec. 31, 1935 and 1936.....	909
Section 6. <i>Government and Other Savings Banks</i>	909-911
24. Deposits with Dominion Government Savings Banks, for representative years ended June 30, 1868-1906, and Mar. 31, 1907-36.....	910
25. Summary of the Financial Business of the Post Office Savings Bank, Mar. 31, 1931-36.....	910
26. Deposits in the Montreal City and District Bank and the Caisse d'Économie de Notre-Dame de Québec, as at June 30, for representative years 1868-1906, and Mar. 31, 1907-36.....	911

CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE—concluded.

	PAGE.
Part II.—Miscellaneous Commercial Finance	911-920
Section 1. <i>Loan and Trust Companies</i>	911-915

the values of field crops for the years 1871, 1881 and 1901.

⁶ Fiscal year.

⁷ Revised since

 the publication of the 1936 Year Book. ⁸ Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927.

⁹ Includes Canadian Navy.

¹⁰ Cwt.

¹¹ Estimates of

 population since the 1931 Census are subject to adjustment as later data are made available. ¹² Figures for 1936 are subject to revision.

¹ The figures for the decennial census years 1881-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese, and quantities have been calculated by reckoning cheese at 10 cents per lb. and butter at 25 cents.

² Previous to 1931 this item does not include skim milk and buttermilk.

³ As from 1932 the values include exchange equalization.

¹ In thousands.² The statistics of manufactures in 1871 and 1881 include works employing fewer than 5 hands; those of 1891, 1901, 1911 and 1916 are for works employing only 5 hands and over except in the case of butter and cheese factories, flour and grist mills, electric light plants, lumber, lath and shingle mills, lime kilns, brick and tile works, and fish canneries. The figures shown are for the preceding years in each case.³ Exports of domestic merchandise only.⁴ Imports of merchandise for home consumption.⁵ Copper.

NOTE.

In the foregoing Summary, the statistics of fisheries (1871-1916), trade, shipping, the Post Office, the public debt, revenue and expenditure and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906, subsequently to years ended Mar. 31. Agricultural, dairying, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road transportation, vital, hospital, and immigration statistics relate to the calendar years and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1926-36. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

ERRATA.

P. 57, Area of National Park in Nova Scotia. In the fourth column under the heading of "Area in Sq. Miles," the type was damaged and should read: 458.00 sq. miles.

P. 66, "1907. Oct. 17, First message by wireless telegraphy . . ." should read: "1902. Oct. 17, First message by wireless telegraphy . . .".

P. 892, line 4, "Exchange Fund Act (c. 60, 1937)" should read: "Exchange Fund Act (c. 60, 1935)".

CHAPTER I.—PHYSIOGRAPHY.

PART I.—GEOGRAPHICAL FEATURES.*

Situation.—The Dominion of Canada comprises the whole northern part of the North American continent with its islands, except the United States territory of Alaska and the territory of Newfoundland. It includes the whole Arctic archipelago between Davis strait and the connecting waters northward to the 60th meridian on the east and the 141st meridian on the west.

The Dominion is bounded on the west by the Pacific ocean and Alaska; on the south by the United States; on the east by the Atlantic ocean, the territory of Newfoundland, Davis strait, and the Danish territory of Greenland; northward it extends to the North Pole.

The southernmost point is Middle island in lake Erie, in north latitude $41^{\circ}41'$, while from east to west Canada extends from about west longitude 57° at Belle Isle strait to west longitude 141° , the boundary of Alaska. Canadian territory thus extends over 84° of longitude and 48° of latitude.

Area.—The area of the Dominion is 3,694,863 square miles, a figure which may be compared with that of 3,738,395 square miles for the United States and its dependent territories, 3,776,700 the total area of Europe, 2,974,581 the total area of Australia, 3,275,510 the area of Brazil, 1,805,252 the area of India, 121,633 the area of the British Isles. Canada's area is over 27 p.c. of the total area of the British Empire as it is shown on page 165 of the 1934-35 Year Book.

Political Subdivisions.—Canada is divided from east to west into the following provinces: the Maritime Provinces of Nova Scotia, Prince Edward Island, and New Brunswick, all three comparatively small in area; Quebec, covering a strip south of the St. Lawrence river and the whole territory north of the St. Lawrence river and east of the Ottawa river to Hudson strait, except the Coast of Labrador; Ontario, extending northward from the Great Lakes to Hudson bay; Manitoba, Saskatchewan, and Alberta, the provinces of the interior continental plain, extending from the boundary of the United States to 60° north latitude; and British Columbia, the province of the Cordilleran region, also extending from the International Boundary to 60° N. North of the area included in the provinces the country is divided into the Yukon Territory to the west, abutting on Alaska, and the Northwest Territories. The latter is subdivided into three provisional districts: that of Mackenzie comprises the mainland between Yukon and the meridian of longitude 102° W.; the district of Keewatin comprises in general the remainder of the mainland between the district of Mackenzie and Hudson bay, and includes the off-shore islands in Hudson and James bays; the district of Franklin comprises in general the Arctic archipelago.

Prince Edward Island.—This, the smallest province of the Dominion, lies just off the coast east of New Brunswick and north of Nova Scotia from both of which it is separated by Northumberland strait from ten to twenty-five miles wide. It is about 120 miles in length and, with an average width of 20 miles, covers an area of 2,184 square miles, approximately 200 square miles more than the State of Delaware. The island is almost trisected by the deep indentations of Malpeque bay north of Summerside and by the mouth of the Hillsborough river at Charlottetown, which nearly meets Tracadie bay on the north side. Its rich red soil and red sandstone formations are a distinctive feature, and no point on the island attains a greater

*Revised by F. H. Peters, Surveyor General and Chief, Hydrographic Service, Department of Mines and Resources, Ottawa.

altitude than about 450 feet above sea-level. A climate tempered by the surrounding waters of the gulf and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The province is noted for its relative predominance in the fox-farming industry, its lobster canneries, its oyster beds, and its production of seed potatoes.

Nova Scotia.—The province of Nova Scotia is 381 miles in length by from 50 to 105 miles in width, a long, narrow strip of land lying parallel to the Maine and New Brunswick coast and joined to the latter province by the isthmus of Chignecto, which is 15 miles in width. It includes at the north the island of Cape Breton, which is separated from the mainland by the narrow strait of Canso. The total area of the province is 21,068 square miles, a little over 2,000 square miles less than the combined area of Belgium and Holland. Cape Breton island, south of the main entrance to the gulf of St. Lawrence and sheltering Prince Edward island from the Atlantic, is roughly 100 miles in length with an extreme breadth of 87 miles. Its area of 3,970 square miles encloses the salt-water lakes of Bras d'Or, connected with the sea at the north by two natural channels and at the south by the St. Peters ship canal. The ridge of low mountainous country running through the centre of the Nova Scotia mainland, the highest altitude of which is less than 1,500 feet, divides it roughly into two slopes. That facing the Atlantic is generally rocky and open to the sweep of Atlantic storms, but the other, facing the bay of Fundy and Northumberland strait, consists for the most part of fertile plains and river valleys noted for general farming and for fruit-farming districts which produce the famous Nova Scotian apples. The Atlantic coast is deeply indented with numerous excellent harbours, many of which provided splendid homes and refuges for the old sail fishing fleets. The province is still the home of an extensive fishing industry. The mineral resources of Nova Scotia were among the first in the Dominion to be exploited as some of its coal deposits outcropped on the sea coast. These valuable coal measures make Nova Scotia still one of the chief coal-producing provinces of the Dominion. In addition, there are extensive areas of gold-bearing formations and valuable deposits of gypsum.

New Brunswick.—With a total area of 27,985 square miles, New Brunswick may be compared in size to Scotland with its area of 30,405 square miles. The province is very compact and in shape nearly rectangular, with its depth not greatly exceeding its width. The conformation is in general undulating and of low relief. In the southeastern half of the province the ground elevation does not generally exceed 500 feet above sea-level except for a narrow strip in the south which produces the highlands bordering the bay of Fundy east of Saint John. In the northwestern half the ground elevation is in general from 500 to 1,000 feet above sea-level and reaches its greatest elevation of about 2,690 feet in Northumberland county north-east of Grand Falls. The St. John, rising in the sister province of Quebec and the bordering State of Maine, is a river with many distinctive beauties, while its length of nearly 400 miles makes it quite noteworthy as to size. In the northeastern half of the province there are very extensive areas of Crown lands still carrying valuable stands of merchantable timber. The bay of Chaleur at the north, the gulf of St. Lawrence and Northumberland strait at the east, the bay of Fundy at the south and Passamaquoddy bay at the southwest, provide the province with a very extensive sea-coast. To its southwest is a group of islands belonging to the province, the most important of which are Grand Manan, Campobello, and the West Isles. New
best watered country in the world; numerous rivers

provide access to extensive lumbering areas in its interior and to many of the most attractive hunting and fishing resorts in the Dominion. While its forest resources are an important economic feature, extensive areas of rich agricultural lands are found in the river valleys and the broad plains near the coasts. The Minto coal-fields, though producing on a limited scale for many years, have shown an expanding tendency recently and the province also produces a limited quantity of petroleum and natural gas.

Quebec.—Quebec might well be included among the Maritime Provinces, for with the St. Lawrence river, the gulf of St. Lawrence, the Atlantic, Hudson strait and bay, salt water washes the coasts of the province for a length of over 2,700 miles. Besides including a narrow strip of land between the St. Lawrence and the International and New Brunswick Boundaries, Quebec extends northward from the St. Lawrence and Ottawa rivers to Labrador and Hudson strait, covering over 17° of latitude and an area of 594,534 square miles, about 38 p.c. of which lies south of the isotherm of 60° F. mean July temperature.* The combined areas of France, Germany, and Spain are about 2,600 square miles less than the area of Quebec. The conformity of the surface of Quebec is in general that characteristic of the Precambrian rocks, being quite even in general but much diversified by minor hills and hollows. North of the St. Lawrence the land takes the form of a ridge, parallel to the river and rising from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet and then descending gently again to the sea-level of Hudson bay to the northwest; but to the northeast the ridge carries its height to end abruptly in the high headlands of Labrador. South of the river, the area is comprised of the St. Lawrence Lowlands between Montreal and Quebec which, rising to the east, produce the highest known elevation in the province, *viz.*, 4,160 feet, that of Jacques Cartier peak of Tabletop mountain in the Gaspé peninsula. With the exception of the treeless zone extending somewhat south of Ungava bay, most of the province supports a valuable tree growth varying from the mixed forest in the southwest to the eastern and northern coniferous in the areas of higher latitude. Apart from its importance as the threshold of Canada and the Atlantic gateway through which ocean vessels must pass on their way to the interior of the continent, Quebec is also noted for its natural resources. The extensive timber limits of its northern areas form the basis for the great pulp and paper industry of the present and the future. Its rivers, many of them as yet comparatively unknown, may be harnessed to supply about two-fifths of the electric power available in Canada. Its asbestos deposits have long been known for their quality and extent, while more recently there have been extensive developments of deposits of gold and copper in the northwestern part of the province, with further discoveries extending the mineralized area into the Chibougamau district. These developments have brought the province up to third place in mineral production in Canada. The fisheries of the St. Lawrence river and gulf are well known. Agriculturally, the climate and soil of the upper St. Lawrence River valley and the plains of the Eastern Townships are eminently adapted to general farming operations.

Ontario.—The province of Ontario is the section of the Dominion contained between the great international lakes and Hudson bay and between the western boundary of Quebec and the eastern limits of Manitoba. Although generally regarded as an inland province, Ontario has a fresh-water shore line on the Great Lakes of more than 2,362 miles and on the north a salt-water shore line of about 680 miles with a tidal port at Moosonee at the southern end of James bay. The

* The isotherm of 60° F. mean July temperature is generally considered as the northern limit for the economic production of cereals.

southernmost point of Ontario, which is also the southernmost point of the Dominion, is in north latitude $41^{\circ} 41'$ —a little further south than the northern boundary of the State of California—and its most northern, in north latitude $56^{\circ} 50'$. The total area comprised within its limits, of which about 82 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 412,582 square miles, of which its fresh-water area of 49,300 square miles forms the unusually large proportion of 12 p.c. The province is over 17,000 square miles greater in area than are France and Germany together, and when compared with the States to the south, Ontario is found to be almost equal in extent to the combined areas of the six New England States, together with New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, and Wisconsin. Excepting in the southwestern part, the surface conformity of Ontario is influenced by the characteristics of the Precambrian rocks. In northern Ontario a large area with elevations of 1,000 feet or over adjoins the north shore of the Great Lakes and going north a short distance over the Height of Land the slope descends very gently to Hudson bay, which has a wide marginal strip less than 500 feet above sea-level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of lake Superior. The whole province supports a valuable covering of trees, varying, from south to north, from the mixed forest to the eastern and northern coniferous. Many varieties of climate and soil are encountered, from the distinctively southern conditions found along the shores of lake Erie to the very different ones of Hudson and James bays. Ontario, of all the provinces, is the centre of the country's manufacturing industries, owing to its abundant water-power resources and its proximity to the coal-fields of Pennsylvania, but the many resources of its rural districts are not on this account neglected. Mining is a very important industry in the wide-spread Precambrian area and, although the most important districts are Sudbury, Porcupine, and Kirkland Lake, profitable mining operations, principally of gold, are now being carried on from the Manitoba boundary eastward across northern Ontario and down into eastern Ontario. There is also an important production of petroleum and natural gas, salt, and gypsum in the southwestern part of the province. Fruit farming in the Niagara district and general farming throughout the entire southern part of the province are carried on extensively under unusually favourable conditions, while timber, pulp, and furs are other important products of more northern parts.

Manitoba.—Manitoba, the most easterly of the Prairie Provinces, and also the oldest of them in point of settlement, includes the area between Ontario on the east and Saskatchewan on the west. Its southerly limit is the International Boundary, while its northerly boundary is the 60th parallel of latitude and Hudson bay, where its coast of over 400 miles includes the harbour and port of Churchill. The total area of Manitoba, of which about 56 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 246,512 square miles—3,246 square miles greater than twice the total area of the British Isles. The conformity of the surface of Manitoba is quite even; commencing on the north with a strip bordering on Hudson bay—perhaps 100 miles wide and less than 500 feet in elevation—the surface rises gradually towards the west and south. The bulk of the province has an elevation of between 500 and 1,000 feet, with the greatest height of 2,727 feet attained in Duck mountain, north-west of lake Dauphin. East and north of lake Winnipeg the Canadian Shield is found with its Precambrian rock formation, but the remainder of the province is overlain by very fertile soil of great depth. The treeless prairie belt extends into the southwest corner of the province, but the greater portion of the developed area is in the grove belt, characterized by groves of poplar interspersed with open prairie

* See footnote to p. 3.

patches; to the north there are great areas of northern mixed forest, blending into the northern coniferous, which thin again to some treeless areas along the coast line farther north. The province has been regarded as typically agricultural, its southern lands being specially adapted to this form of industry. Its northern districts, however, are of importance in the production of timber and furs and its numerous large lakes in the production of fresh-water fish, chiefly whitefish. About three-fifths of the area of this province is underlain by the Precambrian rocks which have been found so rich in minerals in northern Ontario and Quebec. Two large deposits of copper-gold-zinc ore have been developed, south of the Churchill river near the Manitoba-Saskatchewan boundary, while to the east and north of lake Winnipeg recent years have witnessed great activity in the prospecting and development of gold properties, a number of which are now producing. The province also possesses important water-power resources in the rivers of the Precambrian area.

Saskatchewan.—This central prairie province lies between Manitoba and Alberta; it extends from the International Boundary on the south to the 60th parallel of latitude, which divides it from the Northwest Territories. The area, of which about 89 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 251,700 square miles, approximating that of Manitoba, and greater by 5,000 square miles than the combined areas of the British Isles and Norway. Approximately one-third of the total area, generally lying north of the Churchill river, is underlain by the Precambrian rocks which have been found so richly mineralized in other parts of Canada. The Flinflon copper-gold-zinc deposit on the Manitoba-Saskatchewan boundary is an evidence of economic mineralization in the east, while in the Lake Athabaska region of the northwest promising discoveries of gold have been made recently. The northern districts, abundantly watered by lakes and rivers, in addition to potential mineral wealth, are rich in timber resources while the southerly two-thirds of the province overlain by generally fertile soil of great depth includes a large portion of the famous western wheat fields. The larger part of the developed area in the south is comprised in the great, treeless prairie belt, fringed to the north with a zone of poplar, interspersed with open prairie, which gradually changes into the northern mixed forest covering all the northerly parts. Apart from the southern prairies, which are extraordinarily smooth, the surface topography is generally of low relief with a gradually rising slope towards the west. The bulk of the province has a general elevation of between 1,000 and 2,000 feet, with the maximum elevation of about 4,500 feet on the eastern point of the Cypress hills in the southwest corner. The climate in the southern parts is quite different from that of Eastern Canada, with less precipitation and perhaps more severe features than are encountered in many other parts of the country, but is nevertheless most favourable to plant growth, when sufficient moisture is available.

Alberta.—Lying between Saskatchewan on the east and the Rocky mountains and the 120th meridian on the west, and bounded on the north and south by the Northwest Territories and the United States respectively, is the province of Alberta. Its area is slightly greater than that of Saskatchewan or Manitoba, comprising a total of 255,285 square miles, of which about 90 p.c. lies south of the isotherm of 60° F. mean July temperature.* The area of the province is over 8,600 square miles greater than the combined areas of the British Isles and Norway. Like Saskatchewan, the southern part of the province is comprised in the dry, treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie, which again gives way to the northern mixed forest covering the northerly parts. The

* See footnote, p. 3.

Precambrian rocks just touch Alberta at its northeast corner, so that, excepting the fringe of mountainous country on its western border, practically the whole of the province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace river, which has already resulted in the extension of settlement farther north than in any other part of Canada, and (2) the wonderful grazing lands in the foothills district, which, rising sharply on the west, commences the ascent which continues to the very peaks of the Rocky mountains. The southern half of the province, rising toward the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half the slope descends until elevations of well under 1,000 feet are reached at lake Athabaska in the northeast corner. Mount Columbia, with an elevation of 12,294 feet, is the highest point in the province. Alberta has the most extensive coal resources of any province of the Dominion and has also become the leading producer of petroleum and natural gas. Lumbering is important in the more mountainous western parts and in the north, while ranching is still pursued in the less populous sections. In the southern prairies there are considerable areas where the quantity and distribution of the natural precipitation makes permanent agriculture precarious and in these areas a number of large irrigation projects have been developed, taking their water supply from rivers rising in the mountains which form the western boundary of the province. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the "Chinook" winds.

British Columbia.—British Columbia, the most westerly province of the Dominion, comprises an area of 366,255 square miles, slightly more than three times the area of the British Isles. The predominant feature of the province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys, many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. Apart from the smoother area in the northeast corner which extends up from the "Peace River Block" there is another notably large area of smoother terrain in the Stuart Lake district, traversed by the Canadian National railway running west from Fort George to Prince Rupert. The highest point in the province is Mount Fairweather (15,287 feet). The shore line of the Pacific is deeply indented with many inlets ideal for harborage and with wonderful scenic aspects. With two ocean ports served by transcontinental railways, British Columbia is well situated and equipped to carry on trade with the Orient, while its great stands of fir, spruce, and cedar timber constitute a natural resource of great value. The province includes many islands of the Pacific, notably the Queen Charlotte group and Vancouver island; the latter, with an area of about 12,408 square miles, is noted for its temperate climate and abundant natural resources. The wealth of the forest resources supports the lumbering and pulp and paper industries and puts British Columbia ahead of any other province in the production of lumber and timber. The province also excels in fishery products chiefly on account of its catches of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. The production of the metals, gold, copper, silver, lead, and zinc, has played an important role in the economic life of the province since its early days, while valuable coal deposits on Vancouver island, and at Crow's Nest and Fernie in the interior, have been worked for many years. The boundaries of the province extend from Alberta on the east to the Pacific ocean and Alaska on the west, and from the International Boundary northward to Yukon.

Yukon and Northwest Territories.—The vast area of 1,516,758 square miles is included within the boundaries of Canada's northern subdivisions, the Yukon Territory and the three provisional districts of the Northwest Territories. This is over twelve times the area of the British Isles, nearly half the area of the United States, and more than the combined areas of the Argentine Republic and Chile in South America. The northern territories are as yet, in parts, unexplored, but travel and transport by air is having a great influence in their further exploration and development. By means of aeroplane photography, the mapping of areas adjacent to the chief transportation routes and mineral discoveries is being rapidly extended. There are many widely scattered indications of mineral wealth in these territories. The discovery of alluvial gold in the Yukon was the cause of the first opening up of that territory, which of late years has been producing coal for local requirements and exporting silver and lead, as well as gold. The presence of copper deposits in the Coppermine River area has been known for many years and recent exploration substantiates their probable eventual worth. More recently, at the east end of Great Bear lake, rich deposits of silver-radium ore have been discovered and are now being mined. Oil wells which have been drilled at Norman on the Mackenzie river are providing a source of power for the mining and transportation activities, as well as a convenient fuel for the increasing number of residents in the district. Promising gold prospects have been located in the Great Slave Lake area. Because a large portion lies within the Arctic circle, the tendency has been to associate with the Northwest Territories thoughts of ice and snow but as our knowledge is increased the argument steadily gains more weight that what have been regarded in the past as the great "barren lands" of the northern mainland, are more appropriately described as our great northern prairies.

Development of the resources of, and communications in, the Northwest Territories and Yukon are dealt with in Chapter XXVIII, Subsection 1.

Summary of Land and Water Area.—The total land and fresh-water areas of the Dominion, together with its distribution by provinces and territories, are shown in Table 1.

1.—Land and Fresh-Water Area of Canada, by Provinces and Territories, as in 1936.¹

¹The salt-water areas of Canada are excluded.

² Approximate.

Section 1.—Orography.

The outstanding and predominant orographical feature in Canada is the great Cordilleran mountain system which, extending up from the south, parallels the coast of the Pacific ocean, and, continuing on, comprises the bulk of the United States territory of Alaska. Throughout Canada this mountain system carries a width of about four hundred miles and, covering about 530,000 square miles in area, includes nearly all of British Columbia and Yukon. This region is definitely the most rugged and elevated in the Dominion, many of the summits reaching heights of 10,000 feet with occasional peaks over 13,000 feet above sea-level. The principal named peaks exceeding 11,000 feet in elevation are given in Table 2. The main mountain ranges forming the system are the Coast mountains and the St. Elias mountains on the Pacific side, the Selkirks and the Rockies on the east side of the system to the south, and further north on the east side the Stikine and the Mackenzie mountains. This great mountainous tract is a formidable barrier between the ocean and the interior of Western Canada; by precipitating a great part of the moisture out of the winds coming from the Pacific, it has a marked effect on the climate of the western country. On the west side, the Cordilleras are drained by mountain streams pitching swiftly down to the Pacific. The Yukon territory is drained to the north by that remarkable river of the same name which runs through a wide valley over seventeen hundred miles long before reaching the Bering sea. On the east side of the mountains and their foothills, the land slopes gently away to the east and to the north.

2.—Mountain Peaks over 11,000 Feet in Elevation, with Latitude and Longitude.

NOTE.—The highest mountain in Eastern Canada, with the exception of the Torngats in Labrador peaks of which rise to about 5,500 feet, is Tabletop mountain (recently re-named Mount Jacques Cartier by the Geographic Board of Canada) in N. lat. 48° 59', W. long. 65° 56', Gaspé district, Quebec, the summit of which is 4,160 feet above sea-level.

¹ This peak is on the international boundary between British Columbia and Alaska. ² The enumerated peaks in Yukon are on or near the Yukon-Alaska Boundary. ³ Data not available.

The southern portion of the eastern declivity, from the Rocky mountains down to lake Winnipeg, is comprised in the Nelson River drainage emptying into Hudson bay; representing the presently settled part of Western Canada, it includes the treeless prairies and comprises the lands which in the main produce Canada's great wheat crop. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare. Generally, it is overlain by great depths of clay soil, through which the streams have cut themselves down into deep coulees and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow; in the dry prairie section there are many places where the absorption from the broad and shallow bodies of water is so great that they have little or no outflowage and consequently the concentration of mineral salts in the water makes it unfit for domestic use. The terrain is generally smooth or gently undulating and, from an elevation of 3,400 feet at Calgary, falls away gradually to an elevation of 800 feet around lake Winnipeg seven hundred miles to

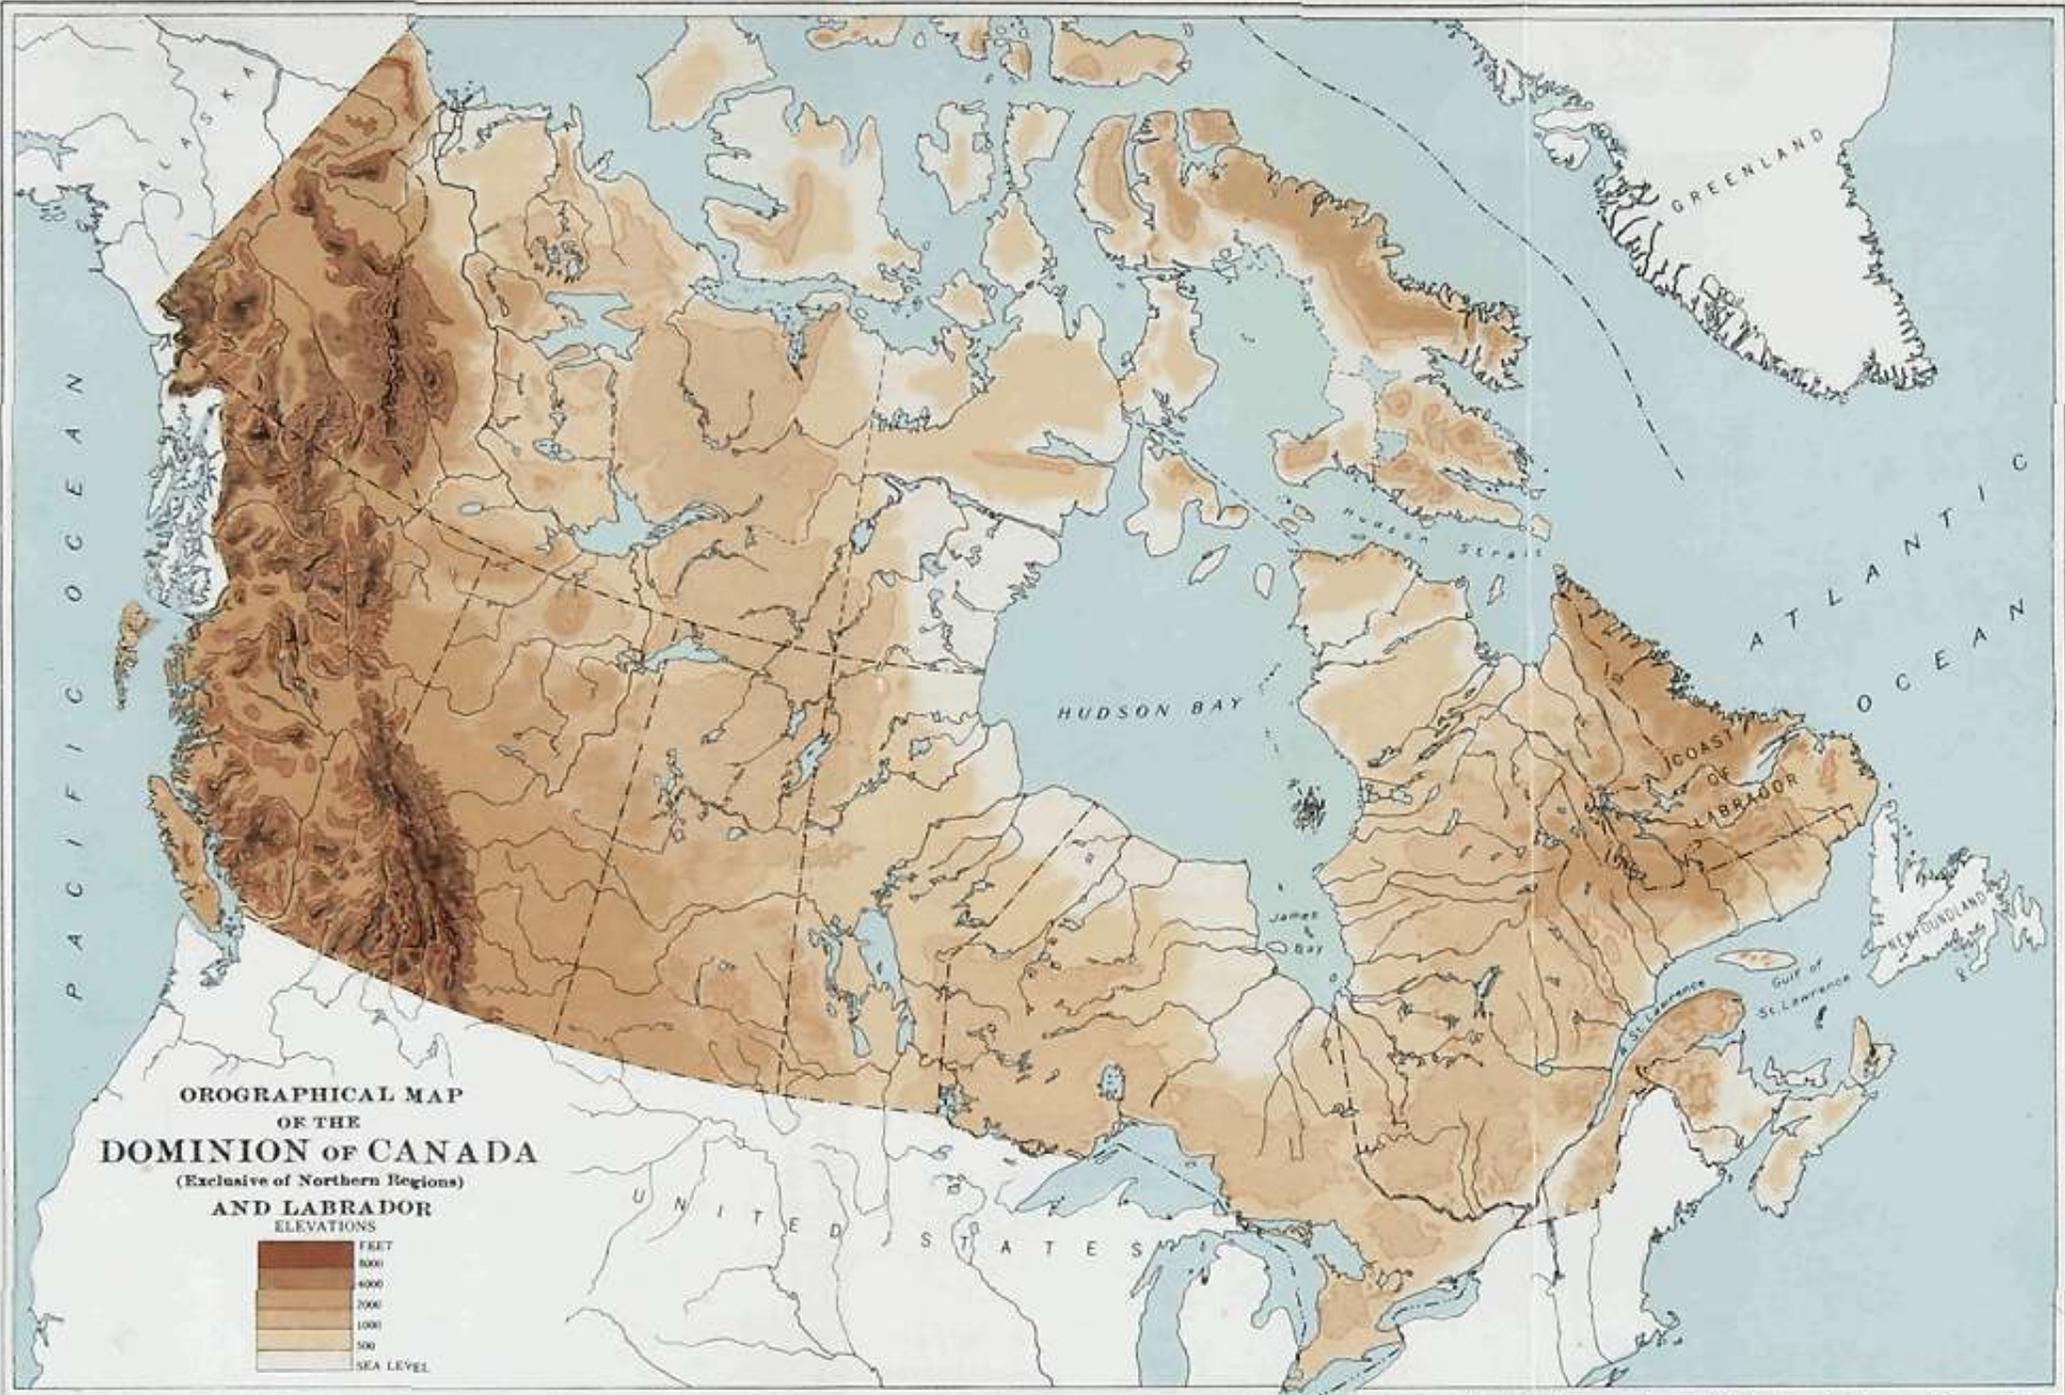

the east. Just north of Edmonton a height of land turns the waters to flow north into the great Mackenzie river, over twenty-five hundred miles long, whose valley with its low elevation above the sea is the outstanding feature of the Northwest Territories. In this watershed the terrain becomes less smooth with prominent elevations in the Caribou, Horn and Franklin mountains and the clay soils of the prairies give way to more of sand and gravel. Great Slave and Great Bear lakes, each half as large again as lake Ontario and less elevated above the sea than lake Erie, are notable features; north and east of these two great lakes the country comes within the Canadian Shield* and the rock with some shallow overburden slopes gently down to the Arctic ocean without any large uplifts to break the monotony.

Going east again, in the more northerly part there is encountered the orographical influence of Hudson bay which, indenting the continent so deeply and with rivers running in from west, south, and east, has an enormous drainage basin mainly in Manitoba, Ontario, and Quebec. Practically all of this great basin, excepting the Nelson River drainage, is included in the Canadian Shield, the surface characteristic of which is hard rock either exposed or overlain with shallow soil generally confining agriculture to the valleys or small basins. With only small areas in northeastern Quebec rising above 2,000 feet in elevation, there are no great eminences, but the surface is generally accidented by many hills and hollows with countless numbers of lakes and streams. On its west and south sides, Hudson bay is bordered by a strip of low land under 500 feet in elevation and varying in width from one to two hundred miles; in the southerly part of these flat, low lands the rock is overlain with a considerable depth of soil sometimes referred to as the clay belt of northern Ontario.

South and east of Hudson bay the predominating feature, both orographically and economically, is the very extensive depression containing the Great Lakes and the St. Lawrence river which connects them with the Atlantic ocean. The bulk of the drainage basin of the Great Lakes and the St. Lawrence lies within the limits of the Canadian Shield with the same characteristics as already described. The very important exception is the valley of the St. Lawrence river from Kingston to Quebec and the peninsula of Ontario formed by the Great Lakes which together are generally known as the St. Lawrence Lowlands, about 35,000 square miles in area. Presently containing the greater part of the population of Canada, this industrial area is of great economic importance; the climatic conditions and fertile soil combine to make it most suitable for mixed farming.

The Maritime Provinces, New Brunswick, Nova Scotia, and Prince Edward Island, together with the southeastern portion of Quebec, embrace an extension northward of the Appalachian mountains but, excepting the Notre Dame mountains of Gaspé peninsula, the comparatively low elevations are better described as hills. The whole area may be regarded as a peninsula jutting out with bold and broken coast-line to separate the gulf of St. Lawrence from the Atlantic and it is this situation that dominates the orography; with the exception of the St. John, the rivers are of no great length in their courses down to the sea. It is a beautiful country of diversified character with areas of good farm lands; the broken coast provides many good harbours and the only ocean ports open throughout the whole year that Canada possesses on the Atlantic seaboard.

* Excepting the St. Lawrence Lowlands, the Maritime Provinces and the Hudson Bay Lowland, the Canadian Shield embraces all of Canada east of a line commencing at Daruley bay on the Arctic coast and running south and east through Great Bear lake, Great Slave lake, lake Athabaska, lake Winnipeg and lake of the Woods on the International Boundary.

Section 2.—Lakes and Rivers.

The fresh-water area of Canada is unusually large constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes, details concerning which are given in Table 3.

Particularly notable are the depth of lake Superior and the shallowness of lake St. Clair and lake Erie.

¹ Revised since the publication of the 1936 Year Book.

Lake Superior, with an area of 31,820 square miles, is the largest body of fresh water in the world. As the International Boundary between Canada and the United States passes through the centre of lakes Superior, Huron, St. Clair, Erie and Ontario, only a part of the areas of these lakes given in the above statement is Canadian, while the whole of lake Michigan is within United States territory. The total length of the St. Lawrence waterway, from the head of the St. Louis river in Minnesota to Pointe-des-Monts at the entrance of the gulf of St. Lawrence, is 1,900 miles. The great obstacle to navigation on this waterway was the rise of 326 feet between lakes Ontario and Erie, which is now surmounted by the new Welland canal; the river itself dropping over the escarpment at Niagara creates perhaps the most famous waterfall in the world. The Great Lakes, with the St. Lawrence river, form the most important system of waterways on the continent and one of the world's most notable fresh-water transportation routes. In addition to the Great Lakes there are many other remarkably large lakes; the eleven following, with their areas in square miles in parentheses, are all over one thousand square miles in area: Great Bear (11,660), Great Slave (11,170), Winnipeg (9,398), Athabaska (3,058), Reindeer (2,444), Winnipegosis (2,086), Manitoba (1,817), Dubawnt (1,600), Nipigon (1,870), Southern Indian (1,200), lake of the Woods (1,346). Apart from these lakes, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer lake in Saskatchewan, there are 7,500 lakes. Table 4 gives a list of the principal lakes of Canada, by provinces, with their areas in square miles.

Total.....	1,379,160	Area, Canada less Arctic Archipelago	3,140,831

¹Areas are approximate.

It is noteworthy that the greater part of the Dominion drains into Hudson bay and the Arctic ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of the West, but, otherwise, the rivers run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie, which drains Great Slave lake is, with its headwaters, the longest river in Canada (2,514 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic ocean. From Fort Smith, on the Slave river, large river boats run without any obstruction down to Aklavik in the delta of the Mackenzie, a distance of 1,292 miles. In Eastern Canada it is the Great Lakes and St. Lawrence drainage basin that dominates all others and has undergone the greatest development. The St. Lawrence river and the Great Lakes provide a water route from the Atlantic as far as Fort William and Port Arthur, twin cities situated on lake Superior and only 419 miles from Winnipeg, the half-way mark in distance across the Dominion. The main tributaries of the St. Lawrence all flowing south (most of which have lakes available for reservoiring), together with the main river itself, have developed and undeveloped water powers whose economic value it would be difficult to over-estimate. Apart from the plains region of the West, the rivers of Canada have a vast power potentiality well distributed over the country, as may be seen by reference to the water-power map at the beginning of Chapter XIII. Table 6 gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

6.—Lengths of Principal Rivers and Tributaries in Canada.

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

Section 3.—Islands.

The islands of Canada are among its most remarkable geographic features. They include the very large group lying in the Arctic ocean, the fringe of both large and small islands off the Pacific coast, those of the Maritime Provinces and Quebec in the Atlantic ocean and the gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. The Arctic islands are of vast extent, Baffin, Victoria, and Ellesmere, the three largest, being approximately 201,600, 80,450, and 75,024 square miles in area respectively, but Banks, Devon, Somerset, Prince of Wales, Melville, and Axel Heiberg are each larger than Prince Edward Island; Southampton, another very large island, lies just within the wide mouth of Hudson bay. Their economic potentialities, beyond deposits of coal and other minerals, have not been fully established. The Pacific Coast islands, with the exception of Vancouver island and the Queen Charlotte group, are small and dot the western coast of British Columbia from Dixon entrance to the southern boundary of the province. Vancouver island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte islands farther north. These islands figure largely in the mining, lumbering, and fishing industries of the West, and together with the bold and deeply indented coast-line provide a region for scenic cruises rivalling those of Norway.

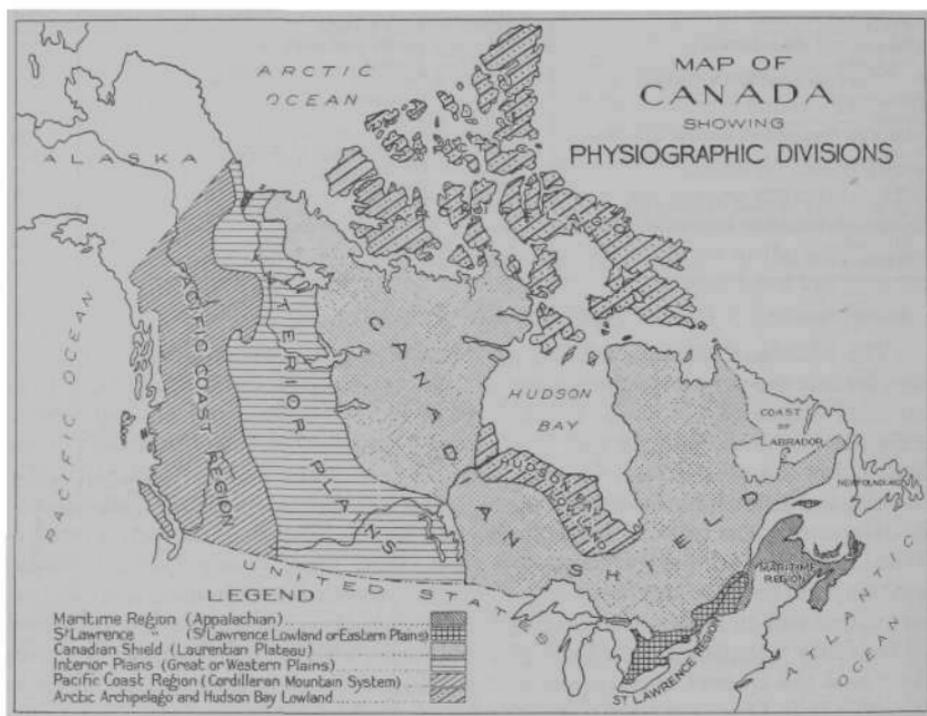

On the eastern coast of the Dominion are the island province of Prince Edward Island, the island of Cape Breton (an integral part of Nova Scotia), Anticosti and the Magdalen group (included in the province of Quebec) and the islands of Grand Manan and Campobello (part of the province of New Brunswick) in the bay of Fundy. Prince Edward island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti of about the same extent. Fishing activities in these eastern islands are important, while agriculture on Prince Edward island and mining on Cape Breton are the chief occupations of the inhabitants.

Manitoulin island and the Georgian Bay islands in lake Huron and the Thousand Islands group in the St. Lawrence river, at its outlet from lake Ontario, are the more important islands of the inland waters.

PART II.—GEOLOGY.

Section 1.—Geology of Canada.

A description of the Geology of Canada by Wyatt Malcolm, M.A., of the National Museum of Canada, will be found at pp. 18-28 of the 1936 edition of the Year Book. Subsection I of this article dealt with the topography of Canada from the standpoint of the geologist and to this material, together with the description of the chief physiographic divisions appearing on pp. 7-11 of the 1936 Year Book, the reader is referred for such data as may be necessary to supplement the physiographic map of Canada given below and the geological map facing p. 25.

Section 2.—Economic Geology.

GEOLOGY AND ECONOMIC MINERALS.*

The continent of North America is made up of six major physiographic divisions. By reference to the above map it is seen that all of these lie partly, and three of them lie largely, within the borders of Canada. In the following pages the geology and mineral resources of Canada are discussed, each physiographic province being taken up in turn. For local sources and latest statistics of production the reader is referred to Chapter XII—Mines and Minerals.

The Canadian Shield.—The Canadian Shield consists of rocks of Precambrian age. It is part of a continental mass which, in Precambrian time, extended in all directions beyond the present limits. During succeeding geological periods the Canadian Shield was several times flooded, at least partly, by seas that advanced over it and later retreated. During these periods, sediments, including limestones,

* By F. J. Alcock, Ph.D., Mines and Geology Branch, Department of Mines and Resources, Ottawa.

sandstones, and shales, were deposited. Later erosion removed nearly the whole covering and exposed the surface of Precambrian rocks. A few patches of the younger capping rocks still remain, as for example, the Palæozoic outliers at lake Timiskaming and lake St. John.

Since the beginning of the Cambrian, the Canadian Shield has been a stable mass. It has suffered vertical movement, but has been unaffected by any folding or mountain-building revolutions. The Precambrian history is, however, complicated. Precambrian time was very long, probably longer than all the time since the beginning of the Cambrian, which according to the latest estimations began about 500,000,000 years ago. During the long Precambrian era, volcanism and sedimentation on vast scales took place, and during at least two periods mountain ranges were built, which were subsequently eroded away to plains of low relief. The mountain-building periods were also characterized by the intrusion of igneous rocks, and these were responsible for the formation of many varieties of ore deposits.

Precambrian time can conveniently be divided into two major divisions which may be termed early Precambrian and late Precambrian. The former has been also described under such names as Archæan, Laurentian, and Archæozoic, and the latter under the terms Algonkian, Huronian, and Proterozoic.

Early Precambrian time is divisible into two periods. In the earlier period volcanism took place on a vast scale and lavas, commonly called Keewatin, accumulated in thicknesses measured in thousands of feet. Contemporaneous sedimentation also took place, so that with the lavas are interbedded tuffs and sediments, which, in places, have been altered to garnet-bearing gneisses and mica-schists. In Rainy River district of western Ontario, a thick series of such rocks, known as the Couchiching, underlies the Keewatin volcanics. In northern Manitoba and Saskatchewan similar altered sediments lie both beneath and interbedded with volcanic rocks.

In eastern Ontario and southwestern Quebec a thick series of sediments in which limestone is an important member may have been deposited in this period. This series is known as the Grenville and consists of limestone, quartzite, and sedimentary gneisses commonly carrying garnet and sillimanite.

This early period of volcanism and sedimentation was followed by widespread but gentle folding accompanied by the intrusion of granite. Succeeding this a series of sediments, known in different districts under various names, such as the Timiskaming, the Windegokan, and the Pontiac, accumulated. This period of sedimentation was succeeded in turn by a mountain-building revolution which was accompanied by widespread and general intrusion of granite, forming one of the great metallogenetic epochs of the Precambrian. A long period of quiescence succeeded, in which long-continued erosion reduced the mountainous region to low relief.

Late Precambrian time included the long period during which the Huronian and Keweenawan rocks accumulated on this eroded complex of igneous rocks. North of lake Huron the Huronian rocks consist of an older series known as the Bruce, consisting of from 10,000 to 15,000 feet of quartzites with, however, a limestone member and in places a basal conglomerate, and a younger series called the Cobalt, consisting of conglomerate, greywacke-conglomerate, slate, and quartzite, in places 10,000 feet thick. Part of the lower portion of the Cobalt series is made up of materials believed to have been derived by continental glaciation.

The Huronian rocks are intruded by thick sills of quartz diabase. In Lake Timiskaming district there is usually only one sill exposed in any given area. The sills vary in thickness up to 1,000 feet. In Sudbury region the intrusive of corresponding age is a norite which was intruded between the base of the Huronian rocks and the complex of older rocks on which these rest. In the district around lake Timiskaming the Huronian strata lie nearly horizontally. From the latitude of Sudbury south to lake Huron the sediments and sills are folded and faulted and locally intruded by the Killarney granite of late Precambrian age.

Bordering the north shore of lake Superior is a series of nearly flat-lying sediments consisting of conglomerate, iron formation, and dark slates. These are known under the name of Animikie, and are thought to be of the same age as the upper Huronian rocks of other areas. East of Port Arthur these rocks are overlain by red conglomerate, sandstone and shale, calcareous beds, and tuffs with acid and basic lava flows on top. The whole are cut by dykes of diabase. These rocks, which are of Keweenaw or late Precambrian age, in places rest with a slight angular unconformity on the rocks of the Animikie series.

The Keweenaw was a period in which volcanic activity and intrusion took place on a vast scale. On the south shore of lake Superior lavas accumulated to a thickness of over 22,000 feet in the lower part of the series. Dykes of this age are common throughout most of the Shield. South of lake Superior the Duluth gabbro forms a laccolithic mass 100 miles in diameter.

Reference to the Sudbury nickel eruptive, which by most workers in the field has been considered Keweenaw, and to the Killarney granite, which belongs to this period of intrusion and mountain-building, has already been made.

These igneous rocks made the Keweenaw a very important period from the point of view of mineralization. The native copper ores of Keweenaw point in Michigan are in lava flows of this age and those of Coppermine River region of northern Canada are similar and probably of the same age. The silver ores of Cobalt are related to the diabase intrusions and the copper-nickel ores of Sudbury to the norite intrusion.

The period of intrusion and folding in the Keweenaw was followed by a long period during which erosion once again reduced the topography to one of low relief, over which successive invasions of the sea were to take place in the succeeding Palæozoic and Mesozoic eras. The sediments deposited in these seas were, in turn, largely swept away by erosion in the Tertiary period. The last great event in the geological history of the Shield was continental glaciation during the Pleistocene. Huge sheets of ice moved out in all directions from their central gathering grounds on the two sides of Hudson bay. They smoothed down the topography; removed the old residual soil; polished, striated, and grooved the rocks; and, by the irregular scattering of the debris over the surface, completely disorganized the old drainage system. The result was the damming of old river channels, with the formation of lakes and new drainage lines. Though the present low relief of the surface dates from Precambrian time, the present appearance of the country, with its lakes, rapids and waterfalls, and its smoothed and rounded hills, dates from Pleistocene.

The mineral resources of the Canadian Shield are varied. In 1935 it produced 86.7 p.c. of the gold of Canada, 44.3 p.c. of the silver, 90.6 p.c. of the copper, and all the nickel and cobalt. The various deposits may be grouped in four main classes: (1) Certain pyrite deposits and banded iron formations that have the appearance of sedimentary formations but were probably of volcanic derivation. (2) Gold,

gold-arsenic, pyrite, chalcopyrite, sphalerite, iron and titaniferous ores, corundum, apatite, mica, molybdenite, feldspar, graphite, all associated with granitic rocks or their differentiates. The most important period of mineralization was the period of granitic intrusion preceding the deposition of the Huronian rocks, though the later, or Killarney, granite intruded in Keweenawan time may, in part, be responsible for some of the deposits. (3) Nickel, copper, gold, and silver ores, and deposits of barite, associated with dykes, sills, and other intrusive masses of gabbro, and norite of late Precambrian age. (4) Ores of lead and zinc and deposits of barite, fluorite, and celestite in veins cutting Precambrian rocks for the most part, but also in places cutting Ordovician sediments along the margin of the Shield and hence deposited in post-Ordovician time.

The general succession of rock formations in the better known geological sub-provinces of the Canadian Shield is indicated in the following tables. The main mineral occurrences are shown opposite the country rock in which they are more commonly found. It must be emphasized, however, that a deposit is not necessarily confined to any one formation or rock type. For example, where granite is the source of the solutions that produced a deposit any of the older rocks that it intrudes may be mineralized.

St. Lawrence Lowlands.—The underlying rocks of the St. Lawrence Lowlands are sediments, mostly little disturbed, ranging in age from Cambrian to Devonian. The Cambrian rocks consist of sandstone derived by the weathering of the old Precambrian surface. The Ordovician, Silurian, and Devonian rocks consist largely of limestones and shales deposited during inundations by the sea. Since the Devonian, the history of the region has been one of erosion. The region was overridden by the ice-sheets of the Pleistocene.

In general the rocks of the district lie flat. In places they are broken by faults, and locally they are thrown in low folds. The dip over most of the region is seldom more than 200 feet to a mile, which is, however, enough to permit the accumulation of oil and gas.

The only intrusive rocks of the region are the igneous masses forming the Monteregian hills. These are eight in number, six of which occur along an east and west line stretching eastward from Montreal. The flanks of the hills consist of altered and hardened sediments and the centres are composed of the intrusive rocks, which include various alkali types such as nepheline syenites, essesites, etc.

The chief natural resources of the St. Lawrence lowlands from a mineral point of view include gypsum, salt, petroleum, and natural gas, occurring in the district between lakes Huron and Erie. Other materials, such as limestone, shale, sandstone, and clay, and sand of the glacial and post-glacial deposits are also made use of in different industries.

The undisturbed character of the rocks has not been favourable for the development of deposits of metalliferous minerals. In eastern Ontario, however, certain lead-bearing calcite veins, though lying for the most part in Precambrian rocks, are known to be post-Ordovician in age, since the upper parts of several cut limestone strata of that age. The Ramsay veins at Carleton Place and the Kingdon vein at Galetta are examples. It is probable that the deposits are related to Devonian intrusives which have not reached the surface in this region, but which correspond to the intrusives of the Monteregian hills to the east.

Arctic Archipelago and Hudson Bay Lowland.—The higher regions of the Arctic Archipelago are composed largely of Precambrian rocks. Cambrian strata are exposed on the east side of Ellesmere island. At other places, horizons ranging from Cambrian to Silurian are found resting directly on the Precambrian. The most widespread Palæozoic formation is the Niagara, or mid-Silurian. On the southwest side of Ellesmere, 8,000 feet of strata ranging in age from middle Silurian to upper Devonian are found. Carboniferous sandstones occur on Parry island. Triassic sediments consisting of limestone and calcareous shale with some volcanic rocks are found on the northwestern and northeastern coasts of Ellesmere island, and Tertiary sands and lignites are also found here and in northwest Baffin island, usually occupying depressions in the older granitic rocks. All of these measures have only gentle dips.

The lowland underlain by Palæozoic strata on the west side of Hudson bay has a length in a southeast direction of 800 miles, a width of from 100 to 200 miles, and an area of 120,000 square miles. It rises from sea-level with a scarcely perceptible gradient to an elevation of about 400 feet. The strata are nearly horizontal and range in age from Ordovician to Mesozoic.

The severe climatic conditions and the inaccessibility have permitted but little prospecting in the northern islands; gold has been reported from the head of Wager inlet; native copper has been brought back from Baffin island; mica and graphite have been found on the north side of Hudson strait; bituminous coal is known to occur in Carboniferous strata on the islands north of Lancaster sound and lignite occurs in the Tertiary beds on the northern and eastern shores of Baffin island as well as on Bylot island. In southwest Greenland, territory belonging to Denmark, an important deposit of cryolite, mineral containing aluminium, occurs in a vein traversing grey gneiss; in the Hudson Bay lowland lignite and refractory clay occur in the Mattagami series of latest Jurassic or early Cretaceous age.

The Appalachian and Acadian Regions.—The rocks of the Appalachian and Acadian region include sediments, volcanics, and intrusives, chiefly of Palæozoic age. Considerable areas in Nova Scotia are, however, underlain by Precambrian rocks, and along the border of the bay of Fundy Mesozoic sediments and volcanics occur. The broad New Brunswick lowland is underlain by flat-lying Carboniferous measures. Elsewhere, however, throughout the region, except in a few places, the rocks are thrown into folds with axes trending in a northeast direction and are broken by faults giving rise to a complex structure typical of the Appalachian region in general. The chief period of mountain-building in Canada was, however, in the Devonian, whereas farther to the south, in the United States, the main period of deformation was the Permian at the close of the Palæozoic.

Precambrian rocks consisting of limestones, quartzite, and gneiss outcrop in New Brunswick along the bay of Fundy. In Cape Breton island are a number of areas underlain by altered volcanics and sediments cut by granitic rocks. Precambrian rocks have also been described as occurring in central New Brunswick and in southeastern Quebec. Some of the occurrences may, however, be of Palæozoic age.

In Nova Scotia an extensive series of altered sediments, known as the Gold-bearing series, is considered to be of late Precambrian age. This series, with its large intrusive areas of Palæozoic granite, occupies most of the mainland of the province. Its thickness is over 35,000 feet, of which the lower half consists dominantly of quartzites and the upper of slates. The series is folded along northeast lines and also broken by northwest faults, the horizontal displacement of some of which exceed a mile. The series is intruded by dykes and sills of diabase and batholiths of grey and red granite of Devonian age. Around the borders of the granite the series is altered to gneisses and schists commonly containing staurolite, garnet, hornblende, sillimanite, and pyrite.

Lower Cambrian strata occur in southeastern Quebec, and upper Cambrian measures are found in northeastern Cape Breton and in New Brunswick near Saint John city. In early Ordovician time, sedimentation was in progress in the St. Lawrence River region. The Sillery formation, consisting of red and green shales with interbedded sandstone, has at Quebec a thickness of 2,000 feet. A younger series, named the Lévis, consisting of dark shales and thin-bedded limestones, has a thickness possibly as great as 5,000 feet. These rocks form a band 6 to 35 miles in width. They have been closely folded, in places overturned, and are broken by faults, some of considerable throw. Trenton, or mid-Ordovician beds outcrop in southwestern Quebec and at the east end of Gaspé peninsula. Late Ordovician strata are known along the northeast coast of Gaspé. During the Ordovician, volcanic activity took place on a great scale in Gaspé. The region was also deformed and intruded by masses of peridotite. Erosion followed the folding and then the region subsided beneath the sea in the succeeding Silurian period.

Silurian rocks are found in Gaspé, in New Brunswick, in southeastern Quebec, and in Nova Scotia in the northeast at Arisaig and also farther west and in the southwest of the province. Succeeding the Silurian, in Gaspé, in northwestern New Brunswick, and locally in Nova Scotia, are deposits of lower Devonian age, consisting of limestones and shales. In Gaspé, during middle Devonian time, a thick series of sandstones accumulated. These are accompanied by contemporaneous lava flows and dyke intrusives of basic composition. A group of conglomerates, sandstones, and shales of upper Devonian age occurs on the Gaspé coast in the vicinity of Maguasha. One member is noted for the fossil fish it has yielded. In late Devonian time the whole Appalachian and Acadian region was affected by

mountain-building movements accompanied by the intrusion of batholiths of granite on a great scale. Subsequent erosion wore down these mountains and locally exposed the upper portions of these deep-seated intrusions.

In Carboniferous time a thick series of conglomerate and sandstone was deposited along Chaleur bay in Gaspé, over the wide lowland of New Brunswick, on Prince Edward island, the Magdalen islands, and over considerable portions of Nova Scotia. These deposits, which are of continental origin, in places reach thicknesses of thousands of feet. Marine lower Carboniferous rocks also occur in parts of New Brunswick and Nova Scotia and locally contain deposits of gypsum. In late Carboniferous or Pennsylvanian time, a series of shales and sandstones was deposited over the lowland of New Brunswick and in Nova Scotia along Northumberland strait. At Joggins, along the east shore of the head of the bay of Fundy, is a section of Carboniferous rocks over 14,000 feet in thickness, consisting of shales, limestone, sandstone with gypsum beds at the base, coal seams in the middle part, and conglomerates at the top.

At the close of the Carboniferous the Nova Scotia region underwent deformational movement resulting in faulting and local folding. This movement, however, affected the New Brunswick area only slightly. During the succeeding Triassic period beds consisting of reddish conglomerate, sandstone, and shale were deposited in New Brunswick along the bay of Fundy. On the opposite side of the bay in Nova Scotia are more extensive deposits, consisting of several thousand feet of red sandstones and shale capped by about 1,000 feet of amygdaloidal basalt flows. These rocks were tilted and faulted, probably in the Jurassic period. The Cretaceous and Tertiary were periods of erosion in the whole Appalachian and Acadian province. The result was the production of a base-levelled surface of very low relief. Uplift took place in late Tertiary time, and since that period the rivers have entrenched themselves below this peneplained surface.

During the Glacial period the whole region with the exception of the central part of Gaspé was overridden by ice-sheets. It is probable that the ice advanced from local centres. Since the withdrawal of ice masses there has been a general elevation of the region, as is shown by the presence of post-Glacial beaches and the occurrence of marine shells several hundred feet above the present level of the sea.

The chief mineral resources of the Appalachian and Acadian regions consist of coal, asbestos, and gypsum, but certain other materials such as clay products, building stone, sand, and gravel are also important. The Carboniferous strata produce the coal and gypsum, and in addition a number of other mineral deposits such as salt, barite, manganese, petroleum and natural gas, and oil-shale. The asbestos occurs in the peridotite rocks of the Eastern Townships of Quebec. These were intruded in Ordovician time in the form of inclined sheets whose outcrops have widths of from 1,000 to 2,000 feet and whose lengths vary up to several miles. In other places they form oval, stock-like masses, and in still other instances they appear to form thick, lenticular, laccolithic bodies. The asbestos occurs in narrow bodies traversing the altered peridotite. These intrusions of peridotite also locally contain deposits of chromite. The mineral occurs as scattered grains throughout the rock and in places is sufficiently concentrated in irregularly shaped masses to produce ore-bodies.

This period of basic intrusions forms one important metallogenetic epoch in the Appalachian region. A second occurred in middle Devonian time, the period in which the batholithic intrusions of granite took place. The intrusions of these two epochs were responsible for metallic deposits of a considerable variety including gold, iron, copper, lead, zinc, antimony, and tungsten ores.

The chief gold region is the mainland of Nova Scotia where gold-bearing quartz occurs along anticlinal openings and in cross-cutting veins in the Gold-bearing series. Gold-bearing quartz veins also occur in Cape Breton island and placer gold has been found in gravels in Chaudière River district, 50 miles southeast of Quebec city.

Copper ores have been mined in southeastern Quebec. At the Acton mine the ore consists of bornite and chalcopyrite in a brecciated limestone. At the Harvey Hill mine schistose rocks were traversed by narrow veins of quartz, calcite, and dolomite, some of which held bornite, chalcopyrite, and chalcocite. At the Eustis mine the deposits are replacements consisting of lenses of ore, in some cases paralleling or overlapping one another. The Huntingdon ore-body lay in chloritic schist along the edge of a sill of serpentine.

Iron deposits occur at numerous localities in the Appalachian and Acadian province. Magnetite deposits formed by the replacement of schistose quartz porphyry rocks occur near Bathurst, New Brunswick. Ores of sedimentary origin were mined in the Nictaux-Torbrook iron-ore field of Nova Scotia. At Londonderry, Nova Scotia, limonite and carbonate ores occur in a zone of fissuring, along the south slope of Cobequid hills. The deposits owe their origin to the igneous intrusions that form the central part of this range.

In the central part of Gaspé peninsula, veins carrying zinc and lead traverse shales and limestones of lower Devonian age. They are related to Devonian intrusive rocks of the region. Near Stirling zinc deposits occur as replacements in volcanic rocks of early Palæozoic age. They, too, are related to the deep-seated intrusions.

Tungsten deposits, consisting of scheelite-bearing veins, occur in the Gold-bearing sedimentary rocks of Nova Scotia. Auriferous stibnite occurs at West Gore, Hants county, in the same series. Stibnite with some native antimony also occurs in New Brunswick at Prince William, 25 miles west of Fredericton. All these occurrences are related to the Devonian igneous intrusives.

The Great Plains.—The Great Plains region may be divided geologically into three zones. A narrow plain on the east, known as the Manitoba lowland, is developed on flat-lying Palæozoic strata ranging in age from Ordovician to Devonian. These rocks lap over the Canadian Shield and commonly present a low escarpment at their border. In the north this zone broadens to form the great Mackenzie lowland. The second division is a wide belt underlain by Cretaceous rocks. Its eastern border, where these rocks overlap the Palæozoic sediments, is rather an abrupt rise known as the Manitoba escarpment. From elevations of 1,000 to 2,000 feet on this flank the surface rises gradually westward until, at the border of the mountains, the elevations are between 4,000 and 5,000 feet. The third division consists of plateaux of flat-lying Tertiary rocks at Wood mountain and Cypress hills, rising to elevations up to 1,000 feet above the level of the surrounding region.

The whole region is a flat to rolling country dissected by river valleys. The southern part is a treeless prairie. North of latitude 53 degrees the country is wooded densely to approximately latitude 60 and more sparsely from there to the delta of the Mackenzie. The drainage, except for a small portion in the south, is northward to the Mackenzie or northeastward to Hudson bay. In places in the southwest evaporation equals precipitation, giving rise to an interior drainage basin type.

The chief mineral wealth consists of coal and lignite which form extensive deposits in the Cretaceous and Eocene rocks of Saskatchewan and Alberta. Natural gas has also been produced in great quantities from various horizons of the Cretaceous in Alberta. Petroleum has been found in the Devonian beds of the lower Mackenzie valley, in Cretaceous strata at several localities in Alberta, and in Palæozoic rocks in Turner valley. Along Athabaska river the basal member of the Lower Cretaceous, known as the McMurray or the Tar sands, is heavily impregnated with bitumen, in places to as much as 20 p.c. The only metalliferous deposits of the region consist of galena and sphalerite in Devonian limestones at certain points south of Great Slave lake.

The Cordilleran Region.—The rocks of the Cordilleran province range in age from Precambrian to Recent. The Rocky and Mackenzie mountains and the Ogilvie range of northern Yukon are made up of great thicknesses of sediments of Precambrian, Palæozoic, and Mesozoic age. The Coast range is largely a complex batholith of post-Triassic age intruded mainly into Mesozoic sediments and volcanic rocks. The plateaux and ranges of the interior are underlain largely by late Palæozoic, Mesozoic, and Tertiary sediments and volcanics. The pre-Tertiary beds are cut by numerous igneous rocks of deep-seated origin and in various districts Precambrian strata are exposed.

The Cordilleran region was affected by two great mountain-building revolutions since the Palæozoic. The first took place in late Jurassic or early Cretaceous time and affected the whole region from Selkirk mountains westward. It was accompanied by igneous intrusions on a vast scale and subsequent erosion has uncovered these batholiths, exposing a broad band that extends down the Pacific coast, curving eastward near the International Boundary. This period of intrusion formed the most important metallogenetic epoch of British Columbia.

The second great mountain-building revolution was the Laramide of Eocene time. In this period the great thickness of sediments that had accumulated in the geosyncline along the site of the present Rocky mountains was folded up to form that range. Igneous intrusions probably accompanied the revolution. It is probable that the lead-zinc ores of the Monarch and Kicking Horse properties at Field are to be related to them. A period of mineralization also occurred in the Oligocene, when copper ores were deposited on the Sunloch property on Vancouver island in a shear zone in gabbro of that age. Mercury deposits in several localities throughout British Columbia are associated with lavas of late Miocene or Pliocene age which otherwise are unmineralized.

The period of the intrusion of the Coast Range batholith was the most important event in the history of the Cordilleran region from the point of view of mineral deposits, and by far the majority of the metalliferous deposits of the province are to be related to this metallogenetic epoch. As already mentioned, the Mesozoic granite batholiths form a band down the Pacific coast which, in the southern part of British Columbia, curves off to the east. Mineral deposits occur in two general zones, one on either side of this belt of granite. That on the west, following the Pacific coast, and including the island fringe, may be described as the Pacific mineral belt, and the one on the eastern side of the batholith may be referred to as the Interior belt. In the southern part of British Columbia, where the batholith trends to the east, the southern zone has been called the Boundary belt, and the northern mineralized side of the batholiths is termed the Kootenay belt. The Pacific and Boundary belts are characterized chiefly by copper deposits. The former includes such camps as Anyox, Marble Bay, Quatsino Sound, and Britannia, and the latter includes Copper Mountain, Phoenix, Deadwood, Rossland, and others. The eastern and northern borders of the batholith comprising the Interior and Kootenay mineral belts are noted particularly for their gold, silver, lead, and zinc ores. The Interior contains such deposits as the Premier, the B.C. Silver, and other deposits of Salmon River region, those of the Bear River country, and Alice Arm, Dolly Varden mine, and occurrences at Hazelton, Smithers, Ootsa lake, and Whitesail lake. The Kootenay belt includes the silver-lead-zinc deposits of Ainsworth, Slocan, and Lardeau districts and the zinc-lead ores of the Sullivan, North Star, and St. Eugene mines near Kimberley.

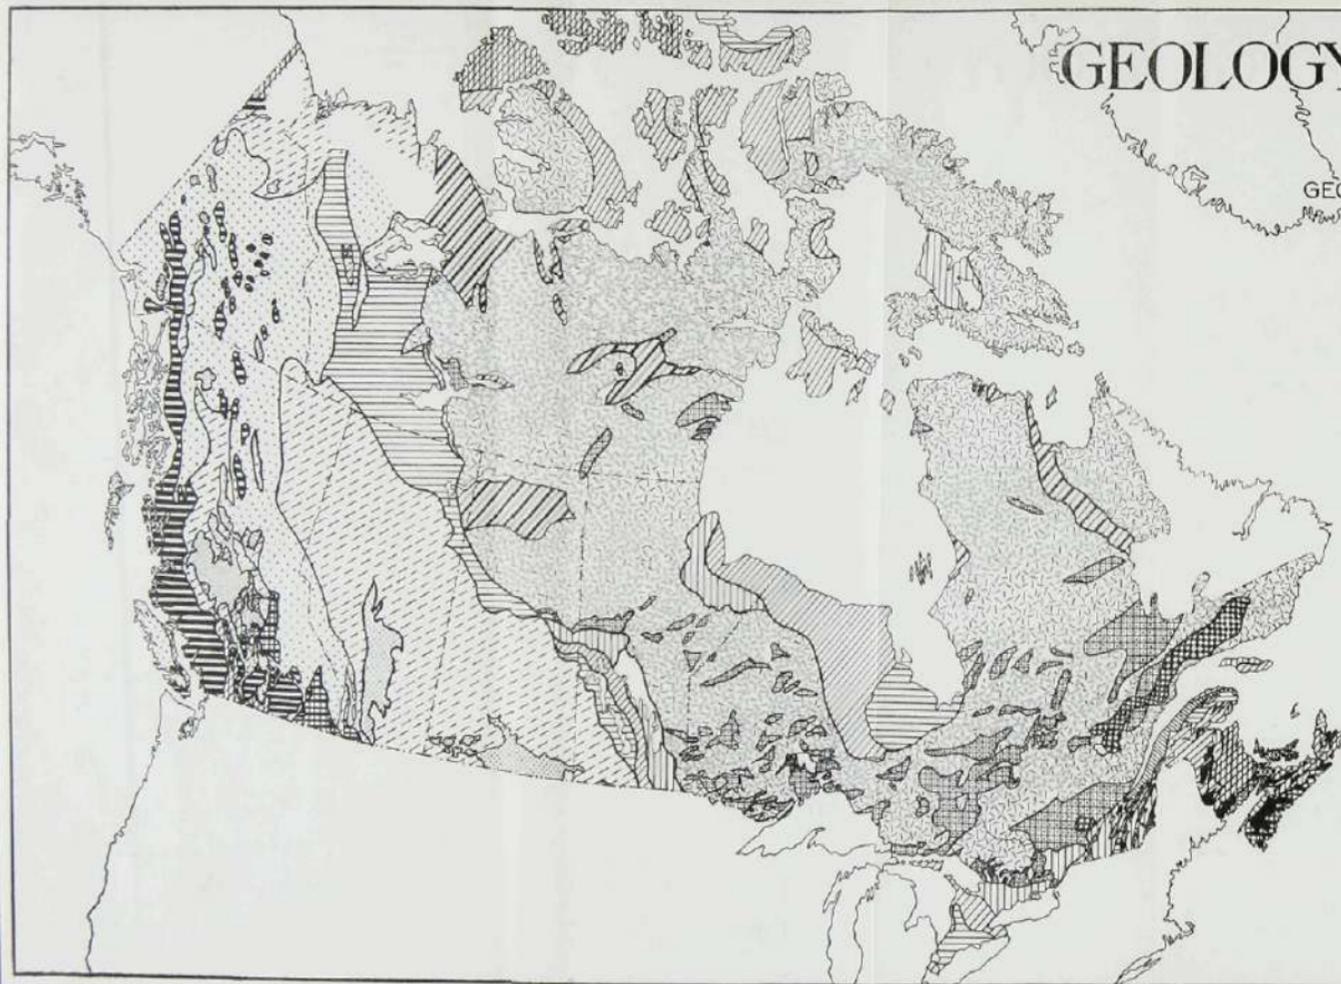

These camps and others in British Columbia are a source of great mineral wealth. In 1935 that province produced 99.3 p.c. of the lead, 79.6 p.c. of the zinc, 9.3 p.c. of the copper, 55.2 p.c. of the silver, and 11.9 p.c. of the gold produced in the whole of Canada. Coal is also abundant in the Rocky mountains and on Vancouver island. The greater part occurs in beds of Cretaceous age, though coals of Tertiary age have wide distribution also. Deposits of iron occur also at many localities in the Cordilleran region, as, for example, on Vancouver and Queen Charlotte islands; they consist of magnetite with pyrite and chalcopyrite developed along the contacts of granite, granodiorite or diorite with limestone, and were apparently formed under conditions of contact metamorphism.

Placer deposits occur at various places in the Cordilleran region. The gold of Klondike region, Yukon, the gold of the Cariboo country, and the platinum of Tulameen district are notable examples.

PART III.—SEISMOLOGY IN CANADA.

An Article on Seismology in Canada, by Ernest A. Hodgson, M.A., appeared at p. 37 of the Canada Year Book 1931.

PART IV.—THE FLORA OF CANADA.

Under the above heading the Canada Year Book, 1922-23, contained an article prepared by the late J. M. Macoun, C.M.G., F.L.S., and M. O. Malte, Ph.D., and revised by the latter. See p. 25 of the 1922-23 edition or p. 73 of the 1921 edition.

PART V.—FAUNAS OF CANADA.*

NOTE.—Textual footnotes are indicated by symbols for each page as in other sections of the Year Book. Bibliographical references are indicated by arabic numerals and run consecutively throughout the article (including footnotes); corresponding notes are listed at the end, on p. 52.

A *fauna* may be described as the aggregate or totality of the animal life of a given area, as of North America; of a given geological period or formation, as Tertiary fauna; or the animals inhabiting certain kinds of situations, as fresh-water, marine, or prairie fauna.

In this article attention will be given only to the so-called *Recent Fauna*—species which still exist in a living state, or have become extinct only within historic time. Space will not allow extended discussion of marine and fresh-water faunas and the main thesis will be confined to the higher vertebrate faunas.

Faunal Types.—The insect fauna has the greatest number of species and perhaps of individuals, is important as food for certain kinds of birds, mammals, and fishes, and greatly affects agricultural and forestry interests, as the distribution and abundance of most species of insects is almost entirely dependent upon the flora or host plants. Approximately 50,000 species of insects occur in Canada; many exotic species are continually being brought into the country, usually adventitiously, and may become pests, supplanting native species, so that the insect fauna is constantly changing.

Halkett (1913)¹ lists 569 species of fish known in Canadian waters, of which about 359 are marine, 225 fresh-water, and about 18 of these species are anadromous. The marine faunas are largely kept within certain narrow limits of temperature and salinity of water, and species which can exist in water that approaches the freezing point in winter will not find the water colder under the ice of the Arctic ocean. The abundance of species and of individuals depends principally upon food available, and that is contingent upon sunlight, depth of water, currents, and food brought from land by rivers and streams. The marine invertebrate faunas, such as the smaller crustaceans, derive much of their sustenance from the aquatic flora and are of enormous importance as food of fishes. The lengthening days and longer periods of sunshine in spring multiply the growth of diatoms and other microscopic vegetation of the sea, and directly influence the migrations of whales, seals, and other marine mammals.

The reptiles (numbering about 43† different forms) and the amphibians (37†) form the smallest vertebrate groups in Canada, being largely animals inhabiting warm climes, although frogs are abundant in parts of Canada, occurring north nearly to the Arctic Circle in the Mackenzie River valley and in central

* By Rudolph Martin Anderson, Ph.D., Chief, Division of Biology, National Museum of Canada, Department of Mines and Resources.

†Checked by C. L. Patch from records in the National Museum of Canada.

Yukon. Most of the general principles applying to the lower or lesser forms will also apply to the larger vertebrate fauna. Essentially, they all depend upon the vegetable life of the earth, the plants transform inorganic chemical elements into organic food which can be assimilated by the animals, either directly as vegetable food by the herbivores, or indirectly by the carnivores which prey upon their herbivorous neighbours or upon each other. The bird fauna numbering about 600 forms, and the mammals about 540 are better known to the general observer, and will be treated more fully in the following pages.

The Study of Modern Faunas.—The first natural approach to systematic study of animals is to learn to tell one species from another, even if the names are not known. Following this, a knowledge of their economic uses for food, clothing, or shelter, and the information on habits and distribution which is necessary to successfully prosecute the chase is usually acquired. When such empirical knowledge is thoughtfully studied and systematized, it is soon noticed that while certain species are found almost everywhere, making their living under very diverse conditions, all types are not found in the same region. Each species is found where climate and physiographic conditions produce the kind of food and shelter which it likes. Some prefer hot climates to cold, arid to humid, or lowland valleys to timberline habitat. Several species of widely different families may be found in an identical habitat, as the distribution of the plants varies as widely as the distribution of animals. Vegetarian species may need some particular kinds of plants for food, but the predatory species find their food wherever weaker species exist which can be preyed upon.

The *Recent Fauna* of Canada as a whole is classified as *Nearctic*, essentially that of the northern half of the New World, and the typical native resident species, while showing decided differences from the faunas of South America, Africa, and southern Asia, display close similarity to the typical forms of northern Asia and Europe, which are known as *Palearctic* faunas. We may therefore assume that the species of these two great faunal areas have a common origin. In a previous paper² the writer stated:

The movements of plant and animal life and the populating of new regions by other forms have been indicated by geological history since the appearance of life on the earth

That these movements and changes of environment have resulted in the displacement and ultimate extinction of many new forms is also apparent. Various theories have been proposed to account for these shiftings and changes of forms; the rising or submergence of land bridges, shifting of continents, change of climates due to glaciation, progressive desiccation of certain regions, or cataclysmic eruptions, but in general such changes must have been very gradual, extending over enormous periods of time.

It seems evident that in past times the continents in the northern hemisphere were more closely connected. The birds of North America mostly belong to families that are found in northern Europe and Asia, and even though birds can and do fly across wide bodies of water, they seldom spread out and establish themselves as permanent residents unless there is land connection. The close similarity of Asiatic species to many kinds of Canadian mammals, such as moose, elk (wapiti), caribou, bighorn sheep, big brown bears, wolves, foxes, ermine, marten, otter, wolverine, beaver, hare, pika, and many of the smaller rodents and insectivores, makes it seem probable that the ancestors of many of these species came originally from Asia, presumably at a time when there was a land bridge or solid ice connection between Asia and North America in the Bering Strait region. Osborn³ considered from both palæontological and zoological evidence that this land bridge was intermittent,

emerging from the sea and becoming submerged again, stating: "The very close similarity between the mammals living at the present time on either side of Bering strait is strong evidence that up to late Pleistocene times there was free migration between the two continents" Various additional proofs of this comparatively recent connection are on record.*

Gadow,⁵ the eminent zoögeographer, states that the object of the study of geographical distribution is the history of life in space and time, which, in turn, embraces every branch of science. Study of the geological history of North America shows that several great glacial periods have occurred, covering a large part of Canada with great sheets of ice, smoothing off hills and depositing vast quantities of boulders, gravel, sand and finer detritus over large areas. The gradual southward movement of the ice sheet would naturally force the animal species ahead of the ice, and in fact we find remains of musk-oxen in the central parts of the United States and remains of reindeer in southern Europe, regions from which these species have been absent during historic time. During the inclement glacial periods some of the less adaptable forms became extinct. Other species were either of tougher fibre, or were able to find suitable new homes, and in many cases their descendants moved northward with the recession of the ice and became separated from their former neighbours. In the meantime, changed conditions and environment were instrumental in developing differences which are now recognized as distinct species or geographical races or subspecies of the parent stock. The results of these forced or voluntary migrations, changes of climate, food and habitat are reflected in the greater or less differences which are found between the species of the same family in the Old and New Worlds, in the east and west of the same country, in the forests and on the prairies, and at low and high elevations.

Effects of Human Interference.—The effects of geological and climatic changes were probably very slow in their effects upon the primitive faunas, extending over thousands or even millions of years. There is little evidence that noticeable changes have occurred in the actual forms of wild species during the period of man's history, although a few species have been domesticated and different varieties bred by artificial selection. Early man, few in numbers, with primitive weapons and inefficient tools, made slow work of cutting down forests and destroying the wild life, and even in the early part of the Christian era much of northern and central Europe was thinly peopled. North America was subjugated at a greatly speeded rate. The early settlers brought in fire-arms and developed a trade in furs and hides, and the rapid increase of population both of man and the domestic animals which he brought in to serve his needs made the occupation of much land necessary for fields and pastures. Predatory wild animals have had to be reduced in numbers and many species have been totally extirpated over wide areas, and otherwise harmless and useful animals which consume the food supply of man and his domestic stock have to be controlled.

A comparison of the accounts of the early pioneers in Canada or the eastern United States, or the early travellers on the Western Plains, with conditions at the

*One of the latest is by Wagner,⁴ who cites Jordan (1929, *Novit. Zool.*) to the effect that out of 131 nearctic species of fleas found in North America, not less than 107 inhabit the western area of the North American continent, whereas in the eastern area we find but 31, and in the central area, which separates the two zones, 26. Wagner states that in 1936 the number of established North American species—not to speak of those imported from other parts of the globe—attained almost 160: the greater part of them was described from the western area of the continent. Many of the western species coincide with the species of eastern Asia, a fact which cannot be said of the species indigenous to eastern North America. Dr. Wagner remarks that "this fact deserves an attentive study from the standpoint of the distribution of Asiatic and North American mammals".

present time, convinces us that at the time of white settlement the country teemed with wild life and the so-called "balance of nature" was probably more nearly perfect than it has been anywhere in the world since that time, and that during the past three hundred years the faunal changes in the Americas have been more rapid and sweeping than during any similar period in the world's history. The rapid development of the country in agriculture, lumbering, and mining has changed the face of the wilderness and destroyed natural habitats. The development of railways, and within the past thirty-five years the spread of the motor car, with accompanying extension of roads into previously inaccessible regions, and improvement of fire-arms at the same time, have enormously accelerated the destruction of game species. The modern demand for furs, with consequent high prices, has enabled the modern trapper to establish his trapping bases hundreds of miles beyond ordinary transport by means of aeroplanes. The compiler of faunal lists soon finds that his records and data approach the status of ancient history rather than accounts of conditions at the present time. The list of dangerously reduced species is disgracefully large, but comparatively few species have recently been totally exterminated, although some of the most valuable and interesting representatives of our native fauna are now absent from a large portion of their former range.

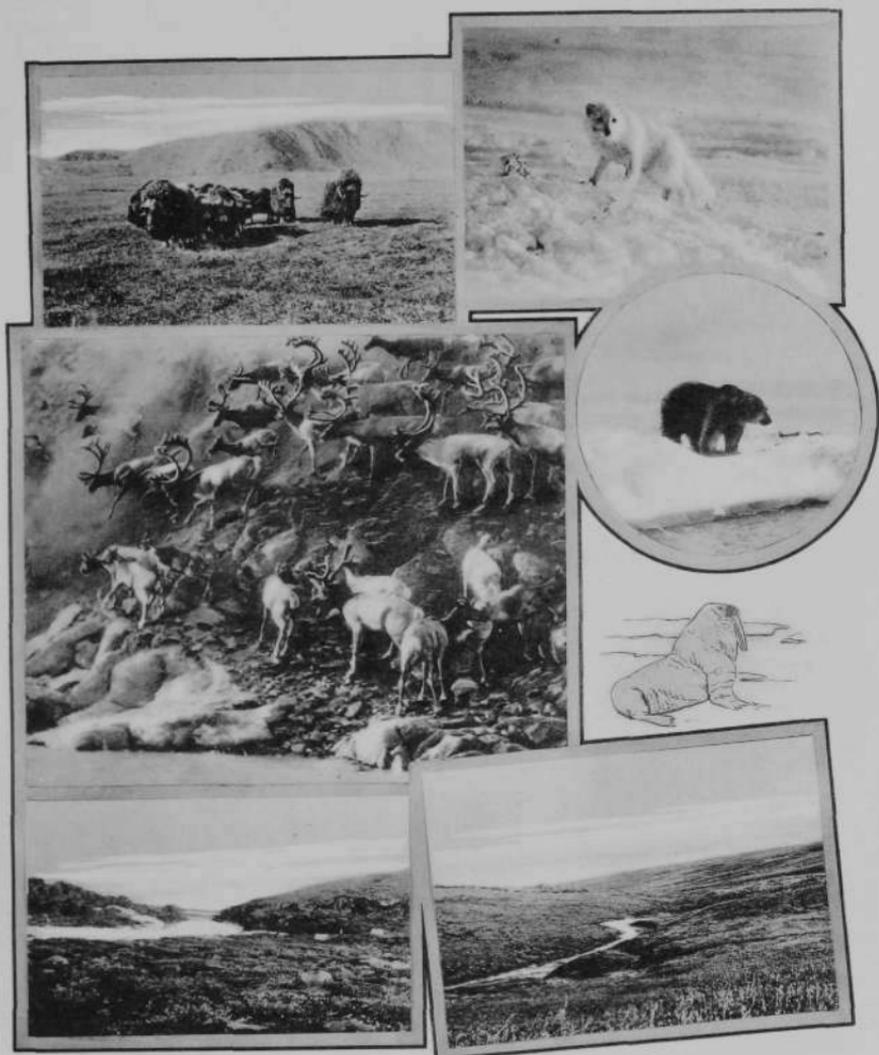

Astronomical or Geographical Zones.

While astronomical or geographical zones can be mapped by parallel lines of latitude on the earth's surface, with the equator at zero, the Tropic of Cancer at $23^{\circ} 26' 56''$ north latitude marking the southern limit of the North Temperate Zone, and the Arctic Circle at $66^{\circ} 33' 04''$ marking the southern limit of the Frigid Zone, these boundaries come very far from being satisfactory boundaries for the life zones. At the same altitude, temperatures average higher toward the equator and lower toward the poles but so many diverse factors enter into climate, that there is little regularity in isothermic lines.*

Altitude is very important. Temperatures fall with elevation so that snow-capped mountains are found near the equator. The warm current of the Gulf Stream carries vast quantities of warm water to the western coast of Europe, and the Greenland current carries cold water south to the coast of Newfoundland, so that England has a comparatively mild climate while Labrador on the same latitude has virtually an Arctic climate. Warm ocean currents in the Pacific ocean bring a comparatively warm and humid climate to the coast of British Columbia and southern Alaska. The condensation of humid atmosphere on ice-fields as on the "banks" of Newfoundland, or on mountain tops as on the coast of British Columbia, brings abundant rain or fog, while high mountain ranges shut off moisture-laden clouds from certain interior districts and produce deserts as in Nevada or semi-arid valleys, as in the interior of British Columbia.

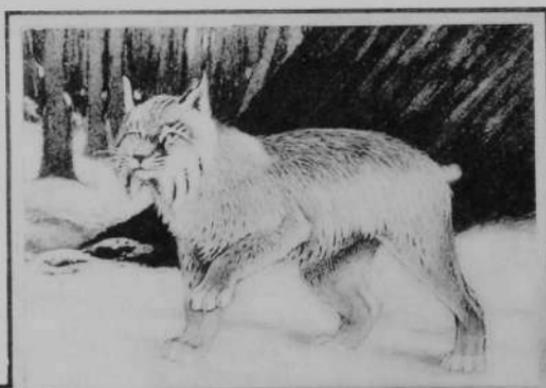

* Passing through the strait of Belle Isle at about 52° N., on July 20, 1928, the writer observed snow-banks in gullies behind an island on the north shore. At Saskatoon, in the same latitude, grain is beginning to ripen at that season. Even in the Mackenzie River delta, over eight hundred miles farther north, well beyond the Arctic Circle, the weather is usually much warmer than at the strait of Belle Isle at that season. Winnipeg but rarely, and only in midwinter, experiences a drop to 50° below zero F. The Mackenzie Delta minimum may not be much lower, but winter is seven or eight months long. The Mackenzie river extends 2,525 miles from mouth to source, and is navigable for 1,400 miles north of Fort Smith on the 60th parallel. The Mackenzie brings warm water two thousand miles north in spring, modifying the climate along the river in early summer, and accounting for a narrow tongue-like extension of the Hudsonian Life Zone with large straight spruce trees growing about two hundred miles north of the Arctic Circle.

TYPICAL MAMMALS AND HABITATS OF THE ARCTIC FAUNAL ZONE

The Musk-Ox, White Fox, Caribou and Polar Bear are shown as typical mammals of this faunal zone; had there been space, Seal and Walrus might well have been included. The habitat picture at the lower left shows Arctic tundra in the granite country near Coronation Gulf, and that at the lower right is typical of the Arctic coast of the Yukon Territory; both were taken in the summer season.

TYPICAL MAMMALS AND HABITATS OF THE

The above layout shows: (Upper left to right) Canadian Lynx, originally common of the choicest fur bearers, which ranges in the Canadian Zone from Quebec to British

(Middle Row) Marten, a rare and valuable fur bearer, where not killed out, is common Porcupine, is a common faunal type in the Canadian and Hudsonian Zones; the part found in bushy coulées on the prairies.

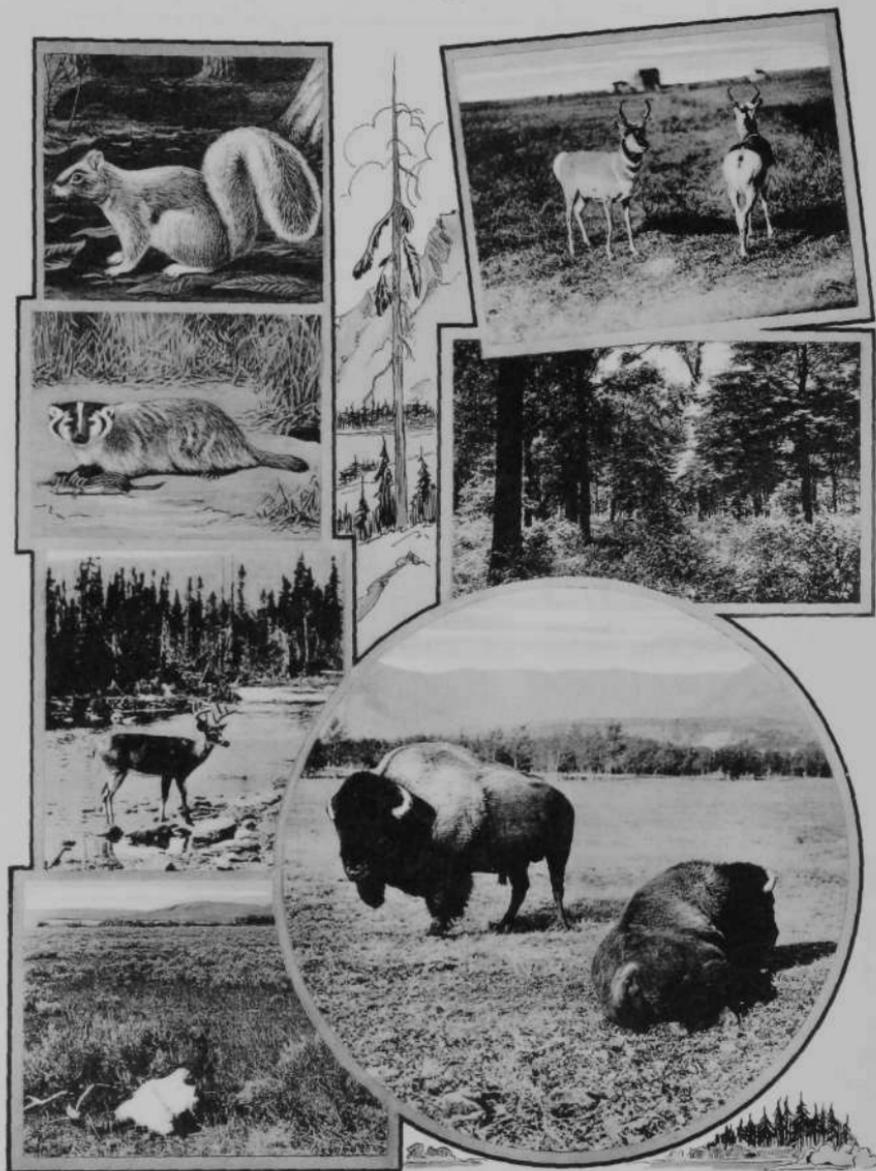

(Lower Row) Three typical habitat scenes, the Hudsonian Zone at about 2,000 northern Ontario; and mixed forest of spruce, poplar, and white birch typical of the

HUDSONIAN AND CANADIAN FAUNAL ZONES

the Canadian and Hudsonian Zones, Black Bear in its natural habitat, and Fisher, one of the Hudsonian and Canadian Zones across Canada; Canadian Moose feeding in a lake; the fisher shown is of the yellow-haired variety, which, though typically woodland, is occasionally found in the open country of the Gaspé Peninsula, Quebec; typical topography in the lake and muskeg country of Eastern Canada.

TYPICAL MAMMALS AND HABITATS OF THE TRANSITION AND ALLEGHANIAN FAUNAL ZONES

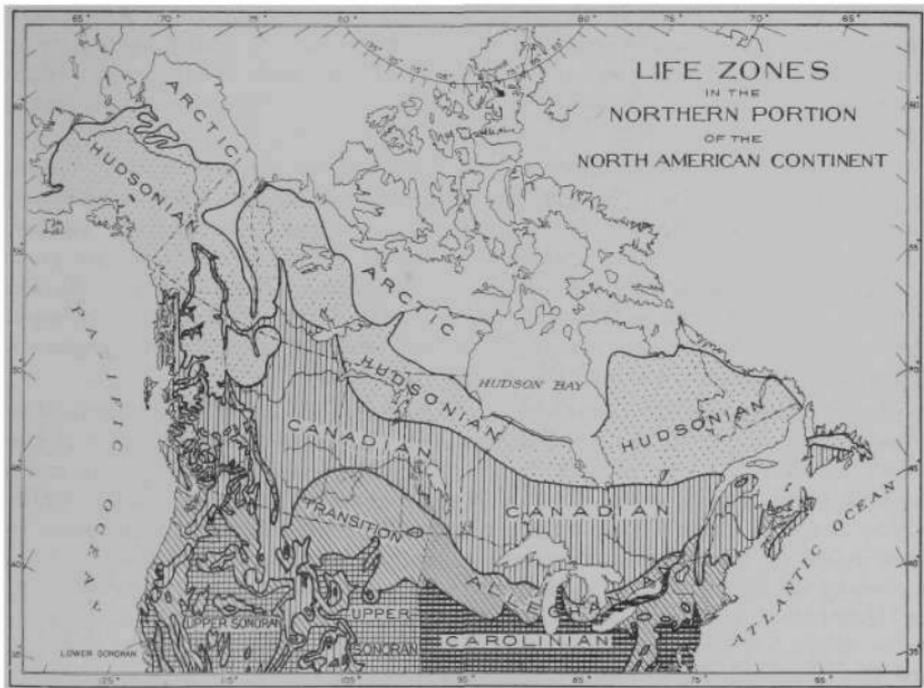

In the above layout the Antelope (*upper right*), the Plains Buffalo (*lower right*), and the Badger (*middle left*) represent faunal types of the southern Prairie Provinces; the White-Tailed Deer and Grey Squirrel (black is also a colour phase) are found in the Transition Zone of Eastern Canada. The commoner and smaller Red Squirrel is found in all wooded parts of Canada. At middle right is shown a typical Transition habitat of hardwood forest in Ontario, and at lower left a Transition (Campestrian) habitat in south-western Saskatchewan.

LIFE ZONES OF CANADA.

Macoun and Malte⁶ gave a provisional classification of the different "floras" in Canada: (1) *Arctic Zone*, lying north of the tree line; (2) *Sub-Arctic Forest Zone*; (3) *Hardwood Forest Zone*; (4) *Carolinian Zone* in extreme southern Ontario; (5) *Prairie* or grass-covered areas of Manitoba, Saskatchewan, and Alberta (subdivided into the "First Prairie Steppe", the "Second Prairie Steppe", and the "Third Prairie Steppe" extending to the foothills of the Rocky mountains); (6) *Rocky Mountain Foothills*; (7) *Rocky Mountains* proper; (8) *Selkirk Range*; (9) *Coast Range*; (10) *Vancouver Island*; and (11) *Dry Belts* of British Columbia, the latter consisting of two floristic subdivisions, the first characterized by bunch grasses, and the second densely wooded, the characteristic tree being yellow pine.

To a certain extent, the faunas of Canada can be correlated with the above classification of floral zones. According to the present practice of most biologists, the very irregularly marked floral and faunal regions of North America are usually arranged under the general classification proposed by Dr. C. Hart Merriam⁷ and revised later by Bailey, Nelson and Preble, Brooks and Swarth, Taverner, Seton, and Anderson. The following map illustrates this arrangement.

For many reasons these life zones are perhaps more conveniently characterized by the typical plants which dominate each zone. Plant life is stationary as far as the individual land plants are concerned and can be determined at all seasons by trunk, twigs, or fruit, when the blossoms and leaves are absent—at times when the birds have migrated and the mammals are in hibernation or in hiding for other reasons.

The first three zones described below, *viz.*, the Arctic, Hudsonian, and Canadian Zones, are frequently combined as the Boreal Region of North America. The more

thickly settled parts of Canada lie south of the Boreal Region, in what is termed the Austral Region. The most southern zone of this region (Australoriparian in the east and Lower Sonoran in the west) do not come within the boundaries of Canada, nor does the Tropical Region which does not extend farther north than southern Florida and the warmer parts of Mexico.

The Arctic Life Zone.—The Canadian islands north of the continent of North America are all in the Arctic Zone, and on the mainland the Arctic Zone extends from the Alaska boundary west of the Mackenzie delta in a southeasterly direction irregularly to Hudson bay, swings across the Ungava peninsula and along the Atlantic coast of Labrador to the strait of Belle Isle and the northern and northwestern part of Newfoundland.

Beginning with the circumpolar regions of the north of Canada, where conditions are simplified and species of plants and animals are fewer in number, is the treeless *Arctic Zone*, the so-called "barren grounds". The Arctic Zone is barren only on exposed rocks or areas of sand or infertile clay. Mosses and lichens are common. The woody plants are restricted to small, prostrate forms of willow, dwarf birch, Labrador tea, Lapland rose-bay, mountain cranberry, alpine bearberry, and similar types. As vegetal growth is slow, the plants are almost exclusively perennial, some of the bunch type growing on dry or rocky ground being alpine poppy, saxifrages of different species, various species of sedge, grasses, etc. Other plants growing in mats on the tundra are buttercup, mountain avens, white heather, etc. Other conspicuous herbaceous plants of the Arctic Zone are cotton-grass, sorrel, smartweed, lousewort, arnica, etc.

Characteristic breeding birds of the Arctic Zone are snowy owl (*Nyctea nyctea*), willow ptarmigan (*Lagopus lagopus*), rock ptarmigan (*Lagopus rupestris*), Lapland longspur (*Calcarius lapponicus*), snow bunting (*Plectrophenax nivalis*), and American pipit (*Anthus spinoletta rubescens*). Typical mammals are polar bear (*Thalarctos maritimus*), musk-ox (*Ovibos moschatus*), Barren Ground caribou (*Rangifer arcticus*), ermine (*Mustela arctica*), Arctic foxes, white and blue (*Alopec lagopus*), Arctic hares (*Lepus arcticus*), brown lemming (*Lemmus trimucronatus*), and white or collared lemming (*Dicrostonyx rubricatus*).

Substantially similar conditions are found farther south above timber-line in mountains, known as the Arctic-Alpine Zone, which is many thousands of feet above sea-level in warm climates, and comes down progressively until it meets the true Arctic Zone at sea-level in the Arctic regions. The Arctic and the Arctic-Alpine Zones in Canada have similar plant and animal assemblages, modified to some extent by colonizing from lower levels and by other local conditions, and the borders of the sparsely timbered Hudsonian Zone are also invaded by species which are truly Arctic. The *Dryas* species, characteristic flowering plants at sea-level in the Arctic, are also common on some of the high mountains in British Columbia, and the white-tailed ptarmigan (*Lagopus leucurus*) ranges from the mountains of Yukon to Colorado.

Hudsonian Life Zone.—The Hudsonian Zone is immediately south of the Arctic Zone, the nominal boundaries being the lines connecting the last straggling salients of the northern coniferous forests. The forests of this zone are generally thin and scanty, stunted in growth, the dominant tree being the white spruce, which may reach a good growth in thick stands, and even in isolated clumps in hollows with southern exposure and shelter from prevailing winds may form notable "big stick islands", or Hudsonian oases miles beyond the apparent boundaries of the northern Indian's picturesquely named "land of the little sticks" (small trees).

The only deciduous trees of consequence are white birch, aspen, and balsam poplar. The forests are not continuous, covering but a limited part of the northern part of this zone, alternating with bare or lichen-covered rocks, sandy or grassy plains, and wet, mossy bogs or muskegs. Berry-producing shrubs are abundant, including blueberries, rock cranberries, raspberries, cloudberries, crowberries, and bearberries. Many species which occur in the northern tundra reach their greatest perfection in the bogs of the Hudsonian Zone, notably Labrador tea, *Kalmia*, lousewort, cotton-grass, and sedge species. The flora of this zone is remarkably uniform throughout and is transitional in character, nearly every one of the species occurring either in the Arctic or Canadian Zones.

Virtually all the Arctic birds occur more or less regularly in the Hudsonian Zone, being met by the northernmost front of the Canadian Zone species, the willow and rock ptarmigan overlapping the range of the spruce grouse (*Canachites canadensis*) and sharp-tailed grouse (*Pediæcetes phasianellus*), and the Lapland longspur meeting the tree sparrow (*Spizella arborea*) and savannah sparrow (*Passerculus sandwichensis*). The mammalian fauna consists of a similar mixture of Arctic and woodland species, the musk-ox reaching its southern limit and the small Barren Ground caribou meeting the larger woodland caribou (*Rangifer caribou*) at its northern limit.

Canadian Zone.—South of the Hudsonian Zone is the Canadian Zone, the most heavily and uniformly forested portion of Canada, dominated by white pine, red pine, hemlock, balsam fir, tamarack, and white cedar. North of the prairies the Banksian pine or "jackpine" is an important tree. West of the Rocky mountains the eastern species are represented by western white pine, western hemlock, Douglas fir, western larch, and Engelmann spruce. Various species of poplar, birch, elm, and ash are found in suitable localities of the Canadian Zone.

The number of bird species is greater than in the more northern zones, though perhaps the number of individuals is not larger on a given area. Contrary to widespread popular belief, a wilderness of heavy coniferous forest is often strikingly lacking in bird life. The commoner forms are numerous species of warblers (*Dendroica*, etc.), the Canada bird or white-throated sparrow (*Zonotrichia albicollis*), olive-backed and hermit thrushes (*Hylocichla* species), Canada jay (*Perisoreus canadensis*), three-toed woodpeckers (*Picoides tridactylus* and *P. arcticus*). Mammals may not be strikingly abundant as the coniferous forests are not well supplied with undergrowth for grazing and browsing. The most important mammals are the moose (*Alces americana*), woodland caribou (*Rangifer caribou*), lynx (*Lynx canadensis*), marten (*Martes americana*), fisher (*M. pennanti*), porcupine (*Erethizon dorsatum* in the east and *E. epixanthum* in the west), snowshoe rabbit (*Lepus americanus*), and red squirrels, chipmunks, native mice and voles of many species which form the principal food supply of the fur-bearing mammals. Some races of all these animals also penetrate parts of the Hudsonian Zone and become rare in the scattered forests farther north.

Transition Zone.—The most important agricultural districts of Canada occupy the northern part of the Austral Region, referred to faunally as the Transition Zone; the more wooded portion east of the 100th meridian being commonly called the Alleghanian Zone, and the Western Prairie section, the Campestrian Zone. While parts of this zone have considerable areas of coniferous forest (white pine, red pine, hemlock, and white cedar), the trees are chiefly deciduous—sugar maple and red maple, red oak and burr oak, white elm, black ash, and white ash. The underbrush is variable and composed of many species. Herbaceous plants are abundant

in species and individuals, and flowers are very conspicuous in the woods in spring, although later in the season they are more noticeable on the borders of the woods where they receive the sunlight.

The bird species are transitional, and northern and southern forms overlap their ranges. Typical summer birds are bluebird (*Sialia sialis*) in the east and mountain bluebird (*S. currucoides*) and western bluebird (*S. mexicanus*) in the west. Baltimore oriole (*Icterus galbula*), catbird (*Dumetella carolinensis*), bobolink (*Dolichonyx oryzivorus*), wood thrush (*Hylocichla mustelina*), red-eyed and warbling vireos (*Vireo olivaceus* and *V. gilvus*). The mammals of the Transition Zone include the gray squirrel (*Sciurus carolinensis*) and the red squirrel (*S. hudsonicus*), cottontail rabbit (*Sylvilagus floridanus*), woodchuck (*Marmota monax*), mink (*Mustela vison*), striped skunk (*Mephitis mephitis* in the east and *M. occidentalis* as well as the little spotted skunk, *Spilogale phenax*, in the west). In many districts the Transition Zone merges very gradually with the Canadian Zone, with occasional oases or relicts of Canadian fauna on higher uplands, but in the west the boundaries may be rather abrupt, as they are also along the lower Ottawa and St. Lawrence rivers where the south side of the rivers are typical Transition, passing at once into Canadian Zone in the Laurentian hills north of the rivers.

The prairie section of the Transition Zone has some species peculiar to the Great Plains, the pronghorn antelope (*Antilocapra americana*), northern white-tailed jackrabbit (*Lepus townsendii campanius*), Black Hills cottontail (*Sylvilagus nuttallii grangeri*), and three overly abundant species of ground squirrels (the "striped gopher" *Citellus tridecemlineatus*, the "brush gopher" *C. franklinii*, and the "flicker-tail gopher" *C. richardsonii*). On the prairies are also found a number of characteristic birds, prairie chicken (*Tympanuchus cupido*), prairie sharp-tailed grouse (*Pedioecetes phasianellus*), chestnut-collared longspur (*Calcarius ornatus*), McCown's longspur (*Rhynchophanes mccowni*), Sprague's pipit (*Anthus spraguei*), and burrowing owl (*Speotyto cunicularia*). Otherwise, most of the prairie birds are generally slightly differentiated subspecies of Eastern Canadian forms, the general tendency of species of animals found on plains or semi-arid regions running to paler or bleached coloration and frequently smaller size; at the same time, the tendency of geographical races is to become larger towards the north. There are many exceptions to this rule, possibly because some species are subject to these conditions only on their breeding range and spend much of the year under different conditions. The occurrence of sage hen (*Centrocercus urophasianus*) and lark bunting (*Calamospiza melanocorys*) in the extreme south of this area as well as recent records of black-footed ferret (*Mustela nigripes*) and Wyoming kangaroo rat (*Dipodomys ordii lutescens*) shows a close approach to Upper Sonoran Zone fauna not heretofore considered to extend much farther north than central Montana. The unusual presence of some of these forms may be due to the prolonged drought conditions in the area during the past few years.

Carolinian Zone.—The most southern faunal region in the eastern part of Canada is the northern edge of the Carolinian Zone, which is confined to extreme southern Ontario. The northern limit may be defined as a strip of territory running along the north shore of lake Erie from Windsor to Hamilton. Its flora resembles the Transition but has many southern genera and species not found elsewhere in Canada. Six species of hickory, ten of oak, together with black walnut, chestnut, and sycamore are found; less abundant are tulip tree, flowering dogwood, sour gum, and sassafras. At least one hundred species of herbaceous plants are found here that occur nowhere else in Canada.

Among the fauna the opossum (*Didelphys virginiana*), prairie mole (*Scalops aquaticus*), little short-tailed shrew (*Cryptotis parva*), and pine mouse (*Pitymys pinetorum*) reach their northern limit in Canada, as well as mockingbird (*Mimus polyglottos*), Carolina wren (*Thryothorus ludovicianus*), orchard oriole (*Icterus spurius*), cardinal (*Richmondia cardinalis*), and several other species.

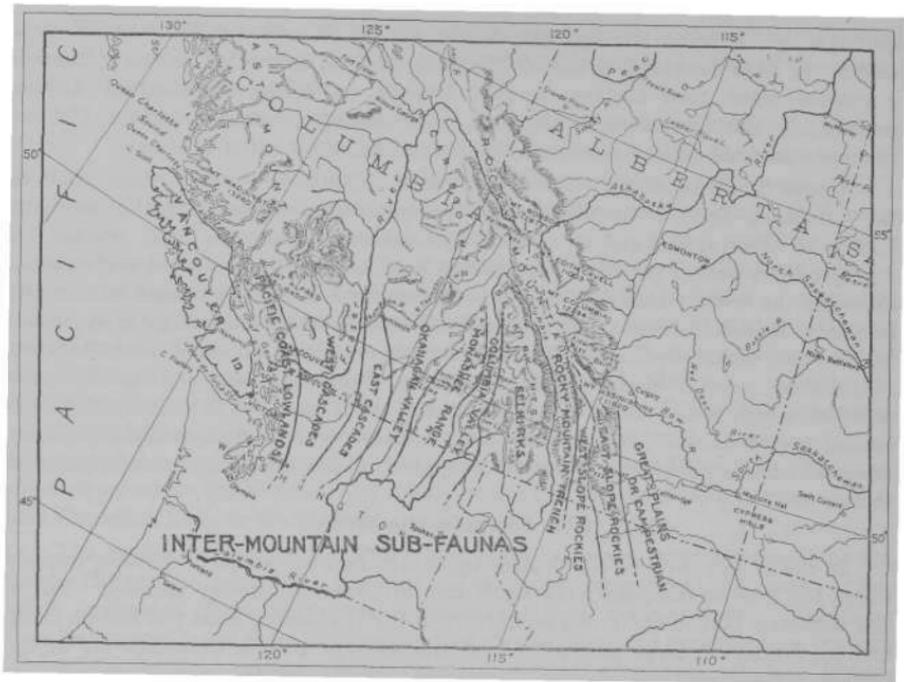

Upper Sonoran Zone.—The Upper Sonoran Zone, the western counterpart of the Carolinian Zone, as mentioned above, shows some traces along the southern borders of Alberta, Saskatchewan, and southwestern Manitoba, and reaches its northern limit west of the Rocky mountains in a narrow tongue of semi-arid country following the lower Okanagan valley to the southern end of Okanagan lake in the interior of British Columbia. It is characterized in British Columbia by greasewood, rabbit-bush, cactus, several species of sagebrush, and other plants of desert habitat. It possesses several characteristic mammals—California badger (*Taxidea taxus neglecta*), which is also found in a few parts of the Transition Zone in British Columbia; pocket mouse (*Perognathus lordi*); western white-tailed jackrabbit (*Lepus townsendii townsendii*); and a few birds typical of the zone which are mentioned further on.

Life Zones in the West.

In the boreal parts of North America and in fact the whole of Eastern Canada where the land is comparatively level, the life zones are nearly parallel. Yukon and northern British Columbia are mostly in the Hudsonian Zone and have a fairly uniform fauna. A large part of central and western British Columbia are in the Canadian Zone, with considerable Transition-Campestrian in the southern interior, and a small finger of Upper Sonoran thrusting up into the lower Okanagan valley. In southern British Columbia and western Alberta as in the northwestern States the life zones are greatly cut up and their relations complicated by the interruption of north-and-south mountain ranges; thus northern species are carried to the south along the moderately humid ridges and southern forms to the north along the hot, semi-arid valleys.

To understand intelligently the faunas of Western Canada, it is important to study the physiography, and particularly the orography, that branch of physical geography treating of mountains and mountain systems (see pp. 8 to 10). Vegetation is everywhere extensively affected by the physical and chemical composition of the soil—whether sand, clay, alluvial, glacial, and whether acid or alkaline in its reaction. In the mountains it is instructive to note how the geological features affect the flora and how this reacts on the animal life. We soon find that a map of the geological subdivisions may be quite different from a map of the life zones. The opposite sides of a mountain range may be of similar rock structure, due to being part of the same uplift or folding of the earth's crust. At the same time the vegetation growing on one slope may have quite different elements from that on the other, and the animal life may show equally striking variations. These differences are due largely to high mountain ridges cutting off moisture-laden winds from the ocean, resulting in a dense rain-forest with heavy undergrowth on the seaward side, and more open country with plants and animals of semi-arid habitat on the interior slopes. This is well illustrated by the west and east slopes of the Cascade and Coast ranges. Other differences in fauna and flora may be due to high ranges preventing certain species from crossing and populating transmontane districts.

Inter-Mountain Sub-Faunas.—From the Pacific coast of British Columbia to the Great Plains in western Alberta the writer has been able to recognize no less

than twelve sub-faunal divisions.¹⁹ Some closely allied species run across all these sub-faunal belts, often with slight subspecific differences, and some of the forms of each adjoining area are found in each belt. These are well illustrated by the various subspecies of flying squirrels (*Glaucomys sabrinus*), snowshoe rabbits (*Lepus americanus*), and pikas (*Ochotona princeps*). As we pass from one belt to another, or from lower to higher levels, we pick up new forms, or distinct geographical races, which give character to the local fauna and flora and show the effects of a different environment. The dominant trees and herbaceous plants mark obvious changes in the landscape. The bird fauna gives a definite character to the various intermountain areas during the breeding season, but at other times is much complicated by seasonal migrations northward and southward in spring and autumn, as well as by local altitudinal movements. The mountain seed-eating birds come down to lower levels when seeds and fruits are ripe, and hummingbirds which breed at the lower levels presumably move upwards to the natural flower gardens at timber-line on the border of Hudsonian-Alpine Zones after the breeding season when the lowlands are dried up as the male hummingbirds seem to disappear from the lower levels and are conspicuous near the timber-line soon afterwards. The mammal life is more static, although some large, hoofed mammals make short movements from summer to winter pastures and *vice versa*. Many of the species, from bears to chipmunks, evade the effects of severe climates by hibernating in winter and, on the other hand, in some of the hot, dry valleys, species like the yellow-bellied woodchuck (*Marmota flaviventris*) and Columbian ground squirrel (*Citellus columbianus*) go into a state of aestivation or dormant inaction during the late summer when vegetation is withered. As the occurrence of many of the larger game and fur-bearing species at the present time is largely dependent upon survival from persecution rather than distribution from natural causes, the peculiarities of mammal distribution in these sub-faunal areas is more readily worked out by study of the

smaller and relatively insignificant species. While the relative numbers of the small mammals are often greatly influenced by external causes, such as epidemic diseases, climatic conditions, or increase of predators, they are less destructively affected by human factors, and there is greater possibility of their persistence in any locality.

Some characters of the main sub-faunal regions along the International Boundary are given here, with the more important differences noted in moving from one district to another.

Vancouver Island.—This region is heavily forested, particularly in the southern and central portions. In the northern part of the island the mountains are lower, with timber of smaller size, and the fauna shows an infusion of northwest coast species. The bird fauna is largely the same as on the mainland, with a few species missing, and only two or three sedentary forms, like the Vancouver Island pygmy owl (*Glaucidium gnoma swarthi*) and the Vancouver Island ruffed grouse (*Bonasa umbellus brunnescens*), which are peculiar to the island. Several of the mammal species of the mainland seem to have never reached the island, and a large proportion of those on the island have been described as insular subspecies of mainland forms, including three shrews, weasel, mink, wolverine, otter, black bear, wolf, cougar, red squirrel, meadow mouse, marmot, raccoon, and two subspecies of white-footed mouse.

Pacific Coast Lowlands.—The mild climate, heavy annual rainfall, and thick undergrowth, with few natural open spaces characterize this area. A list of the birds breeding in this region shows that the species are largely the same as those found on the northwestern Pacific coast of the United States and several typical species are mentioned on p. 45 of this paper. Typical mammals of the Coast Belt are Oregon mole (*Scapanus townsendii*), Scheffer mole (*S. orarius schefferi*), Gibbs shrew mole (*Neurotrichus gibbsi*), Trowbridge shrew (*Sorex trowbridgii*), Bendire water shrew (*Sorex bendirei*), Puget Sound spotted skunk (*Spilogale phenax olympica*), Puget Sound striped skunk (*Mephitis occidentalis spissagrada*), Bachman flying squirrel (*Glaucomys sabrinus oregonensis*), Cooper chipmunk (*Eutamias townsendii cooperi*), Puget Sound white-footed mouse (*Peromyscus maniculatus austerus*), northwestern red-backed mouse (*Clethrionomys gapperi caurinus*), Townsend meadow mouse (*Microtus townsendii*), Agassiz meadow mouse (*M. oregoni serpens*), brown mountain beaver (*Aplodontia rufa rufa*), and Columbian Coast deer (*Odocoileus hemionus columbianus*).

West Slope of Cascade Mountains.—Here heavy timber and dense undergrowth, such as salal, devil's club, salmonberry, etc., merge into the preceding region, and harbour birds like the sooty grouse (*Dendragapus f. fuliginosus*), dipper (*Cinclus mexicanus unicolor*), sooty fox sparrow (*Passerella iliaca fuliginosa*), and Pacific varied thrush (*Ixoreus n. naevius*). Typical mammals of this zone are mountain goat (*Oreamnos americanus americanus*), Cascade hoary marmot (*Marmota caligata cascadenis*), Mount Baker chipmunk (*E. amoenus felix*), Cascade red squirrel (*Sciurus douglassii cascadenis*), dusky flying squirrel (*G. s. fuliginosus*), Washington white-footed mouse (*P. m. oreas*), Cascade water vole (*Microtus richardsoni arvicoloides*), Cascade pika (*Ochotona princeps brunnescens*), Wrangell lemming mouse (*Synaptomys borealis wrangelli*), and Cascade mountain beaver (*Aplodontia rufa columbiana*).

East Slope of Cascade Mountains (Similkameen valley).—The high mountains shut off a large part of the rain-bearing clouds from the coast and the east slope is noticeably drier, with more open timber of Transition type, typically of western yellow pine (*Pinus ponderosa*), with open grassy areas, gradually merging into the

Okanagan valley. The sooty grouse comes a little over the divide, but is soon replaced by Richardson's grouse (*Dendragapus obscurus*), Franklin's grouse (*Cana-chites franklini*), and gray ruffed grouse (*Bonasa umbellus umbelloides*). Other interior forms are California pygmy owl (*G. g. californicus*), red-naped sapsucker (*Sphyrapicus varius nuchalis*), black-headed jay (*Cyanocitta stelleri annexens*), American magpie (*Pica pica hudsonica*), and Nevada towhee (*Pipilo maculatus curtatus*). Typical mammals not found on the west slope of the Cascades are: dusky-mantled ground squirrel (*Callospermophilus lateralis saturatus*), Columbian chipmunk (*E. a. affinis*), Streater red squirrel (*S. h. streatori*), sagebrush lemming mouse (*Synaptomys borealis artemisiae*), Kootenay jumping mouse (*Zapus princeps kootenayensis*), Ashnola pika (*Ochotona princeps fenisix*), mountain meadow mouse (*Microtus pennsylvanicus modestus*), sagebrush white-footed mouse (*P. m. artemisiae*), Okanagan flying squirrel (*G. s. columbiensis*), Cascade snowshoe rabbit (*Lepus americanus cascadiensis*), and bighorn sheep (*Ovis canadensis californiana*).

Okanagan River Valley.—In the hot Upper Sonoran Zone of Osoyoos Lake country in the extreme south, greasewood, rabbit-bush, cactus, and several species of sagebrush are common plants. This merges into semi-arid Transition-Campes-trian farther north, with much open range country. Among the birds may be mentioned turkey vulture (*Cathartes aura*), Columbian sharp-tailed grouse (*Pedio-cetes phasianellus columbianus*), burrowing owl (*Speotyto cunicularia hypugaea*), Nuttall's poor-will (*Phalaenoptilus nuttalli*), cañon wren (*Catherpes mexicanus*), bobolink (*Dolichonyx oryzivorus*), long-tailed chat (*Icteria virens longicauda*), white-throated swift (*Aëronautes saxatilis*), sage hen (*Centrocercus urophasianus*) (formerly); and various species of ducks and grebes. Mammals restricted in Canada to this valley and some local valleys near the border farther east are California badger (*Taxidea taxus neglecta*), pocket mouse (*Perognathus lordi*), and western white-tailed jackrabbit (*Lepus townsendii townsendii*).

Monashee Mountains.—This area is a more heavily timbered region of the Columbia Mountain system, with more rainfall than the eastern Cascades, flora of mixed Eastern Canadian and Western Canadian characteristics, and a somewhat intermediate fauna, showing species that are found in both the Okanagan and Columbia valleys, but few that are common to both of those areas.

Columbia and West Kootenay Valleys.—This area is closely connected with the preceding, ranging from Transition Zone at Trail (1,364 feet elevation), on the Columbia, reaching timber-line a few miles away at the edge of the Hudsonian Zone at about 7,000 feet, showing a mixed bird fauna, including long-eared owl (*Asio wilsonianus*), Sierra creeper (*Certhia familiaris zelota*), Audubon's warbler (*Dendroica auduboni*), and Alaska pine grosbeak (*Pinicola enucleator alascensis*). Typical mammals are buff-bellied chipmunk (*E. a. luteiventris*), Okanagan hoary marmot (*Marmota caligata okanagana*), with yellow-bellied woodchuck (*Marmota flaviventris avara*) at lower levels, Chapman lemming mouse (*Synaptomys borealis chapmani*), big-footed water vole (*M. r. macropus*), Richardson red squirrel (*S. h. richardsoni*), and brown pocket gopher (*Thomomys fuscus*). The mountains in this area are forested nearly or quite to the tops, and the alpine flower displays are of great interest, incidentally providing food and shelter for some of the alpine mammal species.

Selkirk Mountains—(*Kootenay and Moyie valleys*).—The interior of British Columbia is not usually thought of as having many water birds, although the long, narrow, deep "arrow lakes", such as the Okanagan and Kootenay lakes, harbour many ducks in season. The "Kootenay Flats" are particularly interesting. The

Kootenay river flows south along the Rocky Mountain Trench into northwestern Montana, thence into northern Idaho, north into British Columbia again, where it flows through a flat valley about five miles wide, cut into numerous side channels, ultimately flowing through the long Kootenay lake and southwest to join the Columbia shortly before it enters the State of Washington. This region shows a great variety of bird life. The Moyie valley is also interesting as a great fall migration route for birds, possibly on account of being badly burned over and with much second growth. Typical mammals are Selkirk marten (*Martes americana abietinoides*), northern striped skunk (*Mephitis m. hudsonica*), the latter being an intrusion from the prairies; British Columbia woodchuck (*Marmota monax petrensis*), an extreme western subspecies of the Eastern woodchuck; Cœur d'Alene chipmunk (*Eutamias ruficaudus simulans*), Cœur d'Alene pocket gopher (*Thomomys fuscus saturatus*), Kootenay red-backed mouse (*Clethrionomys gapperi saturatus*), Rocky Mountain showshoe rabbit (*Lepus bairdii bairdii*), and mountain muskrat (*Ondatra zibethica osoyoosensis*). The region is noted for abundance of yellow-tailed deer (*Odocoileus virginianus ochrourus*) and mule deer (*O. hemionus*) and a few mountain caribou are still found here and there. Mountain goats are found locally, but bighorn sheep are not known to have ever occurred in the Selkirks although found both to the east and west.

Rocky Mountain Trench.—This is a comparatively level valley between the Selkirks and the Rocky mountains, including the east part of the Big Bend of the Columbia river, and farther south the source of the Kootenay river which flows south on the west side of the Tobacco Plains into northwestern Montana. The Rocky Mountain Trench is apparently less of a barrier to species of birds than it is to mammals. There is little apparent difference between the species found on each side, and the Trench is a common migration ground for the birds from either side. The region around Newgate at the edge of the Tobacco Plains is noteworthy for prairie or Great Plains intrusions, producing breeding grounds for upland plover (*Bartramia longicauda*), McCown's longspur (*Rhynchophanes mccowni*), and chestnut-collared longspur (*Calcarius ornatus*). Williamson's (cut-throat) sapsucker (*Sphyrapicus thyroideus*) is here largely restricted to a western larch habitat. The Columbian ground squirrels and pocket gophers are very abundant, and the California badger, which within the past few years has been nearly exterminated in British Columbia, was more common than at any other point along the Boundary. The Alberta phenacomys (*Phenacomys intermedius levis*) is first noted as an intrusion from the east, and the Rocky Mountain jumping mouse (*Zapus princeps*) is common. The buff-bellied chipmunk (*E. a. luteiventris*) is found on the east side of the Kootenay river near Newgate, and the Columbian chipmunk (*E. a. affinis*) on the west bank, showing that in this latitude a large swift river may be a barrier separating hibernating species.

West Slope of Rocky Mountains.—The foothill region is comparatively narrow, and the mountains rise rather abruptly from the Rocky Mountain Trench. This section is heavily forested at the lower levels, except where limited areas have been stripped by snowslides or fires, and on Arctic-Alpine summits. Typical trees are Engelmann spruce, lodgepole pine, and Douglas fir. Mammals of interest are wapiti (*Cervus canadensis*), Montana mountain goat (*Oreamnos americanus missoulae*), Yellowstone moose (*Alces americana shirasi*), bighorn sheep (*Ovis canadensis canadensis*), British Columbia showshoe rabbit (*Lepus americanus columbiensis*), and the typical Rocky Mountain pika (*Ochotona p. princeps*) which is represented by various subspecies on the ranges farther west.

East Slope of Rocky Mountains.—The slopes are less abrupt than on the western side, with a wider fringe of foothills, merging gradually into the Great Plains. The forests are similar to those of the western slope of the mountains. This is the main range of the bighorn sheep, and mountain goats and wapiti are also found, while the typical moose (*A. a. americana*) is common farther north. Other characteristic mammals are Rocky Mountain cougar (*Felis concolor hippolestes*), Rocky Mountain hoary marmot (*Marmota caligata oxytona*), with the Montana hoary marmot (*M. c. nivaria*) occurring locally near the International Boundary. The northern chipmunk (*Eutamias minimus borealis*) reaches its western limit here, but ranges north along the Mackenzie and east to northern Ontario. The alpine flying squirrel (*G. s. alpinus*), Drummond wood-rat or "pack-rat" (*Neotoma cinerea drummondii*), Richardson water vole (*Microtus r. richardsoni*), long-tailed mountain vole (*Microtus mordax*), approaching its eastern limit, and Alberta pika (*Ochotona princeps lutescens*) are characteristic animals.

The Great Plains.—This region which merges gradually into the foothills of the Rocky mountains, is characterized by Transition-Campestrian fauna. Some of the larger mountain forms formerly ranged for some distance on the Plains. The big Plains grizzly (*Ursus horribilis*) which was found as far east as Manitoba 130 years ago, is now extinct, and the cougar which reached the Cypress hills in southwestern Saskatchewan until comparatively recent times, does not stray far from the shelter of the mountains. In addition to the typical Plains species found in Canada, listed earlier in this paper, we may add the northern white-tailed jack-rabbit (*Lepus townsendii campanius*), silver badger (*Taxidea taxus taxus*), and several forms of the true pocket gopher (*Thomomys talpoides*), which on account of their glossy fur and habit of throwing up earth hills are often mistakenly called "moles" on the prairies as well as in British Columbia. There are no true moles known in Canada in the region between eastern Manitoba and the extreme southwestern corner of British Columbia. The Plains muskrat is a pale-coloured form (*Ondatra zibethica cinnamomina*), and the Missouri River beaver (*Castor canadensis missouriensis*), which is found in some of the parts of southern Alberta and Saskatchewan belonging to the Missouri drainage system, is also a pale, bleached form.

Distribution of Species in the Northwest.

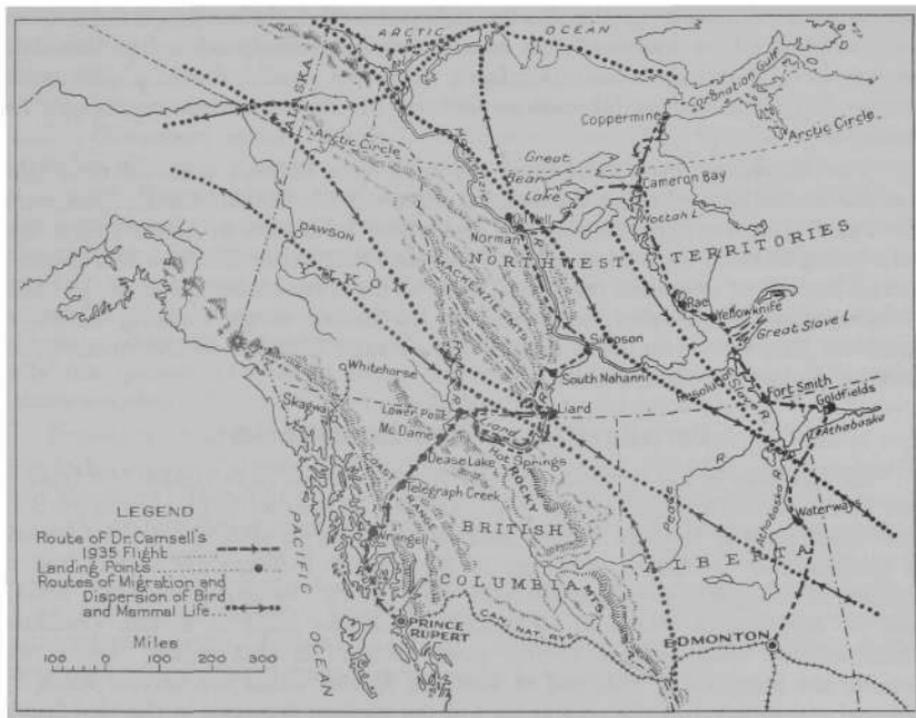

The general trend of the life zones of Canada being along a southeast-northwest line, it has been generally assumed that the dispersion has been fairly regular across the Great Plains region and to the northward of the Plains (the Rocky Mountain system forming an unbroken barrier which is surmounted by few forms of life) and that the species have followed the foothills of the Rockies along the Mackenzie River valley to the Arctic ocean. The above is true only in part. The fauna of the Mackenzie Delta region (about latitude 68° N. and longitude 135° W.), much farther west than the west coast of British Columbia, is essentially the same as that of Eastern Canada, with the exception of a few stragglers from the Yukon side, and a few marine species of Pacific origin.

However, it has been known for some time that there is a strong infusion of many typical Eastern Canadian species in central Yukon and northern British Columbia, extending into central Alaska to the mouth of the Yukon river and beyond. The eastern race of the common fox sparrow (*Passerella iliaca iliaca*) ranges to the northwest coast of Alaska, while the large, dark, western coast races of the same species—Shumagin Island fox sparrow (*unalaschensis*), Kodiak Island (*insularis*), Valdez (*sinuosa*), Yakutat (*annectens*), Queen Charlotte Island (*towns-*

endi), Vancouver Island (*fuliginosa*), etc.—do not range north beyond the Alaska peninsula and Aleutian islands. The yellow-shafted flicker (*Colaptes auratus*) of the east ranges into central Yukon and northwestern British Columbia, straggling down the coast as far as Vancouver island.

The Liard River Gap.—Many of these anomalies of distribution become much more intelligible in the light of important geographical and geological explorations made by Dr. Charles Camsell in the summer of 1935.⁹ Leaving Prince Rupert and passing Wrangell in Alaska, following the Stikine river and passing Telegraph creek, his plane crossed the Pacific-Arctic divide to Dease lake, one of the headwaters of Liard river. Dr. Camsell states:

The plateau east of the Cassiar Range is characterized by a fairly even skyline and by mature, rounded summits which seldom rise above the forest line. Some of it is almost flat. Timber is general and is quite thick in the broad and flaring valleys that flow through the plateau. The divide at Dease Lake is only about 2,600 feet above sea-level, and therefore it is 1,000 feet lower than Yellowhead Pass or 1,700 feet lower than Kicking Horse Pass. At Fort Liard the level is estimated to be about 500 feet.

The Rocky mountains were found to definitely terminate at Liard river, after extending as a continuous group of ranges for about 1,000 miles, and then pass gradually into the plateau region to the north. South of the river the skyline is cut by a series of sharp peaks, which in some places stand well above the timberline, whereas to the north the topography is subdued, with rounded summits that only very occasionally reach beyond the timber-line. The Mackenzie mountains begin at latitude 60° N., immediately west of the Liard, and extend northward and northwesterly for about 600 miles as a gradually broadening belt of mountains, which on the line of the Ross and Gravel rivers have a width of 300 miles, according

to Keele. The important and striking gap between the Rocky mountains and Mackenzie mountains, about sixty miles in width, which was first recognized by R. G. McConnell of the Geological Survey of Canada, on a remarkable canoe traverse of Liard river in 1887, was hardly appreciated at its full physiographic value at the time, owing to the difficulty of human travel by the old methods, but was immediately seen by bird's-eye view from the air and confirmed by observations and photographs taken. The low, tree-covered pass was easily distinguished from the rugged and barren mountains on both sides of the river.

This Liard River gap, while it offers a logical explanation of what may be called a central Yukon and Alaska extension of the Eastern Canadian fauna, does not account for the entire fauna of central and southern Yukon Territory, as the mountain sheep (*Ovis dalli*), mountain goat (*Oreamnos americanus*), pika or "rock rabbit" (*Ochotona collaris*), and hoary marmot or "whistler" (*Marmota caligata*), which are closely related to northern Asiatic forms, are presumably derived from Asiatic immigrants that came to North America in preglacial or interglacial times. The mountain sheep has worked down some of the western ranges as far south as Mexico, but is most abundant in the Rocky mountains and their outliers. However, the Canadian elk or wapiti (*Cervus canadensis*), also closely related to Eurasian species, but not strictly a mountain form, may very possibly have come in to the Prairie Provinces and as far east as Ontario by this low roadway through the mountains.

The Mackenzie mountains form the basis of a distinct chain of mountains running northwestward along the boundary between the Northwest Territories and the Yukon Territory, approaching the Richardson mountains in Arctic Yukon, and with a considerable depression at the Porcupine-Bell River divide, which allows a certain amount of migration from the Yukon to the lower Mackenzie drainage basin, swinging more to the west, continuing as the Brooks range, formerly known as Arctic or Endicott mountains, terminating at cape Lisburne in the Arctic ocean north of Kotzebue sound, Alaska.

Peculiarities of Bird Distribution.

Explorations in the northern parts of North America have yielded few types of new species of birds within recent years, as most of the species on their migrations have been passing through settled districts twice a year since the earliest periods of colonization. Additions of species to our western avifauna are usually due to capture of stragglers from northeastern Asia which frequently come to Alaska and we may expect others to be picked up on the coast of British Columbia when resident ornithologists become more common in that region. Other new records are occasionally obtained of southern species which are carried north by tropical hurricanes, but the greater part of the modern increases in the bird faunal list is due to "splitting" of species, *i. e.*, finer discrimination of subspecies or geographic races.

The listed avifauna of Canada now stands at something over 600 forms (Taverner, 1934).⁹ The last Ontario list (Nash, 1905)¹⁰ recorded 324 forms known to have occurred in the province, and the latest addenda to the list of birds of the Ottawa district (Lloyd, 1936)¹¹ bring it up to 250 forms. These lists include every form which has ever been taken in the region in question, numbering permanent residents (not many over two dozen in the Ottawa district), regular migrants which may be expected to occur every year, and casual stragglers of which only one record of occurrence may be known.

The bird faunas of Canada can not be properly divided by an arbitrary line drawn north and south through the centre of the Dominion, as the breeding birds are largely of typically Eastern Canadian type to the eastern edge of the Rocky mountains. Worthy of note are a number of so-called "Eastern" species which range without change clear across the continent: American bittern (*Botaurus lentiginosus*), Cooper's hawk (*Accipiter cooperi*), sparrow hawk (*Falco sparverius*), killdeer (*Oxyechus vociferus*), spotted sandpiper (*Actitis macularia*), eastern kingbird (*Tyrannus tyrannus*), olive-sided flycatcher (*Nuttallornis mesoleucus*), tree swallow (*Iridoprocne bicolor*), barn swallow (*Hirundo erythrogaster*), cliff swallow (*Petrochelidon albifrons*), cedar waxwing (*Bombycilla cedrorum*), red eyed vireo (*Vireo olivaceus*), and pine siskin (*Spinus pinus*).

Numerous species familiar in the east are represented on the prairies or on the Pacific coast by slightly differentiated subspecies: Harris's (hairy) woodpecker (*Dryobates villosus harrisi*), Batchelder's (downy) woodpecker (*Dryobates pubescens leucurus*), western pileated woodpecker (*Ceophloeus pileatus picinus*), slender-billed nuthatch (*Sitta carolinensis aculeata*), western house wren (*Troglodytes aëdon parkmani*), western winter wren (*Nannus hyemalis pacificus*), western robin (*Turdus migratorius propinquus*), dwarf hermit thrush (*Hylocichla guttata nanus*), willow thrush (*Hylocichla fuscescens salicicola*), Cassin's (blue-headed) vireo (*Vireo gilvus cassini*), western warbling vireo (*Vireo gilvus swainsoni*), lutescent (orange-crowned) warbler (*Vermivora celata lutescens*), Calaveras (Nashville) warbler (*Vermivora ruficapilla ridgwayi*), western yellow-throat (*Geothlypis trichas occidentalis*), long-tailed chat (*Icteria virens longicauda*), pileolated (Wilson's) warbler (*Wilsonia pusilla pileolatus*), western red-winged blackbird (*Agelaius phœniceus* subspecies), pale goldfinch (*Spinus tristis pallidus*), western lark sparrow (*Chondestes grammacus strigatus*), western vesper sparrow (*Pooecetes gramineus confinis*), western chipping sparrow (*Spizella passerina arizonae*), western tree sparrow (*Spizella arborea ochracea*), Gambel's (white-crowned) sparrow (*Zonotrichia leucophrys gambeli*), sooty fox sparrow (*Passerella iliaca fuliginosa*), rusty song sparrow (*Melospiza melodia morphna*), Forbush's sparrow (*Melospiza lincolni gracilis*).

Typical birds of the Pacific coast and rare east of the Coast mountains are: band-tailed pigeon (*Columba fasciata*), Kennicott's screech owl (*Otus asio kennicotti*), coast pigmy owl (*Glaucidium gnoma grinnelli*), black swift (*Nephoecetes niger borealis*), northwestern flicker (*Colaptes cafer cafer*), red-breasted sapsucker (*Sphyrapicus varius ruber*), Steller's jay (*Cyanocitta stelleri*), Oregon chickadee (*Penthestes atricapillus occidentalis*), chestnut-sided chickadee (*Penthestes rufescens*), russet-backed thrush (*Hylocichla ustulata*), black-throated gray warbler (*Dendroica nigrescens*), northwestern redwing (*Agelaius phœniceus caurinus*), Oregon towhee (*Pipilo maculatus oregonus*), northwest crow (*Corvus brachyrhynchos caurinus*).

Waterfowl Flyways of North America.

The perplexing intermixture of the avian faunas of North America is perhaps best illustrated by the migration of the waterfowl. The ducks and geese, of importance for food and sport, have been the object of detailed study by a wider class of people than have most other groups of birds. The comparatively recent development of bird-banding, or "ringing" as it is called in England, has done much to sweep away the mystery which has shrouded the migration of birds since earliest times. Begun in a small way by private naturalists, the project has become of international importance, as many of the birds breed in one country and winter in other countries. Great numbers of birds, as nestlings or taken in traps, have

been banded with aluminium, stamped with consecutive numbers attached to the leg; a filing card with necessary data is sent in to a central office. For Canada and the United States, to avoid confusion, the bands are stamped "Notify Biological Survey" and handled by the Department of Agriculture, Washington, D.C. All records of birds that have been banded in Canada, or taken in Canada or other countries bearing bands of Canadian origin as shown by their numbers on file, are ultimately sent to Ottawa and filed at headquarters of the National Parks Bureau, Department of Mines and Resources. Birds banded in Canada may be taken in the United States, or *vice versa*, and many birds have been taken during several successive years as "repeaters" The assembled records have given a very clear and accurate idea of where certain species spend their summers and winters and the routes which they follow during migrations.

The matter of migration records is of considerable importance to Canada, as most of the bird species which nest in Canada spend the winter outside of our borders. We know that a large proportion of the geese and ducks reared in Canada find their winter feeding grounds in the United States and are killed there. Recent investigations¹² have shown that some of our smaller species, which are protected in North America, as the upland plover (*Bartramia longicauda*), a favourite bird on the western prairies, is being killed to a dangerous extent in Argentina, and the buff-breasted sandpiper (*Tryngites subruficollis*), formerly common in Arctic Canada and well-known on migrations, has nearly approached extinction on its wintering grounds in Argentina, where settlement and wheat growing has developed during the past generation as on the prairies of Western Canada.

The prolonged period of drought during the past few years in large sections of Western Canada, covering the area which is normally the greatest duck-producing ground in North America, has focussed the attention of sportsmen and conservationists on the study of our waterfowl fauna. Data have been gathered which show that some species have reached such a low ebb, due to lack of reproduction on the breeding grounds and to over shooting in autumn and winter, that a few years more might easily place them in the class of the Labrador duck and the passenger pigeon—irrevocably missing from the list of our living fauna.

The recent intensive studies on the waterfowl migration have been well summarized by Lincoln,¹³ who has described the four important flyways.

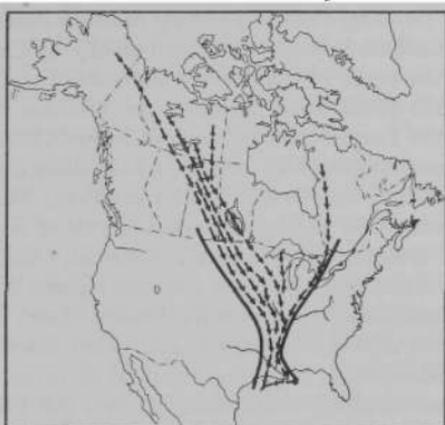

The Atlantic Flyway extends from the Atlantic coast west to the Allegheny mountains and curves northwestward to the western end of lake Erie. It has at least three primary migration routes and as many more that are important as tributaries. The extreme eastern route which leads directly down the coast, has its origin in the Eastern Arctic islands and Greenland, bringing down the greater snow goose (*Chen hyperborea atlantica*) and the Atlantic brant (*Branta bernicla hrota*), which winter on the coast of Virginia and North Carolina. This route is also used by black ducks (*Anas rubripes*) and Canada goose (*Branta canadensis*), the latter species on this route seldom going very far south of Long Island sound. The black ducks of western Quebec and Ontario first travel southward through the peninsula of southern Ontario, and together with ducks and geese from both sides of Hudson bay, and several species of diving ducks, canvasback (*Nyroca valisneria*), redhead (*N. americana*), and scaup (*N. marila* and *N. affinis*), which breed in the Prairie Provinces and some of the northwestern States, make a cross-country flight over Pennsylvania and northern West Virginia to the Atlantic coast, and winter largely in the vicinity of Chesapeake bay and Delaware bay.

THE WATERFOWL FLYWAYS OF NORTH AMERICA

After F.C. Lincoln, U.S. Dept. of Agriculture,
Circular No. 342, January, 1935.

THE ATLANTIC FLYWAY

THE MISSISSIPPI FLYWAY

THE CENTRAL FLYWAY

THE PACIFIC FLYWAY

(The Arctic portion of the Pacific Flyway has been added in finely dotted lines by the present writer.)

The Mississippi Flyway is more simple. It draws some geese from the east side of Hudson bay, and black ducks from western Quebec and Ontario which fly from the general vicinity of western lake Erie and reach the Mississippi valley near the mouth of the Ohio river. From the west it draws from the Yukon flats in Alaska, traverses the Mackenzie River valley, and the Great Lakes and prairie region of central Canada and, running generally from northwest to southeast, enters the United States on a broad band from Montana to Wisconsin, but constricts as it proceeds southward, resulting in heavy concentration in central Arkansas. The most significant factors are the vast area of breeding territory that is tributary to it and the greatly restricted winter quarters, resulting in heavy concentration during winter and giving rise to erroneous ideas of abundance.

The Central Flyway merges imperceptibly with the western boundary of the Mississippi Flyway but in general is bounded in this direction by the Missouri

river and the western parts of Missouri and Arkansas. It draws birds from central Alaska and Yukon, Alberta, Saskatchewan, and various western States, including the Bear River marshes in Utah. The wintering grounds are chiefly in Texas.

The Pacific Flyway presents some peculiarities. The route along the British Columbia coast is followed chiefly by the cackling goose (*Branta canadensis minima*), the black brant (*Branta nigricans*), and some of the sea-ducks. A large number of the black brant breed on the Western Arctic coast and islands of Canada, and with the Pacific eider (*Somateria v-nigra*) and king eider (*S. spectabilis*) perform a curious and noteworthy east-west migration along the coasts of the Northwest Territories, Yukon and Arctic Alaska via Point Barrow and Bering strait. The eiders mostly winter in Bering sea and the gulf of Alaska, but the black brant follow the Pacific Flyway along the coasts of British Columbia and States of Washington, Oregon, and California. Most of the other geese, including the little Ross's goose (*Chen rossii*), and ducks which use the United States part of this route, come from eastern Alaska, the Mackenzie valley, and other interior points. Starting in Alaska, Yukon and Mackenzie, this route is used in common with many birds which follow other flyways, going southward through the Prairie Provinces. The route branches somewhere near the International Boundary, and while some birds continue south-eastward into the Central and Mississippi Flyways, some turn southwestward across northwestern Montana and the Panhandle of Idaho, follow the Snake and Columbia River valleys, turning southward across central Oregon to the great interior valleys of California. Another important contingent of birds, particularly the redheads which winter in California, crosses the mountains from the Bear River marshes of Utah, and curiously enough sends some ducks along the Central and Atlantic Flyways as well. The breeding grounds of interior British Columbia continue to supply a fairly good number of waterfowl, nearly all of which winter in the Puget Sound region and seldom go south of the State of Washington.

Distribution of Mammal Faunas.

Next to the plant species, the mammals probably present the best indicators of life zones in Canada. With the exception of a few species of bats, which migrate to more southern climes, and some of the grazing mammals which move limited distances in search of winter forage, and a few predators which follow their prey, nearly all our Canadian mammals are resident and stay in the same region throughout the year, even if they have to hibernate and sleep all or part of the winter. As the mammals are comparatively sedentary and are subject to the same environment throughout the year, they have developed into many local races which are still being brought to light as new areas are explored scientifically.*

The introduction of domestic animals has always accompanied the immigration of man into a new region, but the number of species is small and largely under control. House rats and mice have been brought in accidentally by human transport, and although not native, have acclimated themselves in most settled parts of the country. European hares have been planted in parts of southern Ontario and become established as part of the wild fauna. A few species of wild mammals have come in as immigrants from the United States, as the Nebraska cottontail rabbit (*Sylvilagus floridanus similis*) which according to Bailey¹⁷ had extended its

* Harlan¹⁴ listed about 100 species of mammals known in the whole of North America in 1825. Richardson¹⁵ in 1829 recorded 82 species in British North America, and Tyrrell¹⁶ in 1888, listed 122 species and 15 varieties of these—a total of 137 forms known in Canada at that time. The writer prepared a card list of Canadian mammals in 1928 listing 464 different forms, and increased this list to 540 by 1936, some records being added and almost as many eliminated on account of lack of authentic records. Hardly a year passes without several new names being added to the list of mammalian fauna of Canada.

range clear across the State of North Dakota between 1887 and 1915. This cottontail is now well established in southern Manitoba and in some areas has become a pest in young orchards and nursery stock. The Mearns cottontail (*S. f. mearnsi*) was probably found locally in extreme southern Ontario before the advent of the white man, but its northward advance has been rapid and since 1870 the cottontail had extended its range from southern Ontario to the environs of Ottawa where it arrived in 1931; it reached the Montreal region about the same time. The Michigan white-footed mouse (*Peromyscus maniculatus bairdii*) has made extensive northward advances in eastern Ontario as well as in Manitoba, and the white-tailed deer (*Odocoileus virginianus borealis*) which was rare north of the Ottawa river in the days of the early settlements, now ranges nearly to James bay, far into Quebec and into all parts of Nova Scotia including Cape Breton island. The prairie pocket gopher (*Geomys bursarius*) has worked north as far as the borders of Manitoba, and the Oregon mole (*Scapanus townsendii*) has recently been found in the Huntingdon-Sumas region of extreme southwestern British Columbia, having probably entered since the region was cleared of heavy timber. On the whole, the mammalian fauna of any given area is essentially static, being only changed by local extermination of a few species, and the appearance of occasional new forms which extend their ranges as the country is cleared, either by breaking of the soil or by burning of forests.

We can take the mammal fauna of Canada to number approximately 540 different forms. Ontario has an even hundred, while Quebec, which includes a number of Arctic forms from Hudson strait and marine species from its Atlantic seaboard, has 125. The Ottawa district has about 45 species of mammals, which is about the normal number found in any limited area in Eastern Canada. Certain mountain areas in British Columbia and Alberta have a somewhat larger number of forms, as one may pass upward for 6,000 to 7,000 feet from Upper Sonoran or Transition to Arctic-Alpine Zones within a few miles and meet species of the different zones. The average variety of species in any fairly homogeneous region may be seen from the Ontario list of mammals¹⁸: *Ungulata* (hoofed species) 5, including caribou, moose, and deer; *Carnivora* (flesh-eaters) 38, including bear, wolves, foxes, wildcats, mink, otter, and most of the other fur bearers; *Rodentia* (gnawing mammals) 25, including beaver, muskrat, porcupine, woodchucks, squirrels, chipmunks, and mice of various kinds; *Insectivora* (insect eaters) 13, including 10 shrews and 3 moles; *Lagomorpha* 5, hares and rabbits; *Chiroptera* 9, bats; as well as certain marine species—*Pinnipedia*, seals and walrus, and *Cetacea*, whales—which are not found in provinces which have no seaboard.

Economic Importance of Faunal Assets.

Fur-bearing and Other Mammals.—In Chapter X, of this volume, a description of the fur trade and its background will be found, supplemented by statistics of production which illustrate its importance in the national economy.

As is there pointed out, one hundred years ago the value of furs to the export trade of Canada was greater than that of any other commodity, and while the fur trade is now proportionately much less important the aggregate is as large as ever; the number of persons engaged in the industry is much larger and a greater variety of furs is collected.

Nearly all of the mammal species are of known economic importance. The large game mammals are obviously useful for food and clothing; in many areas they still furnish the main sustenance of Indians and Eskimos and are a great help to

white pioneers, although they do not figure in the statistics. The big game is of interest to other citizens for sport and pleasure, and incidentally an important source of direct revenue to the provinces from hunting licences, as well as to railways, hotels, guides, arms and ammunition manufacturers, outfitters, and local tradesmen. Most of the fur-bearing species are carnivores, and wolves, foxes, and cougars prey to some extent upon domestic stock and poultry. Some of the rodents, as muskrat and beaver, are valuable fur producers; a few of them are eaten by man, but far more (rabbits, squirrels, lemmings and native mice) are essential as food for fur bearers, and in settled districts mice, ground squirrels, pocket gophers, and woodchucks may become pests to forests and cultivated crops. Even the tiny shrews (*Sorex* and *Blarina* species), including the pygmy shrew (*Microsorex hoyi*), the smallest mammal known in North America, if not in the world, have recently been found important to forestry, helping to control the spruce sawfly and perhaps other species of insects, by feeding on the larvæ or cocoons which are found under fallen leaves in the forests.

Insects.—The Entomological Branch, Department of Agriculture,²¹ issued a statement in 1934, that from 1919 to 1923 the control of native grasshoppers made necessary the expenditure of \$1,750,000 in the provinces of Manitoba, Saskatchewan, and Alberta, and it was estimated that crops worth \$80,000,000 were saved by these measures. The wheat-stem sawfly in 1926 caused losses in Saskatchewan alone estimated at \$12,000,000. The spruce budworm during the past twenty years has destroyed more than two million cords of spruce and balsam in Eastern Canada, three times as much as was destroyed by fire in the same time. A conservative estimate is that the annual devastation in Canada from insect enemies is considerably more than \$100,000,000. Other insects and their larvæ, wire-worms, cut-worms, corn-borer, codling moth, larch sawfly, potato bug, etc., are continually working on farm and garden crops, orchards, and forests, and continued efforts are needed to keep this section of our fauna in check. One method is biological, by the introduction of natural enemies of the forms inimical to human affairs. As with many other "cures", the introduction of exotic species may be worse than the disease, as was found by bringing the English sparrow and starling into North America, but considerable success has been met in the introduction of parasitic insects which control certain other harmful kinds.

Fish.—The value of the commercial fisheries industry to Canada is shown in Chapter XI of this volume. The value of the game fishes is difficult to estimate, but they form a large and important food asset, provide, when well managed, healthful recreation to a large section of our citizens and attract many tourists and sportsmen from other parts of Canada as well as from outside our borders.

Conservation of Native Faunas.

The importance of the native faunas of Canada, both on account of their intrinsic values as food and fur and their indirect values as living biological influences on agriculture, forestry, water powers, and irrigation, should not be overlooked. During recent years, a realization of the rapid depletion of natural resources of all kinds has come to the peoples, states, and provinces of North America, and they have begun to take stock of the permanent values of their wild life heritage, and to consider the necessity of intelligent conservation.

The panther and the elk were long ago exterminated in Eastern Canada, the

ave disappeared from nearly all areas near civilization.

and the musk-ox is in a precarious state on the mainland of Canada. A few indigenous Canadian feathered species, such as the Labrador duck and the passenger pigeon, have become extinct, and the whooping crane and trumpeter swan have been reduced to very low numbers. Some of the ducks have also come within the danger line during the drought period of the past few years.

It has been shown in the past that when any wild species becomes reduced in numbers beyond a certain safety point, it is always questionable whether it can be restored to a position of safety, and the revival involves large expense over a long period of years. When a species becomes totally extinct, a historic monument which has existed longer than the memory of man upon the earth and which may have values beyond our present comprehension, has been irreparably and wantonly destroyed.

Many reclamation projects, draining of ponds, lakes, and marsh lands, undertaken ostensibly to obtain more land for agriculture, have been proved unwise, for in many cases the natural crop of fish, waterfowl, muskrat, and other furs was of more value than the agricultural products produced on the drained bottom lands. A still greater loss has been sustained by the general lowering of water tables in parts of the country. The recent long period of drought in the western parts of Canada has brought these questions to the front, and the problem of restoring the breeding grounds of our vanishing wild fowl has become identical with the greater human problem of restoration of inland water levels and retention of good agricultural land in cultivation. It should be axiomatic that the invaluable resources provided by the faunas of fin, feathers, and fur should be husbanded and thus the goose that lays the golden eggs should not be killed.

Many faunal species have a value in the balance of nature which is often forgotten and when they are exterminated the balance is upset to the detriment of other values; thus the beaver is considered by many wild life experts to have far more value to the country as an unpaid and self-supporting water-power engineer than even as a fur producer, for the reason that beaver dams in the mountain streams help to impound excess flood water, conserve moisture, and aid in preventing floods and harmful erosion at lower levels. The devastation wrought by insect pests has been pointed out on page 50, but not all insects, by any means, are injurious and wholesale methods of insect control may have serious effects on the balance of nature. This fact is stressed by Dr. Edith M. Patch,²⁰ who has been in charge of entomological work at the Maine Agricultural Experiment Station for many years.* Many naturalists and writers have complained that the general spraying of fruit trees has seriously reduced the number of certain species of birds in orchard districts; that drainage and other methods of mosquito control have eliminated many forms of useful swamp life; that wholesale poisoning of predatory mammals has eliminated the valuable fur bearers at the same time in certain districts; and that the use of strychnine, thallium, and other poisons in rodent control has unnecessarily sacrificed large numbers of fur bearers and useful birds. In all wild life control, an essential fact to be borne in mind is that faunas and floras have

* Dr. Patch thinks that too much emphasis has been directed to the fact that certain insects are injurious to man, his crops, and domestic animals, and too little to the fact that man is dependent on the insects for the pollination of plants which produce fruit, seeds, flowers, and commodities which are useful to him. The wholesale killing of insect life resulting from control campaigns, in which large areas are dusted or sprayed with toxic materials by means of aeroplanes and other mechanical equipment, has already exterminated such a large proportion of the beneficial native insect life that pollination of the blossoms of fruit trees and therefore the fruit crops themselves have suffered. In certain localities some plants have already become rare because their insect pollinators have been eliminated from the native fauna.

intricate interlocking ecological relationships, affecting many diverse human interests. In self defence it is often necessary for man to attempt to strike a balance between different forms of wild life, and the crucial question to be answered in each case is whether the problematical advantages exceed the disadvantages; steps, once taken, usually cannot be retraced.

One of the most important and effective agencies of conservation in Canada is found in the immense National Parks and the many smaller provincial parks where wild life is protected, and the overflow from these areas helps to keep up a supply in the surrounding areas. The extensive preserves in the Northwest Territories where hunting and trapping of game is restricted entirely to native Indians and Eskimos, eliminates much intensive harrying of the game and fur-bearing mammals in those areas. Certain parks and sanctuaries are the only remaining natural habitats of important mammal species. Among these are the Wood Buffalo Park and the Thelon Game Sanctuary where the wood buffalo and most of the remaining musk-oxen on the mainland of Canada are protected.

The conservation of migratory birds became a federal matter by the Migratory Birds Treaty of 1916 between Great Britain and the United States. The provisions of this treaty were put into effect by the Migratory Birds Convention Act of 1917, and reinforced by legislation of the different provinces. Co-operation between Canada and the United States is necessary, as a large proportion of the migratory wild fowl are reared in Canada and feed during the winter in the United States.

The protection of non-migratory birds, game, and fur-bearing mammals in Canada is entirely within the control of the provinces, except in the Northwest Territories where it is regulated by the Northwest Game Act, and in the Yukon Territory where the Game Ordinance of the Yukon Council is in effect. Protection of inland fish resources is largely a matter of provincial action, but the Dominion Government operates fish hatcheries and patrol vessels in coastal waters.

PART VI.— LANDS, SCENIC AND GAME RESOURCES OF CANADA.

Canada is distinctly a new country, and her resources are for the most part in the early stages of development. The fur, fishery, and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. A notable feature, especially in so young a country, has been the effort directed to conservation and, in the cases of those resources which admit of such methods, the actual replenishment or augmentation of the sources of supply by the practice of reforestation, silviculture, fur farming or the establishment of fish hatcheries.

Numerous surveys and investigations of the extent and value of the resources have been made and broad outlines of the resources of the provinces supplement the information on physical geography given on pp. 1 to 15. Detailed information regarding individual natural resources will be found in the later chapters—Agriculture, Furs, Fisheries, Forestry, Minerals, Water Powers—of this volume.

The treatment of resources considered below is concerned only with those phases of the subject which can be properly regarded as falling under the definition of physiography used in its wider interpretation, and which, do not specifically relate to individual subjects treated elsewhere in this volume. A classification of lands resources (where there is naturally overlapping since much land suitable for agriculture remains under forest cover), information on the National Parks and resources in game and scenery properly fall under this head.

Lands Resources.—Table 1 presents a broad classification of the potential land resources of Canada, by provinces. The figures are in the main based on estimates prepared by the Dominion Forest Service, Lands, Parks and Forests Branch, and by the Surveyor General and Chief, Hydrographic and Map Service of the Surveys and Engineering Branch, Department of Mines and Resources; they show how the total land area of Canada is made up as between existing and potential agricultural lands, existing and potential forest lands, and lands which are unproductive as regards surface resources. Between the totals of existing and potential agricultural lands and the totals of existing and potential forest lands there is, of course, duplication to the extent of the agricultural lands under forest.

National Parks of Canada.*—The Dominion Government maintains, as the medium through which some of the most outstanding natural beauties of the country may be preserved and popularized, the National Parks Bureau, Lands, Parks and Forests Branch of the Department of Mines and Resources, which administers the scenic and recreational parks set aside for this purpose. Under the supervision of this same body are the national wild animal preserves—large fenced areas established for the protection and propagation of species in danger of extinction—the national historic parks, and the historic sites of great national interest which have been acquired throughout the country.

The mountain parks include regions of unsurpassed grandeur in the Rocky and Selkirk mountains of Western Canada. Among these are the Banff, Jasper, and Waterton Lakes national parks in Alberta, located on the eastern slopes of the Rockies; the Kootenay and Yoho parks in British Columbia on the western slopes of the Rockies; and the Glacier and Mount Revelstoke parks, also in British Columbia, located in the Selkirks. While these parks have a general resemblance to each other, each possesses individual characteristics, varying flora and fauna, and different types of scenery.

* Prepared under the direction of F. H. H. Williamson, Controller, National Parks Bureau, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

1.—Land Area of Canada, Classified as Agricultural, Forested or Unproductive.

NOTE.—The land area of Canada is shown classified by tenure in Chapter XXVIII.

Description.	Prince Edward Island.	Nova Scotia.	New Brunswick.	Quebec.	Ontario.	Manitoba.
	sq. miles.	sq. miles.	sq. miles.	sq. miles.	sq. miles.	sq. miles.
Agricultural Land—						
Occupied.....	1,861	6,722	6,488	27,036	35,689	23,644
Improved and pasture.....	1,331	2,811	2,686	17,608	28,342	20,489

¹ Total agricultural land plus forested land, minus forested agricultural land.² Includes open

muskeg, rock, road allowances, urban land, etc.

Prince Albert National Park in Saskatchewan forms a typical example of the lake country bordering the northwestern prairies, and the Riding Mountain National Park in Manitoba, having a general elevation of 2,000 feet above sea-level, contrasts sharply with the fertile plains to the east. In Ontario are located three small park units, the Point Pelee, Georgian Bay Islands, and the St. Lawrence Islands national parks, which were established primarily as recreational areas. Fort Anne National Park in Nova Scotia and Fort Beauséjour National Park in New Brunswick, surround sites notable in early Canadian history.

Two recent additions to Canada's National Park system include areas of approximately 458 square miles in the northern part of Cape Breton island, Nova Scotia, and of approximately ten square miles along the northern shore of Prince Edward island. The Cape Breton Island area presents outstanding examples of rugged coast line with a mountain background. The Prince Edward Island area possesses some of the finest salt-water bathing beaches in Eastern Canada.

The special animal parks were established for the protection of such vanishing species of mammalian wild life as the buffalo, wapiti (elk), and pronghorned antelope, which now thrive under natural conditions in large enclosures especially suited to their requirements. These parks include the Buffalo and Elk Island parks in Alberta, which contain large herds of buffalo, elk, moose, and deer, and the Nemiskam and Wawaskey parks, also in Alberta, which form sanctuaries for the pronghorned antelope.

In the national parks all wild life is given rigid protection and primal natural conditions are maintained as far as possible. The local administration of the larger parks is carried out by resident superintendents, assisted by park wardens who are responsible for the necessary game and forest patrols. Recreational facilities are many and varied, and in some parks natural attractions have been augmented by the provision of golf courses, tennis courts, swimming pools, bath-houses, and other features. A number of the parks also possess well-equipped motor campgrounds, which are available to visitors desiring this type of accommodation.

The national parks of Canada are accessible either by railway or motor highway. In addition to being served by the Canadian Pacific or Canadian National Railway systems, most of the parks are either traversed by or linked up with the main arteries of motor travel. More than 600 miles of all-weather motor roads have been built by the National Parks Bureau, which have been instrumental in opening up many of the outstanding beauty spots, while other regions have been made accessible by the construction of more than 2,000 miles of trails.

Migratory Birds Treaty.—This treaty and the legislation making it effective throughout Canada are administered by the National Parks Bureau of the Department of Mines and Resources. The treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the treaty, and regulations enacted for its enforcement, may be obtained from the Controller, National Parks Bureau, Ottawa.

Provincial Parks.—Several of the provinces, including Alberta, British Columbia, Ontario, Quebec, and Saskatchewan, also maintain provincial parks for the protection of wild life and as recreational areas. Among the largest of these are the Algonquin Park (2,740 square miles) in Ontario, and the Laurentides Park (3,565 square miles) in Quebec.

2.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1936.

(Twenty-two in number with a total area of 29,831 square miles.)

Park.	Location.	Date Established.	Area.	Characteristics.
Scenic Parks.				
Banff.....	Western Alberta, on east slope of Rockies.	1885	2,585-00 sq. miles.	Mountain playground containing two famous resorts—Banff and Lake Louise. Massive ranges, upper slopes bare and worn, or glacier crowned, lower slopes covered with luxuriant forests and flowered alplands; glacier-fed lakes. Wild deer, goat, sheep, elk, etc. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, fishing, skiing, skating, curling.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507-00	Rugged scenery on west slope of Rockies; Kicking Horse valley; lofty peaks, large number with permanent ice-caps or glaciers; famous Yoho valley with numerous waterfalls, one over 1,200 feet in height. Natural bridge, Emerald lake, lakes O'Hara and McArthur.
Glacier.....	Southeastern British Columbia, on the summit of the Selkirk range.	1886	521-00	Massive formations of the old Selkirk range; luxuriant forests, alpine flower gardens. Centre for alpine climbers. Illecillewaet and Asulkan glaciers and valleys; Nakimu caves. Marion lake, Rogers and Baloo passes.
Mount Revelstoke....	Southeastern British Columbia, on the summit of mount Revelstoke.	1914	100-00	Nineteen-mile drive up Mt. Revelstoke affording panoramic views of the Columbia and Illecillewaet valleys, Clachnacunn icefield, lakes Eva and Millar. Game sanctuary and winter sports resort.
Kootenay.....	Southeastern British Columbia, along Banff-Windermere highway.	1920	587-00	Park extends five miles on each side of Vermilion-Sinclair section of Banff-Windermere highway. Deep canyons, Iron Gates, Briscoe range, Sinclair canyon, famed Radium Hot Springs. Bear, deer, caribou, and Rocky Mountain sheep.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200-00	Immense mountain wilderness, rich in historical associations. Numbers of unclimbed peaks; glaciers, snowfields, canyons, lakes of wonderful colouring; Athabaska valley, Maligne lake, Mount Edith Cavell; Miette Hot Springs; big game sanctuary. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, fishing.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	220-00	Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls, trout fishing, camping, Government golf course.
St. Lawrence Islands.	In St. Lawrence river between Morrisburg and Kingston, Ontario.	1904	185-60 (acres)	Thirteen islands among the "Thousand Islands" in the St. Lawrence river. Recreational area, camping, fishing.
Point Pelee.....	Southern Ontario, on lake Erie.	1918	6-04	Most southerly mainland point in Canada, 41° 54' N. Resting place of many migratory birds; unique flora. Recreational area, camping, bathing.
Georgian Bay Islands (including Flowerpot Island Reserve)	In Georgian bay, near Midland, Ontario.	1929	5-37	Thirty islands in Georgian bay; Beausoleil, largest of the group, is a popular camping resort. Fine bathing beaches, beautiful groves of trees, varied bird and plant life. Flowerpot island, at head of Bruce peninsula, has interesting limestone formations and numerous caves.

2.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1936—concluded.

Park.	Location.	Date Established.	Area.	Characteristics.
			sq. miles.	
Scenic Parks—concl.				
Riding Mountain.....	Southwestern Manitoba, west of lake Winnipeg.	1929	1,148.04	Rolling woodland country in western Manitoba dotted with several beautiful lakes. Natural home of big game including one of the largest herds of wild elk in Canada. Summer resort, fine bathing and camping, Government golf course.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,869.00	Forest country of northwestern Canada, birch, spruce, jack-pine, poplar; lakes and streams; moose, deer, bear, beaver, and interesting bird life. Excellent fishing—northern pike, pickerel, and lake trout; summer resort; sand beaches, campgrounds, Government golf course.
Area in Nova Scotia..	Northern part of Cape Breton island.	1936	45 0 (approx.)	Outstanding examples of rugged coast line with mountain background. Magnificent views of Atlantic ocean and gulf of St. Lawrence.
Area in Prince Edward Island.	North shore of Prince Edward island.	1936	10.00 (approx.)	Strip approximately twenty miles long on north shore. Some of finest bathing beaches in Eastern Canada.
National Parks Tar Sands Reservation ¹ .	Alberta.....	1926	2,068.20 (acres)	Four areas comprising in all 2,068 acres in the Fort McMurray District, Alberta, have been reserved for the National Parks Branch to provide a supply of tar sands for road construction purposes in the National Parks.
Animal Parks and Reserves.				
Buffalo.....	Eastern Alberta, near Wainwright.	1908	197.50	Fenced enclosure; home of the Dominion Government buffalo herd. Over 5,000 buffalo, also moose, deer, elk, yak, and hybrids.
Elk Island.....	Central Alberta, near Lamont.	1911	51.00	Fenced enclosure, containing over 2,000 buffalo, also moose, elk, and deer; recreational area, camping, bathing, Government golf course.
Nemiskam.....	Southern Alberta, near Foremost.	1922	8.50	Fenced pronghorned antelope reserve, containing more than 300 head of this interesting animal, a species indigenous to the region.
Wawaskey.....	Southeastern Alberta.	1922	54.00	Antelope reserve, as yet undeveloped.
Wood Buffalo ²	Partly in Alberta (13,675 sq. miles) and partly in Northwest Territories (3,625 sq. miles), west of Athabaska and Slave rivers.	1922	17,300.00	Forests interspersed with rivers and open plains. Dotted with innumerable lakes and streams. The home of the wood buffalo, moose, deer, caribou, bear, beaver; waterfowl abundant. Area as yet undeveloped.
Historic Parks.				
Fort Anne.....	Nova Scotia..... (Annapolis Royal)	1917	31.00 (acres)	National Historic Park—site of early Acadian settlement of Port Royal; museum containing interesting relics of early days and fine historical library.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	59.00 (acres)	National Historic Park—site of old French fort erected middle of 17th century. Re-named Fort Cumberland in 1755 by British; original name was later restored. Historical museum containing interesting exhibits.

¹ Reserved by Order in Council and became a Dominion reserve by agreement with the province of Alberta in 1931. ² Administered by the Bureau of Northwest Territories and Yukon Affairs; Lands, Parks and Forests Branch, Department of Mines and Resources.

Game and Scenery.—Canada's resources as a country for the sportsman and tourist are both unique and varied. Owing to the growth of tourist travel and its demands (the statistics of the tourist trade are dealt with in Chapter XVI as a phase of External Trade), great areas of uninhabited land have become accessible, and hitherto almost unknown parts may now be reached and traversed with ease. In the wooded and unsettled areas of every province there are many moose, deer, bear, and smaller game, while in the western parts of the Dominion there are also wapiti, caribou, mountain sheep, mountain goat, grizzly bear, and lynx. Mountain lion, or cougar, are found in British Columbia and in the mountains of Alberta, while in the northwest and the far north there still exist herds of buffalo and musk-ox, which, however, are given absolute protection by the Dominion Government.

Ruffed and spruce grouse are found in the wooded areas of Canada from coast to coast. Prairie chicken and Hungarian partridge inhabit the open prairies and the partly timbered areas of the three mid-western provinces. Franklin grouse are native to the mountains of the west and the ptarmigan, an Arctic grouse, lives in the treeless northern plains and is also found in the high mountains of Alberta and British Columbia.

Canada is the natural habitat of many kinds of waterfowl and it is difficult to imagine any finer field for the shot-gun sportsman than is afforded by many of the myriad lakes which form so large a feature of Canadian scenery. This is particularly true of the three mid-western provinces, where the lakes are of the shallow, surface type that furnishes the most abundant feed for waterfowl.

The valleys of Nova Scotia and New Brunswick, the broken lake country of northern Ontario and Quebec, northern Manitoba and Saskatchewan, as well as the mountain districts of British Columbia, offer to the tourist, the hunter and the fisherman new scenic effects and innumerable game preserves, and have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers which form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season. In both Dominion and provincial parks, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter and angler, at proper seasons, a wealth of game species.

PART VII.—CLIMATE AND METEOROLOGY.

Section 1.—The Climate of Canada.

An article on this subject by Sir Frederic Stupart, at that time Director of the Dominion Meteorological Service, Toronto, appeared in the 1929 edition of the Year Book at pp. 42-51.

Section 2.—The Factors which Control Canadian Weather.

Under the above heading, Sir Frederic Stupart, at that time Director of the Dominion Meteorological Service, Toronto, contributed an article which appeared at of the Year Book, also at pp.36-40 of the 1925 edition.

Section 3.—The Distribution of Precipitation in Canada.

An article on "The Distribution of Precipitation in Canada", contributed by A. J. Connor, Climatologist, Dominion Meteorological Office, Toronto, appeared at pp. 42-46 of the 1926 edition of the Year Book.

Section 4.—The Temperature and Precipitation of Northern Canada.

An article on the climate of northern Canada, accompanied by meteorological tables showing the normal temperature and precipitation at selected northern stations, was contributed by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, to the 1930 edition of the Year Book, where it will be found at pp. 41-56.

Section 5.—The Meteorological Service of Canada.

Under the above heading Sir Frederic Stupart contributed a short article descriptive of the growth and present activities of the Meteorological Service, to the 1922-23 edition of the Year Book (pp. 43-47); to it the interested reader is referred.

Section 6.—Meteorological Tables.

Tables showing the normal temperature and precipitation at selected Canadian stations in each of the provinces, together with the recorded extremes, also the averages of sunshine, wind, and weather at such stations, will be found at pp. 51-63 inclusive of the 1927-28 edition of the Year Book. The 1931 edition of the Year Book contains at pp. 48-76 additional and more comprehensive tables, contributed by A. J. Connor, of monthly average temperatures and precipitation throughout Canada, as well as of normal snowfall and duration of bright sunshine.

Section 7.—Droughts in Western Canada.

An article on the above subject by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, accompanied by diagrams and tables showing the precipitation and sun-spot incidence in the Prairie Provinces, appeared at pp. 47-59 of the 1933 edition of the Year Book.

Section 8.—Standard Time and Time Zones in Canada.

A summary, based on a paper "Standard Time and Time Zones in Canada", by C. C. Smith, Dominion Observatory, Ottawa, accompanied by a map diagram, appeared at pp. 50-53 of the 1934-35 edition of the Year Book.

CHAPTER II.—HISTORY AND CHRONOLOGY.

PART I.—HISTORY.

In the 1922-23 edition of the Canada Year Book, pp. 60-80, will be found an outline of the history of Canada, not reprinted here due to pressure on available space.

A select bibliography of historical works relating to Canada was contributed by the late Adam Shortt, C.M.G., LL.D., F.R.S.C., Chairman of the Historical Documents Publication Board, Ottawa, to the 1925 edition of the Canada Year Book, where it appears on pp. 53-55.

A special article "Canada on Vimy Ridge", prepared by Colonel A. Fortescue Duguid, D.S.O., B.Sc., R.C.A., Director of the Historical Section, Department of National Defence, was published on the occasion of the unveiling of the Vimy Memorial and appears on pp. 50-60 of the Canada Year Book, 1936.

PART II.—CHRONOLOGY, 1497 to 1937.

1497. June 24, Eastern coast of North America discovered by John Cabot.
1498. Cabot discovered Hudson strait.
1501. Gaspar Corte Real visited Newfoundland and Labrador.
1524. Verrazano explored the coast of Nova Scotia.
1534. June 21, Landing of Jacques Cartier at Esquimaux bay.
1535. Cartier's second voyage. He ascended the St. Lawrence to Stadacona (Quebec), (Sept. 14), and Hochelaga (Montreal), (Oct. 2).
1541. Cartier's third voyage. He planted wheat, cabbages, turnips and lettuces near Cap Rouge river.
- 1542-3. De Roberval and his party wintered at cape Rouge, and were rescued by Cartier on his fourth voyage.
1557. Sept. 1, Death of Cartier at St. Malo, France.
1592. Straits of Juan de Fuca discovered by de Fuca.
1603. June 22, Champlain's first landing in Canada, at Quebec.
1604. De Monts settled colony on island in the St. Croix river.
1605. Founding of Port Royal (Annapolis, N.S.).
1608. Champlain's second visit. July 3, Founding of Quebec.
1609. July, Champlain discovered lake Champlain.
- 1610-11. Hudson explored Hudson bay and James bay.
1611. Brûlé ascended the Ottawa river.
1612. Oct. 15, Champlain made Lieutenant-General of New France.
1613. June, Champlain ascended the Ottawa river.
1615. Champlain explored lakes Nipissing, Huron and Ontario (discovered by Brûlé and Le Caron).
1616. First schools opened at Tadoussac and on the site of the city of Three Rivers.
1617. Arrival at Quebec of the first colonist, Louis Hébert and his family.
1620. Population of Quebec, 60 persons.
1621. Code of laws issued and register of births, deaths and marriages opened in Quebec. Nova Scotia granted to Sir William Alexander by King James I.
1622. Lake Superior discovered by Brûlé.
1623. First British settlement of Nova Scotia.
1627. New France and Acadia granted to the Company of 100 Associates.
1628. Port Royal taken by Sir David Kirke.
1629. April 24, Treaty of Susa between France and England. July 20, Quebec taken by Sir David Kirke.
1632. Mar. 29, Canada and Acadia restored to France by the Treaty of St. Germain-en-Laye.
1633. May 23, Champlain made first Governor of New France.
1634. July 4, Founding of Three Rivers.
- 1634-35. Exploration of the Great Lakes by Nicolet.
1635. Dec. 25, Death of Champlain at Quebec. Founding of the first college at Quebec.
1638. June 11, First recorded earthquake in Canada.
1640. Discovery of lake Erie by Chaumonot and Brébeuf.
1641. Resident population of New France, 240.
1642. May 17, Founding of Ville-Marie (Montreal) by Maisonneuve.
1646. Exploration of the Saguenay by Dablon.
1647. Lake St. John discovered by de Quen.
1648. Mar. 5, Council of New France created.
1649. Mar. 16-17, Murder of Fathers Brébeuf and Lalemant by Indians and massacre of the Hurons.
1654. August, Acadia taken by an expedition from New England.
1656. Acadia granted by Cromwell to La Tour, Temple and Crowne.

1659. June 16, François de Laval arrived in Canada as Vicar-Apostolic.
1660. May 21, Dollard des Ormeaux and sixteen companions killed by Iroquois at the Long Sault, Ottawa river.

June 25, Provincial general election in Nova Scotia; Conservative party under Hon. E. N. Rhodes returned to office. July 6, signing at Ottawa of trade agreement between Canada and the British West Indies. Aug. 10, Provincial general election in New Brunswick; Conservative party under Hon. J. B. M. Baxter returned to office. Nov. 20, Death of Queen Alexandra.
1926. June 1, Census of Prairie Provinces. June 28, Provincial general election in Alberta; United Farmers under Premier Brownlee retained office. July 1, Two-cent domestic rate of postage restored. Oct. 19-Nov. 23, Imperial Conference in London. Nov. 26, Hon. C. Vincent Massey appointed Envoy Extraordinary and Minister Plenipotentiary to the United States. Dec. 1, General election in Ontario; Ferguson Government retained office.
1927. May 16, General election in Quebec; the Liberal Government of Hon. L. A. Taschereau sustained. June 1, Hon. Wm. Phillips, first U.S. Minister to Canada, reached Ottawa. June 25, General election in Prince Edward Island; the Conservative Government of Hon. J. D. Stewart defeated. June 28, General election in Manitoba; the Government of Hon. John Bracken sustained. July 1-3, Diamond Jubilee of Confederation celebrated throughout the Dominion. July 30, The Prince of Wales, Prince George, the Rt. Hon. Stanley Baldwin and party, arrived at Quebec on a visit to Canada. September, Canada elected as a non-permanent member of the Council of the League of Nations at Geneva. November, Dominion-Provincial Conference on the relations between the Dominion and the provinces.
1928. Jan. 30, President Cosgrave of the Irish Free State visited Ottawa. April 25, Sir Wm. H. Clark appointed first British High Commissioner to Canada. May 31, Legislative Council of Nova Scotia ceased to exist, leaving Quebec as the only province with a bi-cameral legislature. July 18, General election in British Columbia; Conservatives successful. Oct. 1, General election in Nova Scotia; Conservatives retained power.
1929. June 5, General election in Saskatchewan. Sept. 9, Dr. J. T. M. Anderson became Premier of Saskatchewan. Oct. 15-25, The Rt. Hon. J. Ramsay MacDonald, Prime Minister of Great Britain, visited Canada. Oct. 30, General election in Ontario; Conservatives retained power. Nov. 11, Death of Hon. Jas. A. Robb, Minister of Finance. Dec. 14, Transfer of natural resources to Manitoba and Alberta.
1930. Jan. 21, Five-power naval arms conference opened at London; Canada represented by Hon. J. L. Ralston. Feb. 20, Transfer of natural resources to British Columbia. Mar. 20, Transfer of natural resources to Saskatchewan. June 19, General election in Alberta; United Farmers retained power. June 20, General election in New Brunswick; Conservatives retained power. Aug. 1, H.M. Airship R-100 arrived at Montreal, being the first transatlantic lighter-than-air craft to reach Canada. Oct. 1, Imperial Conference in London. Dec. 20, Viscount Willingdon, Governor General of Canada, appointed Viceroy of India by the King.
1931. June 1, Seventh Dominion Census. June 11, Remembrance Day (Nov. 11) proclaimed a general holiday by Act of Parliament. June 30, The Statute of Westminster exempting the Dominion and the provinces from the operation of the Colonial Laws Validity Act and the Merchant Shipping Act approved by the House of Commons. Aug. 6, Provincial election in Prince Edward Island resulted in defeat of the Liberal Administration of Hon. W. M. Lea by the Conservatives under Hon. J. D. Stewart. Aug. 24, Hon. L. A. Taschereau's Liberal Administration sustained in a general election in Quebec. Sept. 21, Great Britain suspended specie payments, following which Canada restricted the export of gold. Nov. 21, Abnormal Importations Act, extending preference to Empire products, assented to in the United Kingdom. Dec. 1, Ottawa Branch of the Royal Mint transferred to the Dominion. Dec. 12, Statute of Westminster establishing complete legislative equality of the Parliament of Canada with that of the United Kingdom became effective.
1932. June 16, General election in Manitoba; the Bracken Administration retained power. July 21-Aug. 20, Imperial Economic Conference at Ottawa. Aug. 6, Official opening of the Welland Ship Canal.

1933. Jan. 17-19, Dominion-Provincial Conference. May 18, Celebration of the 150th anniversary of the landing of the Loyalists at Saint John. Aug. 22, Provincial general election in Nova Scotia; Conservative Administration of Hon. G. S. Harrington defeated by Liberals under A. L. Macdonald. Nov. 2, Provincial general election in British Columbia; Conservative Administration of Hon. S. F. Tolmie defeated by Liberals under T. D. Patullo.
1934. Mar. 6, Centenary of city of Toronto celebrated. June 19, General elections in Ontario and Saskatchewan; Ontario Conservative Administration of Hon. G. S. Henry defeated by Liberals under M. F. Hepburn; Saskatchewan Conservative Government of Hon. J. T. M. Anderson defeated by Liberals under J. G. Gardiner. July 15, Three Rivers began tercentenary celebrations. August, Celebration at Gaspé of the 400th anniversary of the first landing of Jacques Cartier.
1935. Mar. 11, Bank of Canada commenced business. May 6, Celebrations throughout the Empire of the 25th anniversary of the accession of King George V to the Throne. June 16, Sir Wm. H. Clark succeeded by Sir Francis Floud, K.C.B., as British High Commissioner to Canada. June 27, Provincial general election in New Brunswick; Conservative Administration of Hon. L. P. D. Tilley defeated by Liberals under A. A. Dysart. July 23, Provincial general election in Prince Edward Island. Conservative Administration of Hon. W. J. MacMillan defeated by Liberals under W. M. Lea. Aug. 22, Provincial general election in Alberta; United Farmers of Alberta Administration of Hon. R. G. Reid defeated by Social Credit party under W. Aberhart. Sept. 15, Conference of British Commonwealth Statisticians met in Ottawa. Oct. 2, Outbreak of hostilities between Italy and Ethiopia. Nov. 2, Lord Tweedsmuir assumed office as Governor General of Canada. Nov. 15, Canada, by Order in Council, supported the League in the application of certain economic sanctions against Italy. Nov. 25, Provincial general election in Quebec; Liberal Administration of Hon. L. A. Taschereau returned to office.
- Dec. 9, Dominion-Provincial Conference met in Ottawa; Naval Limitation Conference met in London.
1936. Jan. 20, Death of H. M. King George V and accession of H. M. King Edward VIII. Mar. 8, German forces re-occupied the Rhineland in defiance of the Treaty of Versailles. May 5, Hostilities between Italy and Ethiopia ended with Italian occupation of Addis Ababa. June 1, Quinquennial census of the Prairie Provinces taken. R.M.S. *Queen Mary* arrived in New York on maiden voyage. June 10, Premier Taschereau of Quebec retired and Hon. A. Godbout, Minister of Agriculture, became Premier. July 1-Sept. 7, Celebration in Vancouver of the Golden Jubilee of that city and of the C.P.R. July 15, Sanctions against Italy removed. July 26, Unveiling of Vimy Memorial in France by His Majesty King Edward VIII. July 30, President Roosevelt visited Lord Tweedsmuir at the Citadel, Quebec—the first official visit of a United States President to a Governor General of Canada. July 27, Provincial general election in Manitoba; Liberal-Progressives under Hon. J. Bracken sustained but without overall majority. Aug. 15, Provincial general election in Quebec; Liberal Administration of Hon. A. Godbout defeated by Union Nationale party under M. Duplessis. Sept. 26, France devalued her currency marking the break-up of the gold bloc and leading to an accord with sterling and the dollar. Sept. 21-Oct. 10, Seventeenth Assembly of the League of Nations at Geneva attended by the Prime Minister, the Rt. Hon. W. L. Mackenzie King, and a Canadian Delegation. Oct. 12, Britain, the U.S. and France agreed to co-operate in protecting exchanges; trading in gold by individuals was banned. Dec. 11, Abdication of H. M. King Edward VIII and accession of H. M. King George VI.
1937. Jan. 28, Decision of the Judicial Committee of the Privy Council declaring certain legislation, passed by the former Administration, on unemployment insurance, hours of labour, minimum wages, and marketing, *ultra vires* of the Dominion Parliament.

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

The Government of the Dominion of Canada was established under the provisions of the British North America Act of 1867. This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this chapter describe in some detail the institutions and processes by which Canada is governed.

The several stages in the development of its status as a Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held in London in 1926, which defined the group of self-governing communities consisting of Great Britain and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations" That Conference also recognized that as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of the Dominion of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931 which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

PART I.—CONSTITUTION AND GENERAL GOVERNMENT.

Under the above heading a brief historical and descriptive account of the evolution of the general government of Canada was given on pp. 89-100 of the Canada Year Book, 1922-23.

PART II.—PROVINCIAL AND LOCAL GOVERNMENT.

Under the heading "Provincial and Local Government in Canada", a brief account of the government of each of the provinces of Canada and of its municipal institutions and judicial organization was published on pp. 101-115 of the 1922-23 edition of the Year Book.

PART III.—LEGISLATIVE AND EXECUTIVE AUTHORITIES.

Section 1.—Dominion Parliament and Ministry.

The Dominion Parliament is composed of the King, represented by the Governor General, the Senate and the House of Commons. The Governor General is appointed by the King on the advice of the Government of Canada. Members of the Senate

are appointed for life by the Governor General in Council and members of the House of Commons are elected by the people. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

In Subsections 3 and 4, pp. 75 to 86, a brief résumé of the history of parliamentary representation will be found. Attention may be drawn to the growth in the number of members of both the Senate and the House of Commons since Confederation and to the greatly increased unit of representation in the Lower House.

Subsection 1.—The Governor General of Canada.

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at £10,000 sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues, and dissolves Parliament and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication between His Majesty's Government in Canada and His Majesty's Government in Great Britain has been instituted.

A list of the Governors General from the time of Confederation, with the dates of their appointment and assumption of office, is given in Table 1.

1.—Governors General of Canada, 1867-1937.

Name.	Date of Appointment.	Date of Assumption of Office.
Viscount Monck, G.C.M.G.....	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.....	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.....	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.....	Oct. 5, 1878	Nov. 25, 1878
The Marquis of Lansdowne, G.C.M.G.....	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.....	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.....	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.....	July 30, 1898	Nov. 12, 1898
Earl Grey, G.C.M.G.....	Sept. 26, 1904	Dec. 10, 1904
Field Marshal H.R.H. the Duke of Connaught, K.G.....	Mar. 21, 1911	Oct. 13, 1911
The Duke of Devonshire, K.G., G.C.M.G., G.C.V.O.....	Aug. 19, 1916	Nov. 11, 1916
General the Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.....	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Raton, G.C.S.I., G.C.I.E., G.B.E.....	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough, G.C.M.G.....	Feb. 9, 1931	April 4, 1931
Lord Tweedsmuir of Elsfield, G.C.M.G., C.H.....	Aug. 10, 1935	Nov. 2, 1935

Subsection 2.—The Ministry.

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy

Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although one Minister may hold more than one portfolio at the same time, while other Ministers may be without portfolio.

The Prime Ministers since Confederation and the dates of their tenures of office, together with the members of the Sixteenth Ministry, are given in Table 2. The complete list of the members of the King's Privy Council for Canada, as at Mar. 1, 1937, is added as Table 3.

2.—Ministries since Confederation and Members of the Sixteenth Ministry.

NOTE.—A complete list of the members of Dominion Ministries from Confederation to 1913 appeared in the Year Book of 1912, pp. 422-429. A list of the members of Dominion Ministries from 1911 to 1921 appeared in the Year Book of 1920, pp. 651-653. A list of the members of the Twelfth and Thirteenth Ministries appeared on pp. 76-77 of the 1927-28 Year Book. Members of the Fourteenth Ministry are listed at p. 69 of the 1930 Year Book and members of the Fifteenth Ministry on p. 67 of the 1934-35 Year Book.

1. Rt. Hon. Sir John A. Macdonald, Prime Minister. From July 1, 1867, to Nov. 6, 1873.
2. Hon. Alexander Mackenzie, Prime Minister. From Nov. 7, 1873, to Oct. 16, 1878.
3. Rt. Hon. Sir John A. Macdonald, Prime Minister. From Oct. 17, 1878, to June 6, 1891.
4. Hon. Sir John J. C. Abbott, Prime Minister. From June 16, 1891, to Dec. 5, 1892.
5. Hon. Sir John S. D. Thompson, Prime Minister. From Dec. 5, 1892, to Dec. 12, 1894.
6. Hon. Sir Mackenzie Bowell, Prime Minister. From Dec. 21, 1894, to April 27, 1896.
7. Hon. Sir Charles Tupper, Prime Minister. From May 1, 1896, to July 8, 1896.
8. Rt. Hon. Sir Wilfrid Laurier, Prime Minister. From July 11, 1896, to Oct. 6, 1911.
9. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Conservative Administration.) From Oct. 10, 1911, to Oct. 12, 1917.
10. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Unionist Administration.) From Oct. 12, 1917, to July 10, 1920.
11. Rt. Hon. Arthur Meighen, Prime Minister. (Unionist—"National Liberal and Conservative Party".) From July 10, 1920, to Dec. 29, 1921.
12. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Dec. 29, 1921, to June 28, 1926.
13. Rt. Hon. Arthur Meighen, Prime Minister. From June 29, 1926, to Sept. 25, 1926.
14. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Sept. 25, 1926, to Aug. 6, 1930.
15. Rt. Hon. Richard Bedford Bennett, Prime Minister. From Aug. 7, 1930, to Oct. 23, 1935.
16. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Oct. 23, 1935.

SIXTEENTH DOMINION MINISTRY.

(According to precedence of the Ministers as at the formation of the Cabinet.)

Office.	Occupant.	Date of Appointment.
Prime Minister, President of the Privy Council, Secretary of State for External Affairs.....	Right Hon. W. L. Mackenzie King, C.M.G.....	Oct. 23, 1935
Member of the Administration and Minister without portfolio.....	Hon. Raoul Dandurand, K.C....	Oct. 23, 1935
Minister of Mines and Resources ¹	Hon. Thomas Alexander Crerar.....	Oct. 23, 1935
Minister of Justice and Attorney General of Canada.....	Hon. Ernest Lapointe, K.C.....	Oct. 23, 1935

Subsection 3.—The Senate.

The British North America Act, 1867, provides in Sections 21 and 22 that "the Senate shall consist of seventy-two members, who shall be styled Senators.* In relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions—(1) Ontario; (2) Quebec; (3) The Maritime Provinces, Nova Scotia and New Brunswick; which three divisions shall be equally represented in the Senate as follows: Ontario by twenty-four senators; Quebec by twenty-four senators; and the Maritime Provinces by twenty-four senators, twelve thereof representing New Brunswick and twelve thereof representing Nova Scotia. In the case of Quebec, each of the twenty-four senators representing the province shall be appointed for one of the electoral divisions of Lower Canada, specified in Schedule A to Chapter I of the Consolidated Statutes of Canada" Further, under Section 147 of the same Act, it is provided that "in the case of the admission to Confederation of Newfoundland or Prince Edward Island, . . . each shall be entitled to a representation in the Senate of four members". "Prince Edward Island, when admitted, shall be deemed to be comprised in the third of the three divisions into which Canada is divided by this Act" and on its admission "the representation of Nova Scotia and New Brunswick shall, as vacancies occur, be reduced from twelve to ten members respectively". In case of the admission of Newfoundland, the normal membership of the Senate of 72 members was to be increased to 76, while the maximum number of 78 (Sec. 28) was to be 82, Sec. 26 containing a provision for the appointment of three or six additional members in certain cases, to represent equally the three divisions of Canada.

*A senator's sessional indemnity is \$4,000.

By 33 Vict., c. 3, an Act to establish and provide for the government of the province of Manitoba, passed in 1870, the newly formed province was given representation of two members in the Senate, provision being made at the same time for increases in representation to three and four on increases of population, according to the decennial census, to 50,000 and 75,000 respectively. In the following year, British Columbia, on being admitted to the Union by an Imperial Order in Council of May 16, 1871, was given representation by three senators. Two years later, when Prince Edward Island was admitted to Confederation by an Imperial Order in Council of June 26, 1873, it was granted representation in the Senate of four members under the terms of the British North America Act, as cited above. Thus, in 1873, the seven provinces of Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia, and Prince Edward Island were represented by a total of 77 members in the Senate, their individual representation at the time being 24, 24, 10, 10, 2, 3, and 4 members respectively.

In 1882, following the Census of 1881 and an increase of population in Manitoba to 62,260 persons, the representation of this province was increased to three members under authority of the Manitoba Act, 1870. Later, by 50-51 Vict., c. 38, an Act of 1887, the representation of the Northwest Territories in the Senate was fixed at two members. A subsequent increase resulted from the growth of population in Manitoba to 152,506, as shown by the Census of 1891, the province being granted a fourth senator under the terms of the Manitoba Act of 1870. An Act passed in the session of 1903 (3 Edw. VII, c. 42) provided for an increase in the representation of the Northwest Territories from two to four members, bringing the total representation at this date to 83 members.

On the establishment of the provinces of Alberta and Saskatchewan out of the former Northwest Territories in 1905, under 4-5 Edw. VII, cc. 3 and 42, provision was made for their representation in the Senate by 4 members each, which might be increased by Parliament to 6 on the completion of the next decennial census. This change in representation brought the membership of the Upper Chamber to a total of 87.

In 1915, by an amendment to the British North America Act (5-6 Geo. V, c. 45), an important change was made with regard to the constitution of the Senate. The number of divisions provided for by Section 22 of the original Act was increased from three to four, the fourth comprising the four western provinces of Manitoba, Saskatchewan, Alberta and British Columbia. Each of these provinces was to be represented by 6 members under the Act, the division being thus represented by 24 members and placed on an equality with the others with respect to membership. A corresponding change was made in the number of additional senators provided for by the original British North America Act by substituting increases of four or eight members for the three or six cited in Section 26 of the Act of 1867. Normal representation, therefore, is at present fixed at 96, which number may be increased if necessary to 100 or to a maximum of 104.

The entry of Newfoundland to the Union is still provided for by the above Act, Subsection 6 of Section 1 of which sets out its representation as six members instead of the four granted by the Act of 1867. If Newfoundland were admitted to the Dominion, the normal number of senators would be 102 with a maximum of 110.

In Table 5 the growth of membership in the Senate is shown by divisions and provinces from 1867 to 1915, since when no change has taken place. The names and addresses of the senators from each province are given as at Mar. 1, 1937, in

Subsection 4.—The House of Commons.

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia and fifteen for New Brunswick".* Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:—

- "(1) Quebec shall have the fixed number of Sixty-five Members;
- "(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
- "(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;
- "(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
- "(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament".

Again, in Section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed"

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

*The sessional indemnity of a member of the House of Commons is \$4,000.

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province".

Readjustments in Representation.—As set out in the above-mentioned provisions of the British North America Act, the first Dominion Parliament of 1867 consisted at its commencement of 181 members, 82 for Ontario, 65 for Quebec, 19 for Nova Scotia and 15 for New Brunswick. To this number were added, under the Manitoba Act of 1870 (33 Vict., c. 3), 4 members to represent the newly created province of Manitoba; also, according to the agreement under which British Columbia entered Confederation, ratified by Imperial Order in Council of May 16, 1871, 6 members were added to represent the new province, making a total of 191 members at the end of the first Parliament of Canada.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15 of 1872), increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21, and of New Brunswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200. To these were added in 1874, as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing that province—bringing the membership of the House of Commons to 206.

Results of the second census, that of 1881, necessitated the passage of a new Representation Act (45 Vict., c. 3), increasing the representation of Ontario from 88 to 92 and that of Manitoba from 4 to 5, thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24, passed in 1886, 4 members for the Northwest Territories (2 for the then provisional district of Assiniboia and 1 each for the then provisional districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census, of 1891, was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20, of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representation of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction in the number of members of the House from 215 to 213.

The fourth census, of 1901, resulted in a readjustment in 1903, reducing the representation of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, of Prince Edward Island from 5 to 4. On the other hand, the representation of Manitoba was increased from 7 to 10, of British Columbia from 6 to 7, of the Northwest Territories from 4 to 10. By Chapter 37 of the Statutes of 1902, a member was added for the Yukon Territory, so that the net effect of the changes was to keep the membership at 214 in the early years of the present century. The extremely rapid growth of the Northwest Territories, however, led to their division and the admission to Confederation in 1905 of the provinces of Alberta and Saskatchewan. In the Acts admitting them—the Alberta Act (4-5 Edw. VII, c. 3) and the Saskatchewan Act (4-5 Edw. VII, c. 42)—it was provided that their representation should be readjusted on the basis of the results of the Quinquennial Census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation of Saskatchewan from 6 to 10 and of Alberta from 4 to 7 members, thus raising the total membership of the House of Commons to 221.

The Census of 1911, with its very large but very unevenly distributed increase of population, led to considerable changes in representation, enacted by the Representation Act of 1914. The representation of Ontario was reduced from 86 to 82, of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, of Prince Edward Island from 4 to 3. On the other hand, the representation of Manitoba was raised from 10 to 15, of Saskatchewan from 10 to 16, of Alberta from 7 to 12 and of British Columbia from 7 to 13. The net result was an increase of 13 members in the total membership of the House of Commons, bringing the figure to 234. However, in the following session the amendment to the British North America Act already referred to, resulted in the retention by Prince Edward Island of her fourth member (since she had 4 senators). (See also 5 Geo. V, c. 19.) The total membership, therefore, of the House of Commons in the thirteenth and fourteenth Parliaments (elected in 1917 and 1921 respectively) was 235.

As a result of the smaller increase of population shown by the Census of 1921, the changes in representation were less far-reaching. Nova Scotia lost 2 members and the West gained 12, 2 of these being added to Manitoba, 5 to Saskatchewan, 4 to Alberta and 1 to British Columbia. The representation of the remaining four provinces was unchanged. Prince Edward Island retained its 4 members because of the provisions of the British North America Act of 1915, to the effect that the members of the House of Commons returned by a province shall never be fewer than its senators. Ontario, again, retained its 82 members because under Sub-section 4 of Section 51 of the British North America Act (quoted p. 78), the proportion which its population bore to the aggregate population of the Dominion had not declined by one-twentieth. Further, by the Quebec Boundaries Extension Act of 1912, it had been stipulated that the population of the added area (Ungava) should not be included for the purpose of determining the unit of representation, so that the 1921 population of Quebec, within its 1911 boundaries, *viz.*, 2,358,412, divided by the fixed number of 65 seats for that province, became the new unit of representation, 36,283.

The Census of 1931 showed a further decrease in the rate of growth of the population of Canada, a gain of only 18.08 p.c. being recorded from 1921 to 1931, as against 21.94 p.c. in the previous decade. Under the provisions of the Representation Act, 1933 (23-24 Geo. V, c. 54), Nova Scotia lost 2 members and New Brunswick 1, while Alberta and British Columbia gained 1 and 2 members respectively, the total number of members in the House of Commons remaining at 245. The whole problem of redistribution arising out of the 1931 Census was treated *in extenso* at pp. 76-77 of the 1934-35 Year Book.

The number of representatives of each province elected at each of the eighteen general elections since Confederation is given in Table 7.

¹ The representation at the general elections of 1926 and 1930 was the same as in 1925.

The Unit of Representation.—While the number of members of the House of Commons has been growing fairly steadily since Confederation, the unit of representation—one-sixty-fifth of the population of Quebec within its 1911 boundaries—has also been increased after each census in consequence of the growth of the population of Quebec. The units of representation, as determined by the decennial censuses taken since Confederation, are as follows: 1871, 18,331 persons; 1881, 20,908; 1891, 22,901; 1901, 25,368; 1911, 30,819; 1921, 36,283; 1931, 44,186, being one-sixty-fifth of the population of Quebec exclusive of Ungava.

Constituencies and Representatives in the Eighteenth Parliament.—A complete list of the constituencies, with their 1931 populations, the voters on the list and votes polled at the general election of Oct. 14, 1935, together with the names and addresses of those then elected to the House of Commons of the eighteenth Parliament of Canada, will be found in Table 8. Changes occurring at subsequent by-elections to Mar. 31, 1937, are indicated in the footnotes.

Subsection 5.—The Dominion Franchise.*

It was provided by the B.N.A. Act, 1867, that, until otherwise directed by Parliament, elections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently remained the same for both Dominion and provincial elections until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (1885, c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote on special conditions; each province, of course, continued separately to define the qualifications of voters at provincial elections. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year (1898, c. 14), the provincial franchises were again made applicable at Dominion elections, except that on the constitution of the provinces of Alberta and Saskatchewan it was provided that manhood suffrage, which had already been adopted for the Northwest Territories under an Act to amend the N.W.T. Act (1895, c. 16), should continue in force for Dominion purposes independently of any action that might be taken by the newly elected legislatures of these two provinces (R.S.C. 1906, c. 6, ss. 31-65). In the other provinces the rules as to the qualifications of voters varied from time to time. In Manitoba manhood suffrage had been adopted in 1888 (1888, c. 2), and the franchise was extended to women on the same terms as to men in 1916 (1916, c. 36). Alberta and Saskatchewan, on their establishment

* Revised by John Thompson, Dominion Franchise Commissioner.

as provinces, continued the previously existing manhood suffrage and both extended the franchise to women on the same terms as to men in 1916 (Alta. 1916, c. 5; Sask. 1916, c. 37). British Columbia adopted manhood suffrage in 1904 (1903-1904, c. 7), Ontario in 1907 (7 Edw. VII, c. 5), and New Brunswick in 1916 (6 Geo. V, c. 16); in British Columbia (1917, c. 23) and in Ontario (7 Geo. V, c. 5), the franchise was extended equally to women in 1917, and in New Brunswick this was done in 1919 (9 Geo. V, c. 63). In Quebec and Prince Edward Island the provincial franchises throughout the period in question were not so wide; in neither were women admitted to vote and certain property or other special qualifications were required in each. A property qualification was also required in Nova Scotia until 1920 (10-11 Geo. V, c. 49), but between 1918 and 1920 men and women had voted on equal terms (9 Geo. V, c. 3). The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War Times Elections Act (1917, c. 39), which admitted certain near female relatives of serving soldiers and sailors to vote at Dominion elections, and three years later, on the adoption of a New Dominion Elections Act (1920, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. Subject to a modification of the usual rules as to changes of nationality, which were amended in 1921 (1921, c. 29, s. 3) and repealed in 1922 (1922, c. 20, s. 1), the right to vote was conferred by the new Act upon all British subjects, male and female, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired to vote, this last restriction having been removed two years later (1922, c. 20), so far as it applied to general elections.

Recent Franchise Legislation.—The right to vote is at present provided for in the Dominion Franchise Act, (24-25 Geo. V, c. 51). The franchise is conferred upon all British subjects who are of the full age of twenty-one years and who have been ordinarily resident in Canada for at least one year and for three months resident in the electoral district in which application is made for registration.

Those denied the right to vote are: prisoners undergoing punishment for any offence; persons restrained of their liberty or management of their property by reason of mental disease; Indians ordinarily resident on an Indian reservation who did not serve in the War, 1914-1918; Judges appointed by Order in Council; persons who are disqualified under the law of Canada relating to the disqualification of electors for corrupt and illegal practices; inmates of an institution which is maintained by any government or municipality for the housing of the poor; Eskimos, whether born in Canada or elsewhere; persons who are disqualified by reason of race from voting at an election of a member of the Legislative Assembly of a province in which they are residing, and who did not serve in the War, 1914-1918; in the province of British Columbia, every Doukhobor or any descendant of such, whether born in that province or elsewhere who is by the law of that province disqualified to vote at an election of a member of the Legislative Assembly of that province.

Revisions of Franchise Legislation.—Under the provisions of the Dominion Franchise Act, 1934, the List of Electors was to be revised annually commencing in May, 1935. On April 8, 1936, an amendment (1 Edw. VIII, c. 4) was passed and

assented to by Parliament postponing the annual revision for the year 1936. In order to take care of any by-elections occasioned by vacancies occurring in the House of Commons in the representation of any electoral district during the postponement of the annual revision of 1936, Parliament also passed an Act cited as the Dominion By-Elections Franchise Act, 1936, (1 Edw. VIII, c. 36) which was assented to June 23, 1936. The qualifications of any elector under the provisions of this legislation are the same as under the Dominion Franchise Act, 1934, except that an elector shall have been ordinarily a resident in Canada for at least twelve months, and has been ordinarily resident in the electoral district in which the pending by-election is to be held not less than three months immediately preceding the date of the issue of the Writ of such by-election.

The Use of the Franchise.—The numbers of voters on the lists and the numbers of votes polled at the general elections of 1925, 1926, 1930, and 1935 are given in Table 9.

9.—Numbers of Voters and Votes Polled at the General Elections of 1925, 1926, 1930, and 1935.

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).
² Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland.
³ Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).
⁴ Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabaska, Alberta, and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., occurred in by Dominion Parliament and Order in Council of Oct. 2, 1895.
⁵ By Order in Council, June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act, 1880 (43 Vict., c. 25), the district of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional districts of Yukon, Mackenzie, Franklin, and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the province of Quebec, and the remaining area of the Northwest Territories south of 60° N. latitude was divided between Manitoba and Ontario.

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council, and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislatures of all the provinces with the exception of Quebec are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. For detailed description of the Provincial Governments, the reader is referred to pp. 101-115 of the 1922-23 edition of the Year Book.

The Lieutenant-Governors of the provinces, together with the names of the Ministers of the present administrations, are given in Table 11. Details regarding Provincial Legislatures and Ministries from Confederation to 1924 were given on pp. 75-84 of the 1924 Year Book.

11.—Lieutenant-Governors of Provinces, 1867-1936, and Present Ministries.

NOTE.—The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life.

THE TERRITORIES.

NOTE.—In 1888 the districts of Alberta, Assiniboia, Athabaska, and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given local responsible government, and the old Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these districts was formed into the provinces of Alberta and Saskatchewan, on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The remaining areas (Yukon and the provisional districts of Franklin, Keewatin, and Mackenzie) are now administered by the Lands, Parks and Forests Branch, Department of Mines and Resources. The Deputy Minister of the Department is, *ex officio*, the Commissioner of the Northwest Territories which comprises the three provisional districts.

PART IV.—REPRESENTATIVES IN OTHER COUNTRIES.*

Section 1.—Representatives Within the Empire.

The policy of the early North American colonies, of maintaining in London accredited representatives for business and diplomatic purposes, was recognized in the eighteenth century as being a more satisfactory means of communication with the British Government than that provided by occasional official visits or by correspondence. Of the Canadian colonies, Nova Scotia was the first to adopt

* Revised by the Department of External Affairs, Ottawa. An annual report on the organization and activities of Canadian Government representation abroad is contained in the Report of the Department of External Affairs, which may be obtained from the King's Printer, price 25 cents.

this plan, its Legislature having appointed an Agent in London in 1761. New Brunswick was similarly represented in 1786, Upper Canada as early as 1794, Lower Canada in 1812 and British Columbia in 1857. Following Confederation, several of the provinces continued to adhere to, and in certain cases enlarge upon, the practice to the extent of themselves appointing Crown Agents or Agents General. Such developments as have taken place are dealt with on p. 92 of the 1934-35 Year Book.

The High Commissioner for Canada.—With the federation of the provinces of British North America in 1867, a new political entity which could not avail itself of the services of the provincial Agents was brought into existence. To supplement the ordinary method of communication between the Canadian and British Governments, which at that time was by correspondence between the Governor General and the Secretary of State for the Colonies, the position of High Commissioner for Canada was created in 1880 (see R.S.C. 1927, c. 92). The duties of the office are defined in the Act as follows:—

“The High Commissioner shall—

- “(a) act as representative and resident agent of Canada in Great Britain and in that capacity execute such powers and perform such duties as are, from time to time, conferred upon and assigned to him by the Governor in Council;
- “(b) take the charge, supervision and control of the immigration offices and agencies in Great Britain, under the Minister of Immigration and Colonization;
- “(c) carry out such instructions as he, from time to time, receives from the Governor in Council respecting the commercial, financial and general interests of Canada in Great Britain and elsewhere.”

Sir Alexander Galt was the first Canadian High Commissioner, holding office from May 11, 1880, until May, 1883; in 1884 he was succeeded by Sir Charles Tupper. Lord Strathcona and Mount Royal was appointed in 1896. Sir George H. Perley took charge of the High Commissioner's Office in 1914 but was appointed High Commissioner only on Oct. 12, 1917. The Hon. P. C. Larkin was appointed in February, 1922, and after his decease (Feb. 3, 1930) the Hon. G. Howard Ferguson was appointed on Nov. 28, 1930. On Nov. 8, 1935, the Hon. Vincent Massey succeeded Mr. Ferguson in this post. The office of the High Commissioner for Canada is in Canada House, Trafalgar Square, London, S.W. 1.

High Commissioner of the United Kingdom in Canada.—His Majesty's Government in the United Kingdom in April, 1928, appointed a High Commissioner in Canada, Sir William H. Clark, who was succeeded in January, 1935, by Sir Francis Floud, K.C.B. The High Commissioner resides in Ottawa, and his position corresponds to that of the High Commissioner for Canada in the United Kingdom. This appointment was made in consequence of discussions at the Imperial Conference of 1926. The relevant passage in the report of the Inter-Imperial Relations Committee runs as follows:—

“A special aspect of the question of consultation which we considered was that concerning the representation of Great Britain in the Dominions. By reason of his constitutional position, as explained in Section IV (b) of this report, the Governor General is no longer the representative of His Majesty's Government in Great Britain. There is no one therefore in the Dominion capitals in a position to represent with authority the views of His Majesty's Government in Great Britain.

"We summed up our conclusions in the following resolution which is submitted for the consideration of the Conference:—

"The Governments represented at the Imperial Conference are impressed with the desirability of developing a system of personal contact, both in London and in the Dominion capitals, to supplement the present system of intercommunication and the reciprocal supply of information on affairs requiring joint consideration. The manner in which any new system is to be worked out is a matter for consideration and settlement between His Majesty's Governments in Great Britain and the Dominions, with due regard to the circumstances of each particular part of the Empire, it being understood that any new arrangements should be supplementary to, and not in replacement of, the system of direct communication from Government to Government and the special arrangements which have been in force since 1918 for communications between Prime Ministers."

Section 2.—Representatives Outside the Empire.

The Canadian Minister to the United States.—For many years the diplomatic business between Canada and the United States has been steadily increasing, as the natural result of the proximity of the two countries and the closeness of the business relationships between their citizens. Before the Great War, a former British Ambassador at Washington, Lord Bryce, said that between two-thirds and three-quarters of the work of the British Embassy in the United States was occasioned by Canadian affairs.

In January, 1918, a temporary Canadian War Mission was established at Washington under the chairmanship of Mr. Lloyd Harris, and was maintained for some years after the close of the War. Though not a formal diplomatic mission, its duties extended to questions usually dealt with through diplomatic channels. After the retirement of this mission Canada was represented in Washington by Mr. M. M. Mahoney, who acted as agent of the Department of External Affairs, and, through the courtesy of the British Government, occupied an office at the British Embassy.

In 1920, following discussions between the British and Canadian Governments, it was announced that agreement had been reached upon the appointment of a Canadian Minister at Washington, who would act for the British Ambassador in the latter's absence. No appointment was made until Nov. 26, 1926, when, after decision to omit the arrangement that the Canadian Minister should substitute for the British Ambassador, Hon. Vincent Massey was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in the United States of America to represent the interests of the Dominion of Canada. Mr. Massey took up his duties in February, 1927, and held office until July 23, 1930. Hon. W. D. Herridge, who was appointed Minister to the United States on Mar. 7, 1931, resigned his appointment Oct. 23, 1935. The Hon. Sir Herbert Marler, K.C.M.G., presented his credentials as Canadian Minister on Oct. 20, 1936. The Canadian Legation in Washington is situated at 1746 Massachusetts Avenue.

The United States Government reciprocated in 1927 by appointing Hon. William Phillips its first Minister to Canada; his successor, Hon. Hanford MacNider, was appointed in August, 1930, and resigned in September, 1932; Hon. W. D. Robbins, appointed in May, 1933, died in April, 1935, and was succeeded by the Hon. Norman Armour, who presented his Letter of Credence on Aug. 7, 1935.

The Canadian Minister to France.—For many years the Canadian Government maintained an agency at Paris. The post was first occupied in 1882 by Hon. Hector Fabre, who also represented for a time the Government of Quebec. After his death Hon. Philippe Roy was appointed in May, 1911, with the title of Commissioner-General of Canada in France. In 1928 an exchange of Ministers was agreed upon between Canada and France, and in September of that year Hon. Philippe Roy was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in France to represent the interests of the Dominion of Canada. The Canadian Legation in Paris is situated at No. 1, rue François premier.

The French Government appointed M. Georges Jean Knight as its first Minister in Canada in 1928. From March, 1931, to September, 1934, M. Charles Arsène Henry was Minister. He was succeeded in September, 1934, by M. R. Brugère.

The Canadian Minister to Japan.—In 1928 an exchange of Ministers was agreed upon between the Governments of Canada and Japan, and Hon. H. M. Marler was appointed in 1929 as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan to represent the interests of the Dominion of Canada. On his appointment as Canadian Minister at Washington he was succeeded by the Hon. R. Randolph Bruce who presented his credentials to the Emperor of Japan on Nov. 7, 1936. The Canadian Legation is at 16 Omote-Cho, Sanhome, Akasaka-Ku, Tokyo.

The Japanese Government appointed the Hon. Iyemasa Tokugawa as its first Minister in Canada in 1929. Mr. Tokugawa presented his Letters of Recall towards the close of 1934 and was succeeded by the Hon. Sotomatsu Kato.

Canadian Advisory Officer, League of Nations.—The practice of appointing permanent representatives at Geneva accredited to the League of Nations has been largely followed by those nations which are situated at a distance from Geneva. It was found that, while countries adjacent to the seat of the League were able without difficulty to include in the personnel of their delegations to the Assembly and Council various advisors and assistants at a minimum of expense, distant countries were at a disadvantage in this respect. Canada's duties as a member of the Assembly and of the International Labour Conference, and as one of the countries represented on the Governing Body of the International Labour Office, made this disadvantage especially felt. Accordingly, the position of Dominion of Canada Advisory Officer, League of Nations, was created and Dr. W. A. Riddell was appointed to the post on Jan. 1, 1925.

The duties of the Canadian Advisory Officer are "to establish and maintain as close relations as possible with the Secretariats of the League of Nations and the International Labour Office", to "communicate with the Government of Canada as to all matters arising and requiring its attention", and to "act in all such matters in an advisory capacity to the Government of Canada and to delegates from the Government of Canada to conferences arising out of the organizations before-named". The office of the Canadian Advisory Officer is situated at 41, Quai Wilson, Geneva.

PART V.—CANADA AND THE LEAGUE OF NATIONS.*

The League of Nations is an association of fully self-governing States whose relations are governed by the Covenant. The League of Nations acts through an Assembly and Council composed of representatives of Governments. Fifty-eight States are at present Members of the League, as compared with forty-two at the time of the first Assembly in 1920. Canada, as a signatory of the Treaties of Peace, is an original Member of the League.

The League of Nations has two aims: (1) to preserve peace and to seek a settlement of international disputes; and (2) to organize in the most varied spheres co-operation of peoples, with a view to the material and moral welfare of humanity.

The Covenant, which constitutes the fundamental charter of the League of Nations, was drafted in 1919 by a Commission of the Peace Conference and inserted at the head of the several Treaties of Peace. It came into force on Jan. 10, 1920.

The Organs of the League.—The organs of the League are:—

- (a) The Assembly;
- (b) The Council;
- (c) The Secretariat;
- (d) The International Labour Organization, (see Chapter XIX);
- (e) The Permanent Court of International Justice.

The Assembly.—The Assembly consists of representatives of the members of the League, and meets annually in ordinary session each September in Geneva. At the 17th Assembly in September, 1936, the Canadian Delegation was headed by the Rt. Hon. W. L. Mackenzie King, Prime Minister and Secretary of State for External Affairs.

The Council.—The Council, which originally consisted of five permanent members and four non-permanent members, now consists of four permanent members (the British Empire, France, Italy, and the U.S.S.R.) together with eleven non-permanent members elected for three years from among the States Members of the League. The non-permanent members of the Council are at present as follows: Chile, Spain, and Turkey, terms expiring in 1937; Ecuador, Poland, and Roumania, terms expiring in 1938; Bolivia, China, Latvia, New Zealand, and Sweden, terms expiring in 1939. Canada was a member of the Council of the League from 1927 to 1930.

The Council, which normally meets four times a year and more frequently if circumstances should require it to do so, may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

The Secretariat.—The Permanent Secretariat is the Civil Service of the League. The staff is appointed by the Secretary General with the approval of the Council. The officials of the Secretariat of the League are exclusively international officials, having international and not national duties. The first Secretary General, Sir Eric Drummond, who was named in the Annex to the Covenant, resigned in 1933 and was succeeded by M. Joseph Avenol, who is assisted by three Deputy Secretaries General and by one Under-Secretary General.

*The League of Nations Society in Canada, 124 Wellington St., Ottawa, is the authorized agent for the publications of the League of Nations.

Permanent Court of International Justice.—The Permanent Court of International Justice was established by the Protocol of Dec. 16, 1920, in accordance with Article 14 of the Covenant of the League of Nations. It is composed of a body of fifteen judges elected by the Assembly and Council of the League of Nations for a term of nine years, and sits at The Hague. The Court is competent to hear and determine any dispute of an international character which the parties thereto submit to it; it may also give an advisory opinion upon any dispute or question referred to it by the Council or the Assembly. Article 36 of the Statute of the Court provides that any State may recognize as compulsory the jurisdiction of the Court in all or any classes of legal dispute concerning:—

- (a) The interpretation of a Treaty.
- (b) Any question of international law.

(c) The existence of any fact which, if established, would constitute a breach of an international obligation, and the nature and extent of the reparations to be made for the breach of the international obligation.

Canada has been a Member of the Court from its establishment, and in 1929 accepted, subject to certain reservations, the compulsory jurisdiction of the Court in the cases contemplated in Article 36.

The Budget of the League.—The expenditure of the League is covered by the contributions of States Members which are fixed in accordance with a scale which takes into account the population, area, and public revenue of each State concerned. The Budget for the year 1937 was 23,347,302 gold francs, of which 15,211,306 francs were for the work of the Assembly, Council and Secretariat, 6,086,929·60 francs for the International Labour Office, and 2,049,066·40 for the Permanent Court of International Justice. A surplus in the preceding year of 2,062,479·70 gold francs reduced the net assessment against States Members for 1937 to 21,284,822·30 gold francs of which Canada's share is 35/923 of the total, 807,116·80 gold francs or \$155,755.

Membership of the League of Nations.—The 58 States which are Members of the League (February, 1937), are as follows:—

Abyssinia	Estonia	Nicaragua ¹
Afghanistan	Finland	Norway
Union of South Africa	France	Panama
Albania	Greece	Paraguay ¹
Argentine Republic	Guatemala	Persia
Australia	Haiti	Peru
Austria	Honduras ¹	Poland
Belgium	Hungary	Portugal
Bolivia	India	Roumania
British Empire	Iraq	Salvador
Bulgaria	Irish Free State	Siam
Canada	Italy	Union of Soviet Social- ist Republics
Chile	Latvia	Spain
China	Liberia	Sweden
Colombia	Lithuania	Switzerland
Cuba	Luxemburg	Turkey
Czechoslovakia	United States of Mexico	Uruguay
Denmark	Netherlands	Venezuela
Dominican Republic	New Zealand	Yugoslavia.
Ecuador		

¹ By a communication dated June 23, 1936, Honduras gave notice of her intention to withdraw from the League of Nations, in accordance with Article 1, paragraph 3, of the Covenant. Paraguay and Nicaragua manifested the same intention by telegram dated Feb. 23, 1935, and June 26, 1936, respectively.

CHAPTER IV.—POPULATION.*

The Population chapter of the Year Book is a *précis* of the results of investigations into the number and the constitution of the population made in the seven censuses of Canada since Confederation, summarizing the growth and distribution of population between 1871 and 1931, as shown by the successive decennial censuses, in regard to the chief matters investigated at the censuses. Owing to the extent of the field covered, it is quite impossible to include in each edition of the Year Book a full digest of population statistics. The policy adopted, therefore, is to maintain the skeleton of the chapter and the historical tables as a permanent feature and build up each section as statistics are available following each census. After complete and accurate summary statistics have been given publicity, the chapter is cut down to skeleton limits, with adequate references, until the next census. The 1934-35 Year Book gave at pp. 98-169 as complete a picture of the 1931 census statistics as will appear in one Year Book. In the present edition, the chapter has been cut down except in regard to Section 15—Occupations of the People—which subject has not previously received treatment for the Census of 1931.

Under the Canadian constitution, the legal *raison d'être* of the census is to determine representation in the House of Commons; after each decennial census a redistribution of seats in the House, following the course of the movement of population, is made in the manner described on pp. 78-80 of this volume. But the census, especially since the introduction of methods of mechanical tabulation, has become far more than a mere counting of heads. It is a great periodical stock-taking of the people and their affairs, designed to show as fully as possible the stage which has been reached in the progress of the nation. Thus the numbers, local distribution, age, sex, racial origin, nationality, language, religion, education, housing and occupations of the people, severally, constitute investigations of enormous importance, to which all the continuous and routine statistics collected in the ordinary course of administration must be related if their full value is to be realized. The census, in fine, rounds out and completes the scheme of information upon which the Government relies in conducting the business of the country.

On account of the requirements as to parliamentary representation and the payment of provincial subsidies, which are based on population, the Canadian census is taken on the *de jure* principle; *i.e.*, each person is counted as belonging to the locality in which he is regularly domiciled, irrespective of where he may be at the date of the enumeration. Under the *de facto* method, adopted in the United Kingdom, each individual is counted as belonging to the locality where he is found on the census date. The *de facto* method is undoubtedly simpler, but the *de jure* plan better portrays the permanent condition of the population. The chief difficulty in the application of the latter method is found in connection with holiday resorts, in the segregation of "visitors" and the tracing of "absentees." A date prior to the opening of the holiday season is accordingly chosen for the date of the census. In the Canadian census, students and inmates of hospitals are assigned to their home localities, while inmates of prisons, gaols, lunatic asylums, etc., are counted where found.

*This chapter has been revised by A. J. Pelletier, Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under

¹ For footnotes see end of Table 3.

Early Censuses.—The credit of taking the first census of modern times belongs to Canada. The year was 1666, the census that of the colony of New France. Still earlier records of settlement at Port Royal (1605) and Quebec (1608) are extant; but the Census of 1666 was a systematic "nominal" enumeration of the people, taken on the *de jure* principle on a fixed date, showing age, sex, occupation and conjugal and family condition. A second census in 1667 included the areas under cultivation and the numbers of sheep and cattle. When it is recalled that in Europe the first census dates only from the eighteenth century (those of France and

England from the first year of the nineteenth) and that, in the United States, the census begins only with 1790, the achievement of the primitive St. Lawrence colony, in instituting what is to-day one of the principal instruments of government throughout the civilized world, may call for more than passing appreciation.

The Census of 1666 (the results occupy 154 pages in manuscript, and are still to be seen in the Archives of Paris, or in a transcript at Ottawa) showed some 3,215 souls. It was repeated at intervals more or less regularly for a hundred years. By 1685 the total had risen to 10,904, including 1,538 Indians settled in villages and living a civilized life under the supervision of the missionaries. By the end of the century it had passed 15,000, and this was doubled in the next twenty-five years. Not to present further details, some of which will be found in the Chronology on pp. 60-69, it may be said that at the time of the cession (1763) the population of New France was nearly 70,000 (69,810 in 1765), whilst another 10,000 French (thinned to these proportions by the expulsion of the Acadians) were scattered through what are now Nova Scotia, New Brunswick and Prince Edward Island. The British population of Nova Scotia was 8,104 in 1762, thirteen years after the foundation of Halifax in 1749.

Our chief sources of statistics for half a century and more after the cession are the reports—more or less sporadic—of colonial governors, though censuses of the different sections under British rule were taken at irregular intervals. British settlement on a substantial scale in the Gulf provinces and in Ontario dates only from the Loyalist movement which followed the American Revolution, at the end of which, *i.e.*, about the year of the Constitutional Act (1791), the population of Lower Canada was approximately 163,000, whilst the newly constituted province of Upper Canada, under Lieutenant-Governor Simcoe, numbered perhaps 15,000, and the addition of the maritime colonies brought the total to well over 200,000. A decade later Canada began the nineteenth century with a population of probably not less than 250,000 or 260,000. Subsequent censuses gave the populations of the different colonies as follows: Upper Canada (1824) 150,066, (1840) 432,159; Lower Canada (1822) 427,465, (1844) 697,084; New Brunswick (1824) 74,176, (1840) 156,162; Nova Scotia (1817) 81,351, (1838) 202,575; Prince Edward Island (1822) 24,600, (1841) 47,042.*

The policy of irregular census-taking was supposed to have been ended after the union of Upper and Lower Canada by an Act, passed on Sept. 18, 1841, which provided for a census in the year 1842 and every fifth year thereafter, but under this Act only the census of Upper Canada was taken and the following year on Dec. 9, the Act was amended, the reason being stated as follows: "Whereas the Census of the inhabitants of Lower Canada, for the year one thousand eight hundred and forty-two as required by an Act of this Legislature, . . . hath not been duly taken . . . and whereas it is of the greatest importance that such Census should be taken Be it therefore enacted . . ." The Census of 1844 of Lower Canada was taken under this Act.

Another Act was passed and given Royal Assent on July 28, 1847, creating a "Board of Registration and Statistics" with instructions "to collect statistics and adopt measures for disseminating or publishing the same" and providing for a census to be taken in the year 1848, to be repeated in 1850 and every fifth year thereafter. Under this Act a census of Upper Canada was taken in 1848.

* A résumé of the results of all the censuses taken in Canada between 1666 and 1931 has been published in bulletin form and is included in Vol. I, Census of 1931.

Finally an Act was passed on Aug. 30, 1851, providing for a census to be taken in January, 1852, then in the year 1861 and thereafter every tenth year, and that better provision should be made for taking the census. The first census thereunder was taken in January, 1852, and, as similar censuses were taken by New Brunswick and Nova Scotia, we have a regular measure of population growth in Canada over the past 80 years. The 'fifties saw a very rapid development, especially in Ontario, and the 'sixties showed only less substantial gains. In the years following Confederation there was a spurt, the increase between 1871 and 1881 (which included several lean years towards the end) being 635,553, or 17.23 p.c. In neither of the last two decades of the nineteenth century, however, was this record equalled either absolutely or relatively, the gains in each being under 550,000, or 12 p.c. With the end of the century the population of Canada had reached approximately five and a third millions, or twenty times that of 1800. It has increased by five millions in the past thirty years.

Expansion in the Twentieth Century.—It is within the present century that the most spectacular expansion of the population of Canada has taken place. The outstanding feature was, of course, the opening to settlement of the West. The unorganized territories of British North America had been ceded to the Dominion soon after Confederation, and the West had been tapped and traversed by the Canadian Pacific railway in the 'eighties and 'nineties. But though western population was doubled in each of these decades, it was only with the launching of a large-scale immigration movement after 1900 that western settlement and production became a first-rate economic factor. Simultaneously an almost equally striking development occurred in the industrial centres of Eastern Canada, forming the immediate basis for the move upon the West. At the back, of course, was the heavy inflow of British and other capital—a total of \$1,500,000,000 between 1900 and 1912—to finance large constructive undertakings (chiefly railway, municipal and industrial) which characterized the movement. The years 1901 to 1911, in brief, form the *decas mirabilis* of Canadian expansion. The immigration movement just mentioned, which had previously run well under 50,000 per annum, rose rapidly to over five times that volume, eventually passing 400,000 in a single year. In the ten years between 1901 and 1911 it exceeded 1,800,000 and, though at least a third of these were lost (partly in the return to Europe of labour temporarily attracted by the railway and other developments in progress, and partly in the never-ceasing and natural "drag" of the United States upon a virile and less wealthy people), it formed the chief factor in the gain of 34 p.c. which the total population of Canada registered in that decade, and which was larger than the relative growth of any other country during the same period. The movement was continued and even intensified in the first three years of the second decade of the century, after which a recession set in, to which the outbreak of war gave a new and wholly unexpected turn. Nevertheless, the decade which closed with the Census of 1921 showed over 1,700,000 immigrant arrivals in Canada, and, though the proportionate loss of these was very heavy (probably as much as two-thirds), Canada's relative gain for the decade was again among the largest in the world.

Results of the Census of 1931.—The total population of the Dominion on June 1, 1931, was 10,376,786, as compared with 8,787,949 on June 1, 1921, an increase of 1,588,837 or 18.08 p.c. in the decade, as compared with 21.94 p.c. and 34.17 p.c. during the decades 1911 to 1921 and 1901 to 1911 respectively.

During the decade 1911-21 the countries which comprise the British Empire, and more especially the United States which was in the Great War for only nineteen months as against Canada's fifty-two, had suffered less in actual loss of life from the War and its consequences than the continental countries of Europe. None of them declined in population during the period, as many continental European countries did. Their percentage increases, however, were in almost all cases lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,886,699, or 5.0 p.c., as compared with an increase of 10.9 p.c. in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,497, or 2.6 p.c., as compared with 6.5 p.c. between 1901 and 1911. Nor has this situation been much improved in the post-war decade 1921-31, for the increase in England and Wales during these years was but 5.4 p.c. and Scotland actually showed a decrease of 0.8 p.c. Of the overseas Dominions, New Zealand, according to the latest official estimate (the 1931 Census was postponed), increased her population from 1,218,913 to 1,510,940, or by nearly 24 p.c. for the decade ended 1931, as compared with 20.9 p.c. and 30.5 p.c. respectively for the decades ended 1921 and 1911. In the case of the white population of South Africa, much the same condition obtained. The Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade of the twentieth century than in the first, increased from 4,455,005 in 1911 to 5,435,734 in 1921, or by 22.01 p.c., as compared with 18.05 p.c. for the previous decade, and by 19.85 p.c. to 6,630,600 in the most recent twelve-year period 1921-33.* The population of the continental United States increased between 1920 and 1930 from 105,710,620 to 122,775,046, an increase of 16.1 p.c., as compared with 14.9 p.c. in the decade 1910-20 and 21 p.c. in the decade 1900-10.

Considering now the movement of population within the Dominion of Canada itself, it is evident from Table 1 that in this country, as formerly in the United States, there is a distinct movement of population from east to west. In the decade from 1911 to 1921 this was clearly apparent, for the four western provinces then increased their population by no less than 44 p.c. and for the decade 1921-31 the increase was from 2,480,664 to 3,047,792, or 22.86 p.c. From 1921 to 1931 the five eastern provinces increased from 6,294,655 to 7,315,041, an increase of 1,020,386 persons, which, though absolutely larger than the figure for the West, constitutes an increase of only 16.2 p.c. over the 1921 population. The same conclusion may be deduced from Table 2, which shows that while in 1871 only 2.97 p.c. and in 1881 only 3.89 p.c. of the population of the country dwelt west of the lake of the Woods, the percentage in 1891 was 7.23; in 1901, 12.02; in 1911, 24.08; in 1921, 28.37; and in 1931, 29.51.

On the other hand, the Maritime Provinces, which in 1871 contained 20.80 p.c. of the total population of the Dominion, had, in 1881, 20.13 p.c.; in 1891, 18.22 p.c.; in 1901, 16.64 p.c.; in 1911, 13.02 p.c.; in 1921, 11.38 p.c.; and in 1931, only 9.72 p.c. of the population. Ontario and Quebec—the old pre-Confederation Province of Canada—still remain the chief centre of population. Their proportion of the total was 60.77 p.c. in 1931, as compared with 76.23 p.c. in 1871, 75.98 p.c. in 1881, 74.54 p.c. in 1891, 71.34 p.c. in 1901, 62.90 p.c. in 1911 and 60.25 p.c. in 1921. In other words, the net result of the sixty years has been that in 1931 three-fifths of the population of the Dominion lived in these provinces as compared with more than three-fourths in 1871.

*As in the case of New Zealand, the 1931 Census was postponed, but in the case of Australia was taken as of June 30, 1933.

Centres of Population.—The “centre of population”* for the Dominion of Canada was carefully worked out for each census from 1851 to 1931 inclusive and showed a definite north-westward movement up to 1911, westward for the next decade and northward for 1931. For the censuses of 1851 to 1881 the location was near Valleyfield, Que.; in 1891, it was 25 miles west of Ottawa; in 1901, near Pembroke; in 1911, 45 miles west of Sudbury; in 1921, 50 miles northeast of Sault Ste. Marie; and in 1931, 35 miles north of Sault Ste. Marie.

Density of Population.—The density of population in 1931 (*i.e.*, the number of persons per square mile of the land area as in that year), as compared with 1921, 1911 and 1901, is shown by provinces and for the country as a whole in Table 5.

*The centres of population are the centres of gravity (not the intersection of median lines). The units of area in which the moments (*i.e.*, population multiplied by distance from a fixed point) were calculated, were the permanent counties or census divisions, of which there are about 220, the same units being used so far as possible for all censuses from 1851 to 1931. The geographical centre of the unit area was assumed to be the centre of population of that unit except in the cases of the thinly settled northern areas of counties with very large cities, where special adjustments were made.

¹The populations of Ontario, Quebec, Manitoba and Northwest Territories were adjusted for 1911 according to the provisions of the Boundary Extensions Act, 1912, but such adjustment was not carried back to 1901.

²Populations of Northwest River Arm and Rigolet, on Hamilton Inlet, as in 1921, have been deducted from Quebec, as these parts were awarded to Newfoundland by decision of the Judicial Committee of the Privy Council, Mar. 1, 1927.

Figures showing the density of population in 1931, by counties and census divisions, were given at pp. 109-110 of the 1934-35 Year Book. Generally speaking, the density of population decreases as one travels westward, but the enormous area of the province of Quebec unduly reduces the density of its population, which was 5.49 in 1931. As among the nine provinces, the density of population is greatest in Prince Edward Island and least in British Columbia.

For purposes of comparison, the densities of population in various countries in recent years are given in Table 6.

6.—Densities of Population in Various Countries in Recent Years.

NOTE.—The following figures, for countries other than Canada and China, are based on data taken from the Statistical Year Book of the League of Nations 1935-36. The population figures of the latest census are used and total population is taken except where indicated otherwise by footnotes.

¹ Estimate as of Dec. 31, 1931, taken from Canada Year Book 1934-35, p. 168.

² Europeans only.

³ Estimate as at Dec. 31, 1934.

Elements of Growth.—The former lack of comprehensive and comparable vital statistics for the whole of Canada, together with the lack of statistics of emigration, make it difficult to determine how far the growth of population since the commencement of the twentieth century is due to natural increase and how far to immigration. In Table 7 figures of movement are given as closely as they can be estimated. During the decade 1911-21, in addition to 60,000 Canadians who died overseas and nearly 20,000 who took their discharge in the United Kingdom, there were also great numbers of residents of Canada—most of them recent immigrants—who left Canada to join the forces of the Mother Country and her allies in the Great War and did not return.

7.—Movement of Population, Including Estimated Natural Increase, Recorded Immigration and Estimated Emigration for the Inter-Censal Periods 1901-11, 1911-21 and 1921-31.

Net Gain in Population, 1911-21.....	1,581,306
Net Gain in Population, 1921-31.....	1,588,837

¹ Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. ² This figure includes also the 60,000 Canadian lives lost at the Front and the soldiers (about 20,000) enlisting in the Canadian forces and receiving their discharge in the United Kingdom.

Section 2.—Sex Distribution.

Throughout the older countries of the world there is usually found an excess of female over male population, more especially as in most of these countries the census is taken on a *de facto* instead of, as in Canada, on a *de jure* basis. The causes of this excess of female population are: (1) the normally higher rate of mortality among males; (2) the greater number of males who travel; (3) the effects of war; (4) the employment of males in the army, navy and merchant marine; and (5) the preponderance of males among emigrants. In the newer countries of the world, however, the preponderance of males among immigrants results in a general excess of male over female population. These phenomena are exemplified for both the older and the newer countries in Table 9.

In Canada there has been an excess of male population from the commencement of its history, the first census, 1666, showing 2,034 males to only 1,181 females. As the colony increased in numbers, the disproportion between the sexes became smaller, more especially since the French-Canadian population, after about 1680,

was not reinforced by immigration from the old world. In 1784, when the English-speaking immigration to Canada for purposes of settlement was commencing, there were 54,064 males and 50,759 females in the colony. At the middle of the nineteenth century, there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly-settled Upper Canada, and since Confederation the same phenomenon of considerable excess of males has occurred throughout the growing Northwest. The great immigration of the first decade of the present century resulted in raising what is called the "masculinity" of the Canadian population (*i.e.*, the excess of males over females per 100 of population) to the highest point in recent history, *viz.*, 6.07 p.c. in 1911. The Great War, however, both checked immigration and took about 60,000 young Canadian male lives as its toll, with the result that at the Census of 1921 the masculinity of our population was only 3 p.c.—515 males to 485 females per 1,000 of population.

In 1931 there were 518 males to 482 females for Canada as a whole. It is interesting to note that the masculinity of the population has increased in the eastern provinces and decreased in the western ones, where it was formerly greatest. In Table 8 statistics are presented, showing the number of males and females in each of the provinces and territories at each census since 1871. A table showing the proportions of the sexes and excess of males per 1,000 of population, 1871-1931, appears at p. 113 of the 1934-35 Year Book. The statistics of Table 9 show the position of Canada among other countries of the world in regard to masculinity.

Section 3.—Conjugal Condition.

In Table 10 are given, in summary form, the statistics of the conjugal condition of the population, as single, married, widowed, divorced and legally separated, for 1871 and subsequent censuses. Especially notable is the larger proportion of married in the more recent years. This is mainly attributable to the larger proportion of adults to total population in our own time. Noteworthy also is the larger proportion of divorced and legally separated in later years. A table showing the conjugal condition of the people, as percentages of the total population, was given at p. 110 of the 1936 Year Book. Another table, showing conjugal condition by sex and provinces, will be found at the same place. At pp. 115-116 of the 1934-35 Year Book a table appears showing the conjugal condition of the 1931 population, 15 years of age and over by age groups. The reader is referred to p. 171 for details of divorces granted in the years 1911-36.

10.—Conjugal Condition of the Population, by Numbers and Percentages, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921 and 1931.

² Legally separated included with married.

³ Legally separated included with divorced.

Section 4.—Age Distribution.

The same causes which have in the past rendered the sex distribution of population in Canada somewhat unusual have also affected its age distribution. In the first stages of the settlement of a new colony, men in the prime of life constitute the bulk of the population, and women and children are conspicuous by their absence, so that there will be a disproportionately large male population between the ages of 20 and 50, together with a low birth rate. Later on in the settlement of a new country, where there is land and food for all and where the early disproportion of the sexes has been overcome, there is a very high rate of natural increase, and an extraordinarily large proportion of children among the population. Thus in 1871 (see Table 11), 286·91 out of every 1,000 of the population of Canada were children under 10 years of age, and over half the total population (526·76 out of every 1,000) were under 20 years of age. But, with the growing urbanization of population, the average age at marriage increased and children came to be regarded as a liability rather than an asset. Thus in 1911, out of every 1,000 of the population, only 231·83 were under 10 years of age and 423·42 under 20 years of age. In 1921, however, 239·67 per 1,000 of the population were under 10 years of age and 434·81 per 1,000 under 20 years. In 1931, the number of children under 10 years of age had dropped to 212·70 per 1,000 of the population, and of persons under 20 to 416·39 per 1,000.

Table 12 shows the varying age distribution of the population of the respective provinces. At p. 118 of the 1934-35 Year Book details of the age distribution of the population of the Dominion, by sex, for the census years 1881 to 1931 were given.

Age Distribution by Sex.—An interesting table of quartile and decile age distribution, by sex, with textual interpretation, was given at pp. 119-120 of the 1934-35 Year Book. It is not repeated this year in order to conserve space.

Section 5.—Racial Origins.

In six out of seven censuses of Canada since Confederation the racial origin of each person has been secured, the exception being 1891. The object of this information is to ascertain from what basic ethnic stocks the Canadian population, more particularly the recently immigrated population, is derived. The answer "Canadian" is not accepted under this heading, as the purpose of the question is to obtain, in so far as possible, a definition of "Canadian" in terms of racial derivation. Of this procedure of the census, criticism has been received on two main grounds: (a) that there are Canadians whose family is of several generations residence in the country who may not know their ultimate racial origin, or who may be of very mixed racial origin; (b) that the practice tends to perpetuate racial distinctions which it is desirable to obliterate. As against these criticisms the following three points must be considered: (a) that the Canadian whose family is of three or more generations residence is enumerated and differentiated through the census question on the birthplace of parents for which statistics from the 1931 Census appeared at pp. 134-139 of the 1934-35 Year Book; (b) that notwithstanding the desirability of racial assimilation, there are special features in connection with the process that require appraisal and study—for example, 271 children of Chinese fathers and 842 of Japanese fathers were born in Canada in 1931. Again, the fact that the constitution of Canada is based on the presence of two dominant races points to the desirability of a measurement of these factors: only recently it has been widely pointed out that the original French colony, numbering 75,000 at the date of the Conquest, has expanded to over three millions to-day. Measurements of this kind would be impossible if the answer "Canadian" instead of "French" were accepted under the heading of racial origin, yet undoubtedly if the descendants of the original French colonists are not "Canadians", no one is; (c) finally, racial origin is an important subject for study in a "new" country like Canada from a scientific standpoint, *i.e.*, from the standpoint of the student of ethnology, criminology, and the social and "biometric" sciences in general.

To accept the answer "Canadian" to the question on racial origin would confuse the data and defeat the purpose for which the question is asked.

Racial Distribution.—The total increase in population over the decade 1921-31 was 1,588,837. The population of English origin increased by only 196,061 compared with 722,208 in the previous decade; that of Scottish origin by 172,725 compared with 175,745; and that of Irish origin by 123,005 compared with 57,419. The population of British origin, taken together, increased from 4,868,738 to 5,381,071, or by 512,333, between 1921 and 1931. This represented 32 p.c. of the total increase as compared with 61 p.c. of the total increase for the previous decade. On the other hand, the population of French origin increased from 2,452,743 in 1921 to 2,927,990 in 1931, or by 475,247 (slightly under 30 p.c. of the total increase for the decade) and showed the greatest absolute increase for any decade since 1871. Figures for the minor racial groups which make up the nation (see Table 13) would indicate that the people of Scandinavian, German and Ukrainian origins increased between 1921 and 1931 by 36 p.c., 61 p.c. and 111 p.c., respectively. Owing to the new national and racial alignments in Central and Southeastern Europe following the Great War, comparison of the post-war numerical strength of certain ethnic stocks in Canada with pre-war returns cannot be made with any certainty. For example, a number of people reported as of Ukrainian stock in the Seventh Census were described in the censuses of 1921 and 1911 as Galician, Bukovinian, Ruthenian or Russian.

A perspective of the percentage relationship of the origin groups to the population as a whole was given in tabular form for the censuses 1871 to 1931 at p. 123 of the 1934-35 Year Book. Table 13, below, gives the actual figures for the same years.

Together, the British and French groups constituted, in 1931, 80 p.c. of the total population, compared with 83 p.c. in 1921 and 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. The immigration of continental Europeans to Canada during the past thirty years has, of course, been the cause of this decline.

13.—Origins of the People According to the Censuses of 1871, 1881, 1901, 1911, 1921, and 1931.

NOTE.—Origins were not taken in the Census of 1891.

¹The figures for 1871 cover the four original provinces of Canada only.

²Incomplete in 1871; includes "half-breeds" in 1901.

³Includes Danish, Icelandic, Norwegian, and Swedish; in 1921 they numbered respectively 21,124, 15,876, 68,856 and 61,503; in 1931, 34,118, 19,382, 93,243 and 81,306.

Section 6.—Religions.

At each of the censuses from 1871 to 1931 every inhabitant of Canada has been asked to state the religious body of which he is a member or an adherent. During the sixty-year period there have been various fluctuations in the proportions of the population belonging to the leading religious bodies, and these fluctuations are, in a new country like this, largely occasioned by the religious affiliations of immigrants.

Throughout the sixty-year period something like two-fifths of the population of Canada has been of the Roman Catholic faith, the 1931 percentage, inclusive of Greek Catholics, being 41.30. Methodists were 16.27 p.c. of the population in 1871 but fell to 13.19 p.c. in 1921, while Presbyterians increased from 15.63 p.c. in 1871 to 16.04 p.c. in 1921, being reinforced by a considerable immigration from Scotland after the beginning of the century. The fusion of the Methodists

and Congregationalists in 1925 with a large section of the Presbyterians, as the United Church of Canada, left that body the second largest religious body in the Dominion in 1931 with 19.44 p.c. of the population. The Presbyterians who did not adhere to the United Church of Canada numbered 8.39 p.c. of the population in 1931. The proportion of Anglicans in the population of Canada fell from 14.17 p.c. in 1871 to 12.69 p.c. in 1901 but thereafter the large immigration from the British Isles raised it to 16.02 p.c. in 1921, followed by a slight falling-off to 15.76 p.c. in 1931. The Baptists have shown a fairly steady decline from 6.87 p.c. in 1871 to 4.27 p.c. in 1931.

The immigration from non-English-speaking countries during the first three decades of the twentieth century has led to a great growth of the religious bodies whose members come from the continent of Europe. Thus the Lutherans, who were only 1.09 p.c. of the population in 1871 and 1.72 p.c. in 1901, have risen to 3.80 p.c. in 1931. The Jews, again, who were only 0.03 p.c. in 1871 and 0.31 p.c. in 1901, were 1.50 p.c. in 1931. The adherents of the Greek Orthodox Church, who in earlier years were not distinguished from Greek Catholics (the two together being only 0.29 p.c. in 1901) were 0.99 p.c. in 1931.

Of the total population in 1931 (10,376,786), 16,042 or 0.15 p.c. did not state their religion while 54,164 persons, or 0.52 p.c., belonging to small sects, were classed as "various" and 21,071 or 0.20 p.c. as of "no religion". Of the non-Christian sects, 155,614 or 1.50 p.c. were Jews, 24,087 or 0.23 p.c. were Confucians, 15,784 or 0.15 p.c. were Buddhists and 5,008 or 0.05 p.c. were pagans. In Table 14 the totals for each religion are brought together for all censuses since Confederation. Further analyses showing the percentages of specified religions at each census, 1871-1931, and the numbers accredited to each specified religion, by provinces, were given at pp. 127-129 of the 1934-35 Year Book.

¹Including Tunkers. ²Practically all Methodists and Congregationalists and a large number of Presbyterians united to form the United Church of Canada in 1925, although a relatively small number reported themselves as "United Church" in 1921, chiefly in Western Canada where the movement towards union began. ³In earlier censuses only small numbers were involved, and Greek Catholics and Greek Orthodox were included under the general term "Greek Church". A rapid increase of both Greek Catholics and Greek Orthodox has been shown for recent censuses and, since the former owe obedience to the Pope in matters of faith, they have been included with the Roman Catholics for 1931. ⁴Including 186,654 Greek Catholics, see footnote 3. ⁵Included with "All other" religions for 1891. ⁶The figures for 1871 cover the four original provinces of Canada only. ⁷Mennonites were included with Baptists prior to 1901.

In 1931, for the first time in the history of the Dominion Census, the religions of the people were cross-classified according to racial origin. The results, for Canada as a whole, were shown at pp. 116-117 of the 1936 Year Book.

Section 7.—Birthplaces.

The birthplaces of the population of Canada, as at each of the seven censuses, are shown by Canadian born, other British born, and foreign born (United States born and other foreign born), in Table 15. The table shows that, in 1871, 97·28 p.c. of the population was born under the British flag, while, sixty years later, the percentage had declined to 89·18. The proportion of Canadian born increased steadily until the opening of the century, but has declined as a result of the increase of immigration after 1900. The Census of 1931 showed declines in the proportions of other British born and United States born as compared with 1921 but an increase in the percentage of "other foreign born"; the proportion of Canadian born has remained practically unchanged.

Worthy of note is the fairly steady increase of population born in the United States from 1·85 p.c. in 1871 to 4·25 p.c. in 1921, and the subsequent decline to 3·32 p.c. in 1931. Other foreign born increased from 0·87 p.c. in 1871 to 6·23 p.c. in 1911, declined to 5·87 p.c. of the total population by 1921 but, as already noted, increased substantially to 7·50 p.c. by 1931.

¹Includes some hundreds of persons born at sea.

The birthplaces of the 1931 population were tabulated for the various provinces and territories, by sex, at p. 118 of the 1936 Year Book. In the Maritime Provinces, the population is shown by the Census of 1931 to be about 93 p.c. native born, and in Quebec about 91 p.c. In Ontario, however, the proportion sinks to about 77 p.c., in Manitoba to about 66 p.c., in Saskatchewan to about 65 p.c., in Alberta to about 58 p.c., and in British Columbia to about 54 p.c.

At pp. 133-140, inclusive, of the 1934-35 Year Book, a very complete analysis was given of the birthplaces of the Canadian people. Tables there published show: population classified by province of residence and province of birth; population, for each province, classified by nativity of parents; Canadian born classified according to nativity of parents, by racial origin; and rural and urban population, other than Canadian born, classified according to year of arrival in Canada.

Section 8.—Citizenship and Naturalization.

At the latest four decennial censuses, those of 1901, 1911, 1921 and 1931, inquiry has been made into the citizenship of the foreign-born population. The relevant instructions given to enumerators at the Census of 1931 were published at p. 141 of the 1934-35 Year Book.

Table 16 deals with the citizenship of the Canadian born, the British born and the foreign born of the population residing in Canada at the date of the Census of 1931. As regards the total (8,069,261) native-born population, 8,052,459 were "Canadian Nationals" and were made up of 8,051,142 persons with uninterrupted citizenship and 1,317 naturalized repatriates. Of the total native-born resident in Canada at the date of the census, 16,802 were aliens owing their allegiance to some foreign country—in the case of females usually as a result of marriage. The table on p. 142 of the 1934-35 Year Book showed the country to which allegiance was owed by these 16,802 Canadian-born aliens.

In the case of British born, 11.4 p.c. had not yet acquired Canadian domicile and of the foreign born 45.2 p.c. were still aliens. A more detailed analysis than that given below will be found at p. 143 of the 1934-35 Year Book.

¹The European country of allegiance was given on p. 142 of the 1934-35 Year Book.

²This column

includes foreign-born persons born in places other than continental Europe, Asia or the United States.

³The European country of allegiance was given at p. 143 of the 1934-35 Year Book.

The Progress of Naturalization.—The foreign-born residents of Canada numbered 1,122,695 in 1931 as compared with 890,277 in 1921, 752,732 in 1911 and 278,449 in 1901; among these the naturalized numbered 614,971 in 1931, 514,179 in 1921, 344,557 in 1911 and 153,908 in 1901, or 54.78 p.c., 57.75 p.c.,

45.77 p.c., and 55.27 p.c., respectively. Alien residents in Canada showed an absolute decline between 1911 and 1921 of from 408,175 to 376,098, *i.e.*, from 5.66 p.c. of the population to 4.28 p.c. Between 1921 and 1931, they increased to 507,724, or 4.89 p.c. of the 1931 population. Among the foreign-born residents of Canada, the United States born exceed those born in any other country, although by continental groups the Europeans are more numerous. Between 1921 and 1931 the U.S. born declined from 374,022 to 344,574, but there was a substantial net increase in the total foreign born due to the large increase of Europeans. On the other hand, the percentage of the U.S. born who are naturalized to total U.S. born has increased from 63.63 in 1921 to 72.44 in 1931, whereas the percentage of continental Europeans who are naturalized has fallen from 57.88 in 1921 to 49.13 in 1931.

Section 9.—Language Spoken and Mother Tongue.

Official Languages.—In the Census of 1931, 1,322,370 persons were reported as speaking both the official languages of Canada, 6,999,913 speaking English, 1,779,338 speaking French and 275,165 as unable to speak either English or French. In a table on p. 121 of the 1936 Year Book the population was classified by racial origin and as able to speak one, both or neither of the official languages.

Mother Tongue.—At p. 122 of the 1936 Year Book will be found a table showing the mother tongue of the population, by provinces and for the Dominion.

Section 10.—Rural and Urban Population.

For the purposes of the census the population residing in cities, towns and incorporated villages has been defined as urban, and that outside of such localities as rural. Thus the distinction here made between 'rural' and 'urban' population is a distinction of provincial legal status rather than of size of aggregations of population within limited areas. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban (the laws of Saskatchewan, for example, making provision that 50 people actually resident on an area not greater than 640 acres may claim incorporation as a village, while the Ontario law now requires that villages asking for incorporation shall have a population of 750 on an area not exceeding 500 acres), the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion, as far as comparable aggregations of population are concerned.

A table published at p. 147 of the 1934-35 Year Book gives the rural and urban populations, by provinces and sex, and divides the incorporated urban centres into two groups, *viz.*, under one thousand, and one thousand and over, thereby allowing a closer comparison than is possible from Table 17. The population in urban places having less than one thousand was shown to have decreased for the whole of Canada but increased in Prince Edward Island, Nova Scotia and British Columbia. In Table 17 are given statistics showing the growth of rural and urban population respectively, by provinces, since 1891. To a limited extent Table 18

will permit the student of population statistics to make, at least for Canada as a whole, his own line of demarcation between rural and urban populations.*

While a summary comparison between urbanization in Canada in 1931 and in the United States in 1930 would lead us to the conclusion that our country, though far less densely peopled than the United States, had an almost equally large percentage of its population in urban communities, *viz.*, 53.70 p.c. in Canada as compared with 56.2 p.c. in the United States, the fact that in the United States inhabitants of places having under 2,500 population are included with rural population must be taken into account. A fairer basis of comparison is secured if the same population limits are taken for both countries, as may be done by using Table 18. Thus, at the Census of 1930, the United States had 29.5 p.c. of its population resident in cities of 100,000 and over, while Canada in 1931 had only 22.44 p.c. of its population in such places. The United States had an additional 18 p.c. of its population residing in cities of between 10,000 and 100,000 population, and 4.8 p.c. in cities and towns of 5,000 to 10,000, while Canada had in cities of these categories only 14.87 p.c., and 4.42 p.c., respectively, of its population. Thus, taking all places of 5,000 and over—the lowest population for which comparative figures are readily available—52.3 p.c. of the population of the United States resided in such places as compared with 41.73 p.c. of the population of Canada, showing the much higher degree of urbanization which has been reached in the United States—a natural thing in an older settled and more densely peopled country.

On the basis of the census classification, it is apparent from Table 17 that in the last decade, as in the previous one, urban communities absorbed nearly 77 p.c. of the total increase in population, with the result that the urban population of Canada in 1931 exceeded the rural by 767,330. Out of every 1,000 persons in the country, 463 were resident, on June 1, 1931, in rural and 537 in urban communities. as compared with 505 in rural and 495 in urban communities on June 1, 1921; 546 in rural and 454 in urban communities in 1911; 625 in rural and 375 in urban communities in 1901; and 682 in rural and 318 in urban communities in 1891.

From Table 18, showing the distribution of urban population in Canada by size of cities and towns, it is seen that Canada possessed, in 1931, two cities of more than half a million population. These are Montreal and Toronto, with 818,577 and 631,207 inhabitants, respectively. Two other cities, Vancouver and Winnipeg, have attained the 200,000 mark and Hamilton, Quebec and Ottawa each have populations of over 100,000. The two western cities of Calgary and Edmonton are now in the 75,000 to 100,000 class. In this respect London, which excelled Edmonton in 1921, now takes the next lower place with a population of 71,148. Details of the population of these and other smaller cities and towns of 5,000 and over, are given by censuses from 1871 to 1931 in Table 19, while the populations of urban communities having in 1931 a population of from 1,000 to 5,000 each, are given for 1901, 1911, 1921 and 1931 in Table 20.

*In the United States, urban population, prior to 1930, was classified by the Census Bureau as that residing in cities and other incorporated places having 2,500 inhabitants or more with certain minor qualifications, but in 1930 the definition was slightly modified to include townships and other political divisions, not incorporated as municipalities, having a total population of 10,000 or more each, and a population density of 1,000 or more per square mile. The direct result of this modification has been to increase slightly the proportion of urban population.

All the larger cities have in their neighbourhoods growing "satellite" towns or other densely settled areas in close economic relationship with the central municipality. This phenomenon is to-day of increasing importance largely as a result of the greater ease and speed of transportation by motor vehicle. It has, therefore, been considered advisable to calculate the total populations resident in what the United States census authorities call the "metropolitan districts" On this basis the total populations of the larger cities at the Census of 1931 were as follows: "Greater Montreal", 1,000,159; "Greater Toronto", 808,864; "Greater Vancouver", 308,340; "Greater Winnipeg", 280,202; "Greater Ottawa" (including Hull), 175,988; "Greater Quebec", 166,435; "Greater Hamilton", 163,710; "Greater Windsor", 110,385; "Greater Halifax", 74,161; and "Greater Saint John", 55,611.

¹The population (98,967) in territory now comprised in the provinces of Alberta, and Saskatchewan and in Yukon and the Northwest Territories was classified as rural in the Census of 1891. ²Vol. 1, Census 1911, places the urban population of Alberta for that year at 141,937. Included in this figure was the population (5,250) of twelve places which, according to the Report of the Municipal Commissioner for Alberta, were not then incorporated. The places so included were Aetna, Banff, Bankhead, Bellevue, Bickerdike, Canmore, Cardiff, Exshaw, Hillcrest, Passburg, Queenston and Elmpark. The correction resulting from this and from other small adjustments consequent upon more definite knowledge as to incorporated areas, places the urban population for 1911 at 137,662. Similar corrections have been made in the urban and rural figures for the Census of 1901.

³As corrected in Census Report, Prairie Provinces, 1916. ⁴As changed by Extension of Boundaries Act, 1912. ⁵The urban population of 970,791, shown in Vol. 1, Census 1911, is reduced to 966,842 by the transfer of the populations of Maniwaki, Martinville, Moisie, St. Bruno, St. Martin and St.-Vincent de Paul from urban to rural; by adjustments in area of the villages of St. Anne and Ste. Genevieve; and Extension of Boundaries Act, 1912. ⁶Urban and rural population for 1911 and 1901 are as corrected in Census Report, Prairie Provinces, 1916. ⁷This includes South Vancouver and Point Grey, with 1921 populations of 32,267 and 13,736, respectively, which were then classified as "rural". ⁸Members of the Royal Canadian Navy were counted at their homes in the Census of 1931.

18.—Urban Populations of Canada, Classified by Size of Municipality Groups, 1911, 1921, and 1931.

Population is shown in Table 18 to be increasingly attracted to the larger cities. Thus, not only have cities of over 500,000 population (Montreal and Toronto) increased their proportions to the total, but cities of from 100,000 to 500,000 have increased their aggregate population from 5.90 p.c. of the total to 8.46 p.c., and cities of between 5,000 and 100,000 from 17.68 p.c. to 19.29 p.c. in the decade 1921-31. The classes below 5,000 show slight proportional reductions.

19.—Populations of Cities and Towns having over 5,000 Inhabitants in 1931, Compared with 1871-81-91-1901-11-21.

NOTE.—The cities and towns in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger (†). In all cases the populations for previous censuses have been rearranged as far as possible to cover the same area as in 1931.

¹Under the Saskatchewan Town Act, Lloydminster, Alberta, is merged with Lloydminster, Saskatchewan, for municipal purposes.

Rural and Urban Farm Populations.—Of the 10,362,833 people who formed, in 1931, the population of the nine provinces of Canada, exclusive of the Territories, only 3,289,507 or 31·7 p.c. lived on farms.

There were 728,623 farms within the nine provinces, and, considering the 14,056 farms (see Table 21) which were located within the limits of incorporated cities, towns or villages as "urban", the farm population was classified as 3,223,422 living on rural farms and 65,718 on urban farms. More than one-half (50·8 p.c.) of the people on urban farms were in Quebec and only 23·5 p.c. in Ontario. Alberta ranks third with 6·4 p.c. and Nova Scotia fourth with 5·7 p.c. This was in contrast with the distribution on rural farms where 24·4 p.c. were in Ontario, 23·1 in Quebec, 17·4 in Saskatchewan and 11·5 in Alberta; these four provinces, therefore, had 76·4 p.c. of the rural farm population. The rural and urban farm populations bore a very close relationship to the number of farms of each class in the individual provinces, but the distribution of rural farms followed more closely the distribution of total population (see Table 1) than that of urban farms. Among the provinces, Quebec had the greatest number of persons per farm on farms of both the rural and urban classes.

Table 21 gives the number of farms and the farm populations, urban and rural, by provinces, as recorded at the Census of 1931.

21.—Rural and Urban Farms, Farm Populations and Average Numbers of Persons per Farm, by Provinces, 1931.

¹ Revised since the publication of the 1936 Year Book.

Details regarding farm workers and those farms employing hired labour, the period of employment and cost of labour were dealt with at p. 299 of the 1934-35 Year Book. The reader should also refer to the item "wage-earners" (in agriculture) in the index of the present volume for further information on these topics.

Section 11.—Literacy.

The subject of literacy was discussed at pp. 131-132 of the 1936 Year Book. At p. 157 of the 1934-35 Year Book will be found a table showing the literacy of the population of 5 years and over from 1901 to 1931, at pp. 158-159 of the same edition the same information as is now summarized in Table 22 is given by sex, while on p. 160 is shown the literacy of the population of cities and towns of 30,000 population and over, as in 1931.

22.—Literacy of the Population of 19 Years of Age or Over, by Provinces, 1931.

(Corresponding figures for 1921 are to be found in the 1924 Year Book, p. 131.)

Section 12.—School Attendance.

At pp. 132-133 of the 1936 Year Book a treatment of this subject will be found, together with tables showing school attendance, (1) of the population 5-19 years of age, by sex, for the census years 1911, 1921 and 1931, (2) of the total rural and urban populations attending school, by sex, for 1931, and (3) of the population 7-14 years of age, by nativity and sex for 1931.

Section 13.—Blind and Deaf-Mutes.

The 1936 Year Book showed, at pp. 134-135, figures of the number of blind and deaf-mutes by provinces and sex in 1931, together with the number and proportion of such persons as found at the decennial censuses from 1881 to 1931.

¹Not including blind deaf-mutes.

Section 14.—Dwellings and Family Households.

An extensive treatment of this subject, as it came under observation at the Census of 1931, will be found at pp. 136-139 of the 1936 Year Book

Section 15.—Occupations of the Canadian People.*

A "gainful" occupation in the census is an occupation by which the person pursuing it earns money or money equivalent or assists in the production of marketable goods; children working at home on general household work or chores are not considered as gainfully occupied. Similarly, women doing housework in their own homes without wages, and having no other employment, are not included among the gainfully occupied. However, in excluding the "homemaker" or housewife from the so-called "bread-winners" in the population, the census is merely limiting the gainfully occupied to those who receive a money value for their services.

According to the 1931 Census, 3,927,230 persons 10 years of age or over in Canada (excluding Yukon and Northwest Territories) had some gainful occupation on the census date, June 1, 1931. This does not mean that all these people were employed on that date. Rather, what is implied is that this number of persons ac-

* Prepared under the direction of A. J. Pelletier, F.S.S., Chief, Demography Branch, Dominion Bureau of Statistics, by A. H. LeNeveu, M.A., Officer in Charge of Occupational Statistics. Complete occupational statistics for 1931 will be found in Volume VII of the 1931 Census Report. The reader is referred to pp. 134-147 of the Canada Year Book 1929, for an analysis of the 1921 Census of Occupations, and to Section 1, Part I of the Chapter on Labour and Wages in this volume for statistics of wage-earners in Canada.

tually reported some occupation at which they normally earned money or money equivalent, whether so engaged on the first of June, 1931, or not. Some of these, of course, were not employees or wage-earners at all but employers and some were engaged on own account as are most lawyers, doctors, and so on. Some were unpaid family workers, such as farmers' sons, who, though receiving no fixed money payment for their services, assist in the production of marketable goods, and so were regarded at the census as having a gainful occupation.

These 3,927,230 persons 10 years of age or over, who reported gainful occupations at the 1931 Census, represented 37.9 p.c. of the population and 48.1 p.c. of the population 10 years of age or over. The number of males reporting a gainful occupation was 3,261,371 and these represented 60.8 p.c. of all males in Canada and 76.7 p.c. of the total male population 10 years of age or over. Gainfully occupied females in 1931 numbered 665,859 and constituted 13.3 p.c. of the female population and 17.0 p.c. of the female population 10 years of age or over. Females in gainful occupations accounted for roughly 17 p.c. of the total gainfully occupied of both sexes.

Growth of Gainfully Occupied, by Sex.—As is shown in Table 24, there has been a tendency for the percentage of females in gainful occupations to rise while for males the tendency has been downward, at least since 1911. The percentage of males at working ages, *i.e.*, 10 years of age or over, in gainful occupations rose from 74.2 p.c. in 1901 to 79.5 p.c. in 1911, falling to 77.5 p.c. in 1921 and to 76.7 p.c. in 1931. The increase from 1901 to 1911 was probably due in the main to the heavy immigration of male adults into Canada at that time, causing the age distribution of the males to be more favourable to entrance to gainful employment. The fall since 1911 has been due largely to the raising of the school-leaving age and the consequent decline in the percentage of boys in gainful occupations. In 1921, for example, 10.7 p.c. of the boys between 10 and 15 years of age were gainfully occupied as compared with only 6.8 p.c. in 1931, while 76.4 p.c. of the youths between 16 and 19 years of age were following gainful occupations in 1921 as against 67.5 p.c. in the most recent census year.

Females 10 years of age or over have shown a steadily increasing percentage gainfully occupied since 1901, when the percentage was 12.0, until 1931 when it had risen to 17.0. Between 1921 and 1931 the gainfully occupied female population increased by 35.9 p.c. as compared with an increase of only 21.7 p.c. for all females 10 years of age or over. Gainfully occupied males increased by 21.6 p.c. over the same period, which was a slightly lower rate of increase than for the total male population 10 years of age or over, the latter rate being 22.9 p.c. between 1921 and 1931.

In the statistics of Table 24 and in the other tables of this section, percentages are given to the nearest decimal place; in percentage distribution tables no attempt has been made to adjust totals to add exactly to 100.0 since where the numbers are small material error would thereby be introduced in individual items.

24.—Numbers and Percentages of the Population in Gainful Occupations, Classified According to Sex, Census Years 1901-31.

Census Year.	Gainfully Occupied Population.			Percentages of Total Population.			Percentages of Population 10 Years or Over.		
	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.
1901.....	1,782,832	1,544,883	237,949	33.5	56.9	9.1	43.9	74.2	12.0
1911.....	2,723,634	2,358,813	364,821	37.9	62.0	10.8	49.4	79.5	14.3
1921.....	3,173,169	2,683,019	490,150	36.2	59.3	11.5	47.6	77.5	15.3
1931.....	3,927,230	3,261,371	665,859	37.9	60.8	13.3	48.1	76.7	17.0

The more rapid rate of increase of gainfully occupied females than of gainfully occupied males is not a recent phenomenon nor, as Table 25 shows, has it been confined to certain provinces. The ratio is highest in Quebec and Ontario where employment opportunities for females in manufacturing are relatively greater than in other provinces.

25.—Number of Females to Every 1,000 Males in Gainful Occupations, by Provinces, Census Years 1901-31.

Census Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total. ¹

¹ Separate figures for Saskatchewan and Alberta are not available for 1901 as these provinces were not then established.

² Exclusive of the Territories.

Changes in the Age Composition of the Gainfully Occupied.—A comparison of the ages of the gainfully occupied can be made covering the period 1911 to 1931 but only by broad age groups owing to the absence of detailed information by age in the compilations of the 1911 Census. However, the comparative information which is given in Table 26 does indicate a definite ageing of the gainfully occupied population. The falling off in the proportionate importance of the gainfully occupied in the age group 10-24 years of age relative to other age groups is largely due to the steady lengthening of the period the average child remains at school. The larger proportion of the total gainfully occupied in the age group 65 years or over, in 1931 than in 1921 or 1911 was mainly due to the greater importance of this age group in the general population in 1931 than in earlier census years. The percentage of the total gainfully occupied in the age group 65 years or over would have been still greater in 1931 if the same proportion of the population of this group had returned gainful occupations in that census year as in 1921. Actually 55.7 p.c. of the males and 6.2 p.c. of the females 65 years of age or over reported gainful occupations at the 1931 Census as compared with 58.5 p.c. of the males and 6.2 p.c. of the females in 1921, the females showing no appreciable change.

26.—Numbers and Percentages of the Gainfully Occupied Males and Females 10 Years of Age or Over, by Age Groups, Census Years 1911-31.

The proportion of the population having gainful occupations varies considerably at different age periods. As is shown in Table 27, the percentage of children 10 to 15 years of age in gainful occupations is quite small, being somewhat lower in 1931 than in 1921. There is a substantial flow of young persons between 16 and 19 years of age into gainful occupations, about two-thirds of the males and almost one-third of the females between these ages being so reported at the 1931 Census. Ten years of the males between 16 and 19 years of age were gainfully

From 20 to 65 years of age more than 90 p.c. of the males are engaged in gainful occupations. On the other hand, females who are most fully gainfully occupied between the ages of 20 and 24 (the percentage in this age category in 1931 reporting gainful occupations being 42.4) show a decided tendency after 25 years of age to withdraw from the ranks of the gainfully occupied. Only 21.7 p.c. of total females 25 to 34 years of age and 12.0 p.c. of the total 35 to 64 years of age had gainful occupations at the 1931 Census.

In the age group 65 years of age or over, 55.7 p.c. of the males reported gainful occupations in 1931, a much smaller proportion than for the age period 35 to 64 years of age. The percentage of females 65 years of age and over in gainful occupations was only 6.2 in 1931, and in number these amounted to 17,359 persons. It will be apparent that, with almost ten times as many of the former as of the latter in the upper age levels, the problem of the aged worker in industry is largely a male one.

¹ Includes a few persons of "not stated" age. In 1921 such persons were included in the age group 35-64 years.

Occupation Trends, 1891 to 1931.—The chief obstacle in the way of a comparison of occupations by census years is the absence of a uniform scheme of classification of occupations at each succeeding census. Even if the scheme of classification itself had not changed, the difficulty of making a comparison of occupations every decade would still exist owing to the revolutionary changes that have taken place in the nature of the work performed in many occupations with the introduction of machine processes in production. Hence, such a comparison can safely be made only for broad occupational groups such as are shown in Table 28. In this table the group totals for years prior to 1931 have been rearranged to place them on a comparable basis with the 1931 classification, the 1911 figures perhaps being less comparable than those for other years. The only change in the 1931 grouping was the addition of the "accountants" class to the clerical group from the professional service group. In the headnote to Table 28, an explanation is given of the nature of the occupational grouping.

28.—Numbers and Percentages of the Gainfully Occupied Males and Females 10 Years of Age or Over, by Occupation Groups, Census Years 1891-1931.

NOTE.—The occupation group totals in this table account for every person following any one of the types of occupation coming under the specified groups listed here, irrespective of the industry in which the person might be employed. For example, all persons directly engaged in the making or repairing of commodities, e.g., bakers, tailors, machinists, printers, etc., are classified under "Manufacturing" in this table whether employed in the manufacturing industry or not. Similarly, all persons following such a transport occupation as truck driver are listed under "Transportation", whether employed by a trucking concern or factory, store, etc. Clerical workers constitute a separate group as do labourers in all but the primary industries. The labourer on a farm is usually a farm labourer and in a mine, a mine-working labourer, but the labourer in a steel mill is not necessarily a metal worker or engaged in some "process" occupation, nor is the labourer on a steam railway always a transport worker. An industrial grouping of the gainfully occupied for 1931 will be found on p. 145.

¹ This total includes persons in unspecified occupations though these are not shown separately in the table.

² This group does not include agricultural, mining, fishing, or logging labourers.

³ Less than one-twentieth of one per cent.

⁴ The class "accountants and auditors", grouped with professional service in the 1931 classification, has been transferred to the clerical group in this table. This class consists of 17,052 males and 571 females.

The outstanding feature of this table is the decline in the relative importance of agricultural occupations since 1891. At that time over 50 p.c. of the gainfully occupied males found employment in agriculture whereas in 1931 only one-third were so engaged. Other primary occupations have changed little, relatively to all other occupations, over this period. The manufacturing group for 1891 and 1901 probably includes a number of unskilled workers classed with labourers (not agricultural, mining, fishing, or logging) in later census years. There has been a steady growth in the proportion of males engaged in transport and commercial occupations and, since 1911, in the services. Clerical occupations have on the whole shown increasing importance since 1891. It will be noted that the group "labourers" was relatively greater in 1911 and 1931 than in 1921. This may be due in part to the fact that both 1911 and 1931 marked the close of periods when immigration to this country was large. It might be observed here that 24.6 p.c. of the gainfully occupied immigrant males coming to Canada between 1926 and 1931 were found in the group "labourers" at the 1931 Census.

Though the number of females in manufacturing occupations is substantial, there has been both an absolute as well as a percentage decline in this field of employment since 1911. It should be pointed out, however, that the figure for 1931 would have been considerably larger had many of the unskilled workers in factories, classified as "labourers" in the latest census, been included with manufacturing occupations, as in 1921 and 1911. It was not possible to make an adjustment in the table for this class of females. A large part of the decline in the relative importance of manufacturing occupations in providing gainful employment for women has been due to the decrease in the number of dress-makers, milliners, and tailoresses since 1911. The combined total of dress-makers, milliners, and tailoresses was 45,287 in 1911 and in 1931 only 14,649. Allowing for changes in the method of classification in the two years, there still remains a substantially larger number in these occupations in 1911 which does not appear to have been fully counterbalanced by the increase between 1911 and 1931 in the number of female operatives in clothing factories. Personal service is absorbing an increasing proportion of females while the professions and the clerical and commercial occupations, which showed outstanding gains up to 1921, have declined slightly in relative importance since that year. It might be mentioned that the growing importance of personal service occupations has been due in no small degree to the remarkable increase in the number of females in such occupations as "lodging-house keepers", "hairdressers", "waitresses", and "laundry operatives" in recent years.

Detailed Analysis of the 1931 Census of Occupations.—*Occupations by Provinces.*—In considering regional differences in the relative importance of the several occupational divisions which make up the working population, some references to the changes that have taken place since 1921 will be necessary. In the first place, consideration may be given to the group "agriculture". In every province, with the exception of British Columbia, this group of gainfully occupied persons was larger than any other. In the Maritimes, excluding Prince Edward Island from the comparison, the proportion of the total gainfully occupied in agriculture was greater than in Quebec or Ontario though, of course, less than in the Prairie Provinces. About three-fifths of the persons in gainful occupations in Saskatchewan, one-half in Alberta, and just over one-third in Manitoba, were following agricultural pursuits at the time of the 1931 Census. In each province, however, the proportionate importance of agricultural occupations to the whole was less than

in 1921, the decline being most marked in the province of Manitoba. Of the other primary occupations, fishing and logging were relatively more important in the Maritime Provinces and in British Columbia than elsewhere, though even in Nova Scotia and British Columbia only 7 p.c. of the population in gainful occupations in 1931 were found in this group. Over 8 p.c. of the gainfully occupied in Nova Scotia followed mining occupations at the 1931 Census. Alberta and British Columbia, each with approximately 3 p.c. of its gainfully occupied population in the group "mining, quarrying", were the only other provinces with a significant percentage in mining occupations.

The manufacturing group of occupations occupied a relatively more important position in Ontario and Quebec for both males and females than in other provinces, the percentages in these two provinces being 16.1 and 14.4, respectively, in 1931, while for Canada the percentage was somewhat lower at 12.1. British Columbia, with 11.2 p.c. of its gainfully occupied population in manufacturing occupations, and Nova Scotia and Manitoba, each with about 8 p.c., were fairly well represented in the manufacturing division. It is interesting to note that while manufacturing occupations occupied a slightly lower position relatively to other occupations in 1931 than in 1921 in the eastern provinces, their importance was relatively greater in 1931 than in 1921 in the western provinces.

Of the remaining groups it will be noticed that the relative proportion of the gainfully occupied in the "construction", "transportation", "trade", and "finance" groups did not vary appreciably by provinces in 1931, although the construction group was relatively more important in Quebec, Ontario, and British Columbia than in the Maritime or Prairie Provinces and the transportation group was somewhat above the average for the nine provinces in British Columbia, Ontario, and Nova Scotia while commercial occupations showed little difference as between provinces. The service group of occupations constitutes a substantial proportion of the gainfully occupied in each province. As has already been stated, over 50 p.c. of the females in gainful occupations in Canada in 1931 were found in this group, and this was true in every province except Ontario where the percentage was 46.2. In provinces with a more urban population a greater proportion of the gainfully occupied of both sexes combined follow service occupations than in such provinces as Saskatchewan, Alberta, and Prince Edward Island. In each province the service group was relatively more important as a source of employment in 1931 than in 1921 and this appeared to be especially true in Ontario, Quebec, and Manitoba. The clerical group of occupations accounted for 7 p.c. of the gainfully occupied in 1931 in Ontario and Manitoba, with slightly lower percentages in Quebec and British Columbia, while the Maritimes, Saskatchewan, and Alberta were lowest among the provinces. Over 20 p.c. of the females in Ontario and Manitoba, and just under 20 p.c. in British Columbia reported clerical occupations at the 1931 Census. In other provinces the percentage varied between 10 and 16 p.c. The group "labourers" is not strictly comparable by provinces, since it does not include the labourers in the primary divisions of agriculture, fishing, logging, and mining. In addition, differences in the quality of enumeration by provinces at the latest census may also render such a comparison less exact. In this connection it might be noted that the percentage shown for New Brunswick is possibly too high.

In Table 29 will be found the number of males and females in each occupation group by provinces and in Table 30 percentages are given by occupation group for Canada and each province.

Occupations by Sex.—In Table 28 a historical analysis was made of the gainfully occupied in each occupational group from 1891 to 1931. It is of interest to break down some of these broad occupational groupings for 1931 to see what actual occupations are important as giving employment to large numbers of males and females and which of these occupations are almost exclusively male or female though they may be followed by males and females alike.

Occupations in which there were 10,000 or more males, and occupations in which there were 2,500 or more females at the 1931 Census are listed in order of numerical importance in Table 31. The males in the 44 occupations shown in this table totalled 2,583,526 and represented 79.2 p.c. of all males in gainful occupations while the females in the 30 occupations shown in Table 31 accounted for 593,157 females or 89.1 p.c. of all females in gainful occupations. The detailed list of occupations at the 1931 Census comprised 358 occupations in which there were males and 226 in which there were females.

In view of the widespread belief that women are entering a variety of occupations in considerable numbers, it is worth repeating that nine-tenths of the females in gainful occupations are found in the 30 occupations shown in Table 31, and of these some of the most important numerically, such as "domestic servants", "stenogra-

phers", "housekeepers", "nurses", and so on, have always been typically female occupations.

Occupations almost exclusively male include several building trades, such as "carpenters", "painters", "electricians", etc., a few transport occupations like "truck drivers", "sectionmen and trackmen", "chauffeurs and bus drivers", and so on, and certain metal trades, such as "mechanics", "machinists", and "blacksmiths".

Occupations which provide considerable employment for both males and females are "salesmen and saleswomen" in stores, "school teachers", "office clerks", "bookkeepers and cashiers", "retail merchants and dealers", "labourers and unskilled workers" (not in agriculture, mining, fishing, or logging), and the classes "farmers and stock raisers" and "farm labourers".

Occupations by Age.—As has been shown, the proportions of males and females at different ages having gainful occupations vary considerably. In Table 27 the number and percentage of the population under 16 years of age gainfully occupied, were seen to be quite small. Similarly, in the upper age groups there was a very definite falling off, especially after 65 years of age. Entrance to gainful employment begins at an earlier age for certain occupations than for others just as withdrawal from the ranks of the gainfully occupied occurs sooner in some occupational fields than in others. In Table 32, which gives the percentage distribution of males and females, classified according to age, by occupation groups, for 1931, this tendency is clearly indicated.

¹ Less than one-twentieth of one per cent.

² This group does not include agricultural, mining, fishing, or logging labourers.

In the younger groups, 10-13 and 14-15 years of age, the vast majority of boys and girls are employed in agricultural occupations and in personal service, respectively, though in the age group 14-15 years of age about 16 p.c. of the girls were found in manufacturing occupations in 1931. In the group 16-17 years of age and in successive age groups up to the middle working years of life the relative importance of agriculture in providing employment for males declines, the percentage in this group falling steadily up to 35 years of age, to be followed by a regular upward trend from that age onward. From 16 to 24 years of age it will be seen that males become more and more fully represented in all other occupation groups. It will be noted that the percentage of males in the group 18-19 years of age reported as

"labourers" in other than primary pursuits was 16.2. For no other age group did this occupation bulk so largely.

From 16 up to 34 years of age the percentage of females in personal service occupations falls steadily. Clerical occupations, which accounted for only 2.7 p.c. of the gainfully occupied girls 14-15 years of age, actually gave employment to 22.7 p.c. of the females in the group 20-24 years of age. The increasing importance of professional occupations in the adult ages is also noteworthy, only 2.2 p.c. of the girls 16-17 years of age reporting professions in 1931 as compared with 19.9 p.c. in the group 20-24 years of age. It will be observed that, for females, manufacturing occupations were relatively more important in the group 16-17 years of age, their importance as compared with other occupations falling off in the older age groups.

After 45 years of age, as agricultural, occupations begin to account for an increasing proportion of gainfully occupied males, a steadily decreasing percentage is found in manufacturing, transportation, construction, and trade. The decline in the proportionate importance of the transport occupations is very noticeable in the upper age groups. Among females the considerable number of farm operators at the older ages explains the increase in the percentage importance of agriculture in the age groups above 45 years of age. From 45 and up to 70 years of age, personal service occupations likewise employ an increasing proportion of all gainfully occupied females, the percentage falling slightly in the age group 70 years of age or over. The manufacturing, commercial, professional, and especially the clerical groups employ a relatively smaller percentage of women of from 45 years of age onward.

Occupations by Conjugal Condition, for Females.—There is a special economic and social value in knowing what are the types of occupations being followed separately by single, married, and widowed or divorced women. The following table, though showing only the broadest occupation groups, does indicate in what fields single, married, and widowed or divorced women are found and where there may be competition between these classes for employment. It will be noted from Table 33 that in the professions and clerical occupations about 40 p.c. of the single women find employment as compared with approximately 12 p.c. of the married and 10 p.c. of the widowed or divorced. All three classes are fairly evenly represented in commercial and manufacturing occupations. The married women are considerably more heavily concentrated in the personal services than either the single or widowed or divorced. Approximately one-quarter of the widowed are farm operators.

33.—Numbers and Percentages of Gainfully Occupied Females 10 Years of Age or Over, Classified According to Conjugal Condition, by Occupation Groups, 1931.

² The "All Occupations" totals include small numbers of persons in unspecified occupations, not shown separately in this table.

The proportion of females in gainful occupations differs greatly according to conjugal condition. Out of a total of 1,148,742 single women in Canada 15 years of age or over, 535,127 or 46·6 p.c. reported gainful occupations at the 1931 Census. Only 66,798 married females, or 3·5 p.c. of the total 15 years of age or over, had gainful occupations in 1931. The number of widowed or divorced women in gainful occupations at the 1931 Census was 61,335, or 21·0 p.c. of the total 15 years of age or over.

Occupations by Birthplace.—In Table 34 the numbers and percentages of the gainfully occupied, classified according to place of birth, are shown by occupation groups. It will be observed that a greater proportion of the Canadian-born males, European-born males, and especially the United-States-born males were engaged in agricultural pursuits at the 1931 Census than was the case for the gainfully occupied males as a whole. Only 20·8 p.c. of the males born in the British Isles and British possessions reported agricultural occupations at the 1931 Census while the percentage of the males born in Asia in this group was as low as 13·2. However, the latter were proportionately greater in fishing and logging occupations than the males of all birthplaces combined. Incidentally, it will be noted that European-born males in mining occupations constituted 4·5 p.c. of their total number whereas only 1·8 p.c. of all gainfully occupied males in 1931 were found in this group.

Males born in the British Isles and British possessions were more fully employed in manufacturing, construction, and transport occupations than males born elsewhere while, on the other hand, those born in Asia had a much less than average representation in these groups. An almost equal proportion of males for each birthplace shown in the table was found in the trade group, except European-born who had a slightly lower than normal representation. Over 40 p.c. of the males born in Asia were employed in service as compared with about 9 p.c. of the males of all birthplaces combined. Practically all the Asiatic-born were found in the personal service group. Males born in the British Isles and British possessions showed a somewhat greater proportion in the services compared with the total of males in gainful occupations, and particularly so in professional service. The clerical occupations gave employment to a greater proportion of British- and Canadian-born males than of foreign-born males. Males born in Europe and in Asia were considerably more fully employed relatively to British- and Canadian-born males in the group "labourers (not in agriculture, fishing, logging, and mining)", but the United-States-born males had a small proportion of their number in this group, largely owing to their predominance in agricultural occupations.

The proportion of European- and United-States-born females in agricultural occupations was somewhat above that recorded for the Canadian- and British-born at the 1931 Census. European-born females were relatively more numerous and United-States-born females less so in manufacturing occupations in relation to all gainfully occupied females. Females of Asiatic birth show a greater proportion in trade than females of other birthplaces, but the absolute number of the former was so small that the significance of the percentage (15·1) for the females born in Asia is lessened. More than one-fifth of the United-States-born and also of the

Canadian-born females in gainful occupations was engaged in the professions while less than 10 p.c. of the females born in the British Isles and British possessions as well as of those born in Asia, and less than 5 p.c. of the European-born females reported professional occupations at the latest census. The personal services gave employment to 58.3 p.c. of the European-born females in gainful occupations, to 49.4 p.c. of the females born in Asia, and to 45.0 p.c. of those born in the British Isles and British possessions, but only to approximately one-third of the Canadian- and United-States-born females. Females born in Europe and Asia were not found in clerical occupations to anything like the same extent as the Canadian-, British-, or United-States-born females.

Occupations by Racial Origins for Immigrants.—An interesting analysis of the occupations followed by immigrants of various races in 1931 is given in Tables 35 and 36, bringing out more fully some of the occupational characteristics of the British and foreign born indicated in Table 34. For instance, while in Table 34 it is shown

that males born in the British Isles and British possessions had the relatively lower percentage of 20.8 in agricultural occupations than was the case for all males, Table 36 shows that 34.6 p.c. of the males of British stock arriving in Canada between 1926 and 1931 were engaged in agricultural pursuits. Although most of these recent arrivals of British origin have come from the British Isles, it should be explained that in Table 35, which takes in all immigrants irrespective of period of arrival, males of British origin include a number from the United States. This explains why the percentage of immigrant males of British origin in agriculture was 23.2 in 1931 as compared with the lower percentage of 20.8 for males born in the British Isles and British possessions.

² This group does not include agricultural, mining, fishing, or logging labourers.

In addition Table 35 describes some of the chief occupational differences of immigrants of various European racial stocks. A greater percentage of immigrant males of French origin than of British origin is found in agricultural occupations. The high percentage of female immigrants of French origin in professional service is due to the substantial proportion of nuns among the female immigrants of this origin. Males of Central European stock are divided mainly between agricultural pursuits and unskilled labour in other than the primary fields. The Germans and Austrians who have come to Canada are well represented in agriculture, over 50 p.c. of their number being engaged in farming occupations, while only about 25 p.c. of the Central European immigrants of such races as Czech and Slovak

were engaged in agricultural occupations in 1931. It should be noted that most of the latter were of recent arrival in this country. About two-thirds of the female immigrants of Central European stock were employed in personal service at the 1931 Census. The outstanding characteristic of the Dutch is the high percentage (60.4) of the males in agriculture. Immigrant males of Eastern European stock were employed mainly in agriculture though an exceptionally high percentage were labourers in other than primary pursuits. It should be pointed out that over one-third of the Polish male immigrants were classed as labourers, as compared with only one-fifth of the Russians and about one-quarter of the Ukrainians. The Poles, also, were largely of recent arrival in Canada. As is shown in Table 36, almost 40 p.c. of the male immigrants of Eastern European origin coming to Canada over the period 1926 to 1931 were reported as labourers in other than the primary pursuits at the latest census. It is interesting to observe that over 75 p.c. of the female immigrants of Eastern European stock were employed in service in 1931, 73.0 p.c. being found in personal service.

In contrast to other racial groups, the Hebrew immigrants of both sexes show high percentages of their number in manufacturing and commercial occupations. Males of Italian origin who have come to Canada are well represented in the manufacturing group of occupations. Like the Hebrews they are not found to any extent in agriculture. However, the Italians show the largest proportion of any of the racial groups in the class of labourers and unskilled workers. Females of Italian origin are likewise commonly found in manufacturing occupations and are well represented in trade. Over 60 p.c. of the immigrant males of Scandinavian origin were engaged in agriculture and other primary occupations in 1931 while females of this stock were largely employed in personal service. There is not much difference between the occupation distribution of the gainfully occupied born in Asia (Table 34) and that shown in Table 35 for immigrants of Asiatic origin.

36.—Percentages of Immigrant Gainfully Occupied Males, Arriving in Canada since 1921, 10 Years of Age or Over, Classified According to Racial Origin and Period of Arrival, by Occupation Groups, 1931.

NOTE.—This table includes those racial origins making up the bulk of the immigrants to Canada since 1921.

Occupations by Status.—As already explained, the gainfully occupied population is made up of persons whose status is one of the following: (a) employer, (b) own account, (c) wage or salaried worker (wage-earner), or (d) unpaid family worker.

In Table 37 the numbers and percentages of the gainfully occupied of each status as reported at the 1931 Census is shown. Over three-fifths of the males and over four-fifths of the females were reported as "wage-earners".

Totals.....	3,927,230	100.0	3,261,371	100.0	665,859	100.0

Briefly, it might be stated that about 75 p.c. of all males and females of employer status were farmers and stock raisers and 10 p.c. merchants and dealers. Over 60 p.c. of the males on own account were farmers and stock raisers, another 10 p.c. were merchants and dealers and about 5 p.c. were engaged in the various professions. Over 40 p.c. of the females on own account were in personal service, the bulk being lodging-house keepers. Another 25 p.c. were engaged in professions and the large proportion of these were graduate nurses and music teachers. In addition 15 p.c. were following manufacturing occupations in 1931 and the majority of these were dressmakers. Only about 10 p.c. of male wage-earners were engaged in agricultural occupations, while about 17 p.c. were found in the manufacturing group, 13 p.c. in transport occupations, 11 p.c. in the services, and about 21 p.c. were labourers in other than the primary pursuits. About 50 p.c. of the female wage-earners were employed in service, over 20 p.c. were in clerical occupations, and about 14 p.c. in manufacturing. Finally, over 90 p.c. of the males working as unpaid family workers were farmers' sons while 85 p.c. of the females of this status were employed in service in 1931. They were largely nuns engaged in religious work, teaching and nursing, as well as housekeepers and domestic servants. In Table 38 a percentage distribution by occupation group is given for the employer, own account, wage-earner, and no pay classes of the gainfully occupied at the 1931 census.

Occupations by Industry.—In the headnote to Table 28 on p. 132, an explanation is given of the nature of an occupational grouping of the gainfully occupied. There it is explained that the occupation group "manufacturing" includes all persons in occupations directly involved in the making or repairing of the products of industry whether employed in a factory, mine, or any other industry. Similarly, the occupation group "transportation" includes every person employed in such transport occupations as truck drivers, whether employed by manufacturing firms, wholesale houses, railways, or other industrial concerns.

On the other hand, an industrial grouping of the gainfully occupied is not concerned with the type or kind of occupation, but rather with the product made or the service rendered, grouping together all persons in a given industry such, for example, as clothing manufacturing whether directly employed in the manufacturing process, or in the warehousing or sales branch of the business, or in clerical occupations in the office, and so on. Hence "manufacturing" in an industrial grouping of the gainfully occupied includes all persons employed by manufacturing establishments irrespective of occupation, and therefore only those among the persons following manufacturing occupations who are employed in factories. The dress-maker in a store would thus be classified to "trade" in an industrial grouping of the gainfully occupied and to "manufacturing" in an occupational grouping.

It might be mentioned here that at the 1931 Census, for the first time, the working population was classified on a strictly industrial basis as well as on the customary occupation basis.

In Table 39 the numbers and percentages of the gainfully occupied, classified according to sex, are shown by industry groups for 1931. This table should be compared with the occupational grouping for 1931 in Table 28.

39.—Numbers and Percentages of the Gainfully Occupied 10 Years of Age or Over, Classified According to Sex, by Industry Groups, 1931.

Industry Group.	Numbers.			Percentages.		
	Total.	Male.	Female.	Total.	Male.	Female.
Agriculture	1,128,154	1,103,899	24,255	28.7	33.8	3.6

Personal	302,457	97,209	205,248	7.7	3.0	30.8
Unspecified	169,250	165,529	3,721	4.3	5.1	0.6
All Industries	3,927,230	3,261,371	665,859	109.0	100.0	100.0

Where the total in a specific industry group is considerably greater than in the corresponding occupation group, as in the case of manufacturing where the difference amounts to 148,058 males and 27,023 females, it is likely that a substantial proportion of persons in clerical occupations and in the labourers class would be found in such an industry group. Because of their wide industrial range it is worth while showing how clerical workers and labourers were distributed among the various industry groups in 1931. In Table 40, where such a distribution is given, it will be noted that the manufacturing industries employ about one-fifth of all per-

sons following clerical occupations. Incidentally, in relation to the total number of persons of all kinds of occupations employed in each industry the proportion of clerical workers in manufacturing is somewhat less than for transportation, trade, and finance, about the same as in the services but, of course, much greater than for construction or the primary industries. In addition, manufacturing industries employed over one-quarter of the males and over four-fifths of the females in the labourers class. Hence both clerical workers and, especially, the labourers were well represented in the manufacturing group of industries.

¹ Less than one-twentieth of one per cent.

It should be explained that the large proportion of male labourers in the unspecified group of industries is due to the inclusion in this group of the general labourers—about 160,000 in all—at the latest census. The few labourers shown as employed in the primary industries are non-agricultural, mining, etc., unskilled workers who nevertheless are attached to these industries.

Section 16.—Quinquennial Census of the Prairie Provinces.

Under the Census and Statistics Act of 1905 and the Statistics Act of 1918, a census of the population and agriculture of the three Prairie Provinces was to be taken in 1906 and every tenth year thereafter, in addition to the decennial census of the whole Dominion. A census of the Prairie Provinces was, therefore, taken as of date June 1, 1936, and a summary of the results is presented in this Section.

The detailed results of this census have been compiled and will be published by the Dominion Bureau of Statistics.

In considering the results of this census, it should be remembered that, during the quinquennial period from 1931 to 1936, agriculture, the basic industry of the Prairie Provinces, was in a very depressed condition. Furthermore, during this period, large areas of southwestern Manitoba, southern Saskatchewan, and south-eastern Alberta were very seriously affected by drought. These underlying economic conditions should be kept in mind in interpreting the changes in population recorded by the census. There has been a movement of rural population from southern Saskatchewan to the northern part of the arable belt in that province and a pronounced movement to the northern agricultural areas of Alberta. This latter province has shown the greatest population increase and the increase was more largely rural than urban. Indeed, in all three provinces, the proportion of urban population has declined due to the effect of the agricultural depression upon the commerce and industry of urban communities, while the rural population has increased in spite of the conditions of hardship and privation experienced over some wide areas. Rural and urban populations are shown in Tables 47 to 49.

41.—Summary of the Population of each of the Prairie Provinces, as Shown by the Quinquennial Census of 1936, with Comparative Figures for census years 1906-31.

42.—Population of each of the Prairie Provinces, by Electoral Districts, Quinquennial Census of 1936.

NOTE.—Populations of electoral districts in 1931 were given at pp. 83-84 of the 1934-35 Year Book, and for previous censuses at pp. 149-150 of the 1929 Year Book. Since the boundaries of electoral districts are changed by the Redistribution Acts after each decennial census, the populations are not strictly comparable and, therefore, are not repeated here.

Sex Distribution.—Probably the depressed condition of the basic agricultural industry in the Prairie Provinces during the five years prior to the latest census, accounts for the evident exodus of males from Manitoba and Saskatchewan. In these two provinces the increase of population in the five-year period has been accounted for by the increase of females; there was an actual decrease of males in Saskatchewan. In Alberta, the increase of 41,000 in the total population was accounted for by an increase of 18,000 males and 23,000 females. In all three provinces, while there was still an excess of males over females, the proportions between the sexes have been brought more nearly to a balance. The masculinity of the population declined, during the five-year period, from 5.2 p.c. to 3.6 p.c. in Manitoba, from 8.4 p.c. to 7.0 p.c. in Saskatchewan, and from 9.4 p.c. to 8.2 p.c. in Alberta.

Conjugal Condition.—This analysis of the population indicates that the absence of increase of male population during the five-year period as shown above is largely accounted for by the changes in the number of single males. The number of single males decreased considerably in Manitoba and Saskatchewan, but increased normally in Alberta, as shown in Table 44. The married population increased in all three provinces with the largest increase in the age group 35 to 44.

Age Distribution.—In Table 45, showing quinquennial age groups, by sex, in each of the three Prairie Provinces, it may be seen that, in the younger age groups up to 30 years, the balance between the sexes was about normal. It is important to observe that this apparent normality in the groups 20-30 years was brought about by a slight decrease in the males and a large increase in the females between 1931 and 1936. Above this age, however, the males were in excess, especially in the age groups from 40 to 65 years, due, no doubt, to the influence of the heavy immigration, largely of young males, into the Prairie Provinces in the first two decades of the century.

45.—Population of each of the Prairie Provinces Classified by Age Groups and Sex, Quinquennial Census, 1936.

Age Group.	Manitoba.			Saskatchewan.			Alberta.

Racial Origins.—There has been a decline in the population of British races from 1931 to 1936 in Manitoba and Saskatchewan and a slight increase in Alberta. People of French racial origin have decreased slightly in Saskatchewan, but have increased in the other two provinces. Marked increases are shown in the figures for Germans and Ukrainians. These, however, should be interpreted with reserve as there has been a great deal of confusion in the reporting of the Teutonic and Slavic races in the period since the War.*

* See the study entitled "Racial Origins and Nativity of the Canadian People", based on the 1931 Census, and published by the Dominion Bureau of Statistics.

Birthplaces.—Table 47 which shows, in broad groups, the birthplaces of the population of the Prairie Provinces, indicates that from 1931 to 1936, the Canadian born increased in each province, while the British born, United States born, European born, and other foreign born decreased in each province. The almost complete cessation of immigration during the period explains an absence of increase of foreign born, but deaths among foreign born would not entirely account for the decline.

Rural and Urban.—Alberta is the only one of the three Prairie Provinces which did not show an actual decline in urban population in the five years 1931 to 1936, and even in Alberta the growth in urban population was slower than that of total population, so that in this province, as well as the other two, the percentage of the population living in urban communities declined. In Alberta the percentage of the urban population also declined between 1926 and 1931. Otherwise in the Prairie Provinces, up to 1931, as in the remainder of Canada, there had been a tendency for the proportion of the population living in urban communities to increase. This trend, therefore, has been reversed in the latest period.

In Table 49 it may be observed that the excess of males in the population of the Prairie Provinces is much greater among the rural than the urban populations. In fact, in urban communities of over 10,000 population, there was, in 1936, an excess of females in Manitoba and Saskatchewan. In all three provinces during the recent five-year period covered, the excess of males in rural population has declined only slightly, but there has been a very marked decline in the excess of males among urban population in the class 10,000 or over.

¹ The city of Medicine Hat in Alberta had a population, in 1931, of 5,207 males, 5,093 females, 10,300 total, and, in 1936, of 4,723 males, 4,869 females, 9,592 total. In the table it is included in the group over 10,000, in 1931, and in the group 1,000 to 10,000 in 1936. Had it been included in the smaller group in 1931 the totals for this group would have been 26,434 males, 25,001 females, 51,435 total, while the totals for the group over 10,000 would have been 90,333 males, 86,114 females, 176,447 total.

Section 17.—Annual Estimates of Population.

While the populations in different countries are actually counted at decennial or quinquennial censuses, annual estimates of populations are required by modern States for many purposes, such as the calculation of birth, death, and marriage rates, and of per capita figures of production, trade, finance, consumption, etc. In different countries various methods of obtaining annual figures of post-censal populations are adopted. For example, it is possible, with good vital statistics and records of arrivals and departures, to obtain the actual population at any particular date with approximate accuracy by the simple method of adding births and arrivals and subtracting deaths and departures during the period elapsed since the census. This method is impracticable for Canada, with 4,000 miles of common boundary line with the United States, crossed in both directions every day by many thousands of people. In almost all civilized countries, the actual methods of making the estimates vary. Thus, the method of arithmetical progression is widely used in estimating the populations in the older countries of the world; this method involves the annual addition to the population of the country and of particular areas within it of one-fifth or one-tenth of the numerical increase in the last quinquennial or

decennial inter-censal period. In the case of Canada annual figures of population were purely estimates, made on the basis of past increases, prior to the Census of 1931. They have now been worked out on a basis which takes into consideration collateral data back to 1867, and the resulting figures are believed to state the populations at inter-censal periods more accurately than any published prior to 1931.

The new method upon which calculations are based was described at pp. 108-109 of the 1932 Year Book.*

* The table of estimates below and the description of the method upon which calculations are based are the work of M. C. MacLean, M.A., F.S.S., Chief of Social Analysis, Dominion Bureau of Statistics.

59.—Estimates of the Population of Canada, by Provinces, inter-censal years, 1900-36.

NOTE.—At every census the previous post-censal data are adjusted to the newly recorded population figure. Figures for 1867-99 will be found at p. 141 of the 1936 Year Book.

Section 18.—Area and Population of the British Empire.

Since the War the boundaries of the British Empire have been contracted by the voluntary retirement from Egypt in 1922 and expanded by the addition of various territories under mandate as a result of the Treaty of Versailles. The increases of territory were mainly in Africa, where the Tanganyika Territory, Southwest Africa, and portions of the Cameroons and Togoland, with an aggregate area of 736,000 square miles and an estimated population of over 5,000,000 (1921) came under Empire control. In Asia, the territories acquired by mandate from the League of Nations include Palestine and Transjordan, with 1,335,821 inhabitants on an area of 25,802 square miles. In the Pacific, the territories added to the Empire include Western Samoa, the Territory of New Guinea, the Bismarck archipelago and part of the Solomon islands, all of which were formerly German possessions. According to the most reliable estimates, the total area of these regions is 92,141 square miles and the population 445,650.

Statistics of the areas and populations of the territories included in the British Empire in 1931, together with comparative figures of populations for 1921 and 1911, are given in a table on p. 165 of the 1934-35 Year Book.

Section 19.—Area and Population of the World.

Statistics showing the areas and the populations of the various continents, and details of each country, as in 1931, are given in a table on pp. 168 to 169 of the 1934-35 Year Book.

CHAPTER V.—VITAL STATISTICS.*

The collection of vital statistics commenced in Canada, as in England, with the registration of baptisms, marriages, and burials by the ecclesiastical authorities. These registers, maintained by the priests from the first settlement of the country, have made it possible for the vital statistics of the French colony to be compiled from the year 1610.† The system of registration by clergy was continued after the cession of the country to the British, and was extended to the newly-formed Protestant congregations of Lower Canada by an Act of 1795, but the registration, particularly of births, among these latter remained seriously defective, both in Lower Canada and in the new province of Upper Canada, the pioneer settlers often going out into the wilds far from the authority of government and the ministrations of religion. An early attempt was made to remedy the situation through the census, by including a schedule requesting births and deaths for the preceding year, but the efforts made to secure records of births and deaths at the Censuses of 1851 and 1861 produced most unsatisfactory results. Nevertheless, in spite of the inherent unsoundness of securing, at a point of time in a decennial census, a record of births and deaths occurring over a considerable period of time, this method was followed down to 1911, when the obviously untrustworthy character of the results led to the discarding of the data obtained at the inquiry.

In English-speaking Canada, the earlier scheme of registration of baptisms, burials, and marriages by the clergy was succeeded after Confederation by Acts for the enforcement of registration of births, deaths, and marriages with the civil authorities. Such Acts were passed in Nova Scotia in 1864, in Ontario in 1869, in British Columbia in 1872, in Manitoba in 1881, in New Brunswick in 1887, and in Prince Edward Island in 1906. The provinces of Saskatchewan and Alberta were not established until 1905 and, until provincial Acts were passed after this date, civil registration in these provinces was governed by ordinances for the Northwest Territories, the first of which was passed in 1888.

The Dominion Government instituted in the early '80's a plan for compiling the annual mortuary statistics of cities of 25,000 population and over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax, and Saint John. By 1891 the list had grown to 25, at a time when, in most of the provinces, the only birth and death statistics were those of the municipalities. Upon the organization of provincial bureaus of vital statistics, however, this work was abandoned, though a conference of Dominion and provincial officials, held in 1893, passed a resolution calling upon the provincial and Dominion authorities to co-operate in the work of collecting, compiling, and publishing the vital statistics of the Dominion. This resolution had no immediate practical results in securing accurate or comparable vital statistics.

The 1912 Commission on Official Statistics, recommended that "for the Dominion, now engaged in building up its national unity, it is important that uniform data should render possible to statisticians the institution of true interprovincial

* This chapter has been revised by W. R. Tracey, B.A., Chief, Vital Statistics, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Population".

† For a summary of the vital statistics of the Roman Catholic population from 1610 to 1883, see the Statistical Year Book of Quebec, 1921, English or French edition, p. 51. For details, by years, of this movement of population, see Vol. V of the Census of Canada, 1871, pp. 160-265, and Vol. IV of the Census of Canada, 1881, pp. 134-145.

and international comparisons. By effective co-operation of the provinces with the Dominion, this object should be capable of attainment without sacrificing the liberty of each province to satisfy its own special statistical requirements". Yet, prior to 1920, it was impossible to compile any satisfactory series of vital statistics figures for Canada as a whole. Among the obstacles to such a national compilation were the inequalities of registration between the provinces, the lack of uniformity in classification and in the method of presentation, the omission in some cases of important data, the choice in some cases of the fiscal instead of the calendar year as the unit of time, and the fact that for some of the provinces within comparatively recent years the series of publications was broken, while for New Brunswick no provincial vital statistics at all were published from 1895 until 1920.

Co-operation was finally effected as a consequence of the establishment of the Dominion Bureau of Statistics under the Statistics Act of 1918, which specifically provided that the Bureau should publish an annual report on vital statistics. A scheme was first drawn up in the Bureau and submitted to the various provinces; then Dominion-Provincial conferences on vital statistics were held in June and December, 1918, when final discussions took place.

In 1919, as a result of conference, a plan was devised whereby the Bureau of Statistics and the Registrar General's office in each province would co-operate in producing National Vital Statistics for the Dominion. Under this national system, while registration of births, deaths, and marriages is carried out as heretofore by the provincial authorities, the legislation of each province conforms in its essentials to a model bill, prepared by the Dominion Bureau of Statistics, one of the features of which was compulsory registration. The Bureau of Statistics undertakes compilation and tabulation.

Under the scheme outlined above, the vital statistics for all the provinces except Quebec were secured and compiled on a uniform basis for the years 1921 to 1925. The annual reports for these years may be obtained on application to the Dominion Statistician.

Quebec has been included in the registration area as from Jan. 1, 1926, from which date her statistics are on a comparable basis with those of the other provinces. The final reports for 1926 to 1934, including the statistics of all the nine provinces, have appeared and may be procured from the Dominion Statistician.

Two important considerations should be borne in mind by the student who uses either the tables which follow or the detailed reports issued by the Bureau of Statistics for comparative purposes. First, in spite of the improvements of the past decade, registration generally, and the registration of births in particular, is not universally carried out. The great extent of the country and the isolation of many of its inhabitants partly account for this unsatisfactory situation. Secondly, the very considerable differences in the age and sex distribution of the population in different provinces make comparisons of crude births rates and crude death rates, as among the provinces, unfair and misleading. All rates in this chapter have been recalculated on the basis of the revised estimates of population given on p. 153.

Yukon and Northwest Territories.—The vital statistics of Yukon and the Northwest Territories have been collected and compiled since 1924. They are not, however, presented with those of the nine provinces in the tables of this chapter because the figures are not regarded as complete, the details are in many cases not available, and the small and varying population is not known with sufficient accuracy for each year to enable the rates to be calculated. As these territories contain less than 1/700th of the population of Canada, their vital statistics are a negligible

factor in the total. Births, marriages, and deaths in Yukon and the Northwest Territories, for the years 1924-35, are summarized in the statement herewith:—

VITAL STATISTICS OF YUKON AND THE NORTHWEST TERRITORIES, 1924-35.

1935.....	58	27	69	214	63	162

The vital statistics of the provinces are taken up in the following order: births, marriages, deaths, and finally natural increase.

Section 1.—Births.

Throughout almost the whole of the civilized world the birth rate has, in the past generation, been on the decline, though the consequent reduction in the rate of natural increase has been partly offset by the synchronous decline in the death rate.

The crude birth rate of England and Wales, for example, was 35.4 per 1,000 population on the average of the decennium 1871-80, 32.5 in 1881-90, and 29.9 in 1891-1900. In 1913 the birth rate was 24.1, and, though it rose to 25.5 in 1920, it fell again to 22.4 in 1921, 19.7 in 1923, thence by successive stages to 16.6 in 1927, rising to 16.7 in 1928, but thereafter falling gradually each year to 14.4 in 1933, with a slight rise to 14.8 in 1934.

Similarly, in France the crude birth rate declined from an average of 25.4 per 1,000 population in the 1870's, 23.9 in the 1880's and 22.2 in the 1890's to 21.4 in 1920 and 19.1 in 1923, falling slightly to 19.0 in 1925 and again to 18.8 in 1926, 18.1 in 1930, 17.5 in 1931, 17.3 in 1932, 16.3 in 1933, and to 16.1 in 1934. In Germany, again, the crude birth rate was 39.1 in the 1870's, 36.8 in the 1880's, 36.1 in the 1890's, 25.9 in 1920, 20.7 in 1925, 17.5 in 1930, 16.0 in 1931, 15.1 in 1932, and 14.7 in 1933. The 1934 rate showed a marked recovery to 18.0.

In Canada the crude birth rate still stands at a comparatively high figure, being 20.3 per 1,000 in 1935. This, however, is largely due to the influence of Quebec, where the rate, although declining, stood at 24.6 per 1,000 in 1935, as compared with 17.2 per 1,000 in Ontario. In the other provinces the figures varied from a low of 13.6 in British Columbia to a high of 24.2 in New Brunswick.

Birth statistics are given by sex in Table 1, p. 158. Table 2 gives the number of live births in cities and towns of 10,000 population and over for the years 1931 to 1935 inclusive. For some years previous to 1930 there was a definite tendency for such births to increase but the figures given indicate an opposite trend since that year.

Sex of Live Births.—Table 1 shows the number and proportion of live male and female births reported for each province of Canada during the calendar years

1933, 1934, and 1935, with averages for the five-year periods 1921-25, 1926-30, and 1931-35. The figures for Quebec commence only with the year 1926, when that province entered the registration area, and the totals for Canada are limited in the same manner in consequence. Every province shows an excess of male births for the years or averages shown in the table. The table shows that among every 1,000 born in 1935 in the whole of Canada, 512 were males and 488 females. In other words, there were 1,047 males born to every 1,000 females.

1.—Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1933-35, with Averages for 1921-25, 1926-30, and 1931-35.

NOTE.—For corresponding figures for single years 1921-25, see p. 165 of the Canada Year Book for 1927-28, for those for 1926-30, p. 156 of the Canada Year Book for 1933 and those for 1931-32, p. 156 of the 1936 Year Book.

Nativity of Mothers.—Table 3 shows, by provinces, the percentages of legitimate children born alive to Canadian-born, British-born, and foreign-born mothers, respectively, for the years 1933, 1934, and 1935. The influence of the limited immigration in past years is reflected in the figures. In the Prairie Provinces of Manitoba, Saskatchewan, and Alberta, where the percentages born to foreign-born mothers in 1933 were 25.9, 36.3, and 40.4, respectively, they were 21.8, 30.5, and 34.6, respectively, in 1935. Thus more and more of the children of the West are coming within the class of third generation Canadian.

Fertility Rates.—The crude birth rate of a young country is subject to influences which vitiate comparison with older lands. These influences are the result, to some extent, of differences in age or sex constitution or in conjugal condition. For this reason birth rates are frequently based on the number of births per thousand women within suitably chosen age-groups. Such rates are commonly known as fertility rates or nuptial birth rates. At pp. 150-152 of the 1936 Year Book specific fertility rates of married women between the ages of 15 and 49 years were given, by provinces, for 1921, 1922, and 1930-32. Such statistics have not been compiled for more recent years, and the interested reader is referred to that table for this

Multiple Births in Canada.—During the ten-year period 1926-35, out of a total of 2,367,336 recorded confinements 28,685 or 1 in 82.5 were multiple confinements. Of these 28,400 were twin and 283 were triplet confinements, while one, in British Columbia in 1931, was a quadruplet confinement from which all the children died within a few hours of birth. The remaining multiple confinement resulted in the birth of the Dionne Quintuplets (May 28, 1934).

Table 4 shows the incidence of multiple births in each year from 1926 to 1935. In 1935 one in every 87 confinements was a twin confinement, a proportion which is fairly representative for the other years as well. There were only 34 triplet confinements in 1935. Of the children born alive or dead one in every 43 was the product of a multiple confinement. For children born alive the proportion was one in 45 and for children stillborn one in 21. In the multiple confinements stillborn children formed 5.9 p.c. of the total births as against 2.8 p.c. in single confinements.

4.—Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1926-35.

¹ Including 4 females born alive in a quadruplet confinement. all females, born alive.

² Including Dionne quintuplets,

Ages of Parents.—Table 5 shows the age distribution of married fathers and mothers in the year 1926 (the first year for which the figures are available for the whole of Canada) and for 1932-34. The fathers and mothers in each of these years are arranged according to age and then divided into four equal groups. Each point of age at which a separation comes is called a quartile. To obtain these points of age it is assumed that those in the same year of age are evenly distributed from its lower to its upper limit. In similar manner the deciles divide fathers or mothers in each year into ten equal groups.

In 1934 one-quarter of the married fathers were under 28.04 years of age, one-half under 32.78 years and three-quarters under 38.72 years. One-quarter of the married mothers were under 24.22 years of age, one-half under 28.52 years and three-quarters under 33.91 years. Nine-tenths of the fathers were under 44.33 years and nine-tenths of the mothers under 38.51 years. It will be noted that the general tendency of the quartile and decile points over the latest three years is in an upward direction, although exceptions to this trend in 1934 are seen in the third quartile and the sixth and seventh deciles for fathers, and the eighth decile for mothers. In every case, except in the ninth decile for fathers, the 1926 figure is, however, appreciably greater than that for 1934. In other words, parents, generally speaking, are somewhat younger than in 1926 although for the years 1932-34 the trend has been generally upwards.

Birthplaces of Parents.—Table 6 classifies the children born in 1934 and 1935 by country of birth of parents, and furnishes some idea to what extent the coming generation of Canadian born will be the offspring of Canadian-born, British-born or foreign-born parents. The term "country not specified", under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. Between 1926 and 1935 the percentage of births for which both parents were born in Canada rose from 61.4 in 1926 to 65.4 and 66.4 for 1934 and 1935, respectively.

6.—Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1934 and 1935.

¹ Less than one-tenth of one per cent. ² This figure gives the number of children whose fathers and mothers have the same origin. The difference between this figure and the total number of births represents the number of children whose fathers and mothers are of different origins. ³ This excludes the percentage of "mixed parentage", i.e., parents not of the same origin. ⁴ Including "Galician" and "Bukovinian".

Illegitimacy.—The ratio of illegitimate to total births is, generally speaking, low in Canada as compared with other countries. The steady increase which is noticeable in recent years is probably due, in some measure, to more complete data.

Out of 221,303 live births in the nine provinces of Canada in 1934, 8,070, or 3.65 p.c., were returned as the issue of unmarried mothers. Figures for 1935 show a total of 221,451 live births, of which 8,344, or 3.77 p.c., were returned as the issue of unmarried mothers. Out of this number, 4,311 were males and 4,033 females—a ratio of 1,069 males to every 1,000 females, as compared with 1,049 males per 1,000 females in 1934, and a general 1935 rate for all live births of 1,047 males to 1,000 females. (See Table 8.)

Stillbirths.—Statistics of the number of children born dead in 1935 are shown below for Canada, according to the status and age of the mother. Stillbirths to unmarried mothers were 4.0 p.c. of total illegitimate births in 1935, whereas total stillbirths were only 2.8 p.c. of total births in the same year.

9.—Stillbirths, Classified by Age of Mother, by Provinces and Legitimacy of Child, 1935, with Averages or Totals, 1926-35, and Ratios to Totals, 1933, 1934, and 1935.

Section 2.—Marriages and Divorces.

Subsection 1.—Marriages.

The marriage rate in modern countries of the western world is appreciably influenced by the general level of prosperity prevailing. Marriages in such English-speaking countries, for instance, as the United Kingdom, the United States, Canada, and Australia tend to increase in "good times" and to diminish in "hard times", when great numbers of those who are contemplating marriage are led to postpone the event. Thus an examination of the figures for individual years over the past decade clearly shows that marriages reached a peak in 1929 after which the recession was steady and marked until 1932; for 1933 there was an improvement, though of little more than 2 p.c. over 1932, for 1934 a further improvement of over 14 p.c. was recorded, and the 1935 figures were more than 5 p.c. above those of 1934. This general trend for Canada as a whole was followed in the figures for each province, although in the cases of Prince Edward Island and Alberta the large increases in 1934 were not held in the following year.

Summary statistics of marriages and marriage rates, 1933-35, with averages for 1921-25, 1926-30, and 1931-35, are given in Table 32, p. 190.

Age at Marriage.—The average age of all bridegrooms in the Dominion in 1934 was 29.1 years and that of all brides 24.9 years. The average excess of the bridegroom's age was thus 4.2 years. It may be noted in Table 11 that when the contracting parties are grouped by age of bridegroom, the average difference in age is less for the younger groups, grooms under 20 being 0.3 years younger than the brides, while the excess of the average bridegroom's age was 1.6 years in the group 20-24, and steadily increased for each quinquennial age group until it was 11.6 years for the bridegrooms 50 years and over in 1934. On the other hand, when the parties are grouped by the age of the bride, the same regularity is not shown. In the case of brides in the age groups 25-29 years and 30-34 years, the bridegrooms approximate most closely in age to their brides. Since these tables are based upon all marriages contracted during the year, the figures given should not be understood to signify the average ages at first marriage. Out of each 1,000 bridegrooms in 1935, 926 were bachelors, 63 widowers, 11 divorced men; out of each

1,000 brides, 950 were spinsters, 41 widows, 9 divorced women. The first year in which as many as 1 p.c. of those marrying had previously been divorced was 1928. The comparison between the figures of divorces granted, as shown in Table 15 of this chapter, and the number of divorced persons re-married is of some interest. Thus 1,376 divorces were granted in 1935, while 814 divorced males and 696 divorced females married again. This of course does not mean that these were the same persons. Table 12 gives the average ages of brides and grooms by provinces.

11.—Differences in Ages of Bridegrooms and Brides, 1934.

Nativity of Brides and Bridegrooms.—The majority of marriages contracted in the western provinces in past years were between persons born outside Canada. This condition, however, is being quickly changed and such percentages in all the western provinces show a general reduction over the past few years. (See Table 13.) Both Canadian-born brides and bridegrooms are now in the majority in each province, and in the Maritime Provinces and Quebec they show a marked predominance. Taking Canada as a whole, over 76 p.c. of all grooms and 84 p.c. of all brides in 1935 were born in Canada; these are the highest percentages shown for the period covered by the statistics.

13.—Percentage Distribution by Nativity of Persons Married in Canada, by Provinces, 1933, 1934, and 1935, with Averages for 1921-25, 1926-30, and 1931-35.

NOTE.—For figures for single years 1921-25, see the 1929 Year Book, p. 166; for 1926-30, the 1933 Year Book, pp. 163-163; and for 1931-32, the 1934-35 Year Book, p. 189.

Subsection 2.—Divorces.

For many years subsequent to Confederation the number of divorces granted in Canada was very small, 1883, with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in these years.

One effect of the War was to increase divorce. The causes may be found in the generally unsettling psychological influences of the war period, and the long separations between men on active service and their wives. The provision of new facilities for divorce is also to be considered; owing to a decision of the British Privy Council, divorces in the Prairie Provinces have, subsequently to 1918, been granted by the courts of these provinces, so that Ontario and Quebec have since then been the only provinces in which the applicant for divorce must secure a special private Act of Parliament. In 1930, however, an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce cases to the Supreme Court of Ontario.

The above-mentioned causes tended to increase the number of divorces granted in Canada, which grew steadily from 114 in 1918 to 875 in 1930. The numbers are those of final decrees, which alone really constitute divorces. In 1931 the number decreased to 692, this being largely due to the transfer of jurisdiction in Ontario divorces from the Parliament of Canada to the Supreme Court of the province, with the consequent delay between the granting of the decree *nisi* and the decree absolute. Since 1931 there has been an increase of almost 100 p.c. in the total number of divorces granted. All provinces except Quebec show increases over that year. The statistics of divorces granted in the years from 1911 to 1936 inclusive will be found in Table 15. (For divorces in each year prior to 1911 see the 1921 Year Book, p. 825.)*

15.—Statistics of Divorces Granted in Canada, 1911-36.

NOTE.—Only three divorces have been granted in Prince Edward Island since Confederation, one in 1913, one in 1931 and one in 1935. In consequence of a decision of the British Privy Council, divorces in Manitoba, Saskatchewan, and Alberta have, subsequently to 1918, been granted by the courts of these provinces.

¹ Includes one judicial separation. ² Includes one not effective till court costs are paid. ³ One by Parliament, remainder by courts. ⁴ Granted by courts. ⁵ Two granted by Parliament, remainder by courts. ⁶ Includes one in Prince Edward Island. ⁷ Three granted by Parliament, remainder by courts. ⁸ Four granted by Parliament, remainder by courts.

Section 3.—Deaths.

Within the past century, and more especially within the past generation, there has occurred throughout the countries of the white world a notable decline in the death rate, except where man has brought death upon himself through wars and the aftermath of wars. How far this decline has been due to advances in medical science, how far to better sanitation and how far to the improvement in the general conditions of living, as a result of the increase in the productive power of humanity, is in dispute, but concerning the facts there is no doubt.

* The General Statistics Branch of the Dominion Bureau of Statistics publishes a bulletin on Divorce showing the sex of applicants and the number of persons re-married together with comparisons with certain other countries. Application for this bulletin should be made to the Dominion Statistician.

Perhaps the most impressive testimony regarding this decline in the death rate is furnished by the mortality statistics of Sweden, where vital statistics have been kept with great accuracy for the whole nation ever since 1750. There, the crude death rate declined from an average of 27.4 per 1,000 in the decade 1751-60 to 14.3 in the decade 1911-20 and to 11.2 in 1934.

Similarly, in England and Wales, the crude death rate, which was 22.5 per 1,000 in the 60's, 21.4 in the 70's and 18.2 in the 90's of the past century, declined to 15.4 in the first decade of the present century and 12.1 in the third; it was 11.8 in 1934. In Scotland, again, the average rate was 22.1 in the '60's, 21.8 in the '70's, 18.6 in the '90's, 13.9 in 1921-25, 13.6 in 1926-30, and 12.9 in 1934.

There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was 15.3 per 1,000, owing to the influenza-pneumonia epidemic, as against 12.0 in 1917 and 11.9 in 1919. Over a period, however, these abnormalities are reduced to negligibility, and it remains generally true that from decade to decade there is a decline in the crude death rates of the countries of the white man's world.

As for Canada, while the period elapsed since the introduction of complete and comprehensive vital statistics in 1920 has been too short to establish a definite downward trend, the rate of 12.4 per 1,000 for that year, in the eight provinces then included in the registration area, was substantially higher than in any subsequent year. A decided improvement is shown in the deaths and death rate of Quebec for the years 1933-35. This has been in evidence ever since 1926, but latterly Quebec has shown a lower rate than any of the provinces to the east of her.

Subsection I.—General Mortality.

Summary statistics of total deaths and crude death rates in recent years are given in Table 32, p. 190, for Canada, by provinces. The absolute number of deaths as well as the crude death rate increased in 1935. In fact total deaths were greater than they have been since 1930, but the death rate was increased very little over the 1933 level although the advantage gained in 1934 was lost. All provinces except Prince Edward Island contributed to the increase.

Age Distribution of Decedents.—The numbers of males and females dying in the nine provinces in 1934 and 1935 are given by single years of age up to 5 and by quinquennial age groups thereafter in Table 16, together with the percentage of deaths occurring in each group in each of these years.

The quartile and decile ages of decedents for the years 1926, 1933, and 1934 are given for each sex and for the two sexes combined in Table 17. The fifth decile and second quartile (or the median) both mark the middle points of the arrays, and the deciles, dividing each half into five groups, give a more detailed picture of the age distribution in each half than do the quartiles. It is shown very definitely that the average ages of decedents have been increasing steadily. The method of construction and interpretation of this table is given on p. 162 in connection with a similar one showing quartile and decile ages of married fathers and mothers.

Standardized Death Rates.—While the crude death rate gives the actual mortality per 1,000 of population, the differing age constitution of the population in different communities and the high mortality among infants and elderly people make the crude death rate no true test of the relative expectation of life in such communities. Where the age and health constitution of a particular group is particularly favourable to low mortality, for example among the selected lives of soldiers in peace time, the crude rate will naturally be lower than elsewhere.

When comparisons of the rates of mortality in several communities are made by age groups the effects of differences in age constitution between these communities are eliminated, but by a rather cumbrous process which does not bring together and express as a single figure the facts of the situation. It has therefore been considered desirable to adopt a particular community as a standard, and to find what the death

rates of other communities would have been if the age and sex constitution of their population had corresponded to those of the community taken as a standard. The "standard" population chosen for this purpose in England and Wales and the United States is the "standard million", based on the age and sex distribution per million of the population of England and Wales at the Census of 1901. That age and sex distribution was as follows:—

Age Group.	Both Sexes.	Males.	Females.
All ages.....	1,000,000	483,543	516,457
Under 5 years.....	114,262	57,039	57,223
5-9 years.....	107,209	53,462	53,747
10-14 years.....	102,735	51,370	51,365
15-19 years.....	99,796	49,420	50,376
20-24 years.....	95,946	45,273	50,673
25-34 years.....	161,579	76,425	85,154
35-44 years.....	122,849	59,394	63,455
45-54 years.....	89,222	42,924	46,298
55-64 years.....	59,741	27,913	31,828
65-74 years.....	33,080	14,691	18,389
75 years or over.....	13,581	5,632	7,949

Regarding the standard million of England and Wales the Registrar General says: "As the population of this country in 1901 included relatively few infants and old people it forms a standard exceptionally favourable to low mortality". The relative fewness of old people in the population is presumably due to the great increase in English population during the 19th century; the relative fewness of infants, to the marked reduction of the birth rate between the 1870's and the end of the century.

The process above described has been applied to the population of the eight provinces, the former registration area of Canada, for the years 1921-35 and to the population of Quebec for the years 1926-35 in Table 18. Of the rates there given, those for 1921 and 1922 have been calculated directly, the proportion of the population in each sex and age group according to the Census of 1921 being assumed to hold true for 1922 also; similarly the rates for 1930, 1931, and 1932 have been calculated directly from the proportions shown in each sex and age group at the Census of 1931. For the intervening years, 1923-29, for which estimates of total population but not of population by age groups were available, the following method was adopted. The proportions which the standardized rates of 1921 and 1922 (correct to three decimal places) bore to the crude were averaged, similarly those of 1930 and 1931, and the change was assumed to have taken place in an arithmetical progression during the intervening seven years. Quebec not having been in the registration area in the year 1921, a standardized rate was not available for that year or for 1922, but as the proportion of the standardized rate to the crude depends primarily on the sex and age distribution of the population, and as this distribution was known for 1921 and 1931, and the actual proportion of standardized rate to crude rate for 1931, it was possible to compute a theoretical proportion for 1921. The same method was followed for the total of the nine provinces. The rates for 1933-35 have been computed on the assumption that the arithmetical progression, to which reference has been made, continued over those years.

In all of the eight provinces for which 1921 figures are given the proportion of the standardized rate to the crude was higher in 1921 than in 1931; in other words, the age distribution had become more unfavourable in the later year. In the Maritime Provinces, Quebec and Ontario the process of "standardizing" the death rate results in a reduced rate. This is particularly true of Prince Edward Island, which has the largest proportion of aged persons of all Canadian provinces. In the western provinces, on the other hand, the standardized rates are higher than the crude.

¹ Quebec was not included in the registration area prior to 1926.

² Revised since the publication of the 1936 Year Book.

Causes of Death.—More than 86 p.c. of deaths recorded in Canada in the years 1931 to 1935 were due to the 32 specific causes named in Tables 19 and 20. In these tables the groupings are in accordance with the revision of the International List in 1929, which was first applied to Canadian mortality statistics for the year 1931. In the chart which accompanies the tables, the main object has been to attain the greatest degree of comparability possible over the whole period 1926-35. For this purpose it has been necessary to depart somewhat from the grouping of Tables 19 and 20.

In any analysis of the relative importance of the causes of death it must be remembered that the Canadian population is an ageing one—that is, the average age is being advanced year by year due to the long-term influences of a falling birth rate, falling specific death rates, and very limited immigration. Since 1913 immigration has been very much curtailed and its effect on age distribution of population is illustrated by the movement of what may be termed the "immigration hump" (that increment of population due to extensive immigration before 1913). This is gradually passing up the age scale. Further, due to the improvements in sanitation and health conditions generally, the average age at which death takes place has been pushed gradually higher. All these factors tend to thrust those causes which are commonly associated with advancing years to the fore.

Some of the effects of the ageing of the population can be observed by the comparison of crude and standardized mortality rates for individual causes of death in 1921 and 1931, since standardized rates are calculated in order to eliminate the effects of changes in sex and age composition of the population. Cancer provides a pronounced example of the ageing effect. The crude rate for cancer was 75.3 in 1921 and in 1931 it was 95.8. The increase was thus 27 p.c. The standardized rate, however, was 72.7 in 1921 and 81.4 in 1931, an increase of only 12 p.c. It may be stated, therefore, that roughly more than half of the increase in the cancer death rate between 1921 and 1931 was accounted for by the ageing of the population. Nevertheless, cancer shows a persistent increase over the years in spite of all efforts to control its spread. Diseases of the heart and arteries are two other important causes which affect people of advancing years and which have shown substantial increases. In the case of diseases of the heart, the crude rate showed an increase of 25.5 p.c. between 1921 and 1931, but, again, the standardized rate increased by only 9 p.c. The crude rate for diseases of the arteries advanced by no less than 71 p.c. and the standardized by 50 p.c. over the decade. For nephritis, a disease which falls in the same general class, the increase in the crude rate was 28.5 p.c. and in the standardized, 12.5 p.c. Pneumonia is particularly fatal among those of advanced years and among infants; the same influences as have been mentioned have, no doubt, affected the figures for this disease.

¹ The numbers given in this column refer to the International List of Causes of Death, as revised in 1929 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate, or abridged form, is accepted in almost all civilized countries.

DEATH RATES PER 100,000 POPULATION IN CANADA

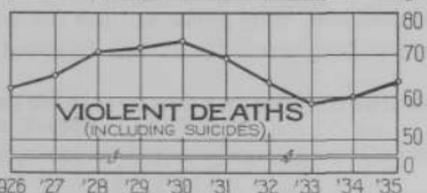

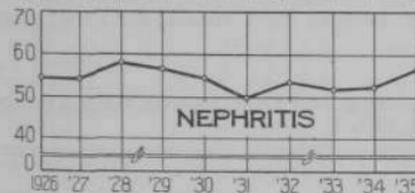

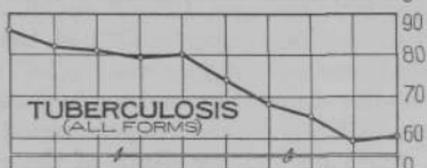

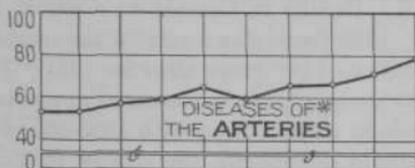

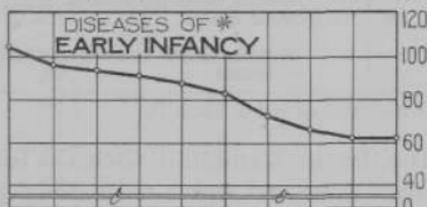

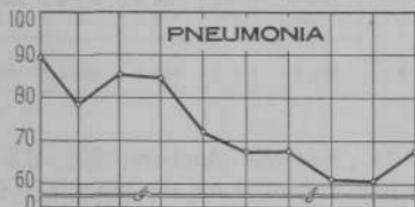

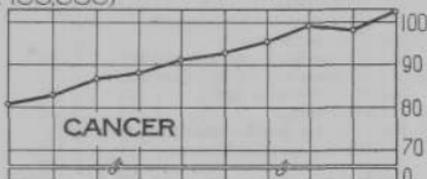

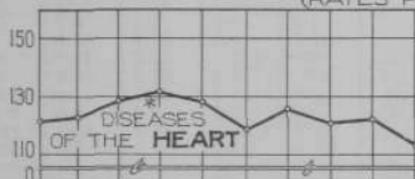

1926-1935

(EXCLUSIVE OF THE NORTHWEST TERRITORIES AND YUKON)

EIGHT IMPORTANT CAUSES OF DEATH

(RATES PER 100,000)

* The rubrics (of the International List) included in the indicated groups have been selected to preserve the greatest degree of continuity possible. For this purpose it has been necessary to depart in these cases (indicated by the asterisks) from the groupings in Tables 19 and 20. In all other cases the classification is the same as shown in the tables.

For footnote, see end of Table 19.

Deaths in Canadian Cities.—Table 21 gives the numbers of deaths in Canadian cities and towns of 10,000 population and over for the years 1931-35, together with averages, 1926-30 and 1931-35. Deaths in Canada as a whole declined steadily for the period 1931-34, but for 1935 there was a substantial increase and the figure for that year was 105,567, or almost 1,000 more than for 1931. The total deaths of the 67 cities listed in Table 21 show a slightly increased proportion of the population for the five-year period 1931-35 as compared with 1926-30. For 1932, which marked the depth of the economic depression, the deaths in these cities increased, thus going against the general trend for Canada; for other years, however, the general trend was followed.

Comparative Crude Death Rates of Different Countries.—In Table 22 will be found a comparative statement of the crude death rates of various countries for the latest available year. Those of the provinces of Canada are also given for comparison. The Netherlands, New Zealand, Australia, Canada, South Africa, and Norway are the only countries with death rates under 10.0 per 1,000 of population. The low death rates in the Prairie Provinces are in all three cases due in part to a favourable age distribution of population.

Subsection 2.—Infantile and Maternal Mortality.

In recent years a great part of the energy devoted by the medical profession and sanitarians to effect a decline in the death rate has gone to reduce infantile mortality, and in this field a large measure of success has been attained. In Canada, the Dominion, provincial, and municipal health authorities have all taken part in the struggle to reduce infantile mortality, and usually, in the absence of epidemics, each year is showing an improvement. In the fifteen years for which the figures are available there is evident a very considerable decline in infantile mortality. In 1921 the infant death rate for Canada (using figures from provincial sources for Quebec) was 102 per 1,000 live births. This rate had been reduced to 71 in 1935. Table 23 gives figures for the whole of Canada for the years 1931 to 1935 and averages for the five-year periods 1921-25, 1926-30, and 1931-35. The infantile mortality in Quebec exceeds that in any other province, although a study of the rates shows that steady improvement has been made in the ten-year period during which the province has been included in the registration area. In Canada as a whole over 6,000 infant lives were preserved in 1935 which, under conditions prevailing in 1926, would probably have been lost.

23.—Infantile Mortality, by Provinces, together with the Rate per 1,000 Live Births, 1931-35, with Averages for 1921-25, 1926-30, and 1931-35.

¹ Quebec was not included in the registration area prior to 1926.

² Exclusive of the Territories.

Infantile Mortality by Causes of Death.—Twenty-one principal causes of death accounted in the years 1926 to 1935 for between 91 and 92 p.c. of the infantile mortality experienced in the Dominion, as is shown in Table 24. It is noteworthy that four causes present at birth, *viz.*, premature birth, injury at birth, congenital debility and congenital malformations, accounted for nearly 44 p.c. of the infant deaths of 1935. This percentage shows a definite increase in the years covered. In 1926 it was 41.4 and in 1930 42.3, and since the total number of infant deaths has decreased by no less than 34 p.c. in the interval since 1926, great improvement in the post-natal care of infants is indicated. In the years 1934 and 1935, 49.0 p.c. and 49.2 p.c., respectively, of all infants who died were less than one month old, and 34.9 p.c. and 35.3 p.c., respectively, were less than one week old, as is shown in Table 25.

24.—Infantile Mortality in Canada by Principal Causes of Death, 1926, 1934-35.

NOTE.—Figures for the former registration area for the single years 1921 to 1924 will be found at pp. 182-183 of the 1927-28 Year Book, and for 1925 to 1927 at pp. 177-178 of the 1929 Year Book. Figures for the whole of Canada for the years 1927 and 1928 will be found at pp. 138-140 of the 1932 Year Book, for 1929 and 1930 at pp. 177-178 of the 1933 Year Book, and for 1931, 1932 and 1933 at pp. 202-203 of the 1934-35 Year Book.

Infantile Mortality in Canadian Cities and Towns.—Table 26 shows for the cities and towns of 10,000 population and over, the numbers of infant deaths and the death rates per 1,000 live births for the years 1932-35. In the latest year Port Arthur, Ont., had the lowest infant death rate, namely 25.

But a very low rate for any particular year means little since wide fluctuations from year to year are the rule. Vancouver, B.C., has a splendid record among the large cities over the four years shown. Three Rivers, Sorel, Hull, Westmount, Glace Bay, Thetford Mines, Granby, and Quebec city have all rates of over 100 for 1935 and most of them have high rates over the four-year period. Apart from Vancouver, already mentioned, among the cities Montreal has recorded steady improvement over the period and Winnipeg and Toronto have very low rates and good records.

The infantile mortality in the cities of Canada has been greatly reduced in the years since the inauguration of Dominion vital statistics. Thus the rate for Toronto has fallen from 90 in 1921 to 51 in 1935, that for Winnipeg from 78 to 42, for Vancouver from 56 to 29, for Hamilton from 88 to 49, for Ottawa from 130 to 94, for London from 92 to 49, for Edmonton from 89 to 33, for Halifax from 135 to 63, for Saint John from 147 to 62. Altogether, in the 13 cities of 40,000 population and over in the former registration area of Canada, there were 41,923 live births in 1921 and 3,833 infant deaths, being a rate of 91 per 1,000 live births. In 1935

in these same cities there were 35,456 live births but only 1,787 infant deaths, or a rate of 50 per 1,000 live births.

Infantile Mortality in Various Countries.—The rate of infantile mortality to live births has been greatly reduced in civilized countries by the recent advances in medical science and in sanitation. The low record is held at the present time by New Zealand, where in 1934 the rate of infantile mortality was only 32 per 1,000 live births as compared with 68 in 1905. Norway, The Netherlands, Switzerland, and Sweden, with rates of 39, 43, 46, and 47 in their latest available year (1934), are the lowest among European countries.

As showing the improvement in recent years, it may be stated that the rate of infantile mortality in England and Wales has been reduced from 128 per 1,000 live births in 1905 to 59 in 1934, while the rate in Germany has declined from 196 in 1904 to 66 in 1934. In the Netherlands, again, the rate has declined from 131 per 1,000 live births in 1905 to 43 in 1934. Statistics are given in Table 27 by leading countries and by provinces.

Infantile Mortality in Certain Cities of the World.—It is one of the greatest triumphs of our time that city life is in our day, if not as healthy, yet not necessarily more dangerous to human, especially to infant, life than the average living conditions in the country as a whole.

To give particular examples, the rate of infantile mortality in New York was 52 per 1,000 live births in 1934, as against a rate of 60 per 1,000 for the birth registration area of the United States. In the same year, Berlin had an infantile mortality rate of 59 per 1,000 live births, as compared with 66 for Germany. On the other hand, Paris had a rate of 76 in 1934, compared with a rate of 69 for France in the same year, and London a rate of 67 compared with 59 for England and Wales.

In Canada, Montreal had, in 1934, an infantile mortality of 89 per 1,000 live births as compared with 92 for the province of Quebec. Toronto had, in 1934, an infantile mortality rate of 49 per 1,000 live births as against 56 for the province

of Ontario, while Winnipeg and Vancouver had much lower infantile mortality rates than their respective provinces. Over a number of years both Vancouver and Victoria have shown two of the lowest infantile mortality rates in the world.

Maternal Mortality.—Of cognate interest with infantile mortality is the maternal mortality arising out of child-birth. This maternal mortality is shown by Table 29 to be at its lowest among mothers under twenty-five years of age. The mortality among mothers of different ages per 1,000 live births is shown for the years 1933-35; averages are also shown for the years 1926-30 and 1931-35. The maternal mortality is shown by provinces and age groups in Table 30 and by causes of death in Table 31.

29.—Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1933-35, and Five-Year Averages for 1926-30 and 1931-35.

NOTE.—Comparable figures for 1926-32 will be found at p. 208 of the 1934-35 Year Book.

¹ Exclusive of Yukon and the Northwest Territories.

As compared with the previous year, the number of maternal deaths shows a decrease of 74 or over 6 p.c., and the decrease from 1930 is over 22 p.c. Increases are shown for Manitoba and British Columbia, but elsewhere decreases are recorded as compared with 1934. By far the most serious causes of maternal mortality are puerperal septicæmia, and puerperal albuminuria and eclampsia, but deaths from these causes decreased from 630 in 1934 to 605 in 1935, or by nearly 4 p.c.

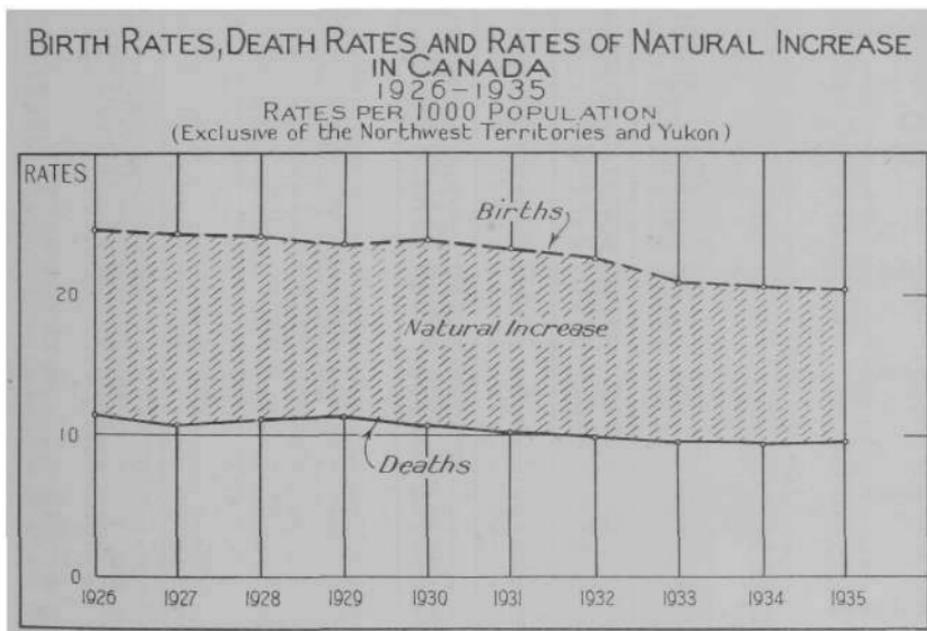

Section 4.—Natural Increase.

Natural increase is a resultant of births and deaths, and its treatment is felt to come, logically, at this place rather than at the beginning of the chapter, as in former editions of the Year Book.

Summary statistics of the births, deaths, and natural increase (births minus deaths) per 1,000 of population are given for the years 1921 to 1935, by provinces, in Table 32. Statistics of marriages are also included in this table for convenience. The province of Quebec is regarded as having one of the highest rates of natural increase per 1,000 population of any civilized area. The rate was 17.1 in 1931 and, while it has been appreciably reduced in line with common experience almost everywhere, it stood at 13.9 in 1935. Saskatchewan has usually approached Quebec in the matter of natural increase but for the years 1934 and 1935 the rates for this prairie province exceeded those for Quebec. Alberta and New Brunswick follow Quebec in the order given. In the case of the two western provinces the high rates of natural increase are due to their relatively younger populations and lower crude death rates, but in the case of New Brunswick the condition of an combined with a high death rate exists. The high

rates for these provinces brought the averages for Canada up to 11.1 in 1934 and 10.6 in 1935, in spite of the fact that the rate for British Columbia, which has always been low, was reduced to 4.3 in 1935. The rate of natural increase in 1934 was 13.7 per 1,000 in the Union of South Africa (Whites), 8.0 in New Zealand, 7.1 in Australia, 6.2 in the Irish Free State, 6.1 in Northern Ireland, 5.1 in Scotland, and 3.0 in England and Wales, so that Canada compares quite favourably with most other British countries.

The rates of natural increase per 1,000 of the mean population for other countries in the latest years are as follows, the figures being for 1934, except where stated in parentheses: Netherlands, 12.3; Japan, 11.9; Spain, 11.4 (1933); Italy, 10.1; Denmark, 7.4; Germany, 7.1; United States, 6.1; Finland, 5.7; Switzerland, 4.9; Norway, 4.7; Belgium, 3.8; Sweden, 2.5; France, 1.0.

During recent years the rate of natural increase of the population of Canada has declined. In 1921 the rate was 17.8; it declined to 13.3 in 1926 and to 12.2 in 1929. After 1929 there was a temporary improvement but, as Table 32 shows, the rates for 1933, 1934 and 1935—11.3, 11.1 and 10.6, respectively—continued the downward trend. Among the provinces the trends generally follow that of Canada as a whole, except in the Maritime Provinces, for each of which the trend is not so regularly downward and improvement is shown for 1935 compared with 1934. Quebec shows the greatest improvement in death rate for the period, but the birth rate is declining here as elsewhere and the rate of natural increase for 1935 is quite definitely lower than that for Saskatchewan.

Statistics of natural increase in cities and towns of 10,000 and over are given for the period 1926-35 in Table 33, but these are not worked out as rates per thousand of population, though the census populations in 1931, which are also given, furnish some guide to such rates.

32.—Summary of Births, Marriages, Deaths, and Natural Increase, by Provinces, for the calendar years 1933-35, with Averages for 1921-25, 1926-30 and 1931-35.

NOTE.—For other than census years birth, marriage, and death rates are calculated on estimated population (see p. 153). Figures for individual years 1921-25 will be found at p. 160 of the 1927-28 Year Book; for 1926-30 at p. 150 of the 1933 Year Book; and for 1931-32 at p. 147 of the 1936 edition.

Province.	Births.	Birth Rate per 1,000 Population.	Marriages.	Marriage Rate per 1,000 Population.	Deaths.	Death Rate per 1,000 Population.	Excess of Births over Deaths.	Rate of Natural Increase per 1,000 Population.

Natural Increase by Sex.—From Table 34 the relationship of births to deaths is shown by sex from 1926 to 1935 for Canada and for 1935 by provinces. In spite of higher male births, the natural increase is shown to be lower for males than females due to the higher mortality among the former.

34.—Births, Deaths, and Natural Increase in Canada,¹ by Provinces and for each Sex, 1935, with Totals, 1931-35 and Averages 1926-30 and 1931-35.

¹ Exclusive of Yukon and the Northwest Territories.

CHAPTER VI.—IMMIGRATION AND COLONIZATION.*

While the great majority of French-Canadians can trace their descent to ancestors who left the Old World 250 years ago or even longer, most English-speaking Canadians are comparative newcomers both to Canada and to this continent, though a considerable number of the United Empire Loyalist families had been resident in the old colonies for generations before they moved north to establish English-speaking settlements in what is now the Dominion of Canada. During the middle third of the nineteenth century a great English-speaking migration entered the province of Ontario and made it for the first time more populous than the sister province of Quebec, thus bringing about the agitation for representation by population. Thereafter, immigration slackened until the dawn of the twentieth century brought another flood of settlers to the newly opened territories of the great Northwest, resulting in an increase of population between the censuses of 1901 and 1911 greater than the combined increase of the three decades from 1871 to 1901.

Immigration during the second decade of the twentieth century promised, at its commencement, to be even greater than during the first. In its first three years no fewer than 1,084,934 persons entered Canada for purposes of settlement, but the Great War, which commenced for Canada on Aug. 4, 1914, dried up the sources of our immigration in the United Kingdom and Continental Europe, where every able-bodied man was needed for the defence of his country. Immigrant arrivals from the United Kingdom in 1918 numbered only about 3,000, as compared with 150,000 in 1913; immigrant arrivals from Continental Europe numbered less than 3,000 in 1916, as compared with approximately 135,000 in 1914. Since the War, immigration to the Dominion has never approached that of the pre-war period.

Section 1.—Statistics of Immigration.

Immigration to Canada, as to other new countries, is generally greatest in "boom" periods, when capital as well as labour is leaving the older countries for the newer in order to secure the more remunerative investments generally to be found in virgin territories where the natural resources are still unexploited. In periods of depression, however, the sending abroad of both capital and labour is diminished, both preferring at such times to endure the ills which they know at home rather than take the risks of a new adventure at a distance. Indeed, the depression which began about the close of 1929, with its accompanying unemployment and unsold surplus of farm products, raised the question whether it was desirable that Canada should accept immigrants in any considerable number. Therefore, the Government, on Aug. 14, 1930, passed an Order in Council whereby immigrants, except Britishers coming from the Mother Country or self-governing Dominions, and United States' citizens coming from the United States, were allowed to come in only if they belonged to one of two classes—(a) wives and unmarried children under eighteen years of age, joining family heads established in Canada and in a position to look after their dependants; (b) agriculturists with sufficient money to begin farming in Canada. This limitation applies to the whole continent of Europe as well as to many other countries. Regulations affecting immigration from the British Isles, the British Dominions or the United States have not been changed but a policy of no solicitation has been rigidly adopted. In harmony with

*Revised under the direction of F. C. Blair, Director of Immigration, Department of Mines and Resources, Ottawa.

this policy the Department of Immigration and Colonization, during 1931, closed all its Canadian Government Information Bureaus in the United States and reduced its representation in the British Isles.

For many years the Immigration Regulations have contained a general provision that immigrants coming to Canada must have sufficient funds to look after themselves until employment is secured. Naturally, when employment is readily available a sum would be considered sufficient which would be insufficient in periods of unemployment, and the enforcement of this regulation is an important factor in reducing immigration at the present time. An Order in Council (Aug. 7, 1929), prohibiting the landing in Canada of any immigrant coming under contract or agreement, expressed or implied, to perform labour or service of any kind in Canada, is also in effect but this prohibition does not apply to farmers, farm labourers, or houseworkers. Under the Order, the Minister of Immigration and Colonization may admit any contract labourer if satisfied that his labour or service is required in Canada.

In the 1936 edition of the Year Book reference was made to the increasing demand for statistics of immigration for the calendar year and statistics were presented, as far as possible on this basis; this year it is possible to show greater progress in this direction. Table 2 now shows arrivals from the United Kingdom, the United States and other countries back to 1908 and in Table 5 racial origins of immigrants are now shown from 1926. It is not believed that available data will permit the further carrying back to 1900 of figures on the basis of the calendar year. The reader who requires corresponding figures on a fiscal year basis is referred to the 1934-35 edition of the Year Book and to the annual Departmental reports on immigration.

The number of immigrant settlers in Canada is shown by calendar years from 1852 to 1936 in Table 1, and the number of immigrant arrivals in Canada from the United Kingdom, the United States, and other countries, is given by years from 1908 in Table 2.

¹ Revised since the publication of the 1936 Year Book.

Sex and Conjugal Condition of Immigrants.—As shown by Table 3, the 11,277 immigrants who came to Canada in the calendar year 1935 included 4,656 males and 6,621 females, males constituting only 41.3 p.c. of the total, as compared with 41.4 p.c. in 1934. Prior to 1932 males normally exceeded females, as shown on

p. 213 of the 1934-35 edition of the Year Book, where figures for the fiscal years 1911-34 will be found. Similar information for the calendar years 1929-35 is given in Table 4.

2.—Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar years 1908-36.

NOTE.—The 1936 edition of the Year Book showed, at p. 186, statistics of immigration on this basis, by calendar years from 1881 to 1900 and by fiscal years from 1901 to 1935.

Racial Origins of Immigrants.—Where there is any considerable immigration into a democratic country, the racial and linguistic composition of the immigrants is of great importance. Canadians prefer that settlers should be of a readily assimilable type, already identified by race or language with one or other of the two great races now inhabiting this country and prepared for the duties of Canadian citizenship. Since the French are not, to any great extent, an emigrating people, this means in practice that the great bulk of the preferable settlers are those who speak the English language—those coming from the United Kingdom or the United States. Next in order of readiness of assimilation are the Scandinavians, Dutch, and Germans, who readily learn English and are already acquainted with the working of democratic institutions. Settlers from Southern and Eastern Europe, however desirable from a purely economic point of view, are less readily assimilated, and the Canadianizing of the people who have come to Canada from these regions in the present century is a problem both in the agricultural Prairie Provinces and in the cities of the East. Less assimilable still, are those who come to Canada from the Orient. On the whole, the great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those continental European countries where the population is ethnically nearly related to the British, though for some years there was an increasing immigration of Slavs.

The racial origins of the immigrants who arrived in Canada in the calendar years 1926-35 are shown in Table 5. In the latest year the British races contributed 47 p.c. of the immigrants and the French 7 p.c.

Nationalities of Immigrants.—In the calendar year 1935 the percentage of British subjects immigrating to Canada was 27, while that of United States citizens was 40. In 1930, when total immigration was over eight times that of the latest year, the proportions were 34 p.c. and 21 p.c., respectively. The third largest group, comprising immigrants of Polish nationality, dropped from 16 p.c. in 1930 to less than 12 p.c. in 1935. Table 7 shows the nationalities of immigrants for the five latest years.

Countries of Birth of Immigrants.—In Table 8 will be found the countries of birth of the immigrants into Canada in the calendar years 1931-35. The figures show that the United States with 3,859 was the birthplace of more of our 1935 immigrants than any other single country. This has been the case since 1930. In 1935 Poland came second with 1,351, England third with 1,320, and Czechoslovakia fourth with 646.

Ports of Arrival of Immigrants.—Throughout the greater part of our history, Quebec has been the port at which the greatest number of our immigrants have landed. In the past years, up to 1935, there was a great increase in the percentage of immigrants arriving at the port of Halifax. This would appear to have been due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Figures for recent years are given in Table 9.

9.—Immigrants Arriving in Canada, by Chief Ports of Arrival, calendar years 1930-35.

Destinations of Immigrants.—Table 10 shows that in the eight latest calendar years the province of Ontario continued to receive the largest number of immigrants, as has been the case since 1905. In 1929 and 1930 Manitoba was in second place, while in the five latest years Quebec stood second as the immediate destination of new arrivals. The 1934-35 edition of the Year Book gives similar information, by fiscal years, from 1901 to 1934.

10.—Destinations of Immigrants into Canada, by Provinces, calendar years 1929-36.

Occupations of Immigrant Arrivals.—The immigrants most universally acceptable to Canadians are those who settle on the land or those females who enter domestic service. In Table 11 will be found statistics of the occupations and destinations of immigrants arriving in Canada during the calendar year 1935.

Prohibited Immigrants.—The following is quoted from Section 3 of the Immigration Act.

PROHIBITED CLASSES.

"No immigrant, passenger or other person, unless he is a Canadian citizen, or has Canadian domicile, shall be permitted to enter or land in Canada, or in case of having landed in or entered Canada shall be permitted to remain therein, who belongs to any of the following classes, hereinafter called 'prohibited classes':—

- (a) Idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane at any time previously;
- (b) Persons afflicted with tuberculosis in any form, or with any loathsome disease, or with a disease which is contagious or infectious, or which may become dangerous to the public health, whether such persons intend to settle in Canada or only to pass through Canada in transit to some other country: Provided that if such disease is one which is curable within a reasonably short time, such persons may, subject to the regulations in that behalf, if any, be permitted to remain on board ship if hospital facilities do not exist on shore, or to leave ship for medical treatment;
- (c) Immigrants who are dumb, blind, or otherwise physically defective, unless, in the opinion of a Board of Inquiry or officer acting as such, they have sufficient money, or have such profession, occupation, trade, employment or other legitimate mode of earning a living that they are not liable to become a public charge or unless they belong to a family accompanying them or already in Canada and which gives security satisfactory to the Minister against such immigrants becoming a public charge;
- (d) Persons who have been convicted of, or admit having committed, any crime involving moral turpitude;
- (e) Prostitutes and women and girls coming to Canada for any immoral purpose and pimps or persons living on the avails of prostitution;
- (f) Persons who procure or attempt to bring into Canada prostitutes or women or girls for the purpose of prostitution or other immoral purpose;
- (g) Professional beggars or vagrants;
- (h) Immigrants to whom money has been given or loaned by any charitable organization for the purpose of enabling them to qualify for landing in Canada under this Act, or whose passage to Canada has been paid wholly or in part by any charitable organization, or out of public moneys, unless it is shown that the authority in writing of the Deputy Minister, or in case of persons coming from Europe, the authority in writing of the Assistant Superintendent of Immigration for Canada, in London, has been obtained for the landing in Canada of such persons, and that such authority has been acted upon within a period of sixty days thereafter;
- (i) Persons who do not fulfil, meet or comply with the conditions and requirements of any regulations which for the time being are in force and applicable to such persons under this Act;
- (j) Persons who in the opinion of the Board of Inquiry or the officer in charge at any port of entry are likely to become a public charge;
- (k) Persons of constitutional psychopathic inferiority;
- (l) Persons with chronic alcoholism;
- (m) Persons not included within any of the foregoing prohibited classes, who upon examination by a medical officer are certified as being mentally or physically defective to such a degree as to affect their ability to earn a living;
- (n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property;
- (o) Persons who are members of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government, or advocating or teaching the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally, of the Government of Canada or of any other organized government, because of his or their official character, or advocating or teaching the unlawful destruction of property;
- (p) Persons guilty of espionage with respect to His Majesty or any of His Majesty's allies;
- (r) Persons who have been found guilty of high treason or treason or of conspiring against His Majesty, or of assisting His Majesty's enemies in time of war, or of any similar offence against any of His Majesty's allies;
- (s) Persons who at any time within a period of ten years from the first day of August, one thousand nine hundred and fourteen, were deported from any part of His Majesty's dominions or from any allied country on account of treason or of conspiring against His Majesty, or of any similar offence in connection with the war against any of the allies of His Majesty;
- (t) On and after the first day of July, one thousand nine hundred and nineteen, in addition to the foregoing 'prohibited classes', the following persons shall also be prohibited from entering or landing in Canada:—Persons over fifteen years of age, physically capable of reading, who cannot read the English or French language or some other language or dialect: Provided that any admissible person or any person heretofore or hereafter legally admitted, or any citizen of Canada, may bring in or send for his father or grandfather, over fifty-five years of age, his wife, his mother, his grandmother or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not, and such relative shall be permitted to enter; for the purpose of ascertaining whether aliens can read, the immigration officer shall use slips of uniform size prepared by direction of the Minister, each containing not less than thirty and not more than forty words in ordinary use printed in plainly legible type in the language or dialect the person may designate as the one in which he desires the examination to be made, and he shall be required to read the words printed on the slip in such language or dialect; but the provisions of this subsection shall not apply to Canadian citizens and persons who have Canadian domicile, to persons in transit through Canada, or to such persons or classes of persons as may from time to time be approved by the Minister;
- (u) Members of a family (including children over as well as under 18 years of age) accompanying a person who has been rejected, unless in the opinion of the Board of Inquiry no hardship would be involved by separation of the family."

The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

Table 12 shows the number of immigrants rejected upon their arrival at Canadian ports, by causes and nationalities, for the calendar years 1930-35, while Table 13 shows the number of deportations after admission, for the fiscal years 1903-24 and by single years for the fiscal years 1925-36, also by causes and nationalities.

Juvenile Immigrants.—Among the most generally acceptable immigrants of recent years were the juveniles of both sexes, many of whom had been trained by highly accredited British organizations for Canadian life before coming to Canada, the boys being taught the lighter branches of farm work, and the girls instructed in domestic occupations. On arrival in Canada the boys were placed on farms, while the girls were placed either in town or country, but the organizations remained the guardians of the children until they had reached maturity and, in addition, the children were subject to efficient and recurrent government inspection until each reached the age of nineteen. This inspection was under the control of the Supervisor of Juvenile Immigration.

Under the British Empire Settlement Agreement the term "children" was applied to boys from 14 to 19 years of age and girls from 14 to 17 migrating to Canada under provincial or approved-society auspices. These organizations were assisted by the Oversea Settlement Agreement, which provided free transportation for the boys and girls from the British Isles migrating to Canada under their auspices. On Sept. 23, 1931, the societies concerned were notified that the Dominion Government had decided to discontinue any further assistance of that nature.

The number of such juvenile immigrants to Canada in each year since 1901 is given in Table 14.

14.—British Juvenile Immigrants, fiscal years ended 1901-36.

NOTE.—Juvenile immigrants are, of course, included in the total number of immigrants, recorded elsewhere.

Oriental Immigration.—The immigration to Canada of Orientals is fundamentally an economic rather than a racial problem, affecting most of all those parts of the country which are nearest to the Orient and the classes which feel their economic position threatened. A record of Oriental immigration, by fiscal years, since the commencement of the century is given in Table 15, while Table 15A gives the same information for the calendar years for which it has been possible to compile the figures, *viz.*, 1929 to 1935.

Chinese Immigrants.—Oriental immigration to the Pacific Coast of North America appears to have commenced with the coming of Chinese immigrants about the time of the discovery of gold in California in 1849, and British Columbia is thought to have received its first Chinese immigrants some time before 1870. The original occupations of these immigrants were laundry workers and domestic servants. As early as 1872 Chinese were employed in the coal mines of the province and the Legislature was already considering the imposition of a poll tax on Chinese, the same proposition coming up later in the Dominion Parliament with the design of preventing the employment of Chinese labour in railway construction. A Royal Commission was appointed by the Dominion Government in 1884 to investigate Chinese immigration, and this commission recommended the imposition of a head tax of \$10 upon Chinese entering Canada, together with registration and special legislation regulating the entry of Chinese domestic servants. This led to the passage of legislation in 1885 (48-49 Vict., c. 71), providing that thereafter Chinese of the labouring class should be required, as a condition of entering Canada, to pay a head tax of \$50 each. On Jan. 1, 1901 (63-64 Vict., c. 32), this tax was increased to \$100, and on Jan. 1, 1904 (3 Edw. VII, c. 8), after another Royal Commission had reported on this matter, the head tax was further increased to \$500. This tax was paid by all Chinese immigrants except consular officers, merchants and clergymen and their families, tourists, men of science, students, and teachers. In spite of this restrictive legislation, the number of Chinese enumerated at the decennial censuses rose from 4,383 in 1881 to 17,312 in 1901, to 27,774 in 1911, to 39,587 in 1921 and 46,519 in 1931. Of this latter number, 43,051 were males and only 3,468 females. Over 58 p.c. of all the Chinese in Canada, *viz.*, 27,139 were residents of British Columbia.

The Chinese Immigration Act of 1923 (13-14 Geo. V, c. 38),* limits the entry to or landing in Canada of persons of Chinese origin or descent, irrespective of allegiance or citizenship, to the following classes:—

- (a) Members of the diplomatic corps or other government representatives, their suites and their servants and consuls and consular agents;
- (b) Children born in Canada of parents of Chinese origin or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return;
- (c) Merchants as defined by such regulations as the Minister may prescribe; students coming to Canada for the purpose of attending, and while in actual attendance at, any Canadian university or college authorized by statute or charter to confer degrees;
- (d) Persons in transit through Canada.

Classes (c) and (d) are to possess passports issued by the Government of China and endorsed by a Canadian immigration officer. As a result of this legislation no Chinese were admitted to the country as immigrants in the fiscal years ended 1925, 1926, and 1927; three are shown by the above table to have been admitted in 1928, one in 1929, none in 1930, 1931 or 1932, one in 1933, two in 1934, and none in 1935 or 1936.

Japanese Immigrants.—Japanese immigration to Canada commenced about 1896, and a total of some 12,000 came in between then and 1900, but at the Census of 1901 the total number enumerated as domiciled in the Dominion was only 4,738; in 1911, 9,021; in 1921, 15,868; in 1931, 23,342—22,205 of these latter being domiciled in British Columbia. The immigration of Japanese was especially active in the fiscal years 1906 to 1908, in which three years a total of 11,565 entered the country. In 1908 an agreement was made with the Japanese Government, under which the latter undertook to limit the number of passports issued to Japanese immigrants to Canada. Japanese immigration has been very restricted since 1929, only 83 Japanese immigrants having entered Canada in the fiscal year 1936.

East Indian Immigrants.—East Indian immigration to Canada, like Japanese, is shown by Table 15 to have been negligible down to 1907, when no fewer than 2,124 East Indian immigrants arrived. However, as a consequence of the operation of the Immigration Regulations, East Indian immigration has for years been comparatively small. A resolution of the Imperial War Conference of 1918 declared that "it is the inherent function of the Governments of the several communities of the British Commonwealth that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities". However, it was recommended that East Indians, already permanently domiciled in other British countries, should be allowed to bring in their wives and minor children. In the ten fiscal years 1927-36 only 503 East Indians, many of them women and children, were admitted to Canada.

Expenditures on Immigration.—The sums expended by the Dominion Government on immigration in each of the fiscal years ended 1868 to 1936 inclusive, as stated in the Public Accounts issued annually by the Department of Finance, are shown in Table 17.

Emigration from Canada.—An important factor tending to offset the immigration activities of the past was a movement from Canada to the United States which attained considerable proportions at certain periods. The quota system of immigration regulation, applied by the United States Government against immigrants generally, but not against the Canadian born, had the effect of limiting immigration to the United States and thereby encouraging Canadians to enter

*R.S.C. 1927, c. 95.

that country. No record of this movement had ever been kept by the Canadian Government, and, while its seriousness was recognized, its magnitude, as indicated by the United States returns, was questioned on the ground that these returns did not make allowance for Canadians returning to Canada after a more or less extended period of residence in the United States. The Canadian Department of Immigration and Colonization was convinced that a very considerable return movement was taking place, but, until 1924, no attempt was made to ascertain the exact magnitude of that movement. In that year immigration officers were instructed to take note of Canadians returning to Canada from the United States after having left Canada to reside in that country. The results are tabulated in Table 18.

Another circumstance which has, in the past, occasioned a considerable movement from Canada to the United States has, no doubt, been the practice of Europeans to enter Canada and declare themselves *bona fide* immigrants, with the real intention of entering the United States as soon as the quota restrictions would permit them to do so. The tightening-up of the United States Regulations *re* persons entering the United States from Canada, and the active co-operation of the Canadian Department of Immigration and Colonization in discouraging this traffic, seem to have effectually met this situation.

Table 18 shows the number of Canadians who had gone to the United States for purposes of permanent residence and who returned to Canada during the period from April 1, 1924, to Dec. 31, 1936.

**17.—Expenditures on Immigration in the fiscal years ended June 30, 1868-1906,
and Mar. 31, 1907-36.**

¹ Nine months.

The movement of population between the two countries now appears to be slightly towards the United States. In the U.S. fiscal year ended June 30, 1936, the total movement from Canada to that country totalled 12,748, made up as follows: immigrants, 8,018; U.S. citizens returning after residence in Canada, 4,524; and persons deported from Canada, 206. The movement towards Canada totalled 8,649, made up as follows: immigrants, 4,144 (of whom 2,872 were U.S. citizens); persons deported to Canada, 1,784; and persons permitted to depart voluntarily to Canada in lieu of deportation proceedings, 2,721. Canadian immigration figures for the same period show 5,024 immigrants admitted to Canada and 5,239 returning Canadians, a total of 10,263. The discrepancy between the two series is probably due to incomplete emigration statistics.

In the past five years there has also been considerable emigration from Canada to the British Isles. Table 19, taken from the *Statistical Abstract of the United Kingdom*, shows the movement of population between the United Kingdom and British North America from 1924 to 1935. Inasmuch as the movement between the British Isles and Newfoundland is negligible, the table may be taken as presenting a fair picture of immigrant and emigrant movement between Canada and the United Kingdom.

Section 2.—Colonization Activities.

Information on this subject was given at pp. 201-202 of the 1936 edition of the Year Book. To it the interested reader is referred.

CHAPTER VII.—SURVEY OF PRODUCTION.*

After showing declines for five years, the net value of production recorded a substantial gain in 1934 over the preceding year. The net value of commodities produced, as estimated by the Dominion Bureau of Statistics on the basis of data compiled by its various branches, was \$2,381,000,000 in 1934 against a revised figure of \$1,996,000,000 in the preceding year. The gain of 19 p.c. represents the marked betterment in productive operations and commodity prices over 1933. Each of the nine main branches of production participated in the advance.

Owing to depressed price levels and low-scale operations, the total for 1933 was less than in any other year in the post-war period. As agricultural production declined in 1929 from the preceding year, the value of net production was greater in 1928 than in any other year during the period of observation from 1920 to the present. Declines were shown for five consecutive years from 1929 to 1933. Owing to the marked rebound in 1934, the total for the year was greater than in 1933 or 1932. While wholesale prices were relatively stable during 1934, the average for the year was much higher than for 1933, the post-war minimum having been reached in the first quarter of that year. A similar trend, as measured by comprehensive indexes, was shown in productive operations. A marked advance was shown in the later months of 1933 and the improvement continued throughout 1934.

The gain in the output of electric power in 1934 was less than in other lines, but even here an increase of nearly 6 p.c. was shown. The greatest absolute gains were recorded in manufacturing and agriculture, but the largest percentage increases were in construction and mineral production. In respect to percentage gains, the fisheries followed closely in third place.

The Definition of "Production".—The term "production" is used here in its popular acceptance, *i.e.*, as including such processes as the growing of crops, extraction of minerals, capture of fish, conversion of water power into electrical current, manufacturing, etc.—in economic phrase, the creation of "form utilities". It does not include various activities which are no less "productive" in a broad and strictly economic sense, such as (a) transportation, refrigeration, merchandising, etc., which add the further utilities of "place", "time", and "possession" to commodities already worked up into form, and (b) personal and professional services, such as those of the teacher and the doctor, which are not concerned with commodities at all, but are nevertheless essential to any civilized society—representing, in economic language, the creation of "service utilities"

As showing the importance of these latter activities, it may be pointed out, for comparison with the figures in the accompanying tables, that steam railway gross earnings in 1934, the latest year for which complete statistics of production are available, amounted to \$300,837,816, street railway gross earnings to \$40,048,136, and telephone and telegraph earnings to \$67,352,798, all of which, from a broad point of view, may be considered as "production" Further, it may be noted that, according to the Census of 1931, out of 3,927,591 persons of ten years of age or over recorded as gainfully occupied, 306,273 were engaged in transportation activities, 387,315 in trade, 92,317 in finance, and 767,705 in service occupations. While 81,610 of the latter were engaged in custom and repair work, the value of which is included in the survey of production, the value of the "production" of the

* Revised by Sydney B. Smith, M.A., Dominion Bureau of Statistics.

remaining 1,472,000 gainfully occupied persons in the four occupational groups just mentioned would not appear to be included to any extent in the survey of production. Then, on the assumption that 1,472,000 gainfully occupied persons whose production is not included in the survey were no less "productive" in the broad sense of the term than the remaining 2,455,591* gainfully occupied persons, about three-fifths should be added to our total net production to arrive at an estimate of the grand total value of the "production" of all gainfully occupied Canadians. Since the net value of production of commodities as stated in this survey was \$2,380,716,629 in 1934, the grand total money value of the productive activities of the gainfully occupied population of Canada in the same year may be estimated at \$3,810,000,000 in round figures. (See the item "Income, national" in the Index of this volume.)

"Gross" and "Net" Production.—The values of products are shown under two headings, namely, "gross" and "net" "Gross" production represents the total value of all the individual commodities produced under a particular heading. "Net" production represents an attempt to eliminate the value of materials, fuel and electricity consumed in the production process. The "net" figures, it will be seen, appear chiefly in the case of secondary production or manufactures, though eliminations were also made in certain cases in the primary or extractive industries, as, for example, seed in the case of field crops, and feed in the case of farm animals. On the other hand, such items as fertilizers in the case of field crops, and reforestation in the case of forestry, are disregarded as partaking of the nature of replacement. The cost of fuel and electricity is deducted in accordance with Resolution 23 of the Conference of British Commonwealth Statisticians, 1935, which states:—"The term *net output* or *net value of production* should be used to denote the value added in each industry to the cost of the objects used in production, including all materials, whether transformed or not".

Difficulties in Differentiating between the Branches of Production.—A survey of production must differentiate between the more important branches and at the same time give a purview of the whole which will be free from overlapping. This is somewhat difficult to present with clearness, in view of the varying definitions that attach to industrial groups from different points of view. For example, brick, tile, and cement are frequently included in "mineral production" as being the first finished products of commercial value resulting from the productive process; frequently, however, they are regarded as "manufactures" in view of the nature of the productive process—either allocation being correct according to the point of view. In the summing up, production in such industries is regarded as primary production and also as secondary production, but the duplication is eliminated in the grand totals.

Branches of Production.—The primary industries of agriculture, fishing, forestry, mining, etc., are separated in this statement from the secondary or manufacturing processes. The close association between the two and the overlappings that are apt to occur have already been pointed out. As further explaining the procedure that has been followed in drawing up the tables, the following notes are appended:—

Agriculture.—Dairy factories are included under this heading; farm dairy products (gross) include the milk consumed whole and sold to dairy factories, and the butter, etc., made on the farm.

* This figure includes 169,263 gainfully occupied persons whose industries were not specified but who were mainly general labourers and office clerks. The products of the labour of these persons were probably mainly included in the survey of production, but here it is assumed that they were all so included.

Forestry.—Forestry production is understood to consist of the operations in the woods as well as those of sawmills and pulp-mills, the latter being limited to the making of first products such as lumber, lath, shingles, pulp, and cooperage stock.

Fur Production.—The item of fur production is limited to wild-life production. To obtain a total of the pelts produced in Canada, it would be necessary to add to the wild-life output the production of pelts on fur farms, which is included in the total for "agriculture".

Mineral Production.—Under mineral production many items are included that are also allocated to "manufactures". Considerable overlapping exists as between "mineral production" on the one hand and "manufactures" on the other. The Dominion Bureau of Statistics presents the detailed statistics of these groups (the chief of which are smelters, brick, cement, lime, etc.) in its reports on mineral production, since their product is the first to which a commercial value is ordinarily assigned.

Construction.—Due to the availability of the totals compiled by a new branch of the Dominion Bureau of Statistics, the treatment of construction data was altered for 1934. The records prepared by the MacLean Building Reports, Limited, were used from 1920 to 1933, 35 p.c. being deducted from the gross totals to obtain the net value of production for the industry. An element of incomparability was thus introduced between 1933 and 1934, but the use of official records in this connection is desirable.

Total Manufactures.—The figure given for this heading is a comprehensive one including the several items listed with the extractive industries above, though also frequently regarded as "manufactures", viz., dairy factories, fish canning and curing, sawmills, pulp-mills, certain mineral industries, and electric power. This duplication is eliminated from the grand totals as shown in the tables. The figures given for total manufactures are inclusive of the value of the products of all manufacturing processes closely associated with the extractive industries that are frequently included under this heading; hence it is obvious that the grand total is equivalent to an amount obtained by adding the values for total manufactures and for the other eight divisions, and deducting the amount of duplication between manufactures and the primary industries.

Section 1.—The Leading Branches of Production in 1934.

Confining subsequent analysis to the net production of commodities—"net" production signifying the value left in the producers' hands after the elimination of the value of the material consumed in the production process—it is observed that, as the turning-point of the depression was reached in 1933, each of the main branches showed advances over the preceding year. While the gain in agricultural production was proportionately less than in some of the other branches, the net output was greater than in any other year since 1930. The increase over 1933 was about 16 p.c., the total in the year under review being nearly \$674,000,000.

The percentage gain in manufacturing output was slightly greater than in agriculture, the value of the former being up \$175,000,000. The totals for the two preceding years were surpassed in 1934.

NET VALUES OF PRODUCTION.

NOTE.—In conformance with Resolution 23 adopted by the Conference of British Commonwealth Statisticians of 1935, the cost of fuel and electricity was deducted from the gross value of manufactured goods for 1933 and 1934. To this extent the results were rendered incomparable with those of preceding years.

Grand Totals	3,335,629,447	2,572,273,201	2,104,908,301	1,996,450,893⁷	2,380,716,629	100.00

¹ The gross values of agricultural production here exceed those given in Chapter VIII, Agricultural Statistics of this edition of the Year Book, by the amounts paid to patrons of dairy factories for milk and cream.

² Gross values comprise the mineral production, as shown in Chapter XII, Table 1, plus the value of ores and other raw materials of the smelting industry.

³ Statistics of custom and repair industries were not collected after 1922, and the totals for that year were repeated in 1923 and 1924. The totals for 1930 to 1934 were estimated according to the percentage change in the data for manufacturing.

⁴ The item "manufactures" includes dairy factories, sawmills, pulp-mills, fish canning and curing, electric power, and certain mineral industries, also included under other headings. This duplication, amounting in 1930 to a gross of \$757,438,326 and a net of \$453,015,547, in 1931 to a gross of \$610,025,080 and a net of \$378,885,534, in 1932 to a gross of \$425,494,363 and a net of \$260,227,869, in 1933 to a gross of \$437,416,093 and a net of \$247,208,132, and in 1934 to a gross of \$542,266,446 and a net of \$290,343,792, is eliminated from the grand totals.

⁵ The proportion of manufactures, freed from all duplication (as explained in footnote 4) to the grand total of net production was 39.2 p.c., and, under like conditions, the proportion of all secondary production to the grand total of net production was 46.5.

⁶ Figures for 1930 and 1931 were revised in accordance with the findings of the Census of 1931.

⁷ Revised since the publication of the 1936 Year Book.

2.—Detailed Itemized Statement of the Net Values of Production in Canada during 1932, 1933, and 1934.

NOTE.—Totals for 1933 and 1934 are rendered incomparable with those of earlier years by conformance to Resolution 23 of the British Commonwealth Statisticians of 1935.

* Revised since the publication of the 1936 Year Book. due to a recent revision in the item fuel and electricity.

† An adjustment of \$3,368 was necessary

The percentage gain in the new business obtained by the construction industry was outstanding. According to MacLean's Building Reports, contracts awarded in 1934 were \$125,800,000, a gain of 29 p.c. over the preceding year. The official total of work completed was \$186,200,000 in 1934, no comparable statistics being available for 1933. Deducting materials used, the net value of construction in 1934 was computed as \$115,400,000. A brilliant gain was shown in mineral production, especially in the output of metals.

Relative Importance of the Several Branches of Production.—Owing to the relatively larger increase in the value of manufactures in 1934, the lead of manufactures over agriculture, which was 80.3 p.c. in 1933, advanced to 81.5 p.c. in 1934. Agricultural production in 1934 represented 28.3 p.c. of the net output of all branches, while the total value added by the manufacturing processes was 51.4 p.c. of the total net production. However, several of the industries listed under manufactures are also included in the various extractive industries with which they are associated. Eliminating this duplication, the output of the manufacturing industries not elsewhere included was 39.2 p.c. of the total net production. Mining held third place in 1934 with a percentage of 11.7. Forestry was in fourth place with a percentage of 6.6, followed by electric power representing 5.1 p.c. The construction group in 1934 had an output of 4.9 p.c. of the total net production. Custom and repair work, fisheries, and trapping followed with percentages of 2.5, 1.4, and 0.4, respectively.

A summary of gross and net values of production is given by industries for the years from 1930 to 1934 in Table 1; a detailed, itemized statement of the net values of production in 1932, 1933 and 1934 is given in Table 2.

Section 2.—The Provincial Distribution of Production.

The net production of the Maritime Provinces showed a considerable gain in 1934, following the increase of the preceding year. Nova Scotia and Prince Edward Island recorded gains in 1933, while Nova Scotia and New Brunswick showed an advance in 1934. The maximum point of the fourteen-year period ended in 1933 was reached in 1928. The high level of that year was followed by four years of decline. Nova Scotia in the post-war period responded to cyclical influences to a greater extent than New Brunswick or Prince Edward Island.

The expansion in the net production of Ontario was continuous from 1921 to 1929, the total net value in the latter year being \$1,658,000,000. This compares with \$1,116,000,000 in 1921, a gain of 48.6 p.c. during the nine years. The total in 1934 was \$1,025,300,000, a gain of more than 19 p.c. from 1933. Industrial revenues in Quebec made very slight progress toward recovery from 1921 to 1924, but in other respects the curve of net production was closely correlated with that of Ontario. The total in 1934 was \$593,100,000 compared with \$508,500,000 in the preceding year, a gain of 16.6 p.c.

The Prairie Provinces, especially Saskatchewan and Alberta, were favoured from 1925 to 1928 with excellent grain crops and relatively profitable prices. From 1929 to 1933 yields were not so bountiful and drastic declines were shown in agricultural prices. The net value of production in the three provinces reached high levels from 1925 to 1928. Subsequent to that period, the decline was well defined, and the total in 1933 reached the lowest point of the post-war period. The rebound in 1934 was of marked proportions. Alberta showed a gain of 23 p.c., while increases of 19 p.c. each were recorded in Manitoba and Saskatchewan. The depend-

ence on the grain crop was a factor during recent years of the wide fluctuation in the value of net production in Saskatchewan and Alberta.

The steady advance shown in British Columbia during the long cycle from 1922 to 1929 was reversed in following years. The gain in 1933 from the preceding year was nearly 7 p.c. and the advance was extended in 1934 to the extent of 20.5 p.c.

Comparison of 1934 and 1933 by Provinces.—Eight of the nine provinces showed gains in net production in 1934 over the preceding year. A considerable increase was shown in the output of the Maritime Provinces, due to gains in New Brunswick and Nova Scotia. The former recorded a gain of about 24.7 p.c., while Nova Scotia scored with an increase of 25.7 p.c. The decline in Prince Edward Island was limited to 1.8 p.c.

Extending the gain of the preceding year, the net production of Ontario recorded an increase of 19.5 p.c. in 1934. The increase in Quebec at 16.6 p.c. was also substantial. The trend was reversed in the Prairie Provinces, the total for the areas being up nearly 21 p.c., and the gain in British Columbia was 20.5 p.c.

The values of gross and net production are given by provinces for the years 1930 to 1934 in Table 3.

¹ Revised in accordance with the findings of the Census of 1931.

² Revised since the publication of the 1936 Year Book.

Relative Production by Provinces, 1934.—Ontario held first place among the nine provinces in the creation of new wealth, producing 43.1 p.c. of the Dominion total compared with 43.0 p.c. in 1933. Quebec followed with an output of 24.9 p.c. against 25.5 p.c. in the preceding year. British Columbia and Alberta were in third and fourth places, respectively, the contribution of the former in 1934 being 7.9 p.c. compared with 7.5 p.c. for Alberta. Saskatchewan and Manitoba were in fifth and sixth places, respectively; Nova Scotia, New Brunswick, and Prince Edward Island followed in the order named.

Section 3.—Leading Branches of Production in Each Province, 1934.

Maritime Provinces.—Considered as an economic unit, the principal industry in the Maritimes during 1934 was total manufacturing, which accounted for 35.3 p.c. of the net production. However, with the deduction of all duplication, this percentage was reduced to 23.6. The agricultural industry represented 25.3 p.c. of the total, while mining comprised 16.0 p.c. and forestry 13.4 p.c. The fisheries produced 7.8 p.c. of the net total. Construction, electric power, custom and repair, and trapping showed 7.1 p.c., 4.6 p.c., 1.9 p.c., and 0.26 p.c., respectively.

Quebec.—As usual, the value of the products derived from manufactures in Quebec was far greater than that from any other industry. Manufactures, exclusive of the output of establishments associated with the extractive industries, contributed 49.5 p.c., while all manufactures on the same basis contributed 64.2 p.c. Agriculture accounted for 21.6 p.c., forestry 9.3 p.c., and electric power 7.9 p.c. Mining was little changed with 5.3 p.c. of the net total. Construction followed with about 4 p.c.

Ontario.—The net value of manufacturing production in Ontario during 1934, less duplication, was 48.2 p.c. of the total or nearly \$494,000,000 compared with 21.1 p.c. for agriculture. Mining was third, as in 1933, but advanced from 12.5 p.c. of the net total in 1933 to 14.2 p.c. in 1934. Construction with 6.0 p.c., electric power with 4.2 p.c., and forestry with 3.5 p.c. followed in order. About 53 p.c. of the net manufacturing production of the Dominion was contributed by Ontario and 32 p.c. of the agricultural income was derived from that province.

Prairie Provinces.—Agriculture contributed 63.4 p.c. of the value of net output of the Prairies in 1934. Total manufacturing, which has continued to advance steadily in the past decade, made up 22.4 p.c. of the total. Mining with 8.0 p.c., and electric power with 3.4 p.c. followed in order. In Manitoba agriculture made up 44.8 p.c. of total production, net manufactures 29.6 p.c., mining 8.5 p.c., and electric power 5.5 p.c. In Saskatchewan agriculture contributed 76.1 p.c., manufactures 8.5 p.c., and construction 3.6 p.c. In Alberta agriculture yielded 66.8 p.c. of the net, mining 11.4 p.c., manufactures 11.3 p.c., and construction 3.0 p.c.

British Columbia.—The net output from manufacturing in British Columbia during 1934 was \$82,841,189 or 44.2 p.c. of all net production, but nearly half of this amount was derived from manufacturing processes closely associated with the primary industries, especially logging and fishing. Manufactures, eliminating this duplication, comprised 23.1 p.c. of the net provincial output. Mining advanced to nearly 22.0 p.c., while forestry was greater with 19.8 p.c.; agriculture with 14.9 p.c., and fisheries with 8.1 p.c. followed in order.

Details showing the gross and net values of production by industries in the different provinces in 1934, together with percentages, are given in Tables 4 and 5.

4.—Gross and Net Values of Production in Canada, Classified for each Province, by Industries, 1934.

NOTE.—For Dominion totals, see Tables 1 and 2.

CHAPTER VIII.—AGRICULTURE.

Agriculture, including stock raising and horticulture, is the chief single industry of the Canadian people, employing, in 1931, 28·7 p.c. of the total gainfully occupied population and 33·9 p.c. or over one-third of the gainfully occupied males. In addition, it provides the raw material for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see p. 54 of this volume.

This chapter treats of current governmental activities in connection with agriculture, including those of the Dominion and Provincial Experimental Stations. Statistics of agriculture follow, including agricultural revenue and wealth, field crops, farm live stock and poultry, dairying, fur farming, fruit, special crops, farm labour and wages, prices, miscellaneous, and, since Canadian exports of agricultural commodities are sold in the world market, a review of world statistics of agriculture, compiled from the publications of the International Institute of Agriculture.

Section 1.—The Government in Relation to Agriculture.*

It is provided in Section 95 of the British North America Act that "in each province the Legislature may make laws in relation to agriculture in the province"; it is also "declared that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the Legislature of a province relative to agriculture . . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada"

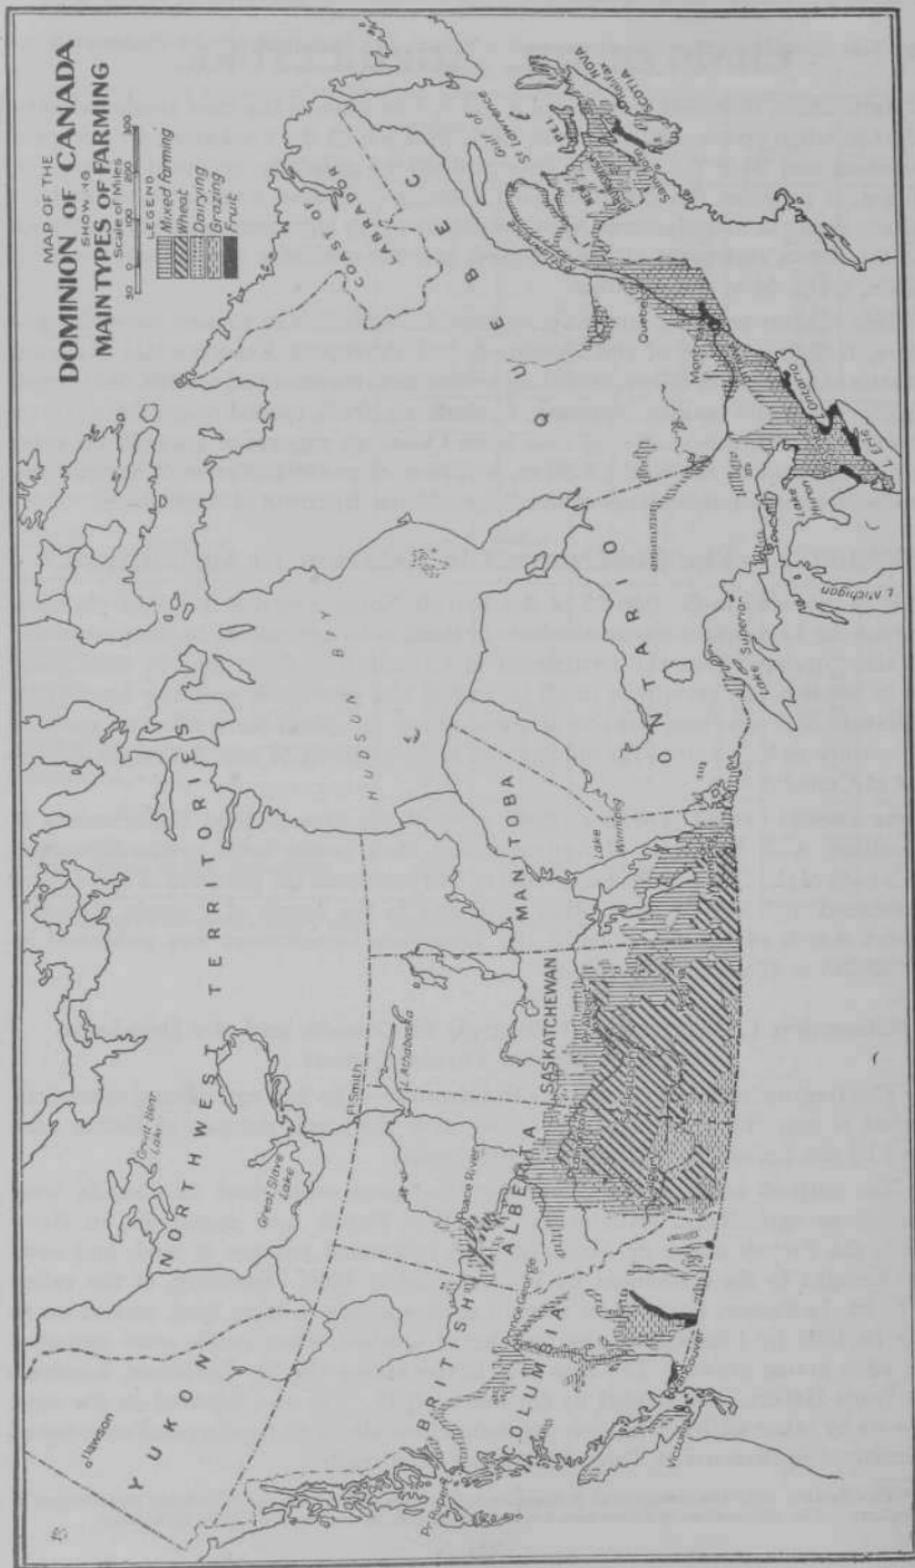

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, both in the Dominion and in each of the nine provinces, though in two provinces the portfolio of agriculture is combined with one or more other portfolios in the hands of a single Minister. A short sketch of the functions of the Dominion Department was published at pp. 212-223 of the 1936 Year Book.

Subsection 1.—Agricultural Progress in Canada and the Dominion Experimental Farms System.

The Beginnings of Agriculture in Canada.—The first agricultural operations in what is now the Dominion of Canada were the small patches of Indian corn grown by the Indians near their main settlements.

The earliest attempts at permanent European settlement in Canada were intended as agricultural settlements. At Port Royal, now Annapolis, in Nova Scotia, the French under de Monts in 1605 cultivated patches of land, and cows were brought to the settlement by Poutrincourt in 1606. Similarly, in the valley of the St. Lawrence, farming on a small scale appears to have been carried on as early as 1608 by Champlain, the founder of Quebec, when cattle were imported and some grains grown. The first real farmer along the St. Lawrence, however, was Louis Hébert, who landed at Quebec in 1617. He was followed in the next 30 years by other settlers who devoted themselves wholly to farming and established agricultural settlements at Three Rivers and Montreal.

* This Section, with the exception of Subsection 2, has been revised by the Dominion Department of Agriculture. The information in Subsection 2 was checked by the various provincial authorities.

MAIN TYPES OF FARMING IN CANADA.

In these early settlements, the agriculture was very primitive. However, the virgin fertility of the soil generally produced good crops in spite of the very crude conditions under which cultivation was carried on. The French establishments were developed primarily for the prosecution of the fur trade and to hold the country for France. Crops were grown to aid in feeding the resident population, and live stock such as horses, cattle, sheep, swine, and poultry, was sent to the colonies to provide a local supply of such primary requirements as meat, hides, dairy products, and wool. However, as the resident population of the colonies increased, agricultural settlement spread along the fertile coasts and river valleys of Acadia and along the lowlands of the St. Lawrence river and its tributaries. Agricultural production grew in certain lines beyond the immediate requirements of the colony so that in 1749 flour, wheat, and peas were being exported.

The Influence of U.E.L. Immigration.—The influx of the United Empire Loyalists in the 1770's and 1780's had a far-reaching effect upon agricultural settlement and production in what is now Eastern Canada. These people from the United States established settlements in Prince Edward island, at Annapolis and other parts of Nova Scotia, in the St. John valley of New Brunswick, the Eastern Townships of Quebec and all along the hitherto unsettled Canadian shores of lake Ontario. In many cases they brought with them live stock and the crude necessary agricultural implements and tools of those days. These immigrants endured many privations and hardships in the early years and their settlements were barely established when the War of 1812-14 came with the usual wastage, devastation, and post-war agricultural depression. The first real prosperity for all this new agricultural settlement in Canada came after 1850 with the improved transportation facilities provided by the railways and with the rising prices resulting from the Crimean War, the American Civil War, and the Prussian wars in Europe.

During this long early period of agricultural development in Canada, methods generally remained very primitive. The greatly increased French-Canadian population continued the traditional farming practices introduced by their forefathers of the 17th century. For many years before and after the British conquest, their live stock was cut off from the possibilities of improvement through the importation of better breeding stock from France. In the conditions of destitution under which most of the Loyalists came to this country, their farming methods were similarly primitive and their live stock poor. Under the French *régime*, some official efforts had been made to improve methods and as early as 1668 Laval opened an industrial school where agriculture was taught at St. Joachim, near Quebec, but for many years after the British conquest of Canada, the agricultural industry received very little help or encouragement from governing bodies, the official classes being too much engrossed in politics.

The Inception of Improved Methods.—The first large-scale movement for the improvement of the agricultural industry, which is in any way comparable with the many agencies for that purpose to-day, appears to have started in Nova Scotia and probably was a result of the depression which followed the Napoleonic wars in Europe and the War of 1812-14 in America. In 1818 a series of articles in the *Acadian Recorder* under the signature of "Agricola" attracted wide-spread public interest and resulted in the formation of the Central Agricultural Society. The movement quickly spread to other districts of Nova Scotia and to the other provinces. These Agricultural Societies held yearly exhibitions in their districts and encouraged the distribution of improved stock and seed. Before long the Societies began to receive official assistance in the form of grants from the colonial govern-

ments and eventually by the creation of Boards or Departments of Agriculture as a feature of their administrative functions. Another avenue, followed by awakened official interest in agricultural improvement, was the provision of facilities for instruction. The first agricultural school in Canada was opened in 1859 at Ste. Anne de la Pocatière and this has been followed by numerous other schools and colleges in various parts of Canada.

Origin of the Dominion Experimental Farms System.—The period of agricultural prosperity and high prices, already mentioned as beginning about the middle of the 19th century, was followed in the 1870's by a period of rapidly declining prices and general depression. The farming industry was particularly affected by the decline in prices. These conditions provided a wide-spread incentive for improvements and greater efficiency in agricultural production and resulted eventually in the establishment of the Dominion Experimental Farms System.

The system owed its inception to the report of a Select Committee of the House of Commons which, in 1884, recommended the establishment of an experimental farm. William Saunders of London, Ontario, was selected by the Minister of Agriculture to plan the organization of such a farm. In June, 1886, the Experimental Farm Stations Act was passed providing, in addition to the original farm intended near Ottawa, for others in the Maritime Provinces, Manitoba, the Northwest Territories, and British Columbia. The farm near Ottawa, designated for the provinces of Ontario and Quebec, was to be the principal or central station. Late in the autumn of 1886, the site of the present farm at Ottawa was acquired and William Saunders was appointed the first Director of Experimental Farms. In the year 1888 the branch farms provided for by the original Act were all established, that for the Maritime Provinces at Nappan in Nova Scotia, for Manitoba at Brandon, for the Northwest Territories at Indian Head, and for British Columbia at Agassiz.

These five original farms are designated as Dominion Experimental Farms to distinguish them from similar stations established at later dates and known as Dominion Experimental Stations. There are also a number of Dominion experimental sub-stations, operated by staffs somewhat smaller than those of the regular farms and stations.

The contribution toward the improvement in agriculture made by the Dominion Experimental Farms System and also by provincial experimental farms, lies chiefly in the breeding of improved live stock and plants, and the development of better cultural practices. While the breeding of pure-bred live stock is carried on very largely by private enterprise as well as by experimental farms, the breeding of improved varieties and strains of field, garden, and orchard plant life has devolved almost exclusively upon the Experimental Farms. Time and patience are the essential factors in the improvement of plant species and each year's progress is the result of fundamental work done years before by men who often have not lived long enough to see the fruits of their labours. For the past fifty years, men who have operated these farms have been leaders in Canadian agricultural progress. Dr. William Saunders, the first Director of the Dominion Experimental Farms System laid the foundation for the development of Marquis wheat by his son, Dr. Charles Saunders. This is still the leading variety grown in Canada and commands a premium on the markets of the world. It is impossible to measure in dollars and cents the value of the contributions made along these lines but, to mention only a few of the more important results obtained in plant breeding, yield per acre has been greatly increased, the climatic limitations of various types of plants and trees

have been pushed back, resistance to diseases and pests has been built up and the quality of the product has been variously improved. The general effect has been that while the quality of Canadian agricultural products has risen, the efficiency of production or the production per capita has made great progress also. Plant breeding and the development of better cultural practices by experimental farms along with the more widespread use of machinery have been the important factors in enabling the agricultural industry to keep pace with the modern increased efficiency of production in other primary industries and in manufactures, thus enabling the agricultural population to share in the general rise in the standard of living without a permanent change in the relationship between the prices of agricultural products and those of other commodities.

Early Work on the Branch Farms.—The Brandon farm endeavoured at an early date to show the importance of the establishment of a permanent home built on sound farming practices for the prairie farmer. Shelter belts and ornamental planting were established at an early date and for many years the Brandon farm has been noted for its valuable work in the study of methods of live-stock production. At the time of the establishment of the Indian Head farm, the West was just opening up to settlement and little was known of its agricultural possibilities. The experimental work of this farm was a leading factor in the development of the country. New cultural methods and new varieties were introduced which rapidly placed the farming industry on a stable basis. The introduction of summerfallowing, a method of conserving soil moisture which has not yet been improved upon, was the result of work done on this farm. Early planting of hardy fruits, shrubs, and trees showed the possibility of establishing permanent homes on the open prairie.

On the farm at Agassiz, British Columbia, much was done to develop horticulture in British Columbia. Subsequently, when it was found that other areas were more suited to the growing of hardy fruits, emphasis was shifted to live stock with accompanying studies in crop production, especially in relation to dairy farming.

Period of Expansion.—For twenty years the original five experimental farms served the young Dominion well, and to-day these farms occupy a prominent place in the agriculture of their respective provinces. It became evident in the early part of the present century that, with the great expansion of agriculture in Canada, there must be an increase in the facilities available for experimental work. The Central Experimental Farm at Ottawa had grown rapidly, and the different branches of agriculture had been recognized as separate "Divisions" of the central farm. The Cereal Division had by this time produced Marquis wheat. It was distributed to farmers in 1909 and rapidly spread throughout Western Canada, extending the spring wheat area enormously. The value of this one production of the Experimental Farms System alone is sufficient annually to pay the complete cost of the system.

Expansion in the Maritime Provinces.—While agriculture was spreading in the newer areas of the West, the older areas of the East were beginning to meet the problems which always come when agriculture has passed the virgin stage. The problems of decreasing crop yields, due in some cases to lack of plant food and in others to definite diseases and insect pests, presented difficulties which urgently required solution. Accordingly, in the Maritime Provinces, experimental stations and plant pathological laboratories were established for each of the three provinces, at Charlottetown, Prince Edward Island; Kentville, Nova Scotia; and Fredericton, New Brunswick. An experimental fox ranch was established at Summerside, Prince Edward Island, to study problems in nutrition, disease, genetics, and general management. This ranch has given splendid service to this important industry.

Recently a combined hospital and metabolism building has been erected on the Summerside ranch. The station at Kentville, Nova Scotia, located in the famous Annapolis valley, has devoted its attention largely to fruit growing, but at the same time has not neglected general farming operations. The stations at Charlottetown and Fredericton have led the way to better general farming methods in their respective provinces. In recent years considerable attention has been paid to the problem of mineral deficiency in the soil, manifesting itself in disease conditions and lower yields in root and fruit crops. The climatic conditions of the Maritime Provinces make them a natural pasture area, and much work is being done to improve the native pastures.

Expansion in Quebec and Ontario.—In the province of Quebec, experimental stations were established at Ste. Anne de la Pocatière for Eastern Canada, at Cap Rouge for central Quebec, at Lennoxville for the Eastern Townships, and at La Ferme for northern Quebec. The station at La Ferme has since been closed and replaced by five smaller illustration stations and a new experimental station has been established at Normandin in the lake St. John district. Each of these farms has specialized in meeting the agricultural problems of its own particular area. In addition, experimental stations were established at L'Assomption and Farnham, where much progress has been made in studying methods of production and marketing of tobacco. In recent years the station at Cap Rouge has concentrated its energies on horticultural work. An experimental sub-station has also been established at Ste. Clothilde for the study of black muck soils. There is also a plant pathological laboratory at Ste. Anne de la Pocatière.

In the province of Ontario the Central Farm at Ottawa has contributed a vast amount of information of value to Ontario farmers and has also carried on the general supervisory work for the whole Dominion system. In 1910 the supervisory work of the branch farms had become so extensive that the Director could no longer handle it. The Chiefs of Divisions were consequently given charge of the direction of their respective lines of work on the branch farms as well as at the Central Farm, and their wider responsibility was denoted by prefixing the word "Dominion" to their official titles. Additional experimental stations were established at Kapuskasing in northern Ontario, and at Harrow in the tobacco area in southwestern Ontario. A Dominion Laboratory of Plant Pathology was established at St. Catharines in the Niagara fruit district. Later a sub-station for tobacco studies was established at Delhi. All of these units have been giving splendid service in their own special fields.

Expansion in the Prairie Provinces.—The rapid settlement in the West made necessary the establishment of new experimental stations to serve the needs of the young country. Stations were located at Lethbridge and Lacombe in Alberta, and at Rosthorn, Scott, and Swift Current in Saskatchewan. In the Peace River district an experimental sub-station was started at Beaverlodge, and a chain of experimental sub-stations was established across the northern area at Forts Smith, Resolution, Vermilion, Providence, Good Hope, and at Carcross, Yukon. Subsequently a range experiment station was located at Manyberries, Alberta, and two forest nursery stations were acquired at Indian Head and Sutherland, Saskatchewan. Laboratories for the study of crop diseases were established in co-operation with the universities of Manitoba, Saskatchewan, and Alberta. A sub-station for the study of weed control was located at Regina, while at Saskatoon there is a special forage crops laboratory. An experimental station was established at Morden, Manitoba, in the older area of the West to solve problems of mixed farming, and

particularly to specialize in horticultural work. Recently a new experimental station has been established at Melfort, Saskatchewan.

Through this well-organized system of experimental farms on the prairies, an exceedingly comprehensive study of all the problems relating to western agriculture has been made. New varieties of grains, hardy fruits and other crops have been developed, new cultural methods worked out, and improved families of live stock distributed. There is not a township in the Prairie Provinces which has not benefited from the work of the Dominion Experimental Farms System.

Expansion in British Columbia.—As agricultural development took place in British Columbia, stations were established at Sidney on Vancouver island, and at Windermere and Summerland in the interior farming areas. The station at Summerland has developed into a large unit studying problems of irrigation and orchard nutrition and disease. All the British Columbia stations are also interested in general problems of live-stock and crop management.

Illustration Stations.—During the first twenty-five years of the work of the Dominion Experimental Farms a vast amount of information of practical value to the farmer was gained relating to rotations, crops, cultural methods, and the necessity of the timely performance of the various cultural operations. Having this information for dissemination, the necessity of having organized bodies of farmers to act as channels for the introduction of these new practices was realized. To accomplish this, the Division of Illustration Stations was established, to co-operate with the farmers in districts remote from the experimental farms, and to carry to them, in a practical, demonstrational form, the results of the experiments and researches as made available by the experimental farms themselves.

To demonstrate the usefulness of these practices, crops, and rotations, illustration stations were established by the Experimental Farms Branch in the different provinces, starting first in Saskatchewan and Alberta in 1915. The value of this work was so strongly felt that this division is now operating 14 stations in Prince Edward Island, 17 in Nova Scotia, 21 in New Brunswick, 58 in Quebec, 17 in Ontario, 13 in Manitoba, 21 in Saskatchewan, 11 in Alberta, and 20 in British Columbia, or, in all, 192 stations. In addition there are 41 district experiment sub-stations, established under the rehabilitation program, which serve a similar purpose. Of these, 3 are in Manitoba, 29 in Saskatchewan, and 9 in Alberta. In carrying out this work, the owner of a farm co-operates with the Department, and, on a small rental basis, sets aside a certain area, varying from 10 acres to 50 acres, for experimental and demonstration purposes. In return, the farmer carries on such rotations, grows such crops, and performs such cultural practices as are deemed necessary by the Department to stimulate more economic production.

Live-stock development is important at 115 of the illustration stations. At the remainder grain farming contributes mainly to the farm revenue. Development of small home orchards is being fostered in suitable districts. A large amount of breeding stock of cattle, sheep, swine, foxes, and poultry is sold annually by the farmers in charge of these stations, and a large amount of seed grain and grass seeds of tested varieties raised on the illustration stations goes out to improve crops of the various districts. The field meetings held at illustration stations are steadily becoming better known. At each field-day the work on the farm as well as the crops and varieties suitable for the district are discussed. As occasion permits, live-stock demonstrations and judging competitions are held. During the year 1936 there were held 147 meetings of this nature with an attendance of 16,149 people.

or an average of 110 persons per meeting. These meetings are sponsored by the local supervisor in co-operation with provincial and Dominion Department workers.

Prairie Farm Rehabilitation.—The Prairie Farm Rehabilitation Act was passed in 1935 to provide for the improvement of agricultural conditions in those parts of the Prairie Provinces which have suffered severely in recent years from drought and soil drifting. Under the provisions of this Act the Dominion Experimental Farms have inaugurated an extensive program of investigational and demonstrational work with the object of introducing the best measures for minimizing the effects of drought, controlling soil drifting, and reclaiming abandoned, drifted land. An important objective of this program is to develop co-operative action on the part of farmers in effecting their own rehabilitation.

The various agencies operating under the rehabilitation program include:—

(1) *District Experiment Sub-Stations.*—These are private farms operated under contract as outposts of the Dominion Experimental Farms, designed to investigate and demonstrate the best methods of crop production under drought and soil-drifting conditions. A total of 41 of these sub-stations have been established throughout the affected area.

(2) *Reclamation Projects.*—With the object of determining the best methods of reclaiming drifted land for cultivation, or of establishing grass cover to prevent further drifting, reclamation projects have been started at more than thirty points in the drought area. These projects vary from large experimental stations to relatively small demonstrational plots.

(3) *Agricultural Improvement Association.*—In order to secure community co-operative action among farmers on the solution of local drought and soil-drifting problems, about 34 Agricultural Improvement Associations have been formed. These Associations receive advisory services together with material and financial assistance under the rehabilitation programs.

(4) *Tree Planting.*—Free trees are made available to farmers throughout the Prairie Provinces. In addition, special assistance in establishing field shelter belts for soil-drifting control is provided through various rehabilitation agencies.

(5) *Water Development.*—For the provision of facilities for stock-watering and irrigation projects in districts inadequately supplied with water, special engineering and financial assistance has been made available under the rehabilitation program.

In addition to the foregoing major aspects of the rehabilitation program, a considerable amount of work has been undertaken by the Dominion Experimental Farms on grass-seed production, soil research, soil survey and other problems arising from drought and soil drifting. In connection with soils investigations, a new Soil Research Laboratory has been opened at Swift Current, Saskatchewan.

Subsection 2.—Provincial Departments of Agriculture.*

Prince Edward Island.—The Department of Agriculture is presided over by a Minister, and the staff consists of a Deputy Minister, a live-stock superintendent, a superintendent of women's institutes, a dairy superintendent and a field promoter. Assistance is given in co-operative marketing, promoting the live-stock industry and encouraging exhibitions, the formation of boys' and girls' clubs and the welfare of agriculture generally.

* For publications of provincial Departments of Agriculture, see in the index the entry "Publications of Provincial Governments".

Nova Scotia.—Agriculture in the province of Nova Scotia is administered by the Department of Agriculture, with the Head Office (Minister's Office) and those of the Director of Marketing and Land Settlement Board situated in Halifax. Many of the technical officials are situated at the Agricultural College and Farm, Truro, and other Divisions of the Department include: extension service; agricultural societies, associations and exhibitions; dairying; poultry; live stock; entomology and botany; apiculture, and women's institutes.

New Brunswick.—The Branches of the Department of Agriculture of New Brunswick are as follows: (1) live-stock and agricultural societies; (2) dairying; (3) herd improvement; (4) soils and crops; (5) poultry; (6) horticulture; (7) women's institutes; (8) agricultural representatives; (9) industry, immigration, and farm settlement; (10) elementary agricultural education; (11) beekeeping.

Quebec.—The Quebec Department of Agriculture comprises a certain number of Branches and sections as follows: *Agricultural Economics Branch*, including the following sections: publicity, co-operation, markets and statistics, demonstration farms, agricultural surveys, field husbandry, drainage, home economics, agricultural societies. *Live Stock Branch*, including the following sections: dairy, veterinary, swine, sheep, horses, poultry, farm buildings. *Horticulture Branch*, including the following sections: fruit growing, truck crops, beekeeping and sugar making, vegetable canning, flower growing, phytopathology, entomology, botany. *Agricultural Representatives Branch*: 82 agricultural representatives' offices are now established in rural counties of Quebec and are under the supervision of 20 district inspectors. The above organizations are all under the authority of the Deputy Minister.

There are other activities which are not included in the above organization, such as: agricultural education, agricultural merit competition, provincial dairy school, provincial handicraft school.

Ontario.—The Ontario Department of Agriculture includes the following organizations: agricultural and horticultural societies, vegetable growers' association, live stock, institutes, dairy, Milk Control Board, fruit, crops, seeds and weeds, statistics and publications, agricultural representatives, the Commissioner of Agricultural Loans, and the Commissioner of Marketing. The Department is responsible for the administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, the experimental farms at Guelph, Ridgetown, and Vineland, and Demonstration Farms at New Liskeard and Hearst.

Manitoba.—The Manitoba Department of Agriculture includes an Agricultural Extension Service, a Dairy Branch, a Publications, Statistics and Weeds Branch, a Live Stock Branch, a Debt Adjustment Board, and a Registrar of Co-operative Associations.

The Agricultural Extension Branch aids field-crop production, horticulture, beekeeping, poultry raising, suppression of insect outbreaks, boys' and girls' club work, and various home-making projects. It also directs the activities of rural agricultural representatives and supervises the work of agricultural societies, horticultural societies and women's organizations. The Dairy Branch grades all cream supplied to creameries, supervises the activities of creameries and cheese factories and gives general support to the dairy industry. The Live Stock Branch licenses stallions and conducts projects and administers policies through which encouragement is given to the production of better types of animals.

Saskatchewan.—The Department of Agriculture includes branches dealing with: the agricultural representative service, live stock, field crops, dairying, statistics, co-operation and markets, and a bee division. The Live Stock Branch provides the organization for examining and licensing stallions, purchasing and selling cattle, sheep, and hogs to farmers on cash and credit terms in the pure-bred sire areas (areas created under statutory authority in order to eliminate undesirable sires and improve the quality of live stock), and registering brands for live stock. The poultry industry is promoted through a flock-culling service, a turkey-grading service and an approved hatchery policy. The Field Crops Branch aids in promoting good cropping and tillage practices as well as encouraging the use of good quality seed of cereal and forage crops and provides control measures for suppressing insect and weed pests. The Dairy Branch directs the grading of cream at all the creameries, promotes herd improvement through cow-testing and administers the provisions of the Dairy Products Act with respect to licensing creamery operators, cream testers, and the bonding of creameries. The Statistics Branch, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers annual data respecting crops and live stock of the province. The Co-operation and Markets Branch grants charters to co-operative associations under the Co-operative Associations Act, promotes co-operative activities including live-stock shipping, and poultry marketing, licenses poultry dealers under the Live Stock and Live Stock Products Act and publishes a fortnightly news letter dealing with co-operation and marketing. Under the Agricultural Representative Service, as established, the province is divided into districts. Qualified men are engaged in field service, carrying on promotional and educational work; they put into action the various policies of the Department. The Apiary Division is organized to promote beekeeping, which is developing substantially. Agricultural societies are organized by the Department and grants are paid through the Department, while direction of the activities of societies is centred in the College of Agriculture of the University of Saskatchewan.

Alberta.—The main services of this Department are rendered through its various branches to the live-stock, grain-growing, dairy, and mixed farming industries. Fairs and institutes are encouraged; rural women's organizations are assisted through the Women's Bureau; district agriculturists are located at 10 points; 2 schools of agriculture are maintained; crop reports and statistical information are prepared; short courses and field days are conducted. Some phases of agriculture receiving more recent and increased attention are: development of apiculture; encouragement of the poultry industry; more effective weed control; production and sale of registered seed; increase in forage crops and grasses; junior activities such as grain and stock clubs and school fairs; encouragement of beef-feeding associations.

British Columbia.—The Department of Agriculture consists of three main divisions dealing with general administration, animal industry and plant industry.

Under General Administration are the branches dealing with collection of statistics, assistance to fall fairs, distribution of publications, soil surveys, apiary inspection, junior club projects, supervision of farmers' and women's institutes, and policies of a general agricultural nature, together with the Markets Branch. The Animal Industry Division includes: dairy, poultry, veterinary and general live-stock branches, as well as brands inspection, nutritional studies, animal parasite control, and pure-bred sire distribution policies. Official lists are maintained of

sires which have five or more daughters with records of production. The Plant Industry Division includes: plant disease and pest control, pathology and entomology, field crops and horticultural activities.

An Extension Service has representatives located in fifteen agricultural districts. These representatives are under the divisions of either animal industry or plant industry, depending upon the predominating feature of agriculture in the several districts. Particular attention is given to the development of a live-stock policy, by which the favourable climatic conditions of the coast districts of British Columbia enable farmers to finish live stock ready for the market at seasons when weather conditions are not favourable in other parts of Canada. This policy has been devised with the aim of enabling the farmers of British Columbia to supplement the work of the prairie live-stock men in maintaining a continuous supply of well-finished animals for the market.

Details of the work of the Feed Standards Board, appointed by the provincial Minister of Agriculture, and of the Pasture Committee were given at p. 226 of the 1936 Year Book and no change is reported since then.

The detailed survey of orchard soils in the Okanagan valley, started in 1931 as a joint undertaking between the Dominion Experimental Farms Branch and the provincial Department of Agriculture, has been conducted under the supervision of provincial Soils Branch officials. During 1936 the work has been extended to cover approximately 500,000 acres of arable land in the Lower Fraser valley.

Subsection 3.—Provincial Agricultural Colleges and Experimental Stations.

Under the above heading, outlines of the work done at provincial agricultural colleges and experimental stations were given by provinces at pp. 198–203 inclusive of the 1930 Year Book. The interested reader is referred to that volume, and to the following provincial publications, for information concerning courses and programs of work at these institutions:—

Nova Scotia.—Annual Report of the Department of Natural Resources for Nova Scotia; College Prospectus of the College of Agriculture, Truro, N.S.

Quebec.—Annual Report of Macdonald College, Ste. Anne de Bellevue, Que., and the prospectuses and annual announcements of the School of Agriculture, Ste. Anne de la Pocatière, and the Oka Agricultural Institute, Lake of Two Mountains, Que.

Ontario.—Annual Report of the Ontario Agricultural College and Experimental Farm, Guelph, Ont.

Manitoba.—Annual Report of the Manitoba Agricultural College, Winnipeg, Man.

Saskatchewan.—Annual Report of the College of Agriculture, University of Saskatchewan, Saskatoon, Sask.

Alberta.—Annual Report of the College of Agriculture, University of Alberta, Edmonton, Alta.

British Columbia.—Annual Report of the Faculty of Agriculture, University of British Columbia, Vancouver, B.C.

Section 2.—Statistics of Agriculture.*

Census Statistics.—In addition to the statistics collected annually, which are the subject of this section, valuable information is published following each decennial census. The total number of farms, their tenure, acreage, value, mortgage debt, farm population, farm machinery and facilities, etc., were treated at pp. 295–301 of the 1934-35 Year Book. In this volume a summary presentation of agricultural development since 1871 is given in Subsection 9, pp. 270-273.

Crop-Reporting Service.—The voluntary crop-reporting service of the Dominion Government, which has been in operation since 1908, has for its object the issue of accurate, timely and independent reports on crop conditions throughout the Dominion; first, in the interests of the general body of Canadian farmers; secondly, for the information and guidance of other interests allied to and dependent upon agriculture (interests represented by statesmen, economists, bankers, grain dealers, transportation agents and others); and thirdly, for reporting to the Institute of Agriculture at Rome (to which Canada is an adhering country), in return for reports on the production of other countries and of world totals which influence prices and consequently affect the interests of Canada. Supplementing the monthly reports from crop correspondents, the Bureau issues telegraphic crop reports utilizing the services of agriculturists throughout the Dominion. For the Prairie Provinces, these are issued every week from the latter part of May to the end of August, while the reports on a Dominion-wide basis are issued every two weeks during the same period. The program of reports for 1937-38 is given in the Monthly Bulletin of Agricultural Statistics, January, 1937, pp. 49–51, and is also issued as a special leaflet.

Annual Statistics.—In addition to the crop-reporting service, statistics of the areas under field crops and of the numbers of farm live stock are collected. These arrangements have been in force since 1918, and are carried out by the Dominion Bureau of Statistics in co-operation with the Provincial Governments. The statistics are secured by simple schedules which are at present returned by about one-fifth of the farmers of Canada. They form the basis of the estimates for the whole of Canada. The results for wheat, oats, barley, rye, and flaxseed in the three Prairie Provinces are ready for publication in August, while the results for the remaining crops and for the numbers of farm live stock are published in November and December. The areas, thus determined, when multiplied by the average yields per acre as reported by crop correspondents, form the basis of the total estimated production for each crop.

The June schedule covers the areas sown to field crops, the numbers of live stock and poultry on hand, and breeding and marketing intentions with regard to live stock and poultry. The December schedule contains practically the same items with the exception of field-crop areas.

The schedules are distributed and collected through the agency of the rural schools in New Brunswick, Quebec, Ontario, Manitoba, and Saskatchewan, while in Prince Edward Island, Nova Scotia, Alberta, and British Columbia the schedules are sent direct to the farmer through the mail.

* Revised under the direction of Dr. T. W. Grindley, Chief of the Agricultural Branch, Dominion Bureau of Statistics. This Branch is concerned with both primary and secondary statistics of agriculture, including statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour, and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, and reports on the milling and sugar industries and cold-storage holdings. A list of the publications of this Branch is given in Chapter XXIX, Section I, under "Production".

Monthly Bulletin of Agricultural Statistics.—Originally established in 1908 as the "Census and Statistics Monthly", but changed to its present title in April, 1917, this publication is now in its thirtieth year. It is the official organ not only for the monthly crop reports and annual statistics previously described, but also for statistics of dairying, eggs, fur farming, fruit, apiculture, hops, tobacco, maple products, sugar beets, beet sugar, flax fibre, clover and grass seeds, visible supplies, prices, values, foreign agriculture and other subjects in considerable variety.

Presentation of Agricultural Statistics.—In the current edition of the Year Book, statistics of agriculture are presented under the following headings: (1) agricultural revenue and wealth; (2) acreages, yields and values of principal field crops; (3) farm live stock and poultry; (4) dairying; (5) horticulture; (6) special agricultural crops; (7) farm labour and wages; (8) prices of agricultural produce; (9) agricultural statistics of the census; (10) miscellaneous agricultural statistics; and (11) international agricultural statistics.

Subsection 1.—Agricultural Revenue and Wealth.

Revenue.—Table 1 shows, under principal headings, the gross agricultural revenue of Canada, by provinces, for the years 1931 to 1935. It is important to note that the figures represent gross values, as no distinction is made between crops used as materials for other kinds of production, such as the feeding of live stock, and no allowance is made for the costs of production. The total revenue for 1935 shows a slight increase of \$516,000 or less than one per cent as compared with 1934.

1.—Estimated Gross Annual Agricultural Revenue of Canada, Itemized by Provinces, 1931-35.

NOTE.—Preliminary figures for 1936 and revised figures for 1931-35 will be found in the Monthly Bulletin of Agricultural Statistics, March, 1937.

¹ Preliminary figures.

In Table 2, full use has been made of the results of the 1931 Census for values of lands, buildings, and implements and machinery. The figures quoted for buildings, and implements and machinery correspond with the values shown in the census returns, as these items change very little in value from year to year. The estimated values for lands are weighted by the annual estimates of farm land values. The other items—live stock, poultry, animals on fur farms, and agricultural production—are annual estimates.

The gross agricultural wealth of Canada for 1935 is estimated at \$5,797,104,000 as compared with the revised estimates of \$5,608,157,000 for 1934; \$5,563,790,000 for 1933; \$5,499,432,000 for 1932; and \$6,060,541,000 for 1931.

Subsection 2.—Acreages, Yields and Values of Field Crops.

The Chief Field Crops of the Latest Ten Years.—In Table 3 will be found a summary statement of the acreages, yields and values of wheat, oats, barley, rye, buckwheat, flaxseed, potatoes, hay and clover, and alfalfa for the latest ten years. Comparative figures back to 1908, given at pp. 230-232 of the 1929 Year Book, indicate the recent growth of Canadian agriculture. In particular may be noted the tripling of the wheat crop, the almost doubling of the oat crop, the tripling of the barley crop, the thirteenfold increase in the rye crop, the 40 p.c. addition to the hay and clover crop, and the sevenfold increase in the alfalfa crop within the past 27 years, disregarding the 1931 to 1936 crops as not, by any means, representing maximum yields. On the other hand, the acreages and yields of the potato crop have not shown a wide variation throughout the period, presumably because this crop is produced mainly for home consumption. Certain figures for earlier years on acreage, yield and value will be found in the Statistical Summary of the Progress of Canada at the beginning of this volume.

3.—Acreages, Yields and Values of Principal Crops Grown in Canada, 1927-36.

NOTE.—Comparative figures for the years 1908-26 are given in the Canada Year Book, 1929, pp. 230-232. The total value of wheat for 1912 should be \$139,090,000 instead of the \$19,090,000 shown on p. 230 of the 1929 Year Book, the error being due to the dropping out of a figure.

The foregoing figures are not entirely comprehensive since the figures for the Maritime Provinces, Quebec, and Ontario include all pasture, seeded and natural, while the figures for the four western provinces are "seeded pasture" only. Most of the area used for pasture in these provinces is "natural" and data on land used in this way can only be properly secured at the quinquennial census. At the Quinquennial Census of 1936, the acres of "natural" pasture in the three Prairie Provinces were as follows: Manitoba, 3,304,017; Saskatchewan, 15,215,313; Alberta, 15,164,467.

The areas under grazing leases in the western provinces as at Mar. 31, 1934-36, are reported by the provincial lands administration branches as shown in Table 7.

7.—Provincial Lands under Grazing Leases, 1934-36.

¹ Revised since the publication of the 1936 Year Book.

Distribution of Wheat and Oat Crops.—The distribution of the wheat crop of Canada for the years ended July 31, 1935 and 1936, is calculated in Table 12.

12.—Distribution of the Canadian Wheat Crops, by crop years, 1934-35 and 1935-36.

Note.—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to 4½ bushels of wheat. For similar calculations extending over a series of years both for wheat and oats, see the Year Book, 1920, pp. 263-266, and the April issues of the Monthly Bulletin of Agricultural Statistics for each of the years 1920 to 1933. For 1934 and later years, preliminary estimates will be found in the August numbers of the Bulletin.

Item.	Crop Year ended July 31, 1935.	Crop Year ended July 31, 1936.	Item.	Crop Year ended July 31, 1935.	Crop Year ended July 31, 1936.
	'000 bush.	'000 bush.		'000 bush.	'000 bush.

Exports as grain.....	144,375	232,020			

Table 13 presents similar data for oats. The bulk of this crop is consumed as feed for live stock and the table shows approximately how the remaining portion of the crop is disposed of, including: the quantities exported as grain, oatmeal and rolled oats; the quantities retained for seed; and the quantities milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry-over represents grain in the elevators, in farmers' hands, in transit, etc., and the balance is the quantity used in Canada, for feeding to live stock, this amount being estimated at 261,438,000 bushels in 1934-35 and 312,627,000 bushels in 1935-36.

13.—Distribution of the Canadian Oat Crops, by crop years, 1934-35 and 1935-36.

Item.	Crop Year ended July 31, 1935.	Crop Year ended July 31, 1936.	Item.	Crop Year ended July 31, 1935.	Crop Year ended July 31, 1936.

Per Capita Consumption of Wheat in Canada.—According to calculations, the average annual per capita consumption of wheat ground for human food in Canada during the ten years 1927 to 1936 was 4.2 bushels. The average range for the period was between 4.0 and 4.4 bushels. The average consumption in 1936 was estimated at 4.1 bushels. Details for the years 1919-27 were given at p. 241 of the 1929 Year Book. Annual estimates are published in the April number of the Monthly Bulletin of Agricultural Statistics.

Subsection 3.—Farm Live Stock and Poultry.

The growth of the live-stock and poultry industries in Canada from decade to decade is indicated in summary statistical form in Table 14.

14.—Summary Statistics of the Numbers of Live Stock and Poultry on Farms in the Dominion of Canada, Censuses of 1871-1931.

Production and Value of Wool.—The production of wool in Canada is placed at 19,195,000 lb. from 3,370,100 sheep and lambs in 1936 as compared with 19,357,000 lb. from 3,399,100 sheep and lambs in 1935. Table 18 gives the total estimated production and value of wool for the years 1927 to 1936.

Egg Production.—Table 19 gives the estimated numbers of egg-producing hens, quantities of eggs produced, prices and values, by provinces, for the years 1934 to 1936 inclusive. The data for egg-laying hens were calculated from the numbers of mature birds shown in the June surveys, with reductions to allow for cocks and cockerels. The production of eggs per hen and the average prices shown in the table were made with the assistance and advice of extension workers and poultrymen connected with the provincial Departments of Agriculture.

19.—Annual Production and Value of Farm Eggs in Canada, by Provinces, 1934-36.

Subsection 4.—Dairying Statistics.

The dairy industry is dealt with under the following headings: total milk production; butter and cheese; miscellaneous factory products; and, finally, the total value of the dairy production of Canada. For the year 1936 preliminary estimates have been made which will be revised when annual returns are available.

Total Milk Production.—The data presented in Table 20 represent the quantities of dairy products expressed in terms of milk. The total milk production for 1936 is estimated at 16,741,613,100 lb., an increase of 384,951,800 lb. or 2.35 p.c. over the previous year.

All products contributed to the increase in the total milk production of Canada between 1935 and 1936 except dairy butter made on farms, this product having declined 13,287,000 lb. in 1936 as compared with the amount of milk used for this purpose in 1935.

20.—Dairy Production of Canada Expressed in Pounds of Milk, 1926-36, and by Provinces, 1936.

¹ The data in this column for 1933-36 include the ice cream made in specialized ice-cream plants and confectionery establishments. ² Figures for 1935 have been revised since the publication of the 1936 Year Book.

Butter and Cheese.—The butter output of creameries in 1936 was 248,740,500 lb., a gain of 7,821,701 lb., or 3.24 p.c., over the previous year, and 22,785,254 lb., or 10.08 p.c., over 1931—a record year up to that time. Dairy butter production in 1936 was 106,381,000 lb., a decrease of 0.53 p.c. Butter reached its maximum

exportation in the year ended June 30, 1903, when 34,128,941 lb. were exported. For the calendar year ended Dec. 31, 1936, the exports were 5,128,800 lb. and the imports were 117,281 lb. The apparent consumption of butter in 1936 is estimated at 346,553,280 lb., or 31.42 lb. per capita, compared with 340,439,540 lb., or 31.13 lb. per capita in the previous year.

The quantity of factory cheese made in Canada during 1936 is estimated at 117,079,400 lb., an increase of 16,652,000 lb. or 16.58 p.c. Cheese made on farms is estimated at 1,032,300 lb., an increase of 14,000 lb. Since 1926, as shown in Table 21, there has been a significant reduction in cheese manufacturing. The decrease recorded between 1933 and 1934 was greater than that shown between 1932 and 1933, but the most outstanding decline occurred in 1927 and a lesser decline in 1929. The increase in factory cheese production which took place in 1936 over that of the preceding year was sufficient to cover 78.63 p.c. of the 21,177,626 lb. decline which occurred between 1932 and 1934. In 1868 the quantity of cheese exported from Canada was 6,141,570 lb.; in 1904 a maximum exportation of 233,980,716 lb. was reached. For the calendar year ended Dec. 31, 1936, the exports were 81,890,300 lb. The apparent consumption of cheese in 1936 was 37,193,554 lb., or 3.37 lb. per capita, compared with 39,634,889 lb., or 3.62 lb. per capita in the previous year. It will be seen that the domestic consumption as shown in 1936 represented only 31.49 p.c. of the total cheese production of the Dominion.

¹ Figures for 1935 have been revised since the publication of the 1936 Year Book.

Miscellaneous Factory Products.—The production of condensed milk in Canada in 1936 is estimated at 7,761,000 lb. as compared with 9,149,309 lb. in the previous year. Evaporated milk increased from 66,218,061 lb. to 70,888,000 lb. The production of all concentrated whole-milk products amounted to 81,846,000 lb. in 1936 as compared with 77,711,741 lb. in 1935. The production of concentrated milk by-products amounted to 26,739,000 lb. in 1936 (according to provisional figures) of which 17,879,000 lb. was skim-milk powder. In 1935 the production

of skim-milk powder was 18,890,048 lb. Thus concentrated whole-milk products increased 5.31 p.c. and concentrated milk by-products decreased 2.45 p.c. Ice cream made in factories in 1936 amounted to 4,774,929 gallons as compared with 4,345,915 gallons in 1935, an increase of 9.87 p.c.

¹ Provisional estimate.

² Gallons.

Total Value of Dairy Production.—The value of all dairy products in 1936 is estimated at \$208,238,128 as compared with \$192,410,423 in 1935, an increase of 8.22 p.c. The value of the dairy production of Canada in 1936 was the highest since 1930 and shows an advance of \$49,163,995 or 30.90 p.c. over the low value recorded in 1932. All products increased in value. The prices of creamery butter during the first quarter of 1936 were slightly lower than in the same period of the preceding year; in the summer months June to September, prices were considerably higher but dropped to about the level of 1935 prices for the rest of the year. The value per lb. of creamery butter, as deduced from Tables 21 and 23, represents an average of 23.0 cents in 1936 and 21.7 cents in 1935. Total butter shows a value of \$77,035,500 in 1936, an increase of \$6,625,367 as compared with 1935, while total cheese was valued at \$14,372,128 in 1936, an increase of \$3,690,796.

Apparent Consumption of Butter and Cheese, 1932-36.—Table 24 shows the apparent consumption of butter and cheese for the years 1932-36 as a deduction from the stocks at Jan. 1, production, and imports less exports. It will be seen that, according to the absolute figures, the apparent consumption of both butter and cheese showed a steady increase over the entire period except that in the case of cheese the consumption figures for 1936 declined. The per capita figures follow the absolute trends fairly closely.

23.—Value of Dairy Production of Canada, 1926-36, and by Provinces, 1936.

Province.	Dairy Butter.	Creamery Butter.	Farm-Made Cheese.	Factory Cheese.	Misc. Factory Products.	Milk Otherwise Used.	All Products. ¹

Subsection 5.—Horticulture.

The statistical treatment of horticulture is confined to fruit growing, vegetable growing, floriculture, and nursery stock production, all on a commercial scale. Of the several branches of commercial horticulture, fruit and vegetable growing are the most important. In recent years the latter has made remarkable gains and now surpasses fruit growing in total value of production. Vegetables and flowers grown in home gardens for private use probably exceed the volume of commercial production. The processing of fruits and vegetables is an important development closely allied to the production industry. In 1935, the latest year for which complete figures are available, the total value of processed fruits and vegetables, including wine, was almost 40 million dollars.

Apple growing is the mainstay of the fruit industry in Canada, the value of commercial production averaging over 10 million dollars annually for the years 1926-35. Other fruits cultivated include the pear, peach, plum, cherry, apricot, and grape, together with various berries of which the strawberry is most important. Substantial revenue is derived from the native blueberry and cranberry, the former being abundant over large areas of Eastern Canada, while the cranberry is found chiefly in the Maritime Provinces. Commercial fruit growing is centred mainly in the provinces of Nova Scotia, Ontario, and British Columbia. For a fuller discussion of fruit growing in Canada, the reader is referred to pp. 242-247 of the 1931 edition of the Year Book.

Satisfactory annual statistics of the commercial vegetable-growing industry are not at present available but important information on the subject is obtained through the decennial census. This material will be found on pp. 254-255 of the 1936 Year Book.

Annual Statistics of Fruit Production.—Table 25, shows the quantities and values of commercial fruit production in Canada for the years 1926-35 inclusive. A number of these figures have been revised since their publication in previous Year Books.

25.—Estimated Quantities and Values of Chief Commercial Fruit Production in Canada, 1926-35, with 5-Year Averages, 1926-30 and 1931-35.

NOTE.—Statistics of fruit production have been generally revised back to 1926 and are therefore republished in revised form for the period 1926-35 in this table.

The Nursery Industry.—The first commercial nursery in Canada was established near Fonthill, Ontario, and this district still continues to be one of the leading centres of the industry. While the province of Ontario accounts for the major part of the nursery stock output, there are nurseries distributed through all the provinces and the wholesale value of the product sold during the year ended May 31, 1936, was \$795,000, of which fruit stock accounted for \$369,693.

¹ Revised since the publication of the 1936 Year Book.

Floriculture.—The total value of floriculture and ornamental nursery stock sold in Canada during the years ended May 31, 1935 and 1936, was \$1,689,165 and \$2,784,172, respectively, as shown by Table 27. The figures for 1936 are not strictly comparable with those of former years since they represent returns from a much larger proportion of the industry than has hitherto been obtained.

27.—Quantities and Values of Floricultural and Ornamental Nursery Stock Grown in Canada and Sold during the years ended May 31, 1935 and 1936.

Vegetables.—Census figures of areas, quantities and values of vegetables produced for sale on farms in Canada, in the years 1920 and 1930, were shown at pp. 254-255 of the 1936 Year Book.

Subsection 6.—Special Agricultural Crops.

Maple Syrup and Sugar.—The Canada Year Book, 1924 contained on pp. 247 and 248 a description of the process of making maple sugar. Table 28 gives the production and value of maple sugar and syrup in Canada for the years 1934-36, as estimated by the Dominion Bureau of Statistics.

The table shows that in 1936 for the whole of Canada there was an estimated increase of 2,692,843 lb. of maple sugar and a decrease of 228,050 gal. of maple syrup, while the combined value of the two products showed an increase of \$191,361 as compared with the previous year.

Sugar Beets and Beetroot Sugar.—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time two companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg in Ontario, and the Canadian Sugar Factories, Ltd., with plants at Raymond, and Picture Butte, Alberta. Table 29 shows the area, yield and value of sugar beets grown in Canada in the years 1926-35.

29.—Acreages, Yields, and Values of Sugar Beets in Canada and Quantities of Refined Beetroot Sugar Produced, 1926-35.

NOTE.—For the years 1911-20, see the 1932 Year Book, p. 1057. For 1921-25, see the 1933 Year Book, p. 257.

The production in 1935-36 of raw beet sugar in the largest beet-growing countries in thousands of short tons was as follows: U.S.S.R., 2,315; Germany, 1,817; United States, 1,269; France 1,065; Czechoslovakia, 629; Great Britain, 610; Poland, 489; Italy, 340; Sweden, 307; Belgium, 270; Denmark, 260; Netherlands, 249; Spain, 247; Austria, 227; Hungary, 127; Roumania, 126.

Tobacco.—In 1935, the commercial tobacco crop of Canada amounted to 54,473,000 pounds from 46,870 acres, as compared with 38,734,000 pounds from 40,963 acres in 1934. The farm value of the tobacco crop for 1935 is estimated at \$10,762,700 as compared with \$7,232,100 for 1934.

Table 30 lists the acreages, quantities produced, and average yields per acre for the years 1926-35. Census figures from 1900 to 1921 and annual figures from 1921 to 1925 were given at p. 284 of the 1934-35 Year Book. For further details, see the March number of the Monthly Bulletin of Agricultural Statistics.

Apiculture.—The data on beekeeping in Canada for the years 1934 and 1935, as given in the following table, have been furnished by the provincial Departments of Agriculture and compiled in consultation with the Dominion Apiarist. The estimates for Ontario have been compiled on a new basis and are not strictly comparable with estimates published for the years prior to 1933. Values are as quoted by the provincial Departments and represent for the most part average wholesale prices; for British Columbia, the values, as in previous years, have been calculated on what is considered a fair average of the wholesale and retail prices.

Statistics of beeswax, where not furnished by the provinces, have been estimated at 1.5 p.c. of the honey crop and valued at the average price of 27 cents per pound in 1935 and 25 cents per pound in 1934.

Table 32 shows for Canada, by provinces, the number of beekeepers, number of hives, average production per colony, and the production and value of honey and wax for the years 1934 and 1935. While the production in 1935 was slightly greater than in 1934, lower prices reduced the value of the crop by nearly 10 p.c. below that of the previous year.

Figures of honey production, as at the Censuses of 1921 and 1931, were given at p. 285 of the 1934-35 edition of the Year Book.

¹Information not available.

Subsection 7.—Farm Labour and Wages.

Average Wages of Farm Help.—The cost of farm labour reached its highest point in 1920. In the next two years there was a rapid drop, while from 1923 until 1929 there was little change. The years 1930 to 1933 showed continuous marked reductions in the average value of yearly wages and board, following the downward trend of the prices of farm produce. In 1934, 1935, and 1936 slight increases were registered.

In Table 33 the values of wages and board are given for the years 1914, 1920, 1930, and 1934-36, both for the summer season and for the year, distinction being made in all cases between wages and board.

33.—Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930, and 1934-36.

Subsection 8.—Prices of Agricultural Produce.

The average monthly cash prices of representative grades of Canadian wheat, oats, barley, flaxseed, and rye in the Winnipeg market—basis, in store at Fort William and Port Arthur—will be found for each month from August, 1934, to December, 1936, in Table 34. The average monthly prices of flour, bran, and shorts at Montreal, Toronto, Winnipeg, Minneapolis, and Duluth for 1936 are given in Table 35.

The yearly average prices per cwt. of Canadian live stock at Toronto, Montreal, Winnipeg, and Edmonton are given for 1935 in Table 36 and the average monthly prices in 1936 at these centres and at Calgary in Table 37.

34.—Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flaxseed, and Rye—basis, in store at Fort William and Port Arthur—Aug., 1934-Dec., 1936, and Yearly Average Prices for crop years ended July 31, 1926-36.

Index Numbers of Agricultural Prices.—Records of the average prices received by farmers for their crops have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office or the Dominion Bureau of Statistics. From these records, annual index numbers have been calculated for each crop and for the field crops as a whole. In calculating the index numbers in the present instance, the base period used is 1926. Index numbers have been calculated of the yields of the various crops from year to year. From these data index numbers of the value of all field crops, weighted according to the quantity produced in each case, have been obtained. The results of these calculations are

38.—Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1914-36.

NOTE.—Average prices, 1926=100.

For the formulæ used in the calculation see Monthly Bulletin of Agricultural Statistics, January, 1937, p. 28.

¹ Prices quoted are per bushel, except for potatoes and turnips, etc., which are per cwt., and the last five items, which are per ton. For details of index numbers by provinces, see Monthly Bulletin of Agricultural Statistics, January, 1937, pp. 27-35.

² Revised since the publication of the 1936 Year Book.

The general index number fell from 1924 to 1928, especially from 1926 to 1928, recovered strongly in 1929 but declined rapidly to reach the record low of 43.1 for the 1932 crops. All the crops contributed to this sharp decline, although the grain crops dependent upon overseas markets suffered the most. The forage crops and sugar beets, which are used within the country, held up well in price, but climatic conditions did not favour high yields, so the values were lower.

During the next two years there was considerable improvement in the prices of these field crops. Fodder and hay prices rose materially because of short crops and good demand. The general index rose from 43.1 in 1932 to 67.4 in 1934. The decline to 55.6 in 1935 was mainly due to increased production and lower prices of coarse grains and forage crops, while smaller production at sharply increased prices brought the index up to 77.8 for 1936, the highest point since 1929.

Subsection 9.—Agricultural Statistics of the Census.*

A summary of the more important agricultural statistics compiled from the Census of 1931 was published at pages 295-301 of the 1934-35 edition of the Year Book. The review included statistics of tenure of farms; farm values; mortgage indebtedness; farm expenditures; farm population; farm workers; and cost of labour, farm machinery, and facilities. In Table 39, the statistics of agriculture made available by the Quinquennial Census of the Prairie Provinces, 1936, are linked up with those of earlier censuses so as to present a picture of the growth of agriculture between 1911 and 1936.

Growth of Agriculture in the Prairie Provinces, 1911-36.—Table 39 shows the development which has taken place in the agriculture of the provinces of Manitoba, Saskatchewan and Alberta during the twenty-five year period from 1911 to 1936. During this period the population of the three provinces increased as follows: Manitoba 249,822 or 54.1 p.c., Saskatchewan 438,461 or 89.0 p.c., and Alberta 398,487 or 106.5 p.c., making a total increase of 1,086,770 or 81.8 p.c. for the three provinces. It is of interest to note that during the period the urban and rural populations of the three provinces have increased at approximately the same rates. In 1911 the urban population formed 35.3 p.c. of the total while in 1936 the percentage was 36.3. The rural populations in 1911 formed 56.6 p.c., 73.3 p.c., and 63.2 p.c., respectively, of the populations of Manitoba, Saskatchewan and Alberta and in 1936 the percentages were 56.3, 69.9 and 62.9, respectively.

Farm Holdings.—On June 1, 1936, the number of occupied farms in the Prairie Provinces was 300,523, an increase of 12,444 over 1931, of 44,866 over 1921, and of 101,320 over 1911. While total population increased 81.8 p.c., the number of occupied farms increased only 50.9 p.c., but, as Table 39 shows, the area of occupied farms increased by 55,469,816 acres or 96.2 p.c. Twenty-five years ago 83.4 p.c. of the farmers of Manitoba, 90.6 p.c. of the farmers of Saskatchewan and 92.0 p.c. of those of Alberta owned the farms which they operated, whereas in 1936 the percentages were as follows: Manitoba 67.2 p.c., Saskatchewan 60.3 p.c., and Alberta 66.9 p.c. While the number of occupied farms increased by over 101,320, the number of farms occupied by owners increased by only 13,630. The number of rented farms, on the other hand, increased by 162.6 p.c. in Manitoba, 730.3 p.c. in Saskatchewan and 598.3 p.c. in Alberta, and the increases in the number of partly owned and partly rented farms were 150.9 p.c., 397.1 p.c., and 550.5 p.c.

Farm Areas.—The area of occupied farms increased in the three provinces from 57.5 million acres in 1911 to slightly over 113 million acres in 1936. To this increase, Manitoba contributed 3,484,623 acres, Saskatchewan 28,804,592 acres and Alberta 23,080,601 acres. The area occupied by full owners is not available for 1911, but the table shows that between 1921 and 1936 it decreased by 5,861,233 acres. The area occupied by tenants, on the other hand, increased by 10,799,433 acres and that occupied by part owners and part tenants by 20,614,180 acres. In 1921 approximately 69 p.c. of the occupied land was operated by full owners, while in 1936 the percentage was down to approximately 48.

Farm Values.—The farm property, *i.e.*, land, buildings, implements and machinery, and live stock, in the three provinces was valued, on June 1, 1936, at \$1,980,115,861 as compared with \$2,530,236,964 in 1931, \$2,609,416,646 in 1926, \$3,255,894,259 in 1921, and \$1,788,692,159 in 1911. The figure for 1936 is not

*Prepared under the direction of A. J. Pelletier, F.S.S., Chief Census Branch, Dominion Bureau of Statistics, by O. A. Lemieux, Statistician in Charge of Agricultural Statistics.

strictly comparable with the others as it does not include the value of automobiles owned by farmers. The above figures show a fairly large increase between 1911 and 1936 but an important decrease if the comparison is made between 1921 and 1936. Land, buildings, implements, and live stock all contributed to the decrease in the value of property but the decrease in the value of land is by far the most important factor. The decreases in values followed the same trend in each of the three provinces.

Condition of Farm Land.—During the twenty-five years under review, the area of improved land in the three provinces increased from 22,969,774 acres to 60,858,887 acres or 165 p.c. It will be remembered that during the period the area of occupied land increased by 96.2 p.c., the number of farms by 50.9 p.c. and the population by 81.8 p.c. The reason for this large increase in the area of improved land is due to mechanization which made it possible for one man to cultivate much greater areas. The area under field crops increased from 17.5 million acres in 1911 to 40 million acres in 1936. It is also of interest to note the large increase in the area under improved pasture and under summer fallow, the first due to the development of the dairy industry and the latter to the benefits derived from such a practice to conserve moisture.

Under unimproved land, the area under woodland on farms has increased in importance due to the opening of the northern sections which are covered with timber.

Live Stock.—While the number of horses on farms in 1936 is higher than it was in 1911, it reached its maximum in the three provinces between 1921 and 1926 and has been decreasing since. The reason for this decrease is due to the advance in mechanization of farm machinery and the consequent greater use of motor trucks, tractors, combines, etc.

The number of cattle on farms has increased steadily from census to census. There were, at June 1, 1936, 3,831,641 cattle on farms in the three provinces—the largest number ever shown in any census. The development of the dairy industry in the west is largely responsible for this increase.

The number of sheep in the three provinces has increased from 285,130 in 1911 to 1,317,418 in 1936. The number of swine increased steadily between 1911 and 1931 but between 1931 and 1936 it decreased from 2,414,196 to 1,806,913. The number of poultry on farms also increased steadily from census to census until 1931 but shows a decrease of 5,560,993 between 1931 and 1936.

Principal Crops.—Several features are of interest when one considers the changes which have taken place in the production of field crops in the western provinces. Wheat has remained the most important crop. Of all the cereal crops, however, barley has shown the largest increase, while oats has remained almost stationary for the latest fifteen years. The increasing importance of mixed grains, cultivated hay, fodder crops and improved pasture is, of course, occasioned by the development of the live-stock industry.

To sum up these few remarks; it is clear that a very radical change has taken place in farming practices in the western provinces during the last twenty-five years. While cereal crops have remained the most important factor of western agriculture, a large development of the live-stock industry, and of the dairy industry in particular, is illustrated by the large increase in live-stock numbers and by the increasing importance of cultivated hay, fodder crops, mixed grains, and improved pasture.

cultivated grasses. ¹ The value of implements and machinery in 1936 does not include the value of automobiles which is as follows: Manitoba, \$4,344,807; Saskatchewan, \$11,730,806; and Alberta, \$9,883,035. ² Total includes area of planted trees.

Subsection 10.—Miscellaneous Agricultural Statistics.

Agricultural Irrigation.—*Alberta.**—The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial, irrigation and other purposes, and the granting of licences for such purposes are dealt with thereunder. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (R.S.A., 1922, c. 114) and amending statutes provide for the formation of irrigation districts, and authorize the raising of loans under by-laws adopted by the voters of the district. Table 40 gives statistics of the larger irrigation projects in Alberta for the years 1934 and 1935.

¹ Revised since the publication of the 1936 Year Book.

The Canadian Pacific Railway Co. has constructed three large projects known as the Eastern, Western, and Lethbridge sections, the last-named being the oldest irrigation project in Alberta. In 1935 the interests of the Company in the Eastern project were transferred to the water contract holders, who are now operating under the name of the Eastern Irrigation District. By agreement with the Canadian Pacific Railway Co., the Taber, Magrath, and Raymond irrigation districts procure their water supply from the main canal of the Lethbridge section, a further 43,603 acres being served by the canals of these districts.

The total irrigable area served by the Canada Land and Irrigation Co.'s project is 130,000 acres, while the New West irrigation district, by agreement with the Canada Land and Irrigation Co., receives a water supply for a further irrigable area of 4,563 acres.

In addition to the irrigated tracts enumerated in the foregoing table, there are approximately 350 privately-owned projects in Alberta, with a possible irrigable area of about 56,000 acres.

* Revised by L. C. Charlesworth, Director of Water Resources, Edmonton, Alberta.

*British Columbia.**—The surface waters of British Columbia are vested in the Crown in the right of the province and are administered by the Water Rights Branch of the Department of Lands under the Water Act, the Drainage Dyking and Development Act, and the Ditches and Watercourses Act. The administration of the Acts is vested in the Comptroller of Water Rights and the Water Board, the latter comprising a Chairman, the Comptroller of Water Rights and the Chief Engineer of the Branch.

Licences to use water for irrigation are issued by the Comptroller of Water Rights, and since 1858, when the first right to use water was given, upwards of 9,000 irrigation licences have been issued.

There are several forms of organization operating irrigation systems in British Columbia, and Table 44 on p. 269 of the 1936 Year Book, gives statistics of the larger irrigation projects for the year 1935. No change has been reported for 1936.

Average Value of Farm Lands.—Statistics showing the average value of farm lands in Canada in 1910 and from 1918 to 1936, are given in Table 41. The values are as estimated by crop correspondents and show the rise in land values between 1910 and 1920, the general decline with moderate fluctuations from 1920 to 1929, and the rapid fall since 1929 to a point below the 1910 level for the country as a whole.

41.—Average Values per Acre of Occupied Farm Lands¹ in Canada, as Estimated by Crop Correspondents, 1910 and 1918-36.

¹ Orchards and fruit lands, 1936, with 1935 in parentheses: Nova Scotia \$94 (\$80); Ontario \$88 (\$84); British Columbia \$266 (\$260). ² Actual returns were not collected from crop correspondents in Saskatchewan for 1924, and the estimate of 1924 is interpolated.

Subsection 11.—International Agricultural Statistics.

World Production of Cereals and Potatoes.—Table 42, constructed from data published by the International Institute of Agriculture, shows the areas and yields of wheat, oats, barley, rye, corn, and potatoes for the years 1935 and 1936 in countries of the Northern Hemisphere, and for the years 1935-36 and 1936-37 in countries of the Southern Hemisphere. The annual average acreages and yields are also given for the five-year period, 1930-34 (1930-31 to 1934-35), and the areas and yields of 1936 (1936-37) are compared in percentages with those of the five-year period.

*Prepared by J. C. MacDonald, Comptroller of Water Rights, Department of Lands, Victoria, B.C.
27175—18½

for 1935 have been revised since the publication of the 1936 Year Book.

World Exports and Imports of Wheat and Flour.—Statistics showing the exports and imports of wheat and wheat flour for the principal countries of the world in the crop year ended July 31, 1936, with comparative figures for the previous crop year, are shown in Table 43. This information is taken from data published by the International Institute of Agriculture. During the crop year 1935-36, a total of 581,691,000 bushels of wheat and wheat flour expressed in bushels of wheat is shown as exported, as compared with 615,935,000 bushels in the previous year.

43.—Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1935 and 1936.

World Live Stock.—The statistics of Table 44, compiled from data published by the International Institute of Agriculture, show as nearly as possible the world situation with regard to live stock about 1934. For many countries, the figures are the result of careful enumeration, while for others they represent only approximate estimates.

CHAPTER IX.—FORESTRY.*

Note.—A short article on "Physiography, Geology and Climate as Affecting the Forests" was published at pp. 311-313 of the 1934-35 Year Book.

Section 1.—Forest Regions.

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic, and soil conditions cause marked differences in the character of the forests in different parts of the country, hence more or less well-defined forest regions may be recognized. The following principal regions are described separately: Acadian, Great Lakes-St. Lawrence, Deciduous, Boreal, Sub-Alpine, Columbia, Montane, and Coast Forest Regions. For descriptive purposes, it is convenient to consider two sections of the Boreal Region as separate entities, and they are described hereunder as the Northern Transition, and the Aspen Grove Sections.

The Acadian Forest Region.—This region includes all of the provinces of Nova Scotia and Prince Edward Island, and all but the northwest corner of New Brunswick. Its climate is characteristic of maritime regions, and is highly favourable to tree growth. Annual precipitation averages about 40 inches. Topography and geology are widely varied. In northern New Brunswick the maximum altitude is 2,700 feet above sea-level, and northern Cape Breton island and parts of Nova Scotia are fairly rough. The surface of the remainder of the region varies from level to gently rolling.

In the northern parts of New Brunswick and Cape Breton island coniferous forests predominate, but elsewhere mixed forests, interspersed by so-called "hardwood", are the rule.

Among the coniferous species red spruce is the characteristic dominant, and is usually associated with balsam fir. White and black spruce, and white and red pine, are widely distributed. Jack pine occurs in pure stands on sandy plains. Hemlock, which is still to be found in most parts of the region, is believed to have been much more important in previous times. Other characteristic conifers are cedar and tamarack.

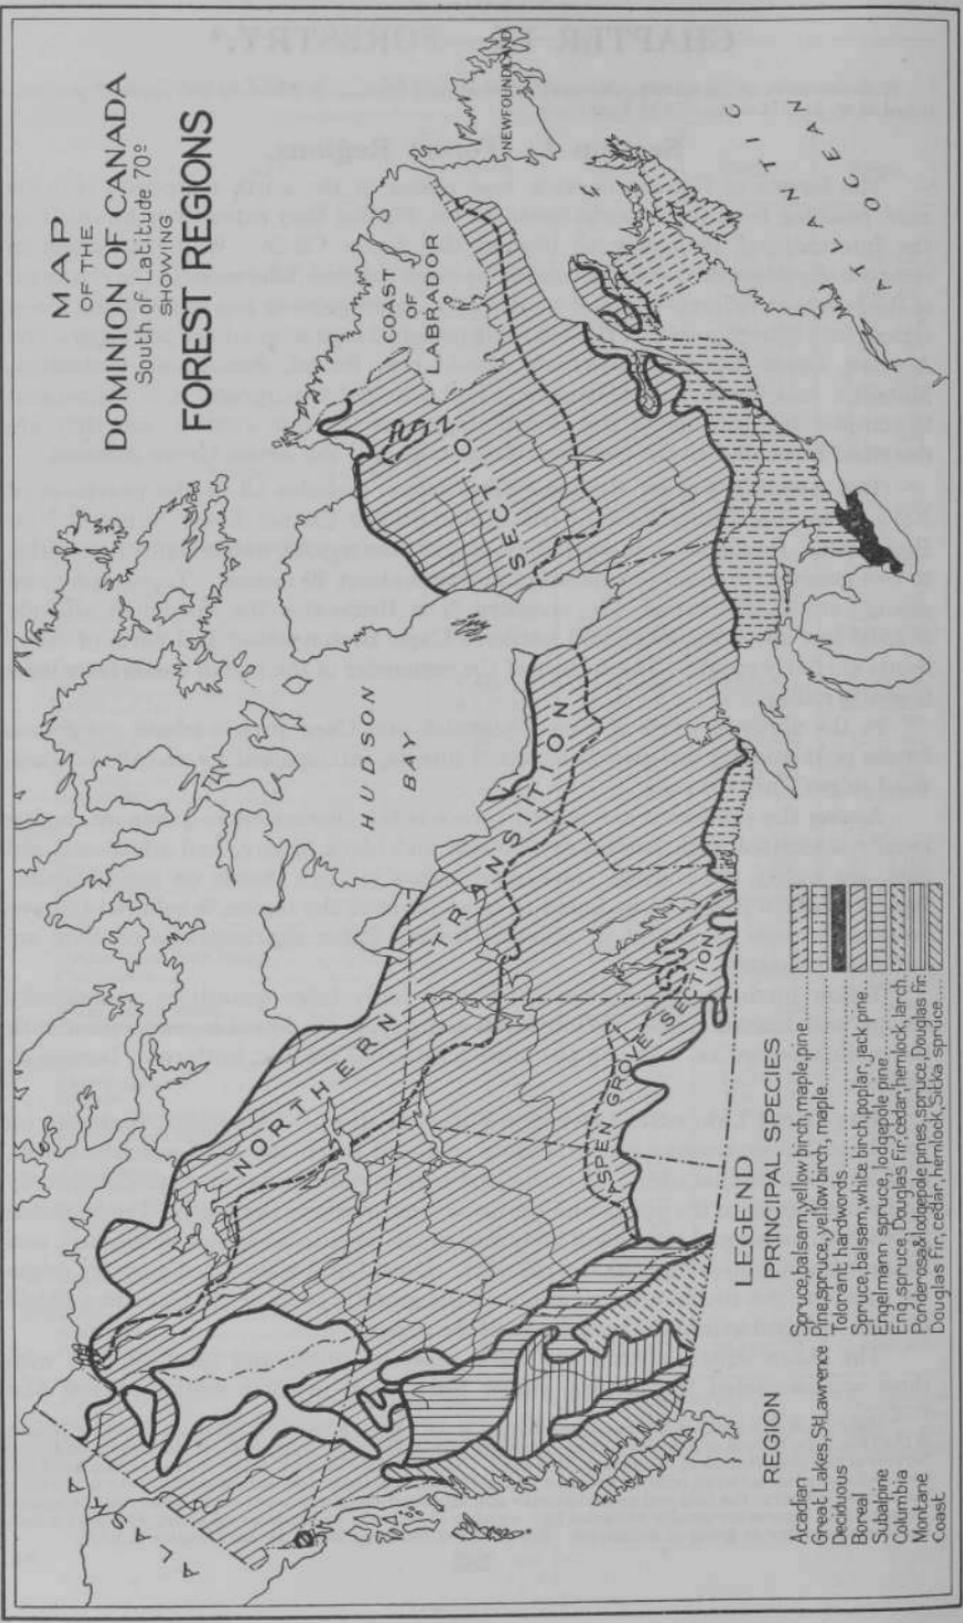

Yellow birch, maple, and beech occur in fairly large quantities, and usually occupy well-drained ridges. White birch and poplar are found in association with the coniferous species. Among the other hardwoods are oak, butternut, basswood, and elm.

The Great Lakes-St. Lawrence Forest Region.—This forest, centering on the Great Lakes system, and extending eastward down the St. Lawrence valley, is of an irregular character. It occupies a middle position between predominantly coniferous forests to the north, and the deciduous forests to the south. Precipitation varies from an annual average of 25 inches in the west to 45 inches in the east, and the growing season is from 100 to 150 days. Good forest soils of sedimentary origin are common, but southward extensions of the granitic areas of the Canadian Shield are also included within the boundaries of the region.

The characteristic species are white pine, red pine, and hemlock, but with these are associated the maples, yellow birch, and, in some sections, beech and

* Material in this chapter has been prepared by R. G. Lewis, B.Sc. F., Chief of the Forestry Branch of the Dominion Bureau of Statistics, in co-operation with Roland D. Craig, F.E., of the Dominion Forest Service of the Department of Mines and Resources. The Forestry Branch of the Bureau of Statistics collects and compiles statistics relating to forest production and publishes four annual printed reports covering the lumber industry, the pulp and paper industry and the wood-using and paper-using industries of Canada. These printed reports are usually preceded by a number of preliminary mimeographed reports, one for each important industry or group of industries. For detailed list of publications, see Chapter XXIX.

LEGEND

REGION	PRINCIPAL SPECIES
Acadian	Spruce, balsam, yellow birch, maple, pine
Great Lakes, St. Lawrence	Pine, spruce, yellow birch, maple
Deciduous	Tolerant hardwoods
Boreal	Spruce, balsam, white birch, poplar, jack pine
Subalpine	Engelmann spruce, lodgepole pine
Columbia	Eng spruce, Douglas Fir, cedar, hemlock, larch
Montane	Ponderosa & lodgepole pines, spruce, Douglas Fir
Coast	Douglas Fir, cedar, hemlock, Sitka spruce

basswood. Aspen, cedar, and jack pine are widely distributed, and spruce and balsam fir are common in certain localities. Among the less widely distributed hardwood species are white birch, elm, hickories, white and black ash, oak, ironwood, butternut, and black walnut.

The pine forests of the Ottawa valley and Algonquin areas have been famous as one of the greatest of Canada's lumbering areas. Elsewhere in the region, forests of mixed type predominate, with a considerable proportion of pure hardwood stands in the more favoured locations towards the south.

The Deciduous Forest Region.—This region in Canada consists of a small northerly intrusion from the great forest of the same type in the United States, and occupies the southwestern portion of what is commonly referred to as the Ontario peninsula. It enjoys very favourable climatic and soil conditions which permit of the growth of a number of tree species not found elsewhere in Canada. Because of its fertile soil, the area is completely settled, and the forests are now represented only by woodlots, parks, and small wooded areas on the lighter soils.

Among the characteristic trees are beech and sugar maple, together with basswood, red maple, and several oaks. Coniferous species are largely represented by scattered specimens of white pine, hemlock, and juniper.

Among the less common hardwoods, which occur singly or in small groups, are hickories, black walnut, chestnut, tulip tree, magnolia, mulberry, sycamore, sassafras, black gum, Kentucky coffee tree, and a number of other species which find their northern limit in this region.

The Boreal Forest Region.—This region covers the greater part of the land area of Canada. It stretches unbroken from the Atlantic coast of Quebec westward to Alaska. Along its southern side it follows the limits of the Great Lakes-St. Lawrence Region, then skirts the open grasslands of the Prairie Provinces, and is terminated in the west in the foothills of the Rocky mountains. To the north it is bounded by the limits of tree growth.

The principal trees of the region are white and black spruce, balsam fir, poplars, white birch, and jack pine. Near the foothills of the Rocky mountains the latter species is replaced by lodgepole pine. In Quebec and Ontario, and as far west as a line running from lake Winnipeg to lake Athabaska in the Prairie Provinces, the region is, for the most part, underlain by granitic rocks of the Precambrian formations known as the Canadian Shield. Within the area described there are extensive tracts of good soil, formed from glacial or sedimentary deposits, but a larger portion of the region is characterized by shallow soils. Very considerable areas of bare rock testify to the disastrous results of forest fires followed by erosion. The forests of this part of the region are mainly coniferous, with black spruce and balsam fir as dominants, and are valuable chiefly for pulpwood.

West of lake Winnipeg the same tree species are in evidence but in different proportions. Here the soil is deep and relatively fertile, and the characteristic forest is a mixture of poplar and white spruce.

The climate of the region is severe, and precipitation ordinarily varies from 15 to 30 inches annually, although these figures are exceeded in eastern Quebec.

The Northern Transition Section.—This area is a part of the Boreal Region, but is described separately because none of its forests are of commercial value although of considerable local economic value. It represents a transition from the merchantable forests of the south to the treeless wastes of the far north. White and black spruce, larch, and birch are the principal tree species, and these are

usually restricted to stunted form by the severity of the climate. In river valleys and other protected sites occasional clumps of trees of fair size are to be found. The principal economic value of the forests probably consists in the habitat which they provide for fur-bearing animals, and the wood they furnish for fuel and buildings for the scattered inhabitants of the region.

The Aspen Grove Section.—This section, which lies entirely within the Prairie Provinces, is also a part of the Boreal Region, but has very special characteristics. It is a zone of transition between the true forest region to the north and the open grasslands to the south. Aspen is the dominant tree, and is in sole possession of most of the area. In southern Manitoba stands of bur oak are found, and elm and ash occur singly or in small groups in river bottoms. Most of the area is farmed and much of the forest is now in the form of woodlots.

The Sub-Alpine Forest Region.—This is essentially a coniferous forest extending from the grasslands of the prairies and the western border of the Boreal Region up the east slopes of the Rockies to timber-line. This same type of forest re-appears in a narrow strip extending northwesterly from the International Boundary between the plateaus of the Montane Region and the non-forested tundra formation of the mountain tops of the Coast ranges.

In general, this forest formation occupies areas from 3,500 to 6,000 feet above sea-level. Rainfall is moderate, temperatures are low, and the growing season is short. The topography is mountainous with steep-sided valleys, and the soils are mostly derived from glacial and other residual material. The dominant tree species are Englemann spruce and alpine fir, lodgepole pine, and aspen. Less widely distributed are mountain hemlock, alpine larch, and white-barked pine.

The Columbia Forest Region.—This region, often referred to as the Interior Wet Belt of British Columbia, supports forests which are somewhat similar in composition to those of the Coast Region.

The forests properly attributable to the Columbia Region comprise stands in the valleys of the Columbia and other rivers which lie between elevations of 2,500 feet and 4,000 feet above sea-level. Below this range occurs the Montane Region, and above it the Sub-Alpine. The climate is intermediate between those of the Coast and Montane Regions. The precipitation varies from 30 to 60 inches. The region should actually be mapped as a series of "islands" and "stringers" surrounded by patches of Sub-Alpine forest; but it is impracticable to do this on so small a scale as is used for the map on page 284.

Some authorities consider the Columbia Region to be merely an extension of the Coast Forest Region. Because of the complete physical separation of the two regions in Canada, and also because of important differences in environmental conditions, the division made here has been adopted.

The principal species in this region are Engelmann spruce, western red cedar, western hemlock, and Douglas fir. Among other species of considerable importance are alpine and grand firs, western white pine, and western larch. Lodgepole pine commonly replaces stands destroyed by fires. Black cottonwood is found on rich alluvial soils.

The Montane Forest Region.—This region forms part of what is often termed the Interior Dry Belt of British Columbia. It occupies an extensive series of plateaux, valleys, and ranges in the interior of the province, which extends northward from the International Boundary to the valley of the Skeena river. The climate is relatively dry, with low summer rainfall, and moderate to high temper-

atures. The dryest conditions are found in the lower river valleys, where the forest gives way to open grassland.

The principal tree species are ponderosa pine, Douglas fir, lodgepole pine, and aspen. Towards the northern limits of the region ponderosa pine disappears and associations of Douglas fir and lodgepole pine become dominant. Towards the east, stands of Engelmann spruce and alpine fir grade into the forests of the Columbia Region. Aspen is a more important constituent of the northern parts of this forest.

The Coast Forest Region.—This region includes the western slope of the Coast and Cascade mountains and the Insular System, the higher elevations of which form Vancouver island, the Queen Charlotte group and other islands along the coast.

The climate in this region is mild and equable, with heavy precipitation varying from 40 to 120 inches per annum, about 70 p.c. of which falls during the autumn and winter months. These conditions are conducive to the luxurious growth of coniferous forests, and produce the largest trees and the heaviest stands in the Dominion.

The dominant trees are western hemlock and western red cedar. Associated with these are Douglas fir in the south and Sitka spruce in the north. All four of these species, of which the most important commercially is Douglas fir, grow to large sizes, and occasionally are found in stands running up to 100,000 ft. b.m. per acre. Other conifers which occur in the region but are of much less importance include yellow cedar, mountain hemlock, amabilis, grand, and alpine firs, and western white pine. Of the broad-leaved trees, several alders are widely distributed, and Garry oak and madrona are found in the vicinity of the straits of Georgia. Broad-leaved maple and vine maple occur at low elevations in the southern sections, and black cottonwood, which is perhaps the most important hardwood from the commercial point of view, is found on alluvial soils in the valleys.

Section 2.—Important Tree Species.

In Canada there are approximately 125 species or distinct varieties of trees. Only 33 of these are conifers commonly known as "softwoods", but they comprise over 80 p.c. of the standing timber and 70 p.c. of the wood utilized for all purposes. While the number of deciduous-leaved or "hardwood" species is large, only about a dozen are of a commercial importance comparable with twice the number of conifers.

For descriptions of the individual tree species, the reader is referred to pp. 283-286 of the Canada Year Book, 1936, where the chief tree species were covered, and to Dominion Forest Service Bulletin No. 61, "Native Trees of Canada", published by the Department of Mines and Resources, where the subject is treated in detail.

Section 3.—Forest Resources.

Areas.—The total land area of Canada, revised according to the latest surveys, is estimated at 3,466,556 square miles, of which 549,700 square miles is considered as being suitable for agricultural or pastoral purposes. About 255,000 square miles of this agricultural land is occupied and of this 213,000 square miles is classified as improved and under pasture and 42,000 square miles as forested.

In Table 1, p. 54, the forested lands are shown in detail. It will be seen that the total area covered by existing forests is 1,254,082 square miles, including 41,637 square miles of occupied agricultural land still forested. Most of this will, no doubt, be left under forest cover in the form of farmers' woodlots. There is

also a considerable area of forest land which is of agricultural value and will eventually be cleared, but it is estimated that 1,100,000 square miles is essentially forest land which can best be utilized for forest production. The accessible and productive forest area is estimated to be 800,783 square miles, of which 395,538 square miles carries timber of merchantable size and on 405,245 square miles there is young growth which, if protected from fire, will eventually produce merchantable timber. The remaining area of 453,299 square miles carries forests of value either because of their influence on water control, climatic conditions, game conservation, or by reason of their attraction to tourists and their value as a source of wood for local use. On account of their geographical location or because of unfavourable growth conditions these forests at present are considered as non-productive from a commercial viewpoint.

As a result of the constant and inevitable improvement in conditions affecting profitable exploitation, such as the extension of settlement and transportation facilities, the increasing world scarcity of forest products, and the ever-increasing demand for these products, due to the development of industry, the discovery of new uses for wood, and the improvements in the methods, equipment and machinery used in logging and manufacturing forest products, some of this inaccessible timber will eventually become commercially exploitable. It is estimated that of the accessible forest area 473,645 square miles is producing softwood or coniferous timber, 221,176 square miles mixed softwoods and hardwoods, and 105,962 square miles hardwood or broad-leaved species.

In Canada as a whole about 10.2 p.c. of the total forest area has been permanently dedicated to forest production. The distribution of Dominion forest experimental areas, provincial forests, provincial parks and national parks, by provinces, is shown in the following statement.

FOREST RESERVES AND PARKS IN CANADA, 1937.

Province.	Dominion Forest Experimental Areas.	Provincial Forest Reserves.	Provincial Parks.	National Parks.	Total.
	sq. miles.	sq. miles.	sq. miles.	sq. miles.	sq. miles.
Nova Scotia.....	Nil	Nil	Nil	458.80	458.80

¹ Not including the Wood Buffalo Park, partly in Alberta and partly in the Northwest Territories, and the Tar Sands Reserve.

Of the total forest area, 8.5 p.c. has been permanently alienated, being owned in fee simple by private individuals or corporations. The Crown still holds title to 12.9 p.c. of the area but has alienated the right to cut timber thereon under lease or licence. So far 78.6 p.c. has not been alienated in any way. It may be said that 91.5 p.c. of Canada's forest area is still owned by the Crown in the right either of the Dominion or the provinces and, subject only to certain temporary

privileges granted to limit-holders, may at any time be placed under forest management and dedicated to forest production.

Volume of Standing Timber.—In 1935 the total stand of timber in Canada was estimated to be approximately 273,656 million cubic feet, of which 222,076 million cubic feet was of coniferous species and 51,580 million cubic feet of broad-leaved species.

During the years 1926-30, which were typical of pre-depression conditions, the average annual depletion due to use was approximately 2,000 million cubic feet of conifers and 970 million cubic feet of hardwoods. The average annual loss from fire was estimated at 185 million cubic feet of conifers and 45 million cubic feet of hardwoods. Though no widespread epidemics of insects or fungous diseases have occurred in recent years, local infestations which cause considerable loss develop practically every year. In Nova Scotia, in 1931, the balsam suffered severely from "gout" induced, it is believed, by minute sucking insects of the genus *Dreyfusia*, previously undescribed. In the Gaspé peninsula the spruce saw-fly became a serious menace. In the absence as yet of any basic data on which to estimate the annual depletion from these causes, it may be taken as 700 million cubic feet. The total annual depletion during the five-year period was, therefore, estimated to have been about 3,900 million cubic feet. To what extent this loss has been replaced by growth increment is not known but, considering the preponderance of the younger age classes in the reproduction, it is believed there has been a considerable net depletion in the merchantable age classes.

Another real difficulty is the division of the existing stand into merchantable timber and that which is inaccessible or unprofitable, since merchantability depends not only on the location but on the density of the stand, the demands of the market for certain species or qualities of product, and the regulations as to cutting. Light stands covering large areas may in the aggregate carry very large amounts of timber and still not be exploitable at a profit. For some species, such as aspen and white birch, which comprise three-quarters of the hardwoods, there is very little demand, and therefore these cannot properly be classed as merchantable, though accessible as far as location is concerned.

In June, 1929, a conference of the Dominion and provincial forest authorities was held in Ottawa and it was decided to undertake a national inventory of the forest resources of Canada, each authority conducting the necessary stock-taking surveys on the land under its jurisdiction. In connection with the inventory, data are being secured regarding the depletion due to use, fire, insect damage, etc., and the increment accruing. The Forest Service of the Department of Mines and Resources acts as a clearing house for the national inventory, and in addition to collecting and compiling the data furnished by the provincial authorities has conducted the inventorial work in the Prairie Provinces and the Maritime Provinces. The inventories for Manitoba and New Brunswick have been completed. The Dominion Service is also carrying on extensive surveys to determine the increment taking place in the forests and conducting more intensive silvicultural research at forest experiment stations located in New Brunswick, Quebec, Ontario, Manitoba and Alberta.

Under present conditions it is estimated that 133,288 million cubic feet of conifers and 36,854 million cubic feet of hardwoods can be considered as accessible.

Section 4.—Forest Administration.

Subsection 1.—Administration of Dominion and Provincial Timber Lands.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber land outright. Under this system the State retains the ownership of the land and control of the cutting operations. Revenue is derived in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut), annual ground rent, and royalty dues collected as and when the wood is removed. Both ground rent and royalty dues may be adjusted at the discretion of the Governments so that the public may share in any increase in stumpage values or, as has happened, reductions may be made in the rates if conditions demand them.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 76 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately-owned forest land in the other provinces is as follows: Quebec, 7 p.c.; Ontario, 3.3 p.c.; Manitoba, 11.3 p.c.; Saskatchewan, 10.4 p.c.; Alberta, 15.7 p.c.; and British Columbia, 13 p.c., except in the National Parks and Indian reserves. In all cases timber lands are now administered by the provinces in which they lie. As new regions are explored their

lands are examined and the agricultural land disposed of. Absolute forest land is usually set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province in Canada. The ownership of forests by towns and communities, so common in Europe, is now beginning in Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on this basis.

The administration of forest lands under Dominion control and those under the control of each of the provinces is reviewed below.

Forest Lands Under Dominion Control.—The forests under Dominion control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, the Lands Registry Office administers the timber in Yukon and the Northwest Territories, and the Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the forest experiment stations.

Forest Lands Under Provincial Control.—*Nova Scotia.*—In this province, 10,473 square miles, about 87 p.c. of the forest land, is privately owned. The Crown timber is administered by the Minister of Lands and Forests, with a Chief Forester in charge of protection, surveys, etc. Timber-cutting leases are granted by special agreements.

New Brunswick.—The Forest Service, under the Department of Lands and Mines, administers the forests in New Brunswick. At present timber lands are disposed of as in the other provinces, but in the past several grants of forest land were made to railway companies, private concerns, and individuals, who now own in fee simple about 13,644 square miles of forest land.

Quebec.—The Forest Service of the Department of Lands and Forests administers the timber lands in Quebec. Its powers include classification of land, disposal of timber and regulation of cutting operations. Since 1924 forest protection has been under a separate organization, the Forest Protective Service. Licences are granted after public competition and are renewable from year to year, subject to changes in royalty by the Government at any time. Grants of land in fee simple, made in some cases under the French *régime* in Quebec, are responsible for the private ownership of about 31,048 square miles of forest land. Forest reserves cover 31,660 square miles and provincial parks 4,759 square miles.

Ontario.—Forest administration is carried out in Ontario by the Department of Lands and Forests, under a Minister, Deputy Minister, and Provincial Forester.

In recent years the sale of saw timber has been by tender after examination, with conditions covering the removal within a specified period, disposal of debris, etc. Much of the merchantable timber is at present held under licences granted in the past and renewable indefinitely. Pulpwood areas are usually disposed of by individual agreements for longer periods than in the case of saw timber. The licensees usually undertake to erect a pulp-mill or a paper-mill within the province, the type of mill being stipulated in the agreement. In this province about 7,972 square miles of forest land have been disposed of outright. Provincial forest reserves cover 19,606 square miles, and the provincial parks 4,248 square miles.

Manitoba.—The Forest Service of the Department of Mines and Natural Resources has administered the forests of Manitoba since 1930. A provincial Air Service is operated under the direction of the Provincial Forester, and is mainly used for purposes of forest fire protection. Six forest reserves, containing 3,811

square miles, are permanently reserved for the production of forest products. Timber is disposed of by licence or timber sale, and large numbers of timber permits, covering small quantities of wood, are issued annually to settlers and others. One pulp and paper-mill is in operation in the province. The area of privately-owned forest land is estimated to be 8,500 square miles.

Saskatchewan.—The forests of Saskatchewan are administered by the Department of Natural Resources. The organization is unique in Canada, because the different resources are not controlled by different branches of the Department. Instead, each field officer handles matters pertaining to all resources within his district. Forestry affairs of the Department are controlled by the Director of Forests. Timber disposal is carried out under licence, sale, and permit. An Air Service is maintained, mainly for forest protection purposes. Forest reserves occupy 9,725 square miles and provincial parks 546 square miles. Privately-owned forest land is estimated to be 6,250 square miles.

Alberta.—The Forest Service of the Department of Lands and Mines administers and protects the provincial forests. Timber is disposed of through licences and permits; except on forest reserves, where timber sales are disposed of but licensed berths are not. The area in forest reserves is 14,410 square miles, and 10,044 square miles of forest land are privately owned.

British Columbia.—In the province of British Columbia, the Forest Branch of the Department of Lands has administered timber lands since 1912. All unalienated lands in the province which are found to be better suited to forest than to agricultural production are dedicated to the former purpose, and all timber lands carrying over a specified quantity of timber are withdrawn from disposal until examined by the Forest Branch. During the past few years 24,126 square miles have been set aside permanently for forest purposes. Provincial parks include 2,727 square miles. The present practice is to sell cutting rights for a stated period by public competition but licences to cut, which are renewable annually in perpetuity, have been granted for a large proportion of the accessible timber. The royalties are adjusted periodically on the basis of prevailing industrial conditions. About 17,519 square miles of timber land are privately owned.

Subsection 2.—Forest Fire Protection.

The protection of forests from fire is undoubtedly the most urgent and most important part of the work of the different agencies administering forest lands in Canada. Except for the forests of the National Parks and the Northwest Territories and Yukon, which remain under Dominion control, the administration of forest lands is now the function of the individual provinces. Up to the end of the fire season of 1930, the Forest Service of the Department of the Interior was responsible for fire protection in the prairie provinces of Manitoba, Saskatchewan, and Alberta, and the Railway Belt of British Columbia. However, by reason of the transfer of natural resources from Dominion to provincial control, their administration is now a matter of provincial concern.

Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being in part distributed or covered by special taxes on timber lands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for closed seasons during dangerous periods. An interesting

development in this connection in the province of Quebec is the organization of a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction in Canada. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners. These officers co-operate with the railway fire-ranging staffs employed by the various railway companies, the compulsory control of all lines coming under the jurisdiction of the Board being one of the requirements of the Dominion Railway Act.

The most important single development of late years in forest fire protection has been the use of aircraft for the detection and suppression of incipient forest fires. Where lakes are numerous, flying boats can be used for detection and for the transportation of fire fighters and their equipment to fires in remote areas. Specially developed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected. Aircraft are now being used extensively for exploring remote areas and mapping forest lands by means of aerial photography. Waste lands and the various forest types can be mapped more accurately and more economically by this means than by ground surveys. As a general rule, aircraft are used in the more remote districts, while lookout towers, connected by telephone lines or equipped with wireless, are established in the more settled and more travelled forest areas. While these agencies have to a large extent supplanted the old canoe, horseback, and foot patrol for the detection of fires, a large ground staff with its equipment stored at strategic points will always be necessary for the fighting of larger fires and the maintenance of systems of communication and transportation, and of fire lanes and fire guards in the forest.

The most important improvement in forest fire-fighting equipment has been the portable gasoline pump. These pumps, each of which weighs from 45 to a little over 100 pounds, can be carried to a fire by canoe, motor boat, automobile, aircraft, pack saddle or back pack. They can deliver efficient water pressure as far as seven thousand feet from a water supply and, when used in relays, to a much greater distance. Small hand pumps supplied by 5-gallon portable containers are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of closed seasons for brush burning, and seasons during which permits are required for setting out fires and for travel in the forest during dangerous dry periods, have been of enormous value as preventive measures.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a circulation of over 16,000, by railway lecture cars and motor trucks provided with motion picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the

schools, by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of the forests, the devastation caused by fire and the means of preventing such destruction.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another important advance in forest protection is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest fire hazard which is expressed in the form of an index computed from the weather factors. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing hazard at any given time, but, by the aid of weather forecasts, they can anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop.

Subsection 3.—Scientific Forestry.

Up to the present, the practice of forestry in Canada has consisted chiefly in the administration and protection of existing forest areas. About 35 square miles is now being planted out annually, largely in connection with farmers' woodlots, shelter belts, and reclamation work, while several commercial reforestation projects have been carried on by paper companies and by provincial governments on denuded Crown lands. The great forestry problem in Canada, however, is the management of Crown forests, first under provisional and later more intensive working plans, so as to ensure a sustained yield. To this end, forest research activities are now assuming great importance. Silvicultural investigations are receiving marked attention both from the Dominion services and some of the provincial services.

About 400 technically-trained foresters are employed by the Dominion or provincial forest services or with paper and lumber companies. In addition to administrative work, these men carry on forest surveys either for the estimation of timber stands and making of maps, or to determine natural growth and reproduction conditions and factors. A considerable number of foresters are actively engaged in the control of commercial logging operations.

Dominion Forest Service.—The activities of the Dominion Government in forest research are centred in the Dominion Forest Service, which is a bureau of the Lands, Parks and Forests Branch of the Department of Mines and Resources. Until the time of transfer of the natural resources of the Prairie Provinces, and the Railway Belt and Peace River Block in British Columbia, to provincial control in 1930, the Forest Service was primarily concerned with the administration of forest reserves and the protection of all forests on Crown lands from fire. In addition silvicultural research work had been carried on at the Petawawa Experiment Station in the Ottawa valley since 1918. Since the transfer of the resources the Service has been entirely devoted to investigations in the fields of forest economics, silvicultural research, forest fire-hazard research, and forest products research.

In co-operation with the provincial forest authorities, the Forest Service assembles the available information respecting the forest resources of the Dominion, in order to prepare a national forest inventory. Such material is revised every reports, entitled "The Forests of Canada", which are

submitted to the quinquennial British Empire Forestry Conferences. Besides giving assistance to certain provinces in the preparation of their inventories, the Service is developing improved methods in interpreting the valuable forestry data contained in aerial photographs.

Five forest experiment stations, where investigations of the underlying principles governing the growth of forests can be made, and where practical methods of management can be tested, are now in operation. Besides the original station at Petawawa, new establishments, opened since 1930, include the Acadia station near Fredericton, N.B.; the Valcartier station near Quebec; the Duck Mountain station in Manitoba; and the Kananaskis station in the foothills west of Calgary. The total area of the five stations is approximately 238 square miles. These stations, or experimental areas, are used for forest fire-hazard research as well as for silvicultural work, and also form centres from which investigations can be conducted in other areas in the regions in which they are located.

One of the principal problems now exercising the minds of all who are interested in the future welfare of our forest resources concerns the present condition and future prospects of forest areas which have been cut or burned. The Forest Service is conducting a special series of investigations into this question.

Forest Products Laboratories.—In order to promote the more efficient use of the forest resources of Canada and at the same time assist the wood-using industries in the more technical problems encountered in their manufacturing operations, the Forest Products Laboratories of Canada were organized in 1913 as a part of the Forest Service of the Department of the Interior. Their need was then felt on account of the influence of the establishment of such laboratories in other important timber-growing countries. Besides, on account of Canada's large exports of timber and timber products, it became increasingly apparent that, in order to meet world competition in the timber trade, it was necessary that Canada keep fully abreast of other countries in scientific developments in wood utilization.

For several years the Laboratories carried on all their work in Montreal, under an arrangement with McGill University. The subsequent development of their work has necessitated the establishing of a Branch Laboratory in Vancouver in a building provided by the University of British Columbia; the transfer of the Main Laboratories to Ottawa, and the establishing of the Pulp and Paper Division of the Laboratories in Montreal in a building erected by the Canadian Pulp and Paper Association. In this building is also housed the executive offices of the Association and certain laboratories of McGill University devoted to research in cellulose and related products. The Pulp and Paper Association, in addition to providing accommodation for the Laboratories, makes a yearly grant to the Laboratories to assist in financing the work, and through a Joint Administrative Committee, consisting of representatives of the Government and the Association, takes an active part in formulating and forwarding the work of the Division. Close co-operation is also maintained with McGill University.

The main Laboratories in Ottawa carry out work in timber mechanics, wood fabrication, wood preservation, lumber seasoning, timber pathology, wood structure, wood identification, wood chemistry and general wood utilization, they also co-operate with other government departments and industrial organizations in timber marketing problems. In addition, the Ottawa Laboratories carry out many investigations in connection with logging problems of the pulp and paper industry.

The Vancouver Laboratory devotes attention to special problems relating to Pacific Coast timbers which require local treatment and which cannot be carried out to advantage in the main Laboratories on account of distance or for other reasons.

A research committee of the Canadian Lumbermen's Association was set up several years ago to effect liaison between the industry and the Laboratories and make as effective as possible the application of researches carried out by the Laboratories in the problems of the lumber industry.

Since the Laboratories were established, many advances have been made in the technique of wood utilization. Improvements have been made in treating railway ties, telephone poles, mining timbers, and other structural timbers with creosote, water-soluble salts, and other chemicals. This has enhanced the value of wood as a permanent structural material and permitted its use for a variety of purposes for which it is otherwise unsuitable. The work carried out in the treatment of hardwoods, particularly birch, beech, and maple, has been of particular value. Reductions in the cost of manufacture of pulp and paper, and improvements in quality of products have resulted from researches of the Laboratories. Of particular interest has been the development in the Pulp and Paper Laboratory of the Canadian Standards Freeness Tester and the Johnston Fibre Classifier. Valuable work has also been carried out in the manufacture of groundwood pulp and in the pulping of resinous woods and hardwoods.

The study of the significance of discolouration in timber, as for example in jack pine, red cedar, and Douglas fir, has been responsible to a considerable degree in curtailing rejection of such material. Researches carried out in the spraying or dipping of timber, notably the sapwood of the pines, with chemicals which are toxic to wood-staining organisms have assisted in curtailing losses on this account which in some years amounted to as high as one million dollars.

Through researches carried out in the Laboratories and at wood-working plants important advances have been made in seasoning both in the open air and in experimental dry-kilns. This work has been particularly valuable in both Eastern and Western Canada in connection with export markets which are becoming increasingly critical of specifications. The work carried out has been of significance to exporters of both softwoods and hardwoods.

Mechanical and physical tests have been carried out on nearly all important Canadian commercial species of timber according to practices which have been adopted by laboratories of countries of the British Empire and the United States. A great deal of work has also been carried out on large structural timbers. This information has been widely used by Canadian engineers and has formed the basis for the revision of city building codes. It has also been made the basis for Canadian standard grades for all species of Canadian woods of structural importance which have been set up by the Canadian Engineering Standards Association.

Close co-operation is maintained between the Laboratories and the Commercial Intelligence Service of the Department of Trade and Commerce through its Trade Commissioners. The Laboratories also co-operate closely with the Dominion Department of Public Works in all its timber structures and with other Dominion Departments, notably Agriculture, National Defence, and Transport; also with Canadian railroads and other large public utility organizations.

Universities and Other Agencies.—Education in forestry and opportunities for research are offered by four Canadian universities. The University of Toronto, the University of New Brunswick and the University of British Columbia provide

four-year courses leading to a professional degree. The School of Forestry and Surveying in connection with Laval University at Quebec provides, in the French language, a combined course of four years duration leading to diplomas in both sciences. The Government of Quebec has established a school in paper-making at Three Rivers in the heart of the paper industry; several agricultural colleges provide short courses in farm forestry and a school for forest rangers has been established at Duchesnay by the Quebec Forest Service.

A provincial forest experiment station of six square miles is maintained by the Quebec Forest Service at Duchesnay, near Quebec city, and the British Columbia Forest Branch has four such stations, totalling fourteen square miles and located at Aleza Lake, Campbell River, Cowichan Lake, and Green Timbers.

The practice of forestry by individuals and private concerns is encouraged by the furnishing of expert advice by Dominion and provincial services and by the distribution of tree-planting material. The Dominion Department of Agriculture maintains two nurseries in Saskatchewan, one at Indian Head and the other at Sutherland, near Saskatoon. Over 7,000,000 trees are distributed annually to farmers and ranchers in the Prairie Provinces for planting woodlots and wind-breaks. If certain conditions are fulfilled, the material and instructions are provided free except for transportation charges. A total of over 125,000,000 trees has been distributed.

The province of Ontario provides material under similar conditions and distributes to woodlot owners at least 7,000,000 trees annually from its five nurseries. As many more are being provided for the creation of county forests, demonstration forests and plantations on denuded Crown lands. To encourage the establishment of communal forests by towns and other municipalities, the Provincial Government undertakes to plant, free of charge, any area purchased by the municipality for this purpose. The Government also assists counties that purchase areas of not less than 1,000 acres of land for forest purposes. As a result of these inducements there are at present, scattered throughout the province, 50 communal forests (owned by municipalities) and eight of the larger county forests. Farm land used for forestry purposes, while so used, is exempt from taxation up to 10 p.c. of the total farm area but not exceeding a total of 20 acres.

In Quebec, a forest nursery at Berthierville serves as a demonstration station for the School of Forestry. It provides trees for sale and distribution in the province, comprising seedlings and transplants for forest planting and larger trees for ornamental purposes. The capacity of the nursery is about 10,000,000 trees. Provision is made by legislation for the creation of communal forests and there are now 76 of these, covering 594,059 acres.

Section 5.—Forest Utilization.

A short historical sketch of forest utilization in Canada appears at p. 325 of the 1934-35 Year Book and an article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., will be found at pp. 318-323 of the 1925 edition of the Canada Year Book.

Subsection 1.—Woods Operations.

Differences in forest conditions throughout Canada give rise to differences in logging methods. Generally speaking, throughout Eastern Canada the climate is such that the cutting and hauling of logs can be carried on most economically during

the fall and winter months. The trees are felled and the logs hauled to the nearest stream or lake, where they are piled on the ice or sloping banks. The presence of connected systems of lakes and streams makes it possible in most cases to float the logs from the forest to the mill at a minimum cost during the annual spring freshets. The logging industry east of the Rocky mountains is, therefore, almost entirely seasonal. In many cases lumbermen co-operate in river-driving operations and improvement companies, financed by the logging operators, build river improvements to facilitate the passage of the floating logs, the logs being finally sorted and delivered to their respective owners. In British Columbia the scarcity of drivable streams and the greater average size of the logs give rise to entirely different logging methods. Logs are assembled by cable systems operated by donkey engines and are transported to the mills or to water chiefly by logging railways but in some cases by motor trucks. These operations are more or less independent of frost, snow or freshet and are carried on in most cases throughout the entire year.

In Eastern Canada logging operations are usually carried on by the mill owners or licensees of timbered lands, often through the medium of contractors, sub-contractors and jobbers. In the better-settled parts of the country a considerable quantity of lumber is sawn by custom sawmills or small mills purchasing logs from the farmers. Unmanufactured pulpwood, poles, ties and other forest products have a market value, but sawlogs, being as a rule the property of the mill owner, are not generally marketed as such in Eastern Canada. In British Columbia logging is carried on more frequently as a separate enterprise by limit holders, who cut and sell logs on the market. In many cases mill operators are not limit holders but buy their entire supplies of raw material from logging concerns.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior, and other plants but that they also provide logs, pulpwood, and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling, and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss, and tanbark, which all go to swell the total.

Table 2 gives the total value of the products of woods operations in Canada for the years 1930 to 1934 inclusive. The exports and imports of forest products in the fiscal years ended Mar. 31, 1933-36, are shown in Tables 12 and 13 of the chapter on External Trade.

It has been estimated that operations in the woods in Canada in 1934 involved the investment of \$131,000,000 in logging equipment, gave employment for a part of the year equivalent to 74,000 man-years, and distributed over \$47,000,000 in wages and salaries. In estimating the annual drain on our forest resources, certain converting factors have been used. Each of these factors represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree. By the use of these factors it has been estimated that the total drain on our forest resources in 1934, due to consumption for use, amounted to 2,299,547,000 cubic feet of standing timber. To this total must be added the volume of material destroyed by fire, insects, and fungi, which would bring the average annual depletion to more than four billion cubic feet of standing timber. Table 3 gives the reported or estimated quantities of wood cut, by chief products, together with the respective converting factor, the equivalent in standing timber and the estimated value in each case for 1934, with totals 1924-34. Table 4 shows the extent of the drain on our forest resources in 1933 and 1934, by provinces.

Subsection 2.—The Pulp and Paper Industry.

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. Paper was first manufactured in Canada about a hundred years ago but prior to 1860 no wood-pulp was used or produced. Rags, straw, esparto grass, cotton waste, and other substances were the raw materials used. The first paper-mill was established at St. Andrews in Quebec (then Lower Canada) in 1803 by United States citizens who obtained concessions from the seigneurs. Upper Canada's first mill, which is still in operation, was built in 1813 at Crook's Hollow (now Greensville) near Hamilton, and the Maritime Provinces entered the industry in 1819 with a mill at Bedford Basin near Halifax.

In 1866, Alexander Buntin installed at Valleyfield, Quebec, what is claimed to have been the first wood grinder in America and began the manufacture of wood-pulp by the mechanical process. During the same year Angus Logan and Co. built the first chemical wood-pulp mill in Canada at Windsor Mills in Quebec. During the next decade the use of wood-pulp in paper making was extensively developed and in 1887 Charles Riordon installed the first sulphite mill in Canada at Merritton in the Niagara Peninsula; by the beginning of the century the output of the industry had exceeded \$8,000,000. In 1907 the Brompton Pulp and Paper Co. built, at East Angus in Quebec, the first mill in America to manufacture chemical pulp by the sulphate or kraft process.

The gross output of the industry increased rapidly and steadily until the boom years following the Great War, when it jumped to a peak of over \$232,000,000 in 1920. This was followed by a drop in 1921, following which there was a steady recovery, resulting in a second peak in 1929 of \$243,970,761. This was followed by annual decreases down to 1933 and increases in 1934 and 1935.

The rapid development of this industry up to 1929 was due chiefly to the existence in Canada of abundant water powers adjacent to extensive forest resources of pulpwood species and an increasing demand for newsprint paper in the United States. Summary statistics for the combined pulp and paper industry are given on pp. 307-8.

There are to-day three classes of mills in the industry. These, in 1935, numbered 28 mills making pulp only, 43 combined pulp- and paper-mills, and 24 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp, and the manufacture of paper. These three stages cannot be treated as entirely distinct nor can they be separated from the different stages of the lumber industry. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and many lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. So far as operations in the woods are concerned, it is often impossible to state whether the timber being cut will eventually be made into lumber or into pulpwood.

On account of legislation already referred to, pulpwood cut on Crown lands must, in every province, be manufactured into pulp in Canadian pulp-mills except under special permit. The pulpwood which is exported to the United States is, therefore, largely cut from private lands. Table 5 shows the annual production of this commodity from 1926 to 1935, together with the quantities used by Canadian pulp-mills and the quantities exported.

In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form but by 1916 the proportion had declined to two-fifths. Since 1930 the proportion exported has been less than one-fifth.

5.—Production, Consumption, Exports and Imports of Pulpwood, calendar years 1926-35.

NOTE.—Figures for the years 1908-25, inclusive, will be found at p. 288 of the 1931 Year Book.

¹ Exports of pulpwood in the calendar year 1936 were 1,235,754 cords.² None reported.

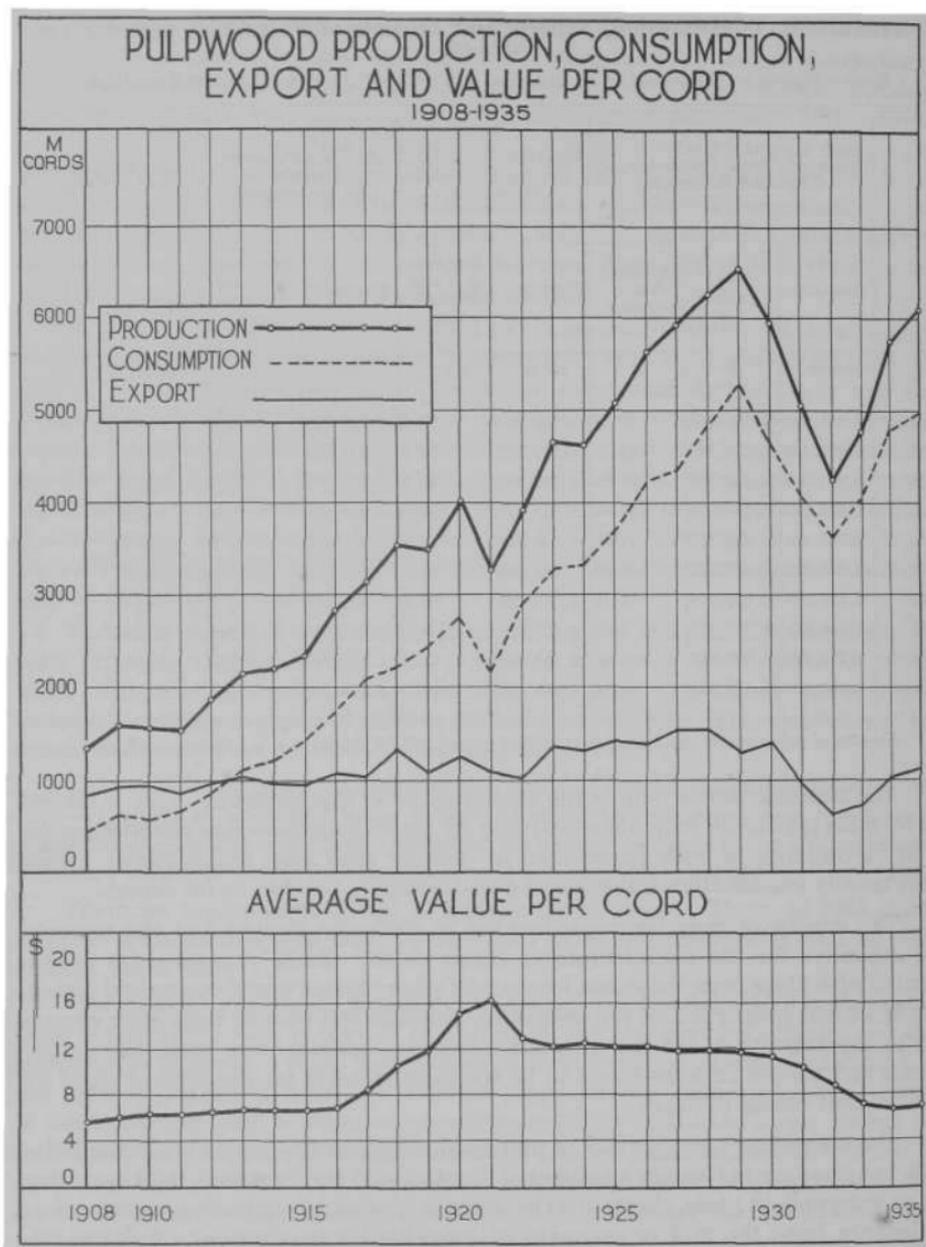

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export.

The supply of rags for paper-making is distinctly limited and the material too expensive for the manufacture of cheap paper. Early paper-makers experimented with fibres from the stems, leaves, and other parts of numerous annual plants, but the small proportion of paper-making material recoverable from such sources led to experiments in the use of wood. Different species were tried, and finally spruce and balsam fir were found to be the most suitable for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of "cutting-up" and "rossing" mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4' by 4' by 8' of piled material), which is approximately equivalent to 500 feet board measure or to 90 cubic feet of solid wood.

There are, in Canada, four methods of preparing wood-pulp, one of which is mechanical and three chemical. Detailed descriptions of these processes were given in the 1931 Year Book, pp. 290-291.

Pulp Production.—Table 6 shows the total production of pulp in Canada from 1926 to 1935 inclusive, together with the production of groundwood pulp and the production of fibre by the chemical processes described.

The growth of this industry was steady up to 1920, when 1,960,102 tons of pulp were produced. There was a drop in production in 1921, but production in 1922 at 2,150,251 tons, more than overtook the previous year's drop. Following this, with the exception of 1924, each year up to 1929 showed consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons. This was followed by annual decreases down to 1932 since when steady increases have been recorded.

6.—Pulp Production, Mechanical and Chemical, calendar years 1926-35.

NOTE.—Figures for the years 1908-25, inclusive, will be found at p. 293 of the 1931 Year Book.

¹ Some of these totals include unspecified pulp.

During 1935 there were 28 mills manufacturing pulp only and 43 combined pulp- and paper-mills. These 71 establishments turned out 3,868,341 tons of pulp, valued at \$79,722,039, as compared with 3,636,335 tons of pulp, valued at \$75,726,958, in 1934. Of the 1935 total for pulp, 3,045,728 tons, valued at \$47,283,533, were made in the combined pulp- and paper-mills for their own use in manufacturing paper. Of the remainder, 146,090 tons, valued at \$5,305,410, were made for sale in Canada, while 676,523 tons, valued at \$27,133,096, were made for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 66 p.c. of the production in 1935 was groundwood pulp and 17 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate and soda fibre made up the remainder, with groundwood and chemical screenings, for which a considerable market has developed in recent years in connection with the manufacture of rigid insulating boards. Table 7 shows the production of pulp by provinces in the latest seven years.

¹ Includes production in British Columbia, Manitoba, New Brunswick, and Nova Scotia.

Pulp Exportation.—The following table gives the quantities of pulp exported by the principal pulp-producing countries of the world in 1935. Figures for 1913, the year immediately preceding the War, and for 1934 are shown for comparison.

Figures of the exports of wood-pulp from Canada in the fiscal years ended Mar. 31, 1933-36, will be found in Table 12 of the chapter on External Trade. In the calendar year 1936 the exports of wood-pulp from Canada were 754,496 tons.

The total exports of the eleven principal pulp-exporting countries of the world in 1935 were 6,737,916 short tons, of which Canada contributed about 10 p.c.

Paper Production.—The paper-making stage of the industry involves the consumption of wood-pulp and other paper stock in the manufacture of paper and other pulp products. Accurate annual statistics for this part of the industry are available only for the years 1917 to 1935 inclusive. These are given in Table 9.

During 1935 there were 43 combined pulp- and paper-mills and 24 mills making paper only. These 67 establishments produced 3,280,896 tons of paper, together with certain miscellaneous pulp products, with a total value of \$129,078,386, as compared to 3,069,516 tons, valued at \$120,892,225 in 1934. Newsprint paper now forms nearly 85 p.c. of the annual paper production in Canada. In 1935, the production was 2,765,444 tons, valued at \$91,762,201, a record production for volume although its value was lower than that of 1929, the previous record year. The preliminary estimate for 1936 is 3,190,599 tons, also a record for volume.

9.—Summary of Paper Production in Canada, calendar years 1926-35.

NOTE.—Comparable figures for the years 1917-25 will be found at p. 334 of the 1934-35 Year Book.

Exportation of Newsprint Paper.—In the fiscal year 1908, exports of printing paper were for the first time separately recorded, and valued at \$2,833,535. In the fiscal year 1913, when quantities were first shown, Canada exported 256,661 short tons valued at \$9,980,378. For the fiscal year ended Mar. 31, 1936, our exports of newsprint amounted to 2,663,081 tons valued at \$90,761,379 and ranked second only to wheat among the exports of the Dominion. For exports of newsprint and other paper in the fiscal years ended Mar. 31, 1932-36, see Table 12 of the chapter on External Trade.

As early as 1913 Canada led the world in the exportation of newsprint, and since that date, her exports have increased more than nine-fold in quantity. The following table shows the exportation of newsprint from the 13 principal exporting countries in 1913, 1933, 1934 and 1935. Canada contributed to the total over 66 p.c. or more than all the other 12 countries combined in 1934. Canada's exports of newsprint paper for the calendar year 1936 were 2,993,089 tons.

Statistics of the Combined Pulp and Paper Industries.*—While the manufacture of pulp and that of paper are properly two industries, the existence of combined pulp- and paper-mills makes it impossible to separate many of their statistics. Considering the manufacturing part of the industry as a whole, there were altogether 95 mills in operation in 1935 and also in 1934. The capital invested in 1935 amounted to \$545,572,938, the employees numbered 27,836 and their salaries and wages amounted to \$35,893,313. If we disregard pulp made "for own use" in combined pulp- and paper-mills, the total value of the raw materials used in the industry as a whole amounted to \$57,995,037, and the gross value of production to \$162,651,282. The difference between these two, or the net value of production,† represents the value added by manufacture and amounted in 1935 to \$81,973,362 or \$104,656,245. The pulp and paper industry, one of the leading single manufacturing industries in Canada, has been first in wages and salaries paid since 1922, when it first exceeded the sawmills. It was the leading industry in gross value of production from 1925, when it replaced the flour mills, until 1935 when it was over-

* See Chapter XIV—Manufactures—for further particulars regarding the pulp and paper industry.

† This is the net value of production as calculated for years prior to 1934. Actually for 1934 and 1935 it is the figure shown less power and fuel used.

taken by non-ferrous smelting and refining. It has been second to central electric stations in net value of production and capital for some years. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the \$7,041,052 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry toward a favourable trade balance for Canada in 1935 amounted to \$122,235,432, representing the difference between exports and imports of pulpwood, pulp, paper, and paper products.

The United States market absorbs annually all of Canada's pulpwood exports, and about 80 p.c. of her pulp and paper shipments. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

Subsection 3.—The Lumber Industry.

The manufacture of lumber, lath, shingles, and other products of the sawmill is the second most important industry in Canada depending on the forest for its raw materials. Annual statistics covering this and other forest industries were collected and published by the Forest Service of the Department of the Interior from 1908 to 1916, since when the work has been carried on by the Dominion Bureau of Statistics, in co-operation with the Forest Service.

The production of sawn lumber in Canada in 1920 reached a total of over four billion feet board measure, the highest cut recorded since 1912. Production in 1921 decreased by over a third and the average value by over \$10 a thousand feet. This was followed, with one exception, by annual increases up to 1929 and then by annual decreases down to 1932. There were increases in 1933, 1934, and 1935. British Columbia now produces 54 p.c. of the total. Table 13 gives the production of lumber, lath, and shingles in each year from 1926 to 1935.

13.—Quantities and Values of Lumber, Lath, and Shingles Produced in Canada, calendar years 1926-35.

NOTE.—Figures for the years 1908-25, inclusive, will be found at p. 300 of the 1931 Year Book.

1935.....	2,973,169	47,911,266	3,258,253	7,593,765	226,854	536,087

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills, and mills for cutting-up and barking or rossing of pulpwood reporting in 1935 was 3,698, as compared with 3,572 in 1934. The capital invested in these mills in 1935 was \$75,973,627, employment amounted to 25,727 man-years and wages and

salaries amounted to \$17,711,657. The logs, bolts, and other raw materials of the industry were valued at \$34,326,753 and the gross value of production was \$65,905,132. The net production in 1935 was \$29,077,248.

The production of sawn lumber increased in quantity from 1934 to 1935 by 15.3 p.c. Lath production increased by 27.5 p.c., and shingle production by 35.3 p.c. Increases were reported in the production of all but pulpwood and a few of the minor products and total values also increased with all but pulpwood, shooks, and pickets. The total gross value of production increased from \$54,822,439 in 1934 to \$65,905,132 in 1935; for production by provinces for the two latest years see Table 14.

British Columbia came first in total production, contributing 54.2 p.c. of the total cut in lumber and 86 p.c. of the shingles in 1935. Ontario followed in second place, Quebec was third and New Brunswick fourth. Douglas fir was the most important kind of lumber sawn, being produced almost entirely in British Columbia. Spruce is sawn in every province and comes second, with hemlock, white pine, and balsam fir next in order of importance. Cedar is the most important shingle wood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood in this industry, only 5 p.c. being deciduous-leaved trees or hardwoods.

Lumber Exportation.—The square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to Great Britain and later to the United States. Our trade with the latter country has been from the first largely confined to planks, boards and dimension stock. During the American Civil War our exports of forest products of all kinds to the United States for the first time exceeded those to Great Britain, but in late years this has become invariable. The total quantity of sawn lumber and square timber exported from Canada changed little from 1900 to 1929, averaging about two billion ft. b.m. per annum, but decreased considerably in 1930, 1931 and 1932. The exports in 1933 amounted to 1,140,541 M ft. b.m., valued at \$18,979,506, of which the United Kingdom took the largest share. Exports to Empire countries made up 57 p.c. of the total and those to foreign countries 43 p.c. In 1934 exports to Empire countries increased to 71 p.c. of the total, but decreased to 64.7 p.c. in 1935. The exports of lumber and square timber increased in 1936 as compared with 1935, but the exports of shingles and lath decreased. (See Table 15.)

Subsection 4.—Other Forest Industries.

Sawmills and pulp-mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products, and pulp and paper. There are also a number of important industries which use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, others manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries which use wood indirectly in the manufacture of articles which do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors and other millwork and planing-mill products; boxes, baskets, cooperage, and other containers; canoes, boats, and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks, and silos; spools, handles, dowels, and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery, and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

Subsection 5.—Manufactures of Wood and Paper.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1935 the gross value of production for all classes of manufactured products amounted to \$2,807,337,381 of which total the wood and paper group contributed \$441,160,387 or over 15 p.c. It was exceeded in this respect only by the vegetable products group with over 18 p.c. Of

the ten groups of the industrial census the wood and paper group, which includes the manufacture of lumber, pulp and paper as well as the wood- and paper-using industries, was highest in number of establishments with 8,186, in net value of products with \$239,387,227* and in salary and wage distribution with \$128,196,524.

In few industries did manufacture add, in 1935, a higher percentage to the raw material used than in the wood and paper-using industries; in the manufacture of pulp and paper this percentage was 101 and in the lumber industry 82. By the manufacture of lumber into planing-mill products its value is increased by 82 p.c. also. For the wood and paper group as a whole the value added by manufacture, in 1935 was \$266,119,706,* or 152 p.c. of the value of raw materials used. Further details are given in Chapter XIV—Manufactures—of the present volume.

The forests of Canada contribute substantially to her export trade values. During the fiscal year ended Mar. 31, 1936, exports of wood and paper products amounted to \$181,831,743 and made up 21.4 p.c. of the total value of exports for the period, amounting to \$849,030,417. Exports of wood and paper products were exceeded by those of mineral products, which made up 33.4 p.c. of the total, and agricultural and vegetable products with 28.6 p.c. Wood and paper products are prominent among the individual items of exportation. Newsprint paper is second only to wheat on the list, with wood-pulp fifth and sawn lumber sixth. The gross contribution of wood and paper products toward a favourable trade balance for Canada amounted to \$158,560,112 during the same period, exceeding all other groups in this respect.

Subsection 6.—Forest Depletion and Increment.

Fire Losses.—No accurate summing up of forest fire losses in Canada's forests has ever been made, but it has been estimated that 60 p.c. of the original forest has been burned, 13 p.c. has been cut for use and 27 p.c. remains. Though the loss of merchantable timber has been greatly reduced in recent years by forest protective services and the education of the public, it still constitutes a serious drain on our resources.

Since the historic Miramichi fire, which burned along the valley of the Miramichi river in New Brunswick in 1825, there have been a number of disastrous fires. About the year 1845 vast areas west of lake Superior were burned over. Some years later a very extensive fire burned along the height of land from lake Timiskaming to Michipicoten. In 1871 a fierce fire swept over more than 2,000 square miles of forest from lake Nipissing westward along the north shore of Georgian bay. About the same time the greater part of the Saguenay and Lake St. John district, in Quebec, was swept by one of the most destructive fires on record. Two other fires in 1891 and 1896 devastated more than 2,000 square miles of country in the southern Algoma district; in Quebec, country along the line of the Quebec and Lake St. John Railway also suffered by a number of disastrous forest fires about this time.

During more recent times a series of disastrous fires swept over northern Ontario. A number of isolated fires around the mining camp of Porcupine culminated, on July 11, 1911, in a conflagration which resulted in the loss of 72 lives and property damage estimated at \$3,000,000. In 1916 fires in the same general region were responsible for the deaths of at least 224 people. In 1922 a third fire destroyed the town of Haileybury and other centres. In 1908 a fire originating in the forest around Fernie, B.C., destroyed that city. Every year thousands of acres are devastated by fires of less individual importance, which in the aggregate are rapidly depleting our forest resources. In 1923 there were unusually disastrous fires, chiefly

* See footnote (f) p. 307.

in Eastern Canada. A total area of over 6,000,000 acres was burned over with a loss of approximately \$46,000,000. The average area burned over for the ten-year period from 1926 to 1935 was slightly over two million acres with an average annual total loss and damage of four and a half million dollars.

Speaking generally, there are, annually, two periods in Canada when the forest fire hazard is highest—in the spring, after the disappearance of the snow, when the forest floor is dry and the green underbrush has not yet developed, and again in the fall when the herbaceous growth is dead and the ground covered with dry leaves.

Statistics compiled by the Dominion Forest Service from reports received from the various provincial and private forest protective organizations, show that, during the ten-year period from 1926 to 1935, 86 p.c. of all fires reported were due to human agencies and were, therefore, preventable. The remainder were attributed to lightning or other natural causes. Campers, settlers, smokers, and railways are responsible for most of the fires whose origin is determined. Other causes, including lumbering operations, lightning and incendiarism, account for smaller proportions.

Losses through Insects and Fungi.—From 1912 to 1923 the spruce bud-worm caused tremendous damage to the spruce and balsam-fir forests in Eastern Canada. In Quebec it was estimated that 100 million cords of pulpwood were destroyed by this insect, and in New Brunswick the loss was placed at 15 million cords. In these regions the active state of the infestation is now practically over, but the insect is causing damage in northern Ontario and Cape Breton island. Other insects, though not as destructive as this one, entail a heavy drain on the forest. The hemlock looper and a new species closely related to the spruce bud-worm are causing considerable damage in eastern coniferous forests. During recent years dusting by aeroplane has been developed on a practical basis by the Entomological Branch of the Department of Agriculture and promises to be effective in the control of certain defoliating insects under certain conditions. Perhaps the most effective means of controlling destructive forest insects is by the introduction of parasites. The Entomological Branch of the Dominion Department of Agriculture has developed this means of attack with marked success in the case of the larch saw fly and has recently secured from Europe some millions of parasitic insects which are being liberated in the forests infested with the spruce saw fly. The loss caused by the various forms of rot and other fungous diseases is probably not less than that caused by insects under normal conditions. The butt rot is especially prevalent in balsam fir, and the value of the hardwoods is also greatly decreased by rot.

Summary of Losses and Increment.—The annual consumption of standing timber for use amounts to about 2,300,000,000 cubic feet. During the latest ten years fire has destroyed annually about 268,000,000 cubic feet of merchantable timber and the young growth of various ages on 848,379 acres. The destruction occasioned by insects, fungi and windfall is not known, but is estimated at 700,000,000 cubic feet per annum. It may be safely estimated that the forests of Canada are being depleted at the rate of upwards of about four billion cubic feet per annum. With about 600,000 square miles of accessible timber in a growing condition, an average annual increment of 10 to 11 cubic feet per acre would be quite possible under forest management and would cover this depletion. In view of the destruction of young growth which occurs and the deterioration of the forests and the soil, caused by repeated fires, there is little hope that this increment is being produced at the present time throughout Canada, although particular areas are producing greatly in excess of this quantity. Nevertheless, extensive reproduction and rate-of-growth surveys being conducted by the Dominion Forest Service indicate that the increment is greater than previously estimated.

CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION.

This chapter is divided into three sections dealing, respectively, with: the fur trade, using that term in the sense which historical association has given it in Canada; fur farming, which follows closely the treatment formerly given the subject in the chapter on agriculture; and fur production and trade statistics, covering the total production and external trade in raw furs.

Section 1.—The Fur Trade.

Historical Sketch.—The place which the fur trade held during the French *régime* in Canada, when for a century and a half it was at once the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said with truth to have held the West until the Dominion had grown to absorb it, bequeathing to the civilization which followed a native race accustomed to the white man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the Canada Year Book, 1934-35, pp. 343-344.

The Modern Industry.—Great changes have taken place in the fur trade since the early days. The railway revolutionized conditions of transportation to the West and indeed wherever its influence has reached, and more recently the motor vehicle and the extension of roads have provided access to outlying districts along the fringe of settlement. Vessels ply the larger lakes and rivers, while the gasoline-driven boat may be taken into quite remote water routes. Finally the aeroplane is frequently used for transportation of furs from the more inaccessible districts. Increase in trapping and improved methods of capture, together with the advance of lumbering, mining, and agricultural settlement have driven some fur-bearing animals farther and farther afield. However, this more widespread search for furs and more intensive exploitation has been followed by a more thorough regulation of the fur trade and the effort to administer more carefully the wild-life resources of the country so that the supply may be perpetuated. Furthermore, some of the fur-bearing animals appear to be adapting themselves to conditions in settled country as illustrated by the fact that Ontario and Quebec, the provinces with the largest populations, usually report the largest catches of furs. While the settlement of the country has inevitably reduced the area in which some fur-bearing animals, such as the beaver, can survive, nevertheless a tremendous area remains which is unsuitable for agricultural settlement and which under proper administration should provide a natural habitat for such animals perpetually. Altogether the annual production of furs in Canada under modern conditions has increased rather than diminished, although some of the chief furs of the early days have not only declined in relative importance, but the average annual production is smaller.

Conservation.*—The conservation of the fur bearers of Canada is a matter coming under the jurisdiction of the respective provincial and territorial governments. Nevertheless, the Dominion as a whole is concerned in the conservation of

* Prepared under the direction of F. H. H. Williamson, Controller, National Parks Bureau, Department of Mines and Resources, Ottawa, by Hoyes Lloyd, Superintendent of Wild Life Protection.

fur and of all wild-life resources. It was to co-ordinate the wild-life conservation efforts of the various Dominion Departments that the Advisory Board on Wild Life Protection was organized in 1916. The Board is specially authorized to advise with respect to the administration of the Migratory Birds Convention Act and Northwest Game Act, but has dealt with many other problems of wild-life conservation. Through conferences of Provincial and Dominion officials which were called together for many years by the Department of the Interior, but are now convoked by the Department of Mines and Resources, uniform and concerted action has been taken and the conservation of Canada's wild-life resources has been advanced. The general policy followed with regard to the fur-bearing animals has been mainly along two lines: first, to so regulate the taking of animals by limitation of catch or close season as to prevent their extinction in districts where natural conditions provide a suitable habitat; and second, to provide sanctuaries in strategic places which serve as reservoirs from which large areas of surrounding wild country may be naturally re-stocked.

Information on the wild-life conservation activities of the provinces and territories may be secured from the chief game officials listed below: G. A. Jeckell, Controller, Controller's Office, Dawson, Yukon; Roy A. Gibson, Deputy Commissioner, Northwest Territories, Ottawa, (administers Northwest Game Act); F. R. Butler, Inspector, Office of the Game Commission, 411 Dunsmuir St., Vancouver, British Columbia; J. A. Hutchison, Game Commissioner, Edmonton, Alberta; Edward S. Forsyth, Game Commissioner, Department of Natural Resources, Regina, Saskatchewan; A. G. Cunningham, Director, Game and Fisheries Branch, Department of Mines and Natural Resources, Winnipeg, Manitoba; D. J. Taylor, Deputy Minister of Game and Fisheries, Toronto, 2, Ontario; L. A. Richard, Deputy Minister of Mines, Game and Fisheries, Quebec, Quebec; Lt.-Col. H. H. Ritchie, Chief Game Warden, Department of Lands and Mines, Fredericton, New Brunswick; F. A. Harrison, Chief Clerk, Department of Lands and Forests, Halifax, Nova Scotia; W. R. Shaw, Deputy Minister and Live Stock Superintendent, Department of Agriculture, Charlottetown, Prince Edward Island.

Section 2.—Fur Farming.*

Fur farming is playing an increasingly important part in the production of furs in Canada, the value of pelts of ranch-bred animals advancing from 3 p.c. of the total value of the fur production in 1921 to 31 p.c. in 1935.

Origin of the Fur-Farming Industry.—A short account of the origin of the fur-farming industry in Canada was given on p. 249 of the 929 edition of the Year Book, while a more detailed account of the earlier history of the industry was given in a publication of the Commission of Conservation, Ottawa, entitled "Fur Farming in Canada", by J. Walter Jones, B.A., B.S.A., the second edition of which was published in 1914.

Fur Farms of Canada.—The term "fur farm" includes farms devoted entirely to the raising of fur-bearing animals (principally silver foxes), together with parts of farms where the raising of fur-bearing animals is carried on as a distinct branch of the operations. Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised successfully in captivity—mink, raccoon, skunk, marten, fisher, and fitch. The mink in particular thrives in captivity if it receives proper care, and the number of mink farms is accordingly

* Revised by Miss F. A. Brown, Chief of the [Animals and Animal Products Branch, Dominion Bureau of Statistics. This Branch publishes detailed annual reports on fur farms and on the production of raw furs.

increasing at a rapid rate. In addition to the farms already mentioned, where animals are raised in rather confined quarters, many areas of marsh, stream or lake are being operated as muskrat and beaver farms. In the case of these semi-aquatic animals, however, although the animals are usually kept within a carefully fenced area where they are given supplementary food and are protected from predatory enemies, they nevertheless live and breed under natural conditions.

For many years the fox-farming industry was expanding so rapidly, both in Canada and abroad, that the chief source of income of ranches was the sale of live animals for breeding purposes, while the production of pelts was a minor or incidental feature. Thus, in 1925 the value of live silver foxes sold was \$2,755,000, while that of silver fox pelts was only \$736,000. As the number of foxes on fur farms progressively increased, ranchers had to readjust their economy to declining values for both live animals and pelts. The industry appears to be gradually becoming stabilized on a pelt basis rather than on a live animal basis. In the latest year, 1935, the value of live silver foxes sold was only \$562,480, while that of silver fox pelts sold was \$3,690,431, and for all fur farms the sales of pelts represented 88 p.c. of the total revenue.

Statistics of Fur Farms.—The earliest Dominion-wide statistics of fur farms were collected for the year 1919. Since then annual statistics have been obtained covering the chief phases of the industry. The statistics of 1919 recorded 429 fur farms with 8,326 fur-bearing animals. The wide growth of the industry since then is evident from the statistics of the tables which follow.

Table 1, showing the number of farms and capital investment in the industry by provinces, indicates that Prince Edward Island no longer holds its earlier margin of supremacy in the industry. In recent years the larger and more populous provinces of Quebec and Ontario have exceeded Prince Edward Island in the number of fur farms, and in the capital invested in fur-bearing animals and land and buildings used for fur farming.

Table 2 indicates that the numbers of silver foxes and mink, the two fur-bearing animals which have proved most readily adaptable to domestication, were higher in 1935 than in any previous year. The values of animals on fur farms, on the other hand, have been greatly affected by the decline in prices since 1929.

¹ Based on estimates furnished by the operators of the farms.

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. Table 4 shows the sales of animals by kinds in the years 1927 to 1935 and Table 5 the sales of pelts. During the five latest years the sales of pelts have exceeded the sales of live animals, while in former years the reverse was the case.

Section 3.—Statistics of Total Production and Trade in Furs.

Fur Production Statistics.*—Statistics of the number and value of raw furs and skins taken were collected at the Decennial Census of 1881 and thereafter till 1911, the figures showing a value of \$987,555 taken in 1880, \$768,983 in 1890, \$899,645 in 1900, and \$1,927,550 in 1910. In 1920 the Dominion Bureau of Statistics

* Revised by Miss F. A. Brown, Chief of the Animal and Animal Products Branch, Dominion Bureau of Statistics.

commenced the annual collection of returns from fur traders, but arrangements were subsequently made with the provinces whereby the provincial game departments undertook to supply annually to the Dominion Bureau of Statistics statements of the numbers and values of pelts taken in the respective provinces, the information being based on royalties, export taxes, etc. These returns include furs produced on fur farms as well as those taken by trappers from the wild-life resources of the Dominion. The figures of pelts produced and their values are given in Table 6 for the years since annual statistics were instituted. The high value shown for 1920 is due to the inflated prices at that time. The value for the latest year ended June 30, 1935, represents a good recovery and is higher than for any year since 1929. The decrease in the number of pelts is attributable chiefly to reductions in the numbers of muskrat, ermine, rabbit, and squirrel.

Canadian consumption of furs is increasing with the growth of population and wealth. An important industry has developed in the dressing and dyeing of furs. Imported furs, chiefly of types not produced in Canada, as well as domestic furs are treated in these plants. The industry is on a custom basis, that is, the work is done for customers and a charge made according to the nature of the work involved. In 1935 the number of fur skins treated was 5,738,920 and the amount received by the plants for the work, \$1,374,747. The plants in operation numbered 13.

As a result of increased Canadian consumption and the disorganization of older European markets at the close of the Great War, fur auctions were instituted in Canada. The first Canadian fur auction was held in Montreal in 1920, when 949,565 pelts, valued at \$5,057,114, were sold. The most recent figures show that at the auction sales held in Montreal during 1935 there were 1,342,769 pelts disposed of with a total value of \$4,562,669. Sales are also held at Winnipeg, Edmonton, and Vancouver. These sales are attended by foreign as well as Canadian fur buyers.

6.—Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, years ended June 30, 1920-35.

¹ Fur prices in this year were abnormally high. Any comparison of this figure with those of later years should take this into account.

Among the provinces, Ontario occupies first place in value of raw fur production, its output in 1934-35 being valued at \$2,218,514. The relation of the value of raw fur production in each province to the total for Canada in 1934-35 is shown by the following percentages: Ontario, 17.3; Quebec, 14.9; Northwest Territories, 13.1; Alberta, 11.5; Saskatchewan, 9.8; Manitoba, 9.2; British Columbia, 6.3; New Brunswick, 5.9; Prince Edward Island, 5.1; Nova Scotia, 5.1; and Yukon, 1.8. Details by provinces of the numbers of pelts produced in the two latest years are

The principal item is silver fox, whose total value of \$4,343,823 represents 34 p.c. of the total value of raw fur production in the season. Silver fox is the product almost entirely of the fur farms and, owing to the expansion of the fur-farming industry throughout the Dominion, has shown an increase in pelt production in nearly every season from 1920-21 onward. The value of pelts of other kinds of foxes added to the silver fox brings the total for all fox pelts to \$6,903,792, or 54 p.c. of the total for all furs. Following silver fox in order of importance, but with considerably smaller total values, are: muskrat, \$1,784,252; mink, \$1,540,684; and white fox, \$1,043,028.

The following table gives details of raw fur production by kinds for 1934 and 1935.

External Trade in Furs.—The important external markets for Canadian furs are London and New York; the trade tables for the twelve months ended June 30, 1935, show that of the total of \$15,224,342 worth of raw furs exported, the United Kingdom took \$9,755,922 and the United States \$4,626,876. In the early years of the 19th century, the exports of furs exceeded in value those of any other product. This has greatly changed, yet the total output has not declined and Canada may still be described as one of the great fur preserves of the world. In 1667 exports of furs to France and the West Indies were valued at 550,000 francs. In 1850, the first year for which tables of the Customs Department are available, the value of raw furs exported was £19,395 (\$93,872). The following table shows exports for recent years which are greatly in excess of the earlier values.

Among living animals exported from Canada only two kinds of fur-bearing animals are separately classified by the Customs Department. These are foxes, separately recorded first in 1925, and mink, in 1931. Live foxes exported were valued at \$1,388,459 in the fiscal year ended Mar. 31, 1925, \$1,434,686 in 1926, when the highest value was recorded, and only \$7,085 in 1936. Live mink exported were valued at \$66,811 in 1931 and \$9,909 in 1936. Foxes have been separately classified among imports of living animals since the fiscal year ended Mar. 31, 1928, when those imported were valued at \$6,914 compared with \$1,020 in 1936. Rabbits imported were valued at \$7,181 in 1928 and \$101 in 1936.

CHAPTER XI.—THE FISHERIES.

Section 1.—The Early Fisheries.

Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. Fishing may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has since yielded a perennial harvest to both Europe and America. According to the Census of 1931, of 3,927,591 persons in Canada gainfully occupied in that year, 34,340 were occupied in the fishing industry, that is, in primary fishing operations exclusive of the canning and curing of fish.

A more detailed account of the history of the Atlantic fisheries was given on p. 348 of the 1934-35 Year Book.

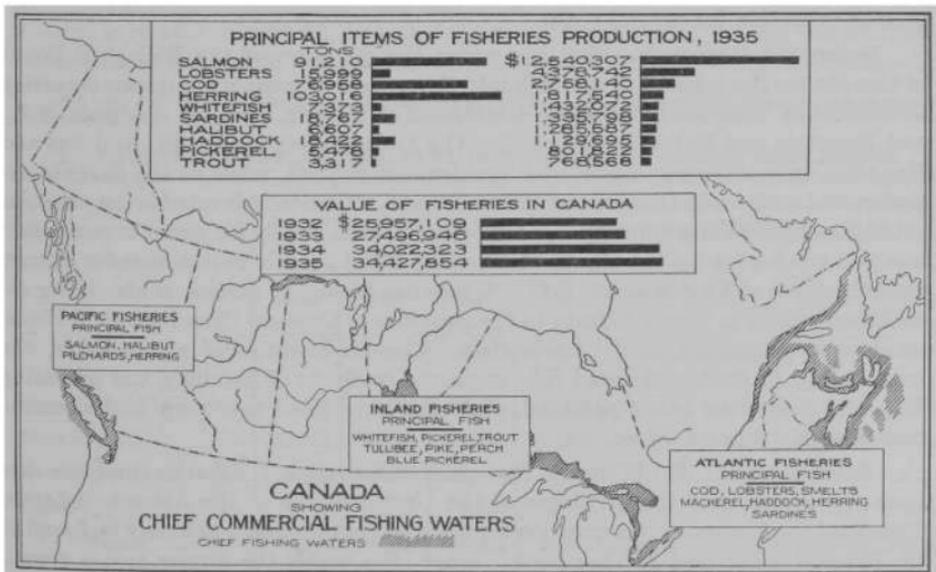

Section 2.—The Canadian Fishing Grounds.

The fishing grounds of the Dominion of Canada, are among the most extensive in the world and are indicated on the accompanying chart. They fall naturally into three divisions: Atlantic, inland, and Pacific fishing grounds. A detailed description of each division, of the fish caught, and of the methods of fishing, will be found at pp. 222-225 of the 1932 Year Book.

Section 3.—The Government and the Fisheries.*

Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a Department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries

* Revised under the direction of W. A. Found, Deputy Minister, Department of Fisheries, Ottawa.

(except those of the mainland portion of Quebec, which by agreement are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island, and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. [See the Fisheries Act (22-23 Geo. V, c. 42).] The expenditure of the Dominion on the fisheries in the fiscal year 1935-36, including civil government salaries, contingencies, etc., was \$1,710,345, and the revenue \$167,862.

Conservation.—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of closed seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1935, operated 23 main hatcheries, 11 subsidiary hatcheries, 9 salmon retaining ponds and several egg collecting stations at a cost of \$231,036, and distributed 145,878,304 trout and salmon eggs, fry and older fish. The young fish are distributed *gratis* if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 at Malpeque bay, Prince Edward Island, by the Dominion Department of Fisheries, and are now being extended to areas in Nova Scotia.

Direct Assistance.—On the Atlantic coast where conditions attending fishing operations make such a service desirable, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72) systems of instruction in improved methods of fish curing and barrel making have been in operation for several years.

Scientific Research.—Stations under the direction of the Biological Board of Canada for the conduct of research into the numerous complex problems occurring in connection with the fisheries are established at Halifax, N.S., St. Andrews, N.B., and Nanaimo and Prince Rupert, B.C. The biological stations at St. Andrews and Nanaimo are concerned chiefly with problems of fish life, while at the fisheries experimental stations at Halifax and Prince Rupert, attention is devoted to the practical problems of the fishing industry. A biological station, chiefly for oyster investigation work, is conducted by the Board at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. A fisheries biological station is also being established (1936) in Gaspé County in the province of Quebec. The Biological Board employs a permanent staff of scientists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.

International Problems.—The chief international fisheries problem has been the question of the privileges of the United States in the Atlantic fisheries. Details of the history of this question for the past century and a half may be found at pp. 351-352 of the 1934-35 Year Book. Since 1933, under the former *modus vivendi* licence plan, which grew out of a treaty of 1888, which, however, was never ratified,

United States vessels have again been permitted to enter Canadian ports to buy bait and all other supplies.

On the Great Lakes, also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State governments interested. Much the same situation has developed in connection with the sockeye salmon fishery of the Pacific coast where the sockeye of the Fraser river, British Columbia, are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners. Different treaties to settle the matter were signed but none of them has so far been made effective.

Better results have been obtained in dealing with the international problem touching the halibut fishery of the Pacific which was settled by the treaty "For the Protection of the Pacific Halibut", signed by Canada and the United States on Mar. 2, 1923. Under this treaty a closed season in each year was provided for halibut fishing. A further convention, signed by the plenipotentiaries of the two countries at Ottawa on May 9, 1930, and ratified by the respective governments of the countries on May 9, 1931, provided for the regulation of the fishery by the division of the waters into fishing areas, changing of dates for closed seasons, etc. This revised convention provides a simpler and more responsive system of control than was previously possible.*

Fishing Bounties.—By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters, of \$150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to \$160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1935, payment was made under authority of the Deep Sea Fisheries Act (R.S.C., 1927, c. 74) on the following basis: to owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty, \$6.30 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$5.45 each. The total amount paid in 1935 was \$159,966. Details of the distribution of bounties for the years 1932 to 1935 are as follows:—

* A new convention, generally similar to that of 1930 but embodying several changes, was signed at Ottawa on Jan. 29, 1937.

1.—Government Bounties paid to Fishermen for the Calendar Years 1932-35.

¹ Amounts include payments to vessel and boat owners.

Collection of Statistics.—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries and those branches of the different Provincial Governments having jurisdiction with regard to fisheries. Under this arrangement, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local fishery officers, checked in the Department of Fisheries and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditious and correct reports.

Section 4.—The Modern Fishing Industry.*

The existing fishing industry of Canada is in the main the growth of the past half century. No comparable figures of production are available for years prior to the confederation of the provinces, but about 1836 the production of fish in what are now the three Maritime Provinces had an estimated value of something like \$1,500,000, while the production of Lower Canada was probably worth \$1,000,000. In 1870 the total was \$6,600,000 and this was more than doubled by 1878. In the '90's it passed \$20,000,000 and in 1912, \$34,000,000. The highest figure was reached in 1918, with over \$60,000,000, but this was in a period of greatly inflated prices. Between that year and 1921 the total value of the products of the fisheries decreased and in the latter year was back to \$34,000,000. From 1921 to 1926 a steady increase to \$56,000,000 took place and in the following three years the value fluctuated around the \$50,000,000 mark. The world-wide depression affected the markets for fish products so that the value dropped to \$25,957,109 in 1932. In 1933 conditions commenced to show improvement and by 1935 the value of output had advanced to \$34,427,854, an amount 33 p.c. greater than the value shown in 1932, the low year of the depression. The figures given represent the total values of fish marketed, for consumption fresh, or as dried, canned, or otherwise prepared.

The number of employees, which was 74,882 in 1931, rose steadily to 83,436 in 1934, but dropped to 82,918 in 1935, while the value of the capital investment of the industry, which was \$45,325,514 in 1931, fell to \$40,912,857 in 1933, but rose again to \$43,585,502 in 1934 and to \$43,617,888 in 1935.†

Among individual fish products the cod and the salmon long disputed the primacy; in the past 30 years the salmon has definitely taken the lead, and the heavy pack and relatively high price of lobsters have, in recent years, sent cod down to third place. The value of output of the salmon fishery in the period 1869 to 1935 was approximately 448 million dollars and that of the cod fishery, 287 million. This has, of course, affected the relative standing of the provinces, British Columbia now occupying the leading place that in earlier times belonged to Nova Scotia. The yearly record of production since 1870, the total production by provinces for the past six years, and the record by values of principal fish products for the past five years in descending order of importance, are shown in Tables 2, 3, and 4. The aggregate value of production in 1935, \$34,427,854, shows an increase of only 1.2 p.c. over the figure of \$34,022,323 in 1934.

* Revised by Miss F. A. Brown, Chief, Animals and Animal Products Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with advance summaries on fish caught, marketed, and prepared, by provinces. These may be obtained from the Dominion Statistician.

† For detailed historical statistics of the fisheries, see pp. 54-58 of Fisheries Statistics of Canada, 1935, obtainable from the Dominion Statistician.

2.—Total Values of the Products of the Fisheries of Canada, 1870-1935.

NOTE.—From 1870 to 1906 inclusive, years ended June 30; from 1908 to 1917 (a) inclusive, years ended Mar. 31; since and including 1917 (b), calendar years. No statistics are available for the nine-month period ended Mar. 31, 1907.

¹Quantity caught. ²Value marketed. ³Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas from 1934 on the United States landings are excluded from the statistics and the figures cover landings by Canadian vessels only. ⁴Prior to 1935 clams and quahaugs were combined.

Quantities and Values in Recent Years.—The wide variations in prices from year to year make total values misleading. On the other hand, the quantities of different kinds of fish are stated in many different units which make the total volume of production difficult to compare from year to year. An effort is made to overcome these difficulties in Table 5 by working out what the values would be in a later year if prices had remained the same as in the preceding year. From 1934 to 1935 there was an increase of 1.2 p.c. in the total value of the fisheries. The decrease due to lower prices was 1.3 p.c., while larger quantities caught accounted for an increase of 2.5 p.c. in total values. The improvement in 1935, following upon the larger increase of 1934, brought total values back considerably above those of 1931, although they still remained 37.5 p.c. below the \$55,050,973 recorded in 1928, before the decline began.

5.—Value of the Fisheries Production of Canada in 1935 compared with 1934, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.

Kind of Fish or Product.	Actual Value, 1935.	Value at Prices of 1934.	Actual Value, 1934.	Increase (+) or Decrease (-).	Due to Higher (+) or Lower (-) Prices.	Due to Larger (+) or Smaller (-) Quantities.

Capital and Employees.—The total capital invested reached an all-time record of \$64,026,297 in 1930, declined successively for three years to \$40,912,857 in 1933, rose again by 6.5 p.c. in 1934 and reached \$43,617,888 in 1935, a very small increase over 1934. The number of persons employed in the primary and secondary operations connected with the fishing industry declined from 80,450 in 1929 to 74,882 in 1931, rose steadily since then to 83,436 in 1934, but dropped in 1935 to 82,918. The 1935 figure is the second highest in the period 1920 to 1935, being exceeded only by the year 1934.

Trade.—Although the domestic consumption of fish is gradually increasing, the trade is still to a large extent dependent upon foreign markets. From 60 to 70 p.c. of the annual catch has been an average export. In the calendar year 1935, total exports amounted to \$24,859,486 of which \$10,321,296 went to the United States and \$6,759,505 to the United Kingdom. The most important single export is canned salmon (to the United Kingdom and European markets), followed by canned lobster and fresh lobster, while cod, dry-salted (to the West Indies, South America, etc.), is fourth in order of value. For fresh fish, especially whitefish and

lobsters, the United States is the chief market. Canadian imports of fishery products in the calendar year 1935 amounted to \$2,597,856. A general review of the import and export trade in fish for 35 years past is given in Table 13, by fiscal years, while Table 14 gives a comparative record of exports, by countries, during the calendar years 1934 and 1935. Table 15 shows the leading items of export for the calendar years 1933-35. For a complete analysis of imports and exports, as well as of production, see the annual report "Fisheries Statistics", issued by the Dominion Bureau of Statistics.

13.—Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-36.

NOTE.—In this table "Exports" includes seals skins and fish oils, and "Imports" includes turtles, whale-bone, shells and their products, fur skins of marine animals, fish oils and ambergris, in addition to fishery products as shown in Tables 12 and 13 of Chapter XVI on External Trade, in this volume.

Totals, Fish and Fishery Products...	-	20,223,610	-	22,497,135	-	24,859,486

The current trend of the fisheries, as shown by the statistics given in the series of tables above, is upward in nearly every feature including yields, value, capital invested, and trade. There was, however, a slight decline in employment afforded. Preliminary figures for 1936 indicate gains both in the catch from the sea fisheries and in the value of the catch to the fishermen, as landed. Statistics showing the result of the year's operations in the inland or fresh-water fisheries are not available at the time of writing. Export trade in fisheries products for the year, including products of the fresh-water fisheries as well as those from the sea, showed an increase of more than \$500,000 and, in round figures, totalled \$25,358,000.

CHAPTER XII.—MINES AND MINERALS.*

An article on the geology of Canada, referring to the chief mineral-bearing areas and formations of the Dominion, will be found at pp. 16-28 of the present edition of the Year Book. This article explains the geological origin of the principal economic minerals of Canada.

The Mines and Minerals chapter of the Year Book is divided into six sections: (1) a sketch of the administration of mineral lands and mining laws, (2) a summary of general production, (3) the industrial statistics of the mineral industries, (4) production of metallic minerals, (5) production of non-metallic minerals, (6) production of clay products and structural materials.

Statistics of Mines and Minerals.—The compilation and publication of statistics concerning mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent to those engaged in mineral industries are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

For more detailed information on the mineral production of Canada the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. The more important of these are: annual preliminary reports on the mineral production of Canada; a complete, detailed, annual report on the mineral industries; monthly bulletins on the production of the 16 leading minerals; and monthly, quarterly, and annual reports on coal statistics. (See footnote* to this page.)

Section 1.—Mineral Lands Administration and Mining Laws.

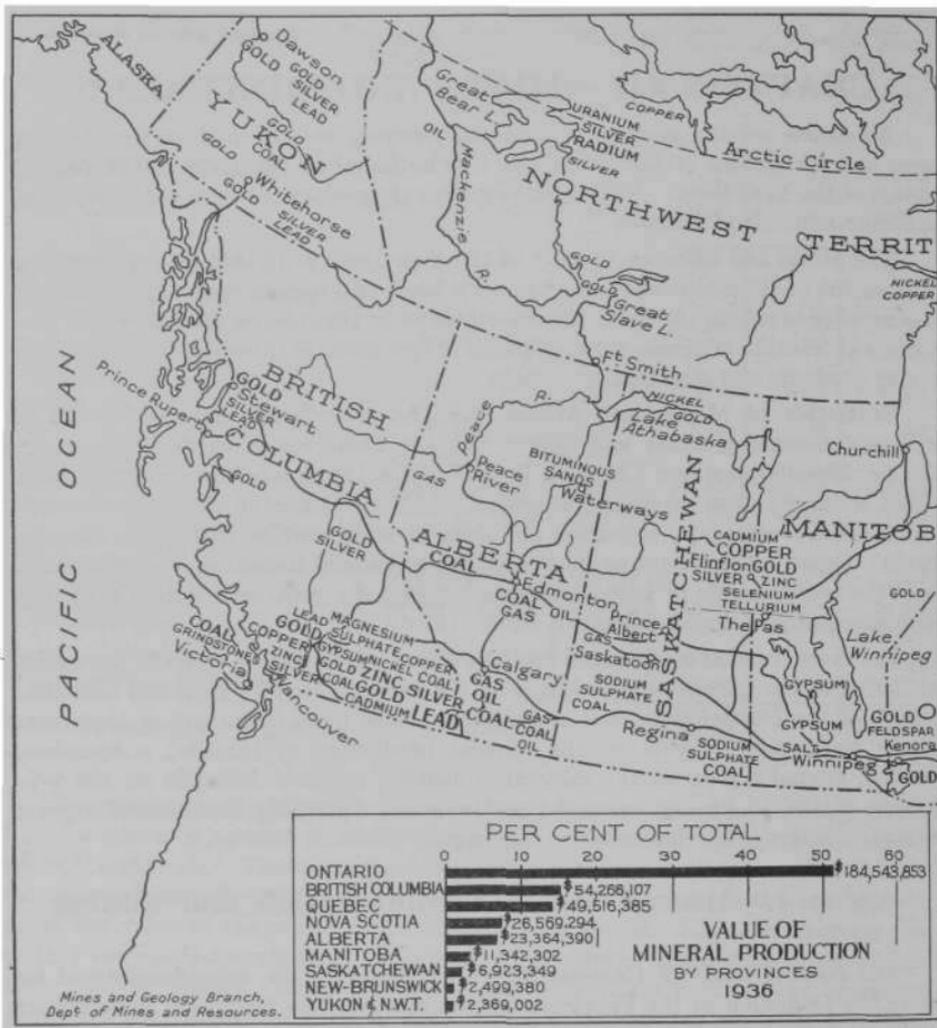

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves, and in National Parks in the Prairie Provinces and British Columbia. Since the transfer of the natural resources to the Prairie Provinces in 1930, all other mineral lands lying within the boundaries of the several provinces have been administered by the respective Provincial Governments.

Subsection 1.—Dominion Mining Laws and Regulations.†

Dominion lands to which these regulations apply are those administered by the Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the territories of Canada, reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

* Revised by W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXIX, Section 1, under "Production".

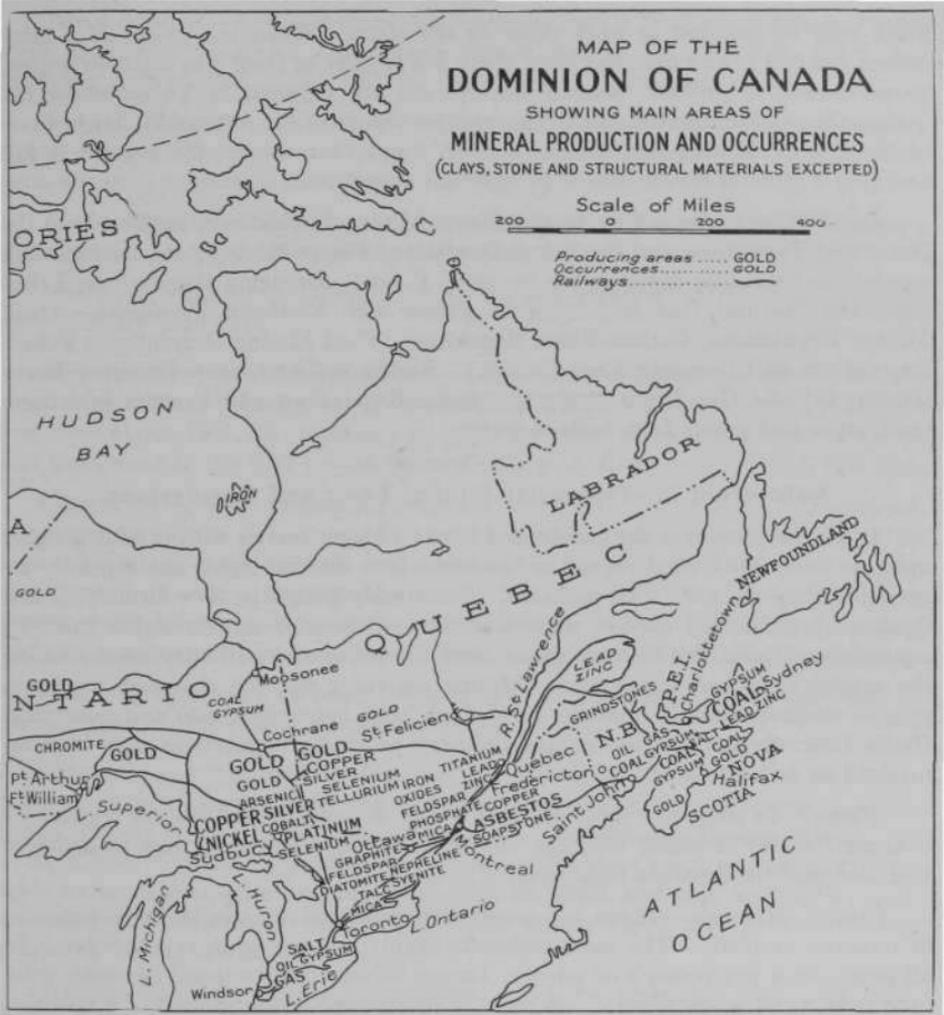

† For copies of any of the regulations referred to, application may be made to the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

Placer.—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person 18 years of age or over; claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, \$200 in Yukon and \$100 elsewhere. Royalty $2\frac{1}{2}$ p.c. under Yukon Placer Mining Act.

Quartz.—"Mineral" under this heading means all deposits of metals and other useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen and oil shales.

Under the present regulations, effective April 2, 1932, applicable to the Northwest Territories, any prospector or locator of a mineral claim, whether an individual, mining partnership or a company, must hold a miner's licence, the fee being \$5 for an

individual, from \$5 to \$20 for mining partnerships, and larger amounts proportionate to their capitalization for mining companies. A licensee may stake out 6 claims on his own licence and 12 more for two other licensees, not exceeding 18 in all in any one licence year in any mining division. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51.65 acres, being 1,500 feet square. Entry is granted by a mining recorder, fee \$5 for a claim located by a licensee on his own licence and \$10 if located on behalf of another licensee. Grant is renewable from year to year, subject to representation work to the value of \$100 being done on the location each year, and the renewal of the owner's miner's licence. A maximum of 36 claims may be grouped for purposes of representation work. When prescribed representation work to the value of \$500 has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense and certain other requirements met, a lease is issued for a term of 21 years, renewable, the rental for the full term of a claim not exceeding 51.65 acres being \$50. The cost of the survey, reckoned at

\$100, may be counted as work done on the claim. When the profits of a mine exceed \$10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to profits. Miners' licences are not required in Yukon under the Yukon Quartz Mining Act, but the general provisions of the Act are similar to those of the Quartz Mining Regulations above, except that the fee for a grant is \$10 and only 8 mineral claims can be grouped for operation.

In addition to these Quartz and Placer Mining Regulations, applicable to the Northwest Territories, and the Yukon Quartz and Placer Mining Acts, the following regulations regarding minerals are in force: *Yukon*.—Dredging Regulations; Petroleum and Natural Gas Regulations. *Yukon and Northwest Territories*.—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations and Domestic Coal Permits. *Northwest Territories*.—Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations and Permits to remove sand, stone and gravel from beds of rivers.

Subsection 2.—Provincial Mining Laws and Regulations.

In all the provinces the granting of land no longer carries with it mining rights upon or under such land except in Ontario where mineral rights are expressly reserved if they are not to be included. Some early grants in New Brunswick and Quebec also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas) and quarrying. Under these divisions of the mining industry provincial regulations may be summarized as follows:—

Placer.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These are sometimes described as quartz, lode minerals, or minerals in place. The most elaborate regulations apply in this division. In all provinces a prospector's or miner's licence to search for mineral deposits, valid for a year, must be obtained. A claim of promising-looking ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years when a grant or lease of the mining rights may be obtained subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

Fuels.—In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural gas, a boring permit on likely ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

Quarrying.—Regulations under this heading define the size of holding and the terms of lease or grant.

The more important features of the regulations dealing with these divisions of the mining industry are outlined for each of the provinces below.

Nova Scotia.—*Administration.*—Minister of Public Works and Mines, Parliament Buildings, Halifax. *Legislation.*—Mines Act (c. 22, R.S.N.S. 1923) and amending Acts of 1927 (c. 17), 1929 (c. 22), 1933 (c. 12), and 1935 (c. 23).

General Minerals.—Prospector's licence at nominal fee. Lease of mining rights—40 years for gold and silver; 20 years, three times renewable, for other minerals; both subject to annual rental and performance of work.

Coal.—Royalty—12½ cents per long ton, with exemption of coal used in mining operations and for domestic purposes by workmen employed about the mine.

Quarrying.—Rights to limestone, gypsum, and building materials are acquired with ordinary land title.

New Brunswick.—*Administration.*—Department of Lands and Mines, Fredericton. *Legislation.*—Mining Act (c. 35, R.S.N.B. 1927). In most grants of Crown land since about 1805, all mines and minerals are reserved to the Crown. Prior to that time, most of the land grants reserved only gold, silver, copper, lead, and coal.

General Minerals.—Prospector's licence costs \$10 for a year. *Claims.*—A prospector may stake 10 claims of 40 acres each which must be registered within 30 days and 25 days' work done on each claim within the year. All this work may be concentrated on one of a group of claims. Mining rights are granted by mining licence, renewable annually upon payment of \$10 per claim. When the mine produces on a commercial basis, a 20-year lease under similar conditions may issue.

Fuel.—Royalties are 10 cents per long ton on coal and 5 p.c. on the value at the well's mouth for petroleum and natural gas.

Quebec.—*Administration.*—Minister of Mines, Quebec. Information and statistics on mining operations and geological explorations are to be found in the Annual Report of the Quebec Bureau of Mines. *Legislation.*—Quebec Mining Act (c. 80, R.S.Q. 1925) and amendments. In townships the Crown retains full mining rights on lands granted subsequently to July 24, 1880, and gold and silver rights on lands granted previously to that date. All mining rights belong to the Crown in most of the seigneuries.

General Minerals.—Miner's certificate good for calendar year; fee \$10. *Claims.*—Five claims of 40 acres each must be recorded and 25 days' work per claim done within 12 months; a mining licence renewable annually is granted upon payment of \$10 recording fee and 50 cents per acre. Mining rights can be purchased as a mining concession for \$5 per acre for superior minerals and \$3 per acre for inferior minerals. Operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated from 4 p.c. upward.

Ontario.—*Administration.*—Department of Mines, Parliament Buildings, Toronto. A resident mining recorder is appointed for each mining division. *Legislation.*—Mining Act (c. 45, R.S.O. 1927); applies to all Crown lands except Indian lands. Title is a grant in fee simple, except in provincial forests, where mining lands are leased. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the recorder, or on appeal, by the Judge of the Mining Court of Ontario.

General Minerals.—Annual miner's licence—fee \$5 for an individual; \$100 on each million dollars capital for companies; holder permitted to stake three claims

in any and every mining division for himself and six additional for other licence holders, but not more than three for any individual licensee. *Claims.*—In unsurveyed territory 20 chains square (40 acres) with lines N.-S. and E.-W. astronomically; in surveyed territory an eighth, a quarter or a half lot, *i.e.*, up to 50 acres. Representation work consists of the actual performance of at least 200 days' work within five years. *Taxation.*—Five cents per acre per annum on patented and leased mining lands with an area of 10 acres or over in unorganized territory; on net profits, with \$10,000 exempt, 3 p.c. up to \$1,000,000, 5 p.c. from \$1,000,000 to \$5,000,000 and 6 p.c. on the excess above \$5,000,000.

Fuels.—Petroleum, natural gas, coal, and salt on the James Bay slope may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres. Certain areas have been withdrawn from staking.

Manitoba.—*Administration.*—Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg; mining recorders' offices at Winnipeg and The Pas. *Legislation.*—The Mines Act (c. 27, 1930) and regulations thereunder.

General Minerals.—The regulations follow closely those summarized for Dominion lands in Subsection 1, except that: not more than three claims, may be staked for any one licensee, and not more than nine altogether by one person in any year in any mining division; and representation work required is 25 days' work per year for 5 years for which purpose nine claims may be grouped.

Fuels.—A prospecting permit good for one year, is necessary to search for oil, coal, gas, or salt. If mineral is discovered a 21-year lease, subject to annual rental and certain work, is granted.

Quarrying.—Lands up to 40 acres containing building stone, clay, gravel, gypsum, or sand may be leased as a quarrying location at an annual rental.

Saskatchewan.—*Administration.*—Department of Natural Resources, Regina. *Legislation.*—Mineral Resources Act of 1931 and regulations thereunder; Saskatchewan Mines Act, providing for the competency of mine managers and pit bosses, for the reporting of accidents and the welfare and safety of those employed in the production of minerals; Coal Mining Industry Act, 1935, providing for a Coal Administrator to administer all legislation pertaining to the coal industry.

General Minerals.—The regulations follow closely those outlined for Dominion lands in Subsection 1, except that the holder of a miner's licence may stake not more than three claims for himself and three for each of two other licensees, while not more than nine claims may be grouped for representation work.

Coal.—Three locations may be applied for by mail or in person; the size of a location may be from 20 acres to 640 acres, but the length must not exceed three times the breadth. All operators must be licensed by the Coal Administrator, the licence being contingent upon payment of fair wages, workmen's compensation assessments, rentals and royalties to the Crown and certain other conditions. Operators must mine annually 10 tons per acre, on leases issued since Jan. 1, 1936.

Petroleum and Natural Gas.—Locations may be applied for by mail or in person. The area of a location may be from 40 acres to 19,200 acres, and one person may apply for three locations, but not over 19,200 acres in all, except in unsurveyed lands, in which the limit is 1,920 acres. An operator must obtain a permit and furnish a substantial bond. All drillers must secure licences of competency. The record of a driller may be obtained by payment of a fee.

Alberta.—*Administration.*—Department of Lands and Mines, Edmonton. There is a staff of inspectors of mines. *Legislation.*—The Coal Mines Regulation Act and regulations thereunder make provision for the safe operation of mines of coal, ironstone, shale, clay, and other minerals. Operating officials must hold certificates of competency. Monthly reports of operations must be returned to the Minister. The Coal Sales Act requires all coal mines to be registered by name and all coal produced to be sold under the registered name. The Coal Miners' Wages Security Act requires all coal operators to provide bond to insure the payment of wages, unless exemption is obtained through the Board of Public Utility Commissioners.

The general laws and regulations pertaining to mining and minerals are similar to those in force under the Dominion Government before the Provincial Government took over the natural resources in 1930. They follow closely those summarized in Subsection 1 of this chapter.

British Columbia.—*Administration.*—Department of Mines, Victoria. The Department includes all Government offices in connection with the mining industry. *Legislation.*—The Department of Mines Act (c. 42, 1934) and other Acts respecting mining and minerals, notably: The Coal and Petroleum Act (c. 162, R.S.B.C. 1924); The Mineral Act (c. 167, R.S.B.C. 1924); The Placer-Mining Act (c. 169, R.S.B.C. 1924); Metalliferous Mines Regulation Act (c. 46, 1935); The Coal-Mines Regulation Act (c. 171, R.S.B.C. 1924); and amendments to the above Acts.

Placer.—Claims are of three classes: (1) creek diggings—250 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) bar diggings—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) dry diggings over which water never extends—250 feet square. A placer claim must be worked by the owner, or someone on his behalf continuously during working hours. Discontinuance for 72 hours, except in closed season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner is deemed abandonment. To hold a placer claim more than one year, it must be again recorded before the expiration of the year.

Placer leases of unoccupied Crown lands, approximately 80 acres in extent, may be granted by the Gold Commissioner of the district, the annual rental for same being \$30 and the annual expenditure required in development work \$250. Dredging leases on rivers below low-water mark also are granted for 5 miles; the annual rental for same is \$25 per mile and the annual expenditure required in development is \$1,000 per mile, the value of any new plant or machinery employed

to count as development. Provision is also made for the granting of leases of areas in excess of those referred to above. Leases of precious stone diggings, 10 acres in extent, may also be obtained.

General Minerals.—The terms of the mining laws are favourable to the prospector and operator, fees and rentals being small. Prospector's licence or "free miners' certificate"—applicant must be over the age of 18; fee for individual \$5 per annum; for a joint-stock company \$50 or \$100 per annum depending on capitalization. Mineral claims must not exceed 1,500 feet square (51·65 acres); work, amounting to \$500 which may be spread over five years, required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding \$5 per acre.

Section 2.—Summary of General Production.

Since 1886, the first year that the Geological Survey issued complete returns of mineral production, Canada has shown a fairly steady growth in mineral output. In that year the per capita production was only \$2·23; in 1901, five years after the Yukon discoveries, production totalled \$12·25 per capita, but there was a falling-off from 1902 to 1904. Thereafter, owing to the discovery of silver in the Cobalt area, the development of the copper-nickel ores of the Sudbury district, the opening up of the gold mines of Porcupine and Kirkland Lake in Ontario, the improvements in metallurgical practice which led to the recoveries of large quantities of lead and zinc from British Columbian ores, and the discoveries and developments in Quebec and Manitoba, the per capita production rose to \$31 in 1929. Although owing to world-wide economic depression it dropped to \$18·20 in 1932, it rose again to \$28·56 in 1935 and about \$32·70 in 1936, with the mineral industry leading in the general improvement in economic conditions.

In 1935, the latest year for which comprehensive world figures of the Imperial Institute are available, Canada stood first in the production of asbestos, nickel, and the platinum metals, second in radium, third in copper, gold, silver, and zinc, fourth in lead and cobalt. During that year, Canada produced approximately 84 p.c. of the world production of nickel, 51 p.c. of the asbestos, 13 p.c. of the copper, 12 p.c. of the gold, 11 p.c. of the lead, 10 p.c. of the zinc, and 7·5 p.c. of the silver.

The Preliminary Report on the Mineral Production of Canada, released by the Dominion Bureau of Statistics in March, 1937, shows a total valuation of \$361,394,062 for the mineral output of the Dominion in 1936 compared with \$312,344,457 in 1935. This represents an increase of 15·7 p.c. and reflects the continuation of the improved conditions commencing in 1933.

Prospecting for gold ores and the exploration and development of known auriferous deposits were more extensively carried on throughout Canada during the recent period 1932-36 than ever before. These activities were common to both the older producing camps and new areas. The higher price for gold stimulated the study and examination of new deposits or ore zones heretofore considered of doubtful economic importance. In certain of the older camps properties closed prior to the revaluation of gold were re-opened and placed in production or further explored as to their possibilities. In some of the producing mines the higher price for the

metal permitted a very considerable extension or increase of pay ore with the resultant milling of rock of lower gold content and important increases in ore reserves. Notable gains in production have been recorded in the base-metal mining industry since 1933 and these gains were extended during 1936. The more outstanding of these gains in the latest year were in lead, nickel, and zinc while copper nearly equalled the record output of 1935.

Production of various non-metallic minerals, especially asbestos and coal, have realized important gains since 1932. The gains in the structural materials industries, where recessions were severe during the period of business depression, have been encouraging since 1933 but there is room for a large expansion in this division when the construction industry recovers its normal activity.

Subsection 1.—General Statistics of Mineral Production.

In Table 1 will be found the total values of the minerals produced in Canada in each year since 1886, while Table 2 gives the details of the mineral production of 1934 and 1935, with the percentage of increase or decrease in the latter year.

1.—Value¹ of Mineral Production in Canada, calendar years 1886-1936.

Volume of Mineral Production in Recent Years.—An interesting comparison of the mineral production of the two years 1934 and 1935 is furnished in Table 3.

The percentage increase or decrease in quantity production of the individual minerals is shown in Table 2 above, but, owing to the many different units in which the quantities of different minerals are expressed, the total volume of production from year to year is difficult to compare, while the wide variations in prices make comparisons of total values misleading. Table 3 constitutes an attempt to overcome these difficulties by working out what the values would have been in the later year if prices had remained the same as in the earlier, thus obtaining the increases or decreases due to changes in quantity alone; these are shown in the last column.

Mineral production in 1935 recovered materially when compared with 1934. Table 3 shows that there was an increase of 8.2 p.c. in physical volume. There was a healthy increase in the volume of production in all divisions of the mineral industry except fuels where the increase amounted to only 1.8 p.c. The average price level was slightly lower in fuels and other non-metallic minerals, while in other divisions the tendency was upward.

It is interesting to note the uneven influence of the economic disturbances of recent years upon different divisions of the mineral industry. Prior to 1935, production in Canada reached its highest recorded value of \$310,850,000 in 1929. The production of metallic minerals actually expanded further in volume in 1930, and in 1932 was still 3.7 p.c. greater than in 1929. Drastic declines had occurred in the volume of production in other divisions, fuels being reduced 28.9 p.c., other non-metallics 47.8 p.c., clay products 72.1 p.c. and other structural materials 57.6 p.c. compared with 1929. The rapid decline in prices was arrested by 1933 and in that year there was increased volume of production in both metallic and non-metallic minerals, but production declined further in clay products to only 20 p.c. and in other structural materials to only 31 p.c. of their respective volumes in 1929. In 1934 and 1935 the improvement made itself felt in all divisions of the industry. Compared with 1929, the volume of production in 1935 was 40.8 p.c. greater for metallic minerals, 18.3 p.c. smaller for fuels, 26.8 p.c. smaller for other non-metallics, 75.4 p.c. smaller for clay products, 56.1 p.c. smaller for other structural materials and 2.5 p.c. larger for the whole mineral industry. Preliminary figures for 1936 indicate a further considerable growth in the production of metals and a continuation of the recovery in each of the other divisions.

Subsection 2.—Provincial Distribution of Mineral Production.

The principal mineral-producing province of Canada in recent years has been Ontario, which accounted for 50.9 p.c. of the Dominion total in 1935. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the province. British Columbia holds second place in the value of minerals produced with 15.6 p.c. of the Dominion totals in 1935. The mineral resources of British Columbia are probably more varied than those of any other province, since its production includes most of the important metals as well as substantial quantities of coal. Mineral production in Quebec has increased greatly in the post-war period, accounting for 12.5 p.c. of the total for Canada in 1935. Whereas formerly non-metallics (especially asbestos) and structural materials made up nearly all of its mineral production, more than half the value is now made up of metals, particularly gold and copper. Nova Scotia and Alberta are the most important coal-producing provinces. Manitoba in recent years has been making a growing contribution to the production of gold, copper, and zinc in the Dominion. The total value of mineral production in each of the provinces for each year since 1910 is given in Table 4.

4.—Mineral Production of Canada, by Provinces, calendar years 1911-36.

NOTE.—Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book.

¹Includes a production from the Northwest Territories in 1932-36.

²Figures for 1935 revised since the publication of the 1936 Year Book.

³Figures for 1936 are subject to revision.

The quantities and values of the minerals produced in each province during 1935 are shown in Table 5. This table shows the different minerals which make up the mineral production of each province and also the particular province or provinces which contribute to the production of each mineral in Canada.

5.—Detailed Mineral Production of Canada, by Provinces, calendar year 1935.

NOTE.—The mineral production of Yukon and the Northwest Territories during the calendar year 1935 was as follows, in quantities and values: gold 33,907 fine oz., \$1,263,567 (including premium); lead 231,418 lb., \$7,250; silver 241,427 fine oz., \$90,165; coal 835 tons, \$3,483; petroleum 5,115 brl., \$25,575; total, \$1,430,246. Radium and uranium salts were produced in Canada in 1935 from ores mined in the N.W.T., but statistics pertaining to those minerals are not available for publication. For Dominion totals by individual minerals see Table 2.

Section 3.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc., in Principal Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid, and net value of sales, while since 1934 there has been added a special survey of expenditures for equipment, supplies, freight, and insurance by the mining industry. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

A new figure of "net income from sales" has been introduced for 1935 in accordance with a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa in 1935. The net income from sales is obtained by deducting the cost of fuel, electricity, and consumable supplies (explosives, lubricants, chemicals, etc.), consumed in the production process, from the net sales. In view of the fact that statistics of process supplies were not collected prior to 1935, it is impossible to present statistics of net income from sales for previous years comparable to this new figure for 1935.

The net sales of the metallic industries given in Tables 6 and 7 are those reported by the operating companies, and are in each case the settlements received for shipments by mine operators and the additional value obtained when the smelting of these ores is completed in Canada. The totals indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc, and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for stocks unsold at the end of the year. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 6 and 7 include products not of Canadian origin.

The net sales of the fuel industries in Table 7 is less than the total production of fuels in Table 2, because the net sales are confined to products for which the operators receive some economic return, while the production of the fuel commodities includes all of those commodities produced, whether the producer actually receives payment in any form for them or not. Thus in coal mining, the industrial values in Table 7 include only coal sold, supplied to employees for domestic consumption, or used in making coke and briquettes, whereas the figures of coal production as shown in Table 2 include, in addition to the above, coal consumed for power and other purposes in the coal-mining operations and also the difference between coal put on the bank and lifted from the bank. Petroleum producers have a larger monetary return than the actual value of the petroleum produced because many oil wells also produce large quantities of natural gas. On the other hand, the natural

gas industry receives a smaller return than the total value of all natural gas produced because some of the gas is produced by the petroleum industry, because of leakage or other loss in piping gas to the consumers, and because a small amount of natural gas is produced by private individuals or groups from their own wells for their own consumption, without any industrial organization intervening between producer and consumer.

For other non-metallic minerals (if the small production of peat normally included with fuels is deducted) and clay products and structural materials, net sales of the producing industries are the same in each case as the total value of the mineral commodities produced.

Subsection 1.—Principal Factors in the Mineral Industries.

Capital.—In connection with the item of capital, operators are requested to report *only the capital actually invested in the enterprises*, including (1) present value of lands, buildings, plant, machinery, and tools, (2) cost of materials on hand, supplies, finished products, and ore on dump, and (3) cash, trading and operating accounts and bills receivable. It should be specially noted that no estimate of ore reserves is included in the capital. Indeed, capital expenditures in mining ventures are frequently very difficult to designate. For instance, purely exploratory workings might properly be charged to current expenses, but if these exploratory workings open up new ore resources and become the channel by which such ore is utilized, such workings become part of the productive plant and as such their cost is an item of capital. On the other hand, after an ore body is exhausted much of the mining plant has practically no resale value and, for this reason, many companies drastically write off the capital value of their plant during profitable years of operation. In these circumstances, the actual amount of capital employed in mining enterprises is uncertain and the figures of capital should be used with such reservations in mind.

Employees.—Tables 6 and 7 which follow give the numbers of persons directly employed in the operating mineral industries. These figures, however, do not include those engaged in prospecting and exploration for individuals or small syndicates from whom no returns can be obtained, amounting probably in the aggregate to a considerable number. Neither do the figures include consulting geologists and mining engineers nor contract diamond drillers and their respective organizations.

Commodities and Services Purchased.—In addition to the expenditures for remuneration of those directly employed in the mineral industries, statistics are collected annually of expenditures for fuel and electricity, but the figures given in Tables 6 and 7 are exclusive of the fuel and electricity used in metallurgical processes, such as reduction furnaces, electrolytic cells, etc. The mining industry expends annually large additional sums for the purchase of equipment, machinery, explosives, and a great variety of other supplies, and for freight and insurance. In an attempt to obtain an estimate of these expenditures, firms engaged in the industry were first circularized regarding such expenditures in 1934 and the survey was repeated in 1935. Returns received covered fairly completely the operating firms in the metal-mining and fuel industries, but in the other groups of mineral industries, where there are many small operators of gravel pits, small quarries, etc., the returns were much less complete. Furthermore, no attempt was made to reach prospectors and small development parties whose expenditures in the aggregate, with so much exploratory activity as exists at present, would amount to a large

sum. The figures resulting from these surveys* must, therefore, be regarded as suggestive rather than by any means comprehensive. The principal items of these expenditures in 1934 and 1935 are summarized in the first statement below.

The distribution of expenditures by provinces in 1935 was: Nova Scotia, \$5,527,391; New Brunswick, \$280,033; Quebec, \$13,100,843; Ontario, \$40,974,115; Manitoba and Saskatchewan combined, \$6,359,251; Alberta, \$4,107,189; and British Columbia, \$14,464,781.

A summary of expenditures by leading industries is shown in the second statement.

* The results of these surveys are given in the "Special Report on the Consumption of Supplies by the Canadian Mining Industry" for 1934 and 1935, published by and obtainable from the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.

Subsection 2.—Growth of the Mining Industry in Recent Years.

Growth, 1922-29.—From 1922 to 1929, the output of the mineral industries increased by 72 p.c., capital investment by 76 p.c., employment by 53 p.c., and the salaries and wages by 65 p.c. Progress was most rapid in the metallic mineral industries, where the expansion in net production amounted to 170 p.c. with proportionate increases in capital and employment. The period from 1922 to 1929 was marked by a rising cycle of activity in construction. This was reflected in the expansion of industries engaged in the production of clay products and other structural materials. The output of this group of industries increased by 47 p.c. during the period, while, within the group, progress was much greater in industries producing cement, gravel and stone than in the clay products industries. The group of non-metallic mineral industries remained relatively stationary in contrast to the other two main groups during this period of rapid expansion. This may be attributed to the fact that coal mining is the predominant industry in the non-metallic group and, under increasing competition from oil fuels and hydro-electric power, did not participate in the general industrial expansion of the period.

Developments since 1929.—Since 1929 the mining industry in Canada has been affected by the world-wide economic disturbances, accompanied by a very drastic decline in the prices of most of the principal metals, especially copper, lead, zinc, and silver. In the case of gold, on the other hand, since 1931 the price has risen to a level about 69 p.c. above that formerly prevailing.* Under the influence of the early decline in base-metal prices, the value of the net production of the metallic mineral industries declined by 27 p.c. from 1929 to 1932, with a decline of 29 p.c. in employees and 30 p.c. in salaries and wages paid. But, since the higher price for gold stimulated its production and the readjustment of costs stabilized the base-metal industries, metal production has expanded again, the net sales in 1935 being 33.3 p.c. above those of 1929, employees 24.0 p.c. above, and salaries and wages 18.2 p.c. above 1929. While industrial statistics for 1936 are not yet available, the production figures for this latest year indicate a continued rapid growth in metal production. Doubtless, in reaching this new record the influence of gold is important through increased production, higher value, and its association with other metals, especially copper. However, in the years 1934-36, not only gold but nickel, copper, lead, and zinc were all produced in Canada in larger quantities than ever before, from which it must be concluded that the producers of these metals were able to operate profitably at even the low prices then prevailing for copper, lead, and zinc: prices have shown a distinctly stronger trend more recently.

Among the non-metallic industries the demand for coal declined owing to reduced requirements in industrial and transportation activities. Similarly, the demand for asbestos and gypsum was affected by the lower level of industrial and construction operations. Salt was an exception to the general rule, as its production was well maintained throughout, partly owing to its increased consumption in certain chemical industries. Indeed, the net sales of the salt-producing industry increased each year from 1929 to 1932 to a level about 23 p.c. above that of 1929. Taking the group of non-metallic industries as a whole, net sales declined by 32 p.c. from 1929 to 1932, employment by 21 p.c. and salaries and wages by 36 p.c. Net sales in 1935 increased by 14.7 p.c. from the low point of 1932.

The production of clay products and other structural materials is directly dependent upon construction activities within Canada. During the early years of the depression, these activities were partly maintained by governmental relief projects and by the carrying to completion of some large operations which had

* See chart on p. 365.

commenced before 1930. As a result, construction reached its lowest level in Canada during 1933, and the group of industries producing clay products and other structural materials was at a lower level of operation in that year than in any other year recorded since 1921. From 1929 to 1933 there was a decline of 71 p.c. in net sales, 69 p.c. in employees, 74 p.c. in salaries and wages and 76 p.c. in expenditures for fuel and electricity, a large item in the cost of production in these industries. However, construction has been more active in Canada since 1933 (see Chapter XV) and this increased activity was accompanied by a welcome change to a rising trend in the production of clay products and other structural materials.

6.—Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1929-35, and by Provinces, 1935.

NOTE.—For the years 1921-28, see the 1936 Year Book, pp. 355-356. In the past, the net value of production, called "net sales", in these industries has been gross value less freight and treatment charges in the case of mines, and less the value of ores charged in the case of smelters. According to a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa, 1935, the net figure, called the "net income from sales", is now obtained from net sales as defined above by a further deduction of the costs of fuel, electricity, and consumable supplies used in the production process. In the table below, however, to facilitate comparison with previous years, both figures are shown for 1935.

Subsection 3.—The Principal Mineral Industries.

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1934 and 1935 is presented in Table 7. Coal mining has the largest labour force but is being rapidly overtaken by gold mining and, since employment in the latter industry is much less subject to seasonal fluctuations, its expenditures on salaries and wages are greater than those of the coal-mining industry. The smelting and refining industry was third in the number of its employees and in salaries and wages paid.

7.—Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1934 and 1935.

NOTE.—See headnote to Table 6.

¹ Value of shipments by mine operators and of products sold by metallurgical works, less estimated cost of ores, concentrates, matte, etc., treated, irrespective of their origin. The major part of the value of ores treated is included as products of mines and mills, but there is necessarily a lag between production of ores and sales of smelter products, while some imported ores are also treated in Canadian smelters.

² Value added by smelting and refining. ³ Includes a small production of peat, normally included in fuels.

⁴ Exclusive of fuel and electricity used in metallurgical processes. ⁵ "Net income from sales", see headnote to Table 6.

Section 4.—Production of Metallic Minerals.

Subsection 1.—Gold.

Canada has been a gold-producing country for over 75 years. During the last half of the 19th century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. The quantities and values of gold produced in Canada are given by provinces for 1911 and subsequent years in Tables 8 and 9. The official estimate for 1936 is 3,735,305 fine oz.

In 1931 the value of gold produced in Canada exceeded that of coal for the first time. Producers of gold have benefited in recent years not only from the general decline in the prices of other commodities, with a consequent reduction in their operating costs, as well as an increase in the purchasing power of their product, but also from the rise in the price of gold in the world market. Under the stimulus of higher prices, prospecting for gold has been more active during recent years than ever before. Favourable results from these activities, with new mines coming into production and expansion in numerous producing mines, give every prospect for a continued increase in gold production.

Ontario.—Although gold was first discovered in 1866 in Hastings County and was later found and worked at points from there to the lake of the Woods in the west, a distance of roughly 900 miles, no permanent gold-mining industry was established until 1911, when the Porcupine Camp was opened up. Soon afterwards the discovery of gold in the Kirkland Lake area, on what is now the Wright-Hargreaves mine, led to the development of this second camp. The Lake Shore mine in this camp has latterly had a larger production than that of any other Canadian gold mine. Active prospecting and development have been carried on during recent years in a number of Precambrian areas in Ontario. In addition to the older camps of Porcupine and Kirkland Lake, producing mines are now established in the Michipicoten district, in the district east of lake Nipigon, at Matachewan and in the district of Patricia and other northwestern parts of the province.

British Columbia.—The discovery of gold in paying quantities was an epoch-making event in the history of British Columbia. In the late '50's, alluvial gold was discovered along the Thompson river and in 1858 the famous Fraser River rush took place. The extraordinarily rich deposits of Williams and Lightning creeks, in the Cariboo district, were discovered in 1860 and three years later the area had a production of alluvial gold valued at \$4,000,000. In the northern part of the province, the Atlin division of the Cassiar district was prospected in 1892. Then the introduction of lode mining resulted in a rapidly increasing production. The copper-gold ores of the Rossland and Yale Boundary districts, of the Britannia mine on Howe sound, of mines in the Anox section and the ores of the Premier mine on the Portland canal were largely responsible for the gold from lode mining which reached its highest pre-war peak with 297,459 fine oz. in 1913. As a result of the higher price of gold, production in the province has recovered from 160,069 fine oz. in 1931 to 391,633 fine oz. in 1935 and the estimate for 1936 is 449,126 fine oz. The mines of the Bridge River district, including the Pioneer, Bralorne and others, are contributing to this current expansion. Placer prospecting in British Columbia has experienced a distinct revival since 1932, especially in the Stikine, Liard, Cariboo, and Atlin districts.

8.—Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-36.

NOTE.—For the years 1862 to 1910, see Canada Year Book, 1916-17, pp. 268-269.

¹ Preliminary figures. ² Includes production of the Northwest Territories. ³ Revised since the publication of the 1936 Year Book.

Yukon.—The discovery of gold in the Yukon River valley was reported in 1869, and bar-mining on the tributaries of the Yukon was conducted with increasing profit between 1881 and 1886. Ten years later, rich discoveries were made in creeks of the Klondike river, a right-bank tributary joining the Yukon at what is now Dawson city, and one of the greatest rushes in history was made to this locality. The richest streams in the district were Bonanza creek and its principal tributary, the Eldorado. There is still a considerable production of gold from alluvial operations principally in the form of dredging and, recently, interesting explorations have been made of auriferous quartz veins in the Carmacks district.

Nova Scotia.—Gold was discovered in Nova Scotia in 1860. Two years after the discovery, gold valued at nearly \$142,000 was recovered from the quartz veins; an annual output has been reported since that time. Since 1933, gold-mining activities have been more widespread with the industry showing signs of a general revival.

Quebec.—Although Quebec produced gold as early as 1823, production consisted only of the small quantities recovered in the treatment of the lead and zinc ores of the Notre-Dame-des-Anges district and from the gravels of the Chaudière river. Important discoveries of copper-gold deposits, however, were more recently made at Rouyn, in the northwestern part of the province, adjacent to the Kirkland Lake district of Ontario. Smelting facilities became available for this region as the result of the opening of the Noranda smelter in December, 1927. The operation of this smelter, together with the development of gold properties in the northwestern part of the province, has established Quebec as the second largest gold-producing province. The main source is the copper-gold ores of the Noranda mine but there is also an expanding production from auriferous-quartz properties operating in the same general section of the province.

Manitoba.—The presence of gold-bearing ores in Manitoba has been known since before the War but continuous production is a post-war development. The major part of the gold of the province is produced as a by-product from the Flin Flon smelter which treats copper-zinc ores. However, an expanding production is coming from auriferous-quartz operations in the Rice Lake and Beresford Lake areas east of lake Winnipeg and the newer Gods Lake area in the northeastern part of the province.

9.—Values of Gold Produced in Canada, by Provinces, calendar years 1911-36.

NOTE.—For the years 1862 to 1910, see Canada Year Book, 1916-17, p. 270.

(From 1911 to 1931, inclusive, values calculated on basis 1 fine oz.= $\$20.671834$; since then, at world prices in Canadian funds.)

World Production.—A sketch of the development of the gold-mining industry of the world since the discovery of America may refer to four successive periods. During the first period, extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851 respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it declined to 5,201,000. The production of the period was contributed chiefly by the United States, Australia, and Russia.

FLUCTUATIONS IN THE PRICE OF GOLD IN NEW YORK AND LONDON

In the fourth period, extending from 1891 to the present time, covered by the figures of Table 10, the outstanding features were the entry of South Africa as an important and later as the leading producer, the increase in the output of most of the gold-producing countries through the introduction of the cyanide process and, more recently, the rapidly increasing world production as a result of the appreciation in the value of gold. The output was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 23,010,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum production of 15,576,000 fine oz. in 1922. However, the notable decline in general commodity price levels which occurred in 1921 and 1922 again reduced the costs of gold production and the industry responded with a distinctly upward trend thereafter throughout the 1920's. The increased price of gold since 1930 has accelerated the expansion in world production during recent years with all previous records being exceeded.

The movements since 1930 of the world price of gold, as represented by prices in London and New York, are indicated in the accompanying chart which shows clearly the wide and erratic fluctuations following the suspension of gold payment by the United Kingdom in September, 1931, succeeded by a period of rising prices and narrowing fluctuations and, finally, since the middle of 1935, an approach to a reasonable degree of stabilization.

¹ At \$20.67+ per oz. fine, prior to 1934; at \$35 per oz. fine in 1934 and 1935.

In 1935 the world's chief producers were the Union of South Africa, with a production of 10,773,991 fine oz. or 35.9 p.c., U.S.S.R. (Russia), including Siberia, with 4,784,030 fine oz. or 12.6 p.c., Canada with 3,283,121* fine oz. or 10.9† p.c. and United States with 3,163,229 fine oz. or 10.5 p.c. As Australia, Rhodesia, British West Africa, and British India were also important producers, about 56.9 p.c. of the world production of 1935 was produced in the British Empire.

Detailed statistics of world gold production for 1934 and 1935 appear in Table 11.

* The revised figure for Canadian gold production in 1935 is 3,284,890 fine oz.

† This percentage, derived from world production as reported by the Director of the United States Mint, is slightly less than that derived from estimates of the Imperial Institute as given on p. 344.

⁶ Including New Guinea and Papua.

Subsection 2.—Silver.

Although no official statistics of the production of silver were published prior to 1887, the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of \$4,800,000, were produced in the Port Arthur district in Ontario. The development of the silver-lead deposits of British Columbia largely accounted for an increase to a production worth over \$2,000,000 in 1896. From 1896 to 1905 annual production varied in value between \$2,000,000 and \$3,500,000, rising rapidly during the next five years to 32,869,264 fine oz. valued at \$17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district. Since then there has been a falling-off in quantity, but owing to the higher price of the metal the value of the annual production increased to a maximum of \$20,693,704 in 1918. The post-war depression and the decline in the value of silver caused a low value of production in 1921, but the industry recovered, and in 1930 production amounted to 26,443,823 fine oz. Partly owing to the further decline in the price of silver since that time production has decreased, amounting to only 16,618,558 fine oz. in 1935.

The silver production of Canada is chiefly credited to the silver-lead-zinc ores of British Columbia, the silver-cobalt ores of northern Ontario and the silver-lead ores exported from Yukon. An appreciable amount of silver also occurs in the gold ores of northern Ontario, the nickel ores of the Sudbury district, the copper-gold ores of Quebec, Manitoba, and British Columbia and the pitchblende ones of the Northwest Territories. Thus in Canada silver is produced chiefly in combination with other metals.

Since 1926 British Columbia has been the chief silver-producing province. Small amounts are recovered from alluvial gold and crude gold bullion, but the Sullivan and Premier mines have been responsible for the greater part of the output from this province. The Sullivan, primarily noted for its lead and zinc production, is the largest producer of silver in Canada. Silver is also recovered from the copper ores produced in British Columbia.

During 1931 much interest was created by the discovery at Echo bay, Great Bear lake, of mineral deposits in which high-grade native silver was associated with uranium- and radium-bearing ores. The first commercial production from this area occurred in 1932, when shipments were made to the Trail smelter in British Columbia. Production from this new camp has continued with shipments of silver-radium ores to the refinery at Port Hope, Ontario.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1911 in Table 12, while statistics of the quantities and values produced in the various provinces are given for 1911 and subsequent years in Table 13.

12.—Quantities and Values of Silver Produced in Canada, calendar years 1911-36.

NOTE.—For figures for the years 1887-1910, see p. 361, 1933 Year Book.

^a Figures for 1935 revised since the publication of the 1936 Year Book. ^b Preliminary figures.

World Production of Silver.—The world production of silver was estimated by the Director of the United States Mint, as shown in Table 11 of this chapter, at 215,948,585 fine oz. for 1935, an increase of 13 p.c. from 1934 but a decrease of 17 p.c. from 1929, when world production reached a record maximum of 260,970,029 fine oz. The silver production of Canada in 1935 was 16,618,558 fine oz., or about 7.7* p.c. of the estimated world total for that year. This placed Canada fourth next to Mexico, the United States and Peru.

In Table 14 the world production, value and average price of silver are given for each year from 1860 up to the present. During the period from 1860 to 1872, silver was still a monetary base in parts of the western world and the price remained fairly stable at about \$1.32 to \$1.35 per fine oz. (about 15½ oz. silver = 1 oz. gold), although production is estimated to have more than doubled during these 12 years. After the demonetization of silver in Germany and the United States, production continued to increase rapidly while the price declined to a generally lower level. During the disturbed conditions of the war period production was curtailed and the price rose to \$1.12 per fine oz. in 1919. However, in the period 1922-29 production increased to new records although the price declined to about half that of 1919. In the course of the depression the price declined further by nearly 50 p.c. and production contracted also, but both have tended to recover since 1932. The fact that silver is to a great extent a by-product in the mining of other metals, helps to explain its increasing production, in spite of lower prices, since 1872.

*This percentage, based on the world estimate of the Director of the United States Mint, differs slightly from that on p. 344 based on the world estimate of the Imperial Institute.

¹ At the average par price of a fine ounce of silver in London, excepting the years 1918-22, inclusive, and 1931-35, for which the mean of the New York bid and asked prices was used.

² Revised since the publication of the 1936 Year Book.

Subsection 3.—Copper.

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. By 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and by 1930 had risen to a new peak of 303,478,356 lb. In the two following years, as a result of the world-wide depression with very low prices prevailing for copper, production declined to 247,679,070 lb. in 1932. Since then output has grown to 418,997,700 lb. in 1935. This encouraging recovery in copper production not only reflects the stability of the copper-mining industry but emphasizes the firmly entrenched position established by the Canadian metal in the copper-consuming countries of the world. Some Canadian copper producers, located principally in Manitoba, Ontario, and Quebec, are fortunate in possessing ores containing sufficiently high values in precious metals to permit of operation during the years of abnormally low copper prices prevailing almost continuously since 1930. However, the unfavourable copper market which existed during the depression has not encouraged production and has curtailed the search for and development of new copper properties. In June of 1932 the United States instituted a duty of 4 cents per pound on foreign copper, which adversely affected Canadian copper production, more especially that of British Columbia. On the other hand, Canadian copper enjoys a preference in the United Kingdom and a large part of Canadian production now goes there.

Quebec.—Until 1894, when Ontario took the lead, Quebec was the chief copper-producing province of Canada, the principal mines being the Eustis and Huntingdon properties in the Eastern Townships. There is still an annual production from this field. Developments in the Rouyn Camp of northwestern Quebec have resulted in a greatly increased production of copper since 1927. Since 1931 the Canadian Copper Refiners Ltd., have treated blister copper in their electrolytic refinery located at Montreal East. This material comes from the Noranda smelter in Quebec and the Flin Flon smelter in Manitoba. Gold, silver, selenium, and tellurium are also products of the Montreal refinery.

Ontario.—The Sudbury deposits were first noted in 1856 but did not attract attention until 1883-84, when, during the construction of the C.P.R., a railway cutting was made through the small hill on which the Murray mine was afterwards located. During the first years the deposits were developed for their copper content alone; not until 1887 was the presence of nickel determined and the true value of the ores known. These nickel-copper ores of the Sudbury area are now the source of nearly all the copper produced in Ontario. Under the International Nickel Co. of Canada, an amalgamation of the former International Nickel Co. and the Mond Nickel Co., an extensive program of expansion in the mining and metallurgical facilities of the district has been carried out. A subsidiary company, the Ontario Refining Co., Ltd., operates a copper refinery at Copper Cliff where electrolytically refined copper, precious metals, selenium, and tellurium are produced from the blister copper smelted by the International Nickel Co., chiefly from ores from their own mines in the district. The company also operates the Acton precious metals refinery situated near London, England, where it recovers, in a refined state, the gold, silver, and platinum metals contained in the concentrates produced at both the Swansea and Port Colborne nickel refineries. The Falconbridge Nickel Mines, operating a mine in Falconbridge township, make a copper-nickel matte which is shipped to Norway for refining. Adverse industrial conditions led to reductions in the copper production of Ontario in 1931 and 1932. There has been, however, a remarkable recovery in production since then.

Manitoba.—During the four years 1917-20, when high prices prevailed for copper, ores containing 9,866,328 lb. of copper were shipped by the Mandy mine. Much development has been carried on in the Flinflon district of Manitoba since the War, and large bodies of ore have been proven on the Flinflon property of the Hudson Bay Mining and Smelting Co. and the Sherritt-Gordon property. About 135 miles of branch line from the Hudson Bay railway provide these properties with transportation facilities. A copper smelter and electrolytic zinc plant are operated by the Hudson Bay Mining and Smelting Co. at Flinflon, while a large hydraulic development on the Churchill river provides the necessary power. Production from the plants of this company has been continuous since 1930.

British Columbia.—Until 1930, British Columbia had been the leading copper producer among the provinces for many years, but it then gave first place to Ontario and since 1930 production has greatly declined, owing to the closing of the Copper Mountain mine, the curtailed operations at Britannia, and the cessation in August, 1935, of mining and smelting operations at Anyox, as a result of the low price of copper. A report, late in 1936, that the Granby Company was resuming operations at its Copper Mountain mine, indicates a future increase in British Columbia copper output.

15.—Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-36.

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272.

¹ Preliminary figures.

² Includes a small production from New Brunswick and Alberta.

¹ Revised since the publication of the 1936 Year Book.

⁴ Includes 770,307 lb. valued at \$73,578 produced in Nova Scotia.

World Production of Copper.—World production of copper was estimated at 1,635,200 short tons in 1935, as compared with 2,150,400 tons in 1929, the record year. Canada had an output of 209,499 tons in 1935, producing about 12·8 p.c. of the estimated world total and standing third among the nations.

16.—Copper Production of the Leading Countries and of the World, 1913-35.

(In short tons of 2,000 pounds.)

³ Preliminary figures.

Subsection 4.—Lead.

Lead is obtained in Canada largely from the deposits of British Columbia, where production began with 88,665 lb. in 1891. Bounties were paid on lead produced in Canada from 1899 to 1918 (see the 1920 Year Book, p. 454) but the highest production of this period was 56,900,000 lb. in 1905. However, as a result of developments in British Columbia mentioned below, production has increased greatly since the War, as shown in Table 17.

British Columbia.—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing since 1930 for lead, zinc, and silver, many of the small silver-lead mines of the Slocan have remained idle.

Other Provinces.—Occurrences of lead have been found in Gaspé peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf County, where the Terault mine is again producing lead and zinc concentrates after suspending operations for some time owing to the low prices of these metals. Lead mining in Ontario has been intimately associated with the operation of the Galetta mine and smelter, which closed down in the summer of 1931. An important production of lead came in recent years from the silver-lead ores of the Mayo district of Yukon, and in 1935 production of silver-lead-zinc concentrates was resumed at the Sterling mine, Richmond County, Nova Scotia.

17.—Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-36.

¹ Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amounts recovered. Since 1912 the data given represent the quantities of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported. ² From 1911 to 1925, average prices at Montreal; from 1926 to 1936, average yearly prices at London, England. ³ Revised since the publication of the 1936 Year Book. ⁴ Preliminary figures.

World Production.—The world production of lead in 1935 was about 1,523,000* short tons. The principal producers were the United States with 21.8 p.c., Australia 16.3 p.c., Mexico 13.3 p.c., Canada 11.1 p.c., India 6.6 p.c., Yugoslavia 4.9 p.c., Spain 4.5 p.c., and Germany 4.1 p.c.

* From the Imperial Institute's Statistical Summary.

Subsection 5.—Nickel.

With the exception of the small amounts of nickel recovered from the ores of the Cobalt district and a shipment to Japan in 1936 of nickel-copper ore from the B.C. Nickel Mines, Ltd., the Canadian production of nickel has been derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. A brief description of the history and development of the nickel-copper mining industry will be found under "copper" in Subsection 3 of this section. From 830,477 lb. in 1889, the production of nickel increased continually to a war-time peak of 92,507,293 lb. in 1918. After a slump to 17,597,123 lb. in 1922, production expanded rapidly again and in 1928 exceeded that of the war year 1918, while 1929 established a still higher record. The depression brought another decline to 30,327,968 lb. in 1932, but a remarkable recovery has again been made and new records established since 1933, as shown in Table 18.

18.—Quantities and Values of Nickel Produced in Canada, calendar years 1911-36.

NOTE.—For figures for the years 1889-1910, see 1929 Year Book, p. 368.

¹ A change in the method of computing the value of nickel production accounts for the drop in value after 1923. ² Preliminary figures.

The nickel-bearing rocks of the Sudbury district, with a width of about two and one-half miles, form a wide ellipse 36 miles long and 13 miles broad. The ore of the district is mined principally for its nickel and copper content but gold, silver, selenium, tellurium, and metals of the platinum group, though present in relatively small quantities, are profitably recovered in the metallurgical processes. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

In recent years the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending their efforts in that direction accounted very largely for the marked increase in production during the nineteen-twenties. The automobile industry, electrical machinery, cooking utensils, new submarine cables, and various nickel alloys all helped to absorb this increased production.

World Production.—The world production of nickel was about 73,200 short tons in 1935, of which output about 84 p.c.* was Canadian in origin, while the remainder was derived chiefly from New Caledonia.

Subsection 6.—Cobalt.

The major portion of the world supply of cobalt was for almost two decades prior to 1925 derived from the silver-cobalt-nickel arsenides of the Cobalt district, the cobalt produced by refineries in southern Ontario having practically controlled world production. Large deposits of cobalt-bearing ores occur in Africa in the Belgian Congo, Northern Rhodesia, and French Morocco, and the introduction

* From the Imperial Institute's Statistical Summary.

into the world's markets of cobalt from this source has increased world production while Canadian production has declined since 1925.

The ore bodies at Cobalt, discovered in 1903, carry silver, cobalt, nickel, bismuth, and arsenic. The Deloro smelter treats ores and residues and disposes of cobalt oxide, metallic cobalt and unseparated oxides of nickel and cobalt. Production of cobalt, computed as the metallic cobalt and cobalt in oxides from Canadian smelters, together with the cobalt recovered in ores exported from the mines and including cobalt in any residues exported, amounted in 1935 to 681,419 lb. valued at \$512,705, as against 1,116,492 lb. valued at \$2,328,517 in 1925. Production in 1936 is estimated at 881,995 lb. valued at \$801,857.

Subsection 7.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia and the production of electrolytic zinc from the Flinflon copper-zinc ores of Manitoba. The growth of production since 1911 is shown in Table 19.

The principal zinc-mining regions of British Columbia are situated in the Kootenay district, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, where the ore worked is a replacement deposit of considerable size. Other mines are located in the Ainsworth and Slocan divisions of the West Kootenay district. The Britannia mine on Howe sound, while primarily a copper-gold property, also produces large quantities of zinc concentrates.

In northwestern Manitoba, the Flin Flon and Sherritt-Gordon mines have ores in which zinc is closely associated with copper and gold, and refined zinc has been made at the Flin Flon smelter since the autumn of 1930. Zinc is associated with lead in the deposits at Galetta, Ontario, which were producing prior to 1930, at Notre-Dame-des-Anges, Quebec, where the Tetrault mine has re-opened and is again producing lead and zinc concentrates, and at the Sterling mine, Richmond County, Nova Scotia, where the production of lead and zinc concentrates was recently resumed.

Subsection 8.—Iron.*

Iron ore is widely distributed in Canada and extensive deposits have been discovered from time to time. In Quebec there is a small annual production of titaniferous iron ore from a deposit near Baie St. Paul, but this material, which is principally exported, is used for its titanium content and not as a source of iron. Bog iron ores were successfully used in charcoal blast furnaces at Radnor Forges and Drummondville for many years. Millions of tons of red hæmatite were taken from the Helen mine in the Michipicoten district, while the Magpie mine in the same district produced siderite which was roasted before being shipped to the blast furnaces at Sault Ste. Marie.

However, there has been no great incentive to the development of the iron-mining industry in Canada, since there are easily accessible and abundant supplies in the high-grade ores of Wabana, Newfoundland, and of the Mesabi range in Minnesota. The Wabana section of Newfoundland contains one of the largest deposits of iron ore in the world, the probable reserves in that area being estimated at 3,635,000,000 tons, and consisting of an exceptionally high-grade hæmatite. In Ontario, where the iron and steel industry has reached its largest development in Canada, cheap and high-grade supplies of iron ore are readily available from the Mesabi range of Minnesota, while coal supplies are drawn from the nearby coal-fields of Pennsylvania.

* The known resources of iron ore were briefly described at p. 411 of the 1934-35 Year Book, and a sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-23 Year Book.

20.—Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys, and Steel Ingots and Castings, calendar years 1911-36.

NOTE.—For the years 1886-1910, see Canada Year Book, 1936, p. 373.

¹ Preliminary figures.

² Revised since the publication of the 1936 Year Book.

From Table 20 it will be observed that the tonnage of pig iron made in Canada in 1929 exceeded that of any previous year, while the 1929 quantities of steel ingots and castings made were exceeded only in the war years 1917 and 1918. Production declined greatly after 1929, but has been recovering since 1932. Production in the ferro-alloy industry (ferro-manganese, ferro-silicon, etc.) provides the chief source of exports of primary iron products from Canada.

Section 5.—Production of Non-Metallic Minerals.

Subsection 1.—Fuels.

Coal.

The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while Ontario and Quebec are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio. The anomaly of the situation is accentuated if we consider that Canada's present coal consumption is about 30,000,000 tons annually (see Table 24), as against reserves of 1,234,289,000,000 metric tons, sufficient for an unthinkable long period at the present rate of consumption. A summary of the known coal resources of Canada was given on pp. 391-394 of the 1922-23 Year Book; and a summary table showing coal resources, classified by provinces, was reproduced therefrom at p. 413 of the 1934-35 Year Book.

The Dominion Fuel Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It is composed of permanent members of the Dominion Civil Service and the staff of the Board constitutes a division in the Bureau of Mines and Geology, Department of Mines and Resources. In recent years the policy of the Government has been to extend the market for Canadian coal and to that end financial assistance in the form of subventions had been given to the coal industry since 1928, the Board being responsible for the administration of subvention payments. The amount of coal moved under these assisted rates has increased from 146,126 short tons in 1928 to 2,390,568 tons in 1934 and 2,280,652 tons in 1935. Of the total moved under assisted rates in 1935, 1,690,742 tons were from Nova Scotia and 338,773 tons from Alberta and the Crowsnest district of British Columbia.

Coal production in Canada during 1935 made a further recovery from the low level of 1933. Production was, however, still 21.0 p.c. below that of 1928, the record year. The average price per ton, which had been \$3.63 in 1928 and had dropped to \$3.02 in 1933, was about the same in 1935. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia, and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1935 production among these classes is given in Table 25.

21.—Production of Coal in Canada, by Provinces, calendar years 1911-36.

NOTE.—For annual production from 1874 to 1910, by provinces, see 1911 Year Book, p. 419.

Coal Consumption.—The sources of the coal consumed in Canada in the calendar years 1911-35 are shown in Table 24, detailed figures of coal made available for consumption during 1935 are given in Table 25; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

24.—Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-35.

NOTE.—For the years 1886 to 1910, see 1921 Year Book, p. 354.

¹ Includes 205,045 tons from Germany, 67,220 tons from Belgium, 54,447 tons from French Indo-China and 384 tons from other countries.

World Production.—The total estimated coal production of the world in 1935 amounted to about 1,290,000,000 long tons, an increase of 2.4 p.c. over the estimate for the previous year. Canada contributed 12,400,000 long tons or about 1.0 p.c. Table 26 shows the production of the British Empire and the chief foreign countries in units of 1,000 long tons during each of the years 1913 and 1921-35.

Natural Gas and Petroleum.

Natural Gas.—The production of natural gas increased in value from \$1,346,471 in 1910 to \$10,289,985 in 1930, but declined to a value of \$8,712,234 in 1933 and \$9,363,141 in 1935. The producing wells in the east are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island, and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1935 Ontario was credited with about 53 p.c. of the total value but only 33 p.c. of the total quantity, while Alberta produced 44 p.c. by value and 64 p.c. of the total quantity. The production by provinces since 1920 is given in Table 27.

27.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-36.

NOTE—For the years 1892 to 1919, see "Mineral Production of Canada", 1928, p. 188.

¹ Totals for Canada include small productions in Manitoba and Saskatchewan.

² Preliminary figures.

³ Revised since publication of the 1936 Year Book.

Petroleum.—The production of crude petroleum in Canada during 1931 was the greatest on record and amounted to 1,542,573 barrels. Output, however, declined to 1,044,412 barrels in 1932, rising again to 1,446,620 barrels in 1935. Production during 1936 was estimated as 1,498,006 barrels. The Turner Valley field in Alberta is the principal source of production in Canada. The wells in this field give a wet gas from which a very high grade of crude naphtha is separated, but recent deep drilling in this field has shown the possibility of crude oils at lower horizons. The Red Coulée field in southern Alberta, near the International Boundary, began to yield some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton. Production from wells near Fort Norman on the lower Mackenzie river increased from 910 barrels in 1932 to 5,115 barrels in 1935. This oil is treated locally in a small refining plant and is used to a large extent in connection with mining operations in the Great Bear Lake area.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. The maximum production of these fields was reached in the '90's and has since declined. New Brunswick's small production comes from the Stony Creek field, near Moncton. For the production by provinces in 1935, see Table 5 of this chapter.

28.—Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-36.

NOTE.—For figures for the years 1886-1910, inclusive, see p. 377 of the 1933 Year Book.

³ Preliminary

Subsection 2.—Other Non-Metallic Minerals.

Asbestos.—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than \$25,000 in 1880 to \$14,792,201 in 1920 and \$13,172,581 in 1929. Owing to trade depression, production was much curtailed from 1929 to 1932, as will be seen in Table 29. However, since 1932 production has shown a distinct improvement. The Imperial Institute's estimate for the world total of asbestos production in 1935 is 374,000 long tons. In 1935 Canada produced about 190,618 long tons, or more than half the world total, while other leading countries with their production in long tons were: Russia, 100,000; Southern Rhodesia, 38,034; Union of South Africa, 18,233; United States, 8,406; and Cyprus, 7,493.

The Eastern Townships of Quebec has for many years been the most productive asbestos-mining area in the world. The most important deposits are: at Black Lake, in Coleraine township; at Thetford and Robertsonville, in Thetford township; at East Broughton, in Broughton township; and at Danville, in Shipton township. The veins of chrysotile asbestos vary in width from $\frac{1}{4}$ inch to $\frac{1}{2}$ inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted for spinning. Both open-cut and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. During 1935 development work was conducted on an asbestos property at Rahn lake, Bannockburn township, Ontario; the fibre in this deposit is reported as being of high quality.

There are 13 plants in Canada which manufacture asbestos products, including the following commodities: asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos yarn; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil, and hydraulic operations.

29.—Quantities and Values of Asbestos Produced in Canada, calendar years 1911-36.

NOTE.—Figures for the years 1896-1910 are given in the 1911 Year Book, p. 424.

¹ The quantities and values of sand, gravel and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years. ² Preliminary figures.

Gypsum.—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness, and Victoria Counties, Nova Scotia; Hillsborough, New Brunswick; Paris, Ontario; Gypsumville and Amaranth, Manitoba; and Falkland, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. Nearly 50 p.c. of Canada's production is exported in crude forms from the Nova Scotia deposits, which are conveniently situated for ocean shipping and account for about 75 p.c. of the total Canadian production. Production of gypsum in Canada reached its highest point in 1928 with 1,246,368 tons valued at \$3,743,648. Production during 1935 was 541,864 tons valued at \$932,203 and preliminary figures for 1936 are 816,999 tons valued at \$1,265,488. The production by provinces during 1935 is shown in Table 5, p. 352.

Salt.—The greater part of the Canadian salt production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia show an increasing production in recent years. The first production of commercial impor-

tance in Manitoba was recorded in 1932 and for Saskatchewan in 1933. Some shipments have been made from deposits near McMurray in Alberta. An important part of Canadian salt production (40 p.c. in 1935) is used in the form of brine in chemical industries for the manufacture of caustic soda, liquid chlorine and other chemicals.

The Canadian production during the present century has shown fairly steady growth from 59,428 tons in 1901 to 91,582 in 1911, 164,658 in 1921, 262,547 in 1926 and a record at that time of 330,264 tons in 1929. Production declined to 259,047 tons in 1931 but has since recovered to 360,343 tons valued at \$1,880,978 in 1935 (see Tables 2 and 5 of this chapter). The estimate for 1936 was 391,316 tons, valued at \$1,773,143.

Section 6.—Production of Clay Products and Other Structural Materials.

Production of these materials is naturally dependent upon the activity of the construction industry in Canada. Building and construction work fluctuates widely with business cycles and during the recent depression dropped to a very low ebb. Under these circumstances the production of clay products, cement, gravel and stone was severely curtailed. Some uncompleted large engineering construction operations and governmental relief projects eased the decline in the early years of the depression but the downward trend was still evident in 1933. With a slight recovery of construction activities since then (see Chapter XV) there has been a moderate increase in the production of the chief structural materials, the total estimated value of production being \$22,334,124 in 1936 as compared with \$16,696,687 in 1933.

Brick and Tile.—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Here the widespread clays of glacial and post-glacial age occurring over considerable areas of the St. Lawrence Lowlands have furnished the materials for numerous brick and tile industries. Production fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, as will be seen from Table 30, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1934 and 1935 is shown in Table 2 of this chapter, while the production by provinces in 1935 is given in Table 5. The estimated value of all clay products made in 1936 was \$3,430,033.

Cement.—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica, and alumina. The lime is usually furnished by limestone or marl, and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta, and British

Columbia. As may be seen from Table 30, production declined greatly from 1929 to 1933, but has recovered somewhat since then. Production by provinces in 1935 is given in Table 5 of this chapter. Whereas in pre-war years Canada was an importer of Portland cement she is now on balance an exporter of this commodity.

¹ The barrel of cement = 350 lb. or 3½ cwt. ² "Production" as used here means quantity and value of sales. ³ Quantities of exports were insignificant prior to 1919. ⁴ Preliminary figures.

⁵ Revised since the publication of the 1936 Year Book.

Stone, Sand and Gravel.—While the Mining Metallurgical and Chemical Branch of the Bureau of Statistics presents details of production and organization of the stone industry separately from that of sand and gravel, for the sake of brevity they are here discussed together. However, the figures of stone production shown here do not include the limestone used to produce lime and cement, nor do they include quartz and other rock minerals, which are shown separately in Table 2, p. 346. Production of these materials increased greatly up to the recent world depression. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased in 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply. Since 1933 there has been some recovery. Among the developments in Canada that resulted in the increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated on p. 384 by a decline in brick production and an increase in that of cement; (2) the vast improvement during the past decade in the mileage and character of roads and highways in Canada; and (3) the improvement of railway roadbeds.

The provincial distribution of the 1935 production of stone, sand and gravel is shown in Table 5, while the chief purposes for which these materials were produced are shown in Table 31.

¹ Totals include minor items not specified.

The quantities and values of stone produced, given in the table above, represent only the production of those establishments which actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments which buy rough stone and dress, polish or finish it; although dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production. Of the total stone produced in 1935 about 84 p.c. was limestone, 8 p.c. granite, more than 7 p.c. sandstone and less than 0.4 p.c. marble. The average value per ton was \$0.90 for limestone, \$3.45 for granite, \$2.44 for sandstone and \$5.34 for marble. The marble was used chiefly for stucco dash, in pulp and paper mills and other industrial processes and for poultry grit and building stone. Large quantities of limestone were used for fluxing and other chemical purposes but by far the largest part of all stone except marble was used as crushed stone.

CHAPTER XIII.—WATER POWERS.

The fresh-water area of Canada is officially estimated at 228,307 square miles—an area nearly twice as large as the whole land area of the British Isles, and certainly larger than the fresh-water area of any other country in the world. As many parts of this well-watered country are situated at considerable heights above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the waters from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

This Water Power chapter of the Year Book is divided into three sections: the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric or Power Commissions in other provinces.

Section 1.—The Water Powers of Canada.*

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was largely secured by the combustion of coal and was therefore looked upon as a secondary product, whereas, when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as a basic commodity. Statistics concern themselves with kilowatt hours of electrical energy produced just as with the production of pig iron, coal or cotton, and take note of undeveloped water power as being a source of raw material just as important as uncut forests or untapped oil fields. The relationship of power to production is of such vital consequence that every nation, besides considering its own power-producing resources, is deeply interested in the similar resources of other countries and the method of their development. To facilitate a study of world power conditions, three Plenary World Power Conferences have already been held to consider the technical, economic, and statistical aspects of power development. The latest of these Conferences was held at Washington in September, 1936, and was composed of representatives of more than fifty member states.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. More than 95 p.c. of the total main-plant equipment of the central electric stations of Canada is hydro-power, and this equipment generates more than 98 p.c. of the total electrical output. Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table 1 shows the provincial distribution of available and developed power in Canada at Jan. 1, 1937.

The figures of available power in the above table are based upon rapids, falls, and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or smaller power capacity, not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The turbine installation in the above table represents the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures for the purpose of deducing therefrom the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated at ordinary six-month flow. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,700,000 h.p. In other words, the present turbine installation represents only slightly more than 18 p.c. of the present recorded water-power resources and the figures of available power in Table 1 may be said to represent the minimum water-power possibilities of the Dominion.

Growth of Water-Power Development.—The commencement of the long distance transmission of electricity at the beginning of the present century resulted in the extensive development of hydro-electricity for distribution over wide areas. The growth of installation during the period from 1900 to 1936 is shown, by provinces, in Table 2.

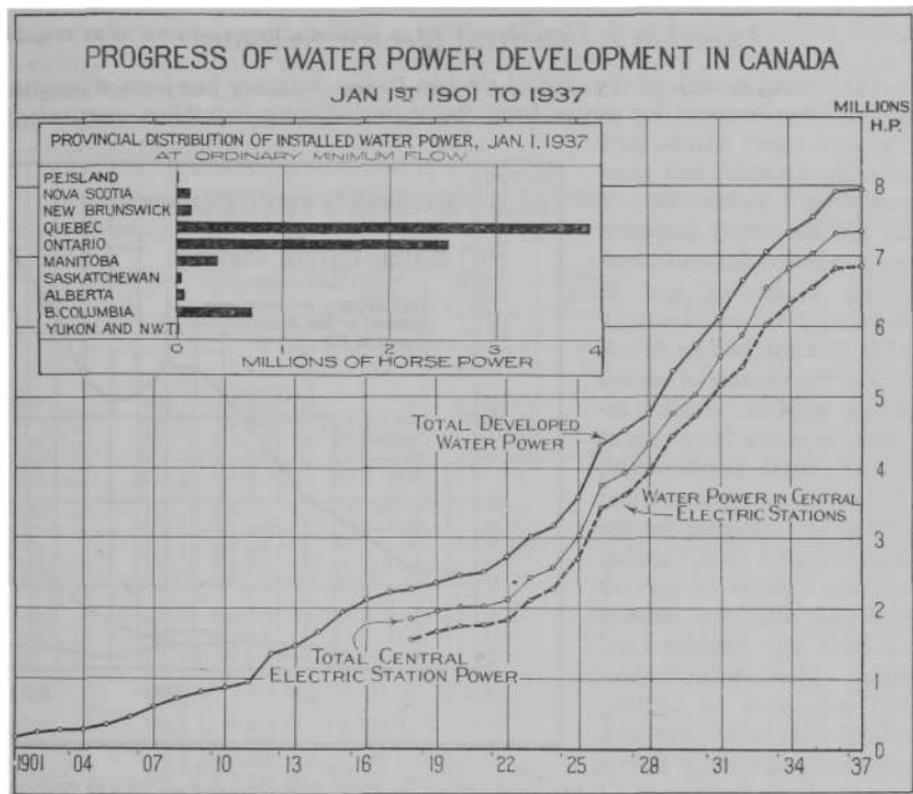

2.—Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1900-36.

NOTE.—Turbine horse-power in Yukon was 5 from 1900 to 1906, 2,085 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910, 13,195 from 1911 to 1913, 13,199 from 1914 to 1934, and 18,199 in 1935 and 1936. These figures are included in the totals for Canada.

¹ Includes totals for Yukon.

Distribution of Developed Water Power.—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper-mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures there given, which indicate that 7.6 p.c. of the developed power is installed by pulp and paper companies, in comparison with 4.5 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and about 90 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries is developed by central electric stations, converted into electricity and delivered to

¹ Includes only hydro-electric stations which develop power for sale. ² Includes only water power actually developed by pulp and paper companies. In addition to this turbine installation, pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations aggregating more than 1,029,000 h.p., making a total of more than 1,634,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electric boilers. ³ Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations. ⁴ Estimated by the Dominion Bureau of Statistics.

Section 2.—Central Electric Stations.*

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electric appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horse-power, kilowatt hours generated and number of customers for the 19 years ended 1935, together with the number of persons employed and the amount expended for salaries and wages. The total output for 1935 amounted to 23,283,033,000 kilowatt hours and, based on preliminary figures from the large stations, the total production in 1936 is estimated at 25,823,000,000 kilowatt hours. This is a new high record for the industry, exceeding the 1935 output by 9.8 p.c.

Exports to the United States, which reached a low point in 1932, began to pick up in June, 1933, and increased more or less continuously, particularly in the later part of 1935 and in 1936 as far as records are available. Total exports for 1935 amounted to 1,364,587,000 kilowatt hours, or 9.3 p.c. above the 1934 exports and 1936 exports were running 16 p.c. above those of 1935.

The use of electric energy in electric boilers in various industries, and particularly in pulp and paper-mills, has increased steadily. During 1933, 3,741,210,000 kilowatt hours were so used, in 1934 these deliveries increased to 5,337,133,000 kilowatt hours, in 1935 to 6,312,387,000 kilowatt hours, and for 1936 an estimate is 6,907,472,000 kilowatt hours. This power is partly off-peak power available at various times each day and partly surplus power available continuously until a better market develops. The domestic service consumption or the electricity used in residences has also increased steadily despite the curtailed expenditures most households have found necessary. In 1935 the domestic service consumption amounted to 1,769,848,000 kilowatt hours and in 1934 to 1,717,090,000 kilowatt hours.

Interesting factors affect the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low-priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada. Again, the pulp and

* Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX.

paper industry is proportionately a smaller industry in the United States than in Canada. While the average consumption for domestic use is twice as high in Canada as in the United States, the total consumption for domestic or residential use is about 8 p.c. of the total output of central electric stations for Canada and 15 p.c. for the United States.

¹ Excluding non-generating stations in 1920 and subsequent years.

² Revised to exclude duplications.

³ Not including auxiliary plant equipment which is included in installation shown in central electric stations in Table 8 of the Manufactures Chapter, pp. 426-431.

Equipment of Central Electric Stations.—The main-plant primary power equipment of all central electric stations aggregated 7,104,142 h.p. in 1935. This included water wheels and turbines, steam reciprocating engines and turbines, and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 96 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 4 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 206,831 h.p., or 2.9 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 54 main-plant steam reciprocating engines in central electric stations in 1935, only 8 in number were over 500 h.p. The steam turbines averaged approximately 4,300 h.p. with 16 units averaging 10,000 h.p., but there were only 60 steam turbines in the industry and these were confined to 22 stations, whereas the 812 water wheels and turbines averaged 8,384 h.p., including 4 at 65,000 h.p. and 3 at 66,000 h.p. each.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces bituminous and lignite coals are used for the steam engines, and gasoline, oil distillates and producer gas for the internal combustion engines.

Of the 326 main-plant internal combustion engines in central electric stations in 1935, 183, or 56 p.c., were in Saskatchewan, 63, or 19 p.c., in Alberta, and 30, or 9 p.c., in Manitoba.

During 1935, the thermal engines produced 399,298,000 kilowatt hours at a cost for fuel of \$2,054,876, an average of 0.51 cents per kilowatt hour. This production was, however, only 1.7 p.c. of the total output.

5.—Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1935.

Provincial Distribution of Electrical Energy.—The distribution by provinces of the electrical energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1930-35. In the latest year over 80 p.c. of the total generated electrical energy was produced in the leading industrial provinces of Ontario and Quebec. From Table 7 it is seen that the total electric energy generated for export in the fiscal year ended Mar. 31, 1936, was 1,448,412,230 kilowatt hours; in the calendar year 1935 it had amounted to 1,317,224,965 kilowatt hours, or 6.1 p.c. of the total amount generated in central electric stations.

Electric Light and Power.—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the production of electrical energy for export is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

Electrical energy produced for export increased from 538,331,425 kilowatt hours in the fiscal year ended Mar. 31, 1911, to 1,749,539,778 kilowatt hours in 1931 and to 1,448,412,230 kilowatt hours in 1936. Such power produced in 1936 showed an increase of nearly 10 p.c. compared with 1934 and was only 20.8 p.c. below the 1931 figure. Figures by companies for the latest four fiscal years are given in Table 7.

Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a "key industry" in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This "public ownership" movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given in Subsection 1. More recently, Manitoba, Nova Scotia, New Brunswick, and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

Subsection 1.—The Hydro-Electric Power Commission of Ontario.*

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the "Hydro"—is an organization of a large number of partner municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public agitation to ensure the provision of adequate supplies of electrical power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1935 electrical service was supplied by the Commission to about 766 municipalities, comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission, and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts are carried on by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electrical energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually* through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years. The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service "at cost". The rates charged by the municipal utilities for retail service are under the control of the Commission and are designed to ensure that each class of consumer bears its appropriate share of the expenses of the undertaking. Each type of consumer is charged with the cost of the service received as far as is practicable.

Power Supplies.—To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately-owned generating plants. Of the 41 hydro-electric power plants operated by the Commission in 1935, the largest is the Queenston-Chippawa development on the Niagara river which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for the needs of the near future has been made—including existing plants, plants under construction and power under contract for present and future delivery—up to an aggregate of about 1,600,000 h.p.

Hydro-Electric Power Commission Statistics.—The Canada Year Book of 1910 (p. xliii) described the turning on, at Berlin (now Kitchener), Ontario, on Oct. 11, 1910, of electrical energy generated by Niagara falls. The small initial load of

* Revised by R. T. Jeffery, Chief Municipal Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ontario.

less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p. and in 1930 it was over 1,260,000 h.p. Table 8 shows the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated over \$408,000,000 in 1935.

Statistics of Urban Municipal Electric Utilities of Ontario Supplied by the Commission.—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking. Summary statistics regarding service to rural consumers are given in Table 14.

Statistics of the assets and liabilities of the electric departments of urban municipalities served by the Hydro-Electric Power Commission are given in Table 12. These show, for 1935, total assets of \$144,850,496 as compared with liabilities of \$43,134,006. Of the difference, \$53,479,947 is allotted as reserves, leaving a surplus of \$48,236,543. The item "equities in hydro systems", listed under both assets and reserves, relates to the sinking fund equities acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt to total assets the equity in Hydro systems is not taken into account. It will be noted that between 1931 and 1935 total assets have increased by \$19,312,638, while total liabilities have decreased by \$9,065,262.

Rural Electrical Service in Ontario.—During the past few years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of "grants-in-aid", 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Legislature passed two additional Acts relating to rural service. The Rural Power District Loans Act, 1930, provides for advances up to \$1,000 to actual farm owners of lands and premises in rural power districts, for the installation of electrical wiring and the purchase of equipment. The Rural Power District Service Charge Act, 1930, provides for the fixing of low maximum service charges for all classes of rural service. In Table 14 will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission. A steady rate of increase is apparent from these statistics.

14.—Statistics Relating to Electrical Service in Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1931-35.

NOTE.—Re rural power district legislation, consult the following Ontario Government publications: *The Power Commission Act* (R.S.O., 1927, c. 57); *The Rural Hydro-Electric Distribution Act*; (R.S.O., 1927, c. 59); *The Rural Power District Loans Act, 1930* (20 Geo. V, c. 14); and *The Rural District Service Charge Act, 1930* (20 Geo. V, c. 15).

Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.

Quebec.—The Quebec Streams Commission, originally created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., 1925, c. 46), and by 20 Geo. V, c. 34, is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has not undertaken the direct production of electric power, but has assisted companies engaged in such work by a systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by constructing storage dams holding water in large reservoirs during flood periods and using it to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 18,000 second-feet,

on lake Kenogami, the St. Francis, the Métis, the Ste. Anne de Beupré, and the North rivers. The entire cost to the Commission of these storage works has been about \$9,000,000 and the annual revenue exceeds \$634,000.

Other reservoirs on the Gatineau, Lièvre, and Mattawin rivers which are the property of the Commission and are operated by that body have been built and paid for by the benefiting companies instead of being financed by the Commission.

The Quebec Electricity Commission, created by 25-26 Geo. V, c. 24—The Quebec Electricity Act—took up its duties on Dec. 2, 1935. This Commission has exclusive jurisdiction over the production, transmission, distribution, and sale of electricity in the province of Quebec and wide powers respecting service, equipment, apparatus, means of protection, extensions of plant and systems, as well as control of rates and capitalization. The approval of the Commission is required for the construction or operation of new plants, transmission lines, networks or systems or any part thereof and all sales or mergers are subject to the consent of the Commission.

Nova Scotia.—The Nova Scotia Power Commission was created in 1919 with powers similar to those of the Ontario Commission. It is authorized to "generate, accumulate, transmit, distribute, supply, and utilize electric energy and power in any part of the province of Nova Scotia, and do everything incidental thereto or deemed by the Commission necessary or expedient therefor". Its main operations, however, are undertaken with the approval of the Lieutenant-Governor in Council.

The Commission has already constructed several important hydro-electric developments and is now operating the following systems: *St. Margaret's Bay*—sells power by wholesale and retail in Halifax and vicinity; *Mushamush*—sells power by wholesale and retail in Lunenburg Co.; *Sheet Harbour*—sells power by wholesale in Pictou Co., supplies demands of a groundwood pulp-mill at Sheet Harbour, retails in Sheet Harbour and in Musquodoboit and Stewiacke valleys and serves the town of Truro through the Pictou County Power Board; *Mersey System*—supplies demands of pulp and paper-mill at Brooklyn, Queens Co.; *Markland System*—supplies town of Liverpool, Caledonia valley and places in vicinity, including woodworking factory and that of a gold mine; *Tusket System*—sells power by wholesale in Yarmouth, also supplies demands of Cosmos Imperial Mills, Ltd., at Yarmouth; *Roseway System*—sells power wholesale in Shelburne and wholesale and retail in the town of Lockeport and vicinity; *Antigonish System*—supplies Antigonish town, and other communities in Antigonish Co.; *Canseau System*—serves town of St. Peters.

The total installed capacity at Sept. 30, 1936, was 67,280 h.p., and there were about 308 miles of main transmission lines and 208 miles of secondary transmission and distribution lines. The total capital expenditure to Oct. 31, 1936, was \$14,379,798 and the reserves were \$1,978,953.

New Brunswick.—The New Brunswick Electric Power Commission, incorporated under provincial legislation, owns and operates two generating stations; one, an 11,000 h.p. hydro-electric plant at Musquash, twelve miles west of Saint John, and a 15,000 h.p. plant at Grand Lake in the Minto coal area; 66,000-volt lines connect the two plants with each other and with the cities of Saint John and Moncton. A 33,000-volt line delivers power from the Grand Lake plant to Fredericton and Marysville. A 66,000-volt line delivers power from the Grand Lake plant to the towns of Newcastle and Chatham.

Power is sold *en bloc* to the cities of Saint John, Moncton, and Fredericton and to the town of Sussex, supplying 17,150 customers in these communities. Power is also distributed directly by the Commission to villages and rural districts, serving

directly 8,450 customers. The high-voltage line mileage is 307, and 940 miles of distributing lines are in operation.

The Commission has under construction rural distribution lines totalling 85 miles in length which will add 250 customers.

The Commission has a plant investment of \$7,550,000 and an annual revenue of \$900,000.

Manitoba.—The formation of the Manitoba Power Commission was authorized by the passage of the Electrical Power Transmission Act of 1919 (c. 30, also c. 61, Consolidated Amendments, 1924) which authorizes the Commission to make provision for generating electrical energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations, and individuals. In 1929, legislation was passed whereby the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electrical power or energy to municipalities, farms and other customers.

The Commission has built and is now operating an extensive transmission system under authority of the above Act, supplying electrical power to many thousands of customers throughout Manitoba. This power is purchased under the Seven Sisters power contract from the Northwestern Power Co. and transmitted over high-tension steel-tower lines to Portage la Prairie, Brandon, and Morden. From this main system power is transmitted to the territory south of the Winnipeg-Brandon main line as far as the International Boundary.

A branch system serving the territory along the western boundary of the province, including the towns and villages of Arrow River, Crandall, Elkhorn, Melita, Miniota, Napinka, Pipestone, and Reston, has been constructed and is operated by the Commission. This system which, until August, 1931, was supplied with power generated by the Commission's plant at Virden, is now tied into the main system and supplied with power generated at Seven Sisters.

Under the authority granted by the Electrical Power Transmission Act of 1931, the Commission made purchases of municipally-owned plants—notably at Birtle and Brandon—both of which plants have now been relegated to stand-by service and are now being served from the system's main network fed from the Seven Sisters power plant. The Commission also purchases energy from the municipally-owned plant at Dauphin which is then distributed to outlying districts.

The Commission owns and operates the central steam-heating system at Brandon, supplying heat to the business, and part of the residential, section of the city. The Commission also owns and operates the gas plant supplying gas to commercial and residential customers. It is the intention of the Commission to supply all outlying power areas from the main system just as soon as their loads are sufficient to justify the cost of building extensions.

Saskatchewan.—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S., 1930, c. 30), authorizing the Commission to manufacture, sell and supply electrical energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power, and to enter into contracts with municipalities for the supply of energy. The Commission is also given certain control and regulatory powers *re* the operation of electric public utilities, and is charged with the responsi-

bility for the administration of the Electrical Inspection and Licensing Act, 1935 (1934-35, c. 64).

The initial operations of the Commission were concerned with acquiring by purchase municipally-owned plants which were improved, enlarged, or supplemented by installations made by the Commission and were operated as individual systems of supply. Examples of such acquisitions made in 1929 were the Saskatoon, Humboldt, and Rosthern plants, while the plant at Shellbrook, the Wynyard-Elfros-Wadena and the Leader-Prelate-Sceptre systems, served from plants at Wynyard and Leader, were established by the Commission in the same year. In 1930 the municipal plants at North Battleford, Swift Current, Unity, and Lanigan and the privately-owned plant of the Maple Creek Light, Power & Milling Co. at Maple Creek were acquired, and in 1931 the generating plant at Willowbunch was added. The Watrous-Nokomis system, including ten towns and villages, was also purchased from Canadian Utilities, Ltd., and has been connected with the Bulyea system of the Montreal Engineering Co., Ltd.

Transmission lines run from Saskatoon, as the centre of the main system, easterly to Humboldt, northerly to Shellbrook and Duck Lake, westerly to Radisson, and southwesterly to Rosetown. Additional lines link Rosetown with Moose Jaw and Tisdale (where the Commission has a generating plant) with Nipawin. The systems built in 1929 have been extended. All transmission lines supply towns and villages along their courses. By a line built in 1935 service is given to the town of Battleford from the North Battleford plant. There are now 1,364 miles of transmission lines owned and operated.

The Commission purchases several blocks of power or contracts for the interchange of power from private interests in addition to supplying energy generated at its own plants. The number of consumers served directly in 123 towns and villages is approximately 8,219 and those indirectly served (where the cities operate the distribution systems) number 16,684. The total plant investment as at Dec. 31, 1935, was approximately \$7,686,546.

British Columbia.—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electrical energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. The Water Board, a quasi-judicial body, regulates the rates which are charged by public utility companies.

CHAPTER XIV.—MANUFACTURES.*

Section 1.—The Evolution of Canadian Manufacturing Industries.

Early Manufactures.—The type of manufactures established in a community will, in the beginning, be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, probably the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were also necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need for protection. At a census of occupations taken in 1681, we find enumerated a comparatively large number of tailors, shoemakers, masons, carpenters, gunsmiths and edgetool makers.

The earlier manufactures were necessarily of a rather crude and primitive type, concerned with the production of commodities which were too bulky to bear the heavy transportation charges of those days, when only one round trip per year could be made between France and Quebec, and vessels were constantly subject to the storms of the North Atlantic and very frequently to the attacks of the English. Indeed, although the colonial policy of France under the old *régime* aimed at preventing the manufacture in Canada of any article which could be imported from the Mother Country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 years out of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. On the occasion of the English capture of a convoy in 1705, the colonists were driven to manufacture rough cloth out of whatever fibres they could obtain, such as the Canadian nettle and the inner bark of the basswood. Such events led to the introduction of sheep raising and the manufacture of homespun woollens. From these humble beginnings arose the important textile industries of to-day, which are able to produce the finest fabrics of cotton, wool or silk.

In the days when ships were built of wood Canada was advantageously situated with respect to their production. Pont-Gravé built two small vessels at Port Royal in 1606 and one at Tadoussac in 1608. Talon, in 1666, built on his private account a ship of 120 tons, and in 1672 a vessel of over 400 tons was on the stocks at Quebec. Ships were built for the French navy and for the West India trade. Under the British *régime* shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865, when 105 Quebec-built ships with a total tonnage of 59,333 were registered. Thereafter, iron and steel ships gradually supplanted the wooden vessels, but the forests of Canada have since provided the raw material for the pulp and paper and other important industries.

The manufacture of mineral products has been of comparatively recent date. Iron deposits in the St. Maurice region were worked as early as 1733 and furnaces set up there for smelting in 1737 were in fairly constant operation until 1883. The iron and steel used in manufacturing in Canada, as well as the coal which has supplied

* Revised by A. Cohen, B. Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the vegetable products, textile and miscellaneous manufacturing industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch, see Chapter XXIX, Section 1, under "Production"

the manufacturing industries with power, has in the main been imported from the United States, chiefly because the principal manufacturing centres of this country in the St. Lawrence and Great Lakes region are fairly conveniently situated with regard to the coal and iron supplies of the United States and far away from the coal and iron supplies of the Maritime Provinces. In recent years the shortage of coal has been made up for by the increasing use of electric power, while the great bulk of the pig iron used in Canadian manufactures is now made in domestic blast furnaces.

Subsection 1.—Growth of Manufacturing in Canada since 1870.

Growth of Canadian Manufactures Prior to the War.—Until the later '90's, the growth of Canadian manufacturing industries was not particularly rapid, though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the values of manufactured commodities from \$221,600,000 in 1870 to \$469,800,000 in 1890. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from \$368,700,000 in 1890 to \$1,166,000,000 in 1910 and to \$1,381,500,000 in 1915. The fundamental advantages of the position of Canada, her abundant raw material, her inexhaustible water power, her growing home market in the expanding West, had contributed to this result.

In the present, as in the past, Canadian manufacturing production has been chiefly dependent upon the use of Canadian raw material, though this is less true than formerly. Raw cotton, for example, is imported from the Southern States, hides from Argentina, rubber from the Straits Settlements and Malay peninsula, sugar from Fiji and the British West Indies, and wool from England, Australia and New Zealand to supply the raw material for Canadian manufacturing industries.

The Influence of the War.—The influence of the War upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had previously been imported. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great prosperity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure, not only to produce munitions and military supplies for the armies of the Allies, but also to make the manifold varieties of goods required for the stimulated civilian consumption. The world shortage of staple commodities, coupled with a strong domestic demand, gave Canadian industries in general a pronounced stimulus toward greater production and, in a great number of cases, the capacity of manufacturing plants was increased; this increase created a demand for greater supplies of raw material. Incidentally, factory methods became more specialized and a high degree of administrative and mechanical efficiency was attained, and Canada, partly owing to the absorption of the energies of Europe in the War, assumed a new position as one of the leading manufacturing countries of the world. The inflation of the war period also led to unprecedented figures of values produced.

The great boom in Canadian manufactures described above reached its height in the summer of 1920. Gross values in 1929, however, reached a higher point than in the post-war boom of 1920, although the prices of manufactured goods had

dropped about 41 p.c. in the intervening period. This steady expansion was halted during 1930, owing to the world-wide recession in business which set in toward the end of 1929, with the result that Canadian manufacturing production in 1934 was valued at only \$2,533,758,954, a decrease of 37.1 p.c. as compared with the peak year 1929. Not only was there a drop in the value of production, but the number of employees declined by 21.5 p.c., with an even greater decline of 34.4 p.c. in the salaries and wages paid, while the value added by manufacture was 35.5 p.c. lower.

The growth of manufacturing production since 1870 is shown in Table 1 following, while the increasing importance of Canadian manufacturing for the international market may be illustrated by the fact that Canadian exports of manufactured produce increased from less than \$3,000,000 per annum on the average of 1871-75 to \$614,000,000 in the post-war fiscal year ended Mar. 31, 1920. Exports of "fully or chiefly manufactured" products in the fiscal year ended Mar. 31, 1935, amounted in value to \$285,484,014, and exports of "partly manufactured" products to \$136,629,437.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1934.

NOTE.—Certain duplications in the gross revenue of central electric stations were eliminated in a net figure and the difference shown as a "cost of material" for the years 1920-29, but net revenues only are now included for both gross and net values for those years. Therefore, the figures here given differ slightly from those formerly published. Also prior to 1929, totals for the chemical industries included the value placed on intermediate products used in further processes in the producing works. To this extent, totals are not comparable to those of 1929 and subsequent years. Further, statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

¹ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of materials as well as the cost of fuel and electricity from the gross value of the products. Prior to this, only the cost of materials was deducted. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried back further as statistics for cost of electricity are not available for years prior to 1924.

2.—Summary Statistics of Manufactures, by Provinces, for Representative Years, 1917-35.

Note.—See headnote, Table 1, p. 407. Statistics for certain years between 1917 and 1929, omitted here, are given on pp. 407-409 of the 1931 Year Book. Figures for 1931 will be found at p. 445 of the 1934-35 Year Book and figures for 1932 at p. 408 of the 1936 edition.

Subsection 2.—Summary Statistics of Manufacturing Production.

Summary Statistics of Manufactures.—In Table 4 will be found an analysis of the most important statistics of manufacture for the period 1917 to 1934, here brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values during the war and immediate post-war periods and the drop in prices of commodities during the depressions of 1921 and 1930, the figures for these years become largely incomparable. One very important figure, however, where the trend of development proceeds clearly and uninterruptedly, is concerned with the use of power. In the analysis on p. 413 the aim is to show the position of power as a factor in general manufacturing production. Therefore, the power installation of central electric stations has been excluded. The total horse-power employed increased from 1,664,578 in 1917 to 4,157,420 in 1932, or an increase of 150 p.c. in 15 years. In the same period horse-power used per establishment increased from 75 to 177 and horse-power per wage-earner from 3.04 to 10.62, indicating the rapidly increasing utilization of power in manufacturing production. The absolute figures for 1934 (but not the averages) show a small increase from 1932. The increase from \$118,056 to \$183,296 in average capital per establishment between 1917 and 1934, and the decrease from 27.2 to 21.2 in the average number of employees are very significant figures. Another interesting comparison is the progressive decrease in the value added by manufacture per employee and the average salaries and wages paid since 1929. Between 1917 and 1929 the value added by manufacture per employee increased from \$2,143 to \$2,729 and then declined in 1933 to \$2,122, while average salaries and wages increased from \$819 in 1917 to \$1,171 in 1929 with a decline to \$943 in 1933. Compared with 1917, the figures for average salaries and wages in 1934 represent an increase of 19.5 p.c., while the increase in the value added by manufacture per employee was only 4.7 p.c., and wholesale prices of commodities declined 37.4 p.c. in the same period.

Value of Products.—The gross value of manufactured products in 1934 was reported as \$2,533,758,954; the cost of materials, including fuel and electricity was \$1,310,815,055, leaving \$1,222,943,899 as the value added by manufacture. As the finished products of one branch of manufacture are constantly used as materials in other branches in the ascending scale of modern industry, it follows that they are counted over and over again, swelling in this manner the total gross value of products. The total value of manufactured products, strictly defined, would include: (1) the value of all raw materials obtained from the extractive and primary production industries which have entered into the manufacturing output; and (2) the entire value added to these raw materials by manufacturing processes from the time they first entered any factory up to the close of the census year. This total value would be very much greater than the \$1,222,943,899 shown as having been added by manufacture, but not so great as the \$2,533,758,954 shown as the gross value of production.

Averages, per wage-earner... h.p.	3.04	3.97	6.37	6.58	7.49	10.62	10.61	9.53	9.53

1 A change in the method of computing the number of wage-earners in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

2 These figures for power in this table represent the installation in manufactures exclusive of central electric stations; statistics of central electric stations are also excluded from the number of establishments and of wage-earners in working out the averages.

3 See footnote to Table 1, p. 407.

4 Not available at time of going to press.

Volume of Manufacturing Production in Recent Years.*—An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. Since real income is ultimately measured in goods and services, the growth of the volume of manufactures, therefore, becomes a matter of great importance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The ever-increasing use of factory products is one of the most significant features of modern life. The process has continued until at the present time fresh fruits and vegetables are about the only articles which reach the consumer without, in some way, being first processed at a factory. Fresh milk is pasteurized and bottled in a dairy plant, fresh fish and meats are dressed principally in packing plants and the home preserving of fruits and vegetables is being superseded by more efficient processes in the canning factory. Thus even the foods we eat, as well as the clothing we wear, our household conveniences and our instruments of production and transportation, are increasingly products of factories. The growing volume of factory production, therefore, measures approximately the total flow of the economic goods upon which the rising standards of modern life so vitally depend.

The statistics of manufactures afford a variety of measures of the growth of factory production. The number of wage-earners, capital invested, value of production and value added by manufacture all show to some extent the direction and volume of growth. The value of production and that added by manufacture, being reported in dollars, are influenced by price changes as well as the quantity of goods produced, and, as already explained, become misleading under the violent price changes of the past fifteen years. The capital invested is also affected by changing money values, while the relation between capital invested and value of goods produced varies greatly as between one industry and another. Neither is the number of wage-earners employed likely to be a representative measure of changes in the volume of production. The progressively increasing use of machinery and the rise in the power installed per wage-earner (see Table 4) tend to increase the employee's output. Thus, while the reported wage-earners in 1934 had decreased 1.0 p.c. from the number in 1923, the volume of production is estimated to have increased 17.9 p.c. in the same period.

The central electric stations were excluded from general manufactures in making the index, since this industry is in a class by itself in the peculiar function of its product, and is also unique in the magnitude of its capital investment and the smallness of its labour force in proportion to its net production. The index is based on the quantities of manufactured products reported and includes 71.1 p.c. of the total value of the production in 1926, exclusive of central electric stations. It is weighted according to the values added by manufacture in 1926. A complete description of the manner in which the index is constructed will be found in the publication referred to in the footnote to this page.

The physical volume of manufacturing production, exclusive of central electric stations, increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$690,904,000 in the fiscal year 1930, the increase in exports representing about 3.6

* For a much more detailed and comprehensive treatment of this subject, see the study "The Quantity of Manufacturing Production in Canada 1923-29" by A. Cohen, B.Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics.

p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in the capital equipment and by the rise in the standard of living of the population of Canada.

As may be seen from Table 5, all groups in the component material classification reported declines in the volume of production during the depression. In comparing the low point of the depression, *viz.*, 1933 with 1929 it is found that the iron and steel group suffered the greatest contraction in production with a decrease of 61.1 p.c. This was followed by the miscellaneous industries group, with a decrease of 46.5 p.c., non-metallic mineral products 46.3 p.c., wood and paper products 30.0 p.c., non-ferrous metal products 29.2 p.c., vegetable products 25.2 p.c., chemicals and allied products 17.6 p.c., animal products 9.5 p.c. and textiles and textile products 5.8 p.c.

In 1934 there was material improvement, the index of production for all industries rising from 100.2 in 1933 to 117.9 in 1934. In spite of this improvement, all groups, with the exception of textiles, are still below the 1929 level of production. The output of textiles in 1934 was about 4 p.c. greater than in 1929. This is an all-time record for this group of industries.

5.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1925, 1926, and 1928-34.

(1923=100.)

Group.	1925.	1926.	1928.	1929.	1930.	1931.	1932.	1933.	1934.

¹ Exclusive of central electric stations.

In analysing the changes in the volume of production, on a purpose classification basis, some interesting facts are revealed. In comparing 1933 with 1929 it is found that the food group reported a decrease of 10.6 p.c., while that of clothing decreased 14.7 p.c. The output of vehicles and vessels, which is largely made up of the automobile and rubber-tire industries, recorded a decrease of 59.5 p.c.—this is the greatest decrease of any group. Producers materials and industrial equipment declined 37.5 p.c. and 45.8 p.c. respectively, due to the general decline in industrial activity. House furnishings dropped 36.6 p.c., personal utilities 30.4 p.c., drink and tobacco 31.5 p.c., and books and stationery 7.2 p.c. The decrease in the personal utilities group needs some explanation. The production of musical instruments, which is included in this group, has been decreasing steadily during the past few years, the output of pianos, phonographs and phonograph records

becoming smaller and smaller. The main product of the musical instruments industry, namely, the radio, is now produced in the electrical apparatus industry. This industry, however, is credited to the industrial equipment group, as by far the largest part of its output consists of industrial equipment.

All groups shared in the improvement which occurred in 1934. None of the major groups, however, was able to equal the 1929 production figures. The only exceptions were two minor groups, "books and stationery" and "miscellaneous industries". These two groups reported a volume of production in 1934 exceeding that of 1929.

The index of the volume of production dropped from 150.2 in 1929 to 100.2 in 1933 and then rose to 117.9 in 1934, making a net decrease of 21.5 p.c. This decrease is significant when compared with the decrease of 35.5 p.c. in the net value of production and 25.5 p.c. in the number of wage-earners employed.

Owing to declines in the values of finished products (due, in a large degree, to drastic declines in the values of raw materials) and to the decrease in the volume of production, the net value of production dropped from \$1,894,910,456 in 1929 to \$1,222,943,899 in 1934, a decrease of 35.5 p.c., while the number of wage-earners dropped from 597,827 to 445,432, a decrease of 25.5 p.c. It will be noted that the percentage decrease in the volume of production between 1929 and 1934 was 4.0 less than the percentage decrease in the number of wage-earners in the same period. According to the observations made in the special study on the volume of production, the number of wage-earners may be regarded as more likely to understate than to overstate the changes in the volume of production. As stated previously, the tendency is toward increasing production per wage-earner through greater efficiency and increased use of machinery and labour-saving devices. Also, in times of depression, many establishments follow the practice of keeping the wage-earners on the payroll on a part-time basis rather than laying some of them off and employing the rest on full time, while in periods of increased industrial activity the additional output required is secured through overtime work rather than an increase in the number of wage-earners. The net result is to confine fluctuations in the number of wage-earners within narrower limits than that of the physical volume of production. All things considered, however, the average number of wage-earners is materially influenced by the fluctuations in industrial activity. The decrease in the volume of production as compared with the decrease in the number of wage-earners since 1929 is really much smaller than the 4.0 p.c. mentioned above. This fact, however, is obscured by the following changes in procedure:—

First, the large decrease in the number of wage-earners in 1931 is not entirely due to the decline in manufacturing production. The decrease is in part due to the change in method of computing the average annual employment. Between 1925 and 1930 the average for each individual plant was obtained by dividing the sum of the monthly employment figures by the number of months in operation, instead of by 12, the number of months in the year. For example, if a plant operated only during three months of the year with an employment of 100 persons the first month, 125 the second month and 75 the third month, its average annual employment was taken as 100 (*i.e.* $300 \div 3$); the same as that of another plant which operated the whole year with an average employment of 100 persons per month. In 1931, however, a change was made to the old method whereby the aggregate of the monthly figures is divided by 12. As a result of this change, the average annual employment in such seasonal industries as fruit and vegetable canning and sawmilling was, therefore, considerably lower than formerly without the number of wage-earners being correspondingly smaller.

Secondly, prior to 1931, owners who were working as ordinary wage-earners such as small bakers, operators of sawmills and grist-mills, etc., reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. By making allowances for the above changes it would be found that during the depression the number of wage-earners declined less than the volume of production.

The construction of this new index of the volume of manufacturing production has superseded for 1923 and later years the index published in 1931 and previous years. The former index, which made no pretence to the reliability of the new one, was made by dividing the gross value of manufactures by the index number of the prices of manufactured goods. The central electric stations were included in the former index, while they are excluded from the new one. However, the former index covered the period 1917 to 1923 not covered in the new one and, since this earlier period was one of wide fluctuations in money values, the following index numbers are given for the whole period since 1917, using the earlier method, but excluding central electric stations, for the years 1917 to 1922, and the new index, transposed to the 1917 base, from 1923 to 1934.

Consumption of Manufactured Products.—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 6, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period approximately corresponding to 1934 was \$2,469,033,897, a figure obtained by adding to the value of manufactured products in 1934 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1935, and deducting the value of the corresponding exports for the same period. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Vegetable, textile, iron, animal, and wood and paper products were, in that order, the leading groups in the value of finished goods made available for consumption. The large amount of manufactured vegetable products made available for consumption was due to the large domestic production, as the exports and imports were about equal, while manufactures of textiles and iron and steel products, in addition to a large production, showed an excess of imports over exports of \$48,000,000 for textiles, and \$55,000,000 for iron and steel products. Wood and paper, animal and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups of manufactures.

In 1929, the order of the groups by the values available for consumption was iron, vegetable, textile, wood and paper, and animal products. In that year the value of iron products available for consumption represented 22.4 p.c. of the total for all products; in 1934 iron products represented only 14.9 p.c. of the total. Since 1929 the consumption of vegetable, animal, chemical, and textile products has been much better maintained than those of iron, non-metallic mineral, and wood products.

6.—Consumption of Manufactured Products, by Groups, 1934, with Totals for 1922-34.

NOTE.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years.

¹ For 1928 to 1934 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible, since foreign exports for these years had never been analysed as raw materials or partly or fully manufactured goods. Therefore, in this table the value of manufactured products made available for consumption, for the years 1922 to 1927 inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

Section 2.—Production of Industrial Groups and Individual Industries.

One of the factors in the progress of Canada is the possession of many natural resources favourable to industrial growth. It is upon the country's agricultural resources, forests, minerals, and water powers that Canada's industries are mainly based. The fish and fur resources also make an important contribution of raw materials to the manufacturing industries of the Dominion. Nevertheless, the industrial development of Canada was a matter of small beginnings and gradual growth over a period of many years, and the comparatively small home market, restricted at the present time to a population of about eleven millions, a large part of it in scattered agricultural areas, is still one of the difficulties of the situation. Yet Canada is now not merely the second largest manufacturing country in the British Empire; her exports to the other Dominions consist largely of manufactured goods, and her exports of manufactured and partly manufactured goods to the United States exceed the exports of raw materials. The rate at which this movement is to continue will depend almost entirely upon growth within the Dominion—upon the further development of the many-sided physical assets of the country.

Effects of the Depression on the Manufacturing Industries of Canada.—The downward trend in manufacturing operations which began in the fall of 1929 continued with increasing force to about the middle of 1933. The first pronounced increase was reported for the month of June, but thereafter, each succeeding month recorded a slight gain over that of the preceding month. The gains in the latter part of the year were not, however, sufficiently pronounced to overcome the losses of the beginning of the year. As a result of this,

the output of manufactured products in 1933, valued at \$2,086,847,847, was the lowest annual average reached in the period. This was a decrease of 48.2 p.c. as compared with the peak year of 1929. In 1934 the value of production amounted to \$2,533,758,954, an increase of 21.4 p.c. over the previous year but still 37.1 p.c. below the 1929 level. The number of persons employed dropped from 694,434 in 1929 to 493,903 in 1933, a drop of 28.9 p.c. In 1934, however, the number of employees rose to 545,162, an increase of 10.4 p.c. from the 1933 figure. In spite of this increase, the employees in 1934 still numbered 21.5 p.c. below the 1929 figure. The decline in salary and wage payments exceeded even that of the number of employees, the drop between 1929 and 1933 being \$347,487,752 or 42.7 p.c. In 1934 the increase in salary and wage payments amounted to \$68,032,545. Average earnings per employee which in 1933 amounted to \$943 represented a decrease of 19.5 p.c. from the average earnings of \$1,171 in 1929. In 1934 average earnings rose to \$979. The following table shows the percentage variation in employment, salary and wage payments and value of production since 1929.

7.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Manufacturing Industries in the Five-Year Period 1929-34.

¹ In 1930 bridge building was transferred from this group to that of iron and its products.

Analysis by Groups of Industries.—The iron and its products group was hit hardest by the depression. In gross value of products, the output of these industries was reduced by 71.3 p.c. in 1933 compared with 1929. In salaries and wages paid the reduction was 62.8 p.c. and in employees 46.4 p.c. The wood and paper group and those of non-ferrous metals and animal products suffered severely but not by any means as much as in the first group named. The records of central electric stations, the chemical and textile industries were particularly good; the first named showed the least reduction of all groups in gross value of production, but the chemicals showed the smallest reductions in both employees and salaries and wages paid. The miscellaneous group of industries showed a reduction of 72.7 p.c. in gross value of products, 50.8 p.c. in the number of employees and 64.5 p.c. in the salaries and wages paid. This group was not as severely affected as these figures would indicate as the bridge-building industry was transferred from this group to that of iron and its products. The iron and its products group, therefore, suffered more severely than the figures in the foregoing table indicate.

From the low year of the depression, so far as the manufacturing industries are concerned, *viz.*, 1933, while there has been marked improvement in all groups,

non-ferrous metals and iron and its products have shown the greatest improvement in gross value of products and quite naturally central electric stations have shown the least. In salaries and wages paid, iron and its products is also the leader, but in employees engaged the miscellaneous group takes first place. It is of interest to note that in the section of the above table, which compares 1934 data with those for 1929 as regards employees engaged, two industrial groups—chemicals and textiles—actually show increases, although that for textiles is very small. The miscellaneous group of industries and iron and its products have made least headway towards the 1929 level, although, as previously stated, the latter group had made a very marked advance from the low point of the depression.

Subsection 1.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, the central electric stations industry was taken out of the miscellaneous class and now forms a class by itself.

Vegetable Products.—Though first in value of gross production in 1934, this group ranked only fourth in the number of people employed and in salaries and wages paid. With the exception of rubber, coffee and spices, sugar factories, and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. They produced in 1934, 19.0 p.c. of the total manufacturing production and employed 14.2 p.c. of all persons engaged in manufacturing industries.

The flour-milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become spectacular. The War and the demand it created gave a great impetus to this trade. The 435 flour mills, many of them of the most modern type and highest efficiency, have a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has been adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 5,053,732 barrels in 1934, but in spite of the decrease Canada continues to be one of the leading exporters of wheat flour.

With the increase in urban population, as well as the improvement in transportation, which increasingly enables rural communities to purchase factory-made bread, the bread industry made rapid strides during the past decade. During this period there was an increase of 37 p.c. in the capital invested and 56 p.c. in the number of employees. The production of bread and other bakery products required the labour of about 19,000 people in 1934. This industry had an output valued at \$57,295,522, a capital investment of \$44,196,221, while the employees numbered 18,562 and the salaries and wages paid amounted to \$15,794,117. This industry was thus the third largest employer of labour among the manufacturing industries of the country. In salaries and wages paid, however, it ranked only fifth.

The rubber industry is another industry of importance in the industrial life of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1930 she was the fifth largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, France,

and Germany. In 1934, however, Japan and Russia were also ahead of Canada in the imports of raw rubber. Existing plants in 1934 numbered 51 and represented a capital investment of \$66,047,471, including equipment and working capital. These plants furnished employment to 11,079 persons who received \$10,858,637 in salaries and wages and produced goods valued at \$55,230,381. They also used raw materials to the value of \$18,439,498, mainly imported from tropical countries. The rubber industry also forms an adjunct of considerable importance to the cotton yarn and cloth industry, which supplies tire fabrics. The industry, besides supplying the domestic market, contributes materially to the export trade of Canada. The products find their way to the remotest parts of the world, as a glance at the list of countries to which rubber tires are shipped would show. Spain, Peru, Dutch East Indies, British East Africa, and China are but a few of the far-flung countries into which Canadian tires find their way.

Establishments engaged in the production of tobacco, cigars and cigarettes numbered 127 in 1934. The capital invested in the industry amounted to \$51,546,009, employees numbered 8,150 with salary and wage payments of \$6,954,646, while the products made were valued at \$37,489,025 exclusive of excise taxes. If these taxes were added, the output of the tobacco industry would be worth over \$66,000,000. This industry thus contributes about \$29,000,000 to the Dominion treasury in excise taxes alone. Canada is self-sufficient as regards its requirements of manufactured tobacco products. Practically the whole of the Canadian production goes to supply domestic demand, imports and exports of manufactured tobacco products being extremely small. The tobacco industry also contributes materially to the agricultural economy of Canada. Of the materials used, amounting to \$18,629,615, \$14,164,681 was for raw leaf tobacco. All told, the tobacco industry consumed 36,100,480 lb. of raw leaf tobacco of which 26,927,337 lb. was of domestic growth.

The fruit and vegetable preparations industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another large division of this group. In 1934, this industry reported an output valued at \$35,330,577, a capital investment of \$39,266,310 and an employment of 7,524 persons, who received \$4,704,518 in salaries and wages. The development of the canned foods trade has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety. The industry has made rapid strides in the past few years. During the period of 1923-34 the volume of fruit and vegetable preparations produced increased 137 p.c. This growth is indeed remarkable, as it represents a corresponding increase in the domestic demand for these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1934 were valued at \$2,414,234 and exports at \$4,118,482. According to these figures, the industry besides supplying the domestic requirements also has a small exportable surplus.

Other important industries of this group are: biscuits and confectionery, brewing, distilling, and sugar refining.

Animal Products.—Production in this group is determined, in large measure by the demand at home and abroad for Canadian butter, cheese, canned fish, fresh or frozen meats, bacon and hams, condensed and evaporated milk, etc.

The leading industry of the group is that of slaughtering and meat packing, with a value of production in 1934 of \$122,112,406. Next comes butter and cheese, with a value of \$92,813,271. These two industries represented about two-thirds of the production of the entire group.

The butter and cheese industry, which manufactures a product of farm animals, has been for many years of leading importance in Canada. Originating in the agricultural districts of the Maritime Provinces, the Eastern Townships of Quebec and the southern counties of Ontario, it is now developing rapidly in the Prairie Provinces and in the more recent northern settlements of Quebec and Ontario. For an industry so large in the aggregate, it is unique in having shown very little tendency toward consolidation in large units, the gross production of \$92,813,271 coming from no fewer than 2,632 plants, mostly small and scattered at convenient points throughout the farming communities.

The leather industries have long been established on a considerable scale, mainly, of course, because the large number of cattle raised and slaughtered provide a ready supply of hides. There are large tanneries in the eastern provinces and no fewer than 211 boot and shoe factories were in operation in 1934, chiefly in Quebec and Ontario, representing a total capital of about \$23,000,000 with an annual output of over \$32,000,000 and employing 14,868 men and women. The canning and preserving of fish also calls for reference. Concentrated naturally upon the Pacific and Atlantic coasts, 665 establishments were engaged in 1934 in canning, curing and packing of various kinds of fish that were valued at \$24,000,000.

Textile Products.—The output of textiles in 1934 was valued at \$342,054,536. The establishments classified in this group, which numbered 2,234, represent a capital investment of \$328,362,816, they furnished employment to 115,695 persons who were paid \$90,796,601 in salaries and wages and also spent \$174,532,597 for materials.

In net production, *i.e.*, in value added by manufacture, which is a truer criterion than gross production of the place of the group in the industrial life of the country, the textile group was third in 1934 among the ten major groups shown in the summary statistics of Table 3, p. 409, being exceeded only by the wood and vegetable products groups. Textiles accounted for over 13 p.c. of the net manufacturing production of Canada. As an indication of the contribution which the textile group made in 1934 to the employment in the Dominion, the group stood second in the number of employees and in salaries and wages paid, with over 21 p.c. of the total employees in manufacturing and 17 p.c. of the total salaries and wages paid. Again, this wide group of textiles may be regarded as two distinct divisions: (1) the spinning, weaving and knitting trades, and (2) the finishing trades. If so regarded, the first division assumes the proportions of a very large industrial group with a gross production of \$180,188,058, while the second division, which usually is the larger, had a production of only \$161,866,478 in 1934.

From the standpoint of gross value of production, cotton yarn and cloth in 1934 was again the leading industry in the textile group. The output was valued at \$61,306,490 while the persons employed numbered 18,106 and the salaries and wages paid totalled \$13,768,278. This industry made substantial gains in 1934. The value of production increased 20 p.c., the number of employees 12 p.c. and the volume of production 10 p.c.

The hosiery and knitted goods industry is also worthy of special mention. From the standpoint of employment, it was the second industry in 1934, employing 17,978 persons and paying \$13,565,616 in salaries and wages. Despite the depressed condition of the textile industry generally, the volume and value of production of this branch of the industry held up remarkably well, the value of production being only 25.6 p.c. lower than the peak year of 1929 while the volume was actually 1.8 p.c. higher. Employment, however, has declined by 1,070 or 5.4 p.c. since 1929.

The outstanding feature of the textile situation in Canada has been the great expansion of the silk industry during the past few years, at a time when practically

all other industries were experiencing a diminishing demand for their products. Compared with 1926, this industry increased its output by \$17,371,906 or 204 p.c. and also furnished employment to 6,797 more people—an increase in employment of 280 p.c.

Wood and Paper.—The forests of Canada have always been an important factor in the building up and maintaining of manufacturing industries. Since early pioneering times the sawmill has formed one of the first steps from the pioneering community to the industrial centre. There is to-day practically no form of industrial activity in which wood is not used, directly as a raw material or indirectly as, for example, in the form of paper. The primary operations in the woods provide work during part of the year for at least 200,000 individuals, largely during the season when employment in manufacturing industries is at its minimum. This has a valuable steadying effect on general labour conditions throughout the year.

The manufacture of lumber, which depends to a large extent on building and construction operations and the export markets, has shown wide fluctuations. The peak, reached in 1911 with a total cut of 4,918,000 M ft. b.m., has never been equalled. It was followed by a general decline to the 2,869,000 M reported for 1921. A second peak was reached in 1929 of 4,742,000 M. Production then decreased annually to a minimum in 1932 amounting to 1,810,000 M. There were increases in 1933 and 1934.

The manufacturing industries which draw their principal raw material from the sawmills reached their maximum production in 1929 with a gross value of \$146,950,000 and then declined to \$52,289,642 in 1933 but increased to \$57,860,721 in 1934.

The pulp and paper industry is a comparatively recent development in Canadian industry. In 1881 there were only 36 paper and 5 pulp mills in operation in Canada. By 1923 the industry had displaced flour milling as Canada's most important manufacturing industry and in spite of recent vicissitudes has held that position ever since. The peak of production was reached in 1929 when 4,021,000 tons of wood pulp and 3,197,000 tons of paper were produced. In that year there were 108 pulp and paper mills in operation, consuming 5,278,000 cords of pulpwood and using hydro-electric power valued at more than \$13,000,000. During 1926, Canada, for the first time, produced more newsprint paper than the United States and became the world's chief producer and exporter of that commodity, maintaining that position ever since in spite of decreases in production. During 1934 this industry produced 3,636,335 tons of pulp and 3,069,516 tons of paper. Of this paper, 2,604,973 tons was newsprint, more than two and a half times the production of the United States.

The manufacturing industries which draw their principal raw material from the pulp and paper mills reached their maximum production of \$187,882,000 in 1929. The value in 1933 for these industries was \$127,011,880 and in 1934, \$139,108,400.

Iron and Its Products.—The manufacture of iron and steel and their products is one of Canada's basic industries. Iron ore is not now produced in Canada, as the known deposits though extensive, are not of sufficiently high grade to permit economic recovery under present conditions. Yet there has been built up a primary steel industry of considerable importance, and the secondary or fabricating industries have been expanding steadily to meet the country's increasing requirements.

There are now four concerns which make pig iron in Canada, one being in Nova Scotia and three in Ontario. The former uses Nova Scotia coal and iron ore from the great Wabana deposits which it controls, on Bell island, Newfoundland, while the Ontario works are dependent on foreign ore and coal, which are brought from the United States. These companies have 11 blast furnaces with a rated capacity of

1.5 million tons of pig iron per annum, but the highest tonnage yet attained was 1,080,160 long tons in 1929. Open hearth steel furnaces and rolling mills are also operated by these companies, which produce steel ingots, blooms and billets, bars, rods, rails, structural shapes, plates, sheets, rail fastenings, etc. Including electric steel furnaces, there were 27 steel plants in operation in 1934, which, with the 17 rolling mills, 4 pig iron plants, and 3 ferro-alloy plants, represented a capital of \$90,079,004 and employed 7,400 hands to produce primary products worth \$29,101,463. This output value was \$10.6 millions above the 1933 total and \$12.9 millions above the 1932 figures, which was the lowest recorded since the Bureau commenced to collect annual statistics in 1918. The value for 1933 was \$18,492,549, for 1932, \$16,197,526, for 1931, \$36,911,245 and for 1930, \$52,588,935.

Automobile manufacturing was the most important of the secondary iron and steel industries in 1934, and the production value of \$76,133,448 was 78 p.c. over the 1933 figure and the highest reported for this industry since 1930. Sixteen companies manufactured or assembled motor cars in Canada in 1934 and 21 separate factories were in operation. The capacity of these plants was reported at 234,000 automobiles and 33,500 trucks annually, from which it is calculated that the industry operated at about 44 p.c. of capacity during 1934 when 116,852 cars and trucks were produced. In 1929, the year of highest production, the plants operated at 66 p.c. of their estimated capacity. Production in 1929 totalled 262,625 cars at \$163,497,675; in 1930 the output was 153,372 cars at \$91,766,806; in 1931, 82,559 cars at \$52,964,936; in 1932, 60,789 cars at \$38,560,796; and in 1933, 65,852 cars at \$38,630,463. Exports of automobiles and parts declined from \$47,005,671 in 1929 to \$20,386,354 in 1930 and to \$7,091,994 in 1932; there was an increase of 39 p.c. in 1933 to \$9,843,361 and a gain in 1934 over 1933 of 99 p.c. to \$19,619,016.

There are also numerous works in Canada for the manufacture of machinery, agricultural implements, railway rolling-stock, automobile parts, boilers and engines, castings and forgings, sheet metal products, hardware and tools, wire and wire goods, etc., and the variety of products made in these establishments is increasing yearly.

The iron and steel industries which are engaged almost entirely in the production of capital goods have been severely affected by the depressed economic conditions of the past few years. In 1934, the 1,255 operating factories reported production valued at \$308,303,352 compared with \$211,961,908 in 1933, \$225,832,185 in 1932, \$374,725,068 in 1931, \$569,745,973 in 1930, and \$738,012,980 in 1929.

Non-Ferrous Metals.—Production from this group of manufactures, which includes non-ferrous smelters and refineries, electrical equipment factories, brass foundries, etc., advanced 44 p.c. in 1934 to a value of \$237,233,670 compared with \$164,765,604 in 1933, \$152,111,317 in 1932 and \$250,458,721 in 1930. Capital employed in the 488 operating factories in 1934 was reported at \$263,488,479 and the number of employees was given at 30,177.

The smelting and refining of non-ferrous metals was the leading industry of the group in 1934. Fourteen plants were operated in that year by 11 different companies and products were valued at \$149,936,239. Capital employed amounted to \$146,047,422 and the average number of workers was 8,298. Products included aluminium, nickel, cobalt, copper, zinc, lead, silver, gold, bismuth, cadmium, selenium, radium, and other refinery products. Output value in 1934 was the best on record and 49 p.c. higher than in 1933.

The electrical apparatus industry showed a considerable increase in 1934, due chiefly to better demand for heavy electrical machinery, wire and cable, and radios. Output in 1934 totalled \$50,234,811 compared with \$37,012,509 in 1933. Radio

production alone advanced to 188,710 sets at \$8,196,248 in 1934 from 112,273 sets at \$4,401,313 in 1933 and 121,468 sets at \$6,808,877 in 1932.

Jewellery, silverware, white metal alloys, aluminium utensils, and brass and copper goods were the other important products made in factories in this group.

Non-Metallic Minerals.—This group of manufactures includes such leading industries as coke making, oil refining and the manufacture of glass, artificial abrasives, bricks, cement, etc. Final figures for 1934 show that the output for this group amounted in value to \$166,782,852, which is 18 p.c. above the corresponding total for 1933 but 31 p.c. below 1929.

The petroleum-refining industry is by far the largest of the group. Canada produces some crude oil, but the bulk of the oil treated in Canadian refineries is imported from the United States or South America. In 1934 there were 42 refineries operating at advantageous points across the Dominion. These units used 1,109,510,343 gallons of crude oil in that year and produced refined commodities worth \$75,691,078. About 4,876 people were given employment and the capital investment was \$66,450,496.

Forty-one coke and gas plants representing an investment of \$99 millions made products worth \$38,272,020. Glass, cement, lime, salt, brick, dressed stone, cement products and asbestos goods were also made in this group of industries.

Chemicals and Allied Products.—That chemical manufactures occupy an important place in Canadian industry is apparent from the fact that in 1934 a total of 17,130 persons were employed in the 736 plants which made chemicals and allied products. These plants produce the greater part of the chemicals that are consumed in this country. In 1934 the apparent consumption of chemicals and allied products amounted in value to \$121,851,858, of which \$108,052,039 or 88.7 p.c. was of domestic manufacture.

Output of chemicals and allied products was valued at \$108,052,039 at factory prices in 1934. This total was about 16.4 p.c. above the 1933 value of \$92,820,761 and 13.4 p.c. above the total of \$95,279,376 in 1932. Paints, soaps, medicinals, acids and chemical salts are the most important products. Output from the 16 plants in the heavy chemical industry, which represented a capital of \$45,033,355, amounted to \$16,494,139 in 1934 and in 1929 was up to \$28,021,972. Acetic acid, calcium, cyanamide, sodium cyanide, caustic soda, soda ash, sulphuric acid, phosphorus, calcium carbide, and nitre cake are among the leading products. The export trade in these commodities amounted to about \$9,000,000 in 1934.

The medicinal and pharmaceutical preparations industry employed 3,506 workers in 1934 and paid \$4,306,409 in salaries and wages. Production in that year was valued at \$19,484,094. The paints industry was next in importance, there being 79 factories in this line of manufacture, with output worth \$18,618,371. The production of soaps and cleaning preparations was worth \$13,614,464 and 1,818 people worked in the 101 factories in this industry. Compressed gases, fertilizers, coal-tar products, wood-distillation products, inks, adhesives, polishes, and a multitude of other such products are also made in the chemical plants.

Many chemical products are also made in industries which for statistical purposes are not included in the chemicals and allied products group. For instance, pulp and paper, distilled liquors, brewery products, and artificial abrasives are classified in other groups.

Central Electric Stations.—The generation of power by central electric stations, which is of such vital importance to the development of manufactures in

Canada, has increased very rapidly since the Great War. The output in 1919, the first year for which statistics have been compiled, amounted to 5.5 billion kilowatt hours and by 1930 had grown to 18 billion kilowatt hours. In spite of a temporary set-back occasioned by the general contraction in industrial production, the output for 1934 reached a new high record of 21.2 billion kilowatt hours. The pulp and paper industry is the largest user of electric energy. During 1934, this industry purchased 8.4 billion kilowatt hours from central electric stations, or about 40 p.c. of the total output. Other large users of electric energy are: the primary iron and steel industry, non-ferrous metal smelting and acids, alkalies, and salts establish-

ments. Approximately 8 p.c. of the total output of central electric stations in 1934 was used for residence lighting and other domestic services, while 5.9 p.c. was exported to the United States.

The growth of central electric stations is also strikingly illustrated in the increase since 1919 of 247 p.c. in the capital investment, which in 1934 totalled \$1,430,852,166 or 30 p.c. of the total. This industry is also unique in that there are no expenditures for raw material, the main items of expenditure are, therefore, for the upkeep of plant and payment of interest charges on the huge capital investment.

Materials and Values of Products of Canadian Manufacturing Industries, 1934.

¹ Net value is obtained by deducting cost of materials, fuel, and electricity from the gross value.

Subsection 2.—Manufactures Classified by the Purpose of the Products.

Production of Manufactured Goods According to the Purpose Classification.—In addition to the classification according to the chief component material of the products used for the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented in Table 9 for the years 1922, 1924, 1926, 1929 to 1933, in summary form and for 1934 in more detail.

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. Indicative of the increasing industrialization of the Dominion is the increase in the "industrial equipment" group from 17.0 p.c. of the total value of production in 1922 to 18.6 p.c. of the total in 1934, and the increase in "producers materials" from 26.8 p.c. to 29.4 p.c. during the same period. Another significant change is the decline in the "food" group which dropped from a production of 27.1 p.c. to 22.8 p.c. of the total. Whereas in 1922, food products comprised the leading group, in 1934 the production of producers materials ranked first in importance. The following groups had improved their position since 1922; vehicles and vessels advanced from an output of 6.5 p.c. to 7.0 p.c. of the total value of production; drink and tobacco from 4.0 p.c. to 4.2 p.c. and books and stationery from 4.0 p.c. to 4.4 p.c. The following groups declined in importance; the clothing group dropped from 9.5 p.c. to 9.3 p.c., house furnishings from 2.5 p.c. to 1.8 p.c. and personal utilities from 2.3 p.c. to 1.6 p.c.

In analysing the relative standing of the two groups which are perhaps of the greatest interest, it is noted that the gross production of the "food" industries in 1934 was 22.8 p.c. of the output of Canadian manufactures, as compared with an output of only 9.3 p.c. for the "clothing" industries. Aside from the fact that a much larger proportion of its products is exported, the greater production of the "food" group was, in part, due to the higher cost of raw materials, the value added by manufacture being 15.0 p.c. of the total for all industries in the case of the "food" group and 8.8 p.c. for the "clothing" group. The "clothing" industries also gave employment to 10,409 more persons than the "food" industries, but paid out \$4,182,477 less in salaries and wages.

9.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-34, and in Detail for 1934.

NOTE.—Statistics for the years 1923 and 1925 are given at pp. 430-431 of the 1931 Canada Year Book, and figures for 1927 and 1928 at pp. 430-431 of the 1933 edition.

¹ Net value is gross value less cost of materials, fuel and electricity for 1924 and later years; see footnote 1, p. 407. These calculations are not available for the purpose classification.

Subsection 3.—Manufactures Classified by Origin of the Materials.

Classification of Manufacturing Production According to the Origin of the Materials Worked Upon.—The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 10 for the years 1924, 1926, 1929, 1930, 1931, 1933, and 1934. By this means Canadian manufacturing production may be analysed from a new angle, one by means of which interesting comparisons may be made with the external trade classification according to origin.

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials which cannot be grown in Canada such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc., but it should be understood that industries included in the Canadian origin classes may be using large quantities of imported corn, fruit, tobacco, hides, wool, etc.

While the period reviewed in the following table only covers the short space of the 11 years from 1924 to 1934, interesting changes have taken place in the relative importance of the industries based on materials from the different origins. Since the purpose of such a comparison is to discover the relative importance of the manufacturing work done upon materials from the different origins, the figures of net value of products or the value added to the raw materials by the manufacturing processes will give a more accurate measure of the importance of the industrial groups than the figures of gross value of products.

The values added in the manufacture of materials of mineral origin represented 31.7 p.c. of the total value added by manufacture in all industries in 1934. This group advanced from second place in 1924 when the percentage of the total was 27.9. The second largest group from the point of view of value added is that of farm origin which accounted for 30.0 p.c. of the total value in 1934. This group with 30.7 p.c. of the total was in first place in 1924. The values added by the industries of the forest group, which are third in importance, declined from 23.8 p.c. of the total in 1924 to 18.7 p.c. in 1934. On the other hand, central electric stations better their position, the percentages of the totals being 7.6 in 1924 and 9.6 in 1934. The above percentages of values added are based on the old method of computation, whereby the materials only are deducted from the gross value of products. The increase during the period under review in the relative importance of the industries of the mineral group was probably due to a number of influences. The expansion of the motor vehicle industry, the rapid growth in the use of electrical equipment, growing dependence of the construction industry upon large quantities of steel, cement and various other manufactured mineral products, and the development of metallurgical plants in Canada were some factors in the growing importance of the mineral group of industries. Another factor in this trend has been the growing appreciation and development of the wealth of the mineral resources of Canada. Not only have the various mining activities made the raw materials for mineral industries more readily available, but those activities have also required large quantities of machinery, electrical apparatus and other finished products of mineral origin.

In the year 1934, the industries of the farm group exceeded those of any other group in the gross value of products with 37.8 p.c. of the total, as compared with 32.0 p.c. for the mineral and 15.7 p.c. for the forest origin group. These three principal groups stood in the same order of importance with regard to salaries and wages paid. In employment, also, the farm origin group ranks first, followed

by the mineral origin and forest origin groups. In the matter of capital invested, central electric stations led with 30.4 p.c. of the total, followed by the mineral group with 27.0 p.c., the farm group with 18.7 p.c. and the forest group with 18.6 p.c.

10.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924-34.

NOTE.—Statistics for 1925 will be found at p. 412 of the 1930 Canada Year Book, those for 1927 and 1928 at pp. 433-434 of the 1933 edition, and those for 1932 at p. 435 of the 1936 edition.

Subsection 4.—The Forty Leading Manufacturing Industries.

A prominent feature of Canadian manufacturing development in recent years has been the growth of central electric stations and non-ferrous metal smelting. These industries, based upon water-power and mineral resources, have taken their places among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources.

In the following statement, the rank of the ten leading industries in 1934, from the standpoint of gross value of production, is compared with their respective ranks in representative years since 1922.

THE TEN LEADING INDUSTRIES, 1934, COMPARED AS TO RANK FOR REPRESENTATIVE YEARS 1922-33.

Industry.	Rank in—							
	1922.	1926.	1929.	1930.	1931.	1932.	1933	1934.
Pulp and paper.....	2	1	1	1	1	1	1	1
Non-ferrous metal smelting and re-fining.....	38	10	10	10	4	6	3	2
Central electric stations.....	6	7	8	2	2	2	2	3
Slaughtering and meat packing....	3	3	2	2	3	3	4	4
Flour and feed mills.....	1	2	3	3	5	4	5	5
Butter and cheese.....	5	6	6	6	6	5	6	6
Petroleum products.....	10	12	11	11	8	7	7	7
Automobiles.....	7	5	4	9	14	11	12	8
Cotton yarn and cloth.....	8	9	14	23	22	16	9	9
Bread and other bakery products..	12	16	15	15	12	9	8	10

The incidence of the depression resulted in a rearrangement in the rank of many industries which probably will prove temporary. The suspension of capital expenditures, a serious factor in the depression, greatly reduced the output of such important industries as: sawmills, electrical equipment, automobiles, railway rolling-stock, primary iron and steel, machinery, etc. On the other hand, the demand for goods for immediate consumption was more stable, including such industries as: petroleum products, bakeries, cotton yarn and cloth, printing and publishing, clothing, tobacco, beverages, etc. (See Tables 11 and 11A.)

11.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1934.

¹ See footnote to Table 1, p. 407.

Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1934 amounted to \$2,022,000,000 or nearly 80 p.c. of the gross value of manufactured products of the Dominion. Of this amount Ontario contributed \$1,255,000,000 and Quebec \$767,000,000. The proximity of Ontario to the coal-fields of Pennsylvania, the water-power resources of the two provinces and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had in 1934 the third largest gross manufacturing production, \$177,000,000, and Manitoba the fourth, \$105,000,000. Alberta, Nova Scotia, New Brunswick and Saskatchewan followed in the order named, with gross productions ranging from \$69,000,000 to \$42,000,000, succeeded by Prince Edward Island with \$3,300,000.

Subsection 1.—The Manufactures of the Maritime Provinces, 1934.

Table 12 gives the statistics of the leading industries of each of the Maritime Provinces for the year 1934. In Prince Edward Island, fish canning and curing, with a gross production of \$743,950, was foremost, followed by butter and cheese, slaughtering and meat packing, central electric stations, etc. Manufacturing in Nova Scotia and New Brunswick is, of course, to a considerable extent dominated by the steel and forest industries in the former and the forest industries in the latter, although there is a large sugar refinery in each province. The pulp and paper industry, with a gross value of production of \$13,365,952 in 1934, was the most important industry in New Brunswick, followed by sawmills with an output of \$3,856,865, central electric stations with an output of \$3,071,568, the coffee, tea and spice industry with an output of \$2,956,440, and fish canning and curing with a value of production of \$2,266,745. These five industries combined provided 47.5 p.c. of the gross manufacturing production of the province. In Nova Scotia, primary iron and steel, after a lapse of a few years, was again in first place. This industry was so severely affected by the depression that in 1933 it was only in fourth place. The increase in production was about 80 p.c. from \$3,763,242 in 1933 to \$6,701,638 in 1934. Other leading industries with their values of production were:—fish curing and packing, \$5,268,128; central electric stations, \$4,904,770; pulp and paper, \$4,296,428; sawmills, \$2,436,801; butter and cheese, \$2,187,609.

12.—Statistics of the Leading Industries of each of the Maritime Provinces, 1934.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Nova Scotia, petroleum products, sugar refineries, wire goods and coke and gas products; in New Brunswick, sugar refineries, cotton yarn and cloth, and railway rolling-stock. The statistics for these industries are included in the item "all other leading industries"

PRINCE EDWARD ISLAND.

¹ See headnote to this table on p. 441. ² Net value is obtained by deducting cost of materials, fuel and electricity from the gross value. These calculations are not available for the individual provinces.

Subsection 2.—The Manufactures of Quebec, 1934.

The pulp and paper mills of Quebec, the most important manufacturing unit of the province, produced goods with a selling value at the factory of \$74,407,960 in 1934. This exceeded by nearly \$28,000,000 the total values produced by central electric stations (\$46,818,247), the industry which ranked second in importance. This was followed by cotton yarn and cloth (\$42,463,877), non-ferrous metal smelting and refining (\$36,230,880), tobacco, cigars and cigarettes (\$31,995,548), women's factory clothing (\$30,868,071), butter and cheese (\$25,137,541), slaughtering and meat packing (\$22,618,696), petroleum products (\$21,664,598), men's factory clothing (\$20,835,234), etc. A change took place in the ranking of some of the more important industries of the province. Butter and cheese advanced from eleventh to seventh place and slaughtering and meat packing from ninth to eighth place, while leather boots and shoes dropped from eighth to eleventh place and petroleum products from seventh to ninth place.

The importance of the pulp and paper industry in Quebec is shown by a comparison with the industry throughout Canada. The Quebec section of the industry,

in addition to supplying about 10 p.c. of the total gross value of all products manufactured in the province, furnished 49 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed 69 p.c., the value of railway rolling stock 45 p.c., the value of tobacco, cigars and cigarettes 85 p.c., and the value of boots and shoes 58 p.c. of the Dominion totals for these products. Thus, Quebec is an outstanding manufacturing province rather on account of her individual industries than because of the diversification of her industrial activity.

13.—Principal Statistics of the Forty Leading Industries of the Province of Quebec, 1934.

NOTE.—Statistics for sugar-refining, which is also one of the leading industries of this province, cannot be published, since there are fewer than three establishments reporting.

¹ Net value is obtained by deducting cost of materials, fuel and electricity from gross value. These calculations are not available for the individual provinces.

Subsection 3.—The Manufactures of Ontario, 1934.

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1934 represented about 50 p.c. of those of the whole Dominion, while those of Quebec, the second province in importance in this respect, amounted to 30 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show: in 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production almost equal to that of the remainder of the Dominion.

The value of manufactured products totalled \$1,255,325,701 in 1934. In value of production, non-ferrous metal smelting heads the list with an output valued at \$85,989,197. Other leading industries in the order of their importance are: automobiles \$75,649,429, slaughtering and meat packing \$51,513,133, flour and feed mills \$50,659,130, pulp and paper \$47,298,680, rubber goods, including footwear \$44,937,204, central electric stations \$43,498,715, and butter and cheese \$40,905,534. Some significant changes took place in the ranking of some of the leading industries. Flour and feed mills dropped from first place in 1933 to fourth place in 1934, while non-ferrous metal smelting, automobiles and slaughtering and meat packing each advanced one step. It is particularly interesting to note that non-ferrous metal smelting was for the first time the dominant industry of the province, displacing that of automobiles which for a number of years prior to the depression was the leading industry.

The turning point of the depression was reached in the summer of 1933. The increases in the latter part of the year were not, however, sufficiently pronounced to offset the losses of the beginning of the year. The result was that the principal statistics for 1933 were the lowest since 1929. Considerable improvement was reported for 1934. Compared with the previous year, there was an increase of 10·1 p.c. in the number of employees, with an even greater increase in the amount paid out in salaries and wages, namely, 15·5 p.c. The increase in the value of production was 24·9 p.c. and in the value added by manufacture 20 p.c.

The depression was particularly hard on industries producing capital or durable goods, and these constitute an important factor in the manufactures of Ontario. Thus, production was disproportionately curtailed in such important industries of the province as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted not only in a drop in the rank of such industries within the province, but in a lowering of the manufacturing production of the whole province relatively to that of other provinces less affected by these influences. Some of these industries, particularly automobiles and primary iron and steel, have made a good recovery since 1933.

Indicating the greater diversification of industry in Ontario as compared with Quebec, the percentages which the forty leading industries bore to the total manufactures of the province were higher in nearly every particular in Quebec than in Ontario, especially in the capital employed and the number of establishments and employees. Outstanding among the industries in which the province of Ontario was pre-eminent, was that of automobile manufacturing, which was carried on practically in this province alone. Other important industries in which Ontario led, with the percentage which the production of each bore to that of the Dominion in 1934, were as follows: agricultural implements 95 p.c.; leather tanneries, 88 p.c.;

rubber goods, 81 p.c.; furniture and upholstery, 61 p.c.; fruit and vegetable canning, preserving, etc., 69 p.c.; electrical apparatus and supplies, 79 p.c.; castings and forgings, 65 p.c.; primary iron and steel, 62 p.c.; slaughtering and meat packing, 42 p.c.; flour and feed mills, 53 p.c.; hosiery and knitted goods, 65 p.c.

¹ Net value is obtained by deducting cost of materials, fuel and electricity from gross value. These calculations are not available for the individual provinces.

Subsection 4.—The Manufactures of the Prairie Provinces, 1934.

The slaughtering and meat-packing industry in 1934 was outstanding among the manufactures of the Prairie Provinces when treated as a single unit. During 1934, as may be seen from Table 15, the gross value of production of this industry was \$38,973,433, (Manitoba \$19,736,903, Saskatchewan \$5,621,232 and Alberta

\$13,615,298). The second industry, from the point of view of gross value of production, was flour and feed mills with products valued at \$29,753,025, (Manitoba \$7,426,855, Saskatchewan \$11,794,973 and Alberta \$10,531,197). Butter and cheese comprised the third largest group, with an output valued at \$19,302,855, followed by petroleum products with \$15,688,582, central electric stations \$15,175,275 railway rolling-stock \$10,894,945, etc.

The order of the leading industries is somewhat different in each province. In Manitoba, the leading industries with their gross value of products in 1934, were as follows:—slaughtering and meat packing \$19,736,903, railway rolling-stock \$8,038,666, flour and feed mills \$7,426,855, butter and cheese \$7,076,644, and central electric stations \$6,378,674. In Saskatchewan, the leading industries were:—flour and feed mills \$11,794,973, petroleum products \$5,944,278, butter and cheese \$5,813,243, slaughtering and meat packing \$5,621,232, and central electric stations \$4,229,402. In Alberta, slaughtering and meat packing with an output of, \$13,615,298 was the leading industry. This was followed by flour and feed mills with \$10,531,197, petroleum products \$8,602,050, butter and cheese \$6,412,968, and central electric stations \$4,567,199.

The importance of these industries, based on such natural resources of the Prairie Provinces as grain-growing and cattle-raising areas, is evident.

15.—Principal Statistics of the Leading Industries of Manitoba, Saskatchewan and Alberta, 1934.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Manitoba and Saskatchewan, non-ferrous metal smelting and refining and, in Alberta, sugar refining and wood preservation. The statistics of the two industries of Alberta are included under the heading "all other leading industries".

Subsection 5.—The Manufactures of British Columbia,* 1934.

British Columbia was, in 1934, the third most important manufacturing province in the Dominion, producing goods with a gross value of \$176,721,398. About 17 p.c. of this production, or \$29,404,759, is seen in Table 16 to be that of the sawmilling industry; the predominance of forest products industries in the industrial life of the province is still further emphasized if to this figure be added \$13,278,736, the value of production of the pulp and paper industry which ranks third. Second in importance among the industries of the province is that of fish curing and packing, with a gross value of production of \$15,078,813. This was followed by central electric stations with \$10,715,293, petroleum products \$8,249,971, slaughtering and meat packing, \$7,521,042, etc.

* Including the Yukon Territory.

¹ Includes: distilleries, sugar refineries and non-ferrous metal smelting and refining. ² The net value is obtained by deducting cost of materials, fuel and electricity from gross value. These calculations are not available for the individual provinces.

Section 4.—Principal Factors in Manufacturing Production.
Subsection 1.—Capital Employed.

In a retrospective study of capital employed in Canadian manufactures since 1900, the remarkable increase denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced

to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands and over, and while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1934 in all establishments, irrespective of the number of employees, was \$4,703,917,730 as compared with \$4,689,373,704 in 1933 and with \$2,696,154,030 in 1917, an increase of 75 p.c. in 17 years.

The provincial distribution of the manufactures of Canada may be illustrated by the investment of capital. Capital employed in Ontario in 1917 was 48.3 p.c. of the total, 52.4 p.c. in 1923 and 43.9 p.c. in 1934. The percentages employed in the plants of Quebec were: 29.4 in 1917, 29.5 in 1924 and 35.7 in 1934. British Columbia held third place in 1934 with a capital investment of 7.8 p.c. of the total, while Manitoba, Nova Scotia, New Brunswick, Alberta and Saskatchewan followed in the order named, with proportions varying between 3.9 p.c. and 1.4 p.c. (Table 17.)

From a survey of the industrial groups in which the capital of the country is invested, it appears that the central electric stations industry led again in 1934, with an investment of 30.4 p.c. of the total. The wood and paper group was second with 18.8 p.c., the iron and its products group third with 11.7 p.c. and the vegetable products group fourth with 10.8 p.c. Up to 1930, the wood and paper group had been first since 1919 in capital invested, but since 1931 the central electric stations group has assumed the premier position. (Table 17.)

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportion of fixed and liquid assets. In 1923, land, buildings, machinery and tools constituted 64 p.c. of the total capital, while in 1929 the proportion had increased to 66 p.c. and in 1934 to 74 p.c. The fixed assets amounted to \$3,489,235,519 in 1934, while current assets, including inventories of raw materials and finished products, bills and accounts receivable, cash and sundries, were valued at \$1,214,682,211. Details by provinces and industrial groups are given in Table 18.

Subsection 2.—Employment in Manufactures.*

The total number of persons engaged in those manufacturing industries of Canada for which statistics were obtained in 1934 was in that year 545,162, as compared with 493,903 in the same industries in 1933 and 694,434 in 1929. The 1934 employees included 99,730 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 445,432 wage-earners, the average number employed as derived from the manufacturers' records of the numbers on the pay-rolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12 whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which are in operation only a limited number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, not only in seasonal industries

* For other employment statistics see Chapter XIX, Section 9, Subsection 3.

but also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method had a reducing influence on apparent average wages and on all other averages per wage-earner and per employee. In 1931, however, the old method of computing the average number of wage-earners was again adopted. A change was also made in the compilation of the number of salaried employees. Prior to 1931, owners who were working as ordinary wage-earners, such as small bakers, reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. In 1931, also, travelling salesmen who were attached to the plant and devoted all or the greater part of their time in selling the products of that plant were included with salaried employees. Prior to this they were not reported at all. These changes, therefore, explain the apparent increase in the number of salaried employees in 1931 as compared with the previous year; actually there was a decrease, this apparent increase being attributable in part to a decrease in the number of wage-earners.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table 19. Then, taking the percentages of the wage-earners and the total employees in each year to those of 1917, and dividing these percentages into the volume of manufacturing production in each year (see p. 417 for the index of volume), the quotients give tentative conclusions regarding the efficiency of production per wage-earner and per employee in years subsequent to 1917, as compared with that year. Since central electric stations were excluded in computing the index of the volume of production, employees in these establishments have been excluded also in computing the percentages relative to 1917 for both wage-earners and total employees, and consequently from the indexes of efficiency of production. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of employees adopted in 1925 and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. The table illustrates the development of modern industry which has accomplished a large increase in production with a comparatively small increase in wage-earners, by better organization and the use of improved equipment. Capital invested in manufacturing industries, exclusive of central electric stations, has increased by 40.0 p.c., from 1917 to 1934, compared with a decrease of 20.2 p.c. in wage-earners, while the horse-power used per wage-earner has increased from about 3 in 1917 to 10 in 1934. The factor of better organization is not susceptible of measurement. However, salaried employees have increased by 42.9 p.c. since 1917, or more nearly in proportion to the growth in production than wage-earners. The result of these developments has been the increase of 55.0 p.c. in the volume of production per wage-earner and a smaller increase of 43.0 p.c. per employee, owing to the increased proportion of salaried employees in the total. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices; it is possible that the sudden rise in the indexes of efficiency in 1921 and 1922 may be partly accounted for by their elimination in the contraction of industrial operations which occurred at that time. During the recent depression years the reduced volume of production lowered the indexes of efficiency.

Statistics of employment in manufacturing industries during 1934, derived from the Census of Manufactures, are shown in Table 8 (pp. 426 to 431). According to these statistics, the 25,663 establishments covered employed 99,730 salaried employees and 445,432 wage-earners, a total of 545,162 persons. Out of every 1,000 persons employed in manufacturing, 183 were classed as salary earners and 817 as wage-earners; the former earned 30.0 p.c. and the latter 70.0 p.c. of the total amount paid out as remuneration for services.

19.—Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-34.

NOTE.—Employees of central electric stations are excluded in this table since factors of production and efficiency for that industry are not representative and would vitiate the result.

Distribution of Employees in 1934.—An analysis of the returns by provinces shows that 50,718 or 50.9 p.c. of all the employees on salaries were employed in Ontario; of this number 38,239 were males and 12,479 were females. The province of Quebec with 29,044 persons or 29.1 p.c. of the total, recorded the second largest number of salaried workers; of these 23,214 were males and 5,830 females. British Columbia ranked third with 6,037 or 6.1 p.c. of the total salaried employees.

Of the wage-earners employed numbering 445,432, 46.9 p.c. were employed in Ontario, 34.3 p.c. in Quebec and 6.5 p.c. in British Columbia. It is interesting to note that out of every 1,000 salaried employees 221 were females, while in the case of wage-earners 239 out of every 1,000 were females.

The wood and paper industries, with 23,912 salaried employees, reported a larger number than any other group, having 24.0 p.c. of the total. The vegetable products group came next with 15,425 salaried employees or 15.5 p.c. of the total. The textile industries gave employment to a proportionately greater number of female salaried employees than any other group. Out of every 1,000 salaried employees in this group 320 were females, as compared with only 207 for all the other groups.

In the number of wage-earners employed, the textile industries came first with 103,404 or 23.2 p.c. of the total. This was followed by the wood and paper products group, with 92,779 wage-earners or 20.8 p.c. of the total. It is also of interest to

note that out of every 1,000 wage-earners in the textile industries 554 were females, while in all the other groups 144 were females. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that out of all female employees engaged in the manufacturing industries of Canada, 47.6 p.c. were found in the textile group.

20.—Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1931.

Monthly Record of Employment in Manufactures.—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled from the Census of Industry, is given in Table 21 for representative years 1922 to 1934 and by sex for certain of the years. Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. In 1929, however, the rising tide of "good times" was checked about midsummer and then the recession set in during the autumn with the stock market crash. Employment during 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment was reached in June, 1929, when 596,544 wage-earners were on the payrolls. This compares with the peak month in 1930 of 556,386 wage-earners, 484,661 in 1931, 417,685 in 1932, 429,018 in 1933 and 462,444 in 1934. In July, 1933, employment took an upward swing; for the first time since 1929 the number of wage-earners on the payroll was higher than that for the corresponding month of the previous year. The improvement has been generally maintained since then. (See Table 21 and Chapter XIX, Section 9, Subsection 3.)

Hours Worked by Wage-Earners.—The wage-earners working specified numbers of hours in the month of highest employment in 1934 is shown in Table 22 by provinces, groups, and the forty leading industries. An explanation should be made of the term "month of highest employment" as used in connection with this table. Each firm is required to report the number of hours per week worked by its wage-earners during the month in which the greatest number were employed. It therefore happens that, in the case of one firm, the month of highest employment might be May, while in that of another firm October might be the month of highest employment. The month of highest employment as shown in the following table, therefore, does not refer to any particular month but represents the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is of more significance, as in this case it coincides for a great number of the firms engaged in the same industry. For Canada as a whole, 54 p.c. of the wage-earners in 1934 worked 48 hours or less, 14 p.c. worked between 49 and 50 hours and 32 p.c. worked over 50 hours per week. Average hours worked per week may also be worked out for the provinces, industrial groups and the forty leading industries from the figures shown in the table following.

22.—Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1934, by Provinces and Groups, and for each of the Forty Leading Industries.

NOTE.—These are the regular hours worked per week and do not, therefore, include overtime.

Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries, 1934.

The total salaries and wages disbursed by manufacturers in 1934 was \$533,594,635 paid to 545,162 workers, compared with \$813,049,842 paid to 694,434 persons in 1929 and \$509,382,027 paid to 621,694 persons in 1917. Of the 1934 aggregate, \$160,986,876 or 30 p.c. was paid to 99,730 salaried employees who constituted 18 p.c. of the total number, and \$372,607,759 or 70 p.c. was paid in wages to 445,432 wage-earners, who formed 82 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1934 was \$1,614, compared with \$1,982 in 1930 and \$1,299 in 1917, while the average wage in 1934 was \$837, compared with \$785 in 1933, \$1,045 in 1929 and \$760 in 1917. Thus during the seventeen years since 1917, average salaries have increased by 24 p.c., while average wages have increased by only 10 p.c. (See Table 23.)

Average Earnings, by Provinces and Industrial Groups.—In 1934, Ontario showed the highest average salary of \$1,672, followed by Quebec with \$1,624, British Columbia, with \$1,574, and Manitoba with \$1,532. The head offices of many large corporations being located in Montreal, Toronto, Vancouver, and Winnipeg tend to raise the average salaries in these provinces. In the other Prairie Provinces the averages were smaller, especially in Saskatchewan, while in the Maritime Provinces the average salaries were still lower, there being comparatively few large executive offices in these provinces.

British Columbia, with an average wage of \$958, was the highest in the Dominion in 1934, being \$121 higher than the general average. In the western provinces average wages are usually higher, this being due to an unusually small proportion of women workers, while many of the male employees were engaged in the better-paid wood and paper, electric light and power industries. In the four provinces situated to the east, average wages in manufacturing were lower than the mean for the Dominion, while from Ontario westward the opposite was the case. The seasonal nature of some of the leading industries, notably fish preserving and lumbering, tends to reduce the mean wage in the Maritime Provinces and Quebec, while, in addition to this, Quebec also has a larger proportion of female wage-earners, employed chiefly in the textile, food and tobacco industries, than any other province, except Prince Edward Island.

The highest average salary, *viz.*, \$1,874, was reported by the non-ferrous metal products group, while the animal products group, with an average salary of \$1,350 in 1934 was the lowest. In wages paid, central electric stations came first with an average of \$1,312, there being no female wage-earners in this industry. The textile industries, on the other hand, had the lowest average wage of \$682, this being due to the fact that in this group more than 55 p.c. of the wage-earners were females. As was stated elsewhere in this report, of all the female wage-earners employed in the manufacturing industries of Canada, nearly 48 p.c. found employment in the textile industries.

Average Earnings in the Forty Leading Industries.—Table 24 shows employees by sex and the average salaries and wages paid in the forty leading industries during 1934, together with average salaries and wages paid in 1933. The rank of each industry is based on the aggregate salaries and wages paid.

In only seven industries did the average salaries exceed \$2,000; in fourteen they ranged from \$1,700 to \$2,000; in eleven they ranged from \$1,500 to \$1,700, while in the remaining eight they were below \$1,500. None of the six industries paying the highest salaries—sugar refining \$2,745, leather tanneries \$2,315, pulp and paper \$2,252, breweries \$2,189, non-ferrous metal smelting and refining \$2,170 and primary iron and steel \$2,166—reported a proportion of female salaried employees equal to the general percentage of the forty leading industries. The lowest salaries were reported by the sawmilling, bread and other bakery products, and the butter and cheese industries.

The highest wages, or those above \$1,000, were paid in ten industries—central electric stations \$1,312, printing and publishing \$1,254, non-ferrous metal smelting and refining \$1,237, coke and gas products \$1,194, automobiles \$1,190, petroleum products \$1,174, primary iron and steel \$1,136, sugar refining \$1,124, pulp and paper \$1,098 and breweries \$1,047—in all of which the proportion of skilled workers is probably high. In six other industries average wages ranged from \$900 to \$1,000. These were: slaughtering and meat packing \$978, automobile supplies \$963, paints, pigments and varnishes \$944, machinery \$943, printing and bookbinding \$936 and railway rolling-stock \$935. In most of these industries the proportion of women workers is low. In the remaining twenty-four industries the average was below \$900. This last group includes seasonal industries, such as fruit and vegetable canning, fish curing and packing, and industries which contain a large number of small units in which the work is intermittent, such as feed mills. Other industries with low average wages were: textiles, tobacco, and boots and shoes, in which the proportion of female wage-earners is high, the number in several of these industries male.

24.—Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1934, together with Comparative Figures of Average Salaries and Wages Paid in 1933, and Totals and Averages Paid in Previous Representative Years.

Note.—Industries ranked according to the aggregate salaries and wages paid.

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 19·8 p.c. between 1917 and 1934. The details of the computation are given in Table 25. There was little change in real wages during the three years 1917 to 1920, when prices were rising rapidly. During the following two years, 1921 and 1922, when prices dropped rapidly, real wages increased by 6 p.c. From then until 1934 there was an almost continuous rise from year to year with the exception of 1930. In 1931 real wages reached a maximum of 120·2 and then declined to 113·8 in 1933 and rose again to 119·8 in 1934.

25.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1917-34.

NOTE.—The figures of average earnings for the years 1931 to 1933 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. (See footnote 1 to Table 4, p. 413.)

Percentages of Wages and Salaries to Value of Products.—Table 26 shows the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of wages and salaries, of interest, rent and taxes, charges for fuel, power, lighting, repairs, and all other overhead charges. The percentage of salaries was highest in the years 1931 to 1934. These were years in which manufacturing production was curtailed and it is probable that, salaried employees being a part of the organization of an industry rather than of its productive force, salaries were an abnormally high percentage of the lower levels of production then prevailing. The percentage declined steadily with the increasing manufacturing production maintained during the period 1924 to 1929, while from 1931 to 1934, due to decreased industrial activity, the percentage of salaries to value added rose to 13·4, 15·0, 14·5 and 13·2 respectively. It should be borne in mind, however, that salaried employees increased 30·8 p.c. during the period 1924-34 while wage-earners increased but 3 p.c. The percentage of wages has fluctuated

much less than that of salaries. The number of wage-earning employees may be more readily adjusted to the activity of the industry and wage levels likewise more readily adjusted to the price levels of the products. The percentage of wages to the values added in manufacture was thus only 5.1 p.c. lower in 1934 than in 1924. The percentage was highest in 1920, when, in the post-war inflation, average wages were highest (Table 25) and the efficiency of production lowest (Table 19).

In previous reports on manufactures the percentage of wages and salaries paid to the value added by manufacture was carried back to 1917. Under the new method of calculating the value added, whereby the cost of materials plus fuel and electricity is deducted from the gross value of the products, it is only possible to go back to 1924. Under the old method of calculating the value added by manufacture only the cost of the materials used was deducted from the gross value of the products.

Subsection 4.—Size of Manufacturing Establishments.

A modern characteristic of industry in all industrial countries has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those which handle expensive raw materials appear to operate on a larger scale. Both measures are subject to two limitations: first, they depend on the fluctuation of business activity and the demand of the consumer; second, over any lengthy period of time there is the difficulty of comparability resulting from changes in the method of the census. Since 1932, for example, due to the difficulty of eliminating duplication in the value of production in central electric stations, as well as the difficulty of apportioning the capital investment as between different cities, it has been found necessary to exclude figures for central electric stations in showing statistics of size of establishment as well as statistics of cities and towns.

Size as Measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries,

the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over a million dollars dropped again to 482, their output being valued at \$1,451,658,954 or 53 p.c. of the total. Due to the elimination of central electric stations, the figures since 1932 are not directly comparable with those for 1929 or 1922:

¹ The value of production in 1929 shown above is greater in the aggregate by \$34,615,939 than the value of production shown in the other tables of this chapter. This is due to the elimination from the other tables of the value of electric energy purchased by central electric stations from other generating plants for distribution to local consumers. For the reporting plant, however, the cost of such power is regarded as the cost of materials. This necessarily involves a duplication in the value of production which it is impossible to make compensation for as between the groups. ² The figures for 1933 and 1934 do not include central electric stations.

28.—Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1934.

Note.—The figures in this table do not include central electric stations.

Size of Establishments as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 it had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 p.c. (central electric stations included). The same also holds true for all establishments employing 101 hands and over. In 1923 they employed 58.5 p.c. of the total, in 1929, 61.9 p.c., and in 1932, 55.7 p.c.

29.—Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923, 1929, 1933 and 1934.

NOTE.—The total employees for 1933, exclusive of central electric stations, exceed the totals shown elsewhere in this report because contract workers in the salmon canneries of British Columbia and other provinces are included here but excluded elsewhere.

Size of Establishments of Some of the Leading Industries.—The following statement and Table 31 show the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of non-ferrous metal smelting, petroleum products, cotton yarn and cloth, slaughtering and meat packing, and pulp and paper, whereas in the case of butter and cheese, bread and other bakery products, women's factory clothing, and printing and publishing the degree of concentration is but moderate. With regard to flour and feed mills, concentration is marked in the case of flour mills, but the small size of the average feed mill offsets this for the industry as a whole.

PERCENTAGE IMPORTANCE OF ESTABLISHMENTS WITH A GROSS PRODUCTION OF \$1,000,000 AND OVER EACH IN CERTAIN INDUSTRIES.

Subsection 5.—Power and Fuel.

Power.—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is increasingly dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

Central electric stations, which generate electricity for both lighting and power purposes, are treated in Table 32, separately from the other groups of industries. Internal combustion engines include all gasoline engines, gas engines (natural, coal and producer gas), and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

The rapid increase in the development of power in Canada and in its utilization in manufacturing industries is illustrated by the summary figures for the years 1921 to 1934 in Table 32. The table is divided into two parts, the first showing manufacturing industries exclusive of central electric stations and the second showing central electric stations only. The abundance of readily available water power in many parts of Canada facilitating the development of low-cost hydro-electric power has, no doubt, played a large part in this rapid growth. Of the total increase in power equipment since 1923, amounting to 6,585,968 h.p., inclusive of central electric stations, no less than 4,288,623 h.p., or 65 p.c., was in water power. However, some sections of Canada are not so well provided with water-power resources and chiefly in such sections primary power derived from steam engines and turbines and internal combustion engines has also increased rapidly during the period covered. In the provinces of Prince Edward Island, Nova Scotia, Saskatchewan, and Alberta, primary power produced from fuels exceeded that from water in 1934. The total installation of electric motors increased 2,014,585 h.p., or 153 p.c., in the 12 years covered, by far the greatest part of this increase being in motors operated by power purchased from central electric stations.

Comparisons with the data for 1923 show an increase in 1934 of 6,585,968 h.p., or 140 p.c., in the total power equipment in all manufacturing establishments, including central electric stations, by far the largest increase, amounting to 4,488,175 h.p., being in central electric stations. Of this increase in central electric stations, water-power development accounted for 4,278,127 h.p., while steam power installed increased by 190,463 h.p. and internal combustion engines increased by 19,585 h.p. Provinces with large water-power developments show the greatest increases in primary power, *i.e.*, steam engines and turbines, internal combustion engines and hydraulic turbines or water wheels. For all manufacturing industries, including central electric stations, the province of Quebec led with an increase of 2,451,575 h.p. during the period under review. Ontario came second with an increase of 1,012,551 h.p., British Columbia third with an increase of 465,576 h.p., Manitoba fourth with 371,626 h.p., Nova Scotia fifth with 170,795 h.p., New Brunswick sixth with 128,915 h.p., etc. In the utilization of hydraulic power, Quebec exceeded Ontario for the first time in 1925. In 1927 Quebec exceeded Ontario or any other province in the total of installed primary power from all sources and has been the leading province since then, largely owing to its extensive water-power resources, 94 p.c. of its primary power in 1934 being derived from water.

32.—Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-34, with Details by Provinces and Industrial Groups for 1934.

Fuel and Electricity.—Fuel and electricity consumed by the manufacturing industries of Canada in 1934 was valued at \$79,838,002. Of this amount \$41,462,574 was for fuel and \$38,375,428 for electric power. The fuel used in industrial establishments in 1934 included 4,301,110 tons of bituminous coal valued at \$22,954,485, constituting 55.4 p.c. of the total fuel cost. The other chief fuels in order of value were: gas (principally manufactured gas) comprising 13.9 p.c.; fuel oil 13.3 p.c.; coke 4.1 p.c.; wood 3.7 p.c.; and anthracite coal 3.0 p.c. Out of a fuel account of \$41,462,574, Ontario expended \$19,930,555 or 48.1 p.c. of the total. The manufacturing plants of Quebec expended \$11,037,217, Nova Scotia \$2,758,321, and British Columbia \$2,308,154.

The groups of industries in which fuel was most extensively used in 1934 were: wood and paper \$8,609,695; non-metallic minerals \$8,379,700; iron and steel products \$6,964,888; and vegetable products \$5,735,808. Fuel is used quite generally throughout the industrial field for the generation of power by means of internal combustion and steam engines. The most important industries where heat is applied directly to materials to transform them or to facilitate their manipulation are foundries and machine shops, blast furnaces and steel mills, smelting plants, brick, tile, lime and cement-making, petroleum refining, and the glass industry. In such industries as the manufacture of coke and gas the coal used as a material which enters into the actual composition of the product is not treated as a fuel but as a raw material and is not, therefore, included in the figures of Table 33.

The total annual expenditure on fuel decreased by \$10,178,338 or 19.7 p.c. in the thirteen years 1921-34 covered by the summary figures in Table 33. During this period prices of fuel generally have declined; thus with an increase of 4.8 p.c. in the quantity of bituminous coal used, the value decreased 33.9 p.c.

The wood and paper products group is the largest user of electric power, the consumption in 1934 being valued at \$17,196,111 or 44.8 p.c. of the total cost of power used by all manufacturing industries. The non-ferrous metal products group ranks second with only 10.7 p.c. of the total. Other principal users were iron and steel industries, vegetable products, and textiles.

In the provinces of Quebec and British Columbia, the cost of electricity exceeds that of fuel. For Quebec, which is the largest user of electrical power, the electricity used was \$17,255,397 as against \$11,037,217 for fuel, while in British Columbia electric power totalled \$3,279,127 and fuel \$2,308,154. Ontario, which ranks second as a user of electrical energy, expended \$13,605,476 for electricity and \$19,930,555 for fuel.

At the Conference of British Commonwealth Statisticians, held in Ottawa, Sept. 13 to Oct. 9, 1935, Canadian representatives agreed with those of the United Kingdom and other British countries that fuel and power used in manufacture should be logically regarded as a material of production, and their cost, therefore, should be deducted from the gross in arriving at the net value of production. This procedure has, therefore, been followed in the compilation of manufacturing statistics for 1934.

Section 5.—Manufacturing Industries in Cities and Towns.

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the West the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 34, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for about 92 p.c. of the total, while in British Columbia and the Maritime Provinces, where sawmilling, fish packing, and dairying are leading industries, the proportion falls to 64 p.c. and 62 p.c. respectively. In the Prairie Provinces manufacturing is largely confined to a few large urban centres.

34.—Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1934.

NOTE.—Statistics published in this table are in some cases higher than the corresponding figures shown in Table 36, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information in Table 36 without disclosing the operations of individual establishments. The statistics in this table do not include central electric stations.

Province.	Cities and Towns with a Gross Production of over \$1,000,000 each.	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each.	Total Production in Cities and Towns Producing over \$1,000,000 each.	Total Production in each Province.	Production in Cities and Towns as a Percentage of Total Production in each Province.

The five chief manufacturing cities of Canada are Montreal, Toronto, Hamilton, Vancouver, and Winnipeg. Statistics showing the trend of production in these cities during the latest five years for which the figures are available are given in Table 35. According to the Census of 1931, Hamilton was proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully employed population was employed in manufacturing, as compared with 28 p.c. in Toronto, 27 p.c. in Montreal, 18 p.c. in Winnipeg and 16 p.c. in Vancouver.

Eighteen other important cities with a gross production of manufactured goods of over \$15,000,000 in 1934 were as follows, in descending order of the value of their products: Montreal East, London, Oshawa, Kitchener, Walkerville, East Windsor, Quebec, Calgary, Three Rivers, Ottawa, Sarnia, Peterborough, Edmonton, St. Boniface, New Toronto, Saint John, Brantford, and Niagara Falls. Statistics of manufactures of cities and towns with a gross production of \$1,000,000 and over and with three or more establishments are given for 1934 in Table 36.

35.—Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1930-34.

NOTE.—For comparable figures for 1922-29, see p. 467 of the 1933 Year Book, and for 1931, p. 508 of the 1934-35 edition. Statistics for 1932-34 do not include central electric stations.

¹ Net value of production is obtained by deducting cost of materials, fuel, and electricity from the gross value of products. These calculations are not available for cities and towns.

CHAPTER XV.—CONSTRUCTION.

Relation of Construction Industry to General Business Conditions.—

The construction and building industry is not only the most widespread in its operation, it is one which expands most rapidly in good times when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed as the result of the introduction of new types of construction. Nevertheless, in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number of men are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

Activity in construction is of particular interest not only to those engaged in the industry itself but to those concerned with the supplying of its raw materials, such as lumber, steel, cement, paint, glass, and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913 and that between 1926 and 1929, construction contributed in large measure to produce the "booms" of those years, as is indicated in the figures of Table 5.

During the war period the industry was at a low ebb, except for the construction of munition plants, but after the War the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table 8. The urgent requirements due to the practical suspension of the industry during the War were fully met in the post-war years, but the peak of the inflation cycle in 1929 is reflected in the highest value of construction contracts on record. This was followed by successive declines until 1933,* when the industry reached a very low level of activity. There has been some recovery in 1934-36 but a very great deficiency in housing and other forms of construction must still remain from the suspension of activity during the depression years, to be overtaken when confidence is restored in the future stability of prices and the permanence of the recovery. To facilitate and encourage this process, the Dominion Housing Act was passed in 1935.

The Dominion Housing Act.—Administered by the Finance Department, the Dominion Housing Act, 1935, has a twofold purpose: (1) to assist in the improvement of housing conditions and (2) to assist in the absorption of unemployment by the stimulation of the construction and building material industries. The Minister of Finance is empowered to make advances and to pay expenses of administering the Act to the extent of \$10,000,000. The Act provides for loans for the construction only of new dwellings (including single-family houses, duplexes, and apartment houses); the security taken being in the form of a first mortgage running jointly to

* October, 1933, marked the lowest point of activity in this industry.

an approved lending institution and to the Dominion Government. In most cases, the loans may be for 80 p.c. of the cost of construction of the dwelling or its appraised value, whichever is the lesser; of a loan of 80 p.c., the lending institution advances 60 p.c. and the Government 20 p.c. The remaining 20 p.c. is provided by the borrower. Provision is also made in certain cases for loans of 70 or 75 p.c., where desired by the borrower or deemed advisable by the lending institution. The interest rate paid by the borrower is 5 p.c. This is made possible by the fact that the Government's funds are advanced on an interest basis of 3 p.c. Loans are made for a period of 10 years subject to renewal for a further period of 10 years upon revaluation of the security and on conditions satisfactory to all parties concerned. Interest, principal, and taxes are payable in monthly instalments. Amortization of principal is effected at a rate sufficient to pay off the loan in 20 years, but more rapid amortizations may be arranged to suit the convenience of the borrower. The Act requires sound standards of construction and contains other clauses safeguarding the mortgage.

The results of operations under the Dominion Housing Act, up to the end of February, 1937, were as follows:—

LOANS MADE UNDER THE DOMINION HOUSING ACT, TO FEB. 28, 1937.

The Government Home Improvement Plan.—To supplement the operations carried on under the Dominion Housing Act, the Government announced in September, 1936, the inauguration of a Home Improvement Plan. This plan provides for the making of loans by chartered banks and certain approved lending institutions to owners of residential property (including farm buildings) for repairs, alterations, and additions (including built-in equipment) to urban and rural dwellings. The loans shall not exceed \$2,000 on any single-family house. However, in the case of houses containing more than one family unit, the amount of the loan shall not exceed \$1,000 plus \$1,000 for every family unit provided. Loans are repayable in equal monthly instalments or in suitable instalments to fit the conditions of the individual borrower.

Loans to the amount of \$1,000 or less must be repaid within three years. Loans in excess of \$1,000 must be repaid within five years. The maximum charge for loans shall be 3½ p.c. discount for a one-year loan repayable in equal monthly instalments (equivalent to an effective interest rate of 6.32 p.c.) and proportionate rates for other periods. Loans made in accordance with approved conditions will

be guaranteed by the Government to the extent of 15 p.c. of the aggregate amount of loans made by each approved lending institution.

The limit of the aggregate loans is \$50,000,000 and the limit of the Government's guarantee is \$7,500,000. Up to Feb. 15, 1937, the total numbers and amounts of loans made in the various provinces were as follows:—

LOANS MADE UNDER THE GOVERNMENT HOME IMPROVEMENT PLAN, TO FEB. 15, 1937.

Industrial Statistics of Construction.*—The 1936 edition of the Year Book gave, at pp. 473-474, a short account of the inception of the Census of Construction and of the difficulties encountered in connection therewith. Statistics for the first year of the survey, *viz.*, 1934, were presented. Summary tables covering data for 1935 are given hereunder. For several reasons it is not considered advisable to begin a historical series at present. In some respects the figures for 1935 are not comparable with those of 1934, and it is felt that no good purpose would be served by bringing them together in comparable form until the basis of procedure has become fairly well established. This will be realized when it is pointed out that in 1935 reports were received from 215 municipalities as compared with 2,333 in 1934, since it was decided that much of the work undertaken by country municipalities (grading and scraping of roads, cleaning ditches, weed and brush cutting, etc.) did not fall within the meaning of construction as applied to the census. On the other hand, the number of reports received from the other three main groups, *viz.*, contractors and builders, Harbour Commissions, and Government Departments, show a net increase of 280.

Another matter which should be pointed out is that no relationship exists between the total value of construction shown for 1935 below and the value of contracts awarded as indicated on p. 480. In the former case all values are included as soon as awards are made irrespective of whether the contract is completed or even begun in that year, whereas the tables below represent construction work carried on and actually performed in 1935.

Table 1 shows the principal statistics of the industry, divided as between public and private employers.

* Revised by F. I. Tanner, Officer in Charge of Construction Statistics.

Table 3 classifies the various types of construction carried out in 1935. The item "trade construction" covers such items as brick laying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces, and more complete information on the industry than it is possible to include in the limited space available in the Year Book, will be found in the Bureau's report on the construction industry for 1935.

Table 4 shows the employment and wage-earnings for the construction industry, by provinces. The employment figures, shown on a monthly basis, reflect the fact that the industry is not so decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1935, was October with 184,502 wage-earners and the lowest was February with 76,634.

Contracts Awarded.—A record of contracts awarded during the years 1911-36, as compiled by MacLean Building Reports, Ltd., is given in Table 5. The aggregate for 1936, though 1.4 p.c. greater than in 1935, and 29.2 p.c. higher than in 1934, was lower by 71.8 p.c. than the total for the record year, 1929, and amounted to only 59.4 p.c. of the average for the years 1911-35. The value of the contracts awarded in each of the years from 1932 to 1936 has been lower than in any other post-war year.

Engineering contracts accounted for over 41 p.c. of the total value of the contracts awarded in 1936, residential buildings for 26 p.c. and business buildings for 23 p.c. As compared with 1935, residential building showed an increase of 15 p.c. in value, engineering projects of 3 p.c., while business construction work decreased 22 p.c. Table 6 shows in some detail the value of the construction contracts awarded in the latest six years.

Building Permits.—The estimated value of construction in 58* cities of Canada, as indicated by their building permits, is shown for the years 1931 to 1936 inclusive in Table 7. These cities had in 1931 about 36 p.c. of the population of Canada, while their 1936 building permits aggregated \$41,325,693 or 25 p.c. of the total contracts awarded, as shown in Table 5. In Table 7, the 35* cities for which statistics of building permits are available since 1910 are indicated by an asterisk (*), and the totals for these cities are given beneath the totals for the larger group.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the

* See footnote to Table 7.

record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North Vancouver in the case of Vancouver. South Vancouver and Point Grey were annexed to Vancouver as from Jan. 1, 1929.

The construction contracts in 1936 as shown in Table 6 increased by 1.4 p.c. compared with 1935 and the building permits of 58 cities in Table 7 decreased by 11.2 p.c.

7.—Values of Building Permits Taken Out in 58¹ Cities for the calendar years 1931-36.

NOTE.—Asterisks indicate the 35 original cities, statistics for which are available since 1910.

¹ The number of cities included in this tabulation has been reduced from 61 to 58, owing to the amalgamation of East Windsor, Sandwich and Walkerville with Windsor during 1935. This union does not affect the areas and populations covered in these statistics since 1920, but it does to some extent affect the comparability of the figures for the original 35 cities for which the record goes back to 1910. Statistics for these centres are not available prior to 1920.

Table 8 shows the value of the building permits issued by 35 cities in the years 1910-36. The average weighted index numbers of wholesale prices of building materials since 1912 are given, together with index numbers of employment in the construction industries as reported by employers since 1920, both these indexes having been compiled by the Dominion Bureau of Statistics. The average index numbers of wages in the building trades since 1910, as compiled by the Department of Labour, are also given. These indexes show as far as possible the fluctuations in building costs with their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. However, the results of a survey made in 1934 and published in "Building in Canada" (June, 1934) showed that in fifteen cities the average proportions in all types of construction were 63.6 p.c. for materials and 36.4 p.c. for labour. The reduction in the cost of building operations in the depression years has probably been much more than is indicated by the declines in the indexes of wholesale prices and wages from the relatively high averages shown since the Great War.

1936.....	36,337,439	127.4 ³	160.8	55.4

¹ See footnote 1 of Table 7.² As reported by employers.³ Preliminary.

The volume of employment afforded in building, as indicated by employers in that industry, was the same, on the whole, as in 1935, but was rather greater than in 1934, 1933 or 1932. In each of these five years, the number employed in building has been decidedly below the average.

Over the period 1911-36 inclusive, or since the beginning of MacLean's record of construction contracts awarded as shown in Table 5, p. 479, there has been an average annual per capita expenditure on construction of about \$30. The period covered includes, of course, the war years and the depression since 1930, as well as the booms of 1911-13 and 1926-30. This average, consequently, is not unreasonably high. For the present population, the annual total of construction, on the basis of this average, should amount to over \$300,000,000. Furthermore, there is undoubtedly an accumulated deficiency in construction from the recent years of sub-normal activity. Some idea may be gained, therefore, of the part which the normal functioning of the construction industry might play in the reduction of unemployment.

CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings: value and quantum* of world trade; historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries; principal commodities imported and exported; trade in raw and manufactured products; main historical tables and tables showing current trends (Tables 1 to 21); and comparison of the volumes of imports and exports (Table 22). Formerly, a subsection was included before the main tables dealing with Canada's position in international trade but, since this subject is fully covered under the value and quantum of world trade, the separate subsection has been discontinued. The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

Section 1.—The Development of Tariffs.

The development of tariffs as affecting Canada is here outlined under two divisions: first, a historical sketch showing phases in the growth of Canadian trade which have influenced tariff development; and second, the present tariff relationships with other countries. Owing to the limitations of space in the Year Book, it is impossible to go into detail with such an intricate matter as tariffs. It has therefore been necessary to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

Subsection 1.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on, by Governments permeated by the mercantile spirit, for "ships, colonies and commerce" Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering State arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

* The term "quantum" is commonly used in international discussions of trade and has a more precise application than the more general term "volume". For this reason it is retained in the analyses of international trade made here, although in line with the common practice in Canada, "volume" is used in the

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal, for the most part returned to France, and the trade of the Colony fell into the hands of the traders from England, Scotland, and New England, who had flocked into the country on the heels of the invading armies. Some of their descendants are still among the leading figures in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was, however, a factor which could not permanently be ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 the United Kingdom made large concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, Nova Scotia, and New Brunswick, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government and, coming at a time when all important parties in Great Britain had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials and import from the United Kingdom the manufactured commodities which they required.

The Abolition of Preference and the Reciprocity Treaty of 1854.—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent opening of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction

between the United Kingdom and the United States during the Civil War period, and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the ten-year period for which it had been negotiated and ceased to operate 12 months later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent consume each other's products.

Tariff Policy since Confederation.—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became conterminous with British North America, the area of internal free trade was thereby extended, while protection against outside competition was generally maintained. However, the protective tariff of the old Province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the worldwide depression which commenced in 1873, and the consequent falling-off in a revenue based upon trade, necessitated an increase of the general rate to $17\frac{1}{2}$ p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from $17\frac{1}{2}$ p.c. to 20 p.c., the rates on cotton goods from $17\frac{1}{2}$ p.c. to rates, specific and *ad valorem* equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper, and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods, and woodenware, to 25 p.c. Pig iron, previously free, now paid \$2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and $17\frac{1}{2}$ p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, binder twine, barbed wire, pig iron, flour, and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This "reciprocal" tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India, while Belgium and Germany, in virtue of their trade treaties with the United Kingdom, were also admitted to the benefits of the "reciprocal" tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunis, and Venezuela, on account of most-favoured-nation treaties between these countries and the United Kingdom, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the "reciprocal" tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga, and Spain, under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation by the United Kingdom of her most-favoured-nation treaties with Germany and Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and later of a remission of $33\frac{1}{3}$ p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

Subsection 2.—Tariff Relationships with Other Countries.*

Tariff of 1907 and Empire Preferences.—A new Canadian Customs Tariff was adopted on April 12, 1907, containing three columns of duties, British preferential, intermediate and general. This tariff with amendments is still in operation. The Customs Tariff itself mentions, as being entitled to the British preference, those parts of the Empire which were already enjoying it under previous measures. Power was taken to extend the same advantages, by Order in Council, to other parts of the Empire. Under this authority the British preference has since been extended to include, at various dates, almost all parts of the Empire and areas under British protectorates, mandates, and spheres of influence. (See p. 520 of the 1934-35 Year Book.) A Canadian Act of June 13, 1935, amended Section 4 of the Customs Tariff, and authorized the Governor in Council to extend most-favoured-foreign-nation treatment to any British country, or territory administered by a British country under mandate of the League of Nations. Orders in Council of July 19, 1935, granted most-favoured-foreign-nation treatment to the United Kingdom and the Union of South Africa, Orders in Council of Aug. 21, 1935, to Australia and New Zealand and an Order in Council of October 20, 1936, to the British West Indies. (The Irish Free State under a Trade Agreement with Canada is guaranteed duties as low as apply to the United Kingdom.) The Intermediate Tariff was extended to Hong Kong as from February 4, 1933.

Trade Agreements With United Kingdom.—The United Kingdom, between 1919 and 1931, granted preferences to Empire products within the limited scope of her tariff of that time. By 1931 there were preferences under what were known as the "McKenna duties", "key industry duties", and duties on certain luxuries as sugar, tobacco, spirits, etc. (See pp. 481-482 of the 1931 Year Book.) The scope of the preference was greatly enlarged when goods of Empire origin were exempted from duties imposed under the Abnormal Importations (Customs Duties) Act, passed Nov. 20, 1931 (to remain in effect for six months), and the Horticultural Products (Emergency Customs Duties) Act, passed Dec. 11, 1931 (to remain in effect for twelve months). The Import Duties Act, effective Mar. 1, 1932, imposed a duty of 10 p.c. *ad valorem* on a wide range of goods not otherwise subject to duty. (See p. 385 of the 1932 Year Book.) Products of the Dominions, India, and Southern Rhodesia were exempt from this duty until Nov. 15, 1932, their treatment after that date to depend on the Imperial Conference of 1932. Products of other parts of the British Empire were exempt without limitation as to date. By an Order effective April 26, 1932, the 10 p.c. general tariff was increased to rates ranging from 15 to $33\frac{1}{3}$ p.c. *ad valorem*, on a wide range of merchandise, chiefly manufactured goods. Some 200 subsequent orders have been issued either increasing rates on particular commodities or exempting articles from duty.

* Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

A trade agreement between Canada and the United Kingdom, signed Aug. 20, 1932, at the Imperial Economic Conference in Ottawa, guaranteed, as part of a larger scheme of reciprocal preferences, that Canadian goods would be exempt for five years from duties established by the Import Duties Act of 1932 (see p. 486 of the 1936 Year Book).

A new trade agreement between Canada and the United Kingdom was signed at Ottawa on Feb. 23, 1937, to remain in force until Aug. 20, 1940, and thereafter until the expiry of six months notice of termination given by either party. The 1937 Trade Agreement guarantees duty-free entry of all Canadian goods, free of duty at the date of signing the Agreement, with a reservation carried forward from the 1932 Agreement, which limited to August, 1935, the assurance given of duty-free entry of eggs, poultry, butter, cheese, and other milk products. These products are still duty-free when of Canadian origin, but the United Kingdom Government may at any time, after notifying the Canadian Government, impose duty, maintaining preferential margins, or, in consultation with the Canadian Government, bring such produce under a system of quantitative regulation of supplies from all sources. With only this modification, the wide range of goods comprised in the Import Duties Act, 1932, and some others, are assured free entry when of Canadian origin. A special schedule guarantees margins of preference on: wheat, 3*d.* per bushel; butter, 15*s.* per cwt.; cheese, 15 p.c. *ad valorem*; raw apples (excluding cider apples) and raw pears, 4*s.* 6*d.* per cwt.; canned apples, 3*s.* 6*d.* per cwt., plus sugar preference; eggs, 1·2*d.* to 2·1*d.* per dozen; unsweetened whole condensed milk, milk powder, and other preserved milk, 6*s.* per cwt.; sweetened whole condensed milk, 5*s.* per cwt., plus sugar preference; honey, 7*s.* per cwt.; copper, unwrought, 2*d.* per lb.; chilled or frozen salmon, 1½*d.* per lb.; fresh sea fish, canned salmon, other canned fish, timber, asbestos, zinc, and lead, 10 p.c. *ad valorem*; patent leather, 15 p.c. *ad valorem*. Duty on foreign wheat, copper, zinc, or lead is not obligatory if at any time Empire producers "are unable or unwilling to offer these commodities on first sale in the United Kingdom at prices not exceeding the world prices and in quantities sufficient to supply the requirements of United Kingdom consumers". Furthermore, the United Kingdom is allowed to make the duty on non-Empire lead 7*s.* 6*d.* per ton, and non-Empire zinc 12*s.* 6*d.* per ton, in lieu of 10 p.c. *ad valorem*. A preference margin of 2*s.* 0½*d.* per lb. on tobacco is assured until Aug. 19, 1942. The rate on Canadian motor cars and parts is stabilized at 22½ p.c. *ad valorem* (present general tariff 33½ p.c.). The margin of preference on socks and stockings of natural silk is increased from one-sixth to one-third, making the rate 28½ p.c. *ad valorem* or 8*s.* per lb., whichever is higher. Canadian-made reed organs are reduced from 22½ p.c. *ad valorem* to duty-free. The United Kingdom Government undertakes that any duty or levy which may be imposed on bacon and hams shall not apply to imports from Canada and that it will impose no regulation of such imports unless the rate at which the trade from Canada progresses towards 280,000,000 lb. per annum should become abnormal and such as to endanger effective regulation of supplies, and then only after consultation with the Canadian Government. The Canadian Government agrees, so far as their power extends, to assist in the promotion of orderly marketing of meats in the United Kingdom, and in particular to furnish from time to time estimates of forthcoming shipments of bacon, hams, cattle, and beef. Canadian cattle and beef are guaranteed freedom from import duty and within the framework of a scheme for regulating imports in general, Canadian fat cattle and beef are to be free from quantitative control so long as annual shipments do not exceed what the agreement describes as "recent levels". The United Kingdom is

accorded a reduction in the Canadian customs duties under 179 tariff items. These include reduced rates, or free entry on: textiles of wool, cotton, silk, and artificial silk; clothing and wearing apparel, knitted goods, blankets, carpets, and linoleum; glassware; various primary forms of iron and steel; machinery, vacuum cleaners, sewing machines, lawn mowers, nuts and bolts, files, needles, pins, enamelled ware, electrical apparatus, and other processed steel goods; leather and leather products; furniture; boots and shoes; numerous paper products; paints, etc.; earthenware, canned herring, malt extracts, chocolate, preserved vegetables, unsweetened biscuits, jams, etc., soaps, brushes, and silverware. The United Kingdom is also given a guarantee against upward revision of existing British preferential rates under 246 items. In the case of 91 items, margins of British preference are not to be reduced, the goods affected including chemicals, vegetable oils, window and plate glass, printing presses, diesel engines, X-ray apparatus, fishing tackle, pocket knives, motor cycles, dental instruments, cotton yarns for mercerizing, linen fabrics and thread, band instruments, electrical instruments, aluminum shapes, anthracite coal, wide steel plate, tin-plate, galvanized sheets, black steel sheets for galvanizing or tinning, steel wire and finished structural steel. Except as regards certain primary steel products, the commitment to maintain fixed margins in favour of United Kingdom goods relates almost entirely to products not of a class or kind made in Canada. Neither party, without the consent of the other, is to amend its preferential tariff regulations so as to increase beyond 50 p.c. the prescribed proportion of Empire content required in any class of manufactured goods in order to make them eligible for tariff preference. If any particular class of duty-free Canadian goods is being exported to the United Kingdom at prices below fair market value in Canada, the United Kingdom may notify the Canadian Government and if the Canadian Government is unable to correct the situation, the anti-dumping provision of the Canadian tariff is to be waived as regards similar goods imported from the United Kingdom. The two Governments agree that goods benefiting by the main tariff concessions provided in the Agreement, shall not be subjected to any new imposts or charges, other than customs duties leviable, unless equal imposts or charges are imposed on the domestic products of the importing country. Either Government is to be free to suspend or modify specific preferential margins if satisfied, after inquiry, that on account of the preferences trade is controlled by an organization or combine of exporters to the prejudice of consumers. The agreement contains extensive provisions for reciprocal preferences between Canada and Crown Colonies. The new British preferences were incorporated in the Budget introduced on February 25 and went into effect on that date. A Canadian Act ratifying the Agreement was assented to on Mar. 31, 1937. The Agreement is to be brought formally into force on a date to be mutually agreed upon between the two Governments when the Agreement of Aug. 20, 1932, will cease to have effect.

Trade Agreements with British West Indies.—To the British West Indies concessions independent of the British preference were made in an Agreement of 1912. In 1920 a second Trade Agreement, broader both as to the extent of the preferences exchanged and the number of West Indian signatories, superseded the first. This in turn was replaced on July 6, 1925, by one still more extensive, brought formally into force by proclamation as from April 30, 1927. It is binding for a 12-year period and thereafter until terminated, on a year's notice. It includes: Jamaica, Trinidad, Barbados, Bahamas, Leeward Islands, Windward Islands, Bermuda, British Guiana and British Honduras. For further details see p. 484 of the 1936 Year Book.

Trade Agreement with Irish Free State.—An Agreement with the Irish Free State, signed Aug. 20, 1932, secured for all goods the produce and manufacture of Canada imported into the Irish Free State the benefits of the lowest rates of duty accorded to similar products of any country. In return, goods the produce or manufacture of the Irish Free State, when imported into Canada, were to be accorded the same tariff treatment as similar goods imported from the United Kingdom.

Trade Agreements with Australia.—A formal Trade Agreement between Canada and Australia (superseding an arrangement of 1925, exchanging limited preferences by legislation) was brought into force on Aug. 3, 1931, providing for exchange of British preferential rates, except as set forth in two schedules. Enlarged margins of preference were granted by each country on certain products of importance to the other. Provisions of the Agreement were given in greater detail at p. 484 of the 1936 Year Book.

Trade Agreement with New Zealand.—Imports from New Zealand have been accorded British preferential rates since 1904. Furthermore, on Oct. 1, 1925, the special rates granted Australia were extended to New Zealand. Canada was granted the British preferential rates of New Zealand established in 1903. However, as from Oct. 12, 1930, Canada withdrew from New Zealand the Australian treaty rates and New Zealand, as from June 2, 1931, withdrew nearly all her British preferential rates from Canada. A new Trade Agreement with New Zealand was brought into force for one year by proclamation as from May 24, 1932, and has been extended from time to time to Sept. 30, 1937. By this Agreement Canada grants New Zealand rates lower than British preferential on various articles of outstanding interest to her, and otherwise extends to her the British preferential tariff. New Zealand restores the British preferential rates to Canada except on six items on which, however, she concedes rates lower than the general tariff. The Agreement applies to Western Samoa and Cook Islands: (See p. 485 of the 1936 Year Book.)

Trade Agreement with Union of South Africa.—An Agreement between Canada and the Union of South Africa, signed Aug. 20, 1932, covers many of the commodities which each Dominion can sell to the other. (See p. 487 of the 1936 Year Book.)

Trade Agreement with Southern Rhodesia.—The Agreement with Southern Rhodesia, signed Aug. 20, 1932, made provision for the exchange of preferential treatment on selected lists of commodities. In addition, other goods not enumerated in the schedules continue to enjoy the benefits of existing and future British preferences.

Other Empire Preferences on Canadian Goods.—Even in the absence of trade agreements many tariff preferences are accorded to Canadian goods throughout the Empire. The general position now is that nearly all goods, the produce or manufacture of Canada, shipped in accordance with prescribed regulations, are granted tariff preferences over non-Empire goods in Great Britain and Northern Ireland, Australia, New Zealand, Fiji, Western Samoa, British West Indies, Bermuda, British Guiana, British Honduras, Southern Rhodesia, Northern Rhodesia, (Zambesi Basin), Gambia, Sierra Leone, Seychelles, British Somaliland, St. Helena, British Protectorate of Tonga, British Solomon Islands, Gilbert and Ellice Islands, Cyprus, Channel Islands, and Isle of Man. To a considerable extent tariff preference is similarly granted to Canadian goods in the Irish Free State, the Union of South Africa, Ceylon, Mauritius, and Malta, also on some goods in the Federated Malay States, the Unfederated Malay States, British North Borneo, Sarawak, Brunei, and Cayman Islands. Empire motor cars enjoy preference in Hong Kong

and the Straits Settlements; spirits, wines, malt liquors, and tobaccos in Gibraltar; and wines in the Falkland Islands.

Trade Agreement of 1933 between Canada and France.—A Trade Agreement between Canada and France replacing an Agreement of 1922, was brought into force as from June 10, 1933. Further minor adjustments were made by an Exchange of Notes of Mar. 20, 1936. (See the tabular statement on pp. 492-494, also pp. 487-488 of the 1936 Year Book.)

Trade Agreement between Canada and the United States.—A comprehensive Trade Agreement, signed at Washington on Nov. 15, 1935, secures for Canada reduced duties for commodities representative of several fields of Canadian production. The tariff concessions by Canada include the extension to the United States of the intermediate tariff in its entirety and some specific reductions.

The reductions in duty contained in the Agreement went into effect on Jan. 1, 1936. The whole Agreement went into force on the exchange of ratifications at Ottawa on May 14, 1936. The Agreement will remain in force, subject to certain contingencies, until Dec. 31, 1938, and thereafter unless terminated by the Government of either country upon six months notice. (See the tabular statement on pp. 492-494 and also pp. 488-489 of the 1936 Year Book.)

Exchange of Notes with Japan.—An Exchange of Notes on Dec. 26, 1935, between Canada and Japan effected the removal of surtaxes previously imposed by both countries and stated the basis for Canadian customs valuations on Japanese goods. (See the tabular statement on pp. 492-494 and also p. 489 of the 1936 Year Book.)

Exchange of Notes with Brazil.—On account of Brazilian policy to cancel old trade agreements, an arrangement was made between Canada and Brazil by Exchange of Notes, July 25-30, 1936, granting the Canadian intermediate tariff in return for the Brazilian minimum or lowest tariff, which is one-quarter less than maximum rates. The new arrangement became effective July 30, 1936, and continued without interruption the former reciprocal relationship between the two countries.

Trade Agreement with Uruguay.—Canada signed a most-favoured-nation Agreement with Uruguay on Aug. 12, 1936, as regards customs duties, quotas and allocation of exchange for commercial transactions. The Agreement is to come into force 30 days after exchange of ratifications and to remain in force for three years and thereafter until termination on six months notice. Uruguay has a tariff one-half higher than her normal tariff which may be applied to countries not offering reciprocity. Notes were exchanged at the same time, effective at once, granting the Canadian intermediate tariff in return for Uruguayan trading facilities for Canadian exports, pending the coming into force of the formal Agreement. A Canadian Act ratifying the Agreement was assented to on April 10, 1937.

Canadian-Polish Convention.—A Canadian-Polish Convention of Commerce signed July 3, 1935, exchanging most-favoured-nation treatment in trade matters and granting each other some specific tariff concessions, was brought into effect as from Aug. 15, 1936.

Normal Trading Relations with Russia.—A Canadian Order in Council of Feb. 27, 1931, prohibiting importation from the Union of Soviet Socialist Republics of coal, wood pulp, pulpwood, lumber, asbestos, and dressed furs, was cancelled by an Order in Council of Sept. 10, 1936, in consequence of which the Soviet Union repealed an Order of April 20, 1931, which had prevented importing organizations and trade representatives of the Soviet Union from purchasing Canadian goods or chartering Canadian vessels.

Trade Agreement with Germany.—A Provisional Most-Favoured-Nation Trade Agreement and a Payments Agreement were signed between Canada and Germany on Oct. 22, 1936. The Trade Agreement is to become effective fourteen days after exchange of ratifications, is to remain in force until Nov. 14, 1937, and thereafter until terminated on two months' notice. The Payments Agreement was entered into on account of German control over exchange for payment of goods imported. It authorizes for purchase of Canadian wheat, apples, cheese, honey, fish, fox skins, asbestos, lumber, wood pulp, sausage casings, and some other goods, utilization of definite percentages of exchange accruing from German exports to Canada. Unallocated exchange is available for miscellaneous purchases. By Exchange of Notes on the day the Trade Agreement was signed, Canada agreed, on a basis of reciprocity, to give effect to the Trade Agreement respecting Canadian customs treatment of German goods as from Nov. 15, 1936, the Payments Agreement having gone into effect on that day. The Exchange of Notes is to remain operative until replaced by the Provisional Trade Agreement or, alternatively, until expiry of six weeks notice of termination which may be given by either Government. A Canadian Act ratifying the Agreement was assented to on April 10, 1937.

Trade Agreement with Haiti.—A commercial Agreement between Canada and Haiti, signed April 23, 1937, exchanged most-favoured-nation treatment. Haiti has a maximum and minimum tariff.

Summary of Tariff Arrangements with Foreign Countries.—Arising out of some old British treaties, later British treaties or favoured-nation clauses sanctioned by Canadian Acts of Parliament, in consequence of purely Canadian conventions of commerce or Exchange of Notes, Canada extends, on a reciprocal basis, most-favoured-nation customs treatment, except where otherwise indicated, to the goods of the following countries:—

Country.	Treaty or Convention.	Terms.
Argentine Republic.....	Treaty of Amity, Commerce and Navigation with the United Kingdom of Feb. 2, 1825.....	Exchange of most-favoured-nation treatment.
Austria.....	Exchange of Notes. Canadian Orders in Council of July 5, 1933, Dec. 29, 1933, and Jan. 14, 1935, latter for an indefinite period subject to termination on three months notice.	Canadian intermediate tariff exchanged for most-favoured-nation treatment in Austria.
Belgium and Luxembourg, Belgian possessions and mandated territory.	Convention of Commerce with Canada of July 3, 1924.	Exchange of most-favoured-nation treatment.
Bolivia.....	Canadian Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment.
Brazil.....	Exchange of Notes of Dec. 4, 1931, renewed July 25-30, 1936.	Canadian intermediate tariff exchanged for most-favoured-nation treatment in Brazil.
Colombia.....	Treaty of Friendship, Commerce and Navigation with the United Kingdom of Feb. 16, 1866.	Exchange of most-favoured-nation treatment.
Costa Rica.....	Exchange of Notes of Mar. 1-2, 1935. Canadian Order in Council of July 20, 1935.	Exchange of most-favoured-nation treatment.
Czechoslovakia.....	Convention of Commerce with Canada of Mar. 15, 1928.	Exchange of most-favoured-nation treatment.
Denmark.....	Treaties of Peace and Commerce with Great Britain of Feb. 13, 1660-1 and July 11, 1670.	Exchange of most-favoured-nation treatment.
Estonia.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 28 of the United Kingdom-Estonia Treaty of Commerce and Navigation of Jan. 18, 1926.	Exchange of most-favoured-nation treatment.

Country.	Treaty or Convention.	Terms.
Finland.....	Finland Trade Agreement Act of June 12, 1925, accepted Article 23 of the United Kingdom-Finland Treaty of Commerce and Navigation of Dec. 14, 1923.	Exchange of most-favoured-nation treatment.
France and French colonies	Trade Agreement with Canada, signed May 12, 1933, in force June 10, 1933. Exchange of Notes, Sept. 29, 1934, additional Protocol of Feb. 26, 1935, and Exchange of Notes of Mar. 20, 1936, extending concessions on both sides.	As regards scheduled goods, percentage reductions from Canadian intermediate tariff or actual intermediate exchanged for French minimum tariff or percentage reductions from general tariff, also quota arrangements.
Germany.....	Exchange of Notes Oct. 22, 1936, effective Nov. 15, 1936. (See also p. 492.) Exchange of Notes Oct. 22, 1936, effective Nov. 15, 1936.	Exchange of most-favoured-nation treatment. Funds from sale of German goods in Canada made available in Germany for purchase of Canadian goods.
Guatemala.....	Exchange of Notes of May 10-June 28, 1935. Canadian Order in Council of July 20, 1935, accepted Article 13 of the United Kingdom-Guatemala Treaty of Commerce and Navigation of Feb. 22, 1928.	Exchange of most-favoured-nation treatment.
Haiti.....	Exchange of Notes of June 7-10, 1935. Canadian Order in Council of July 20, 1935. Renewed by Exchange of Notes of April 6-13, 1936. Trade Agreement signed April 23, 1837.	Exchange of most-favoured-nation treatment.
Hungary.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 20 of the United Kingdom-Hungary Treaty of Commerce and Navigation of July 23, 1926.	Exchange of most-favoured-nation treatment.
Italy, colonies and possessions.	Convention of Commerce with Canada of Jan. 4, 1923.	Exchange of most-favoured-nation treatment.
Japan.....	Japanese Treaty Act of April 10, 1913, sanctioned (with provisos) United Kingdom-Japan Treaty of Commerce and Navigation of April 3, 1911. Exchange of Notes, Dec. 26, 1935, effective Jan. 1, 1936.	Exchange of most-favoured-nation treatment. Removal of surtaxes imposed by both countries in 1935; adjustment Canadian customs valuation of Japanese goods.
Latvia.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 26 of the United Kingdom-Latvia Treaty of Commerce and Navigation of June 22, 1923.	Exchange of most-favoured-nation treatment.
Lithuania.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 4 of the United Kingdom-Lithuania Agreement respecting commercial relations of May 6, 1922.	Exchange of most-favoured-nation treatment.
Netherlands, Netherlands Indies, Surinam and Curaçao.	Convention of Commerce with Canada of July 11, 1924.	Exchange of most-favoured-nation treatment.
Norway.....	Convention of Commerce and Navigation between the United Kingdom and (Sweden and) Norway of Mar. 18, 1826.	Exchange of most-favoured-nation treatment.
Panama.....	Canadian Order in Council of July 20, 1935, accepted Article 12 of the United Kingdom-Panama Treaty of Commerce and Navigation of Sept. 25, 1928.	Exchange of most-favoured-nation treatment.
Panama Canal Zone.....	Canadian Order in Council, Dec. 29, 1936.....	Grants Cdn. Inter. Tariff.
Poland.....	Convention of Commerce, signed July 3, 1935, became effective Aug. 15, 1936. Free City of Danzig declared party to Convention from Jan. 1, 1937.	Reciprocal most-favoured-nation treatment and as regards scheduled goods percentage reductions from Canadian intermediate tariff and lowest Polish statutory tariff.
Portugal, including Madeira, Porto Santo, and Azores.	Canadian Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom-Portugal Treaty of Commerce and Navigation of Aug. 12, 1914.	Exchange of most-favoured-nation treatment.

Country.	Treaty or Convention.	Terms.
Roumania.....	Exchange of Notes of Sept. 30, 1930, under Article 36, Treaty of Commerce and Navigation between United Kingdom and Roumania of Aug. 6, 1930.	Exchange of most-favoured-nation treatment.
Serb-Croat-Slovene Kingdom (Yugoslavia).	Canadian Trade Agreements Act of June 11, 1928, accepted Article 30 of the United Kingdom-Serb-Croat-Slovene Kingdom Treaty of Commerce and Navigation of May 12, 1927.	Exchange of most-favoured-nation treatment.
Spain.....	Spanish Treaty Act of June 11, 1928, sanctioned United Kingdom-Spain Treaty of Commerce and Navigation of Oct. 31, 1922 (revised April 5, 1927), also United Kingdom-Spain Agreement of June 27, 1924, regulating treatment of companies.	Exchange of most-favoured-nation treatment.
Sweden.....	Convention of Commerce and Navigation between the United Kingdom and Sweden (and Norway) of Mar. 18, 1826.	Exchange of most-favoured-nation treatment.
Switzerland.....	Treaty of Friendship, Commerce and Reciprocal Establishment between the United Kingdom and Switzerland of Sept. 6, 1855.	Exchange of most-favoured-nation treatment.
United States.....	Trade Agreement signed Nov. 15, 1935, and as regards reductions in duty, in force Jan. 1, 1936; otherwise in force on exchange of ratifications on May 14, 1936.	Terms include grant of reduced or fixed rates on scheduled goods by both sides and mutual exchange of most-favoured-nation treatment exclusive of the tariff concessions made by the United States to Cuba and Canada's Empire preferences.
Uruguay.....	Exchange of Notes of Aug. 12, 1936, in force pending ratification of 1936 Trade Agreement.	Intermediate tariff of Canada exchanged for normal tariff of Uruguay.
Venezuela.....	Treaty of Amity, Commerce and Navigation between the United Kingdom and Colombia (of which Venezuela was then part) of April 18, 1825.	Exchange of most-favoured-nation treatment.

Under mutual most-favoured-nation customs treatment each contracting country accords to the goods of the other the lowest duties applied to similar products of any foreign origin, unless there are reservations. These reservations would be tariff concessions, not considered of relatively great importance, which one country may grant to another on historical, geographical, or some related ground. Most-favoured-nation obligations do not include Canadian preferences given to other parts of the Empire. Benefits to most-favoured nations under the Canadian tariff now consist of the rates of the immediate tariff because they are granted by Agreements to Brazil, Uruguay, and Austria, and in addition any rates lower than intermediate granted to France, the United States, and Poland.

The value to Canada of most-favoured-nation treatment in foreign countries depends on the customs system of the country concerned. Several countries have maximum and minimum schedules, meaning that there are reduced duties for practically all goods imported from reciprocating or treaty countries. Some countries, on account of rates conceded in treaties, maintain reduced duties on specified items of their tariffs. The number of countries maintaining uniform tariffs regardless of the origin of the goods is growing less from year to year. The benefit of most-favoured-nation treatment depends also on the extent to which tariff favours apply to countries competing with Canada in the market in question. ■

Section 2.—The Commercial Intelligence Service.*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

Organization at Ottawa.—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Directories—where inquiries for Canadian products, forwarded by the Trade Commissioners, are prepared for publication and distribution, and the Exporters Directory listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up to date; Editorial—where the Commercial Intelligence Journal is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal and Fish Products; Vegetable Products; Mineral and Chemical Products; Forest Products; and Miscellaneous Manufactures. These last five divisions handle correspondence falling within their respective classifications.

Also, in order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to the Canadian manufacturer regarding opportunities and conditions of trade in his territory.

Organization Abroad.—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office and cable address of the Trade Commissioner in each case is given below:—

CANADIAN GOVERNMENT TRADE COMMISSIONERS.

NOTE.—This list revised as at Jan. 1, 1937. Cable address of Trade Commissioners is "Canadian" unless otherwise stated.

<i>Argentina Republic</i> (Territory includes Uruguay.) . . .	J. A. Strong, B. Mitre 430, Buenos Aires (1).
<i>Australia</i> — Sydney (Territory covers Federal District of Canberra, New South Wales, Queensland, Northern Territory and Dependencies.)	L. M. Cosgrave. Address for letters—P.O. Box No. 3952V. Office—City Manual Building, Hunter and Bligh Streets.
Melbourne (Territory covers States of Victoria, South Australia, Western Australia, and Tasmania.)	Frederick Palmer. Address for letters—Box 196C, G.P.O. Office—Safe Deposit Office Building, Melbourne.
<i>Belgium</i>	Yves Lamontagne, Shell Building, 60 Ravenstein Street, Brussels.
<i>Brazil</i>	L. S. Glass. Address for letters—Caixa Postal 2164, Rio de Janeiro. Office—Ed. Da "A Noite", Sala 802, Praca Maua.
<i>British Malaya</i> (Territory includes the Straits Settlements, the Federated and Unfederated Malay States, British Borneo, Northern Sumatra, Siam, and Netherlands Indies.)	Acting Trade Commissioner, Union Building, Singapore, Straits Settlements.
<i>British West Indies</i> — Trinidad (Territory includes Barbados, Windward and Leeward islands and British Guiana.)	M. B. Palmer. Address for letters—P.O. Box 125, Port of Spain. Office—Colonial Bank Building.
Jamaica (Territory covers Jamaica, Haiti, the Bahamas, and British Honduras.)	F. W. Fraser, P.O. Box 225. Office—Canadian Bank of Commerce Chambers, Kingston.

* Revised by L. D. Wilgress, Director, Commercial Intelligence Service, Department of Trade and Commerce.

CANADIAN GOVERNMENT TRADE COMMISSIONERS—continued.

- China*—
Shanghai (Territory includes North and Central China and Manchuria.)
- Cuba* (Territory includes Dominican Republic and Puerto Rico.)
- Egypt* (Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Persia, Greece, Turkey, Bulgaria, and Roumania.)
- France* (Territory includes French Colonies in North Africa.)

Glasgow.....

G. B. Johnson, 200 St. Vincent Street. Cable address—*Cantraacom*.*United States*—

New York City. (Territory includes Bermuda.)

D. S. Cole, British Empire Building, Rockefeller Centre, New York City. Cable address—*Cantraacom*.

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

Commercial Intelligence Journal.—The Commercial Intelligence Journal, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is \$1 per annum in Canada and \$3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the Commercial Intelligence Journal.

Section 3.—Statistics of External Trade.*

NOTE.—For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of the terms used should be carefully kept in mind.

Fiscal Years.—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

Quantities and Values.—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means "Imports entered for consumption". "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada; but the value shall not be less than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Sections 35 to 45 of the Customs Act.)

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Section 55 of the Customs Act and Orders in Council respecting currency valuations.)

Canadian Exports: Valuation.—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which

* Revised by A. L. Neal, B.A., B.Sc., (Econ.), Acting Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the Annual Report on the Trade of Canada, the Condensed Preliminary Report on the Trade of Canada (annual), the Quarterly Report on the Trade of Canada, the Calendar Year Report on the Trade of Canada, the Summary of the Trade of Canada (monthly), etc. For complete list of the publications of this Branch see Chapter XXIX, Section 1, under "External Trade".

have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, flour ground from imported wheat, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

Foreign Exports: Valuation.—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and those of the valuations of other countries.

The recent period of disturbed currency relations between countries has introduced an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at \$4.86 $\frac{2}{3}$ to the £, although for two years after Sept. 21, 1931, the actual value of the £ was below that figure, dropping as low as \$3.70, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. Similar inaccuracies have resulted from disturbances in exchange levels with other countries.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1935, in connection with distilled spirits, an important item in our imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the excise duty in addition to the British export valuation, an excess valuation aggregating over \$200,000,000 for the period 1920-34. The excise duty has been excluded from the valuation of such imports since April 1, 1935.

(2) Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and end of the period.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports.

A considerable proportion of Canada's exports to overseas countries (18 p.c. in 1936) is shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium, and France are included in Canadian imports from those countries but are not included by those countries in exports to Canada.

For more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, and pp. 26 and 37 of the Condensed Preliminary Report on the Trade of Canada, 1936, both published by the Dominion Bureau of Statistics.

Subsection 1.—Recent Changes in the Value and Quantum of World Trade.*

According to the figures shown in Statement I p. 502 and illustrated in the chart on p. 500, the value of world trade (imports plus exports) in terms of gold fell during each year from 1929 to 1934, until in that year it amounted to 34 p.c. of the figure for 1929. The trend changed for the first time in 1935 with a slight rise of about 1.9 p.c. in gold value. The decline from 1929 to 1934 was for the greater part due to the fall in average gold prices which during the period amounted to 56 p.c. (57.6 p.c. from 1927). The decline in gold prices appears to have been arrested in the first half of 1935, with a slightly rising trend manifested thereafter, although the average gold price index was lower for 1935 than for 1934. The fall in quantum of trade was arrested in 1932 on a level 26 p.c. below that of 1929 (about 20 p.c. below that of 1927). In 1933 the quantum of trade rose about 1.5 p.c., in 1934 about 4 p.c., and in 1935 about 4.5 p.c. Even after the change in the quantum movement which occurred in 1932, trade remains on a very low level. The increase in the quantum which has occurred during each of the last three years is below the annual growth before the depression which during the period 1925-29 was estimated at an average of 5 p.c. per annum.

The increase in the quantum of trade during the last quarter of each year, due mainly to the marketing of the autumn crop in the northern hemisphere, conceals to some extent the trend of the quantum curve in the diagram. Actually, the lowest level of trade activities would appear to have been reached either during the third quarter of 1932 or early in 1933. The rising trend of gold value, price and quantum, appears to have continued during 1936, according to recent monthly bulletins of the League of Nations.

During the first years of the depression, manufactured articles fell much less in price than foodstuffs and raw materials. Since 1932, however, the price fall has been heaviest in the case of manufactured articles. During 1935, prices of manufactured goods and of foodstuffs declined further, while those of raw materials

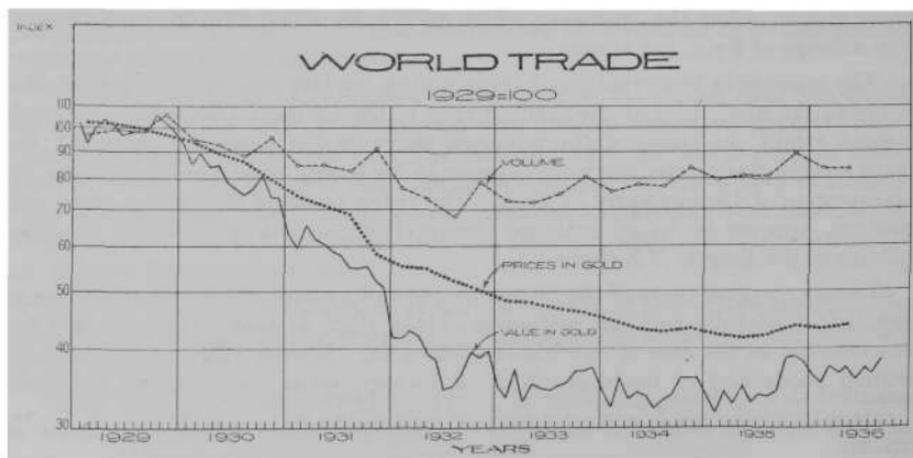

*Abbreviated from "Review of World Trade, 1935", published by the League of Nations.

remained unchanged, but the average fall was greatest for manufactured goods. As in 1933 and 1934, therefore, the barter terms of agricultural and mineral-producing countries, which had been most severely affected by the price declines in the early years of the depression, improved in 1935, although they were still unfavourable when compared with the years 1925-29.

On the other hand, the quantum of manufactured articles declined more than that of foodstuffs and raw materials in the early years of the depression. The quantum of foodstuffs declined more slowly but it continued to decline until 1934, rising slightly in 1935. The quantum of raw or partly manufactured materials declined more than that of foodstuffs but since 1932 has recovered more than either of the other two groups. The price and quantum movements of these three groups are shown by the following index figures:—

Item.	1929.	1932.	1933.	1934.	1935.
Price Movement (1929=100).					
Foodstuffs.....	100.0	52.0	45.5	41.0	40.0
Materials, raw or partly manufactured.....	100.0	44.0	40.5	39.0	39.0
Manufactured articles.....	100.0	64.0	55.5	49.5	48.0
All commodities.....	100.0	52.5	46.5	43.0	42.0
Quantum Movement (1929=100).					
Foodstuffs.....	100.0	90.5	84.5	84.0	86.0
Materials, raw or partly manufactured.....	100.0	82.0	87.5	89.5	93.5
Manufactured articles.....	100.0	58.0	59.5	65.5	68.5
All commodities.....	100.0	74.5	75.5	78.5	82.0

The drought situation in the United States and the consequent importation of foodstuffs was an important factor in the increased quantum of trade in foodstuffs in 1935, while the progress of recovery in that country and the expanding trade of Japan were potent influences in increasing the quantum of raw materials. A large part of the increased quantum in manufactured articles since 1932 has been due to a greater movement of capital goods such as building materials, iron and steel, machinery, and certain semi-durable goods such as motor cars, and is probably partly due to the tendency to increased industrialization in formerly non-industrial countries and to re-armament programs.

In the early years of the depression, the trade of Europe declined less than that of other continents. The decline was particularly severe for North America during that period. However, the share of Europe in world trade has declined steadily since 1932. In 1932, the quantum of total trade (imports plus exports) of Europe stood at 75.5 p.c. of its 1929 level; that of other continents at 72 p.c. In 1935 the quantum of total trade of Europe was still only 76 p.c. of the 1929 level while that of other continents was 88 p.c. The increase which has taken place in the quantum of world trade since 1932 must therefore be attributed mainly to trade between continents other than Europe. The trade of Europe in 1935 continued to be hampered by the restrictive measures applied by the majority of European countries in the endeavour to maintain the gold parity of their currencies.

International trade benefited from a relatively high degree of currency stability in 1935. But exchange restrictions—in Europe in particular—continued to obstruct the exchange of goods; and the recent tendencies of commercial policy based on the principle of "bilateralism" affected the direction of trade even in certain countries outside Europe where such tendencies had hitherto been of little importance. As a result, there was a further decline in the share of convenient and beneficial "triangular" transactions in total world trade.

The foregoing brief outline of the recent course of world trade, taken from the League of Nations reports, is presented as a background against which Canada's position in world trade may be viewed. It should be noted that the figures of Canadian imports in Statement I have been adjusted for over—or under—valuation of imports from the United Kingdom because in Canadian recorded imports the value of the pound sterling is taken as \$4.86 $\frac{2}{3}$.

According to these League of Nations figures, Canada, in 1935, stood ninth in imports (if allowance be made for the incompletely reported imports of Italy), fifth in exports and sixth in total trade, whereas in 1929 she was fifth in each category. From 1929 to 1932, Canada's share in total world trade declined from 3.68 p.c. to 3.24 p.c. due to a great decline in the share of imports more than offsetting a slight increase in the share of exports. From 1932 to 1935, Canada's share in total world trade increased to 3.49 p.c. The share of imports was still very low although increasing somewhat in the latest year. The greatest decline in its share of world trade occurred in the case of the United States. The United Kingdom, Japan, Belgium, Netherlands, and Union of South Africa were some of the leading countries to show increases in their share of the world's trade since 1929.

In the section of Statement I dealing with indexes of gold prices, it may be seen how Canada's barter position in world trade suffered on account of the uneven price decline since 1929, affecting the average prices of her exports more than those of her imports. There has been a distinct improvement in this respect, however, since 1932. Japan, Argentina, China, British Malaya, and the Netherlands Indies have been at a greater disadvantage than Canada as a result of this uneven price decline. In the case of the United States and of industrial countries of Europe, on the other hand, the barter advantage was greatly increased in the early years of the depression, but has tended to decline since 1932.

Changes in the quantum of world trade are indicated by the indexes in the last part of Statement I. Taking the year 1927 as 100, the quantum of Canadian imports in 1935 was still only 74.7 compared to 87.4 for total world imports. The Union of South Africa and Japan had a higher quantum of imports in 1935 than in 1929, while for the United Kingdom the quantum of imports was comparatively little below that of 1929. Imports of the United States declined rather less than

those of Canada, while in Germany, Argentina, China, Czechoslovakia, and Netherlands Indies the decline was considerably greater than in the case of Canada. The quantum of Canadian exports has recovered well since 1932 and in 1935 stood at about 95.4, compared with a world average in 1935 of 89.4. Japan and possibly some other countries had a larger volume of exports in 1935 than in 1929. Compared to other industrial countries of Europe, the United Kingdom has maintained the volume of its exports fairly well. The United States, Germany, France, Switzerland, and China appear to have suffered most severely in the reduced quantum of exports and in the case of France, the latest year was the lowest.

I.—VALUE, PERCENTAGE, PRICE, AND QUANTUM OF TRADE OF TWENTY-TWO LEADING COUNTRIES OF THE WORLD, CALENDAR YEARS 1929, 1932, 1934, AND 1935

NOTE.—Basis, recorded values of merchandise trade. Values are in U.S.A. old gold dollars (in millions.) Price indexes are on the basis of U.S.A. old gold dollars. The year 1927 is taken as the base for both price and quantum indexes.

¹Includes exports of gold produced within the country. ²Totals include other countries not specified. ³For the nine months Jan. 1-Sept. 30, 1935, only, as trade figures were not reported by Italy after the latter date. ⁴Including improvement and repair trade beginning 1933. ⁵Index based on year 1928. ⁶For the year 1930. ⁷Excluding Manchuria since July 1, 1932. ⁸Estimated from preliminary Canadian sources. ⁹Indexes of total trade for individual countries were not published in the League of Nations Review, 1935.

Subsection 2.—Historical Statistics of Canadian Trade.

A general view of the trade of Canada in the fiscal years from 1868 to 1935 is furnished in Table 1 (p. 524), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising from the different methods

adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce since 1920 has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past 16 years, re-exports of foreign products from bonded warehouses have no longer been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that, in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. Since that time, however, there has been an annual excess of exports except in the fiscal years ended 1920, 1930, and 1931, when there were heavy return movements of funds to Canada in the form of an excess of imports.

The values of coin and bullion imported and exported are shown in Table 3. In the tables this year, gold bullion exported from Canada as merchandise is included as such as a part of the total commodity exports and the statistics have been revised accordingly from 1926 to date. When the Royal Mint in Ottawa began to refine gold, exports formerly shipped as "Gold bearing quartz, dust, etc.", began to be exported in the form of bullion and until 1935 were recorded under coin and bullion as distinct from merchandise. In order to maintain comparability with the statistics of previous years, and also since Canada is a large gold-producing country and exports of gold are as much a part of national production as any other item, it was considered expedient to make the change indicated above. The gold exports have been valued since June 1, 1931, at the monthly average current market price. Amounts collected in export duties from 1868 to 1892, and in import duties from 1868 to 1936, together with the cost of collection expressed as a percentage of the total duties, are stated by years in Table 4. Tables 5 and 6 show, respectively, exports of Canadian produce and imports for home consumption from the United Kingdom, the United States and other countries since 1868. These figures show the overwhelming predominance of the two great English-speaking countries in our foreign trade; in the fiscal year ended Mar. 31, 1936, for example, 80.3 p.c. of our exports of domestic produce was shipped to these two countries, which, in the same year, together provided 77.7 p.c. of our imports for home consumption. Tables 7 and 8 show, respectively, by years, the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1911, and the *ad volorem* rates of duty collected on imports from these and from all countries from 1868 to 1936. The higher rates collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is largely due to the following factors: (1) imports of alcoholic beverages, which are subject to high duties, bulk largely in imports from the United Kingdom but are negligible from the United States; (2) imports of raw materials for processing in Canada, which are free of duty, form an important part of imports from the United States; and (3) dutiable imports from the United Kingdom are largely highly manufactured goods which are subject to relatively higher rates than semi-manufactured goods for further manufacture in Canada, which form another large element of imports from the United States. This subject is treated in more detail at pp. 58-59 of the Condensed Preliminary Report on the Trade of Canada, 1936, and under Subsection 4 of this chapter.

Importations of important raw materials used in Canadian manufacturing industries are given in Table 9 for the fiscal years ended 1911 to 1936.

Subsection 3.—General Analysis of Current Import and Export Trade.

The external trade of Canada, like that of every other country in the world, declined considerably in volume and very greatly in value in the period of falling prices following the War. Thereafter it recovered and by 1929 had reached a value greater even than in the war period. The world-wide depression which commenced in the autumn of 1929, however, was responsible for a very great reduction in the value, and a smaller reduction in the volume, of the trade of Canada and of every other country (see Subsections 1 and 10 of this chapter), the total value of our merchandise trade falling steadily from \$2,655,000,000 in the fiscal year ended Mar. 31, 1929, to \$887,000,000 in the fiscal year 1933. The external trade of Canada during the fiscal year ended Mar. 31, 1936, represented a third year of expansion from the low level of 1933. There was an increase in 1936 over 1935 in both imports and exports, imports increasing in value by 7.7 p.c. and exports by 12.2 p.c.

Imports are an indication of purchasing power in Canada and are especially influenced by the expansion or contraction of capital expenditures within Canada. The increase, therefore, of 8.1 p.c. in the volume and 7.7 p.c. in the value of imports reflects a recovery in purchasing power in Canada and probably some slight expansion in capital expenditures which were almost completely suspended during the worst years of the depression. It may be noted in Statement II that imports of iron and non-ferrous metal products, the groups chiefly influenced by capital expenditures, were much higher in 1936 than in 1933, though still much below those of the fiscal year 1927, chosen because it approximates to the calendar year 1926 taken as a representative year of the post-war prosperity period. Similarly in 1935 and 1936 imports have increased from the United States which is the chief external source for machinery and other durable goods and materials.

Exports represent the sale in world markets of surplus products of Canadian farms, mines, forests, fisheries, and factories and, when there is a ready sale for such products at prices profitable to the producer, large exports result in prosperity in Canada. In the year 1936 exports increased in volume by 7.0 p.c., while higher prices accounted for an increase of about 5.2 p.c. in the value of exports, so that Canadian goods were sold abroad not only in larger volume but also at more profitable prices. (See Subsection 10, pp. 578-581, for a comparison of volume and value.) The figures of exports shown in Statement II indicate that a shift is taking place in the importance of groups in the composition of our exports. In the prosperity period, 1925-29, Canadian exports were predominantly agricultural. Indeed in that period it was largely because bountiful harvests coincided with an active world demand at good prices that prosperity was widespread in Canada. In 1927 the two groups, vegetable and animal products, made up 59 p.c. of our exports, while non-ferrous metals constituted only 6.4 p.c. In 1936, on the other hand, vegetable and animal products made up only 41 p.c. of exports, but non-ferrous metals (including gold) increased to 25 p.c. This is very suggestive of the part which the mining and exporting of non-ferrous metals (including gold) are playing in the current economic recovery of Canada.

¹ Revised since the publication of the 1936 Year Book.

Statistical Tables of Current Trade.—Tables 10 to 18 (pp. 532-573) deal with the current trade statistics of the Dominion. Tables 10 and 11 are summary tables, showing by groups our trade with the United Kingdom, the United States and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13 for imports of all important commodities. Table 14 shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1932-36. Table 15 shows imports and exports for the fiscal year ended 1936 by degree of manufacture and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries dutiable or free under the general, preferential, and treaty rate tariffs in 1936.

Subsection 4.—Trade with the United Kingdom and the British Empire.

Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States. In the early years of the Dominion, the United Kingdom, which was then lending us capital on a considerable scale for those times, supplied more than half our imports, though as a customer she came second to the United States. Later on, however, partly as the result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the United Kingdom became the chief market for our exports, holding that position steadily from 1890 to 1920, while in certain of the more recent years the United States has been our largest customer.

As regards our imports, on the other hand, the United States, though in the beginning ranking second in supplying our wants, took first place as early as 1876 and has maintained that position steadily since about 1883, the proximity of the two countries and the increasing population on both sides of the line being largely responsible. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, the percentage of Canada's imports coming from the United States rose as high as 82.3 p.c. in 1918. From 1921 to 1930 it remained fairly constant at about two-thirds, while in recent years it has declined and was 56.8 p.c. in 1936. Our imports from the United Kingdom, which fell as low as 8.0 p.c. of the total in 1919, fluctuated between 15.2 p.c. and 19.0 p.c. between 1921 and 1930, but have been somewhat higher since then and stood at 21.0 p.c. in 1936. (See Tables 5 and 6 of this chapter.)

Statement II above shows our trade with the United Kingdom in three recent years compared with that in 1927 and 1914. It may be noted that in the latest years there has been a very great decline in imports of textiles, partially compensated by some increase in imports of iron, non-metallic mineral and chemical products. Vegetable and animal products continue to make up the major part of our exports to the United Kingdom, but there has been an actual and a great proportional increase in exports of wood and paper products and non-ferrous metals.

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in summary form in Tables 10 and 11, and in detail in Tables 12 and 13 of this chapter.

Trade of Canada with the British Empire.—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to on p. 489. Table 18 on p. 573 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff. The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56.7 p.c. After the introduction of the British preferential tariff, the downward

trend in the value of imports from the United Kingdom was reversed, although the proportion of our total imports coming from the United Kingdom continued to decline. Imports from other Empire countries which were insignificant before the beginning of the century have increased both in actual value and proportion of total imports. However, during the latest four years and especially since the Ottawa Agreements, the proportion of trade with both the United Kingdom and the total British Empire has shown an upward trend, although both the volume and direction of Canada's exports vary widely with the vicissitudes of crops here and in other parts of the world. Canada's exports to Empire countries other than the United Kingdom consist very largely of manufactured products, while imports from those Empire countries are chiefly raw materials.

In the interpretation of statistics covering a long period, such as those in Statement III following, the wide fluctuations in price levels should be borne in mind. Thus the fiscal year 1896, just prior to the introduction of the British preference, marked about the close of a long period of declining prices which began in the '70's. Prices followed a rising trend from then to the last pre-war fiscal year 1914, and rose very steeply throughout the War to a peak in the fiscal year ended 1921. In the following year, prices suffered a sudden drop and then remained fairly steady until 1929, after which the recent serious decline has occurred. (See Chapter XX.) The trade of Canada with the British Empire in certain fiscal years since 1886 was as follows:—

III.—CANADA'S TRADE WITH THE BRITISH EMPIRE.

Item and Fiscal Year.	Canadian Trade with—			Percentage of Total Trade with—

¹ Revised since the publication of the 1936 Year Book.

Canadian Preference on Imports from Empire Countries.—As indicated in the paragraph above dealing with trade with Empire countries, a declining trend in the imports from Empire countries down to 1897 was changed after the British preferential tariff of 1897 to a rising trend. Imports from the United Kingdom since 1868 are shown in Table 6. Table 8 shows the average *ad valorem* rates of duty collected on imports from the United Kingdom, the United States and all countries. This shows an appreciable drop in the rates of duty on imports from the United Kingdom after 1897. However, even after this, average rates of duty are shown in many years to be higher on both dutiable imports and total imports from the United Kingdom than from the United States in spite of the British preference being in effect. A number of factors explain this situation. Dutiable imports from the United Kingdom consist very largely of highly manufactured goods normally subject to high rates of duty, whereas dutiable imports from the United States include a large proportion of semi-manufactured goods for further processing in Canadian factories and such goods carry a reasonably low rate of duty. The United States is also the chief source of Canadian imports of raw materials free of duty. Furthermore, alcoholic beverages and manufactured tobaccos which are subject to very high duties are an important element of imports from the United Kingdom but are insignificant in imports from the United States. Finally, especially in recent years, there is a large range of imports which are free of duty under the British preference but are subject to moderate duties when coming from the United States. The values of such imports from Empire countries in the latest fiscal year are shown in Table 18. Imports from the United Kingdom which are free only under the preference tariff have increased from 0.6 p.c. in 1925 to 41.3 p.c. in 1936 of our total imports from that country. To make a fair comparison between the United Kingdom and the United States of the average rates of duty collected on ordinary dutiable imports, imports of alcoholic beverages and manufactured tobaccos should be eliminated, while imports free of duty under the British preference but dutiable when imported from the United States should be added to the dutiable imports from the United Kingdom. This is done in Statement IV which follows.

IV.—COMPARISON OF THE AVERAGE *AD VALOREM* RATES OF DUTY ON DUTIABLE IMPORTS FROM THE UNITED KINGDOM AND THE UNITED STATES WITH DUTIABLE IMPORTS OF ALCOHOLIC BEVERAGES AND TOBACCO ELIMINATED AND IMPORTS FREE OF DUTY UNDER THE BRITISH PREFERENCE ADDED TO DUTIABLE IMPORTS FROM THE UNITED KINGDOM, FISCAL YEARS 1922-36.

NOTE.—Figures in this statement do not include dumping and other special duties.

Fiscal Year.	United Kingdom.				United States.		Average <i>Ad Valorem</i> Rate on Dutiable Imports.

On this fair basis of comparison the average rate of duty on imports from the United Kingdom has been lower in every year shown here while the difference in favour of the United Kingdom has become 50 p.c. or more in the years since the Ottawa Agreements became effective.

Subsection 5.—Trade with the United States and Other Foreign Countries.

Trade with the United States.—In the period immediately following Confederation, the United States was Canada's chief customer, trade still following its accustomed channels in spite of the denunciation of the Reciprocity Treaty, which had expired on Mar. 17, 1866. On the other hand, we bought more from the United Kingdom than from the United States. (See Tables 5 and 6 for a record of trade with the United States since 1868.)

In the '70's, however, the proportion of our exports going to the United States, which had been over 50 p.c. in the first few years of the Dominion, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890, when it fell to 35 p.c. in 1892 and as low as 27 p.c. in 1898. In the first decade of the twentieth century it averaged about 35 p.c., but fell off considerably in the war years. Since the War, the average has been about 40 p.c., although in 1933 under the influence of the depression and high tariffs in the United States the proportion dropped to 33 p.c. (See Statement V below.)

Imports from the United States exceeded half of our total imports for the first time in the years from 1877 to 1879, while in the eighteen-eighties they were approximately equivalent to those from the United Kingdom, at from 40 to 45 p.c. from either country. By 1896, however, imports from the United States again reached half of the total, and subsequently have never fallen below that point, increasing both absolutely and relatively during the great period of expansion until 1913, when they were 65.0 p.c. of all imports. In the extraordinary circumstances of the Great War they rose as high as 82.3 p.c. in 1918, and throughout the nineteen-twenties stood at about two-thirds of the total. They have declined to less than three-fifths of the total since 1932 as shown in Statement V below. The reduced demand for capital goods has been an important factor in recent years.

The commodities making up our export and import trade with the United States are shown in summary form in Tables 10 and 11 and in detail in Tables 12 and 13 of this chapter.

Trade with the United States by main groups of commodities for the three latest fiscal years compared with 1927 and 1914 is shown in Statement II (c), p. 506. Non-metallic minerals (chiefly coal and petroleum products) and chemicals are an increasingly important factor in imports from the United States, although iron products became again in 1935 the most important group and there are still large imports of textiles which include raw cotton and of vegetable products largely comprised of tropical or out-of-season fruits and vegetables. Aside from the effects of the Ottawa Agreements with their purpose of increasing intra-Empire trade and of the at-times heavy discount against Canadian funds in the United States, a factor in the fluctuation of the United States' share in our imports which should not be overlooked is the influence of capital expenditure in Canada. The United States is the principal external source for machinery, equipment and structural materials. The almost complete cessation of capital expenditures in the depression therefore affected imports from the United States more than from any other country.

Another important factor influencing imports from the United States is Canadian purchasing power which is very directly affected by exports to the United States. These were seriously curtailed by the very high rates on many important Canadian products introduced by the Hawley-Smoot tariff of June, 1930, and thereafter imports from the United States showed a greater decline than Canadian exports to that country. (See the 1936 Year Book, p. 508.)

The effect of the Trade Agreement with the United States which became effective on Jan. 1, 1936, is indicated by the following figures:—

Item.	Twelve Months Ended Dec. 31—		Increase or Decrease.	
	1935.	1936.		
	\$'000	\$'000	\$'000	p.c.
Imports from United States.....	312,417	369,857	57,440	18.7
Totals, domestic exports to United States.....	358,570	406,665	48,095	13.4
Less exports of non-monetary gold.....	95,990	71,489	24,501	-25.5
Exports merchandise other than gold.....	262,580	335,176	72,596	27.6

The influence of the economic recovery in both Canada and the United States should not be overlooked as a factor in the above increases of trade. However, the Trade Agreement has undoubtedly been of great benefit to producers of live stock and lumber in Canada and, in a less degree, to many other classes.

Canadian Trade via the United States.—Imports from overseas countries *via* the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported *via* a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1936 imports *via* the United States have decreased from 9.5 p.c. to 2.58 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going *via* the United States shows a considerable decline since 1927, the percentages by fiscal years being: 1927, 39.4; 1928, 38.7; 1929, 36.6; 1930, 33.7; 1931, 27.3; 1932, 18.7; 1933, 14.2; 1934, 14.4; 1935, 17.3; 1936, 18.4. An important factor in the decline for recent years has been the requirement of direct shipment for goods to qualify under the Empire preferences introduced in Britain. Details by countries are given in Table 21 of this chapter.

Trade with Other Foreign Countries.—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1936 are shown in Statement V below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion and were 69 p.c. in 1921, while those from other foreign countries declined. With this exception the proportion of imports from other foreign countries has remained surprisingly constant over the period of nearly half a century at about one-tenth to one-eighth of total imports. Canadian exports to the United States have fluctuated between 30 p.c. and 46 p.c. of the total, while those to other foreign countries increased from 4.5 p.c. to as high as 24.0 p.c. in 1929; they declined to 10.5 p.c. in 1936.

¹ Revised since the publication of the 1936 Year Book.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 8 to 39 (pp. 122-162) of the Condensed Preliminary Report on the Trade of Canada, 1936, published by the Dominion Bureau of Statistics. These tables show the trade of Canada in leading commodities with 96 British and foreign countries for the fiscal years 1935 and 1936.

Subsection 6.—Geographical Distribution of Canadian Trade by Continents and Countries.
