## PREFACE.

The Canada Year Book had its beginning in the first year of the Dominion when the semi-official "Year Book and Almanac of British North America"—being (to quote its sub-title) "an Annual Register of political, vital, and trade statistics, customs tariffs, excise and stamp duties, and all public events of interest in Upper and Lower Canada, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland, and West Indies"—was founded. Subsequently the title was changed to "The Year Book and Almanac of Canada,—an annual statistical abstract of the Dominion and a register of legislation and of public men in British North America" It was published annually from 1867 to 1879.

In 1886, after the passing of a general Statistics Act, the "Statistical Abstract and Record of Canada" was instituted as an official book of reference respecting the institutions, population, finance, trade, and general conditions of the Dominion. The work was prepared in the General Statistical Office of the Department of Agriculture and was continued annually until 1904. In 1905, the General Statistical Office was amalgamated with the Census Office, and the Year Book was remodelled as "The Canada Year Book, Second Series" by Dr. Archibald Blue, Chief Officer.

In the re-organization of statistics which followed the report of the Royal Commission on Statistics of 1912, and the establishment of the Dominion Bureau of Statistics in 1918, the improvement of the Year Book was made a primary object and this progress has been continued down to the present time.

In a publication so broad in scope as the Year Book, under conditions where the content and variety of statistical data are continually changing and expanding, the editorial task of keeping the size of each edition within convenient limits is becoming more difficult year by year. But while it is no longer possible to cover adequately the entire field of information in a single edition, every effort is made when planning the publication to keep the framework intact and well-balanced, and to make reference to previously published material as easy as possible for the reader.

In the present edition, a complete list of special articles and of significant historical or descriptive text that has not been subject to wide change and is therefore not repeated, is given following the Table of Contents. This list links the 1939 Year Book with its predecessors and indicates the extent to which the 'Year Book' must now be regarded as a series of publications rather than as a single volume.

Among the more important of the new features incorporated in the present edition are the following: In Chapter II, an article on the Relationship of the Department of Public Archives to the Historical Records of Canada, followed by a Bibliography of Canadian History, contributed by Dr. Gustave Lanctot, LL.M., D.Litt., LL.D., K.C., F.R.S.C., Deputy Minister and Dominion Archivist, appears at pp. 34-40. In the introduction to Chapter VIII—Agriculture—an article on the Historical Background of Canadian Agriculture, by G. S. H. Barton, C.M.G., B.S.A., D.Sc.A., Deputy Minister, Department of Agriculture, appears at pp. 187-190. A special article on Noxious Forest Insects and Their Control, prepared by J. J. de Gryse, Ph. Cand. (Lov.), Chief, Forest Insect Investigations, Department of Agriculture, pp. 254-263, is an added feature of Chapter IX—Forestry. T. W. Grindley, Ph.D., Secretary, the Canadian Wheat Board, Winnipeg, has contributed an article on the Origin, Development, and Operations of the Canadian Wheat Board, which appears at pp. 569-580. An extended article on the Development of the Press in Canada, together with statistics for all the daily and the principal weekly newspapers and magazines, supplements Chapter XVIII where it appears at pp. 737-

773. This article was prepared, under the direction of the Dominion Statistician, by A. E. Millward of the Year Book staff.

The extra space given to these special features this year more than accounts for the increase in the total number of pages in the volume. Indeed, the regular chapter material has been substantially condensed, without impairment of the treatment, by rearrangement and close editing. On the other hand, the statistical series of several chapters have been broadened by the inclusion of tables showing special census analyses that, it is considered, will be found useful to readers.

All parts of the volume have been carefully revised and brought up to date; the latest information appearing to the date when each section was sent to press is included. Under Section 1 of Chapter VIII—Agriculture—a special subsection explains the loaning operations of the Canadian Farm Loan Board since its inception in 1930. Further progress has been made this year in completing the framework of Chapter XVIII—Transportation and Communications—especially in regard to Part VII that deals with Radio Communications. Chapter XX—Prices—has been revised, especially in relation to Subsection 2 dealing with Retail Prices and Cost of Living, under which heading a new subsection summarizes the latest results of a special study on family living expenditures, now being undertaken by the Bureau as a phase of the Nutrition Survey. The material of Chapter XXVII—Judicial and Penitentiary Statistics—has been recast and certain statistics reclassified in line with the procedure now adopted by the Judicial Statistics Branch of this Bureau.

In commemoration of the Royal Visit to Canada, May 17 to June 15, 1939, colour plates of Their Majesties King George VI and Queen Elizabeth, together with official pictures of incidents connected with the unveiling of the National Memorial and of the Royal Assent to legislation of the 1939 Session of Parliament, appear as frontispiece. At pp. 1155-1160 a short account of the Royal Tour across Canada together with a condensed itinerary is given.

In the absence, during part of the year, of the Editor, S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F. R. Econ. Soc., Chief of the General Statistics Branch and Editor, Canada Year Book, the present volume has been edited under his direction by A. E. Millward, B.A., B.Com., assisted by W. H. Lanceley, and R. F. Clarke, M.C., D.L.S. Charts, graphs, and layouts, except as otherwise credited, have been made by, or under the supervision of, J. W. Delisle, Senior Draughtsman of the Dominion Bureau of Statistics.

Grateful acknowledgments are hereby tendered to the numerous officials of the Dominion and Provincial Governments, and other individuals, who have assisted in the collection of information. Credit is apportioned to the various persons and services concerned by means of footnotes to those chapters and sections that have been contributed, or in the compilation of which co-operation has been received.

While every care has been taken in preparation, there are doubtless imperfections and, with a view to the improvements of future editions, the Bureau will be glad to hear of any errors that may have escaped notice, and to receive suggestions with regard to omissions or to method of treatment.

R. H. COATS,  
Dominion Statistician.

# ARTICLES AND MISCELLANEOUS TEXT MATERIAL (PUBLISHED IN FORMER EDITIONS) CLASSIFIED BY SUBJECT.

**NOTE.**—As explained in the Preface, it is not possible to include in a single edition of the Year Book all articles and descriptive text of previous editions, and the following list has been compiled as an index or key to miscellaneous material and special articles, contributed by authorities in their particular fields, that appear in earlier editions. This list links up the 1939 Year Book with its predecessors in respect to matters that have not been subject to wide change. Those sections of chapters, such as Population, which are automatically revived when new material is made available from a later census, and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. Only the latest published article on each subject is shown except when an earlier article takes in ground not covered in the later one. When articles cover more than one subject they are listed under each heading.

# SYNOPSIS.

## CHAPTER I.—PHYSIOGRAPHY.

	PAGE.
<b>Part I.—Geographical Features</b> .....	1-14
1. Land and Fresh-Water Areas of Canada, by Provinces and Territories, 1938.....	8
Section 1. <i>Orography</i> .....	9-11
2. Mountain Peaks over 11,000 Feet in Elevation, with Latitude and Longitude.....	9-10
Section 2. <i>Lakes and Rivers</i> .....	12-13
3. Areas, Elevations, and Depths of the Great Lakes.....	12
4. Drainage Basins in Canada.....	13
Section 3. <i>Islands</i> .....	13-14
<b>Part II.—Geology</b> .....	14-25
Section 1. <i>Geology of Canada</i> .....	14-25
Section 2. <i>Economic Geology</i> .....	25
<b>Part III.—Seismology in Canada</b> .....	25
<b>Part IV.—The Flora of Canada</b> .....	26
<b>Part V.—Faunas of Canada</b> .....	26
<b>Part VI.—Lands, Scenic, and Game Resources of Canada</b> .....	26-32
1. Land Area of Canada, Classified as Agricultural, Forested, or Unproductive.....	27
2. Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1938.....	29-31
<b>Part VII.—Climate and Meteorology</b> .....	32-33
Section 1. <i>The Climate of Canada</i> .....	32
Section 2. <i>The Factors which Control Canadian Weather</i> .....	32
Section 3. <i>The Distribution of Precipitation in Canada</i> .....	32
Section 4. <i>The Temperature and Precipitation of Northern Canada</i> .....	32
Section 5. <i>The Meteorological Service of Canada</i> .....	33
Section 6. <i>Meteorological Tables</i> .....	33
Section 7. <i>Droughts in Western Canada</i> .....	33
Section 8. <i>Standard Time and Time Zones in Canada</i> .....	33

## CHAPTER II.—HISTORY AND CHRONOLOGY.

<b>Part I.—History</b> .....	34-40
Section 1. <i>The Relationship of the Department of Public Archives to the Historical Records of Canada</i> .....	34-36
Section 2. <i>Outlines of Canadian History</i> .....	36
Section 3. <i>A Bibliography of Canadian History</i> .....	36-40
<b>Part II.—Chronology, 1497 to 1939</b> .....	40-49

## CHAPTER III.—CONSTITUTION AND GOVERNMENT.

<b>Part I.—Constitution and General Government</b> .....	50
<b>Part II.—Provincial and Local Government</b> .....	50
<b>Part III.—Legislative and Executive Authorities</b> .....	50-71
Section 1. <i>Dominion Parliament and Ministry</i> .....	50-65
Subsection 1. <i>The Governor General of Canada</i> .....	51
1. <i>Governors General of Canada, 1867-1939</i> .....	51
Subsection 2. <i>The Ministry</i> .....	51-55
2. <i>Ministries since Confederation and Members of the Sixteenth Ministry</i> .....	52
3. <i>Members of the King's Privy Council for the Dominion of Canada, according to Seniority therein, as at Mar. 1, 1939</i> .....	53
4. <i>Duration and Sessions of Dominion Parliaments, 1867-1939</i> .....	54-55
Subsection 3. <i>The Senate</i> .....	55-58
5. <i>Growth of Representation in the Senate, 1867-1939</i> .....	57
6. <i>Representation in the Senate of Canada, by Provinces, as at Mar. 15, 1939</i> .....	57-58
Subsection 4. <i>The House of Commons</i> .....	58-65
7. <i>Representation in the House of Commons as at Dominion General Elections 1867-1935</i> .....	59
8. <i>Electoral Districts, Voters on Lists and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Eighteenth General Election, Oct. 14, 1935</i> .....	60-65
Subsection 5. <i>The Dominion Franchise</i> .....	65
9. <i>Number of Voters and Votes Polled at the General Elections of 1925, 1926, 1930, and 1935</i> .....	65
Section 2. <i>Provincial Governments</i> .....	66-71
10. <i>Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation, and Legislative Process by which Admission was Effected</i> .....	66
11. <i>Lieutenant-Governors of Provinces, 1867-1938 and Present Ministries</i> .....	67-71

## CHAPTER III.—CONSTITUTION AND GOVERNMENT—concluded.

	PAGE.
<b>Part IV.—Representatives in Other Countries</b> .....	72-75
Section 1. <i>Representatives within the Empire</i> .....	72-73
Section 2. <i>Diplomatic Representation Abroad</i> .....	73-75
Section 3. <i>Diplomatic Representation in Canada</i> .....	75
<b>Part V.—Canada and the League of Nations</b> .....	75-77

## CHAPTER IV.—POPULATION.

Section 1. <i>Census Statistics of General Population</i> .....	78-89
1. Population of Canada, by Provinces and Territories, in the Census Years 1871 to 1931.....	79
2. Percentage Distribution of Canadian Population, by Provinces and Territories, 1871 to 1931.....	79
3. Population of Canada, by Provinces and Territories, in 1871 and 1931, Numerical Increase in each Decade from 1871 to 1931 and Total Increase.....	80
4. Population of Canada, by Provinces and Territories, in 1871, and Percentage Increase, by Decades, from 1871 to 1931.....	80
5. Area and Density of Population of Canada, by Provinces, 1901-31.....	84
6. Area and Density of Population, by Counties or Census Divisions, 1931.....	85-86
7. Densities of Population in Various Countries in Recent Years.....	88
8. Summary of Births, Deaths, Natural Increase, and Immigration, calendar years, with Estimated Population as at June 1, 1921-38.....	89
Section 2. <i>Sex Distribution</i> .....	89-91
9. Sex Distribution of the People of Canada, by Provinces, 1871-1931.....	90
10. Masculinity of the Population of Various Countries in Recent Years.....	91
Section 3. <i>Conjugal Condition</i> .....	91
11. Conjugal Condition of the Population, as Shown by the Censuses of 1871-1931.....	91
Section 4. <i>Age Distribution</i> .....	92
12. Proportion per 1,000 of the Population by Age Periods, Census Years, 1871-1931.....	92
13. Proportion per 1,000 of the Population by Age Periods, by Provinces, 1931, with Totals for 1921.....	92
Section 5. <i>Racial Origins</i> .....	93-94
14. Origins of the People, Census Years, 1871-1931.....	94
Section 6. <i>Religions</i> .....	94-96
15. Religious of the People at each Decennial Census, 1871-1931.....	95-96
Section 7. <i>Birthplaces</i> .....	96-97
16. Birthplaces of the Population of Canada, by Numbers and Percentages, According to the Censuses of 1871-1931.....	96
Section 8. <i>Citizenship and Naturalization</i> .....	97-98
17. Citizenship of Native-Born, other British-Born, and Foreign-Born Residents in Canada in 1931, by Sex, According to Allegiance.....	97-98
Section 9. <i>Language Spoken and Mother Tongue</i> .....	98-99
18. Percentages of the Population Speaking Both and Neither Official Languages, by Quinquennial Age Groups, Sex, Rural and Urban, Canada, 1931.....	99
Section 10. <i>Rural and Urban Population</i> .....	99-107
19. Rural and Urban Populations, by Provinces and Territories, Decennial Censuses 1871-1931 and Numerical Increases 1921-31.....	101
20. Urban Populations, Classified by Size of Municipality Groups, 1911, 1921, and 1931.....	102
21. Populations of Cities and Towns having over 5,000 Inhabitants, Decennial Censuses 1871-1931, and the Quinquennial Census of 1936.....	102-104
22. Populations of Towns and Villages having between 1,000 and 5,000 Inhabitants, Decennial Censuses 1901-31 and the Quinquennial Census of 1936.....	104-107
Section 11. <i>Literacy</i> .....	107-108
23. Literacy of the Population of 10 Years of Age or Over, by Provinces, 1931.....	108
Section 12. <i>School Attendance</i> .....	108
Section 13. <i>Blind and Deaf-Mutes</i> .....	108
24. Deaf-Mutes, by Number and Proportion per 10,000 Population, by Provinces, 1831-1931.....	108
Section 14. <i>Dwellings and Family Households</i> .....	109-110
25. Classification of Urban Households of One Family with Husband and Wife Living Together in Rented Home, by Rent Paid, Earnings, etc., Canada, 1931.....	109
26. Numbers of Families and Numbers and Percentages of Children Living at Home, by Class and Size of Family, Rural and Urban, Canada, 1931.....	109-110
Section 15. <i>Occupations of the Canadian People</i> .....	110
Section 16. <i>Quinquennial Census of the Prairie Provinces</i> .....	110-112
27. Rural and Urban Population of the Prairie Provinces, by Racial Origin, Birthplace, and Sex, as at June 1, 1936.....	111-112
Section 17. <i>Annual Estimates of Population</i> .....	112-113
28. Estimates of the Population of Canada by Provinces, intercensal years, 1900-35.....	113
Section 18. <i>Area and Population of the British Empire</i> .....	113
Section 19. <i>Area and Population of the World</i> .....	113

## CHAPTER V.—VITAL STATISTICS.

Section 1. <i>Births</i> .....	116-127
1. Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1935-37, with Averages for 1921-25, 1926-30, and 1931-35.....	117-118
2. Live Births in Cities and Towns of 10,000 Population or Over, 1933-37, with Averages, 1926-30, and 1931-35.....	118-119

## CHAPTER V.—VITAL STATISTICS—concluded.

	PAGE.
Section 1. <i>Births</i> —concluded.	
3. Percentages of Legitimate Children Born Alive to Canadian-Born, British-Born or Foreign-Born Mothers, by Provinces, 1935-37.	130
4. Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1933-37.	121
5. Quartile and Decile Ages of Married Fathers and Mothers, in Canada, 1926, 1934-36	122
6. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1926, 1936 and 1937.	122-123
7. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1926, 1936, and 1937.	124-125
8. Numbers of Illegitimate Births, Classified by Age of Mother, by Provinces, 1937, Percentages to Total Live Births, and Totals of Illegitimate Births, by Sex, 1935, 1936, and 1937, with Averages or Totals, 1926-37.	126
9. Stillbirths, Classified by Age of Mother, by Provinces and Legitimacy of Child, 1937, with Averages or Totals, 1926-37, and Ratios to Totals, 1935, 1936, and 1937.	126
10. Crude Birth Rates of Various Countries of the World and of Provinces of Canada in Recent Years.	127
Section 2. <i>Marriages and Divorces</i> .	127-131
Subsection 1. <i>Marriages</i> .	127-130
11. Differences in Ages of Bridegrooms and Brides, 1936.	128
12. Average Ages of Parties Contracting Marriage, by Provinces, 1935 and 1936.	128
13. Percentage Distribution by Nativity of Persons Married in Canada, by Provinces, 1935, 1936, and 1937, with Averages for 1921-25, 1926-30, and 1931-35.	129
14. Crude Marriage Rates of Various Countries of the World and of Provinces of Canada in Recent Years.	130
Subsection 2. <i>Divorces</i> .	130-131
15. Statistics of Divorces Granted in Canada, 1918-38.	131
Section 3. <i>Deaths</i> .	131-149
Subsection 1. <i>General Mortality</i> .	132-140
16. Numerical and Percentage Distribution of Deaths in Canada by Sex and Age Groups, 1936-37.	133
17. Quartile and Decile Ages of Decedents, by Sex, 1926, 1935, and 1936.	133
18. Crude and Standardized Death Rates in Canada, by Provinces, 1930-37, with Averages, 1921-25, 1926-30, and 1931-35.	135
19. Deaths in Canada, by Principal Causes, 1933-37.	136
20. Death Rates per 100,000 Population in Canada, by Principal Causes, 1932-37.	138
21. Deaths in Cities and Towns of 10,000 Population and Over, 1933-37, with Averages, 1926-30 and 1931-35.	138-140
22. Crude Death Rates of Various Countries and of the Provinces of Canada in Recent Years.	140
Subsection 2. <i>Infantile and Maternal Mortality</i> .	141-149
23. Infantile Mortality, by Provinces, together with the Rates per 1,000 Live Births, 1931-37, with Averages for 1921-25, 1926-30, and 1931-35.	141
24. Infantile Mortality in Canada, by Principal Causes of Death, 1926, 1930-37.	142-143
25. Proportion per 1,000 Deaths of Infants under One Year of Age Occurring at each Age Period, 1930-37.	143-144
26. Deaths and Death Rates of Children Under One Year of Age (Exclusive of Stillbirths) in Cities and Towns of 10,000 or Over, 1935-37, with Averages, 1926-30 and 1931-35.	145
27. Infantile Mortality per 1,000 Live Births in Various Countries of the World and Provinces of Canada in Recent Years.	146
28. Infantile Mortality per 1,000 Live Births in Certain Cities of the World in 1936.	147
29. Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1934-37, with Averages for 1926-30 and 1931-35.	148
30. Maternal Deaths in each Province, by Age Groups, 1937, with Totals and Rates per 1,000 Live Births for 1934-37 and Averages for 1926-30 and 1931-35.	148
31. Maternal Deaths in each Province, by Causes of Death, 1937.	148-149
Section 4. <i>Natural Increase</i> .	149-153
32. Summary of Births, Marriages, Deaths, and Natural Increase, by Provinces, for the calendar years 1935-37, with Averages 1921-25, 1926-30, and 1931-35.	151
33. Natural Increase in Cities and Towns of 10,000 Population and Over, 1933-37, and Averages, 1926-30, and 1931-35.	152-153
34. Births, Deaths, and Natural Increase in Canada, by Provinces and for each Sex, 1937, with Totals, 1931-37, and Averages 1926-30, and 1931-35.	153

## CHAPTER VI.—IMMIGRATION AND COLONIZATION.

Section 1. <i>Statistics of Immigration</i> .	154-174
1. Numbers of Immigrant Arrivals in Canada, calendar years 1852-1938.	156
2. Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States, and other Countries, calendar years 1908-38.	157
3. Sex and Conjugal Condition of Immigrants into Canada, by Age Groups, calendar years 1936 and 1937.	157
4. Sex Distribution of Immigrants as Adult Males, Adult Females, and Children, calendar years 1929-37.	157
5. Racial Origins of Immigrants into Canada, calendar years, 1926-37.	158-159
6. The Cumulative Effects of Immigration on the Racial Composition of the Population: Percentages of each Origin Born in Leading Countries and Leading Races with which the Males have Intermarried, 1931.	160
7. Languages of Immigrants Ten Years of Age or Over, calendar years 1931-37.	161
8. Nationalities of Immigrants, calendar years 1931-37.	162
9. Countries of Birth of Immigrants, calendar years 1931-37.	163
10. Immigrants Arriving in Canada, by Chief Ports of Arrival, calendar years, 1931-37.	164

## CHAPTER VI.—IMMIGRATION AND COLONIZATION—concluded.

Section 1. <i>Statistics of Immigration—concluded.</i>	PAGE.
11. Destinations of Immigrants into Canada, by Provinces, calendar years 1929-33.	164
12. Immigrants Arriving in Canada, Classified by Occupation and Sex, According to Destination, calendar year 1937.	165-166
13. Rejections of Prospective Immigrants upon Arrival at Ocean Ports, by Principal Causes and by Nationalities, calendar years 1931-37.	168
14. Deportations of Immigrants, Including Accompanying Persons, after Admission, by Principal Causes and by Nationalities, fiscal years ended, 1927-38, with Totals 1903-26 and 1903-38.	168
15. British Juvenile Immigrants, fiscal years ended 1901-33.	169
16. Record of Oriental Immigrants, fiscal years ended 1931-38 and by decades, 1901-30	170
16A. Record of Oriental Immigrants, calendar years, 1929-37.	170
17. Record of Revenue Receipts and Registrations for Leave of Chinese Immigrants, fiscal years ended Mar. 31, 1931-38, with Totals 1886-1900, and by decades, 1901-30.	171
18. Expenditures on Immigration in the fiscal years ended Mar. 31, 1931-38, with Totals 1868-70, and by decades, 1871-1930.	172
19. Canadians Returned from the United States, calendar years 1924-38.	173
20. Numbers of Passengers of British Nationality Changing Their Permanent Residence Between the United Kingdom and British North America, calendar years 1924-38.	173
21. Returning Canadians and Other Non-Immigrants entering Canada via Ocean Ports, by Class of Travel, calendar years 1936 and 1937, with Totals for calendar years 1930-35.	174
Section 2. <i>Colonization Activities</i>	174

## CHAPTER VII.—SURVEY OF PRODUCTION.

Section 1. <i>The Leading Branches of Production in 1936</i>	177-180
1. Gross and Net Values of Production in Canada, by Industries, 1935 and 1936.	178
2. Itemized Statement of the Net Values of Production in Canada during 1935 and 1936, Indicating the Method of Computation by Giving Separately the Duplicated Items.	179
Section 2. <i>The Provincial Distribution of Production</i>	180-181
3. Summary Analysis of the Value of Production in Canada, by Provinces, 1935 and 1936.	180
Section 3. <i>Leading Branches of Production in each Province, 1936 compared with 1935</i>	181-186
4. Gross and Net Values of Production, Classified for each Province, by Industries, 1935.	182-184
4A. Gross and Net Values of Production, Classified for each Province, by Industries, 1936.	184-185
5. Percentage of the Value of the Net Production in each Industry to the Total Net Production for each of the Provinces in 1935.	185-186
5A. Percentage of the Value of the Net Production in each Industry to the Total Net Production for each of the Provinces in 1936.	186

## CHAPTER VIII.—AGRICULTURE.

Section 1. <i>The Government in Relation to Agriculture</i>	190-196
Subsection 1. The Dominion Government.	191-193
1. Applications for Farm Loans Received, Loans Approved, and Loans Disbursed, fiscal years ended Mar. 31, 1930-38.	192
2. Statement of Farm Loans Approved, with Details of Appraised Values of Security at Time of Loan, by Provinces, fiscal years ended Mar. 31, 1937 and 1938.	192
Subsection 2. Provincial Departments of Agriculture.	193-196
Subsection 3. Provincial Agricultural Colleges and Experimental Stations.	196
Section 2. <i>Statistics of Agriculture</i>	196-246
Subsection 1. Value of Agricultural Production and of Farm Capital.	200-203
1. Estimated Gross Value of Agricultural Production in Canada, Itemized by Provinces, 1933-37.	200-202
2. Current Value of Farm Capital in Canada, by Provinces, 1936 and 1937.	202
Subsection 2. Acreages, Yields, and Values of Field Crops.	203-215
3. Acreages, Yields, and Values of Principal Crops Grown in Canada, 1929-38.	203-204
4. Total Acreages and Values of Field Crops in Canada, by Provinces, 1933-38.	204
5. Acreages, Production, and Values of Principal Field Crops of Canada, Itemized by Provinces, 1937 and 1938.	205-211
6. Annual Average Yields per Acre of Field Crops for Canada, 1931-38, with Long-Time Averages.	212
7. Areas and Production of Wheat, Oats, Barley, Rye, and Flaxseed in the Prairie Provinces, 1936-38.	212
8. Stocks of Grain on Farms in Canada at July 31, 1938, 1937, and 1936, with Totals of Production of the Previous Years' Crop.	213
9. Detailed Stocks of Grain in Canada at July 31, 1936, 1937, and 1938.	213
10. Distribution of the Canadian Wheat Crops, by crop years, 1936-37 and 1937-38.	214
11. Distribution of the Canadian Oat Crops, by crop years, 1936-37 and 1937-38.	214
Subsection 3. Farm Live Stock and Poultry.	215-230
12. Summary Statistics of the Numbers of Live Stock and Poultry on Farms in Canada, Censuses of 1871-1931.	215
13. Numbers and Values of Farm Live Stock in Canada, by Provinces, 1935-38.	215-216
14. Average Values per Head of Farm Live Stock in Canada, by Provinces, 1936-38.	217
15. Numbers and Values of Farm Poultry in Canada, by Provinces, 1937 and 1938.	217-218
16. Estimated Production, Exports, Imports, and Apparent Consumption of Wool, 1920-38.	219
17. Annual Production and Value of Farm Eggs in Canada, by Provinces, 1936-38.	220

**CHAPTER VIII.—AGRICULTURE—concluded,**

	Page.
Section 2. <i>Statistics of Agriculture—concluded.</i>	
Subsection 4. <i>Dairying Statistics.</i>	
18. Total Milk Production of Canada, by Provinces, 1936-38.	220-224
19. Total Value of the Dairy Production of Canada, by Provinces, 1936-38.	221
20. Farm Value of the Milk Production of Canada, by Provinces, 1936-38.	222
21. Production of Butter and Cheese in Canada, by Provinces, 1936-38.	222
22. Production and Value of Miscellaneous Products of Dairy Factories, 1936-38.	223
23. Per Capita Daily Consumption of Milk in Canada, by Provinces, 1936-38.	224
Subsection 5. <i>Horticulture.</i>	224-226
24. Estimated Quantities and Values of Chief Commercial Fruit Production in Canada, 1934-37, with Five-Year Averages, 1932-36.	225
25. Numbers and Values of Fruit Trees, Bushes, and Plants, Sold by Nurserymen in Canada, years ended May 31, 1935-38.	226
26. Quantities and Values of Floricultural and Ornamental Nursery Stock Grown in Canada and Sold during the years ended May 31, 1937 and 1938.	226
Subsection 6. <i>Special Agricultural Crops.</i>	227-230
27. Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1936-38.	227
28. Acreages, Yields, and Values of Sugar Beets Grown in Canada and Quantities of Refined Beetroot Sugar Produced, 1928-37.	227
29. Acreage, Production, and Value of the Commercial Crop of Leaf Tobacco in Canada, representative years, 1900-38.	228
30. Acreage, Production, and Value of the Commercial Crop of Leaf Tobacco in Canada, by Provinces, 1934-38.	229
31. Acreage, Production, and Value of the Commercial Crop of Leaf Tobacco, in Canada, by Main Types, 1937-38, with Five-Year Averages 1932-36.	229
32. Acreages, Yields, and Values of Flaxseed, Fibre, and Tow, in Canada, 1929-38.	229
33. Estimated Production and Value of Honey and Beeswax in Canada, by Provinces, 1936 and 1937.	230
Subsection 7. <i>Farm Labour and Wages.</i>	230-232
34. Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930, and 1936-38.	231-232
Subsection 8. <i>Prices of Agricultural Produce.</i>	232-237
35. Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flaxseed, and Rye—basis, in store at Fort William and Port Arthur—Aug., 1935-Dec., 1938, and Yearly Average Prices for crop years ended July 31, 1926-38.	232-233
36. Monthly Average Prices of Flour, Bran, and Shorts at Principal Markets, 1938.	233
37. Yearly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1937 and 1938.	234
38. Monthly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1938.	234-235
39. Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, crop years, 1916-17 to 1938-39.	236
Subsection 9. <i>Agricultural Statistics of the Census.</i>	237
40. Occupations of Part-Time Farm Operators, 1931.	237
Subsection 10. <i>Miscellaneous Agricultural Statistics.</i>	238-239
41. Major Irrigation Projects in Southern Alberta, 1936 and 1937.	238
42. Average Values per Acre of Occupied Farm Lands in Canada, as Estimated by Crop Correspondents, 1910 and 1920-38.	239
Subsection 11. <i>International Agricultural Statistics.</i>	239-246
43. Acreages and Yields of Cereals and Potatoes in Countries of the World, 1937 and 1938, with Five-Year Averages for 1932-36.	240-244
44. Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1937 and 1938.	245
45. Numbers of Live Stock in Principal Countries, circa 1936.	245-246

**CHAPTER IX.—FORESTRY.**

Section 1. <i>Forest Regions.</i>	247-250
Section 2. <i>Important Tree Species.</i>	251
Section 3. <i>Forest Resources.</i>	251-253
1. Estimate of Total Accessible Stand of Timber in Canada, Classified by Type and Merchantable Size, by Provinces and Regions, with Estimate of Grand Total Stand.	253
Section 4. <i>Noxious Forest Insects and Their Control.</i>	254-263
Section 5. <i>Forest Administration.</i>	263-271
Subsection 1. <i>Administration of Dominion and Provincial Timber Lands.</i>	263-265
Subsection 2. <i>Forest Fire Protection.</i>	265-267
Subsection 3. <i>Scientific Forestry.</i>	267-271
Section 6. <i>Forest Utilization.</i>	271-286
Subsection 1. <i>Woods Operations.</i>	271-273
2. Values of Woods Operations, by Products, 1932-36.	272
3. Quantities of Wood Cut in Operations in the Woods in Canada, Equivalents in Standing Timber, and Total Values, by Chief Products, 1936, with Comparative Totals, 1926-35.	272
4. Equivalent Volumes of Standing Timber Cut in Canada and Values of Products of Woods Operations, by Provinces, 1935 and 1936.	273
Subsection 2. <i>The Pulp and Paper Industry.</i>	273-281
5. Production, Consumption, Exports, and Imports of Pulpwood, calendar years 1930-37.	274
6. Pulp Production, Mechanical and Chemical, calendar years 1930-37.	275

## CHAPTER IX.—FORESTRY—concluded.

	Page.
Section 6. <i>Forest Utilization</i> —concluded.	
Subsection 2. The Pulp and Paper Industry—concluded.	
7. Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1933-37. . . . .	277
8. Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1936, and 1937. . . . .	277
9. Summary of Paper Production in Canada, calendar years 1930-37. . . . .	278
10. Production of Paper in Canada, by Provinces, 1937. . . . .	278
11. Estimated Quantities of Newsprint Produced in Leading Countries, 1936 and 1937, and the Ten-Year Average, 1928-37. . . . .	279
12. Exports of Newsprint Paper from Principal Paper-Producing Countries of the World, 1913, 1935, 1936 and 1937. . . . .	280
Subsection 3. The Lumber Industry. . . . .	281-283
13. Quantities and Values of Lumber, Shingles, and Lath Produced in Canada, calendar years 1927-37. . . . .	282
14. Quantities and Values of Lumber and All Sawmill Products Made in Canada, by Provinces, 1936 and 1937. . . . .	282
15. Canadian Exports of Planks, Boards, and Square Timber, by Countries, calendar years 1935-38. . . . .	283
Subsection 4. Manufactures of Wood and Paper. . . . .	284
Subsection 5. Forest Depletion and Increment. . . . .	284-286

## CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION.

Section 1. <i>The Fur Trade</i> . . . . .	287-289
Section 2. <i>Fur Farming</i> . . . . .	289-292
1. Numbers of Fur Farms, Values of Land and Buildings, and Values of Fur-Bearing Animals, by Provinces, 1934-36. . . . .	290
2. Numbers of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1928-36. . . . .	290
3. Values of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1928-36. . . . .	291
4. Values of Fur-Bearing Animals Sold from Fur Farms in Canada, 1928-36. . . . .	291
5. Values of Pelts Sold from Fur Farms in Canada, 1928-36. . . . .	292
Section 3. <i>Statistics of Total Production and Trade in Furs</i> . . . . .	292-295
6. Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada with Percentages Sold from Fur Farms, years ended June 30, 1920-37. . . . .	293
7. Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, by Provinces, years ended June 30, 1936 and 1937. . . . .	293
8. Numbers, Total Values, and Average Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1936 and 1937. . . . .	294
9. Exports of Canadian Raw Furs by Leading Countries and Kinds of Fur, years ended June 30, 1933-37. . . . .	295
10. Imports of Raw Furs by Leading Countries Whence Imported and Kinds of Fur, years ended June 30, 1933-37. . . . .	295

## CHAPTER XI.—THE FISHERIES.

Section 1. <i>The Early Fisheries</i> . . . . .	296
Section 2. <i>The Canadian Fishing Grounds</i> . . . . .	296
Section 3. <i>The Government and the Fisheries</i> . . . . .	296-299
1. Government Bounties Paid to Fishermen for the calendar years 1934-37. . . . .	299
Section 4. <i>The Modern Fishing Industry</i> . . . . .	300-308
2. Total Values of the Products of the Fisheries of Canada, calendar years 1870-1937. . . . .	301
3. Total Values of the Products of the Fisheries, by Provinces, calendar years 1932-37. . . . .	301
4. Quantities Caught and Values of All Products Marketed of the Chief Commercial Fishes of Canada, 1934 to 1937. . . . .	301-302
5. Percentages of Total Value and Indexes of Volume of Fisheries Production, by Principal Kinds of Sea and Inland Fish, 1926-37. . . . .	303
6. Numbers of Fish-Canning and -Curing Establishments, by Provinces, 1936 and 1937. . . . .	304
7. Values of Materials Used and of Products of Fish-Canning and -Curing Establishments, 1933-37. . . . .	304
8. Numbers and Capital Values of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, and of Establishments Processing the Products, 1936 and 1937. . . . .	305
9. Numbers of Persons Employed in the Fisheries of Canada and in Processing Establishments Connected Therewith, 1935-37. . . . .	306
10. Numbers of Employees in Fish-Canning and -Curing Establishments, 1935-37. . . . .	306
11. Employees and Salaries and Wages in Fish-Canning and -Curing Establishments, 1920-37. . . . .	306
12. Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-38. . . . .	307
13. Exports of the Fisheries, the Produce of Canada, by Principal Countries, calendar years 1936 and 1937. . . . .	308

## CHAPTER XII.—MINES AND MINERALS.

Section 1. <i>Mineral Lands Administration and Mining Laws</i> . . . . .	311-316
Subsection 1. Dominion Mining Laws and Regulations. . . . .	311-312
Subsection 2. Provincial Mining Laws and Regulations. . . . .	312-316
Section 2. <i>Summary of General Production</i> . . . . .	316-326
Subsection 1. General Statistics of Mineral Production. . . . .	316-322
1. Value of Mineral Production in Canada, calendar years 1886-1938. . . . .	317
2. Mineral Production of Canada, calendar years 1935-37. . . . .	319-320
3. Percentages of the Total Value of Mineral Production and Indexes of Volume, by Groups and Principal Minerals, 1929-37. . . . .	321-322

## CHAPTER XII.—MINES AND MINERALS—concluded.

	PAGE.
Section 2. <i>Summary of General Production</i> —concluded.	
Subsection 2. Provincial Distribution of Mineral Production.....	323-326
4. Mineral Production of Canada, by Provinces, calendar years 1911-38.....	323
5. Detailed Mineral Production of Canada, by Provinces, calendar year 1937.....	324-326
Section 3. <i>Industrial Statistics of Mines and Minerals—Capital, Labour, Wages, etc., in the Mineral Industry</i> .....	327-333
Subsection 1. Principal Factors in the Mineral Industries.....	327-329
Subsection 2. Growth of the Mining Industry in Recent Years.....	329-331
6. Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1929-37, and by Provinces, 1937.....	330-331
Subsection 3. The Principal Mineral Industries.....	331-333
7. Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1936 and 1937.....	332-333
Section 4. <i>Production of Metallic Minerals</i> .....	333-347
Subsection 1. Cobalt.....	333-334
8. Production of Cobalt in Canada, calendar years 1904-38.....	334
Subsection 2. Copper.....	334-335
9. Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-38.....	335
10. Copper Production of the Leading Countries and of the World, 1913-37.....	335
Subsection 3. Gold.....	336-339
11. Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-38.....	336-337
12. Values of Gold Produced in Canada, by Provinces, calendar years 1911-38.....	337
13. Quantities and Values of World Production of Gold, 1891-1937.....	338
14. Quantities and Values of the World Production of Gold and Silver, by Principal Countries, calendar years 1886 and 1937.....	339
Subsection 4. Iron.....	340-341
15. Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys, and Steel Ingots and Castings, calendar years 1911-38.....	340
Subsection 5. Lead.....	341-342
16. Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-38.....	341
Subsection 6. Nickel.....	342
17. Quantities and Values of Nickel Produced in Canada, calendar years 1911-38.....	342
Subsection 7. Metals of the Platinum Group.....	343
18. Quantities and Values of Platinum and Palladium Produced in Canada, 1921-38.....	343
Subsection 8. Radium and Uranium.....	343-344
19. Production of Radium and Uranium in Canada, 1933-37.....	344
Subsection 9. Silver.....	344-346
20. Quantities and Values of Silver Produced in Canada, calendar years 1911-38.....	344
21. Quantities and Values of Silver Produced in Canada, by Provinces, calendar years 1911-38.....	345
22. Quantities and Values of World Production of Silver, with Annual Average Prices, 1860-1937.....	346
Subsection 10. Zinc.....	346-347
23. Quantities and Values of Zinc Produced in Canada, calendar years 1911-38.....	347
Section 5. <i>Production of Non-Metallic Minerals</i> .....	347-355
Subsection 1. Fuels.....	347-353
24. Production of Coal in Canada, by Provinces, calendar years 1911-38.....	348
25. Imports into Canada of Anthracite, Bituminous, and Lignite Coal for Home Consumption, calendar years 1911-38.....	349
26. Exports of Coal, the Produce of Canada, calendar years 1911-38.....	349
27. Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-37.....	350
28. Coal Output, Exports, Receipts from Other Countries, and Coal Made Available for Consumption in Canada during 1937.....	350
29. Coal Produced in the Principal Countries of the World, 1913, 1921-37.....	351
30. Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-38.....	352
31. Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-38.....	353
Subsection 2. Other Non-Metallic Minerals.....	353-355
32. Quantities and Values of Asbestos Produced in Canada, calendar years 1911-38.....	354
Section 6. <i>Production of Clay Products and Other Structural Materials</i> .....	355-357
33. Production, Imports, Exports, and Apparent Consumption of Portland Cement, by Quantities and Values, calendar years 1910-38.....	356
34. Production of Sand and Gravel, and Stone in Canada, by Principal Purposes, calendar years 1935-37.....	357

## CHAPTER XIII.—WATER POWERS.

Section 1. <i>The Water Powers of Canada</i> .....	359-362
1. Available and Developed Water Power in Canada, by Provinces, Dec. 31, 1938.....	360
2. Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1900-38.....	361-362
3. Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Dec. 31, 1938.....	362
Section 2. <i>Central Electric Stations</i> .....	363-366
4. Summary Statistics of Central Electric Stations, calendar years, 1917-37.....	364
5. Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1937.....	365

## CHAPTER XIII.—WATER POWERS—concluded.

	PAGE.
Section 2. <i>Central Electric Stations</i> —concluded.	
6. Electric Energy Generated in Central Electric Stations, by Provinces, calendar years 1932-37.....	365
7. Electric Energy Exported under Authority of the Electricity and Fluid Exportation Act, calendar years 1935-38.....	366
Section 3. <i>Public Ownership of Hydro-Electric Power</i> .....	366-376
Subsection 1. The Hydro-Electric Power Commission of Ontario.....	366-372
8. Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, fiscal years ended Oct. 31, 1910-37.....	368
9. Distribution of Power to Systems of the Ontario Hydro-Electric Power Commission, fiscal years ended Oct. 31, 1933-37.....	368
10. Capital Investments in Ontario's Hydro Undertakings, fiscal years ended Oct. 31, 1933-37.....	369
11. Accumulated Reserves of the Ontario Hydro-Electric Power Commission and of the Local Electric Utilities of the Co-operating Municipalities, fiscal years ended Oct. 31, 1933-37.....	369
12. Consolidated Statement of Assets, Liabilities, Reserves, and Surpluses of Electrical Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1933-37.....	370-371
13. Statement of Earnings and Expenses of Electrical Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1933-37.....	371
14. Statistics Relating to Electrical Service to Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1933-37.....	372
Subsection 2. Hydro-Electric and Power Commissions in Other Provinces.....	372-376

## CHAPTER XIV.—MANUFACTURES.

Section 1. <i>The Evolution of Canadian Manufacturing Industries</i> .....	377-389
Subsection 1. Growth of Manufacturing in Canada since 1870.....	378-386
1. Historical Summary of Statistics of Manufactures for the Dominion, 1870-1937..	379
2. Summary Statistics of Manufactures, by Provinces, for Representative Years 1917-37.....	380-381
3. Summary Statistics of Manufactures, by Industrial Groups, for Representative Years 1917-37.....	382-383
4. Summary Statistics of Manufactures for Representative Years 1917-37.....	385
5. Consumption of Manufactured Products, by Groups, with Totals for 1922-36.....	386
Subsection 2. Value and Volume of Manufactured Products.....	386-389
6. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923, 1929, and 1932-36.....	388
7. Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, 1923, 1929, and 1932-36.....	388
Section 2. <i>Production of Industrial Groups and Individual Industries</i> .....	389-409
8. Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Groups of Industries Compared for Specific Years, 1929-36.....	390
Subsection 1. Manufactures Grouped by Chief Component Materials.....	390-401
9. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials, and Values of Products of Canadian Manufacturing Industries, 1936.....	396-401
Subsection 2. Manufactures Classified by the Purpose of the Products.....	402-404
10. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-36 and in Detail for 1936.....	402-404
Subsection 3. Manufactures Classified by Origin of the Materials.....	404-407
11. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924-36.....	405-407
Subsection 4. The Forty Leading Manufacturing Industries.....	407-409
12. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1936.....	408
12A. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1937.....	409
Section 3. <i>Provincial Distribution of Manufacturing Production</i> .....	410-416
Subsection 1. The Manufactures of the Maritime Provinces, 1936.....	410-411
13. Statistics of the Leading Industries of each of the Maritime Provinces, 1936.....	410-411
Subsection 2. The Manufactures of Quebec, 1936.....	411-412
14. Statistics of the Leading Industries of the Province of Quebec, 1936.....	412
Subsection 3. The Manufactures of Ontario, 1936.....	413-414
15. Statistics of the Leading Industries of the Province of Ontario, 1936.....	414
Subsection 4. The Manufactures of the Prairie Provinces, 1936.....	414-415
16. Statistics of the Leading Industries of Manitoba, Saskatchewan, and Alberta, 1936.....	415
Subsection 5. The Manufactures of British Columbia, 1936.....	416
17. Statistics of the Leading Industries of British Columbia and Yukon, 1936.....	416
Section 4. <i>Principal Factors in Manufacturing Production</i> .....	418-438
Subsection 1. Capital Employed.....	418-419
18. Distribution of Capital Employed in the Manufacturing Industries of Canada, in Percentages, by Provinces and Industrial Groups, Representative Years 1917-36.....	418
19. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Groups of Industries, 1936 and Totals for Representative Years 1924-36.....	419

CHAPTER XIV.—MANUFACTURES—concluded.

	PAGE.
Section 4. <i>Principal Factors in Manufacturing Production</i> —concluded.	
Subsection 2. <i>Employment in Manufactures</i> .....	419-426
20. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-36.....	421
21. Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1936.....	422
22. Total Numbers of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and by Sex, for Representative Years 1922-36.....	423
23. Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment from 1932 to 1935 and in Detail, by Provinces, Groups, and the Forty Leading Industries, 1936.....	424-425
Subsection 3. <i>Wages and Salaries in Canadian Manufacturing Industries</i> .....	426-430
24. Employees on Salaries and Wages in Manufacturing Industries, 1936, by Sex, and Average Salaries and Wages, 1935 and 1936, by Provinces and Groups.....	427
25. Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1936, together with Comparative Figures of Average Salaries and Wages Paid in 1935, and Totals and Averages Paid in Previous Representative Years.....	428
26. Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living, and Real Wages of Wage-Earners, in Manufacturing Industries, 1917-36.....	429
27. Percentages of Wages and Salaries Paid to the Total Net Values of Manufacturing Production, 1924-36.....	430
Subsection 4. <i>Size of Manufacturing Establishments</i> .....	430-434
28. Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922, 1929, 1935, and 1936.....	431
29. Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1936.....	431-432
30. Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923, 1929, 1935, and 1936.....	432
31. Establishments and Employees in Canadian Manufactures, by Provinces, and Average Number of Employees per Establishment, 1936.....	433
32. Size of Establishments of some of the Leading Industries, Grouped According to the Gross Value of Products, and the Number of Persons Employed, 1936.....	434
Subsection 5. <i>Power and Fuel</i> .....	435-438
33. Totals for Canada of Power Installed in the Manufacturing Industries, 1922-35, with Details by Provinces and Industrial Groups for 1936.....	435
34. Fuel and Electricity Used in the Manufacturing Industries of Canada, 1922-35, with Details by Provinces and Groups, 1936.....	437
Section 5. <i>Manufacturing Industries in Cities and Towns</i> .....	438-442
35. Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1936.....	438
36. Principal Statistics of the Manufacturing Industries of the Six Leading Manufacturing Cities of Canada, 1932-36.....	439
37. Statistics of Manufactures of Municipalities, each with a Gross Production of \$1,000,000 or Over, and with Three or More Establishments, 1936.....	440-442

CHAPTER XV.—CONSTRUCTION.

1. Loans, Units, and Amounts of Loans Approved under the Dominion Housing Act, 1935 and Part I of the National Housing Act, 1938, by Provinces, calendar years 1935-38.....	444-445
2. Loans made under the Government Home Improvement Plan, by Provinces, 1936-38.....	446
Section 1. <i>The Annual Census of Construction</i> .....	447-450
3. Principal Statistics of the Construction Industry in Canada, 1935-37.....	448
4. Principal Statistics of the Construction Industry in Canada, by Provinces, 1937.....	448
5. Percentage Distribution of the Principal Statistics of the Construction Industry, by Provinces, 1937.....	449
6. Description, Classification, and Value of Construction in Canada, 1937.....	449
7. Average Monthly Employment of Wage-Earners and their Remuneration, by Groups and Provinces, 1937.....	450
8. Summary of Average Wage-Earners Employed, Total Wages Paid, and Average Wages per Man, by Provinces, 1937.....	450
Section 2. <i>Contracts Awarded and Building Permits</i> .....	451-455
9. Summary of the Value of Construction Contracts Awarded in Canada, 1911-38.....	451
10. Construction Contracts Awarded in Canada, by Provinces and Types of Construction, 1933-38.....	451-452
11. Values of Building Permits Taken Out in 58 Cities, calendar years 1933-38.....	453-454
12. Values of Building Permits Issued by 35 Cities and Index Numbers of the Building Construction Industries, calendar years 1910-38.....	454-455

CHAPTER XVI.—EXTERNAL TRADE.

Section 1. <i>The Development of Tariffs</i> .....	456-469
Subsection 1. <i>Historical Sketch of External Trade and Tariffs</i> .....	456-459
Subsection 2. <i>Tariff Relationships with Other Countries</i> .....	459-460
Section 2. <i>The Commercial Intelligence Service</i> .....	470-472
Canadian Government Trade Commissioners.....	470-472
Section 3. <i>Statistics of External Trade</i> .....	472-559
1. Exports of Non-Monetary Gold Included in Merchandise Trade Statistics, fiscal years 1934-38.....	476

## CHAPTER XVI.—EXTERNAL TRADE—continued.

	PAGE.
Section 3. <i>Statistics of External Trade</i> —continued.	
Subsection 1. Value and Quantum of World Trade.....	476-485
II. Price and Quantum Movements of Groups of Commodities in World Trade, 1929 and 1932-37.....	478
III. Percentage Distribution of World Trade by Continents, 1929, 1932, 1936, and 1937.....	481
IV. Percentage Distribution of World Trade by Political Groups, 1929, 1932, 1936, and 1937.....	481
V. Percentage, Price, and Quantum of Trade of Twenty-Two Leading Countries of the World, calendar years 1929, 1932, 1936, and 1937.....	484-485
Subsection 2. Historical Statistics of Canadian Trade.....	485-486
Subsection 3. General Analysis of Current Import and Export Trade.....	486-488
VI. Summary of the Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1914, 1927, 1933, 1937, and 1938.....	487
Subsection 4. Trade with the United Kingdom and the British Empire.....	488-490
VII. Canada's Trade with the British Empire.....	490
Subsection 5. Trade with the United States and Other Foreign Countries.....	491-492
VIII. Canada's Trade with the United States and Other Foreign Countries.....	492
Subsection 6. Geographical Distribution of Canadian Trade by Continents and Countries.....	493-494
IX. Canada's Trade by Continents, Representative fiscal years 1929-38.....	493
X. Percentages of Total Imports into Canada from Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1935-38.....	494
XI. Percentages of Total Domestic Exports from Canada to Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1935-38.....	494
Subsection 7. Principal Commodities Imported and Exported.....	495-499
XII. Canada's Leading Imports, fiscal years 1890, 1900, 1910, 1920, 1930 and 1938.....	496-497
XIII. Canada's Leading Domestic Exports, fiscal years 1890, 1900, 1910, 1920, 1930, and 1938.....	498-499
Subsection 8. Proportions of Trade in Raw and Manufactured Products.....	499-501
XIV. Canada's Imports and Exports, by Continents and Leading Countries, According to Degree of Manufacture, year ended Mar. 31, 1938.....	500-501
Subsection 9. Main Historical Tables and Tables showing Current Trends in External Trade.....	501-559
1. Aggregate External Merchandise Trade of Canada, fiscal years 1868-1938.....	502
2. Ratio of Exports to Imports and Values per Capita of Exports, Imports, and Total Trade, fiscal years 1868-1938.....	503
3. Movement of Coin and Bullion, fiscal years 1868-1938.....	504
4. Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1938, with Percentages of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1898-1938.....	505
5. Exports to the United Kingdom, to the United States, and to Other Countries, of Merchandise the Produce of Canada, fiscal years 1868-1938.....	506
6. Imports from the United Kingdom, from the United States, and from Other Countries, of Merchandise Entered for Home Consumption, fiscal years 1868-1938.....	507
7. Percentage Proportions of Imports from the United Kingdom and the United States, respectively, to Totals of Dutiable and Free, fiscal years 1911-38.....	508
8. Average <i>ad valorem</i> Rates of Duty Collected on Dutiable and Total Imports from the United Kingdom, the United States, and All Countries, fiscal years 1898-1938.....	508
9. Imports for Home Consumption of Certain Raw Materials Used in Canadian Manufactures, fiscal years 1911-38.....	509
10. Exports to the United Kingdom, to the United States, and to All Countries, of Classes of Merchandise the Produce of Canada, by Values and Percentages, fiscal years 1935-38.....	510
11. Imports from the United Kingdom, from the United States, and from All Countries, of Classes of Merchandise Entered for Home Consumption, by Values and Percentages, fiscal years 1935-38.....	511
12. Principal Exports of Canadian Produce from Canada to United Kingdom, United States, and All Countries, fiscal years 1935-38.....	512-523
13. Principal Imports into Canada for Consumption from United Kingdom, United States, and All Countries, fiscal years 1935-38.....	524-543
14. Imports (Dutiable and Free) and Exports of Canadian and Foreign Produce, by Main Classes, and Totals of Duties Collected during the fiscal years ended Mar. 31, 1934-38.....	544-545
15. External Trade of Canada, by Main Groups and Degree of Manufacture, According to Origin, fiscal year ended Mar. 31, 1938.....	546-547
16. Summary of the External Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended Mar. 31, 1938.....	548
17. Value of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at certain Ports and by Provinces, fiscal years ended Mar. 31, 1937 and 1938.....	549-550
18. Imports of Canada, by Values Entered for Consumption from British Empire and Foreign Countries, Dutiable and Free, under the General, Preferential, and Treaty Rate Tariffs, fiscal year ended Mar. 31, 1938.....	551
19. Values of Imports into Canada of Merchandise Entered for Consumption, from the British Empire and from Foreign Countries, fiscal years ended Mar. 31, 1934-38.....	552-553
20. Values of Exports of Canadian Produce, from Canada to the British Empire and to Foreign Countries, fiscal years ended Mar. 31, 1934-38.....	553-554
21. Values and Percentages of Canadian Imports and Exports, from and to Stated Countries, passing through the United States, fiscal years ended Mar. 31, 1937 and 1938.....	555

## CHAPTER XVI.—EXTERNAL TRADE—concluded.

	PAGE.
Section 3. <i>Statistics of External Trade</i> —concluded.	
Subsection 10. Comparison of the Volume of Imports and Exports.....	556-559
22. Comparison of the Values and Volumes of the External Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1933-38.....	557-559
Section 4. <i>The Tourist Trade of Canada</i> .....	560-561
23. Estimated Tourist Expenditures in Canada and of Canadians Abroad, calendar years 1924-38.....	561
Section 5. <i>Balance of International Payments</i> .....	561-565
XV. Holdings of Gold under Earmark by the Bank of Canada, by Months, 1936-38.....	563
24. Summary of Canadian Balance of International Payments, 1934-38.....	564
25. Estimated Balance of International Payments, 1936 and 1937.....	565

## CHAPTER XVII.—INTERNAL TRADE.

Section 1. <i>Interprovincial Trade</i> .....	566-568
1. Railway Revenue Freight Traffic Movement in Canada, by Provinces, calendar years 1936 and 1937.....	567-568
Section 2. <i>The Grain Trade</i> .....	568-588
Subsection 1. Governmental Agencies Regulating or Co-operating with the Grain Trade.	
2. Production, Imports, Exports, and Home Consumption of Wheat in Relation to Population in Canada, 1868-1937.....	583
3. Summary of the Distribution of Canadian Grain, crop year ended July 31, 1938.....	584-585
4. Numbers and Storage Capacities of Canadian Grain Elevators, licence years 1937 and 1938.....	585-586
5. Quantities of Canadian Grain Inspected, crop years ended July 31, 1935-38.....	586-587
6. Shipments of Grain by Vessels from Fort William and Port Arthur, navigation seasons 1937 and 1938.....	587
7. Shipments of Grain by Lake and All-Rail Routes from Fort William and Port Arthur, crop years ended July 31, 1937 and 1938.....	587
8. Canadian Grain Handled at Eastern Elevators, crop years ended July 31, 1930-38.....	588
9. Canadian Grain Handled at Eastern Elevators, by Classes of Ports, crop year ended July 31, 1938.....	588
Section 3. <i>Marketing of Live Stock and Live-Stock Products</i> .....	589-596
10. Animals in Canada, Animals Killed or Sold by Farmers, and Wool Produced, census years, 1871-1931.....	589
11. Index Numbers of Animals on Farms in Canada, calendar years 1921-38.....	589
12. Total Receipts of Live Stock and Disposition of Slaughter and Store Stock at Principal Markets in Canada, calendar years 1936 and 1937.....	590-591
13. Live Stock from Several Provinces of Canada, Marketed through Stockyards, Packers, etc., calendar year 1937.....	591
14. Grades of Live Stock from Several Provinces of Canada, Marketed at the Stockyards and Packing Plants, calendar year 1937.....	592-593
15. Principal Statistics of the Slaughtering and Meat-Packing Industry of Canada, decennially 1870-1930, annually 1933-37.....	593
16. Live Stock Slaughtered at Canadian Inspected Establishments, by months, 1936 and 1937.....	594
17. Production, Imports, Exports, and Total and Per Capita Consumption of Meats and Live-Stock Products in Canada, calendar years 1934-38.....	594-595
Section 4. <i>Cold Storage</i> .....	596-597
18. Cold Storage Warehouses in Canada, by Provinces, 1938.....	596
19. Stocks of Food Commodities on Hand in Cold Storages and Dairy Factories, by Months, 1937 and 1938.....	597
Section 5. <i>Bounties</i> .....	598
Section 6. <i>Patents, Copyrights and Trade Marks</i> .....	598-601
20. Numbers of Canadian Patentees, by Province of Residence, fiscal years 1927-38.....	599
21. Statistics of Patents Applied for, Granted, etc., fiscal years 1933-38.....	600
22. Statistics of Copyrights, Trade Marks, etc., fiscal years 1933-38.....	600
23. Receipts, Expenditures, and Surpluses on Account of Patents, Copyrights, and Trade Marks, fiscal years 1930-38.....	601
Section 7. <i>Weights and Measures</i> .....	601-602
24. Inspections by the Weights and Measures Service, fiscal years 1937 and 1938.....	602
Section 8. <i>Electricity and Gas Inspection</i> .....	602-603
25. Numbers of Electricity Meters in Use, fiscal years 1915-38.....	603
26. Numbers of Gas Meters in Use, by Kinds of Gas Consumed, fiscal years 1916-38.....	603
27. Quantity of each Kind of Gas Sold in Canada, fiscal years 1920-38.....	603
Section 9. <i>Merchandising and Service Establishments</i> .....	604-621
Subsection 1. Wholesale and Other Bulk or Non-Retail Merchandising.....	604-608
28. Bulk Merchandising (Wholesale and Other Non-Retail) in Cities of 20,000 Population or Over, 1930.....	605
29. Total Sales and Indexes of Sales made by Wholesalers Proper, by Provinces and Kinds of Business, 1930, 1933, 1936, and 1937.....	606
30. Unadjusted Index Numbers of Wholesale Sales, by Economic Divisions and by Kinds of Business, January, 1936, to December, 1938.....	607-608
Subsection 2. Retail Trade and Service Establishments.....	608-621
31. Retail Merchandise Trade in Cities of 20,000 Population or Over, 1930.....	609
32. Total Sales and Indexes of Sales of Retail Merchandise Trade, by Provinces and Kinds of Business, 1930, 1933-37.....	610-613
33. Numbers of Chains and Chain Stores in Selected Kinds of Business, 1923, 1930, 1936, and 1937.....	614
34. Principal Statistics for Chain Stores, 1930-37.....	614

## CHAPTER XVII.—INTERNAL TRADE—concluded.

	PAGE.
Section 9. <i>Merchandising and Service Establishments</i> —concluded.	
35. Retail Sales of New Motor Vehicles in Canada, calendar years 1932-38, with Total Value for 1930.....	615
36. Numbers and Values of New and Used Motor Vehicles Sold in Canada, by Provinces, 1937.....	616
37. Comparison of Sales and Financing of New Motor Vehicles in Canada, 1932-38....	617
38. Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by months, 1929, 1930, 1933, and 1935-38.....	618
39. Adjusted Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by Kinds of Business, January, 1936, to December, 1938.....	619
40. Motion Picture Theatres, Employees, Salaries and Wages, and Total Receipts, by Provinces, 1930, 1935, and 1937.....	620
41. Principal Statistics for Motion Picture Theatres, by Provinces and Cities, 1936 and 1937.....	621
Section 10. <i>Control and Sale of Alcoholic Liquors and Beverages in Canada</i> .....	622-625
42. Gross Sales and Net Profits of Liquor Control Boards, Additional Revenues Paid Directly to Governments, and Total Net Revenue from Liquor Control, 1935-37.....	624
43. Apparent Consumption of Spirits in Canada, fiscal years ended Mar. 31, 1923-38....	625
44. Apparent Consumption of Malt Liquors, fiscal years ended Mar. 31, 1923-38.....	625
45. Apparent Consumption of Wines in Canada, fiscal years ended Mar. 31, 1923-38....	625

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Part I.—Governmental Control Over Agencies of Transportation and Communication....	627-629
Part II.—Railways.....	629-660
Section 1. <i>Steam Railways</i> .....	630-655
Subsection 1. Mileage and Equipment.....	632-634
1. Record of Steam Railway Mileage, 1835-1937.....	633
2. Operated Steam Railway Mileage, by Provinces, as at Dec. 31, 1929-37.....	633
3. Rolling-Stock of Steam Railways, as at Dec. 31, 1931-37.....	634
Subsection 2. Finances of Steam Railways.....	635-649
4. Capital Liability of Steam Railways, 1901-37.....	635
5. Mileage, Capital Liability, Earnings, and Operating Expenses of Individual Steam Railways, calendar year 1937.....	636
6. Capital Invested in Road and Equipment of Canadian Steam Railways, calendar years 1932-37.....	637
7. Earnings and Operating Expenses of Steam Railways per Mile of Line and per Train Mile, 1915-37.....	637
8. Distribution of Operating Expenses of Steam Railways, calendar years 1934-37....	638
9. Steam Railway Employees, Totals and Averages of Salaries and Wages, and Ratio of Salaries and Wages to Operating Revenues and Expenses, 1912-37.....	638
10. Areas of Land Granted to Steam Railways by the Dominion and Provincial Governments to Dec. 31, 1937, by Type of Grant.....	639
11. Areas of Land Granted to Steam Railways by the Dominion and Provincial Governments to Dec. 31, 1937, by Railways.....	639
12. Cash Subsidies Granted to Railways to Dec. 31, 1937, by Railways.....	640
13. Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1937.....	640
14. Railway Investment Account of the Dominion Government to Mar. 31, 1938.....	641-642
15. Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges, and Deficits of the Canadian National Railways, calendar years 1923-37.....	643
16. Condensed Consolidated Balance Sheet at Dec. 31, 1936, showing adjustments as of Jan. 1, 1937, as Authorized by the Canadian National Railways Capital Revision Act, 1937.....	644-645
17. Capital Structure and Debt of the Canadian National Railways, as at Dec. 31, 1922-37.....	646
18. Funds Received and Expended by Canadian National Railways, calendar years 1923-37.....	647-648
19. Reconciliation between Public Accounts, Mar. 31, 1938, and Canadian National Railways' Balance Sheet, Dec. 31, 1937, with respect to the Railways' Obligations to the Dominion Government.....	648
20. Assets of the Canadian National Railways System, as at Dec. 31, 1922 and 1937....	649
Subsection 3. Steam Railway Traffic.....	649-655
21. Summary Analysis of Statistics of Passenger and Freight Services and Receipts, calendar years 1929-37.....	650
22. Canadian National Railways (Canadian and U.S. Lines) Train Traffic Statistics, calendar years 1936 and 1937.....	651-652
23. Commodities Hauled as Freight on Steam Railways, calendar years 1933-37....	652-653
24. Numbers of Passengers, Employees, and Others Killed or Injured on Steam Railways, calendar years 1929-37.....	654
25. Numbers of Persons Killed or Injured on Steam Railways, calendar years 1935-37.....	654-655
Section 2. <i>Electric Railways</i> .....	655-658
Subsection 1. Equipment of Electric Railways.....	656
26. Mileage and Equipment of Electric Railways, calendar years 1934-37.....	656
Subsection 2. Finances of Electric Railways.....	656-657
27. Financial Statistics of Electric Railways, calendar years 1929-37.....	656
28. Mileage, Capital, Earnings, Operating Expense, Passengers, Employees, and Salaries and Wages of Electric Railways in Canada, calendar year 1937.....	657

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.

	PAGE.
<b>Part II.—Railways—concluded.</b>	
Section 2. <i>Electric Railways—concluded.</i>	
Subsection 3. <i>Traffic of Electric Railways</i> .....	657-659
29. Summary Statistics of Electric Railway Operation, calendar years 1929-37.....	659
30. Numbers of Passengers, Employees, and Others Killed or Injured on Electric Railways, calendar years 1929-37, with Totals from 1894 to June 30, 1929.....	658
Section 3. <i>Express Companies</i> .....	658-660
31. Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1929-37.....	659
32. Revenues, Expenses, and Operating Mileage of Express Companies, by Companies, calendar years 1936 and 1937.....	659
33. Business Transacted by Express Companies in Financial Paper, calendar years 1935-37.....	660
<b>Part III.—Road Transportation</b> .....	660-672
Section 1. <i>Provincial Motor Vehicles and Traffic Regulations</i> .....	660-662
Section 2. <i>Roads and Vehicles</i> .....	662-664
Subsection 1. <i>Roads and Highways</i> .....	662-663
1. Classification of Highway Mileage, by Provinces, 1937.....	663
Subsection 2. <i>Motor Vehicles</i> .....	663-664
2. Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1929-37.....	663
3. Types of Motor Vehicles Registered in Canada, by Provinces, calendar years 1936 and 1937.....	664
4. Apparent Consumption of Automobiles in Canada, 1926-37.....	664
Section 3. <i>Finances of Road Transportation</i> .....	665-669
5. Summary of Highway Expenditures in Canada, 1919-37.....	666
6. Capital, Maintenance, and General Expenditures on Provincial Highways or Provincially Subsidized Highways in Canada, calendar years 1933-37.....	667
7. Provincial Government Funded Highway Debt and Annual Charges Thereon, 1935-37.....	668
8. Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, calendar years 1936 and 1937.....	669
Section 4. <i>Road Traffic</i> .....	669-672
9. Sales of Gasoline in Canada, by Provinces, calendar years 1933-37.....	670
10. Deaths Resulting from Motor Vehicle Accidents in Canada, by Provinces, calendar years 1926-37.....	671
11. Persons Killed or Injured in Motor Vehicle Accidents, as Reported by Provincial Motor Vehicle Authorities, showing Status of Person, 1937.....	672
<b>Part IV.—Waterways</b> .....	672-701
Section 1. <i>Equipment and Facilities</i> .....	673-682
Subsection 1. <i>Shipping</i> .....	673-674
1. Numbers and Net Tonnages of Vessels on the Registry of Shipping of Canada, by Provinces, as at Dec. 31, 1928-37.....	674
2. Vessels Built and Registered in Canada and Vessels Sold to Other Countries, fiscal years 1927-38.....	674
Subsection 2. <i>Aids to Navigation and Miscellaneous Works</i> .....	675-676
3. Marine Danger Signals Maintained in Canada, fiscal years 1927-38.....	675
4. Duration of the Season of Open Navigation in the St. Lawrence Ship Channel, calendar years 1911-38.....	676
Subsection 3. <i>Canals</i> .....	676-677
5. Canals of Canada under the Control of the Department of Transport, Length and Lock Dimensions, 1939.....	677
Subsection 4. <i>Harbours</i> .....	677-679
6. Dimensions of Graving Docks Owned by the Dominion Government.....	679
7. Dimensions and Cost of Graving Docks Subsidized under the Dry Dock Subsidies Act, 1910.....	679
Subsection 5. <i>Government Administrative Services</i> .....	680-682
8. Details of Pilotage, by Districts, fiscal years 1937 and 1938.....	680
9. Steamboat Inspection, by Inspection Divisions, fiscal years 1937 and 1938.....	681
10. Seamen Shipped and Discharged at Canadian Ports, calendar years 1918-37.....	682
11. Canadian Wrecks and Casualties, calendar years 1918-37.....	682
Section 2. <i>Financial Statistics of Waterways</i> .....	682-689
Subsection 1. <i>Capital and Operation Expenditures of Waterways</i> .....	683-688
12. Capital Expenditures of the Dominion Government on Waterways and Harbours, to Mar. 31, 1938.....	684
13. Expenditures of the Dominion Government for Maintenance and Operation of Aids to Navigation, Canals, and Harbours, fiscal years 1935-38.....	685-686
14. Revenues of the Dominion Government from the Operation of Aids to Navigation, Canals, and Harbours, fiscal years 1935-38.....	686
15. Operating Revenues and Expenditures of Harbours and Elevators under the National Harbours Board and the New Westminster Harbour Commission, calendar years 1936-38.....	687
16. Mail Subsidies and Steamship Subventions, fiscal years 1935-38.....	687-688
Subsection 2. <i>Merchant Marine Services Operated by the Canadian Government</i> .....	689-689

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.

	PAGE.
<b>Part IV.—Waterways—concluded.</b>	
Section 3. <i>Water Traffic and Services</i> .....	689-701
Subsection 1. <i>Shipping</i> .....	689-694
17. Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years 1926-38.....	690
18. Numbers and Tonnages of Sea-Going Vessels Entered and Cleared and of All Vessels (Exclusive of Ferriage) Entered at each Principal Canadian Port, fiscal year 1938.....	692-693
19. Numbers and Tonnages of All Vessels (Exclusive of Ferriage) Entered and Cleared at Canadian Ports, 1929-38, with Details by Provinces for the fiscal year 1938.....	694
Subsection 2. <i>Canal Traffic</i> .....	695-699
20. Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1929-38.....	695
21. Tonnage of Canal Traffic, by Canals and Classes of Products, navigation seasons 1937 and 1938.....	695-696
22. Principal Commodities Carried through Canadian Canals, navigation seasons 1935-38.....	696
23. Canal Traffic, by Direction and Origin, navigation seasons 1937 and 1938.....	697
24. Freight Traffic Using the St. Lawrence River, Welland Ship, and Sault Ste. Marie Canals, navigation season 1938.....	698
25. Traffic to and from the East and West Coasts of Canada via the Panama Canal, years ended June 30, 1929-38.....	699
26. Summary of Commercial Traffic through the Panama Canal, years ended June 30, 1929-38.....	699
Subsection 3. <i>Harbour Traffic</i> .....	699-701
27. Principal Commodities in Water-Borne Cargo Landed from and Loaded to Vessels at Six Principal Ports in Canada during the calendar year 1938, with Grand Totals, 1934-38.....	700-701
<b>Part V.—Air Navigation</b> .....	702-713
1. Summary Statistics of Civil Aviation in Canada, calendar years 1932-37.....	702-703
Section 1. <i>History and Administration</i> .....	703-708
Subsection 1. <i>Development of Aviation in Canada</i> .....	703-707
Subsection 2. <i>Administration</i> .....	707-708
Section 2. <i>Airports and Aircraft</i> .....	708-710
Subsection 1. <i>Ground Facilities</i> .....	708-709
2. Air Harbours in Canada, 1937.....	708-709
Subsection 2. <i>Aircraft</i> .....	709-710
3. Licensed Civil Aircraft in Canada, as at Dec. 31, 1937.....	710
Section 3. <i>Finances and Employees</i> .....	710-711
4. Investment of Provincial Governments, Flying Clubs, and Commercial Organizations for Civil Aviation in Canada, 1937.....	710
5. Revenues and Expenditures of Provincial Governments, Flying Clubs, and Commercial Organizations for Civil Aviation in Canada, 1937.....	711
6. Employees and Salaries and Wages in Civil Aviation in Canada, 1937.....	711
Section 4. <i>Traffic</i> .....	711-713
7. Commercial Air Traffic in Canada, by Provinces, 1937.....	711
8. Operations of Civil Aircraft in Canada, 1937, with totals for 1936.....	712
9. Accidents Resulting from Aircraft in Flight in Canada, 1937.....	713
10. Non-Flight Accidents in Connection with Civil Aviation in Canada, 1937.....	713
11. Operation and Accident Averages in Commercial Aviation in Canada, 1937.....	713
<b>Part VI.—Wire Communications</b> .....	714-718
Section 1. <i>Telegraphs</i> .....	714-715
1. Summary Statistics of all Canadian Telegraphs, calendar years 1926-37.....	714
2. Statistics of Chartered Telegraph Companies, calendar years 1933-37.....	715
Section 2. <i>Telephones</i> .....	716-718
Subsection 1. <i>Systems and Equipment</i> .....	716-717
3. Mileages of Pole Line and Wire and Telephones in Use, Classified by Business, Residential, Rural and Public Pay, as at Dec. 31, 1926-37.....	716
4. Telephones in Use, by Provinces, as at Dec. 31, 1937.....	717
Subsection 2. <i>Telephone Finances</i> .....	717-718
5. Summary Financial Statistics of Telephones in Canada, calendar years 1920-37.....	717
6. Financial Statistics of Telephones in Canada, by Provinces, 1937.....	718
Subsection 3. <i>Telephone Calls</i> .....	718
7. Local and Long-Distance Calls and Averages per Telephone and per Capita, calendar years 1928-37.....	718
<b>Part VII.—Radio Communications</b> .....	718-729
Section 1. <i>Administration</i> .....	719-721
Subsection 1. <i>Technical Control and Licensing</i> .....	719-720
1. Summary of Radio Stations in Operation in Canada, by Class, as at Mar. 31, 1934-38.....	720
2. Private Receiving Station Licences Issued in Canada, by Provinces, fiscal years 1935-38.....	720
Subsection 2. <i>Investigation and Suppression of Inductive Interference</i> .....	721
3. Investigations of Inductive Interference, fiscal years 1935-38.....	721
Section 2. <i>Operation of Radio Communications</i> .....	721-725
Subsection 1. <i>Dominion Government Radio Stations</i> .....	721-724
4. Type of Service Performed and Areas Served by Marine Radio Stations of the Department of Transport, as at Mar. 31, 1938.....	722-723
5. Type of Service Performed and Routes Served by Aeronautical Radio Stations of the Department of Transport, as at Mar. 31, 1938.....	723

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—concluded.

	PAGE.
<b>Part VII.—Radio Communications—concluded.</b>	
Section 2. <i>Operation of Radio Communications—concluded.</i>	
Subsection 2. Provincial Government Radio Stations	724
Subsection 3. Privately-Owned Commercial Stations	724-725
Section 3. <i>Program Broadcasting and Regulation under the Canadian Broadcasting Corporation.</i>	725-729
Subsection 1. Policy and Administration	725-726
Subsection 2. Broadcasting Facilities	726-727
6. Broadcasting Stations of the CBC National Network, showing Time Zones, Identification Letters, Locations and Frequencies, as at Mar. 31, 1939	727
Subsection 3. Finances	727
7. Income and Expenditure of the Canadian Broadcasting Corporation, fiscal year 1938	727
Subsection 4. Programs	728-729
8. Classification of CBC Programs, showing Percentage Distribution, fiscal year 1938	729
<b>Part VIII.—The Post Office</b>	730-736
1. Numbers of Post Offices in Operation, by Provinces, as at Mar. 31, 1933-38	731
2. Statistics of Gross Postal Revenues of Offices Collecting \$10,000 and upwards, fiscal years 1937 and 1938	731-733
3. Revenues and Expenditures of the Post Office Department, quinquennial fiscal years 1890-1910, and each fiscal year 1911-38	734
4. Operations of the Money Order System in Canada, fiscal years 1911-38	734
5. Money Order Statistics, by Provinces, and Total Postal Notes, fiscal years 1934-38	734-735
6. Mileage Flown and Weight of Mail Carried by Air, fiscal year 1938	736
<b>Part IX.—The Press</b>	737-773
Section 1. <i>The Development of the Press in Canada</i>	737-759
Section 2. <i>Statistics of the Press</i>	758-773
1. Daily Newspapers of Canada: Places where Published, Circulations, Years Established, and Political Affiliations, by Provinces	759-760
2. Principal Weekly and Semi-Weekly Newspapers of Canada: Places Where Published, Circulations, Years Established, and Political Affiliations, by Provinces	761-764
3. Leading Magazines and Special Papers of Canada Individually Classified According to Purpose, Place where Published, Circulation, Frequency of Issue, and Year Established	765-770
4. Publications in Canada, by Frequency of Issue, 1921-38	771
5. Circulations of Daily, Semi-Weekly, and Weekly Publications in Canada, 1921-38, with Details by Provinces, 1938	771
6. Circulations of Daily, Semi-Weekly, and Weekly Publications, in Cities of 20,000 Population or Over, 1937	772
7. Numbers and Circulations of French Language Publications in Canada, by Provinces, 1936 and 1937	773
<b>CHAPTER XIX.—LABOUR AND WAGES.</b>	
<b>Part I.—Labour</b>	774-840
Section 1. <i>Occupations of the Wage-Earning Population</i>	774-778
Subsection 1. Occupational Trends in Canada, 1891-1931	774-778
1. Numbers and Percentages of the Gainfully Occupied, 10 Years of Age or Over, Classified According to Sex, in each Occupational Group, by Economic Areas, 1891-1931	776-778
Section 2. <i>The Dominion Department of Labour</i>	779-782
Section 3. <i>Provincial Labour Departments and Bureaus</i>	782-786
Section 4. <i>Canada and the International Labour Organization</i>	786-788
Section 5. <i>Organized Labour in Canada</i>	788-792
2. Membership of Trade Unions in Canada, 1911-37	788
3. International Trade Unions Operating in Canada, showing Individual Numbers of Branches and Memberships, as at Dec. 31, 1937	790-791
4. Canadian Central Labour Bodies Operating in Canada, showing Individual Numbers of Branches and Memberships, as at Dec. 31, 1937	791-792
Section 6. <i>Fatal Industrial Accidents</i>	792-793
5. Fatal Industrial Accidents in Canada, by Industries, 1934-38	792
Section 7. <i>Workmen's Compensation in Canada</i>	793-797
6. Compensation and Medical Aid Paid, and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1930-38	793
7. Compensation, Funeral Expenses, and Medical Aid Paid, and Reserves Held by the New Brunswick Workmen's Compensation Board, 1930-38	794
8. Compensation Paid and Accidents Compensated by the Quebec Workmen's Compensation Commission, 1928-38	794
9. Compensation and Medical Aid Paid, and Accidents Reported by the Ontario Workmen's Compensation Board, 1930-38	795
10. Compensation and Medical Aid Paid, and Accidents Compensated by the Manitoba Workmen's Compensation Board, 1930-37	796
11. Compensation and Medical Aid Paid and Accidents Compensated by the Saskatchewan Workmen's Compensation Board 1930-38	796
12. Compensation and Medical Aid Paid, and Accidents Reported and Compensated by the Alberta Workmen's Compensation Board, 1930-38	797
13. Compensation and Medical Aid Paid, and Accidents Compensated by the British Columbia Workmen's Compensation Board, 1930-37	797
Section 8. <i>Strikes and Lockouts</i>	798-800
14. Strikes and Lockouts in the Coal Mining, Other, and All Industries in Canada, 1930-38, with Totals for 1901-29	798

## CHAPTER XIX.—LABOUR AND WAGES—concluded.

## Part I.—Labour—concluded.

	PAGE.
Section 8. <i>Strikes and Lockouts—concluded.</i>	
15. Strikes and Lockouts, showing Numbers of Workers Involved and Time Loss, by Provinces, 1937 and 1938.	799
16. Strikes and Lockouts, by Industries, 1937 and 1938.	800
Section 9. <i>Employment and Unemployment.</i>	800-821
Subsection 1. Operations of the Employment Service of Canada.	800-802
17. Applications for Employment, Positions Offered, and Placements Effected by the Employment Service of Canada, 1930-38 and by Provinces, 1937 and 1938.	802
Subsection 2. Unemployment as Reported by Trade Unions.	802-803
18. Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1930-37, and by months, 1938.	803
Subsection 3. Employment as Reported by Employers.	803-809
19. Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1937, to December, 1938, with Yearly Averages since 1927.	805-806
20. Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1937, to December, 1938, with Yearly Averages since 1927.	807
21. Index Numbers of Employment as Reported by Employers, by Industrial Groups, as at the First of each Month, January, 1937, to December, 1938, with Yearly Averages since 1927.	808-809
Subsection 4. Employment and Unemployment Statistics of the Census.	809-812
22. Estimated Wage-Earners and Numbers and Proportions Actually Employed, calendar years 1921-38, and by months 1937 and 1938.	812
Subsection 5. Unemployment Relief.	812-819
23. Settler Families and Individuals Approved and Settled under the Relief Settlement Agreements to Dec. 31, 1938.	818
24. Disbursements by the Dominion for Assistance Provided Under Relief Legislation, 1930-38.	819

25. Persons on Urban and Agricultural Aid, by Months, 1937-38.	821
26. Fully-Employable Persons on Urban Aid, by Months and Sex, 1937-38.	821
Section 10. <i>Old Age Pensions and Pensions for Blind Persons.</i>	821-824
27. Financial Summary of Old Age Pensions in Canada, by Provinces, as at Dec. 31, 1938.	823
28. Financial Summary of Pensions for Blind Persons in Canada, by Provinces, as at Dec. 31, 1938.	824
Section 11. <i>The Co-operative Movement in Canada.</i>	824-829
Subsection 1. Consumers' Co-operation.	825
29. Statistics of Retail Co-operative Societies, Affiliated with the Co-operative Union of Canada, 1931-37.	825
Subsection 2. Co-Operative Credit in Quebec.	826
30. Progress of Co-operative People's Banks in Quebec, 1915, 1920, 1925 and 1930-37.	826
Subsection 3. Agricultural Co-operation in Canada in 1937.	826-829
31. Farmers' Co-operative Business Organizations in Canada, crop year ended July 31, 1938.	829
Section 12. <i>Labour Legislation in Canada in 1938.</i>	830-834
Section 13. <i>Legislation Respecting Combinations in Restraint of Trade.</i>	834-835
Section 14. <i>Mothers' Allowances.</i>	835-840
32. Mothers' Allowances in Nova Scotia, fiscal years 1931-38.	837
33. Mothers' Allowances in Ontario, fiscal years 1921-38.	838
34. Mothers' Allowances in Manitoba, 1919-38.	838
35. Mothers' Allowances in Saskatchewan, fiscal years ended Apr. 30, 1929-38.	839
36. Mothers' Allowances in Alberta, 1919-38.	839
37. Mothers' Allowances in British Columbia, fiscal years 1921-38.	840
Part II.—Wages	840-849
Section 1. <i>Wage Rates.</i>	840-842
1. Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1913-38.	841
2. Rates of Wages and Hours of Labour in Various Trades and for Unskilled Factory Labour in Certain Cities of Canada, 1938.	842
Section 2. <i>Wages and Hours of Labour Under Provincial Minimum Wage Legislation.</i>	842-849
Subsection 1. Minimum Wages for Females.	843-846
3. Minimum Wage Rates for Female Workers in Canada Under Orders of Provincial Minimum Wage Boards, as at Dec. 31, 1938.	844-845
Subsection 2. Minimum Wages for Male Employees.	845-847
Subsection 3. Wages and Hours of Labour under Collective Agreements and Schedules of Wages and Hours Made Obligatory by Order in Council in Certain Provinces.	845-849
Section 3. <i>Cost of Living of Wage-Earners.</i>	849
Section 4. <i>Earnings in the Census Year, 1931.</i>	849

## CHAPTER XX.—PRICES.

Section 1. <i>Wholesale Prices of Commodities.</i>	850-859
Subsection 1. Historical Review of Canadian Prices.	860-861
1. Annual Index Numbers of Wholesale Prices in Canada, 1867-1938.	851
Subsection 2. The Index Number on a Post-War Base (1926).	851-859
2. Weighted General Wholesale Price Index Numbers, by Months, 1928-38.	852
3. Monthly Price Index Numbers of Industrial Materials, 1926-38.	854
4. Annual Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), by Groups (Chief Component Material Classification), 1918-38, with Monthly Figures for 1937 and 1938.	855
5. Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Purpose, Yearly Averages, 1926-38, and by Months, October, 1937 to December, 1938.	856

## CHAPTER XX.—PRICES—concluded.

	PAGE.
Section 1. <i>Wholesale Prices of Commodities—concluded.</i>	
Subsection 2. The Index Number on a Post-War Base—concluded.	
4. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Yearly Averages 1932-38.....	856-857
7. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Months, 1933, 1937, and 1938.....	857-858
8. Index Numbers of Wholesale Prices of Principal Exports and Imports, 1926-38.....	859
Section 2. <i>Retail Prices and Cost of Living.</i>	860-866
Subsection 1. The Bureau of Statistics Index Numbers of Retail Prices and Services.....	860-862
9. Index Numbers of Retail Prices, Rents, and Costs of Services (on the 1926 Base), 1926-38 and by Months, 1937-38, and January-April, 1939.....	860-861
10. Average Daily Hospital Charges in Canada and Index Numbers Thereof (on the 1913 Base), 1913 and 1930-37.....	862
Subsection 2. The Nutrition and Family Living Expenditures Investigation.....	862-865
11. Average Distribution of Family Expenditures, by Income Groups.....	865
Subsection 3. Cost of Living of Wage-Earners.....	866
12. Changes in the Cost of Living of Wage-Earners in Canada, 1929-38.....	866
Section 3. <i>Index Numbers of Security Prices.</i>	867-869
13. Investors Index Numbers of Common Stocks (on the 1926 Base), by Months, 1938.....	868
14. Index Numbers of 25 Preferred Stocks, by Months, January, 1927, to April, 1939.....	869
15. Weighted Index Numbers of Prices of Mining Stocks (on the 1926 Base), by Months, 1937, to May, 1939.....	869
Section 4. <i>Index Numbers of Bond Yields.</i>	870
16. Index Numbers of Dominion of Canada Long-Term Bond Yields (on the 1926 Base), by Months, 1929 to May, 1939.....	870

## CHAPTER XXI.—PUBLIC FINANCE.

Section 1. <i>Dominion Public Finance.</i>	873-906
Subsection 1. The Current Balance Sheet of the Dominion.....	875-876
1. Balance Sheets of the Dominion of Canada, as at Mar. 31, 1934-38.....	875-876
Subsection 2. Receipts and Disbursements.....	876-885
2. Details of Revenue Receipts, fiscal years 1934-38.....	877-878
3. Details of Expenditures, fiscal years 1934-38.....	878-880
4. Principal Items of Dominion Expenditure, fiscal years 1868-1938.....	881-882
5. Analysis of "Other Expenditures" (shown in Table 4), 1930-38.....	883
6. Principal Items of Receipts (Ordinary) and Total Receipts, fiscal years 1868-1938.....	883-884
7. Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account and Total Expenditures, 1868-1938.....	884
8. Per Capita Revenue Receipts and Expenditures, by Principal Items, 1934-38.....	885
Subsection 3. War Tax Revenue.....	886-891
9. War Tax Revenues Received by the Receiver General, fiscal years 1915, 1919, 1920, and 1925-38.....	886
10. Income Assessed for the Purposes of the Income War Tax, by Provinces, fiscal years 1934-38.....	887
11. Amounts of Income Tax Collected, by Provinces, fiscal years 1934-38.....	887
12. Income Assessed for the Purposes of the Income War Tax, by Individuals and Corporations, fiscal years 1921-38.....	887
13. Income Tax Paid (Individuals and Corporations) by Size of Income, fiscal years 1935-38.....	888
14. Income Tax Paid (Individuals and Corporations) by Occupations of the Taxpayers, fiscal years 1935-38.....	889
15. Amounts Received from Special Five Per Cent Tax on Interest and Dividends, fiscal years 1934-38.....	890
16. Summary of Excise War Taxes Collected by the Department of National Revenue, fiscal years 1933-38.....	890
17. Excise War Taxes Collected by the Department of National Revenue, by Provinces, fiscal year 1938.....	891
Subsection 4. Inland Revenue.....	892-894
18. Details of Excise Duties Collected, fiscal years 1933-38.....	893
19. Statistics of Distillation, fiscal years 1933-38.....	893
20. Quantities of Spirits, Malt Liquor, Malt, and Tobacco Taken Out of Bond for Consumption, fiscal years 1920-38.....	894
Subsection 5. Subsidies and Loans to Provinces.....	894-897
21. Subsidies of Dominion to Provincial Governments, fiscal years 1933-38.....	897
22. Total of Subsidy Allowances to Provincial Governments from July 1, 1867, to Mar. 31, 1938.....	896
23. Loans to Provincial Governments Under the Relief Acts, by Provinces, fiscal years 1935-39.....	897
24. Loans to Provincial Governments Outstanding, on Account of Housing, by Provinces, as at Mar. 31, 1920-39.....	897
Subsection 6. National Debt.....	898-906
25. Summary of the Public Debt of Canada and Interest Payments Thereon, July 1, 1867 to Mar. 31, 1938.....	900-901
26. Funded Debt and Treasury Bills of the Dominion, Date of Maturity, Rate of Interest Payable Thereon, and Centres at Which Loans are Payable, Amount of Loans Outstanding, and Total Annual Interest Charges, as at Mar. 31, 1938.....	901-902
27. The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913-38.....	903
28. Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-38.....	904
29. Securities Guaranteed by the Dominion Government, as at Mar. 31, 1938.....	905-906

## CHAPTER XXI.—PUBLIC FINANCE—concluded.

Page.

Section 2. <i>Provincial Public Finance</i> .....	907-918
Subsection 1. <i>Provincial Revenues and Expenditures</i> .....	908-915
30. Ordinary Revenues and Expenditures of Provincial Governments for their respective fiscal years ended in the census years 1871-1926 and in each year from 1931-37.....	910
31. Ordinary Revenues and Expenditures of Provincial Governments per Head of Population for their respective fiscal years ended in the census years 1871-1926, and in each year from 1931-37.....	911
32. Ordinary, Capital, and Trust and Charity Revenues of Provincial Governments for their respective fiscal years ended in 1937.....	912-913
33. Ordinary, Capital, and Trust and Charity Expenditures of Provincial Governments for their respective fiscal years ended in 1937.....	914-915
Subsection 2. <i>Provincial Debts and Assets</i> .....	916-918
34. Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, for their respective fiscal years 1916, 1921, 1926, and 1931-37.....	916
35. Debts of Provincial Governments at ends of their respective fiscal years in 1936 and 1937, showing Bonded Debt with Offsetting Sinking Funds, Treasury Bills, Other Direct Liabilities, Available Assets Offsetting Direct Liabilities, and Indirect Liabilities.....	917
Section 3. <i>Municipal Public Finance</i> .....	915-924
36. Numbers of Municipalities, by Provinces and Classes, 1936.....	919
37. Tax Receipts of Municipalities in Canada, by Provinces, 1913-36.....	920
38. Summary Statement showing Total Assessment Valuations of Municipalities, by Provinces, 1932-36.....	921
39. Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-36.....	922
40. Principal Financial and Other Statistics of Canadian Cities and Towns with Populations of 10,000 or Over, 1936.....	923-924
Section 4. <i>National Wealth and Income</i> .....	924-931
Subsection 1. <i>National Wealth</i> .....	924-927
41. Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1929 and 1933.....	926
42. Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929 and 1933.....	927
Subsection 2. <i>National Income</i> .....	927
Subsection 3. <i>British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad</i> .....	928-931
43. Estimated British and Foreign Capital Invested in Canada, Classified According to Main Types, as at Dec. 31, 1926 and 1929-37.....	930
44. Estimated Canadian Investments Abroad as at Dec. 31, 1926 and 1929-37.....	930
45. Estimated British and Foreign Capital Invested in Canada as at Dec. 31, 1937.....	931
46. Estimated Canadian Investments Abroad as at Dec. 31, 1937.....	931

## CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE.

Part I.— <i>Currency and Banking</i> .....	932-958
Section 1. <i>Historical Sketch</i> .....	932
Section 2. <i>The Bank of Canada</i> .....	932-935
Subsection 1. <i>The Bank of Canada Act and its Amendments</i> .....	932-934
Subsection 2. <i>The Bank of Canada and Its Relationship to the Canadian Financial System</i> .....	934
Subsection 3. <i>Bank of Canada Operations</i> .....	934-935
1. Liabilities and Assets of the Bank of Canada, Mar. 18, 1935 and Dec. 31, 1936-38.....	934
Section 3. <i>Currency</i> .....	936-940
Subsection 1. <i>Canadian Coinage</i> .....	936-937
2. Particulars of Canadian Coinages Current in 1939.....	936
3. Circulation of Canadian Coin as at Dec. 31, 1926-38.....	936
4. Annual Receipts of Gold Bullion at the Ottawa Mint, and Bullion and Coinage Issued, calendar years 1926-38.....	937
Subsection 2. <i>Dominion and Bank of Canada Notes</i> .....	937-939
5. Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932, and 1936-38.....	939
Subsection 3. <i>Chartered Bank Notes</i> .....	939-940
6. Note Circulation in the Hands of the Public, 1926-38.....	940
Section 4. <i>Monetary Reserves</i> .....	940-941
Subsection 1. <i>Bank of Canada Reserves</i> .....	940
Subsection 2. <i>Chartered Bank Canadian Cash Reserves</i> .....	940-941
7. Cash Reserves of the Chartered Banks in Canada, 1926-38.....	941
Section 5. <i>Commercial Banking</i> .....	941-956
Subsection 1. <i>Historical</i> .....	941-943
8. Bank Absorptions in Canada since 1867.....	942-943
Subsection 2. <i>Combined Statistics of Chartered Banks</i> .....	943-951
9. Historical Summary showing Development of the Canadian Chartered Banking Business, calendar years 1897-1938.....	944-945
10. Assets of Chartered Banks, 1929, 1932, and 1936-38.....	946
11. Liabilities of Chartered Banks, 1929, 1932, and 1936-38.....	947
12. Ratio Comparisons of Certain Assets and Liabilities of Chartered Banks, 1926-38.....	947
13. Classification of Deposits, According to Size, in Chartered Banks in Canada, as at Oct. 31, 1936-38.....	948
14. Loans, According to Class, made by Chartered Banks in Canada, and Outstanding as at Oct. 31, 1936-38.....	948
15. Amounts of Exchanges of the Clearing Houses of Chartered Banks in Canada, calendar years 1934-38.....	949-950
16. Bank Debits at the Clearing-House Centres of Canada, by Individual Centres, calendar years 1934-38.....	951

**CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE—concluded.**

<b>Part I.—Currency and Banking—concluded.</b>		<b>PAGE.</b>
Section 5. <i>Commercial Banking—concluded.</i>		
Subsection 3. <i>Statistics of Individual Chartered Banks</i> .....		951-956
17.	Principal and Total Assets of Individual Chartered Banks, 1929 and 1935-38.....	952
18.	Principal and Total Liabilities of Individual Chartered Banks, 1929 and 1935-38.....	953
19.	Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1933-38.....	954
20.	Numbers of Branches of Chartered Banks in Canada, by Provinces, as at Dec. 31, 1868, 1902, 1905, 1920, 1926, 1930, 1935-38.....	955
21.	Numbers of Branches of Individual Canadian Chartered Banks in each Province and outside Canada as at Dec. 31, 1938.....	955
22.	Numbers of Branches of each of the Canadian Chartered Banks in Other Countries, with their Locations, as at Dec. 31, 1937 and 1938.....	956
Section 6. <i>Government and Other Savings Banks</i> .....		956-958
23.	Deposits with Dominion Government Savings Banks, representative years 1868-1900, and 1905-38 inclusive.....	957
24.	Summary of the Financial Business of the Post Office Savings Bank, Mar. 31, 1933-38.....	957
25.	Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, representative years 1868-1900, and 1905-38 inclusive.....	958
<b>Part II.—Miscellaneous Commercial Finance</b> .....		959-969
Section 1. <i>Loan and Trust Companies</i> .....		959-963
1.	Summary Statistics of the Operations of Dominion and Provincial Loan and Trust Companies in Canada, as at Dec. 31, 1937.....	960
2.	Classification of Assets and Liabilities of Loan Companies Chartered by the Dominion Government, as at Dec. 31, 1920-37.....	961
3.	Classification of Assets and Liabilities of Trust Companies Chartered by the Dominion Government, as at Dec. 31, 1920-37.....	962-963
4.	Amounts of Estates, Trust, and Agency Funds of Trust Companies Chartered by the Dominion Government, as at Dec. 31, 1920-37.....	963
Section 2. <i>Small Loans Companies</i> .....		963-964
5.	Classification of Assets and Liabilities of Small Loans Companies Chartered by the Dominion Government, as at Dec. 31, 1928-37.....	964
Section 3. <i>Sales of Canadian Bonds</i> .....		964-966
6.	Sales of Canadian Bonds, by Class of Bond and Country of Sale, calendar years 1926-38.....	965-966
Section 4. <i>Corporation Dividends</i> .....		966
7.	Dividend Payments of Canadian Companies, by months, 1931-38.....	966
Section 5. <i>Foreign Exchange</i> .....		967-969
8.	Monthly Averages of Exchange Quotations at Montreal, 1937 and 1938.....	968-969
<b>CHAPTER XXIII.—INSURANCE.</b>		
Section 1. <i>Fire Insurance</i> .....		971-983
1.	Summary Statistics of Fire Insurance by Companies Operating under Dominion Registration, calendar years 1869-1938.....	973-974
2.	Fire Insurance Business Transacted in Canada, by Companies Operating Under Dominion Registration, 1937.....	974-978
3.	Assets of Canadian Companies Transacting Fire Insurance, or Fire Insurance and Other Classes of Insurance, and Assets in Canada of Companies other than Canadian Transacting such Business in Canada, 1933-37.....	979
4.	Liabilities of Canadian Companies Transacting Fire Insurance, or Fire Insurance and Other Classes of Insurance, and Liabilities in Canada of Companies other than Canadian Transacting such Business in Canada, 1933-37.....	979-980

**THE  
STATISTICAL SUMMARY  
OF THE  
PROGRESS OF CANADA  
1871-1938.**

**NOTE.**—In the following Summary, the statistics of fisheries (1871-1916), trade, shipping, the Post Office, the public debt, revenue and expenditure and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906; subsequently to years ended Mar. 31. Agricultural, dairying, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road transportation, vital, hospital, and immigration statistics relate to the calendar years and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1926-38. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA.

Area of the Dominion of Canada in square miles: Land, 3,466,556; Fresh Water, 228,307; Total, 3,694,863.

Note.—Dashes in this table indicate that comparable data or estimates are not available for the years so indicated.

<sup>1</sup> Figures for 1938 are subject to revision.<sup>2</sup> In thousands.<sup>3</sup> The statistics of manufactures in 1871 and 1881 include works employing fewer than 5 hands; those of 1891, 1901, 1911, and 1916 are for works employing only 5 hands or over except in the case of butter and cheese factories, flour and grist mills, electric light plants, lumber, lath and shingle mills, lime kilns, brick and tile works, and fish canneries. The figures shown are for the preceding years in each case. From 1922 statistics are exclusive of construction, hand trades, repair and custom work. Figures for 1926-37 include non-ferrous metal smelting not included in earlier years.<sup>4</sup> Includes all establishments irrespective of the number of employees.

provincial companies, but estimated to cover about 90 p.c. of all provincial business. The figures include all the large and most of the small provincial companies. <sup>9</sup> Not including fraternal insurance.

<sup>7</sup> Figures are for 1924, the first year for which bank debits are available. <sup>8</sup> Includes Newfoundland.

<sup>9</sup> Year ended Sept. 30. <sup>10</sup> Revised since the publication of the 1938 Year Book. <sup>11</sup> 1886 figures;

first year available. <sup>12</sup> During the respective fiscal years. <sup>13</sup> Corrected figure, published since

Chapter XXXIII went to press.

## CHAPTER I.—PHYSIOGRAPHY.

### PART I.—GEOGRAPHICAL FEATURES.\*

**Situation.**—The Dominion of Canada comprises the whole northern part of the North American continent with its islands, except the United States territory of Alaska and the territory of Newfoundland (which includes Labrador). It takes in the whole Arctic archipelago between Davis strait and the connecting waters northward to the 60th meridian on the east and the 141st meridian on the west.

The Dominion is bounded on the west by the Pacific ocean and Alaska; on the south by the United States; on the east by the Atlantic ocean, the waters between Newfoundland and the gulf of the St. Lawrence, Labrador, Davis strait, and the dividing waters between the Danish territory of Greenland and Ellesmere island; northward it extends to the North Pole.

The southernmost point is Middle island in lake Erie, in north latitude  $41^{\circ} 41'$ , and from east to west Canada extends from about west longitude  $57^{\circ}$  at Belle Isle strait to west longitude  $141^{\circ}$ , the boundary of Alaska. Canadian territory thus extends over  $84^{\circ}$  of longitude and  $48^{\circ}$  of latitude.

**Area.**—The area of the Dominion is 3,694,863 square miles, a figure which may be compared with that of 3,738,395 square miles for the United States and its dependent territories, 3,776,700 the total area of Europe, 2,974,581 the area of Australia, 3,275,510 the area of Brazil, 1,805,252 the area of India, 121,633 the area of the British Isles. Canada's area is over 27 p.c. of the total area of the British Empire as it is shown on p. 165 of the 1934-35 Year Book.

**Political Subdivisions.**—Canada is divided from east to west into the following provinces: the Maritime Provinces of Nova Scotia, Prince Edward Island, and New Brunswick, all three comparatively small in area; Quebec, covering a strip south of the St. Lawrence river and the whole territory north of the St. Lawrence river and east of the Ottawa river to Hudson strait, except the Coast of Labrador; Ontario, extending northward from the Great Lakes to Hudson bay; Manitoba, Saskatchewan, and Alberta, the provinces of the interior continental plain, extending from the boundary of the United States to  $60^{\circ}$  north latitude; and British Columbia, the province of the Cordilleran region, also extending from the International Boundary to  $60^{\circ}$ N. North of the area included in the provinces the country is divided into the Yukon Territory to the west, abutting on Alaska, and the Northwest Territories. The latter is subdivided into three provisional districts: that of Mackenzie comprises the mainland between Yukon and the meridian of longitude  $102^{\circ}$ W.; the district of Keewatin comprises in general the remainder of the mainland between the district of Mackenzie and Hudson bay, and includes the off-shore islands in Hudson and James bays; the district of Franklin comprises in general the Arctic archipelago.

*Prince Edward Island.*—This, the smallest province of the Dominion, lies just off the coast east of New Brunswick and north of Nova Scotia; it is separated from both provinces by Northumberland strait from ten to twenty-five miles wide. It is about 120 miles in length and, with an average width of 20 miles, covers an area of 2,184 square miles, approximately 200 square miles more than the State of Delaware. The island is almost trisected by the deep indentations of Malpeque bay north of Summerside and by the mouth of the Hillsborough river at Charlottetown, which nearly meets Tracadie bay on the north side. Its rich, red soil and red sandstone formations are distinctive features, and no point on the island attains a greater

\*Revised by F. H. Peters, Surveyor General and Chief, Hydrographic Service, Department of Mines and Resources, Ottawa.

altitude than about 450 feet above sea-level. Its climate, tempered by the surrounding waters of the gulf and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The province is noted for its relative predominance in the fox-farming industry, its lobster canneries, its oyster beds, and its production of seed potatoes.

*Nova Scotia.*—The province of Nova Scotia is 381 miles in length by from 50 to 105 miles in width, a long, narrow strip of land lying parallel to the Maine and New Brunswick coasts and joined to the latter province by the isthmus of Chignecto, which is 15 miles in width. It includes to the north the island of Cape Breton, which is separated from the mainland by the narrow strait of Canso. The total area of the province is 21,068 square miles, a little over 2,000 square miles less than the combined areas of Belgium and Holland. Cape Breton island, south of the main entrance to the gulf of St. Lawrence and sheltering Prince Edward island from the Atlantic, is roughly 100 miles in length with an extreme breadth of 87 miles. Its area of 3,970 square miles encloses the salt-water lakes of Bras d'Or, connected with the sea at the north by two natural channels and at the south by the St. Peters ship canal. The ridge of low, mountainous country running through the centre of the Nova Scotia mainland, the highest altitude of which is less than 1,500 feet, divides it roughly into two slopes. That facing the Atlantic is generally rocky and open to the sweep of Atlantic storms, but the other, facing the bay of Fundy and Northumberland strait, consists for the most part of fertile plains and river valleys noted for general farming and for fruit-farming districts which produce the famous Nova Scotian apples. The Atlantic coast is deeply indented with numerous excellent harbours, many of which provided splendid homes and refuges for the old sail fishing fleets. The province is still the home of an extensive fishing industry. The mineral resources of Nova Scotia were among the first in the Dominion to be exploited as some of its coal deposits outcropped on the sea-coast. These valuable coal measures make Nova Scotia still one of the chief coal-producing provinces of the Dominion. In addition, there are extensive areas of gold-bearing formations and valuable deposits of gypsum.

*New Brunswick.*—With a total area of 27,985 square miles, New Brunswick may be compared in size to Scotland with its area of 30,405 square miles. The province is very compact and in shape nearly rectangular, with its depth not greatly exceeding its width. The conformation is in general undulating and of low relief. In the southeastern half of the province the ground elevation does not generally exceed 500 feet above sea-level except for a narrow strip in the south which produces the highlands bordering the bay of Fundy east of Saint John. In the northwestern half the ground elevation is in general from 500 to 1,000 feet above sea-level and reaches its greatest elevation of about 2,690 feet in Northumberland county north-east of Grand Falls. The St. John, rising in the sister province of Quebec and the bordering State of Maine, is a river with many distinctive beauties, while its length of nearly 400 miles makes it quite noteworthy as to size. In the northeastern half of the province there are very extensive areas of Crown lands still carrying valuable stands of merchantable timber. The bay of Chaleur at the north, the gulf of St. Lawrence and Northumberland strait at the east, the bay of Fundy at the south, and Passamaquoddy bay at the southwest, provide the province with a very extensive sea-coast. To its southwest is a group of islands belonging to the province, the most important of which are Grand Manan, Campobello, and the West Isles. New Brunswick has been called the best watered country in the world; numerous rivers

provide access to extensive lumbering areas in its interior and to many of the most attractive hunting and fishing resorts in the Dominion. While its forest resources are an important economic feature, extensive areas of rich agricultural lands are found in the river valleys and the broad plains near the coasts. The Minto coal-fields, though production has been on a moderate scale for many years, have shown an expanding tendency recently and the province also produces a limited quantity of petroleum and natural gas.

*Quebec.*—Quebec might well be included among the Maritime Provinces, for with the St. Lawrence river, the gulf of St. Lawrence, the Atlantic, Hudson strait and bay, salt water washes the coasts of the province for a length of over 2,700 miles. Besides including a narrow strip of land between the St. Lawrence and the International and New Brunswick boundaries, Quebec extends northward from the St. Lawrence and Ottawa rivers to Labrador and Hudson strait, covering over 17° of latitude and an area of 594,534 square miles, about 38 p.c. of which lies south of the isotherm of 60° F. mean July temperature.\* The combined area of France, Germany, and Spain is about 2,600 square miles less than the area of Quebec. The conformity of the surface of Quebec is that characteristic of the Precambrian rocks, being quite even in general but much diversified by minor hills and hollows. North of the St. Lawrence the land takes the form of a ridge, parallel to the river and rising from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet and then descending gently again to the sea-level of Hudson bay to the northwest; but to the northeast the ridge carries its height to end abruptly in the high headlands of Labrador. South of the river, the area is comprised of the St. Lawrence Lowlands between Montreal and Quebec which, rising to the east, produce the highest known elevation in the province, *viz.*, 4,160 feet, that of Jacques Cartier peak of Tabletop mountain in the Gaspé peninsula. With the exception of the treeless zone extending somewhat south of Ungava bay, most of the province supports a valuable tree growth varying from the mixed forest in the southwest to the eastern and northern coniferous in the areas of higher latitude. Apart from its importance as the threshold of Canada and the Atlantic gateway through which ocean vessels must pass on their way to the interior of the continent, Quebec is also noted for its natural resources. The extensive timber limits of its northern areas form the basis for the great pulp and paper industry of this part of Canada. Its rivers, many of them as yet comparatively unknown, may be harnessed to supply about two-fifths of the electric power available in Canada. Its asbestos deposits have long been known for their quality and extent, while more recently there have been extensive developments of deposits of gold and copper in the western part of the province, with further discoveries extending the mineralized area into the Chibougamau district. These developments have brought the province up to third place in mineral production in Canada. The fisheries of the St. Lawrence river and gulf are well known. Agriculturally, the climate and soil of the upper St. Lawrence River valley and the plains of the Eastern Townships are eminently adapted to general farming operations.

*Ontario.*—The province of Ontario is the section of the Dominion contained between the great international lakes and Hudson bay and between the western boundary of Quebec and the eastern limits of Manitoba. Although generally regarded as an inland province, Ontario has a fresh-water shore line on the Great Lakes of more than 2,362 miles and on the north a salt-water shore line of about 680 miles with a tidal port at Moosonee at the southern end of James bay. The

\*The isotherm of 60° F. mean July temperature is generally considered as the northern limit for the economic production of cereals.

southernmost point of Ontario, which is also the southernmost point of the Dominion, is in north latitude  $41^{\circ} 41'$ —a little farther south than the northern boundary of the State of California—and its most northern, in north latitude  $56^{\circ} 50'$ . The total area comprised within its limits, of which about 82 p.c. lies south of the isotherm of  $60^{\circ}$  F. mean July temperature,\* is 412,582 square miles, of which its fresh-water area of 49,300 square miles forms the unusually large proportion of 12 p.c. The province is over 17,000 square miles greater in area than are France and Germany (exclusive of Austria) together, and when compared with the States to the south, Ontario is found to be almost equal in extent to the combined areas of the six New England States, together with New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, and Wisconsin. Excepting in the southwestern part, the surface conformity of Ontario is influenced by the characteristics of the Precambrian rocks. In northern Ontario a large area with elevations of 1,000 feet or over adjoins the north shore of the Great Lakes and, going north a short distance over the Height of Land, the slope descends very gently to Hudson bay, which has a wide marginal strip less than 500 feet above sea-level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of lake Superior. The whole province supports a valuable covering of trees, varying, from south to north, from the mixed forest to the eastern and northern coniferous. Many varieties of climate and soil are encountered, from the distinctively southern conditions found along the shores of lake Erie to the very different ones of Hudson and James bays. Ontario, of all the provinces, is the centre of the country's manufacturing industries, owing to its abundant water-power resources and its proximity to the coalfields of Pennsylvania, but the many resources of its rural districts are not on this account neglected. Mining is a very important industry in the wide-spread Precambrian area and, although the most important districts are Sudbury, Porcupine, and Kirkland Lake, profitable mining operations, principally of gold, are now being carried on from the Manitoba boundary eastward across northern Ontario and down into eastern Ontario. Petroleum and natural gas, salt, and gypsum are also produced on an important scale in the southwestern part of the province. Fruit farming in the Niagara district and general farming throughout the entire southern part of the province are carried on extensively under unusually favourable conditions, while timber, pulp, and furs are other important products of more northern parts.

*Manitoba.*—Manitoba, the most easterly of the Prairie Provinces, and also the oldest of them in point of settlement, includes the area between Ontario on the east and Saskatchewan on the west. Its southerly limit is the International Boundary, while its northerly boundary is the 60th parallel of latitude and Hudson bay, where its coast of over 400 miles includes the harbour and port of Churchill. The total area of Manitoba, of which about 56 p.c. lies south of the isotherm of  $60^{\circ}$  F. mean July temperature,\* is 246,512 square miles—3,246 square miles greater than twice the total area of the British Isles. The conformity of the surface of Manitoba is quite even; commencing on the north with a strip bordering on Hudson bay—perhaps 100 miles wide and less than 500 feet in elevation—the surface rises gradually towards the west and south. The bulk of the province has an elevation of between 500 and 1,000 feet, and the greatest height of 2,727 feet is attained in Duck mountain, north-west of lake Dauphin. East and north of lake Winnipeg the Canadian Shield is found with its Precambrian rock formation, but the remainder of the province is overlain by very fertile soil of great depth. The treeless prairie belt extends into the southwest corner of the province, but the greater portion of the developed area is in the grove belt, characterized by groves of poplar interspersed with open prairie

\* See footnote, p. 3.

patches; to the north there are great areas of northern mixed forest, blending into the northern coniferous, which thin again to some treeless areas along the coast-line farther north. The province has been regarded as typically agricultural, its southern lands being specially adapted to this form of industry. Its northern districts, however, are of importance in the production of timber and furs and its numerous large lakes in the production of fresh-water fish, chiefly whitefish. About three-fifths of the area of this province is underlain by the Precambrian rocks which have been found so rich in minerals in northern Ontario and Quebec. Two large deposits of copper-gold-zinc ore have been developed, south of the Churchill river near the Manitoba-Saskatchewan boundary, while to the east and north of lake Winnipeg recent years have witnessed great activity in the prospecting and development of gold properties, a number of which are now producing. The province also possesses important water-power resources in the rivers of the Precambrian area.

*Saskatchewan.*—This central prairie province lies between Manitoba and Alberta; it extends from the International Boundary on the south to the 60th parallel of latitude, which divides it from the Northwest Territories. The area, of which about 89 p.c. lies south of the isotherm of 60° F. mean July temperature,\* is 251,700 square miles, approximating that of Manitoba, and greater by 5,000 square miles than the combined areas of the British Isles and Norway. Approximately one-third of the total area, generally lying north of the Churchill river, is underlain by the Precambrian rocks which have been found so richly mineralized in other parts of Canada. The Flinflon copper-gold-zinc deposit on the Manitoba-Saskatchewan boundary is an evidence of economic mineralization in the east, while in the Lake Athabaska region of the northwest promising discoveries of gold have been made recently. The northern districts, abundantly watered by lakes and rivers, in addition to potential mineral wealth, are rich in timber resources while the southerly two-thirds of the province overlain by generally fertile soil of great depth includes a large portion of the famous western wheat fields. The larger part of the developed area in the south is comprised in the great treeless prairie belt, fringed to the north with a zone of poplar interspersed with open prairie, which gradually changes into the northern mixed forest covering all the northerly parts. Apart from the southern prairies, which are extraordinarily smooth, the surface topography is generally of low relief with a gradually rising slope towards the west. The bulk of the province has a general elevation of between 1,000 and 2,000 feet, with the maximum elevation of about 4,500 feet on the eastern point of the Cypress hills in the southwest corner. The climate in the southern parts is quite different from that of Eastern Canada, with less precipitation and perhaps more severe features than are encountered in many other parts of the country, but is nevertheless most favourable to plant growth, when sufficient moisture is available.

*Alberta.*—Lying between Saskatchewan on the east and the Rocky mountains and the 120th meridian on the west, and bounded on the north and south by the Northwest Territories and the United States, respectively, is the province of Alberta. Its area is slightly greater than that of Saskatchewan or Manitoba, comprising a total of 255,285 square miles, of which about 90 p.c. lies south of the isotherm of 60° F. mean July temperature.\* The area of the province is over 8,600 square miles greater than the combined areas of the British Isles and Norway. Like Saskatchewan, the southern part of the province is comprised in the dry, treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie, which again gives way to the northern mixed forest covering the northerly parts. The

\* See footnote, p. 3.

Precambrian rocks just touch Alberta at its northeast corner, so that, excepting the fringe of mountainous country on its western border, practically the whole of the province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace river, which has already resulted in the extension of settlement farther north than in any other part of Canada; and (2) the wonderful grazing lands in the foothills district, which, rising sharply on the west, commence the ascent which continues to the very peaks of the Rocky mountains. The southern half of the province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half the slope descends until elevations of well under 1,000 feet are reached at lake Athabaska in the northeast corner. Mount Columbia, with an elevation of 12,294 feet, is the highest point in the province. Alberta has the most extensive coal resources of any province of the Dominion and has also become the leading producer of petroleum and natural gas. Lumbering is important in the more mountainous western parts and in the north, but ranching is still pursued in the less populous sections. In the southern prairies there are considerable areas where the quantity and distribution of the natural precipitation makes permanent agriculture precarious and in these areas a number of large irrigation projects have been developed, taking their water supply from rivers rising in the mountains which form the western boundary of the province. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the "Chinook" winds.

*British Columbia.*—British Columbia, the most westerly province of the Dominion, comprises an area of 366,255 square miles, slightly more than three times the area of the British Isles. The predominant feature of the province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys, many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. Apart from the smoother area in the northeast corner which extends up from the "Peace River Block" there is another notably large area of smoother terrain in the Stuart Lake district, traversed by the Canadian National railway running west from Fort George to Prince Rupert. The highest point in the province is mount Fairweather (15,287 feet). The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and with wonderful scenic aspects. With two ocean ports served by transcontinental railways, British Columbia is well situated and equipped to carry on trade with the Orient, and its great stands of fir, spruce, and cedar timber constitute a natural resource of great value. The province includes many islands of the Pacific, notably the Queen Charlotte group and Vancouver island; the latter, with an area of about 12,408 square miles, is noted for its temperate climate and abundant natural resources. The wealth of the forest resources supports the lumbering and pulp and paper industries and puts British Columbia ahead of any other province in the production of lumber and timber. The province also excels in fishery products, chiefly on account of its catches of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. The production of the metals, gold, copper, silver, lead, and zinc, has played an important role in the economic life of the province since its early days, while valuable coal deposits on Vancouver island, and at Crowsnest and Fernie in the interior, have been worked for many years. The boundaries of the province extend from Alberta on the east to the Pacific ocean and Alaska on the west, and from the International Boundary northward to Yukon.

*Yukon Territory.*—Yukon Territory, with an area of 207,076 square miles, is the most western part of Canada and its time is nine hours later than Greenwich. It

extends northward from latitude  $60^{\circ}$  N., (the boundary of British Columbia) to the Arctic ocean. Longitude  $141^{\circ}$  W. is the western boundary between Yukon and Alaska. It is bounded on the east by the Northwest Territories.

The greater part of the Yukon Territory is mountainous although in the extreme north and southeast the relief is low. The mountainous part is divided into a number of ranges and a central plateau area, all of which exhibit a general north-west trend. The St. Elias mountains in the southwest are the highest mountains in Canada and, in mount Logan (19,850 feet elevation) contain the second highest peak in North America. The Coast mountains lie northeast of the St. Elias mountains and are followed by the Yukon plateau, which is bounded on the east and north by the Mackenzie mountains and their western spur, the Ogilvie range. The plateau covers most of the southern part of the territory and forms the central part of the basin of the Yukon river. It contains a number of isolated mountain ranges distributed over it. The higher levels of the plateau are of 4,000 to 5,000 feet elevation with the exception of the ranges whose peaks reach 6,000 to 8,000 feet. The Coast and Mackenzie mountains contain a few peaks of more than 8,000 feet elevation. On the east, Yukon is drained by the tributaries of the Mackenzie river to the Arctic ocean and on the southwest by the Alsek river to the Pacific ocean.

Western and central Yukon are drained by the Yukon river to Bering sea. Whitehorse, the head of navigation on Lewes river, the main tributary of the Yukon river, has an elevation of 2,081 feet; that of Dawson on the Yukon river is 1,038 feet. The plateau is isolated on three sides by the mountains through which there is no natural, easy route of access and on the northwest it is 1,100 miles by the Yukon river from the Bering sea. The discovery of rich deposits of alluvial gold led to the construction of a railway from tidewater at Skagway on the Alaskan coast over the Coast mountains by White pass to Whitehorse. The tributaries of the Yukon river within the plateau area form 1,250 miles of connected waterways navigable for stern-wheel steamboats. This waterway with the railway has made the plateau the most accessible area of the northern territories of Canada. Dawson is the capital, chief commercial, and placer-mining centre of the territory. Whitehorse ranks next in importance, being the junction of rail and water transport and the distributing centre. Mayo is the centre of the silver-lead mining industry. In recent years roads for use throughout the year have been built in the neighbourhoods of these three places. Aeroplanes are now an important means of travel. A chain of landing fields has been built along the chief air routes.

The chief industries are mining, fur trade, tourist traffic, and big-game hunting: mining is by far the most important. For over fifty years Yukon has been a producer of gold and in more recent years silver, lead, copper, and coal have also been mined in important quantities. A wide variety of other mineral resources have been discovered distributed throughout the territory promising greater importance for mining in future. The relatively warm and dry climate for such northern latitudes enjoyed by the plateau of southern Yukon enables a wide range of garden produce and hardy grains to be grown throughout its extent. The break-up of the ice in the lakes and rivers takes place in May and navigation opens in the fourth week of that month and closes in the latter part of October.

*The Northwest Territories.*—The Northwest Territories consists of the provisional districts of Mackenzie, Keewatin, and Franklin. It embraces all of Canada north of the 60th parallel of latitude and east of the Yukon Territory (including also the

islands in Hudson and James bays and Hudson strait), except that portion of Quebec which extends north of the 60th parallel. Its area is 1,309,682 square miles, or nearly as large as the combined areas of Argentina and Chile in South America, or over twelve times the area of Great Britain and Northern Ireland.

Much of the area is still unexplored. The highest part of the mainland is in the Mackenzie mountains, where Keele peak has an elevation of 8,500 feet and elevations of 11,000 feet have been reported near the headwaters of the South Nahanni river. From the Mackenzie mountains the land drops to an elevation of less than 500 feet at the Mackenzie river, on the east side of which the Horn and Franklin mountains reach altitudes of about 2,000 feet. A large depression is formed by a trough-like valley in which Great Bear and Great Slave lakes are the principal topographical features. To the east of this the land rises to an elevation of 1,400 feet in the great interior plateau, which in turn gradually falls away to the beach-made plains on the west side of Hudson bay. There are some high mountains in the northeastern Arctic islands, particularly in northern Ellesmere island where the Shackleton Expedition of 1935 recorded an elevation of 10,000 feet.

Roughly speaking, about one-third of the mainland and all the Arctic islands are treeless. This is not due to inadequate summer temperature, but more likely to insufficient precipitation coupled with the extreme dryness of the air during winter. Some form of plant life is in evidence wherever there is soil. In the wooded areas there is little difficulty in securing forest products sufficient for the needs of the residents.

Photography from the air has done much to aid in mapping areas adjacent to the better-known transportation routes and the areas in which minerals have been discovered. The silver, radium, and copper deposits near the east end of Great Bear lake, and the gold discoveries in the Yellowknife area north and east of Great Slave lake are the most important mineral discoveries. Oil is being refined at the Imperial Oil Company's wells some 42 miles below Norman on the Mackenzie river. Coal has been reported at several points both on the mainland and in the Arctic archipelago.

Development of the resources of, and communications in, the Northwest Territories and Yukon are dealt with in Chapter XXVIII, Subsection 1 of Section 1.

**Summary of Land and Water Areas.**—The total land and fresh-water areas of the Dominion, together with their distribution by provinces and territories, are shown in Table 1.

**1.—Land and Fresh-Water Areas of Canada, by Provinces and Territories, 1938.<sup>1</sup>**

*Note.*—A classification of land area as agricultural, forested, or unproductive will be found under Part VI of this Chapter at p. 27.

<sup>3</sup> Too small to be enumerated.

Section 1.—Orography.

The outstanding and predominant orographical feature in Canada is the great Cordilleran mountain system which, extending up from the south, parallels the coast of the Pacific ocean, and, continuing on, comprises the bulk of the United States territory of Alaska. Throughout Canada this mountain system has a width of about 400 miles and, covering about 530,000 square miles in area, includes nearly all of British Columbia and Yukon. This region is definitely the most rugged and elevated in the Dominion, many of the summits reaching heights of 10,000 feet with occasional peaks over 13,000 feet above sea-level. The principal named peaks exceeding 11,000 feet in elevation are given in Table 2. The main mountain ranges forming the system are the Coast mountains and the St. Elias mountains on the Pacific side, the Selkirks and the Rockies on the east side of the system to the south, and farther north on the east side the Stikine and the Mackenzie mountains. This great mountainous tract is a formidable barrier between the ocean and the interior of Western Canada; by precipitating a great part of the moisture out of the winds coming from the Pacific, it has a marked effect on the climate of the western country. On the west side, the Cordilleras are drained by mountain streams pitching swiftly down to the Pacific. The Yukon Territory is drained to the north by that remarkable river of the same name which runs through a wide valley over 1,700 miles long before reaching the Bering sea. On the east side of the mountains and their foothills, the land slopes gently away to the east and to the north.

2.—Mountain Peaks over 11,000 Feet in Elevation, with Latitude and Longitude.

NOTE.—The highest point on the mainland of Eastern Canada, with the exception of the Torngats in Labrador, peaks of which rise to about 5,500 feet, is Mount Jacques Cartier, a peak of Tabletop mountain in N. lat. 48°59', W. long. 65°56', Gaspé district, Quebec, the summit of which is 4,160 feet above sea-level.

<sup>1</sup> Data not available.      <sup>2</sup> This peak is on the international boundary between British Columbia and Alaska.      <sup>3</sup> The enumerated peaks in Yukon are on or near the Yukon-Alaska boundary.

The southern portion of the eastern declivity, from the Rocky mountains down to lake Winnipeg, is comprised in the Nelson River drainage emptying into Hudson bay; representing the presently settled part of Western Canada, it includes the treeless prairies and comprises the lands which, in the main, produce Canada's great wheat crops. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare. Generally, it is overlain by great depths of clay soil, through which the streams have cut themselves down into deep coulees and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow; in the dry prairie section there are many places where the evaporation from the broad and shallow bodies of water is so great that they have little or no outflowage and consequently the concentration of mineral salts in the water makes it unfit for domestic use. The terrain is generally smooth or gently undulating and, from an elevation of 3,400 feet at Calgary, falls away gradually to an elevation of 800 feet around lake Winnipeg 700 miles to the east.

\* Prepared under the direction of F. H. Peters, Surveyor General and Chief, Hydrographic Service, Department of Mines and Resources, Ottawa, from information supplied by the Geodetic Service of Canada.

Just north of Edmonton a height of land turns the waters to flow north into the great Mackenzie river, over 2,500 miles long, whose valley with its low elevation above the sea is the outstanding feature of the Northwest Territories. In this watershed the terrain becomes less smooth with prominent elevations in the Caribou, Horn, and Franklin mountains and the clay soils of the prairies give way to more of sand and gravel. Great Slave and Great Bear lakes, each half as large again as lake Ontario and less elevated above the sea than lake Erie, are notable features; north and east of these two great lakes the country comes within the Canadian Shield\* and the rock with some shallow overburden slopes gently down to the Arctic ocean without any large uplifts to break the monotony.

Going east again, in the more northerly part there is encountered the orographical influence of Hudson bay which, indenting the continent so deeply and with rivers running in from west, south, and east, has an enormous drainage basin mainly in Manitoba, Ontario, and Quebec. Practically all of this great basin, excepting the Nelson River drainage, is included in the Canadian Shield, the surface characteristic of which is hard rock either exposed or overlain with shallow soil generally confining agriculture to the valleys or small basins. With only small areas in northeastern Quebec rising above 2,000 feet in elevation, there are no great eminences, but the surface is generally accented by many hills and hollows with countless numbers of lakes and streams. On its west and south sides, Hudson bay is bordered by a strip of low land under 500 feet in elevation and varying in width from one to two hundred miles; in the southerly part of these flat, low lands the rock is overlain with a considerable depth of soil sometimes referred to as the clay belt of northern Ontario.

South and east of Hudson bay the predominating feature, both orographically and economically, is the very extensive depression containing the Great Lakes and the St. Lawrence river which connects them with the Atlantic ocean. The bulk of the drainage basin of the Great Lakes and the St. Lawrence lies within the limits of the Canadian Shield with the same characteristics as already described. The very important exception is the valley of the St. Lawrence river from Kingston to Quebec and the peninsula of Ontario formed by the Great Lakes which together are generally known as the St. Lawrence Lowlands, about 35,000 square miles in area. At present, containing the greater part of the population of Canada, this industrial area is of great economic importance; the climatic conditions and fertile soil combine to make it most suitable for mixed farming.

The Maritime Provinces, New Brunswick, Nova Scotia, and Prince Edward Island, together with the southeastern portion of Quebec, embrace an extension northward of the Appalachian mountains but, excepting the Notre Dame mountains of Gaspé peninsula, the comparatively low elevations are better described as hills. The whole area may be regarded as a peninsula jutting out with bold and broken coast-line to separate the gulf of St. Lawrence from the Atlantic and it is this situation that dominates the orography; with the exception of the St. John, the rivers are of no great length in their courses down to the sea. It is a beautiful country of diversified character with areas of good farm lands; the broken coast provides many good harbours and the only ocean ports open throughout the whole year that Canada possesses on the Atlantic seaboard.

\* Excepting the St. Lawrence Lowlands, the Maritime Provinces, and the Hudson Bay Lowland, the Canadian Shield embraces all of Canada east of a line commencing at Darnley bay on the Arctic coast and running south and east through Great Bear lake, Great Slave lake, lake Athabaska, lake Winnipeg, and Lake of the Woods on the International Boundary.

## Section 2.—Lakes and Rivers.

The fresh-water area of Canada is unusually large constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes, details concerning which are given in Table 3.

Particularly notable are the depth of lake Superior and the shallowness of lake St. Clair and lake Erie.

3.—Areas, Elevations, and Depths of the Great Lakes.

Lake.	Length.	Breadth.	Maximum Depth.	Area.	Elevation Above Sea-level.
	miles.	miles.	feet.	sq. miles.	feet.
Superior.....	383	160	1,302	31,820	602-23
Michigan.....	321	118	923	22,400	580-77
Huron.....	247	101	750	23,010	580-77
St. Clair.....	26	24	23	460	575-30
Erie.....	241	57	210	9,940	572-40
Ontario.....	193	53	774	7,540	245-88

Lake Superior, with an area of 31,820 square miles, is the largest body of fresh water in the world. As the International Boundary between Canada and the United States passes through the waters of lakes Superior, Huron, St. Clair, Erie, and Ontario, only a part of the areas of these lakes given in the above statement is Canadian, while the whole of lake Michigan is within United States territory. The total length of the St. Lawrence waterway, from the head of the St. Louis river in Minnesota to Pointe-des-Monts at the entrance of the gulf of St. Lawrence, is 1,900 miles. The great obstacle to navigation on this waterway was the rise of 326 feet between lakes Ontario and Erie, which is now surmounted by the Welland ship canal; the river itself dropping over the escarpment at Niagara creates perhaps the most famous waterfall in the world. The Great Lakes, with the St. Lawrence river, form the most important system of waterways on the continent and one of the world's most notable fresh-water transportation routes. In addition to the Great Lakes there are many other remarkably large lakes; the eleven following, with their areas in square miles in parentheses, are all over 1,000 square miles in area: Great Bear (11,660), Great Slave (11,170), Winnipeg (9,398), Athabaska (3,058), Reindeer (2,444), Winnipegosis (2,086), Manitoba (1,817), Dubawnt (1,600), Nipigon (1,870), Southern Indian (1,200), Lake of the Woods (1,346). Apart from these lakes, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer lake in Saskatchewan, there are 7,500 lakes. A table at pp. 12-13 of the 1938 Year Book gave a list of the principal lakes of Canada, by provinces, with their elevations in feet and their areas in square miles.

The river systems of Canada, excluding the Arctic islands, are best studied by segregating the main drainage basins as shown in Table 4.\*

#### 4.—Drainage Basins in Canada.

Western Hudson bay.....	383,722	<b>Gulf of Mexico Basin.....</b>	<b>10,121</b>
<b>Total.....</b>	<b>1,379,160</b>	<b>Canada, Less Arctic Archipelago.....</b>	<b>3,149,831</b>

<sup>1</sup> Areas are approximate and are exclusive for all rivers of those portions of their basins which lie in United States territory.

It is noteworthy that the greater part of the Dominion drains into Hudson bay and the Arctic ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of the West, but, otherwise, the rivers run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie, which drains Great Slave lake is, with its headwaters, the longest river in Canada (2,514 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic ocean. From Fort Smith, on the Slave river, large river boats run without any obstruction down to Aklavik in the delta of the Mackenzie, a distance of 1,292 miles. In Eastern Canada it is the Great Lakes and St. Lawrence drainage basin that dominates all others and has undergone the greatest development. The St. Lawrence river and the Great Lakes provide a water route from the Atlantic as far as Fort William and Port Arthur, twin cities situated on lake Superior and only 419 miles from Winnipeg, the half-way mark in distance across the Dominion. The main tributaries of the St. Lawrence all flowing south (most of which have lakes available for reservoiring), together with the main river itself, have developed and undeveloped water powers whose economic value it would be difficult to over-estimate. Apart from the plains region of the West, the rivers of Canada have a vast power potentiality well distributed over the country, as may be seen by reference to the water-power map at the beginning of Chapter XIII. A table at p. 15 of the 1938 Year Book gave the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

#### Section 3.—Islands.

The islands of Canada are among its most remarkable geographic features. They include the very large group lying in the Arctic ocean, the fringe of both large and small islands off the Pacific coast, those of the Maritime Provinces and Quebec in the Atlantic ocean and the gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. The Arctic islands are of vast extent, Baffin,

\* This classification is that of the Dominion Water and Power Bureau, Department of Mines and Resources.

Victoria, and Ellesmere, the three largest, being approximately 201,600, 80,450, and 75,024 square miles in area, respectively, but Banks, Devon, Somerset, Prince of Wales, Melville, and Axel Heiberg are each larger than Prince Edward Island; Southampton, another very large island, lies just within the wide mouth of Hudson bay. Their economic potentialities, beyond deposits of coal and other minerals, have not been fully established. The Pacific Coast islands, with the exception of Vancouver island and the Queen Charlotte group, are small and dot the western coast of British Columbia from Dixon entrance to the southern boundary of the province. Vancouver island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte islands farther north. These islands figure largely in the mining, lumbering, and fishing industries of the West, and together with the bold and deeply indented coast-line provide a region for scenic cruises rivalling those of Norway.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the islands of Cape Breton (an integral part of Nova Scotia), Anticosti, and the Magdalen group (included in the province of Quebec), and the islands of Grand Manan and Campobello (part of the province of New Brunswick) in the bay of Fundy. Prince Edward island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti of about the same extent. Fishing activities in these eastern islands are important, while agriculture on Prince Edward island and mining on Cape Breton are the chief occupations of the inhabitants.

Manitoulin island and the Georgian Bay islands in lake Huron and the Thousand Islands group in the St. Lawrence river, at its outlet from lake Ontario, are the more important islands of the inland waters.

## PART II.—GEOLOGY.

### Section 1.—Geology of Canada.\*

In the section on Orography, pp. 9-11, the physical features of Canada have been considered and the natural divisions have been briefly described. These physiographic divisions depend fundamentally on underlying differences of geological structure and hence are geomorphic ones as well as physiographic. A description of the geology of Canada hence involves an account of the geology of each of these divisions. They are shown in the map on p. 15 and include:—

(1) The Canadian Shield, a vast V-shaped area of ancient rocks surrounding Hudson bay.

(2) The St. Lawrence Region, a lowland belt bordering the St. Lawrence river and extending westward through southern Ontario to lake Huron. It is underlain chiefly by flat or gently dipping strata of Palæozoic age.

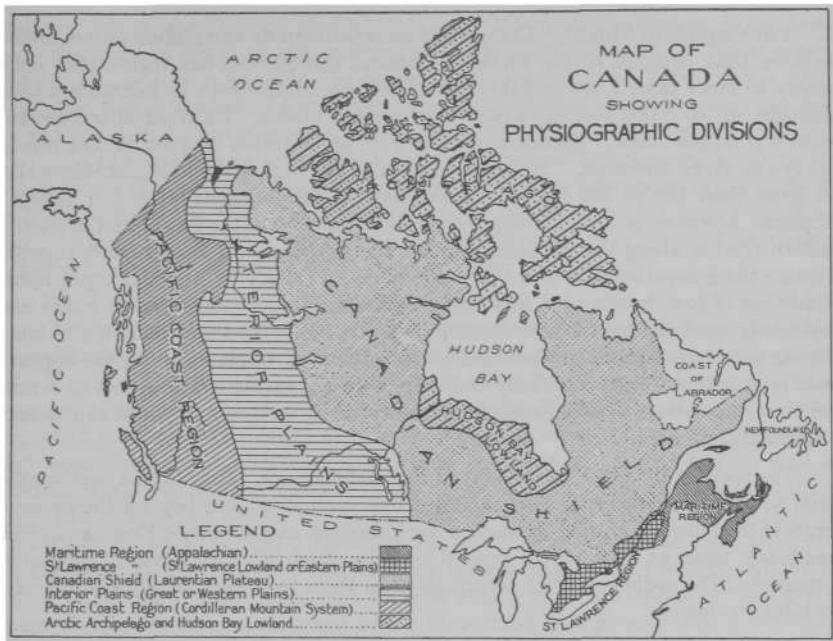

(3) The Appalachian and Acadian Regions, comprising the Maritime Provinces and most of that part of Quebec lying south of the St. Lawrence river. It is a hilly or mountainous region and is made up largely of disturbed beds.

(4) The Arctic Archipelago, with which is linked the Hudson Bay Lowland. The former includes the islands lying north of the Canadian Shield, while the latter is a broad, flat region, underlain by flat-lying Palæozoic beds.

(5) The Interior Plains Region of Manitoba, Saskatchewan, and Alberta, which stretches down Mackenzie valley to the Arctic ocean. It is underlain by only slightly disturbed Palæozoic and Mesozoic strata.

(6) The Cordilleran Region, including the mountainous country of the Pacific coast which is developed on highly disturbed rocks.

\* By F. J. Alcock, Ph.D., Geologist, Department of Mines and Resources, Ottawa.

The following geological time scale will assist the reader by showing the relationship of the various formations mentioned in this article to the geological map which faces p. 24.

## GEOLOGICAL TIME SCALE.

ARCHAEO (early Precambrian).....		Cambrian	
		Keweenaw	Killarnean
		Huronian	
		Timiskamian	Algoman
		Keewatin	Laurentian

**The Canadian Shield.**—Comprising an area of nearly two million square miles, or more than one-half of the whole of Canada, this plateau-like region rises only locally to more than 1,500 or 2,000 feet above sea-level, except in Labrador where altitudes up to 5,000 feet are reached in certain places. Its most characteristic feature is its low relief. Standing anywhere on an elevation an even skyline meets the eye in every direction. Throughout most of the region the hills and ridges rise no more than 100 or 200 feet above the level of the adjacent lakes and valleys. In places, however, as locally along the southern margins of the Shield and in north-eastern Quebec along the Labrador border, the relief is considerably more rugged. Though the general relief is low, the region in detail has a very irregular topography consisting of low, hummocky hills and ridges separated by depressions which are commonly occupied by lakes or muskegs. Lakes of all sizes and shapes, and containing numerous islands, dot practically the entire area, in places giving the appearance of a drowned area with only the ridge tops appearing. The rivers as a rule are mere successions of lake expansions connected by stretches in which rapids and waterfalls are numerous.

The rocks of the Shield are mainly of Precambrian age. They form a continental mass which in Precambrian time extended out in all directions beyond the present limits of the Shield. During the succeeding Palæozoic and Mesozoic Eras the Shield was many times at least partly flooded by seas which advanced over it and later retreated. The sediments that accumulated in these seas were largely swept away by later erosion.

From the beginning of the Cambrian period on to the present, the Shield has been a stable mass. During this time it has suffered vertical movement at intervals but it has been unaffected by any folding or mountain-building deformation. Its earlier or Precambrian history, however, was very complex and included periods of volcanism, sedimentation, folding, mountain-building, and igneous intrusion, and also long intervals of quiescence in which erosion was the active process.

Precambrian time can be conveniently divided into two major divisions, the Archæan or early Precambrian and the Proterozoic or late Precambrian. The Archæan in turn falls into two subdivisions, in the earlier of which volcanism took place on a tremendous scale and lavas and tuffs, usually referred to as Keewatin, accumulated over wide areas in thicknesses measured in thousands of feet. With the volcanics are locally associated sediments, in many places altered to mica schists and gneisses. In the Rainy Lake region of western Ontario a thick succession of such sediments, known as the Couchiching series, lies below the Keewatin lavas. In northern Manitoba and Saskatchewan interbedded lavas and sediments of probably similar age are referred to as the Wekusko group. In eastern Ontario and southwestern Quebec a thick series composed of limestone, quartzite, and sedimentary gneiss, known as the Grenville series, is also usually regarded as having been deposited during this first part of the early Precambrian Era. This period was terminated by widespread but gentle folding movements accompanied by some intrusions of granite.

During the second period of the early Precambrian, a thick formation of elastic sediments was deposited. These are commonly referred to in northern Ontario and Quebec as the Timiskaming series. In northern Manitoba and Saskatchewan similar sediments apparently occupying a corresponding stratigraphic position are referred to as the Missi series. Certain series of sediments, such as the Sudbury of the

Sudbury region, the Doré at Michipicoten, the Ridout of the Woman River area, and others, are of disputed age being regarded by some geologists as Timiskamian and by others as belonging in the Keewatin. The period of Timiskamian sedimentation was succeeded by a mountain-building revolution which was accompanied by widespread intrusion of granite, commonly referred to as the Algomian batholiths. The time of the Algomian intrusions was a great mineral-forming epoch. Most of the gold ores of the Shield, and the copper-zinc sulphide replacement deposits, such as those of Noranda, Flin Flon, Sherritt-Gordon, and many others, were formed at this time from mineralizers given off by these intrusives. A long period of quiescence followed in which erosion reduced the region to one of low relief.

The Proterozoic or late Precambrian included the long era during which thick series of sediments were deposited on this eroded complex of Archæan rocks. These strata are best developed in the region around lake Superior and north of lake Huron. They belong to two systems, an older known as the Huronian and a younger called the Keweenawan. North of lake Huron the Huronian strata consist of an older series called the Bruce—made up of conglomerates, quartzites, and impure dolomitic limestone, totalling in thickness up to 12,000 feet—and a younger series named the Cobalt—made up of boulder conglomerate and other materials of probable glacial origin, overlain by quartzite and slightly calcareous quartzite, the whole having a thickness up to 10,000 feet. These two series are separated by an unconformity but the time interval represented was probably not great. The beds for the most part lie with only gentle dips except on the north shore of lake Huron and eastward where they stand at high angles as a result of mountain-building movements. The Huronian rocks are intruded by dykes and sills of quartz diabase extending over wide areas of northeastern Ontario. These intrusions of what is called the Nipissing diabase attracted the silver-cobalt camp of Cobalt, and subsidiary camps. Copper is associated with this diabase in the western part of the region. The Huronian rocks are cut by masses of Killarney granite intruded during the mountain-building period at the close of the Huronian to which reference has been made, and both the Huronian sediments and the Nipissing diabase are cut by small masses of a younger granite which is rich in alkalis.

At Sudbury a series of volcanic and sedimentary rocks filling the basin of the nickel irruptive is known as the Whitewater series. It has usually been referred to as Upper Huronian. The nickel-bearing irruptive was intruded at the base of this series as a saucer-shaped sill or laccolith, 37 miles long and 17 miles wide. It differentiated from norite at the base to micropegmatite at the top. This intrusive is the source of the nickel-copper ores of the region, the deposits occurring along the outer margins of the mass or in offsets where the mass injects the surrounding rocks. Cutting all these rocks are trap and olivine diabase dykes.

North of lake Superior is a group of late Precambrian rocks which has been described under the term Kaministikwan. The group includes the Animikie series of conglomerate, iron formation, and shale; the Sibley series of conglomerate, sandstone, limestone, and tuff; and the Osler series of lavas, conglomerate, sandstone, and tuff. Strata resembling the Animikie rocks of the Lake Superior region also occur in the central part of Ungava peninsula and on the Belcher islands and the east coast of Hudson bay.

In the Northwest Territories a group of Proterozoic rocks known as the Great Slave group consists of sediments and volcanics and rests on an old erosion surface crossing granitic intrusives and the upturned edges of Archæan sediments. The group consists of a lower part made up of conglomerate, sandstone, quartzite, shale,

iron formation, limestone, tuff, agglomerate, andesite, and dolomite, and an upper part of dolomite, shale, limestone, sandstone, and lavas with interbeds of argillite. Still farther north in the Bathurst Inlet region of the Arctic coast are Proterozoic strata. Resting on granite is the Epworth dolomite which has a thin basal conglomerate and grades up through arkose into a cherty dolomite. Above this is the Kanuyak formation, made up of fine-grained calcareous tuffs and tuff-conglomerates, which at one place shows a structural unconformity with the Epworth beds. A still younger formation is the Goulburn quartzite which contains rounded fragments apparently of the Epworth and Kanuyak. The next younger rocks are those of the Coppermine River series to which reference will be made later.

The Keweenaw, the later division of the Proterozoic, saw the accumulation of great thicknesses of clastic deposits, in places accompanied by volcanic rocks, over various parts of the Shield. The type area is on the south side of lake Superior where thousands of feet of sediments and lavas are exposed. On the Canadian side several smaller areas occur on the east coast of lake Superior.

In the northwestern part of Canada are wide areas underlain by flat-lying or only gently dipping beds which are regarded as late Precambrian in age and are commonly correlated with the Keweenaw. The beds consist for the most part of sandstone and arkose with some conglomerate and shale. South of lake Athabaska is a broad area of these rocks to which the term Athabaska series has been applied. Smaller patches also occur north of the lake and to the northeast is another considerable area along the Dubawnt river. Interbedded basaltic flows and diabase dykes occur in places with these rocks. On Great Slave lake the Et-then series of clastic sediments is considered to be of equivalent age, while farther north on the Coppermine river and at Bathurst inlet a series of interbedded sediments and volcanics is known as the Coppermine River series. It carries notable copper deposits. Trap dykes, commonly considered as Keweenaw in age, are of wide occurrence over the entire Shield and are the youngest of the Precambrian rocks.

During the Pleistocene or Glacial period, the Shield was heavily glaciated by huge glaciers of continental extent. One of these sheets had its gathering ground west of Hudson bay and another in the heart of Labrador. From these centres the ice moved out in all directions. In its advance it scoured off the residual soil, smoothed down the topography, polished and striated the rock surface, and by scattering debris irregularly over the surface completely disorganized the drainage. The result was the formation of the numerous lakes which are everywhere so characteristic a feature of the region. On the retreat of the glaciers, large temporary lakes stood in places in front of ice and in these accumulated clay and other fine stratified deposits forming what are known as clay belts.

The Canadian Shield is a great store-house of mineral wealth and hence offers an attractive field to the prospector. It is not because its rocks are of Precambrian age that such is the case. It is rather because parts of it offer geological conditions favourable for the occurrence of minerals. Ore deposits the world over have, for the most part, resulted from mineralizing solutions given off from masses of igneous rocks during the late stages of their intrusion and cooling, and where we have an association of older rocks invaded by intrusives we may expect to find mineralization, no matter what age the rocks may be. During the Precambrian the rocks of the Shield, as has already been mentioned, were extensively invaded from time to time by intrusive masses of composition varying from acid to basic. Reference has been made to the nickel-copper deposits associated with the Sudbury irruptive, the silver-cobalt ores occurring with the Nipissing diabase, the gold deposits of Ontario

and Quebec associated with porphyry and other granitic rocks. The gold-bearing copper ores of western Quebec, the zinc-copper ores of northern Manitoba, the pitchblende and silver deposits of Great Bear lake are other important mineral occurrences which are being developed. In eastern Ontario and western Quebec, where granite has intruded limestone and other sediments of the Grenville series, occur deposits of mica, graphite, feldspar, magnesite, fluorite, kaolin, molybdenite, talc, apatite, and other minerals.

**The St. Lawrence Region.**—The St. Lawrence Region is a lowland which stretches westward from Quebec city for a distance of some 600 miles to lake Huron. It begins as a narrow strip bordering each side of the St. Lawrence and gradually widens until at Montreal it has a width of 120 miles. Its northerly border continues on up the Ottawa river but 50 miles west of Ottawa the belt is interrupted by a projection of the Canadian Shield known as the Frontenac axis which extends southward crossing the St. Lawrence between Kingston and Brockville. West of this axis the lowland occupies a triangular area lying between lakes Ontario, Erie, and Huron and an east and west line drawn from Kingston to the south end of Georgian bay. This western part in turn falls into two divisions separated from each other by a prominent topographic feature, the Niagara escarpment, an abrupt, eastward-facing rise of 250 to 300 feet, extending from Niagara river in a northwest direction to Bruce peninsula. Still farther to the northwest, the escarpment is continued by the northward-facing cliffs of Manitoulin and adjacent islands.

The St. Lawrence Region is underlain by Palæozoic strata ranging in age from late Cambrian to late Devonian. For the most part the beds lie flat or at low angles. In places, however, as in southwestern Ontario, they are folded into broad low domes and elsewhere, as in the vicinity of Ottawa, they are traversed by faults of considerable magnitude. In general the beds dip away from the Canadian Shield so that as one proceeds in a direction leaving the Shield, progressively younger strata are encountered.

The strata are almost wholly of marine origin and were deposited in seas that spread out over a large part of the continent. Differential movements caused these seas to advance and retreat, so that the sediments which were deposited in them vary considerably. There are also local gaps in the sedimentary sequence caused by these movements, but the movements were so gentle that there are no angular unconformities.

The oldest of the Palæozoic formations is the Potsdam sandstone of Upper Cambrian age. It is followed by a thick succession of Ordovician strata. In the Ottawa-Montreal region these beds have a thickness of about 6,000 feet and are the youngest measures there are. They include Beekmantown or early Ordovician dolomitic limestones, Chazy sandstones, shales, and limestones, Black River limestone, and Trenton limestone deposited during the Middle Ordovician, and Upper Ordovician beds made up of the Utica shale, Lorraine shales with limestone and sandy layers, and the Richmond group of shales and limestones. The Lorraine and Richmond rocks are developed chiefly southeast of the St. Lawrence.

West of the Frontenac axis and east of the Niagara escarpment, the middle division of the St. Lawrence Region is also underlain by Ordovician strata. Along the escarpment these beds are succeeded by Silurian measures of which the lowest group is the Medina composed of sandstone, shale, and shaly limestone. These beds are succeeded by shales and limestones of the Clinton group which in turn are followed by the Rochester shale and Lockport dolomite of the Niagara group. Above the Lockport is the Guelph dolomite and this in turn is overlain by the Cayuga

group made up of the Salina formation and the Lower Munroe dolomite and shale. The total thickness of the Silurian measures is around 1,750 feet.

The Cayugan beds are terminated by an erosion surface upon which rest Devonian beds about 1,000 feet in thickness. The succession from bottom to top is as follows: Sylvania sandstone, Upper Munroe dolomite, Oriskany sandstone, Onondaga limestone, Delaware limestone, Hamilton limestone and shale, Huron shale, and Port Lambton shale.

The only intrusive rocks of the St. Lawrence Region occur in the eastern part in what are known as the Monteregian hills. These are eight in number occurring along an approximately east and west line some 50 miles long. The most westerly is Mount Royal at Montreal. The hills are circular or oval in outline and rise abruptly to elevations of from 600 to 1,200 feet above the surrounding flat country. The flanks of the hills consist of altered and hardened sediments and the centres are composed of intrusive rocks, including various alkali types such as nepheline syenites, essexites, etc. The age of these intrusives may be as late as Pliocene.

The whole region was overrun by Pleistocene ice sheets and much of the bed-rock is covered by debris left by these glaciers. At Toronto stratified deposits carrying plant and animal remains lie between deposits of glacial material. These layers show that the region was crossed at least three times by ice sheets coming from central Ungava and that between these advances the region had a climate considerably milder than at present. In late Pleistocene time the region was depressed and an arm of the sea extended up the St. Lawrence valley as far at least as Brockville and up the Ottawa River valley beyond Ottawa. At Ottawa the sea stood at least 688 feet above its present level. In this sea, layers of clay were deposited and along its shores deposits of sand accumulated. Eventually uplift of the land caused the withdrawal of this sea to which the name Champlain is given.

The chief mineral occurrences of the St. Lawrence Region include petroleum and natural gas which are produced in southwest Ontario, salt from the counties bordering lakes Huron and St. Clair, and gypsum from the Grand River valley. Other materials which are available at many places include limestone and dolomite used in chemical and metallurgical industries, rock for construction purposes and clay for brick, tile, and cement manufacture.

**The Appalachian and Acadian Regions.**—The Appalachian and Acadian Regions include that part of Canada lying south of the St. Lawrence river and east of a line running from Quebec city south to the foot of lake Champlain. The Appalachian Region, whose eastern boundary in Canada is the Restigouche river and Chaleur bay, is a continuation of the Appalachian Mountain system of the eastern United States. The Acadian Region lies to the southeast and comprises the provinces of New Brunswick, Nova Scotia, and Prince Edward Island.

The region is for the most part mountainous or hilly. In southeastern Quebec the Notre Dame mountains, consisting of three roughly parallel ridges trending northeast, reach elevations up to 3,100 feet and in Gaspé peninsula, the Shickshocks, actually a continuation of the same range, have heights up to 4,200 feet. Many of the mountain summits are flat-topped, showing that the region is really a dissected plateau. The Acadian Region is also largely one of plateaux, ridges, and valleys. In central New Brunswick is a rugged area with summits rising over 2,000 feet. To the east of this is a lowland area of some 10,000 square miles comprising the eastern portion of the province and all of Prince Edward island. It nowhere rises over 600 feet above the sea. Nova Scotia is largely an upland region which in the northern part of Cape Breton island reaches elevations of 1,500 feet.

The rocks of the Appalachian and Acadian Regions include sediments, volcanics, and intrusives, chiefly of Palæozoic age. In a few places rocks of Precambrian age are known and along the Bay of Fundy coast are a few areas underlain by Mesozoic rocks. The lowland area of eastern New Brunswick is underlain by little-disturbed Carboniferous beds. Elsewhere, however, throughout the region, the rocks are nearly everywhere thrown into folds with axes trending in a northeast direction and are in addition broken by faults giving rise to a complex structure typical of the Appalachian Region in general. The chief period of deformation in this part of Canada, however, was during the Devonian, whereas to the south, in the United States, the greatest disturbances took place later during the Permian at the close of the Palæozoic.

At Saint John city in southern New Brunswick is exposed a series of early Precambrian rocks made up of limestone, dolomite, quartzite, and gneiss. It is overlain by a thick succession of late Precambrian volcanic rocks upon which rest Cambrian strata. Precambrian rocks also occur in Cape Breton island. In Gaspe peninsula along the north side of Chaleur bay the Macquereau series, composed largely of quartzite, rests unconformably below Ordovician strata and may be Precambrian. Precambrian rocks have been described as occurring in central New Brunswick and in southwestern Quebec. Some of the occurrences are probably, however, of Palæozoic age.

In the mainland of Nova Scotia a thick series of altered sediments, known as the Meguma or Gold-bearing series covers wide areas and is believed to be of late Precambrian age. The lower half of its 35,000 feet thickness consists dominantly of quartzites and the upper half of slates. The series is folded along northeast lines and is broken by northwest faults, the horizontal displacement of some of which exceed a mile. The rocks are intruded by dykes and sills of diabase and by batholithic masses of grey and red granites of Devonian age.

Cambrian formations occur in southeastern Quebec, in southern New Brunswick, and in northeastern Cape Breton. In early Ordovician times sediments were deposited in the St. Lawrence River Region. The Sillery formation of red and green shales with interbedded sandstone has at Quebec a thickness of 2,000 feet. A younger series, called the Lévis, consists of dark shales and thin-bedded limestones with a thickness of possibly as much as 5,000 feet. It forms a band varying in width from 6 to 35 miles; its beds have been folded, faulted, and in places overturned. Mid-Ordovician rocks occur in southwestern Quebec and in Gaspe and northern New Brunswick. Late Ordovician rocks are developed in the Matapedia River and Chaleur Bay districts. At the close of the Ordovician there were extensive mountain-building movements. Masses of peridotite which intrude the Ordovician and older rocks may have originated at this time.

Silurian rocks are exposed in southeastern Quebec, in Gaspe, in New Brunswick, and in Nova Scotia at Arisaig and a few other places. The next marine invasion was in Lower Devonian time when great thicknesses of sediments with interbedded volcanics accumulated in New Brunswick and Gaspe. During the Middle Devonian, a thick series of sandstones accumulated in Gaspe. In the Upper Devonian was deposited in the vicinity of Maguasha, on the Gaspe coast, a group of conglomerates, sandstones, and shales, one member of which is noted for the fossil fish it has yielded. Towards the close of the Middle Devonian, the whole Appalachian and Acadian Regions were affected by mountain-building movements accompanied by the intrusion of batholithic masses of granite.

Rocks of Carboniferous age underlie the lowland belt forming much of the southeastern half of New Brunswick, the part of Nova Scotia north of the Cobequid mountains, part of the lowland south of these mountains, southwestern and north-eastern Cape Breton island and all of Prince Edward island. With the Lower Carboniferous or Mississippian rocks occur the extensive gypsum deposits and the salt beds of Nova Scotia and New Brunswick and also the bituminous shales of these provinces. The Upper Carboniferous or Pennsylvanian strata contain the coal measures which occur at Sydney, and at other places in Nova Scotia and at Minto in New Brunswick. The Carboniferous beds have in places been folded and faulted but there are wide areas in which the strata have been but little disturbed since they were deposited.

Red sandstones deposited during the Triassic period are exposed in a number of small areas along the Bay of Fundy coast. In places as at North Mountain, Nova Scotia, the beds are accompanied by lava flows. During the Pleistocene the region was glaciated. At certain stages there were apparently local gathering grounds for glaciers in central New Brunswick and in central Gaspé.

The chief mineral deposits of the Appalachian and Acadian Regions include coal, asbestos, and gypsum. The coal and gypsum, as has already been mentioned, occur in the Carboniferous measures. Asbestos occurs in serpentized peridotite in southeastern Quebec. Chromite also occurs with the peridotite. Gold occurs in quartz veins in the Gold-bearing series of Nova Scotia. Many of the deposits are located on domes or pitching anticlines. Zinc-lead deposits occur in central Gaspé in veins cutting lower Devonian beds. At Stirling in the southern part of Cape Breton island, zinc, lead, and copper sulphides occur in a series of volcanic rocks. Copper and iron pyrite deposits occur in southern Quebec. Salt occurs in Nova Scotia and New Brunswick.

**The Arctic Archipelago and Hudson Bay Lowland.**—The Arctic Archipelago includes the islands lying north of the Canadian Shield. They have a land area of over half a million square miles. Except for northward extension of the area of the rocks of the Canadian Shield, the islands for the most part are a series of plateaux formed of gently dipping strata.

The main Precambrian belt extends through Baffin island to Ellesmere island. Its rocks consist chiefly of granite and granite-gneiss intrusive into various types of gneisses and schists. Palæozoic strata, including Cambrian, Ordovician, Silurian, Devonian, and Carboniferous beds, cover most of the remaining area. Triassic rocks occur on the Sverdrup islands and a number of areas are underlain by Tertiary beds some of which are coal-bearing. Coal is also associated with some of the Upper Carboniferous strata at a number of places.

The Hudson Bay Lowland bordering the west side of Hudson bay has a length in a northwest direction of 800 miles, a width of from 100 to 200 miles and an area of 120,000 square miles. It rises from sea-level with a scarcely perceptible gradient to a height of about 400 feet. It is underlain by flat-lying rocks most of which are of Palæozoic age ranging from Ordovician to Devonian. An area of Mesozoic beds carrying lignite occurs in the Moose River region.

The seas in which the Palæozoic rocks which are now exposed in the Arctic Archipelago, the Hudson Bay Lowland, and the St. Lawrence Region were deposited extended at times widely over the Canadian Shield. Palæozoic outliers are known on lake St. John, lake Nipissing, and lake Timiskaming in the south, and on lake Nicholson west of Hudson bay. These outliers are mere remnants which have survived the erosion of Mesozoic and Tertiary time.

**The Interior Plains.**—The Interior Plains division of Canada is part of a great plains region in the interior of the continent stretching from the gulf of Mexico to the Arctic ocean. In Canada it extends from the Canadian Shield on the east to the Cordillera on the west. At the United States border it has a width of 800 miles but in the extreme northwest at the mouth of the Mackenzie river it is less than 100 miles wide. Throughout most of the region the underlying Palæozoic, Mesozoic, and Tertiary rocks are nearly flat-lying. In the northwestern part of the area, however, the Franklin range, which lies between Great Bear lake and Mackenzie river, is composed of folded strata. In western Alberta, also, the rocks are folded and faulted.

Geologically the region falls into three zones. On the east a narrow plain known as the Manitoba Lowland is developed on flat-lying Palæozoic strata which range in age from Ordovician to Devonian. In Manitoba the Ordovician beds rest on the Precambrian rocks of the Canadian Shield and commonly present a low escarpment facing the Shield. To the northwest this zone broadens to form the Mackenzie Lowland. Here over wide areas Silurian measures form the base of the Palæozoic section. In the Franklin mountains, however, red quartzites and sandstones of the Mount Clark formation are regarded as of probable Lower Cambrian age. They are succeeded by Middle and Upper Cambrian sandstones and shales. Beds regarded as of probable Ordovician age are also known to occur at the base of mount Kindle east of Wrigley and beneath the Silurian dolomite of the Great Slave Lake area. Over considerable areas strata of Cretaceous age also occur in the Mackenzie Lowland region, as for example on Liard river, on the western shores of Great Bear lake, and at several places along the Mackenzie. At the mouth of Bear river is an area covered by partly consolidated Tertiary sands and clay carrying lignite beds.

The second zone includes much of southwestern Manitoba and southern Saskatchewan and Alberta. It is a broad belt underlain by Cretaceous rocks. Its eastern border, where these strata overlap the underlying Palæozoic sediments, is an abrupt rise known as the Manitoba escarpment. Its surface gradually rises from an elevation of from 1,000 to 2,000 feet at the escarpment to from 4,000 to 5,000 feet at the border of the mountains on the west.

The third zone consists of the plateaux of Wood mountain and the Cypress hills which rise up to elevations of 1,000 feet above the level of the surrounding region. They are composed of flat-lying beds of Tertiary age.

In Pleistocene time glacial drift was widely scattered over the region. On the retreat of the ice deposits, clay accumulated in lakes which stood in front of the waning ice sheet. Much of southern Manitoba formed the bed of glacial lake Agassiz.

The Interior Plains Region is the great wheat-producing area of Canada. Coal mining is an important industry. Bituminous coal and lignites are produced in large quantities in Alberta and in small amounts in Saskatchewan from Cretaceous and Eocene beds. Natural gas is produced in large quantities from various horizons of the Cretaceous in Alberta. Petroleum has been found in the Devonian beds of the lower Mackenzie valley north of Norman, in Cretaceous strata at a number of localities in Alberta, and in Palæozoic rocks in Turner valley. Along the Athabaska river the basal member of the Lower Cretaceous, known as the McMurray or the Tar sands, is heavily impregnated with bitumen. Gypsum is obtained from the Palæozoic rocks of Manitoba and also occurs in northern Alberta. Deposits of lead and zinc occur in Devonian limestones at certain places south of Great Slave lake.

**The Cordilleran Region.**—The Cordilleran Region comprises the mountainous country bordering the Pacific ocean. The part of it which lies in Canada has an average width of 400 miles, a length in a northwest direction of 1,500 miles, and an area of 600,000 square miles. It is made up of three principal zones. On the east is the Rocky Mountain range; along the coast is a broad belt of mountains known as the Coast range, while between these two lies a third or intermediate belt made up of plateaux and mountain ranges. The Rocky mountains have a maximum width of 100 miles and have many peaks with elevations of from 10,000 to 12,000 feet. The Coast range, varying in width from 50 to 100 miles, rises abruptly from the coast to peaks which along the axis of the range reach elevations of from 7,000 to 10,000 feet. The interior plateau and mountain belt is represented in the north by the Yukon plateau, a gently rolling upland broken into a series of flat-topped ridges by valleys several thousand feet deep. In the southern part of British Columbia the interior region is a plateau rising 3,000 to 4,000 feet above sea-level and cut by valleys a thousand or so feet in depth. To the west this plateau either joins the Coast range directly or else is separated from it by the Cascade range and other mountains. To the east between the plateau and the Rocky mountains are a series of ranges separated by northwest-trending valleys. The Selkirk range with peaks over 11,000 feet is the most important of these.

The rocks of the Cordilleran Region range in age from Precambrian to Recent. The Rocky Mountain belt is composed of great thicknesses of Precambrian, Palæozoic, and Mesozoic sediments, in most places unaccompanied by plutonic or volcanic rocks. The Coast range is essentially a complex batholith of granite of late Jurassic or early Cretaceous age cutting and enclosing sediments and volcanic rocks of earlier Mesozoic age. The Interior belt of plateaux and mountain ranges is underlain by Palæozoic, Mesozoic, and Tertiary sediments and volcanic rocks. The pre-Tertiary beds are cut by numerous bodies of plutonic rocks and in several districts strata of Precambrian age are exposed.

The geological history of the Canadian Cordilleran Region may be briefly summarized as follows: In Precambrian time sediments which now are in the form of limestones, gneisses, and schists were deposited in the interior belt. In Yukon these strata are known as the Yukon group and in central British Columbia as the Shuswap group. These have been altered by intrusive rocks and included with them may be metamorphosed phases not only of Precambrian rocks but also of much later rocks. In late Precambrian time a thick series of argillites and related sediments accumulated on the site of the southern Rockies and farther west in the region now occupied by the Purcell mountains. The Purcell series, consisting dominantly of quartzites, has a thickness of over 20,000 feet.

From the Cambrian to the Carboniferous, sedimentation progressed in the Rocky Mountain and Purcell region. Cambrian strata are best known in the Bow and Kicking Horse valleys along the main line of the Canadian Pacific railway, where a total thickness of more than 18,000 feet of Cambrian beds are exposed. Another thick section can be seen in the Mount Robson district along the Canadian National railway. In both these areas the Cambrian beds are succeeded by Ordovician strata. Silurian limestone occurs south of Kicking Horse river, in Yukon, and in the western part of Mackenzie mountains. In Devonian time the whole eastern Cordilleran Region was submerged and calcareous beds, in places

several thousand feet thick, were deposited. In the western part of the Rocky mountains they in places succeed Silurian beds, but in the south and at various places in the eastern part of the Rockies they rest on late Precambrian or Cambrian strata. Carboniferous beds succeed the Devonian strata at many places in the Rockies. Around Banff they include a thickness of 5,000 feet. In the interior belt around Kootenay lake Carboniferous beds rest directly on Precambrian rocks.

During the Triassic and Jurassic, sedimentation and volcanism on a vast scale occurred in the region from the Rocky mountains westward to the Pacific ocean, and on the site of what are now Vancouver island and the Queen Charlotte islands. In late Jurassic and early Cretaceous times this whole region was deformed. The Selkirk and Coast ranges were produced and the Coast Range batholith was intruded. In later Cretaceous time, sediments were deposited on both sides of these Jurassic ranges.

Long continued erosion in late Cretaceous time reduced the mountains to a peneplain and unroofed their granite cores. During the Eocene occurred the great Laramide revolution which produced the Rocky mountains. The rocks of this belt were folded and faulted and in places great blocks of older rocks were thrust over younger beds. Local intrusions of igneous rock accompanied the deformation. In the Oligocene local movements accompanied by igneous intrusions again took place. During the Miocene period great fissure eruptions took place while during the succeeding Pliocene period there was further volcanism with general uplift and subsequent valley cutting. In the Pleistocene or Glacial period most of the Cordilleran Region with the exception of some of the higher ridge tops was covered by what is known as the Cordilleran ice sheet. The whole region was depressed at this time but in post-glacial time there has been uplift ranging from 450 to 1,000 feet.

The Cordilleran Region is a great mineral area. Most of the deposits are related to the Coast Range batholith. They occur principally along the borders of the batholith and in the older rocks surrounded by the intrusives and were produced by mineralizing solutions given off from the igneous masses. Some of the more important deposits are the copper ores of Hidden Creek, Britannia, and Allenby mountain, the gold-silver deposits of Salmon River district, the silver-lead-zinc ores of the Slocan, and the Sullivan ore body, the largest silver-lead-zinc mine in the world. Other mineral deposits include coal which occurs in the Rocky mountains and on Vancouver island in beds of Cretaceous and also of Tertiary age, iron ores in Vancouver and Queen Charlotte islands, placer gold in Yukon and in the Cariboo country in gravels of Tertiary age, and numerous other mineral occurrences.

An article on this subject, together with a bibliography, prepared by John Adams, M.A. (Cantab.), Division of Botany, Experimental Farm, Ottawa, appeared at pp. 30-59 of the 1938 Year Book.

## PART V.—FAUNAS OF CANADA.

An article under this heading, by Rudolph M. Anderson, Ph.D., Chief, Division of Biology, Department of Mines and Resources, appeared at pp. 29-52 of the 1937 Year Book.

## PART VI.—LANDS, SCENIC, AND GAME RESOURCES OF CANADA.

Canada is distinctly a new country, and her resources are for the most part in the early stages of development. The fur, fishery, and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. A notable feature, especially in so young a country, has been the effort directed to conservation and, in the cases of those resources which admit of such methods, the actual replenishment or augmentation of the sources of supply by the practice of reforestation, silviculture, fur farming, or the establishment of fish hatcheries.

Numerous surveys and investigations of the extent and value of the resources have been made and broad outlines of the resources of the provinces supplement the information on physical geography given on pp. 1 to 14. Detailed information regarding individual natural resources will be found in the later chapters—Agriculture, Furs, Fisheries, Forestry, Minerals, Water Powers—of this volume.

The treatment of resources considered below is concerned only with those phases of the subject which can be properly regarded as falling under the definition of physiography used in its wider interpretation, and which do not specifically relate to individual subjects, treated elsewhere in this volume. A classification of lands resources (here there is naturally overlapping since much land suitable for agriculture remains under forest cover), information on the National Parks, and resources in game and scenery properly fall under this head.

**Lands Resources.**—Table 1 presents a broad classification of the potential lands resources of Canada, by provinces. The figures are, in the main, based on estimates prepared by the Dominion Forest Service, Lands, Parks, and Forests Branch, and by the Surveyor General and Chief, Hydrographic and Map Service of the Surveys and Engineering Branch, Department of Mines and Resources; they show how the total land area of Canada is made up as between present and potential agricultural lands, present and potential forest lands, and lands which are unproductive as regards surface resources. Between the totals of present and potential agricultural lands and the totals of present and potential forest lands there is, of course, duplication to the extent of the agricultural lands under forest.

## 1.—Land Area of Canada, Classified as Agricultural, Forested, or Unproductive.

NOTE.—The land area of Canada is shown classified by tenure in Chapter XXVIII.

Description.	Prince Edward Island.	Nova Scotia.	New Brunswick.	Quebec.	Ontario.	Manitoba.
	sq. miles.	sq. miles.	sq. miles.	sq. miles.	sq. miles.	sq. miles.
<b>Agricultural Land (Present and Potential)—</b>						
Occupied.....	1,881	6,722	6,488	27,038	35,689	23,644

<b>Totals, Forested Land.....</b>	<b>82,160</b>	<b>130,635</b>	<b>209,540</b>	<b>69,000</b>	<b>1,323,522</b>
<b>Net Productive Land<sup>2</sup>.....</b>	<b>178,795</b>	<b>216,192</b>	<b>218,940</b>	<b>79,067</b>	<b>1,521,539</b>
<b>Waste and Other Land<sup>3</sup>.....</b>	<b>59,180</b>	<b>32,608</b>	<b>140,333</b>	<b>1,393,496</b>	<b>1,944,967</b>
<b>Totals, Land Area.....</b>	<b>227,975</b>	<b>248,800</b>	<b>359,273</b>	<b>1,463,563</b>	<b>3,466,756</b>

<sup>1</sup> These totals embrace present agricultural land of all possible classes and land which has agricultural possibilities in any sense. <sup>2</sup> Very small or negligible. <sup>3</sup> Total agricultural land plus forested land, minus forested agricultural land.

<sup>4</sup> Includes open muskeg, rock, road allowances, urban land, etc.

<sup>5</sup> An estimate from provincial sources places the total area of land suitable for tillage at 6,626 sq. miles.

**National Parks of Canada.\***—The Dominion Government maintains, as the medium through which some of the most outstanding natural beauties of the country may be preserved and popularized, the National Parks Bureau, Lands, Parks, and Forests Branch of the Department of Mines and Resources, which administers the scenic and recreational parks set aside for this purpose. Under the supervision of this same body are the national wild-animal preserves—large fenced areas established for the protection and propagation of species in danger of extinction—the national historic parks, and the historic sites of great national interest which have been acquired throughout the country. (See pp. 78 to 90 of the 1938 Year Book.)

The mountain parks include regions of unsurpassed grandeur in the Rocky and Selkirk mountains of Western Canada. Among these are the Banff, Jasper, and Waterton Lakes National Parks in Alberta, located on the eastern slopes of the Rockies; the Kootenay and Yoho parks in British Columbia on the western slopes of the Rockies; and the Glacier and Mount Revelstoke Parks, also in British Columbia, located in the Selkirks. While these parks have a general resemblance to each other, each possesses individual characteristics, varying flora and fauna, and different types of scenery.

Prince Albert National Park in Saskatchewan forms a typical example of the lake country bordering the northwestern prairies, and the Riding Mountain National Park in Manitoba, having a general elevation of 2,000 feet above sea-level, contrasts sharply with the fertile plains to the east. In Ontario are located three small park units, the Point Pelee, Georgian Bay Islands, and the St. Lawrence Islands National Parks, which were established primarily as recreational areas. Fort Anne National Park in Nova Scotia and Fort Beauséjour National Park in New Brunswick, surround sites notable in early Canadian history.

The most recent additions to the system of National Parks are located in the Maritime Provinces. Cape Breton Highlands National Park, an area of 390 square miles, is situated in the northern part of Cape Breton island between the gulf of St. Lawrence and the Atlantic ocean. Its rugged and picturesque shore line, and its mountainous interior which greatly resembles the Highlands of Scotland, are accessible from Cheticamp and Ingonish by a spectacular motor road called the Cabot Trail. Prince Edward Island National Park, containing an area of seven square miles, extends for a distance of twenty-five miles along the northern shore of Prince Edward island. Outstanding among its features are beautiful sand beaches, among the finest in eastern Canada, which offer unrivalled opportunities for sunbathing. The provision of recreational facilities, including golf courses and bath-houses, is being carried out in the orderly development of these park areas.

The special animal parks were established for the protection of such vanishing species of mammalian wild life as the buffalo, wapiti (elk), and pronghorned antelope, which now thrive under natural conditions in large enclosures especially suited to their requirements. These parks include the Buffalo and Elk Island parks in Alberta, which contain large herds of buffalo, elk, moose, and deer, and the Nemiskam park also in Alberta, which forms a sanctuary for the pronghorned antelope.

In the national parks all wild life is given rigid protection and primal natural conditions are maintained as far as possible. The local administration of the larger parks is carried out by resident superintendents, assisted by park wardens who are responsible for the necessary game and forest patrols. Recreational facilities are many and varied, and in some parks natural attractions have been augmented by the provision of golf courses, tennis courts, swimming pools, bath-houses, and other

\* Prepared under the direction of R. A. Gibson, Director, Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

features. A number of the parks also possess well-equipped public camp grounds, which are available to visitors desiring this type of accommodation.

In addition to being served by the Canadian Pacific or Canadian National Railway systems, most of the parks are either traversed by or linked up with the main arteries of motor travel. More than 600 miles of all-weather motor roads have been built by the National Parks Bureau, which have been instrumental in opening up many of the outstanding beauty spots, while other regions have been made accessible by the construction of more than 2,800 miles of trails.

*Migratory Birds Treaty.*—This treaty and the legislation making it effective throughout Canada are administered by the National Parks Bureau of the Department of Mines and Resources. The treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the treaty, and regulations enacted for its enforcement, may be obtained from the Controller, National Parks Bureau, Ottawa.

## 2.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1938.

(Twenty-one in number with a total area of 29,700 square miles.)

Park.	Location.	Date Established.	Area.	Characteristics.
<b>Scenic Parks.</b>				
Banff.....	Western Alberta, on east slope of Rockies.	1885	2,585.00 sq. miles. (approx.)	Mountain playground containing two famous resorts—Banff and Lake Louise. Massive ranges, upper slopes bare and worn, or glacier crowned, lower slopes covered with luxuriant forests and flowered alplands; glacier-fed lakes. Wild deer, goat, sheep, elk, etc. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, fishing, skiing, skating, curling.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.00	Rugged scenery on west slope of Rockies; Kicking Horse valley; lofty peaks, large number with permanent ice-caps or glaciers; famous Yoho valley with numerous waterfalls, one over 1,200 feet in height. Natural bridge, Emerald lake, lakes O'Hara and McArthur.
Glacier.....	Southeastern British Columbia, on the summit of the Selkirk range.	1886	521.00	Massive formations of the old Selkirk range; luxuriant forests, alpine flower gardens. Centre for alpine climbers. Illecillewaet and Asulkan glaciers and valleys; Nakimu caves. Marion lake, Rogers and Baloo passes.
Mount Revelstoke....	Southeastern British Columbia, on the summit of mount Revelstoke.	1914	100.00	Nineteen-mile drive up Mt. Revelstoke affording panoramic views of the Columbia and Illecillewaet valleys, Clachnacunnis ice-field, lakes Eva and Militar. Game sanctuary and winter sports resort.
Kootenay.....	Southeastern British Columbia, along Banff-Windermere highway.	1920	537.00	Park extends five miles on each side of Vermilion-Sinclair section of Banff-Windermere highway. Deep canyons, Iron Gates, Briscoe range, Sinclair canyon, famed Radium Hot Springs. Bear, deer, caribou, and Rocky Mountain sheep.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200.00	Immense mountain wilderness, rich in historical associations. Numbers of unclimbed peaks; glaciers, canyons, lakes of wonderful colouring; Athabaska valley, Maligne lake, Mount Edith Cavell; Miette Hot Springs; Columbia ice-field; big game sanctuary. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, fishing.

2.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1938—continued.

Park.	Location.	Date Established.	Area.	Characteristics.
<b>Scenic Parks—con.</b>			sq. miles.	
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	220.00 (approx.)	Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls, trout fishing, camping, Government golf course.
St. Lawrence Islands.	In St. Lawrence river between Morrisburg and Kingston, Ontario.	1904	135.60 (acres)	Thirteen islands among the "Thousand Islands" in the St. Lawrence river. Recreational area, camping, fishing.
Pont Pelee.....	Southern Ontario, on lake Erie.	1918	6.04	Most southerly mainland point in Canada, 41° 54' N. Resting place of many migratory birds; unique flora. Recreational area, camping, bathing.
Georgian Bay Islands (including Flowerpot Island Reserve)	In Georgian bay, near Midland, Ontario.	1929	5.37	Thirty islands in Georgian Bay; Beausoleil, largest of the group, is a popular camping resort. Fine bathing beaches, beautiful groves of trees, varied bird and plant life. Flowerpot island, at head of Bruce peninsula, has interesting limestone formations and numerous caves.
Riding Mountain.....	Southwestern Manitoba, west of lake Winnipeg.	1929	1,148.04	Rolling woodland country in western Manitoba dotted with several beautiful lakes. Natural home of big game including one of the largest herds of wild elk in Canada. Summer resort, fine bathing and camping, Government golf course.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,869.00 (approx.)	Forest country of northwestern Canada, birch, spruce, jack pine, poplar; lakes and streams; moose, deer, bear, beaver, and interesting bird life. Excellent fishing—northern pike, pickerel, and lake trout; summer resort; sand beaches, camp grounds, Government golf course.
Cape Breton Highlands.	Northern part of Cape Breton island.	1936	390.00 (approx.)	Outstanding examples of rugged coast-line with mountain background. Magnificent views of Atlantic ocean and gulf of St. Lawrence. Deep-sea fishing; camping; Government golf course.
Area in Prince Edward Island.	North shore of Prince Edward island.	1936	7.00	Strip approximately twenty-five miles long on north shore. Some of finest bathing beaches in Eastern Canada. Government golf course.
National Parks Tar Sands Reservation, <sup>1</sup>	Alberta.....	1926	2,068.20 (acres)	Four areas comprising in all 2,068 acres in the Fort McMurray District, Alberta, have been reserved for the National Parks Branch to provide a supply of tar sands for road construction purposes in the National Parks.
<b>Animal Parks and Reserves.</b>				
Buffalo.....	Eastern Alberta, near Wainwright.	1908	187.50	Fenced enclosure; home of the Dominion Government buffalo herd. Over 3,000 buffalo, also moose, deer, elk, yak, and hybrids.
Elk Island.....	Central Alberta, near Lamont.	1911	51.20	Fenced enclosure, containing approximately 2,000 buffalo, also moose, elk, and deer; recreational area, camping, bathing. Government golf course.
Nemiskam.....	Southern Alberta, near Foremost.	1922	8.50	Fenced pronghorned antelope reserve, containing more than 300 head of this interesting animal, a species indigenous to the region.

<sup>1</sup> For footnote see end of table, p. 31.

2.—Details Regarding Locations, Dates Established, Areas, and Characteristics of the National Parks of Canada and Dominion Reserves, 1938—concluded.

Park.	Location.	Date Established.	Area.	Characteristics.
			sq. miles.	
<b>Animal Parks and Reserves—concl.</b>				
Wood Buffalo <sup>1</sup> .....	Partly in Alberta (13,675 sq. miles) and partly in Northwest Territories (3,625 sq. miles), west of Athabaska and Slave rivers.	1922	17,300.00 (approx.)	Forests interspersed with rivers and open plains. Dotted with innumerable lakes and streams. The home of the wood buffalo, moose, deer, caribou, bear, beaver; waterfowl abundant. Area as yet undeveloped.
<b>Historic Parks.</b>				
Fort Anne.....	Nova Scotia..... (Annapolis Royal)	1917	31.00 (acres)	Site of early Acadian settlement of Port Royal; museum containing interesting relics of early days and fine historical library.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	59.00 (acres)	Site of old French fort erected middle of 18th century. Renamed Fort Cumberland in 1755 by British; original name was later restored. Historical museum containing interesting exhibits.

<sup>1</sup> Reserved by Order in Council and became a Dominion reserve by agreement with the Government of Alberta in 1931. <sup>2</sup> Administered by the Bureau of Northwest Territories and Yukon Affairs of the Lands, Parks, and Forests Branch, Department of Mines and Resources.

**Provincial Parks.**—In addition to the national parks throughout Canada administered by the Dominion Government, most of the provinces also maintain provincial parks for the protection of wild life and as recreational areas. Among the largest of these are the Algonquin Park (2,740 square miles) in Ontario, and the Laurentides Park (3,565 square miles) in Quebec.

**Game and Scenery.**—The resources of Canada from the standpoints of the sportsman and tourist are both unique and varied. Owing to the growth of tourist travel and its demands (the statistics of the tourist trade are dealt with in Chapter XVI as a phase of External Trade), great areas of uninhabited land have become accessible, and hitherto almost unknown parts may now be reached and traversed with ease. In the wooded and unsettled areas of every province there are many moose, deer, bear, and smaller game, while in the western parts of the Dominion there are also wapiti, caribou, mountain sheep, mountain goat, grizzly bear, and lynx. Mountain lion, or cougar, are found in British Columbia and in the mountains of Alberta, while in the northwest and the far north there still exist herds of buffalo and musk-ox, which, however, are given absolute protection by the Dominion Government.

Ruffed and spruce grouse are found in the wooded areas of Canada from coast to coast. Prairie chicken and Hungarian partridge inhabit the open prairies and the partly timbered areas of the three mid-western provinces. Franklin grouse are native to the mountains of the west and the ptarmigan, an Arctic grouse, lives in the treeless northern plains and is also found in the high mountains of Alberta and British Columbia.

Canada is the natural habitat of many kinds of waterfowl and it is difficult to imagine any finer field for the shot-gun sportsman than is afforded by many of the myriad lakes which form so large a feature of Canadian scenery. This is particularly true of the three mid-western provinces, where the lakes are of the shallow, surface type that furnishes the most abundant feed for waterfowl.

The valleys of Nova Scotia and New Brunswick, the broken lake country of northern Quebec, Ontario, Manitoba, and Saskatchewan, as well as the mountain districts of British Columbia and Alberta, offer to the tourist, the hunter, and the fisherman new scenic effects and innumerable game preserves, and have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers which form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season. In both Dominion and provincial parks, while angling is permitted, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter, at proper seasons, a wealth of game species.

## **PART VII.—CLIMATE AND METEOROLOGY.**

### **Section 1.—The Climate of Canada.**

An article on this subject by Sir Frederick Stupart, at that time Director of the Dominion Meteorological Service, Toronto, appeared in the 1929 edition of the Year Book at pp. 42-51.

### **Section 2.—The Factors which Control Canadian Weather.**

Under the above heading, Sir Frederic Stupart, at that time Director of the Dominion Meteorological Service, Toronto, contributed an article which appeared at pp. 26-31 of the 1924 edition of the Year Book, also at pp. 36-40 of the 1925 edition.

### **Section 3.—The Distribution of Precipitation in Canada.**

An article on "The Distribution of Precipitation in Canada", contributed by A. J. Connor, Climatologist, Dominion Meteorological Office, Toronto, appeared at pp. 42-46 of the 1926 edition of the Year Book.

### **Section 4.—The Temperature and Precipitation of Northern Canada.**

An article on the climate of northern Canada, accompanied by meteorological tables showing the normal temperature and precipitation at selected northern stations, was contributed by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, to the 1930 edition of the Year Book, where it will be found at pp. 41-56.

### **Section 5.—The Meteorological Service of Canada.**

Under the above heading Sir Frederic Stupart contributed a short article descriptive of the growth and present activities of the Meteorological Service, to the 1922-23 edition of the Year Book (pp. 43-47); to it the interested reader is referred.

### **Section 6.—Meteorological Tables.**

An article accompanied by tables giving the times of sunrise and sunset for places in certain latitudes across Canada appeared at pp. 66-68 of the 1938 Year Book.

### **Section 7.—Droughts in Western Canada.**

An article on the above subject by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, accompanied by diagrams and tables showing the precipitation and sun-spot incidence in the Prairie Provinces, appeared at pp. 47-59 of the 1933 edition of the Year Book.

### **Section 8.—Standard Time and Time Zones in Canada.**

A summary, based on a paper "Standard Time and Time Zones in Canada", by C. C. Smith, Dominion Observatory, Ottawa, accompanied by a map diagram, appeared at pp. 50-53 of the 1934-35 edition of the Year Book.

## CHAPTER II.—HISTORY AND CHRONOLOGY.

### PART I.—HISTORY.

#### Section 1.—The Relationship of the Department of Public Archives to the Historical Records of Canada.\*

The Public Archives of Canada is a national institution. Created in 1872, it is directed by a Deputy Minister and attached to the Department of the Secretary of State. Its primary function is the custody and care of all inactive records of the Government that possess administrative value or historical interest. A secondary purpose is to gather public and private material relating to the history of the country in its broadest sense. Consequently, the objectives of the Archives are: first, to preserve such records and material for present and future generations; and secondly, to make them available to government officials, students of history, and general inquirers.

In the Archives are kept the commissions, proclamations, constitutions, acts, charters, and treaties in which are recorded and defined our national and provincial boundaries as well as our constitutional and political rights. There are deposited also numerous land grants, deeds, and surveys through which ownership is established on behalf of governments, institutions, and citizens. There too, in public or private records, will be found much information concerning public men as well as private persons. Thus in the Archives vital interests of the country, of institutions, and of individuals are preserved and safeguarded.

Unlike its European counterparts, the Canadian Archives has not limited itself to official records: it has also assembled all kinds of documentary material, manuscripts, maps, pictures, books, and historical articles, which are classified and grouped in their respective divisions.

The work of the Archives is at present organized under five divisions and an Administrative Section headed by the Dominion Archivist. These Divisions are: the Manuscript Division, the Map Division, the Print Division, the Library Division, and the Museum Division.

By its very nature, the Manuscript Division is that which essentially constitutes the Archives. It comprises, on the one hand, numerous and extensive series of official records of governments and, on the other, many collections of public and private papers. Together these embrace the basic material of the country's history. Constantly growing through transfers, donations, and purchases, the records include over thirty thousand large volumes and portfolios. It is inexpedient here to describe these series and collections, or even to enumerate them; it will suffice to indicate the main subject matters of their contents.

First, are to be found the instructions to and reports of those who discovered and explored our country; then follow the commissions and instructions which, under French rule, established the system of government and prescribed the duties of those who administered it. Next come the innumerable dispatches which passed between the Governors and the Intendants in Canada and the Ministers in France, dealing with every detail of the military, economic, and social life of the colony. To these must be added narratives of Indian and British wars leading up to the conquest of the country.

\* Contributed by Dr. Gustave Lanctot, LL.M., D.Litt., LL.D., K.C., F.R.S.C., Deputy Minister and Dominion Archivist.

Under British rule, documentary material begins with the correspondence between the Governors and the Ministers in London, in which can be traced the political evolution that brought us from the position of a colony to the status of a Dominion. There also are contained the records of our economic progress in terms of population, business, fur trade, fisheries, agriculture, industry, transport and means of communication, handicrafts, etc. These collections also comprise material relating to religious and educational matters, and to Indian missions, as well as information concerning public works, social assistance, hospitals, alms-houses, immigrants, etc. Thus from the countless papers of the Manuscript Division the story of the political, economic, military, religious, and social life of our country can be reconstructed.

The Map Division of the Archives contains more than twenty thousand maps, charts, plans, and drawings. In addition to their historical value maps are required to visualize a country, to show the adaptation of a human group to its habitat, and to interpret the economic, military, and social evolution of a people. The oldest American map goes back to the year 1500 and was made by Juan de la Cosa eight years after the discovery of the New World. Together with geographical maps can also be seen military, naval, geological, and demographic maps and charts, as well as plans and drawings of public buildings and military works. No end of information can be gathered from the proper reading of such valuable material.

As more and more interest is being attached in historical writing to contemporary representation of the men and scenes of the past, the Print Division of the Archives aims at bringing together iconographic records relating to Canada, past and present. It includes engravings, paintings, aquarelles, lithographs, drawings, photographs, and sculpture. It is rich in portraits, and still more so in representations of scenes, buildings, costumes, and sites. About forty-eight thousand pictures have now been catalogued. With the object of assisting in the teaching of Canadian history, a collection of lantern-slides has been formed and is available for loan to responsible teachers and lecturers in Canada.

The Library Division has a no less useful part in the service rendered by the Archives. So close to the Library of Parliament, it aims merely at assembling works, chiefly documentary, such as are indispensable to the study of Canadian history. Its purpose is to provide members of the staff, historians, students, and other inquirers with a good reference library of historical compilation and literature that may supply them with the required information, and facilitate the making of researches. The library now contains more than forty thousand volumes. The pamphlet section of approximately eleven thousand volumes, with its four thousand items printed between 1600 and 1867, merits special attention. Mention should be made of the Library's collection of old Canadian newspapers, including the *Gazette of Quebec*, which first appeared in 1764.

The Museum Division completes, so to speak, the part which the Archives plays in preserving such materials as are available for reconstructing the past. It contains all manner of objects possessing historic interest, such as flags, furniture, uniforms, medals, arms, coins, personal articles, etc., in exhibition rooms open to visitors.

To make its contents known to the public, the Department has issued since 1872 annual reports containing lists of the material acquired during the year, as well as inventories with indexes of the principal collections. Finally, the Archives has published several volumes of documents relating to the constitution, to discoveries and economics, and certain guides and catalogues of the divisions.

The Archives places all its material at the service of the public. Anyone may present himself, and be admitted to consult the documents in the Students' Room specially appointed for this purpose. The help and experience of the staff may also be obtained by inquirers in their research work. For those who cannot make the journey to Ottawa, there remains the easy method of correspondence, as the Department will provide, when practicable, the desired information.

### Section 2.—Outlines of Canadian History.

The late Sir Arthur Doughty prepared an outline of the history of Canada which appeared in the 1913 Year Book, pp. 1-29, and in somewhat abridged form in the 1922-23 Year Book, pp. 60-80.

A special article "Canada on Vimy Ridge", prepared by Colonel A. Fortescue Duguid, D.S.O., B.Sc., R.C.A., Director of the Historical Section, Department of National Defence, was published at pp. 50-60 of the Canada Year Book, 1936.

A special article "Historic Sites and Monuments in Canada" was published at pp. 78-90 of the 1938 edition of the Year Book.

### Section 3.—A Bibliography of Canadian History.\*

A select bibliography of historical works relating to Canada was contributed to the 1925 edition of the Year Book by the late Adam Shortt. The following, although still purposely short, is a more extended and eclectic bibliography compiled for the benefit of the general reader and restricted to authoritative books on general topics.

## PART II.—CHRONOLOGY, 1497 to 1939.

1497. June 24, Eastern coast of North America discovered by John Cabot.
1498. Cabot discovered Hudson strait.
1501. Gaspar Corte Real visited Newfoundland and Labrador.
1524. Verrazano explored the coast of Nova Scotia.
1534. July 24, Jacques Cartier, on his first voyage, erected a cross at Gaspe, claiming the land for the King of France.
1535. Cartier's second voyage. He ascended the St. Lawrence to Stadacona (Quebec), (Sept. 14), and Hocheiaga (Montreal), (Oct. 2).
1541. Cartier's third voyage. He planted wheat, cabbages, turnips, and lettuces near Cap Rouge river.
- 1542-3. De Roberval and his party wintered at cape Rouge, and were rescued by Cartier on his fourth voyage.
1557. Sept. 1, Death of Cartier at St. Malo, France.
1592. Straits of Juan de Fuca discovered by de Fuca.
1603. June 22, Champlain's first landing in Canada, at Quebec.
1604. De Monts settled colony on island in the St. Croix river.
1605. Founding of Port Royal (Annapolis, N.S.).
1608. Champlain's second visit. July 3, Founding of Quebec.
1609. July, Champlain discovered lake Champlain.
- 1610-11. Hudson explored Hudson bay and James bay.
1611. Brûlé ascended the Ottawa river.
1612. Oct. 15. Champlain made Lieutenant-General of New France.
1613. June, Champlain ascended the Ottawa.
1615. Champlain explored lakes Nipissing, Huron, and Ontario (discovered by Brûlé and Le Caron).
1616. First schools opened at Tadoussac and on the site of the city of Three Rivers.
1617. Arrival at Quebec of the first colonist, Louis Hebert and his family.
1620. Population of New France, 60 persons.
1621. Code of laws issued and register of births, deaths, and marriages opened in Quebec. Nova Scotia granted to Sir William Alexander by King James I.
1622. Lake Superior discovered by Brûlé.
1623. First British settlement of Nova Scotia.
1627. New France and Acadia granted to the Company of 100 Associates.
1628. Port Royal taken by Sir David Kirke.
1629. April 24, Treaty of Susa between France and England. July 20, Quebec taken by Sir David Kirke.
1632. Mar. 29, Canada and Acadia restored to France by the Treaty of St. Germain-en-Laye.
1633. May 23, Champlain made first Governor of New France.
1634. July 4, Founding of Three Rivers.
- 1634-35. Exploration of the Great Lakes by Nicolet.
1635. Dec. 25, Death of Champlain at Quebec. Founding of the first college at Quebec.

1638. June 11, First recorded earthquake in Canada.
1640. Discovery of lake Erie by Chaumonot and Brébeuf.
1641. Resident population of New France, 240.
1642. May 17, Founding of Ville-Marie (Montreal), by Maisonneuve.
1646. Exploration of the Saguenay by Dablon.
1647. Lake St. John discovered by de Quen.
1648. Mar. 5, Council of New France created.
1649. Mar. 16-17, Murder of Fathers Brébeuf and Lalemant by Indians and massacre of the Hurons.
1650. Population of New France, 675.
1654. August, Acadia taken by an expedition from New England.
1656. Acadia granted by Cromwell to La Tour, Temple, and Crowne.
1659. June 16, François de Laval arrived in Canada as Vicar-Apostolic.
1660. May 21, Dollard des Ormeaux and sixteen companions killed by Iroquois at the Long Sault, Ottawa river.
1663. Company of 100 Associates dissolved. Feb. 5, severe earthquake. April, Sovereign Council of New France established. Population of New France, 2,500, of whom 800 were in Quebec. Foundation of the "Grand Seminary" at Quebec, by Laval.
1664. May, Company of the West Indies founded.
1665. Mar. 23, Talon appointed Intendant.
1666. Feb.-Mar., First census; population of New France, 3,215.
1667. July 21, Acadia restored to France by the Treaty of Breda. Sept.-Oct., Second census; white population of New France, 3,918.
1668. Foundation of the "Little Seminary" at Quebec by Laval. Mission at Sault Ste. Marie founded by Marquette.
1670. May 2, Charter of the Hudson's Bay Company granted.
1671. Population of Acadia, 392.
1672. Population of New France, 6,705. April 6, Comte de Frontenac, Governor.
1673. June 13, Catarauqui (Kingston) founded.
1674. Oct. 1, Laval became first Bishop of Quebec.
1675. Population of New France, 7,832.
1678. Niagara falls visited by Hennepin.
1679. Ship *Le Griffon* built on Niagara river above the falls by La Salle. Third census; population of New France, 9,400; of Acadia, 515.
1681. Fourth census; population of New France, 9,677.
1682. Frontenac recalled.
1683. White population of New France, 10,274; settled Indians, 1,512.
1685. First issue of card money. Fifth census; population of New France, 12,515, including 1,538 settled Indians.
1686. Population of New France, 12,566, including 1,436 settled Indians; of Acadia, 894.
1687. Mar. 18, La Salle assassinated.
1688. Sixth census; population of New France, 11,782, including 1,259 settled Indians.
1689. June 7, Frontenac reappointed Governor. Aug. 5, Massacre of whites by Indians at Lachine.
1690. May 21, Sir William Phips captured Port Royal, but was repulsed in an attack on Quebec (Oct. 16-21).
1692. Seventh census; population of New France, 12,431. Oct. 22, Defence of Verchères against Indians by Madeleine de Verchères.
1693. Population of Acadia, 1,018.
1695. Eighth census; population of New France, 13,639, including 853 settled Indians.
1697. Sept. 20, By the treaty of Ryswick, places taken during the war were mutually restored. D'Iberville defeated the Hudson's Bay Co.'s ships on Hudson bay.
1698. Nov. 28, Death of Frontenac. Ninth census; population of New France, 15,361.
1701. La Motte Cadillac built a fort at Detroit.
1703. June 16, Sovereign Council of Canada became Superior Council and membership increased from 7 to 12.
1706. Tenth census; population of New France, 16,745.
1708. Death of Laval.
1709. British invasion of Canada.
1710. Oct. 13, Port Royal taken by Nicholson.
1711. Sept. 1, Part of Sir H. Walker's fleet, proceeding against Quebec, wrecked off the Seven Islands.
1713. April 11, Treaty of Utrecht; Hudson Bay, Acadia, and Newfoundland ceded to Great Britain. August, Louisbourg founded by the French. Population of New France, 18,469.
1718. Foundation of New Orleans in carrying out French plan to control the Mississippi as well as the St. Lawrence.
1719. Census population of New France, 22,503.
1720. Population of New France, 24,594; of Ile St. Jean (P.E.I.), about 100. April 25, Governor and Council of Nova Scotia appointed.
1721. June 19, Burning of about one-half of Montreal. Census population of New France, 25,923.
1727. Population of New France, 31,184.
1728. Population of Ile St. Jean (P.E.I.), 336.
1731. Population of the north of the peninsula of Acadia, 6,000.
1733. Discovery of lake Winnipeg by La Vérendrye.
1734. Road opened from Quebec to Montreal. Census population of New France, 37,716.

1737. Iron smelted on St. Maurice. French population of the north of the Acadia peninsula, 6,958.
1739. Census population of New France, 43,362.
1743. The younger La Vérendrye discovered the Rocky mountains.
1745. June 17, Taking of Louisbourg by Pepperell and Warren.
1748. Oct. 18, Treaty of Aix-la-Chapelle. Louisbourg restored to France in exchange for Madras.
1749. June 21, Founding of Halifax—British immigrants brought to Nova Scotia by Governor Cornwallis, 2,544 persons. Fort Rouillé (Toronto) built.
1750. St. Paul's Church, Halifax (oldest Anglican church in Canada), built.
1752. Mar. 25, Issue of the Halifax *Gazette*, first newspaper in Canada. British and German population of Nova Scotia, 4,203.
1754. Census population of New France, 55,009.
1755. Establishment at Halifax of first post office in what is now Canada, together with direct mail communication with Great Britain. June 16, Surrender of Fort Beauséjour on the isthmus of Chignecto to the British. Sept. 10, Expulsion of the Acadians from Nova Scotia.
1756. Seven Years' War between Great Britain and France began.
1758. July 26, Final capture of Louisbourg by the British. Oct. 7, First meeting of the Legislature of Nova Scotia.
1759. July 25, Taking of Fort Niagara by the British. July 26, Beginning of the siege of Quebec. July 31, French victory at Beauport Flats. Sept. 13, Defeat of the French on the Plains of Abraham. Death of Wolfe. Sept. 14, Death of Montcalm. Sept. 18, Surrender of Quebec.
1760. April 28, Victory of the French under Lévis at Ste. Foy. Sept. 8, Surrender of Montreal. Military rule set up in Canada.
1762. British population of Nova Scotia, 8,104. First British settlement in New Brunswick.
1763. Feb. 10, Treaty of Paris, by which Canada and its dependencies were ceded to the British. May, Rising of Indians under Pontiac, who took a number of forts and defeated the British at Bloody Run (July 31). Oct. 7, Civil government proclaimed. Cape Breton and Ile St. Jean annexed to Nova Scotia; Labrador, Anticosti, and Magdalen islands to Newfoundland. Nov. 21, General James Murray appointed Governor-in-Chief. Canadian post offices established at Montreal, Three Rivers, and Quebec.
1764. June 21, First issue of the Quebec *Gazette*. Aug. 13, Civil government established.
1765. Publication of the first book printed in Canada, "Catéchisme du Diocèse de Sens". May 18, Montreal nearly destroyed by fire. Population of Canada, 69,810.
1766. July 24, Peace made with Pontiac at Oswego.
1768. Charlottetown, Ile St. Jean (P.E.I.), founded. April 11, Great fire at Montreal. April 12, Sir Guy Carleton (Lord Dorchester) Governor-in-Chief.
1769. Ile St. Jean (P.E.I.) separated from Nova Scotia.
- 1770-72. Hearne's journey to the Coppermine and Slave rivers and Great Slave lake.

Sept. 21, Great Britain suspended specie payments, following which Canada restricted the export of gold. Nov. 21, Abnormal Importations Act, extending preference to Empire products, assented to in the United Kingdom. Dec. 12, Statute of Westminster establishing complete legislative equality of the Parliament of Canada with that of the United Kingdom became effective.
1932. July 21-Aug. 20, Imperial Economic Conference at Ottawa. Aug. 6, Official opening of the Welland Ship Canal.
1933. Jan. 17-19, Dominion-Provincial Conference. May 18, Celebration of the 150th anniversary of the landing of the Loyalists at Saint John.
1934. August, Celebration at Gaspé of the 400th anniversary of the first landing of Jacques Cartier.

NOTE.—For references regarding Dominion Government changes, and Provincial Government changes prior to 1937, see Note on p. 45.

1935. Mar. 11, Bank of Canada commenced business. May 6, Celebrations throughout the Empire of the 25th anniversary of the accession of King George V to the Throne. Sept. 15, Conference of British Commonwealth Statisticians met in Ottawa. Dec. 9, Dominion-Provincial Conference met in Ottawa; Naval Limitation Conference met in London.
1936. Jan. 20, Death of H.M. King George V and accession of H.M. King Edward VIII. Mar. 8, German forces reoccupied the Rhineland in defiance of the Treaty of Versailles. June 1, Quinquennial Census of the Prairie Provinces taken. July 1-Sept. 7, Celebration in Vancouver of the Golden Jubilee of that city and of the C.P.R. July 26, Unveiling of Vimy Memorial in France by H.M. King Edward VIII. Dec. 11, Abdication of H.M. King Edward VIII and accession of H.M. King George VI.
1937. Jan. 1, Belgium represented in Canada by a Minister Plenipotentiary. Mar. 30, The Governor General and Lady Tweedsmuir visited the White House at Washington to return the official visit made by President Roosevelt at Quebec on July 30, 1936. May 12, Coronation of H.M. King George VI. July 8, Imperial Airways flying boat *Caledonia* arrived at Montreal from Southampton, inaugurating the experimental phase of the Transatlantic Airways. Aug. 17, Dominion Government disallowed three Alberta statutes on the ground of invasion of the legislative field assigned to the Dominion Parliament. Nov. 29, Rowell Commission on Constitutional Relations opened sittings at Winnipeg.
1938. Mar. 4, Unanimous judgments of the Supreme Court of Canada on the Alberta constitutional references made in favour of the Dominion Government regarding each of the questions submitted: powers of the Governor General in Council to disallow provincial legislation, and powers of the Lieutenant-Governor to reserve provincial legislation for the signification of the pleasure of the Governor General, were found to be valid and unrestricted; the press, credit regulation, and banking taxation measures were found unconstitutional. The Court also held the Social Credit Act unconstitutional, although this was not a subject of specific reference. June 9, Provincial general election in Saskatchewan. Liberal government of Hon. W. J. Patterson returned to power. June 15, Disallowance of Alberta Home Owners' Security Act and Securities Tax Act. July 7, Privy Council declined to rule on Alberta Acts for control of the Press and regulation of credit. July 15, Privy Council dismissed Alberta's appeal from judgment of Supreme Court of Canada on legislation to tax chartered banks. Aug. 15, Bank of Canada became a wholly government-owned institution. Sept. 2, British High Commissioner announced conclusion of arrangement between British Government and Canadian companies for construction of aeroplanes in Canada. Sept. 12, Herr Hitler's speech at Nuremberg followed by clashes on the Czechoslovak border, developing into an international crisis. Convention between Canada and United States placed control of waters in Rainy Lake watershed under International Joint Commission. Sept. 15, Meeting of Mr. Chamberlain and Herr Hitler at Berchtesgaden. Sept. 19, Royal Commission of inquiry into circumstances surrounding the letting of a contract for the manufacture of Bren machine guns opened at Ottawa, with Mr. Justice H. H. Davis as Commissioner. Sept. 22-23, Meeting of Mr. Chamberlain and Herr Hitler at Godesberg. Sept. 28, Mobilization of British fleet. Intervention by Signor Mussolini, and agreement by Germany to conference of United Kingdom, France, Germany, and Italy. Sept. 30, Crisis terminated following four-power conference at Munich. Oct. 11, Serious forest fires in Fort Frances area. Oct. 17, Inauguration of express service on Trans-Canada Air Lines. Nov. 4, Written Judgment of Privy Council stating reasons for rejection of appeal in Alberta Bank Tax Act. Nov. 17, Trade Agreement between Canada and United States signed at Washington.
1939. Jan. 13, Report of the Royal Commission of Inquiry into the Bren gun contract tabled in the House of Commons. Mar. 1, Opening of Trans-Canada air-mail service. Mar. 27, Dominion Government disallowed Alberta Government's legislation concerning Limitation of Actions Act of 1935, designed to outlaw certain debts contracted prior to July 1, 1936. Mar. 31, The Prime Minister of the United Kingdom announced arrangements for a treaty guaranteeing armed support to Poland in defence of its independence.

NOTE.—For references regarding Dominion Government changes and Provincial Government changes prior to 1937, see Note on p. 45.

## CHAPTER III.—CONSTITUTION AND GOVERNMENT.

The Government of the Dominion of Canada was established under the provisions of the British North America Act of 1867. This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this chapter describe in some detail the institutions and processes by which Canada is governed.

The several stages in the development of its status as a Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held in London in 1926, which defined the group of self-governing communities consisting of Great Britain and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making powers, and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of the Dominion of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931 which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

### PART I.—CONSTITUTION AND GENERAL GOVERNMENT.

Under the above heading a brief historical and descriptive account of the evolution of the general government of Canada was given on pp. 89-100 of the Canada Year Book, 1922-23.

### PART II.—PROVINCIAL AND LOCAL GOVERNMENT.

Under the heading "Provincial and Local Government in Canada", a brief account of the government of each of the provinces of Canada and of its municipal institutions and judicial organization was published on pp. 101-115 of the 1922-23 edition of the Year Book. The 1938 edition of the Year Book included at pp. 92-93 an article entitled "The Government of Canada's Arctic Territory".

### PART III.—LEGISLATIVE AND EXECUTIVE AUTHORITIES.

#### Section 1.—Dominion Parliament and Ministry.

The Dominion Parliament is composed of the King, represented by the Governor General, the Senate, and the House of Commons. The Governor General is appointed by the King on the advice of the Government of Canada. Members of the Senate

are appointed for life by the Governor General in Council and members of the House of Commons are elected by the people. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

In Subsections 3 and 4, pp. 55-65, a brief résumé of the history of parliamentary representation will be found. Attention may be drawn to the growth in the number of members of both the Senate and the House of Commons since Confederation and to the greatly increased unit of representation in the Lower House.

### Subsection 1.—The Governor General of Canada.

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at £10,000 sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues, and dissolves Parliament, and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication between His Majesty's Government in Canada and His Majesty's Government in Great Britain has been instituted.

A list of the Governors General from the time of Confederation, with the dates of their appointment and assumption of office, is given in Table 1.

1.—Governors General of Canada, 1867-1939.

Name.	Date of Appointment.	Date of Assumption of Office.
Viscount Monck, G.C.M.G.	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.	Oct. 5, 1878	Nov. 25, 1878
The Marquis of Lansdowne, G.C.M.G.	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.	July 30, 1898	Nov. 12, 1898
Earl Grey, G.C.M.G.	Sept. 26, 1904	Dec. 10, 1904
Field Marshall H.R.H. the Duke of Connaught, K.G.	Mar. 21, 1911	Oct. 13, 1911
The Duke of Devonshire, K.G., G.C.M.G., G.C.V.O.	Aug. 19, 1916	Nov. 11, 1916
General the Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Rattou, G.C.S.I., G.C.I.E., G.B.E.	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough, G.C.M.G.	Feb. 9, 1931	April 4, 1931
Lord Tweedmuir of Elsfield, G.C.M.G., C.H.	Aug. 10, 1935	Nov. 2, 1935

### Subsection 2.—The Ministry.

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representa-

tives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

The Prime Ministers since Confederation and the dates of their tenures of office, together with the members of the Sixteenth Ministry, are given in Table 2. The complete list of the members of the King's Privy Council for Canada, as at Mar. 15, 1939, is added as Table 3.

## 2.—Ministries since Confederation and Members of the Sixteenth Ministry.

**NOTE.**—A complete list of the members of Dominion Ministries from Confederation to 1913 appeared in the Year Book of 1912, pp. 422-429. A list of the members of Dominion Ministries from 1911 to 1921 appeared in the Year Book of 1920, pp. 651-653. A list of the members of the Twelfth and Thirteenth Ministries appeared on pp. 78-77 of the 1927-28 Year Book. Members of the Fourteenth Ministry are listed at p. 69 of the 1930 Year Book and members of the Fifteenth Ministry on p. 67 of the 1934-35 Year Book.

1. Rt. Hon. Sir John A. Macdonald, Prime Minister. From July 1, 1867, to Nov. 6, 1873.
2. Hon. Alexander Mackenzie, Prime Minister. From Nov. 7, 1873, to Oct. 16, 1878.
3. Rt. Hon. Sir John A. Macdonald, Prime Minister. From Oct. 17, 1878, to June 6, 1891.
4. Hon. Sir John J. C. Abbott, Prime Minister. From June 16, 1891, to Dec. 5, 1892.
5. Hon. Sir John S. D. Thompson, Prime Minister. From Dec. 5, 1892, to Dec. 12, 1894.
6. Hon. Sir Mackenzie Bowell, Prime Minister. From Dec. 21, 1894, to April 27, 1896.
7. Hon. Sir Charles Tupper, Prime Minister. From May 1, 1896, to July 8, 1896.
8. Rt. Hon. Sir Wilfrid Laurier, Prime Minister. From July 11, 1896, to Oct. 6, 1911.
9. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Conservative Administration.) From Oct. 10, 1911, to Oct. 12, 1917.
10. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Unionist Administration.) From Oct. 12, 1917, to July 10, 1920.
11. Rt. Hon. Arthur Meighen, Prime Minister. (Unionist—"National Liberal and Conservative Party") From July 10, 1920, to Dec. 29, 1921.
12. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Dec. 29, 1921, to June 28, 1926.
13. Rt. Hon. Arthur Meighen, Prime Minister. From June 29, 1926, to Sept. 25, 1926.
14. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Sept. 25, 1926, to Aug. 6, 1930.
15. Rt. Hon. Richard Bedford Bennett, Prime Minister. From Aug. 7, 1930, to Oct. 23, 1935.
16. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Oct. 23, 1935.

### SIXTEENTH DOMINION MINISTRY.

(According to precedence of the Ministers as at the formation of the Cabinet.)

Office.	Occupant.	Date of Appointment.
Prime Minister, President of the Privy Council, Secretary of State for External Affairs.....	Right Hon. W. L. Mackenzie King, C.M.G.....	Oct. 23, 1935
Member of the Administration and Minister without portfolio.....	Hon. Raoul Dandurand, K.C....	Oct. 23, 1935
Minister of Mines and Resources <sup>1</sup> .....	Hon. Thomas Alexander Crerar	Oct. 23, 1935
Minister of Justice and Attorney General of Canada.....	Right Hon. Ernest Lapointe, K.C.....	Oct. 23, 1935
Minister of Public Works.....	Hon. Pierre Joseph Arthur Cardin, K.C.....	Oct. 23, 1935
Minister of Finance.....	Hon. Charles Avery Dunning...	Oct. 23, 1935
Postmaster General.....	Hon. Norman Alexander McLarty.....	Jan. 23, 1939
Minister of Trade and Commerce.....	Hon. William Daum Euler.....	Oct. 23, 1935
Secretary of State of Canada.....	Hon. Fernand Rinfret.....	Oct. 23, 1935
Minister of National Defence.....	Hon. Ian Alistair Mackenzie...	Oct. 23, 1935
Minister of Pensions and National Health.....	Hon. Charles Gavan Power, M.C., K.C.....	Oct. 23, 1935
Minister of National Revenue.....	Hon. James Lorimer Halsey, K.C.	Oct. 23, 1935
Minister of Fisheries.....	Hon. Joseph Enoil Michaud, K.C.	Oct. 23, 1935
Minister of Labour.....	Hon. Norman McLeod Rogers...	Oct. 23, 1935
Minister of Transport <sup>2</sup> .....	Hon. Clarence Decatur Howe...	Oct. 23, 1935
Minister of Agriculture.....	Hon. James Garfield Gardiner...	Oct. 23, 1935
Minister without portfolio.....	Hon. James Angus MacKinnon...	Jan. 23, 1939

<sup>1</sup> The Departments of Mines, Interior, Immigration and Colonization, and Indian Affairs were organized into the new Department of Mines and Resources on Dec. 1, 1936.

<sup>2</sup> The Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence were organized into the new Department of Transport on Nov. 2, 1936.

### 3.—Members of the King's Privy Council for the Dominion of Canada, According to Seniority Therein,<sup>1</sup> as at Mar. 15, 1933.

NOTE.—In this list the prefix Rt. Hon. indicates membership in the British Privy Council. Besides those mentioned in this list, the Rt. Hon. Sir Lyman P. Duff, G.C.M.G., Chief Justice of the Supreme Court, is a Canadian member of the British Privy Council.

Name.	Date When Sworn In.	Name.	Date When Sworn In.
The Rt. Hon. Sir William Mulock	July 12, 1896	The Hon. Charles A. Dunning <sup>2</sup>	Mar. 1, 1926
The Rt. Hon. Sir Charles Fitzpatrick <sup>3</sup>	Feb. 11, 1902	The Hon. John C. Elliott <sup>3</sup>	Mar. 8, 1926
The Hon. Sir A. B. Aylesworth	Oct. 16, 1905	The Hon. George Burpee Jones	July 13, 1926
The Rt. Hon. George P. Graham	Aug. 30, 1907	The Hon. Donald Sutherland	July 13, 1926
The Hon. R. Dandurand <sup>4</sup>	Jan. 20, 1909	The Hon. Raymond Ducharme Morand	July 13, 1926
The Rt. Hon. W. L. Mackenzie King <sup>5</sup>	June 2, 1909	The Hon. John Alexander Macdonald	July 13, 1926
The Rt. Hon. Sir Thomas White	Oct. 10, 1911	The Hon. Eugène Paquet	Aug. 23, 1926
The Hon. Wilfrid Bruno Nantel	Oct. 10, 1911	The Hon. Guillaume André Fauteux	Aug. 23, 1926
The Hon. Pierre Edouard Blondin	Oct. 20, 1914	The Hon. Lucien Cannon	Sept. 25, 1926
The Rt. Hon. Arthur Meighen	Oct. 2, 1915	The Hon. William D. Euler <sup>3</sup>	Sept. 25, 1926
The Hon. Esioff Léon Patenaude	Oct. 6, 1915	The Hon. Fernand Rinfret <sup>3</sup>	Sept. 25, 1926
The Rt. Hon. William Morris Hughes	Feb. 18, 1916	The Hon. Peter Heenan	Sept. 25, 1926
The Hon. Albert Sévigny	Jan. 8, 1917	The Hon. James Layton Ralston	Oct. 8, 1926
The Hon. Charles Colquhoun Ballantyne	Oct. 3, 1917	H. R. H. The Duke of Windsor	Aug. 2, 1927
The Hon. James Alexander Calder	Oct. 12, 1917	The Rt. Hon. Earl Baldwin of Bewley	Aug. 2, 1927
The Hon. Newton Wesley Rowell	Oct. 12, 1917	The Hon. William Frederick Kay	June 17, 1930
The Hon. Sydney Chilton Mewburn	Oct. 12, 1917	The Hon. Cyrus Macmillan	June 17, 1930
The Hon. Thomas Alexander Cramer <sup>3</sup>	Oct. 12, 1917	The Hon. Ian Alistair Mackenzie <sup>3</sup>	June 27, 1930
The Hon. Alexander K. Maclean	Oct. 23, 1917	The Hon. Arthur C. Hardy	July 31, 1930
The Hon. Hugh Guthrie	July 5, 1919	The Hon. Arthur Sauvé	Aug. 7, 1930
The Hon. Sir Henry Lumley Drayton	Aug. 2, 1919	The Hon. Murray MacLaren	Aug. 7, 1930
The Hon. Fleming Blanchard McCurdy	July 13, 1920	The Hon. Hugh Alexander Stewart	Aug. 7, 1930
The Hon. Rupert W. Wignmore	July 13, 1920	The Hon. Charles Haslit Cahon	Aug. 7, 1930
The Hon. Edgar N. Rhodes	Feb. 22, 1921	The Hon. Donald Matheson Sutherland	Aug. 7, 1930
The Hon. John Babbington Macaulay Baxter	Sept. 21, 1921	The Hon. Alfred Duranleau	Aug. 7, 1930
The Hon. Henry Herbert Stevens	Sept. 21, 1921	The Hon. Thomas Gerow Murphy	Aug. 7, 1930
The Hon. Robert James Manion <sup>4</sup>	Sept. 22, 1921	The Hon. Maurice Dupré	Aug. 7, 1930
The Hon. James Robert Wilson	Sept. 26, 1921	The Hon. Wesley Ashton Gordon	Aug. 7, 1930
The Rt. Hon. Richard Bedford Bennett	Oct. 4, 1921	The Hon. G. Howard Ferguson	Jan. 14, 1931
The Rt. Hon. Ernest Lapointe <sup>2</sup>	Dec. 29, 1921	The Hon. W. D. Herridge	June 17, 1931
The Hon. Arthur Bliss Copp	Dec. 29, 1921	The Hon. Robert Charles Matthews	Dec. 6, 1933
The Hon. Charles Stewart	Dec. 29, 1921	The Hon. Richard Burpee Hanson	Nov. 17, 1934
The Hon. William Richard Motherwell	Dec. 29, 1921	The Hon. Grote Stirling	Nov. 17, 1934
The Hon. James Murdoch	Dec. 29, 1921	The Hon. George Reginald Geary	Aug. 14, 1935
The Hon. John Ewan Sinclair	Dec. 30, 1921	The Hon. William Gordon Ernst	Aug. 14, 1935
The Hon. James H. King	Feb. 3, 1922	The Hon. James Earl Lawson	Aug. 14, 1935
The Hon. Edward Mortimer Macdonald	April 12, 1923	The Hon. Samuel Gobeil	Aug. 14, 1935
The Hon. Edward James McMurray	Nov. 14, 1923	The Hon. Lucien Henri Gendron	Aug. 30, 1935
The Hon. Pierre Joseph Arthur Cardin <sup>4</sup>	Jan. 30, 1924	The Hon. William Earl Rowe	Aug. 30, 1935
The Hon. George Newcombe Gordon	Sept. 7, 1925	The Hon. Onésime Gagnon	Aug. 30, 1935
The Hon. Sir Herbert Marlars <sup>4</sup>	Sept. 9, 1925	The Hon. Charles Gavan Power <sup>3</sup>	Oct. 23, 1935
The Hon. Charles Vincent Massey <sup>1</sup>	Sept. 16, 1925	The Hon. James Lorimer Ilsley <sup>3</sup>	Oct. 23, 1935
The Hon. Walter Edward Foeter	Sept. 26, 1925	The Hon. Joseph Enoil Michaud <sup>4</sup>	Oct. 23, 1935
The Hon. Philippe Roy	Feb. 9, 1926	The Hon. Norman McLeod Rogers <sup>3</sup>	Oct. 23, 1935
		The Hon. Clarence Decatur Howe <sup>3</sup>	Oct. 23, 1935
		The Hon. James Garfield Gardiner <sup>3</sup>	Nov. 4, 1935
		The Hon. Norman Alexander McLarty <sup>2</sup>	Jan. 23, 1939
		The Hon. James Angus MacKinnon <sup>3</sup>	Jan. 23, 1939

<sup>1</sup> As in the case of Privy Councillors of the United Kingdom, members of His Majesty's Privy Council for Canada take rank *inter se* according to the dates of their being sworn in. <sup>2</sup> Ranks as retired Chief Justice of Canada. <sup>3</sup> Ranks as a member of the Cabinet. <sup>4</sup> Ranks as the Prime Minister of Canada. <sup>5</sup> Ranks as the Leader of the Opposition. <sup>6</sup> Canadian Ministers abroad. <sup>7</sup> High Commissioner in Great Britain.

In Table 4 are given the dates of the opening and prorogation of the sessions of the various Dominion Parliaments from 1867 to 1939.

4.—Duration and Sessions of Dominion Parliaments, 1867-1939.

Order of Parliament.	Session.	Date of Opening.	Date of Prorogation.	Days of Session.	Date of Election, Writes Returnable, Dissolution and Length of Parliament. <sup>1</sup>
1st Parliament.....	1st	Nov. 1, 1867	May 22, 1868	18 <sup>2</sup>	Aug., Sept., 1867. <sup>3</sup> Sept. 24, 1867. <sup>4</sup> July 8, 1872. <sup>5</sup> 4 y., 9 m., 15 d. <sup>6</sup>
	2nd	April 15, 1869	June 22, 1869	69

## Subsection 3.—The Senate.

The British North America Act, 1867, provides in Sections 21 and 22 that "the Senate shall consist of seventy-two members, who shall be styled Senators." In relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions—(1) Ontario; (2) Quebec; (3) The Maritime Provinces—Nova Scotia, and New Brunswick; which three divisions shall be equally represented in the Senate as follows: Ontario by twenty-four senators; Quebec by twenty-four senators; and the Maritime Provinces by twenty-four senators, twelve thereof representing New Brunswick and twelve thereof representing Nova Scotia. In the case of Quebec, each of the twenty-four senators representing the province shall be appointed for one of the electoral divisions of Lower Canada, specified in Schedule A to Chapter I of the Consolidated Statutes of Canada. Further, under Sec. 147 of the same Act, it is provided that "in the case of the admission to Confederation of Newfoundland or Prince Edward Island, . . . each shall be entitled to a representation in the Senate of four members. Prince Edward Island, when admitted, shall be deemed to be comprised in the third of the three divisions into which Canada is divided by this Act" and on its admission "the representation of Nova Scotia and New Brunswick shall, as vacancies occur, be reduced from twelve to ten members, respectively". In case of the admission of Newfoundland, the normal membership of the Senate of 72 members was to be increased to 76, while the maximum number of 78 (Sec. 28) was to be 82, Sec. 26 containing a provision for the appointment of three or six additional members in certain cases, to represent equally the three divisions of Canada.

\* A senator's sessional indemnity is \$4,000.

By 33 Vict., c. 3, an Act to establish and provide for the government of the province of Manitoba, passed in 1870, the newly formed province was given representation of two members in the Senate, provision being made at the same time for increases in representation to three and four on increases of population, according to the decennial census, to 50,000 and 75,000, respectively. In the following year, British Columbia, on being admitted to the Union by an Imperial Order in Council of May 16, 1871, was given representation by three senators. Two years later, when Prince Edward Island was admitted to Confederation by an Imperial Order in Council of June 26, 1873, it was granted representation in the Senate of four members under the terms of the British North America Act, as cited above. Thus, in 1873, the seven provinces—Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia, and Prince Edward Island—were represented by a total of 77 members in the Senate, their individual representation at the time being 24, 24, 10, 10, 2, 3, and 4 members, respectively.

In 1882, following the Census of 1881 and an increase of population in Manitoba to 62,260 persons, the representation of this province was increased to three members under authority of the Manitoba Act, 1870. Later, by 50-51 Vict., c. 38, an Act of 1887, the representation of the Northwest Territories in the Senate was fixed at two members. A subsequent increase resulted from the growth of population in Manitoba to 152,506, as shown by the Census of 1891, the province being granted a fourth senator under the terms of the Manitoba Act of 1870. An Act passed in the session of 1903 (3 Edw. VII, c. 42) provided for an increase in the representation of the Northwest Territories from two to four members, bringing the total representation at this date to 83 members.

On the establishment of the provinces of Alberta and Saskatchewan out of the former Northwest Territories in 1905, under 4-5 Edw. VII, cc. 3 and 42, provision was made for their representation in the Senate by 4 members each, which might be increased by Parliament to 6 on the completion of the next decennial census. This change in representation brought the membership of the Upper Chamber to a total of 87.

In 1915, by an amendment to the British North America Act (5-6 Geo. V, c. 45), an important change was made with regard to the constitution of the Senate. The number of divisions provided for by Section 22 of the original Act was increased from three to four, the fourth comprising the four western provinces of Manitoba, Saskatchewan, Alberta, and British Columbia. Each of these provinces was to be represented by 6 members under the Act, the division being thus represented by 24 members and placed on an equality with the others with respect to membership. A corresponding change was made in the number of additional senators provided for by the original British North America Act by substituting increases of four or eight members for the three or six cited in Sec. 26 of the Act of 1867. Normal representation, therefore, is at present fixed at 96, which number may be increased if necessary to 100 or to a maximum of 104.

The entry of Newfoundland to the Union is still provided for by the above Act, s-s 6 of Sec. 1 of which would allow it a representation of six members instead of the four granted by the Act of 1867. If Newfoundland were admitted to the Dominion, the normal number of senators would, therefore, be 102 with a maximum of 110.

In Table 5 the growth of membership in the Senate is shown by divisions and provinces from 1867 to 1915, since when no change has taken place. The names and addresses of the senators from each province are given, as at Mar. 15, 1939, in Table 6.

**Subsection 4.—The House of Commons.**

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia and fifteen for New Brunswick".\* Further, under Sec. 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:—

- "(1) Quebec shall have the fixed number of Sixty-five Members;
- "(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
- "(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;
- "(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
- "(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament"

\* The sessional indemnity of a member of the House of Commons is \$4,000.

Again, in Sec. 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed"

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Sec. 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province"

**Readjustments in Representation.**—As set out in the above-mentioned provisions of the British North America Act, the representation in the House of Commons has been readjusted following each of the seven decennial censuses since taken, also as a result of the admission of Manitoba, British Columbia, and Prince Edward Island to Confederation and the creation of portions of the Northwest into Saskatchewan, Alberta, and Yukon. At pp. 74-77 of the 1934-35 Year Book, the problems of redistribution are dealt with in detail, especially those arising out of the 1931 Census. Summarized accounts were also carried in later Year Books down to 1937 (see pp. 79 and 80 of the 1937 Year Book).

The number of representatives of each province elected at each of the eighteen general elections since Confederation is given in Table 7.

<sup>1</sup> The representation at the general elections of 1926 and 1930 was the same as in 1925.

**The Unit of Representation.**—While the number of members of the House of Commons has been growing fairly steadily since Confederation, the unit of representation—one-sixty-fifth of the population of Quebec as taken at each census within its 1911 boundaries—has also been increased after each census in consequence

of the growth of the population of Quebec. The units of representation, as determined by the decennial censuses taken since Confederation, are as follows: 1871, 18,331 persons; 1881, 20,908; 1891, 22,901; 1901, 25,368; 1911, 30,819; 1921, 36,283; 1931, 44,186, being one-sixty-fifth of the population of Quebec exclusive of Ungava.

### Constituencies and Representatives in the Eighteenth Parliament.—

A complete list of the constituencies, with their 1931 populations, the voters on the list and votes polled at the general election of Oct. 14, 1935, together with the names and addresses of those then elected to the House of Commons of the eighteenth Parliament of Canada, will be found in Table 8. Changes occurring at subsequent by-elections to Mar. 15, 1939, are indicated in the footnotes.

### 8.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Eighteenth General Election, Oct. 14, 1935.

Subsection 5.—The Dominion Franchise.

An article by Col. J. T. C. Thompson, Dominion Franchise Commissioner, appeared at pp. 86-88 of the 1937 edition of the Year Book. Briefly, the qualifications for the Dominion franchise are that one must be a British subject, of the full age of 21 years, and have been ordinarily resident in Canada for at least one year, and resident for three months in the electoral district in which application is being made for registration.

**The Use of the Franchise.**—The numbers of voters on the lists and the numbers of votes polled at the general elections of 1925, 1926, 1930, and 1935 are given in Table 9.

9.—Numbers of Voters and Votes Polled at the General Elections of 1925, 1926, 1930, and 1935.

<b>Totals.....</b>			<b>3,466,556</b>	<b>228,307</b>	<b>3,694,863</b>

<sup>1</sup> The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).  
<sup>2</sup> Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland.

<sup>3</sup> Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).  
<sup>4</sup> Too small to be enumerated.

<sup>5</sup> Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabaska, Alberta, and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parliament and Order in Council of Oct. 2, 1895.  
<sup>6</sup> By Order in Council, June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act, 1880 (43 Vict., c. 25), the district of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional districts of Yukon, Mackenzie, Franklin, and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the province of Quebec, and the remaining area of the Northwest Territories south of 60° N. latitude was divided between Manitoba and Ontario.

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislatures of all the provinces with the exception of Quebec are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. For detailed description of the Provincial Governments, the reader is referred to pp. 101-115 of the 1922-23 edition of the Year Book.

The Lieutenant-Governors of the provinces, together with the names of the Ministers of the present administrations, are given in Table 11. Details regarding Provincial Legislatures and Ministries from Confederation to 1924 were given on pp. 75-84 of the 1924 Year Book, and for 1924-37 on pp. 110-118 of the 1938 Year Book.

11.—Lieutenant-Governors of Provinces, 1867-1938, and Present Ministries.

NOTE.—The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life. Legislatures from Confederation to 1923 will be found on pp. 75-84 of the 1924 Year Book, and for 1924-37 at pp. 110-113 of the 1938 Year Book.

THE TERRITORIES.

NOTE.—In 1888 the districts of Alberta, Assiniboia, Athabaska, and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given local responsible government, and the old Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these districts was formed into the provinces of Alberta and Saskatchewan, on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The remaining areas (Yukon and the provisional districts of Franklin, Keewatin, and Mackenzie) are now administered by the Lands, Parks and Forests Branch, Department of Mines and Resources. The Deputy Minister of the Department is the Commissioner of the Northwest Territories, which comprises the three provisional districts.

## PART IV.—REPRESENTATIVES IN OTHER COUNTRIES.\*

## Section 1.—Representatives Within the Empire.

The policy of the early North American colonies, of maintaining in London accredited representatives for business and diplomatic purposes, was recognized in the eighteenth century as being a more satisfactory means of communication with the British Government than that provided by occasional official visits or by correspondence. Of the Canadian colonies, Nova Scotia was the first to adopt this plan, its Legislature having appointed an Agent in London in 1761. New Brunswick was similarly represented in 1786, Upper Canada as early as 1794, Lower Canada in 1812 and British Columbia in 1857. Following Confederation, several of the provinces continued to adhere to, and in certain cases enlarge upon, the practice to the extent of themselves appointing Crown Agents or Agents General. Such developments as have taken place are dealt with on p. 92 of the 1934-35 Year Book.

**The High Commissioner for Canada.**—With the federation of the provinces of British North America in 1867, a new political entity which could not avail itself of the services of the provincial Agents was brought into existence. To supplement the ordinary method of communication between the Canadian and British Governments, which at that time was by correspondence between the Governor General and the Secretary of State for the Colonies, the position of High Commissioner for Canada was created in 1880 (see R.S.C. 1927, c. 92). A new Act received assent on June 24, 1938, and under its provisions the duties of the office are defined as follows:—

“The High Commissioner shall—

- “(a) act as representative and resident agent of Canada in the United Kingdom, and in that capacity, execute such powers and perform such duties as are, from time to time, conferred upon and assigned to him by the Governor in Council;
- “(b) carry out such instructions as he, from time to time, receives from the Secretary of State for External Affairs respecting the general interests of Canada in the United Kingdom;
- “(c) subject to the provisions of the preceding paragraphs, supervise the official activities of the various agencies of the Canadian Government in the United Kingdom.”

SIR ALEXANDER GALT was the first Canadian High Commissioner, holding office from May 11, 1880, until May, 1883; in 1884 he was succeeded by SIR CHARLES TUPPER. Lord Strathcona and Mount Royal was appointed in 1896. SIR GEORGE H. PERLEY took charge of the High Commissioners' Office in 1914 and was appointed High Commissioner on Oct. 12, 1917. The HON. P. C. LARKIN was appointed in February, 1922, and after his decease (Feb. 3, 1930) the HON. G. HOWARD FERGUSON was appointed (Nov. 28, 1930). On Nov. 8, 1935, the HON. VINCENT MASSEY succeeded Mr. Ferguson in this post. The office of the High Commissioner for Canada is in Canada House, Trafalgar Square, London, S.W. 1.

**High Commissioner of the United Kingdom in Canada.**—His Majesty's Government in the United Kingdom in April, 1928, appointed a High Commissioner in Canada, SIR WILLIAM H. CLARK, who was succeeded in January, 1935 by SIR FRANCIS FLOUD, K.C.B. On May 17, 1938, the appointment of SIR GERALD CAMPBELL, K.C.M.G., in succession to Sir Francis Floud was announced. The High

\* Revised by the Department of External Affairs, Ottawa. An annual report on the organization and activities of Canadian Government representation abroad is contained in the Report of the Department of External Affairs, which may be obtained from the King's Printer, price 25 cents.

Commissioner resides in Ottawa, and his position corresponds to that of the High Commissioner for Canada in the United Kingdom. This appointment was made in consequence of discussions at the Imperial Conference of 1926. The relevant passage in the report of the Inter-Imperial Relations Committee runs as follows:—

“A special aspect of the question of consultation which we considered was that concerning the representation of Great Britain in the Dominions. By reason of his constitutional position, as explained in Section IV (b) of this report, the Governor General is no longer the representative of His Majesty's Government in Great Britain. There is no one therefore in the Dominion capitals in a position to represent with authority the views of His Majesty's Government in Great Britain.

“We summed up our conclusions in the following resolution which is submitted for the consideration of the Conference:—

“The Governments represented at the Imperial Conference are impressed with the desirability of developing a system of personal contact, both in London and in the Dominion capitals, to supplement the present system of intercommunication and the reciprocal supply of information on affairs requiring joint consideration. The manner in which any new system is to be worked out is a matter for consideration and settlement between His Majesty's Governments in Great Britain and the Dominions, with due regard to the circumstances of each particular part of the Empire, it being understood that any new arrangements should be supplementary to, and not in replacement of, the system of direct communication from Government to Government and the special arrangements which have been in force since 1918 for communications between Prime Ministers’.”

**Accredited Representative of the Union of South Africa in Canada.**—His Majesty's Government in the Union of South Africa appointed MR. DAVID DE WAAL MEYER as their Accredited Representative in Canada on Apr. 1, 1938: Address, 56 Sparks Street, Ottawa.

## Section 2.—Diplomatic Representation Abroad.

**The Canadian Minister to the United States.**—For many years the diplomatic business between Canada and the United States has been steadily increasing as the natural result of the proximity of the two countries and the closeness of the business relationships between their citizens. Before the Great War a former British Ambassador at Washington, Lord Bryce, said that between two-thirds and three-quarters of the work of the British Embassy in the United States was occasioned by Canadian affairs.

In January, 1918, a temporary Canadian War Mission was established at Washington, under the chairmanship of Mr. Lloyd Harris, and was maintained for some years after the close of the War. Though not a formal diplomatic mission, its duties extended to questions usually dealt with through diplomatic channels. After the retirement of this mission, Canada was represented in Washington by Mr. M. M. MAHONEY, who acted as agent of the Department of External Affairs, and, through the courtesy of the British Government, occupied an office at the British Embassy.

In 1920, following discussions between the British and Canadian Governments, it was announced that agreement had been reached upon the appointment of a Canadian Minister at Washington, who would act for the British Ambassador in the latter's absence. No appointment was made until Nov. 26, 1926, when, after decision to omit the arrangement that the Canadian Minister should substitute for the British Ambassador, Hon. Vincent Massey was appointed as His Majesty's

Envoy Extraordinary and Minister Plenipotentiary in the United States of America to represent the interests of the Dominion of Canada. Mr. Massey took up his duties in February, 1927, and held office until July 23, 1930. Hon. W. D. Herridge, who was appointed Minister to the United States on Mar. 7, 1931, resigned his appointment Oct. 23, 1935. The Hon. Sir Herbert Marler, K.C.M.G., presented his credentials as Canadian Minister on Oct. 20, 1936. The Canadian Legation in Washington is situated at 1746 Massachusetts Avenue.

**The Canadian Minister to France.**—For many years the Canadian Government maintained an agency at Paris. The post was first occupied in 1882 by Hon. HECTOR FABRE, who also represented for a time the Government of Quebec. After his death Hon. PHILIPPE ROY was appointed in May, 1911, with the title of Commissioner General of Canada in France. In 1928 an exchange of Ministers was agreed upon between Canada and France, and in September of that year Hon. Philippe Roy was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in France to represent the interests of the Dominion of Canada. Mr. Roy resigned in December, 1938, and Lt.-Colonel George P. Vanier, formerly Secretary of the Office of the High Commissioner for Canada in London was appointed in January, 1939, as His Majesty's Canadian Minister in France. The Canadian Legation in Paris is situated at No. 1, rue François premier.

**The Canadian Minister to Japan.**—In 1928 an exchange of Ministers was agreed upon between the Governments of Canada and Japan, and Hon. H. M. MARLER was appointed in 1929 as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan to represent the interests of the Dominion of Canada. On his appointment as Canadian Minister at Washington he was succeeded by the Hon. R. RANDOLPH BRUCE, who presented his credentials to the Emperor of Japan on Nov. 7, 1936. Mr. Bruce resigned as Canadian Minister in Japan in December, 1938, and pending the appointment of his successor, Mr. E. D. McGREER, First Secretary in Tokyo is acting as Chargé d'Affaires. The Canadian Legation is at 16 Omote-Cho, Sancho-me, Akasaka-Ku, Tokyo.

**The Canadian Minister to the Netherlands and to Belgium.**—On May 26, 1938, the Prime Minister announced in the House of Commons that Canada intended to open Legations in the Netherlands and Belgium with a single Minister to represent the Dominion in both countries. Mr. JEAN DESY, formerly Counsellor on the staff of the Canadian Legation in France was appointed in January, 1939, as Canadian Minister in the Netherlands and Belgium.

**The Permanent Delegate of Canada to the League of Nations.**—The practice of appointing permanent representatives at Geneva accredited to the League of Nations has been largely followed by those nations which are situated at a distance from Geneva. It was found that, while countries adjacent to the seat of the League were able, without difficulty, to include in the personnel of their delegations to the Assembly and Council various advisers and assistants at a minimum of expense, distant countries were at a disadvantage in this respect. Canada's duties as a member of the Assembly and of the International Labour Conference, and as one of the countries represented on the Governing Body of the International Labour Office, made this disadvantage especially felt. Accordingly, the position of Dominion of Canada Advisory Officer, League of Nations, was created and Dr. W. A. RIDDELL was appointed to the post on Jan. 1, 1925. He was succeeded by Mr. H. H. WRONG on Oct. 25, 1937. The Canadian Representative is now designated as Permanent Delegate of Canada.

The duties of the Permanent Delegate are "to establish and maintain as close relations as possible with the Secretariats of the League of Nations and the International Labour Office", to "communicate with the Government of Canada as to all matters arising and requiring its attention", and to "act in all such matters in an advisory capacity to the Government of Canada and to delegates from the Government of Canada to conferences arising out of the organizations before-named". The office of the Canadian Permanent Delegate is situated at 41, Quai Wilson, Geneva.

### Section 3.—Diplomatic Representation in Canada.

The following list gives the addresses of the legations with the dates of establishment and the present Ministers:—

#### Legation of the United States of America: (Established 1927.)

*Address:* Wellington Street, Ottawa. *Envoy Extraordinary and Minister Plenipotentiary:* (Vacant as at Mar. 26, 1938, *Chargé d'Affaires, ad interim,* Mr. J. F. SIMMONS.)

#### Legation of France: (Established 1928.)

*Address:* 42 Sussex Street, Ottawa. *Envoy Extraordinary and Minister Plenipotentiary:* COUNT ROBERT DE DAMPIERRE.

#### Legation of Japan: (Established 1928.)

*Address:* 140 Wellington Street, Ottawa. *Envoy Extraordinary and Minister Plenipotentiary:* BARON TOMII.

#### Legation of Belgium: (Established 1937.)

*Address:* Stadacona Hall, 395 Laurier Avenue East, Ottawa. 680 Sherbrooke Street West, Montreal. *Envoy Extraordinary and Minister Plenipotentiary:* BARON SILVERCRUYS.

## PART V.—CANADA AND THE LEAGUE OF NATIONS.\*

The League of Nations is an association of fully self-governing States whose relations are governed by the Covenant. The League of Nations acts through an Assembly and Council composed of representatives of Governments. Fifty-five States are at present Members of the League, as compared with forty-two at the time of the first Assembly in 1920. Canada, as a signatory of the Treaties of Peace, is an original Member of the League.

The League of Nations has two aims: (1) to preserve peace and to seek a settlement of international disputes; and (2) to organize in the most varied spheres co-operation of peoples, with a view to the material and moral welfare of humanity.

The Covenant, which constitutes the fundamental charter of the League of Nations was drafted in 1919 by a Commission of the Peace Conference and inserted at the head of the several Treaties of Peace. It came into force on Jan. 10, 1920.

**The Organs of the League.**—The organs of the League are:—

- (a) The Assembly;
- (b) The Council;
- (c) The Secretariat;
- (d) The International Labour Organization, (see Chapter XIX);
- (e) The Permanent Court of International Justice.

\* The League of Nations Society in Canada, 124 Wellington St., Ottawa, is the authorized agent for the publications of the League of Nations.

*The Assembly.*—The Assembly consists of representatives of the members of the League, and meets annually in ordinary session each September in Geneva. At the 19th Assembly in September, 1938, the Canadian Delegates were the Right Hon. Ernest Lapointe, Mr. H. Hume Wrong, Mr. Paul Martin, Mr. J. T. Thorson, and Mrs. Nellie McClung.\*

*The Council.*—The Council, which originally consisted of five permanent members and four non-permanent members, now consists of four permanent members (the British Empire, France, Italy, and the U.S.S.R.) together with eleven non-permanent members elected for three years from among the States Members of the League. The non-permanent members of the Council are at present as follows: Ecuador, Poland, and Roumania, terms expiring in 1938; Bolivia, China, Latvia, New Zealand, and Sweden, terms expiring in 1939; Belgium, Iran, and Peru, terms expiring in 1940. Canada was a member of the Council of the League from 1927 to 1930.

The Council, which normally meets four times a year and more frequently if circumstances should require it to do so, may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

*The Secretariat.*—The Permanent Secretariat is the Civil Service of the League. The staff is appointed by the Secretary General with the approval of the Council. The officials of the Secretariat of the League are exclusively international officials, having international and not national duties. The first Secretary General, Sir Eric Drummond, who was named in the Annex to the Covenant, resigned in 1933 and was succeeded by M. Joseph Avenol, who is assisted by three Deputy Secretaries General and by one Under-Secretary General.

*Permanent Court of International Justice.*—The Permanent Court of International Justice was established by the Protocol of Dec. 16, 1920, in accordance with Article 14 of the Covenant of the League of Nations. It is composed of a body of fifteen judges elected by the Assembly and Council of the League of Nations for a term of nine years, and sits at The Hague. The Court is competent to hear and determine any dispute of an international character which the parties thereto submit to it; it may also give an advisory opinion upon any dispute or question referred to it by the Council or the Assembly. Article 36 of the Statute of the Court provides that any State may recognize as compulsory, the jurisdiction of the Court in all or any classes of legal dispute concerning:—

- (a) The interpretation of a Treaty;
- (b) Any question of international law;
- (c) The existence of any fact which, if established, would constitute a breach of an international obligation, and the nature and extent of the reparations to be made for the breach of the international obligation.

Canada has been a member of the Court from its establishment, and in 1929 accepted, subject to certain reservations, the compulsory jurisdiction of the Court in the cases contemplated in Article 36.

*The Budget of the League.*—The expenditure of the League is covered by the contributions of States Members which are fixed in accordance with a scale which takes into account the population, area, and public revenue of each State concerned. The budget for the year 1939 was 21,698,926 gold francs reduced after

\* The Report of the Canadian Delegates to the Nineteenth Assembly of the League of Nations is obtainable from the King's Printer, Ottawa, price 10 cents.

taking account of the returnable surplus to 20,848,926 gold francs. This net sum included 10,108,173 gold francs for the work of the Assembly, Council, and Secretariat; 5,605,589 gold francs for the International Labour Organization, and 1,911,338 gold francs for the Permanent Court of International Justice; the balance of 3,023,824 gold francs is allocated to buildings and pensions. Canada's share of this net assessment is 35/927 of the total, or 779,303.90 gold francs.

**Membership of the League of Nations.**—The States which are Members of the League (January, 1939) are as follows:—

Afghanistan	Finland	Panama
Union of South Africa	France	Peru
Albania	Greece	Poland
Argentine Republic	Guatemala	Portugal
Australia	Haiti	Roumania
Belgium	Hungary	Salvador <sup>1</sup>
Bolivia	India	Siam
Bulgaria	Iran	Soviet Socialist Republics, Union of
Canada	Iraq	Spain
Chile <sup>1</sup>	Ireland (Eire)	Sweden
China	Italy <sup>1</sup>	Switzerland
Colombia	Latvia	Turkey
Cuba	Liberia	United Kingdom of Great Britain and Northern Ire- land
Czechoslovakia	Lithuania	Uruguay
Denmark	Luxemburg	Venezuela <sup>1</sup>
Dominican Republic	Mexico, United States of	Yugoslavia
Ecuador	Netherlands	
Egypt	New Zealand	
Ethiopia	Norway	
Estonia		

<sup>1</sup> By a communication dated July 23, 1937, Salvador gave notice of her intention to withdraw from the League of Nations, in accordance with Article 1, paragraph 3, of the Covenant. Italy, Chile, and Venezuela manifested the same intention by communications dated Dec. 11, 1937, May 31, 1938, and July 11, 1938, respectively. In a letter dated Mar. 18, 1938, the Secretary of State for Foreign Affairs of the German Reich informed the Secretary General of the League of Nations that the former Federal State of Austria had ceased to be a Member of the League of Nations on Mar. 13, 1938.

## CHAPTER IV.—POPULATION.\*

The Population chapter of the Year Book is a *précis* of the results of investigations into the number and the constitution of the population made in the seven censuses of Canada since Confederation, summarizing the growth and distribution of population between 1871 and 1931, as shown by the successive decennial censuses, in regard to the chief matters investigated at the censuses. Owing to the extent of the field covered, it is quite impossible to include in each edition of the Year Book a full digest of population statistics. The policy adopted, therefore, is to maintain the skeleton of the chapter and the historical tables as a permanent feature and build up each section as statistics are available following each census. After complete and accurate summary statistics have been given publicity, the chapter is cut down to skeleton limits, with adequate references, until the next census. The 1934-35 Year Book gave at pp. 98-169 as complete a picture of the 1931 Census statistics as will appear in one Year Book.

Under the Canadian constitution, the legal *raison d'être* of the census is to determine representation in the House of Commons; after each decennial census a redistribution of seats in the House, following the course of the movement of population, is made in the manner described on pp. 58-60 of this volume. But the census, especially since the introduction of methods of mechanical tabulation, has become far more than a mere counting of heads. It is a great periodical stock-taking of the people and their affairs, designed to show as fully as possible the stage which has been reached in the progress of the nation. Thus the numbers, local distribution, age, sex, racial origin, nationality, language, religion, education, housing, and occupations of the people, severally, constitute investigations of enormous importance, to which all the continuous and routine statistics collected in the ordinary course of administration must be related if their full value is to be realized. The census, in fine, rounds out and completes the scheme of information upon which the Government relies in conducting the business of the country.

On account of the requirements as to parliamentary representation and the payment of provincial subsidies, which are based on population, the Canadian census is taken on the *de jure* principle, *i.e.*, each person is counted as belonging to the locality in which he is regularly domiciled, irrespective of where he may be at the date of the enumeration. Under the *de facto* method, adopted in the United Kingdom, each individual is counted as belonging to the locality where he is found on the census date. The *de facto* method is undoubtedly simpler, but the *de jure* plan better portrays the permanent condition of the population. The chief difficulty in the application of the latter method is found in connection with holiday resorts, in the segregation of "visitors" and the tracing of "absentees" A date prior to the opening of the holiday season is accordingly chosen for the date of the census. In the Canadian census, students and inmates of hospitals are assigned to their home localities, while inmates of prisons, gaols, lunatic asylums, etc., are counted where found.

\* This chapter has been revised by A. J. Pelletier, F.S.S., Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section I, under "Population"

## Section I.—Census Statistics of General Population.

Since the creation of the Dominion of Canada, in 1867, decennial censuses have been taken on the *de jure* plan as of the dates April 2, 1871, April 4, 1881, April 5, 1891, April 1, 1901, June 1, 1911, 1921, and 1931. The population of Canada and its percentage distribution as on each date, together with the absolute and percentage increases from decade to decade, are given in Tables 1 to 4 immediately following. The population was given by counties or census divisions on pp. 103-107 of the 1934-35 Year Book and corresponding areas and densities of population for 1931 on pp. 109-110 of the same edition.

**Early Censuses.**—The credit of taking the first census of modern times belongs to Canada; the year was 1666, the census that of the colony of New France. Still earlier records of settlement at Port Royal (1605) and Quebec (1608) are extant; but the Census of 1666 was a systematic 'nominal' enumeration of the people, taken on the *de jure* principle on a fixed date, showing age, sex, occupation, and conjugal and family condition. A second census in 1667 included the areas under cultivation and the numbers of sheep and cattle. When it is recalled that in Europe the first census dates only from the eighteenth century (those of France and

England from the first year of the nineteenth) and that, in the United States, the census begins only with 1790, the achievement of the primitive St. Lawrence colony in instituting what is to-day one of the principal instruments of government throughout the civilized world, may call for more than passing appreciation.

The Census of 1666 (the results occupy 154 pages in manuscript, and are still to be seen in the Archives of Paris, or in a transcript at Ottawa) showed some 3,215 souls. It was repeated at intervals more or less regularly for a hundred years. By 1685 the total had risen to 12,515, including 1,538 Indians settled in villages and living a civilized life under the supervision of the missionaries. By the end of the century it had passed 15,000, and this was doubled in the next twenty-five years. Not to present too much detail, some of which is in the Chronology on pp. 40-49, it may be said that at the time of the cession (1763) the population of New France was nearly 70,000 (69,810 in 1765), while another 10,000 French (thinned to these proportions by the expulsion of the Acadians) were scattered through what are now Nova Scotia, New Brunswick, and Prince Edward Island. The British population of Nova Scotia was 8,104 in 1762, thirteen years after the foundation of Halifax in 1749.

Our chief sources of statistics for half a century and more after the cession are the reports—more or less sporadic—of colonial governors, though censuses of the different sections under British rule were taken at irregular intervals. British settlement on a substantial scale in the Gulf provinces and in Ontario dates only from the Loyalist movement which followed the American Revolution, at the end of which, *i.e.*, about the year of the Constitutional Act (1791), the population of Lower Canada was approximately 163,000, while the newly constituted province of Upper Canada, under Lieutenant-Governor Simcoe, numbered perhaps 15,000, and the addition of the maritime colonies brought the total to well over 200,000. A decade later Canada began the nineteenth century with a population of probably not less than 250,000 or 260,000. Subsequent censuses gave the populations of the different colonies as follows: Upper Canada (1824) 150,066, (1840) 432,159; Lower Canada (1822) 427,465, (1844) 697,084; New Brunswick (1824) 74,176, (1840) 156,162; Nova Scotia (1817) 81,351, (1838) 202,575; Prince Edward Island (1822) 22,600, (1841) 47,042.\*

The policy of irregular census-taking was supposed to have been ended after the union of Upper and Lower Canada by an Act, passed on Sept. 18, 1841, which provided for a census in the year 1842 and every fifth year thereafter, but under this Act only the census of Upper Canada was taken and the following year, on Dec. 9, the Act was amended, the reason being stated as follows: "Whereas the Census of the inhabitants of Lower Canada, for the year one thousand eight hundred and forty-two as required by an Act of this Legislature, . . . hath not been duly taken and whereas it is of the greatest importance that such Census should be taken. . . Be it therefore enacted . . .". The Census of 1844 of Lower Canada was taken under this Act.

Another Act was passed and given Royal Assent on July 28, 1847, creating a "Board of Registration and Statistics" with instructions "to collect statistics and adopt measures for disseminating or publishing the same" and providing for a census

\* A résumé of the results of all the censuses taken in Canada between 1666 and 1931 has been published in bulletin form and is included in Vol. I, Census of 1931.

to be taken in the year 1848, to be repeated in 1850 and every fifth year thereafter. Under this Act a census of Upper Canada was taken in 1848.

Finally an Act was passed on Aug. 30, 1851, providing for a census to be taken in January, 1852, then in the year 1861 and thereafter every tenth year, and that better provision should be made for taking the census. The first census thereunder was taken in January, 1852, and, as similar censuses were taken by New Brunswick and Nova Scotia, there is a regular measure of population growth in Canada over the past 80 years. The 'fifties saw a very rapid development, especially in Ontario, and the 'sixties showed only less substantial gains. In the years following Confederation there was a spurt, the increase between 1871 and 1881 (which included several lean years towards the end) being 635,553, or 17.23 p.c. In neither of the last two decades of the nineteenth century, however, was this record equalled either absolutely or relatively, the gains in each being under 550,000, or 12 p.c. With the end of the century the population of Canada had reached approximately five and a third millions, or twenty times that of 1800. It has increased by five millions in the past thirty years.

**Expansion in the Twentieth Century.**—It is within the present century that the most spectacular expansion of the population of Canada has taken place. The outstanding feature was, of course, the opening to settlement of the West. The unorganized territories of British North America had been ceded to the Dominion soon after Confederation, and the West had been tapped and traversed by the Canadian Pacific railway in the 'eighties and 'nineties. But though western population was doubled in each of these decades, it was only with the launching of a large-scale immigration movement after 1900 that western settlement and production became a first-rate economic factor. Simultaneously an almost equally striking development occurred in the industrial centres of Eastern Canada, forming the immediate basis for the move upon the West. At the back, of course, was the heavy inflow of British and other capital—a total of \$1,500,000,000 between 1900 and 1912—to finance large constructive undertakings (chiefly railway, municipal, and industrial) which characterized the movement. The years 1901 to 1911, in brief, form the *decas mirabilis* of Canadian expansion. The immigration movement just mentioned, which had previously run well under 50,000 per annum, rose rapidly to over five times that volume, eventually passing 400,000 in a single year. In the ten years between 1901 and 1911 it exceeded 1,800,000 and, though at least a third of these were lost (partly in the return to Europe of labour temporarily attracted by the railway and other developments in progress, and partly in the never-ceasing and natural 'drag' of the United States upon a virile and less wealthy people), it formed the chief factor in the gain of 34 p.c. which the total population of Canada registered in that decade, and which was larger than the relative growth of any other country during the same period. The movement was continued and even intensified in the first three years of the second decade of the century, after which a recession set in, to which the outbreak of war gave a new and wholly unexpected turn. Nevertheless, the decade which closed with the Census of 1921 showed over 1,700,000 immigrant arrivals in Canada, and, though the proportionate loss of these was very heavy (probably as much as two-thirds), Canada's relative gain for the decade was again among the largest in the world.

**Results of the Census of 1931.**—The total population of the Dominion on June 1, 1931, was 10,376,786, as compared with 8,787,949 on June 1, 1921, an increase of 1,588,837 or 18·08 p.c. in the decade, as compared with 21·94 p.c. and 34·17 p.c. during the decades 1911 to 1921 and 1901 to 1911, respectively.

During the decade 1911-21 the countries which comprise the British Empire, and more especially the United States which was in the Great War for only nineteen months as against Canada's fifty-two, had suffered less in actual loss of life from the War and its consequences than the continental countries of Europe. None of them declined in population during the period, as many continental European countries did. Their percentage increases, however, were in almost all cases lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,886,699, or 5·0 p.c., as compared with an increase of 10·9 p.c. in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,497, or 2·6 p.c., as compared with 6·5 p.c. between 1901 and 1911. Nor has this situation been much improved in the post-war decade 1921-31, for the increase in England and Wales during these years was but 5·4 p.c. and Scotland actually showed a decrease of 0·8 p.c. Of the overseas Dominions, New Zealand, according to the official estimate\* increased her population from 1,218,913 to 1,452,747, or by about 19 p.c. for the decade ended 1931, as compared with 20·9 p.c. and 30·5 p.c., respectively, for the decades ended 1921 and 1911. In the case of the white population of South Africa, much the same condition obtained. The Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade of the twentieth century than in the first, increased from 4,455,005 in 1911 to 5,435,734 in 1921, or by 22·01 p.c., as compared with 18·05 p.c. for 1901-11, and to 6,552,606 in 1931 according to the official estimate,\* or by 20·5 p.c. in the decade 1921-31. The population of the continental United States increased between 1920 and 1930 from 105,710,620 to 122,775,046, an increase of 16·1 p.c. as compared with 14·9 p.c. in the decade 1910-20 and 21 p.c. in the decade 1900-10.

Considering now the movement of population within the Dominion of Canada itself, it is evident from Table 1 that in this country, as formerly in the United States, there has been a distinct movement of population from east to west. In the decade from 1911 to 1921 this was clearly apparent, for the four western provinces then increased their population by no less than 44 p.c. This growth occurred chiefly in the three Prairie Provinces for their combined population increased in the decade by 47·3 p.c., while that of British Columbia increased by 33·6 p.c. In the first two decades of the century the economic factor which had the greatest influence on population growth and movement in Canada was undoubtedly the agricultural settlement of the Prairie Provinces. The growth of population in these provinces was assisted both by immigration into Canada and by movement of domestic population from east to west.

While the agricultural industry of the Prairie Provinces has encountered periods of serious difficulty since the War, major economic developments have been in progress in the mining, forest products, and hydro-electric power industries of Quebec, Ontario, and British Columbia. Furthermore, in this period immigration has been less important as a factor in population growth (see Table 1, p. 156) than

\* In both New Zealand and Australia the 1931 censuses were postponed and were taken in March, 1936, and June, 1933, respectively.

in pre-war years, and thus the high rate of natural increase in Quebec (see Table 33, p. 151) has become a relatively greater factor. The Census of 1931 revealed the changing trends resulting from these influences, for in this latest decade the population of British Columbia increased 32.3 p.c. and of Quebec 21.7 p.c. compared with 20.3 p.c. for the Prairie Provinces. This change is also indicated by the percentage figures of Table 2, p. 79. The 1936 Quinquennial Census of the Prairie Provinces showed very little growth of population in those provinces in the 5-year period after 1931.

**Centres of Population.**—The 'centre of population'\* for the Dominion of Canada was carefully worked out for each census from 1851 to 1931, inclusive, and showed a definite north-westward movement up to 1911, westward for the next decade and northward for 1931. For the censuses of 1851 to 1881 the location was near Valleyfield, Que.; in 1891, it was 25 miles west of Ottawa; in 1901, near Pembroke; in 1911, 45 miles west of Sudbury; in 1921, 50 miles northeast of Sault Ste. Marie; and in 1931, 35 miles north of Sault Ste. Marie.

**Density of Population.**—The density of population in 1931 (i.e., the number of persons per square mile of the land area as in that year), as compared with 1921, 1911, and 1901, is shown by provinces and for the country as a whole in Table 5.

\* The centres of population are the centres of gravity (not the intersections of median lines). The units of area in which the moments (i.e., population multiplied by distance from a fixed point) were calculated, were the permanent counties or census divisions, of which there are about 220, the same units being used so far as possible for all censuses from 1851 to 1931. The geographical centre of the unit area was assumed to be the centre of population of that unit except in the cases of the thinly settled northern areas of counties with very large cities, where special adjustments were made.

N.W.T.....	1,258,217	20,129 <sup>1</sup>	1	6,507	0.01	7,988	0.01	9,723	0.01
<b>Canada.....</b>	<b>3,466,556</b>	<b>5,371,315</b>	<b>1.55</b>	<b>7,206,643</b>	<b>2.05</b>	<b>8,787,949<sup>2</sup></b>	<b>2.53</b>	<b>10,376,786</b>	<b>2.99</b>

<sup>1</sup> The populations of Ontario, Quebec, Manitoba, and Northwest Territories were adjusted for 1911 according to the provisions of the Boundary Extensions Acts, 1912, but such adjustment was not carried back to 1901 and this accounts for the apparent decrease of population of the Northwest Territories from 1901 to 1911.

<sup>2</sup> Populations of Northwest River Arm and Rigolet, on Hamilton inlet, as in 1921, have been deducted from Quebec, as these parts were awarded to Newfoundland by decision of the Judicial Committee of the Privy Council, Mar. 1, 1927. The grand total for Canada also contains 485 members of the Royal Canadian Navy who were recorded separately in 1921.

Figures showing the density of population in 1931, by counties and census divisions, are given in Table 6. Generally speaking, the density of population decreases as one travels westward, but the enormous area of the province of Quebec unduly reduces the density of its population, which was 5.49 in 1931. As among the nine provinces, the density of population is greatest in Prince Edward Island and least in British Columbia.

**Census Divisions of Western Canada  
1931**

The densities of population in various countries in recent years are given in Table 7. It should not be assumed, however, that a low density is necessarily evidence of under-population. If density could be expressed in terms of estimated habitable area, the figures would be more comparable, but even then natural physical factors, such as climate, topography, physical condition of the soil, mineral wealth, etc., would not be adequately weighted. These considerations should be borne in mind when comparing the figures of this table.

### 7.—Densities of Population in Various Countries in Recent Years.

NOTE.—The following figures, for countries other than Canada and China, are based on data taken from the Statistical Year Book of the League of Nations, 1937-38. The population figures of the latest census are used and total population is taken except where indicated otherwise by footnotes.

Country.	Year.	Persons per Sq. Mile.	Country.	Year.	Persons per Sq. Mile.
Belgium.....	1930	697.59	United States of America (not including Alaska).....	1930	40.57

<sup>1</sup> Estimate as of Dec. 31, 1931, taken from Canada Year Book, 1934-35, p. 168.

<sup>2</sup> Estimate as at Dec. 31, 1936.

**Elements of Growth.**—The factors involved in estimating population movement and growth are: natural increase, which is a resultant of births and deaths; immigration; and emigration. As explained on p. 115, co-operation in the collection of vital statistics (births, marriages, and deaths) in Canada was a consequence of the establishment of the Dominion Bureau of Statistics in 1918, and vital statistics for all provinces except Quebec were made available on a uniform basis for the first time for the years 1921 to 1925. Quebec has been included in the registration area from Jan. 1, 1926, and, since that time, figures for all provinces have been comparable.

Immigration figures are available from the old records of the Department of Immigration or, since 1936, from the Immigration and Colonization Branch of the Department of Mines and Resources, for a period antedating Confederation by fifteen years (see p. 152). It is very difficult, however, to obtain correct figures for emigration; no record of this movement is kept by the Canadian Government, although its magnitude is indicated by United States, United Kingdom, and other British returns of Canadian immigrants to those countries. Even these figures cannot however, be taken at their face value since no allowance is made for Canadians returning to Canada after a more or less extended period of residence in the United States or British countries outside Canada. Since 1924, however, the Canadian

Government immigration officers have been instructed to take note of such Canadians returning from the United States. This group, of course, covers the greater part of "returning Canadians".

Estimates of Canadian emigration based on United States and British returns, supplemented by the known figures for "returning Canadians" are made by the Social Analysis Branch of the Dominion Bureau of Statistics in the process of working out the annual estimates of population. These estimates are the closest available but are naturally subject to a margin of error because of the incomplete data upon which they are based and the fact that they are calculated for a period of time ahead of actual experience. Moreover, the annual estimates of population are not calendar year statistics but are from June 30 to July 1, respectively, and naturally such emigration estimates as are made are on the same basis.

It will be clear, therefore, that, while the *trend* of emigration can be obtained by the interested reader from the statistics given in Table 8, he would not be justified in adding together natural increase and immigration for any year and expecting the total, when subtracted from the estimated increase in population, to represent the emigration for that year.

8.—Summary of Births, Deaths, Natural Increase, and Immigration, calendar years, with Estimated Population as at June 1, 1921-38.

Year.	Calendar Year Data.				Data for Year ended June 1.		
	Births.	Deaths.	Natural Increase.	Immigration.	Estimated Population of Previous Year.	Estimated Population.	Estimated Increase in Population.

### Section 2.—Sex Distribution.

Throughout the older countries of the world there is usually found an excess of female over male population, more especially as in most of these countries the census taken on a *de facto* instead of, as in Canada, on a *de jure* basis. The causes of this excess of female population are: (1) the normally higher rate of mortality among males; (2) the greater number of males who travel; (3) the effects of war; (4) the employment of males in the army, navy and merchant marine; and (5) the preponderance of males among emigrants. In the newer countries of the world, however, the preponderance of males among immigrants results in a general excess of male over female population. These phenomena are exemplified for both the older and the newer countries in Table 10.

In Canada there has been an excess of male population from the commencement of its history, the first census (1666) showing 2,034 males to only 1,181 females. As the colony increased in numbers, the disproportion between the sexes became smaller, more especially since the French-Canadian population, after about 1680, was not reinforced by immigration from the Old World. In 1784, when the English-speaking immigration to Canada for purposes of settlement was commencing, there were 54,064 males and 50,759 females in the colony. At the middle of the nineteenth century, there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly-settled Upper Canada, and since Confederation the same phenomenon of considerable excess of males has occurred throughout the growing northwest. The great immigration of the first decade of the present century resulted in raising what is called the 'masculinity' of the Canadian population (i.e., the excess of males over females per 100 of population) to the highest point in recent history, viz., 6.07 p.c. in 1911. The Great War, however, both checked immigration and took about 60,000 young Canadian male lives as its toll, with the result that at the Census of 1921 the masculinity of our population was only 3 p.c.—515 males to 485 females per 1,000 of population.

In 1931 there were 518 males to 482 females for Canada as a whole. It is interesting to note that the masculinity of the population has increased in the eastern provinces and decreased in the western ones, where it was formerly greatest. In Table 9 statistics are presented showing the number of males and females in each of the provinces and territories at each census since 1871. A table showing the proportions of the sexes and excess of males per 1,000 of population, 1871-1931, appeared at p. 113 of the 1934-35 Year Book. The statistics of Table 10 show the position of Canada among other countries of the world in regard to masculinity.

Sweden.....	1936	-1.14	U.S.S.R. (Europe).....	1926	-4.90

<sup>1</sup> 1928 estimate.

## Section 3.—Conjugal Condition.

In Table 11 are given, in summary form, the statistics of the conjugal condition of the population, as single, married, widowed, divorced, and legally separated, for 1871 and subsequent censuses. Especially notable is the larger proportion of married in the more recent years. This is mainly attributable to the larger proportion of adults to total population in our own time. Noteworthy also is the larger proportion of divorced and legally separated in later years. A table showing the conjugal condition of the people, as percentages of the total population, was given at p. 110 of the 1936 Year Book. Another table, showing conjugal condition by sex and provinces, will be found at the same place. At pp. 115-116 of the 1934-35 Year Book a table appeared showing the conjugal condition of the 1931 population, 15 years of age or over by age groups. The reader is referred to p. 131 of this volume for details of divorces granted in the years 1918-38.

## 11.—Conjugal Condition of the Population, as Shown by the Censuses of 1871-1931.

NOTE.—Dashes in this table indicate that no data were reported under the respective headings.

Census Year and Sex.	Single.	Married.	Widowed.	Divorced.	Legally Separated.	Not Given.	Total.
1871—Male.....	1,133,787	543,037	37,487				1,764,311
Female.....	1,099,216	542,339	79,595				1,721,450
1881—Male.....	1,447,415	690,544	50,895				2,188,854
Female.....	1,336,981	689,540	109,435				2,135,956
1891—Male.....	1,601,541	796,153	62,777				2,460,471
Female.....	1,451,851	791,902	129,015				2,372,768
1901—Male.....	1,748,582	928,952	73,837	337			2,751,708
Female.....	1,564,011	904,091	151,181	324			2,619,607
1911—Male.....	2,369,766	1,331,853	89,154	839	1,286	29,097	3,821,995
Female.....	1,941,886	1,251,468	179,656	691	1,584	9,363	3,384,048
1921—Male.....	2,698,564	1,698,297	119,695	3,670	2	9,417	4,529,643
Female.....	2,378,728	1,631,663	236,504	3,731	2	7,680	4,258,306
1931—Male.....	3,179,444	2,033,240	148,954	4,049	2	8,354	5,374,541
Female.....	2,771,998	1,937,950	288,841	3,392	2	294	5,002,245

<sup>1</sup> The figures for 1871 cover the four original provinces of Canada only. included with divorced.

<sup>2</sup> Legally separated included with married.

<sup>2</sup> Legally separated

## Section 4.—Age Distribution.

The same causes which have in the past rendered the sex distribution of population in Canada somewhat unusual have also affected its age distribution. In the first stages of the settlement of a new colony, men in the prime of life constitute the bulk of the population, and women and children are conspicuous by their absence, so that there will be a disproportionately large male population between the ages of 20 and 50, together with a low birth rate. Later on in the settlement of a new country, where there is land and food for all and where the early disproportion of the sexes has been overcome, there is a very high rate of natural increase, and an extraordinarily large proportion of children among the population. Thus in 1871 (see Table 12), 286.91 out of every 1,000 of the population of Canada were children under 10 years of age, and over half the total population (526.76 out of every 1,000) were under 20 years of age. But, with the growing urbanization of population, the average age at marriage increased and children came to be regarded as a liability rather than an asset. Thus in 1911, out of every 1,000 of the population, only 231.83 were under 10 years of age and 423.42 under 20 years of age. In 1921, however, 239.67 per 1,000 of the population were under 10 years of age and 434.81 per 1,000 under 20 years. In 1931, the number of children under 10 years of age had dropped to 212.70 per 1,000 of the population, and of persons under 20 to 416.39 per 1,000.

Table 13 shows the varying age distribution of the population of the respective provinces. At p. 118 of the 1934-35 Year Book details of the age distribution of the population of the Dominion, by sex, for the census years 1871 to 1931 were given.

## 12.—Proportion per 1,000 of the Population by Age Periods, Census Years, 1871-1931.

Age Period.	1871.	1881.	1891.	1901.	1911.	1921.	1931.

<sup>1</sup> The statistics for Yukon and the Northwest Territories are included in the totals.

**Age Distribution by Sex.**—An interesting table of quartile and decile age distribution, by sex, with textual interpretation, was given at pp. 119-120 of the 1934-35 Year Book. It is not repeated in order to conserve space.

### Section 5.—Racial Origins.

In six out of seven censuses of Canada since Confederation the racial origin of each person has been secured, the exception being 1891. The object of this information is to ascertain from what basic ethnic stocks the Canadian population, more particularly the recently immigrated population, is derived. The answer "Canadian" is not accepted under this heading, as the purpose of the question is to obtain, in so far as possible, a definition of "Canadian" in terms of racial derivation. Of this procedure of the census, criticism has been received on two main grounds: (a) that there are Canadians whose family is of several generations residence in the country who may not know their ultimate racial origin, or who may be of very mixed racial origin; (b) that the practice tends to perpetuate racial distinctions which it is desirable to obliterate. As against these criticisms the following three points must be considered: (a) that the Canadian whose family is of three or more generations residence is enumerated and differentiated through the census question on the birthplace of parents for which statistics from the 1931 Census appeared at pp. 134-139 of the 1934-35 Year Book; (b) that notwithstanding the desirability of racial assimilation, there are special features in connection with the process that require appraisal and study—for example, 271 children of Chinese fathers and 842 of Japanese fathers were born in Canada in 1931. Again, the fact that the constitution of Canada is based on the presence of two dominant races points to the desirability of a measurement of these factors: only recently it has been widely pointed out that the original French colony, numbering 70,000 at the date of the Conquest, has expanded to over three millions to-day. Measurements of this kind would be impossible if the answer "Canadian" instead of "French" were accepted under the heading of racial origin, yet undoubtedly if the descendants of the original French colonists are not "Canadians", no one is; (c) finally, racial origin is an important subject for study in a new country like Canada from a scientific standpoint, *i.e.*, from the standpoint of the student of ethnology, criminology, and the social and "biometric" sciences in general.

To accept the answer "Canadian" to the question on racial origin would confuse the data and defeat the purpose for which the question is asked.

**Racial Distribution.**—The total increase in population over the decade 1921-31 was 1,588,837. The population of English origin increased by only 196,061 compared with 722,208 in the previous decade; that of Scottish origin by 172,725 compared with 175,745; and that of Irish origin by 123,005 compared with 57,419. The population of British origin, taken together, increased from 4,868,738 to 5,381,071, or by 512,333, between 1921 and 1931. This represented 32 p.c. of the total increase as compared with 61 p.c. of the total increase for the previous decade. On the other hand, the population of French origin increased from 2,452,743 in 1921 to 2,927,990 in 1931, or by 475,247 (slightly under 30 p.c. of the total increase for the decade) and showed the greatest absolute increase for any decade since 1871. Figures for the minor racial groups that help to compose the nation (see Table 14) indicate that the people of Scandinavian, German, and Ukrainian origins increased between 1921 and 1931 by 36 p.c., 61 p.c., and 111 p.c., respectively. Owing to the new national and racial alignments in Central and Southeastern Europe following the Great War, comparison of the post-war numerical strength of certain ethnic stocks in Canada with pre-war returns cannot be made with any certainty. For example, a number of people reported as of Ukrainian stock in the Seventh Census were described in the Censuses of 1921 and 1911 as Galician, Bukovinian, Ruthenian, or Russian.

A perspective of the percentage relationship of the origin groups to the population as a whole was given in tabular form for the censuses 1871 to 1931 at p. 123 of the 1934-35 Year Book. Table 14, below, gives the actual figures for the same years.

Together, the British and French groups constituted, in 1931, 80 p.c. of the total population, compared with 83 p.c. in 1921 and 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. The immigration of continental Europeans to Canada during the past thirty years has, of course, been the cause of this decline.

#### 14.—Origins of the People, Census Years, 1871-1931.

NOTE.—Origins were not taken in the Census of 1891. See also headnote to Table 11.

<sup>1</sup> The figures for 1871 cover the four original provinces of Canada only. <sup>2</sup> Figures for individual origins revised by the redistribution of 130,413 "Unspecified" since the publication of the 1938 Year Book. <sup>3</sup> Incomplete in 1871; includes "half-breeds" in 1901. <sup>4</sup> Includes Danish, Icelandic, Norwegian, and Swedish; in 1921 they numbered, respectively, 21,124, 15,876, 68,856, and 61,503; in 1931, 34,118, 19,382, 93,243, and 81,306.

### Section 6.—Religions.

At each of the censuses from 1871 to 1931 every inhabitant of Canada has been asked to state the religious body of which he is a member or an adherent. During the sixty-year period there have been various fluctuations in the proportions of the population belonging to the leading religious bodies, and these fluctuations are, in a new country like this, largely occasioned by the religious affiliations of immigrants.

Throughout the sixty-year period something like two-fifths of the population of Canada has been of the Roman Catholic faith, the 1931 percentage, inclusive of Greek Catholics, being 41.30. Methodists were 16.27 p.c. of the population in 1871 but fell to 13.19 p.c. in 1921, while Presbyterians increased from 15.63 p.c. in 1871 to 16.04 p.c. in 1921, being reinforced by a considerable immigration from Scotland after the beginning of the century. The fusion of the Methodists

and Congregationalists in 1925 with a large section of the Presbyterians, as the United Church of Canada, left that body the second largest religious body in the Dominion in 1931 with 19.44 p.c. of the population. The Presbyterians who did not adhere to the United Church of Canada amounted to 8.39 p.c. of the population in 1931. The proportion of Anglicans in the population of Canada fell from 14.17 p.c. in 1871 to 12.69 p.c. in 1901 but thereafter the large immigration from the British Isles raised it to 16.02 p.c. in 1921, followed by a slight falling-off to 15.76 p.c. in 1931. The Baptists have shown a fairly steady decline from 6.87 p.c. in 1871 to 4.27 p.c. in 1931.

The immigration from non-English-speaking countries during the first three decades of the twentieth century led to a great growth of the religious bodies which have as their home the continent of Europe. Thus the Lutherans, who were only 1.09 p.c. of the population in 1871 and 1.72 p.c. in 1901, rose to 3.80 p.c. in 1931. The Jews, again, who were only 0.03 p.c. in 1871 and 0.31 p.c. in 1901, were 1.50 p.c. in 1931. The adherents of the Greek Orthodox Church, who in earlier years were not distinguished from Greek Catholics (the two together being only 0.29 p.c. in 1901) were 0.99 p.c. in 1931.

Of the total population in 1931 (10,376,786), 16,042 or 0.15 p.c. did not state their religion while 54,164 persons, or 0.52 p.c., belonging to small sects, were classed as "various" and 21,071 or 0.20 p.c. as of "no religion". Of the non-Christian sects, 155,614 or 1.50 p.c. were Jews, 24,087 or 0.23 p.c. were Confucians, 15,784 or 0.15 p.c. were Buddhists, and 5,008 or 0.05 p.c. were pagans. In Table 15 the totals for each religion are brought together for all censuses since Confederation. Further analyses showing the percentages of specified religions at each census, 1871-1931, and the numbers accredited to each specified religion, by provinces, were given at pp. 127-129 of the 1934-35 Year Book.

<sup>1</sup>The figures for 1871 cover the four original provinces of Canada only. <sup>2</sup>Including Tunkers.  
<sup>3</sup>Mennonites were included with Baptists prior to 1901. <sup>4</sup>Practically all Methodists and Congregationalists and a large number of Presbyterians united to form the United Church of Canada in 1925, although a relatively small number reported themselves as "United Church" in 1921, chiefly in Western Canada where the movement towards union began. <sup>5</sup>In earlier censuses only small numbers were involved, and Greek Catholics and Greek Orthodox were included under the general term "Greek Church". A rapid increase of both Greek Catholics and Greek Orthodox has been shown for recent censuses and, since the former owe obedience to the Pope in matters of faith, they have been included with the Roman Catholics for 1931. <sup>6</sup>Included with "All other" religions for 1891. <sup>7</sup>Including 186,654 Greek Catholics (see footnote 5).

In 1931, for the first time in the history of the Dominion Census, the religions of the people were cross-classified according to racial origin. The results, for Canada as a whole, were shown at pp. 116-117 of the 1936 Year Book.

## Section 7.—Birthplaces.

The birthplaces of the population of Canada, as at each of the seven censuses, are shown by Canadian born, other British born, and foreign born (United States born and other foreign born), in Table 16. The table shows that, in 1871, 97·28 p.c. of the population was born under the British flag, while sixty years later the percentage had declined to 89·18. The proportion of Canadian born increased steadily until the opening of the century, but has declined as a result of the increase of immigration after 1900. The Census of 1931 showed declines in the proportions of other British born and United States born as compared with 1921 but an increase in the percentage of other foreign born; the proportion of Canadian born has remained practically unchanged.

Worthy of note is the fairly steady increase of population born in the United States from 1·85 p.c. in 1871 to 4·25 p.c. in 1921, and the subsequent decline to 3·32 p.c. in 1931. Other foreign born increased from 0·87 p.c. in 1871 to 6·23 p.c. in 1911, declined to 5·87 p.c. of the total population by 1921 but, as already noted, increased substantially to 7·50 p.c. by 1931.

## 16.—Birthplaces of the Population of Canada, by Numbers and Percentages, According to the Censuses of 1871-1931.

Year.	Canadian Born.	Other British Born. <sup>1</sup>	Foreign Born.		Total Population.	Percentages of Total Population.			
			Born in United States.	Born in other Foreign Countries.		Canadian Born.	Other British Born.	Foreign Born.	
								Born in United States.	Other Foreign Born.

<sup>1</sup> Includes some hundreds of persons born at sea.

The birthplaces of the 1931 population were tabulated for the various provinces and territories, by sex, at p. 118 of the 1936 Year Book. In the Maritime Provinces, the population is shown by the Census of 1931 to be about 93 p.c. native born, and in Quebec about 91 p.c. In Ontario, however, the proportion sinks to about 77 p.c., in Manitoba to about 66 p.c., in Saskatchewan to about 65 p.c., in Alberta to about 58 p.c., and in British Columbia to about 54 p.c.

At pp. 133-140, inclusive, of the 1934-35 Year Book, a very complete analysis was given of the birthplaces of the Canadian people. Tables there published showed: population classified by province of residence and province of birth; population, for each province, classified by nativity of parents; Canadian born classified according to nativity of parents, by racial origin; and rural and urban population, other than Canadian born, classified according to year of arrival in Canada.

### Section 8.—Citizenship and Naturalization.

At the latest four decennial censuses, those of 1901, 1911, 1921, and 1931, inquiry has been made into the citizenship of the foreign-born population. The relevant instructions given to enumerators at the Census of 1931 were published at p. 141 of the 1934-35 Year Book.

Table 17 deals with the citizenship of the Canadian born, the British born, and the foreign born of the population residing in Canada at the date of the Census of 1931. As regards the total (8,069,261) native-born population, 8,052,459 were "Canadian Nationals" and were made up of 8,051,142 persons with uninterrupted citizenship and 1,317 naturalized repatriates. Of the total native born resident in Canada at the date of the census, 16,802 were aliens owing their allegiance to some foreign country—in the case of females usually as a result of marriage. The table on p. 142 of the 1934-35 Year Book showed the country to which allegiance was owed by these 16,802 Canadian-born aliens.

In the case of British born, 11.4 p.c. had not yet acquired Canadian domicile and of the foreign born 45.2 p.c. were still aliens. A more detailed analysis than that given below will be found at p. 143 of the 1934-35 Year Book.

#### 17.—Citizenship of Native-Born, Other British-Born, and Foreign-Born Residents in Canada in 1931, by Sex, According to Allegiance.

Nationality.	NATIVE BORN.			Nationality.	OTHER BRITISH BORN.		
	Total.	Male.	Female.		Total.	Male.	Female.

<sup>1</sup> This column includes foreign-born persons born in places other than continental Europe, Asia, or the United States. <sup>2</sup> The European country of allegiance was given at p. 143 of the 1934-35 Year Book.

**The Progress of Naturalization.**—The foreign-born residents of Canada numbered 1,122,695 in 1931 as compared with 890,277 in 1921, 752,732 in 1911, and 278,449 in 1901; among these the naturalized numbered 614,971 in 1931, 514,179 in 1921, 344,557 in 1911, and 153,908 in 1901, or 54.78 p.c., 57.75 p.c., 45.77 p.c., and 55.27 p.c., respectively. Alien residents in Canada showed an absolute decline between 1911 and 1921 of from 408,175 to 376,098, i.e., from 5.66 p.c. of the population to 4.28 p.c. Between 1921 and 1931, they increased to 507,724, or 4.89 p.c. of the 1931 population. Among the foreign-born residents of Canada, the United States born exceeded those born in any other country, although by continental groups the Europeans were more numerous. Between 1921 and 1931 the U.S. born declined from 374,022 to 344,574, but there was a substantial net increase in the total foreign born due to the large increase of Europeans. On the other hand, the percentage of the U.S. born who were naturalized to total U.S. born increased from 63.63 in 1921 to 72.44 in 1931, whereas the percentage of continental Europeans who were naturalized fell from 57.88 in 1921 to 49.13 in 1931.

### Section 9.—Language Spoken and Mother Tongue.

**Official Languages.**—In the Census of 1931, 1,322,370 persons were reported as speaking both the official languages of Canada, 6,999,913 speaking English, 1,779,338 speaking French and 275,165 as unable to speak either English or French. In a table on p. 121 of the 1936 Year Book the population was classified by racial origins and as able to speak one, both, or neither of the official languages.

**Rural and Urban Distribution.**—One interesting sidelight which analysis of the data from the 1931 Census has shown is the respective capacities of rural and urban people to speak the official languages; it is especially interesting to compare the proportions of them who are able to speak both languages and also the proportions unable to speak either. About twice as many speak both French and English in urban localities as in rural localities, and about three times as many of the latter as the former speak neither of these languages. There is, of course, greater opportunity for intermingling in urban residence than rural, and probably also greater necessity for acquiring the official languages in urban occupations. The obvious conclusion or expectation would be that larger proportions among the urban populations than among the rural have acquired both official languages. But other factors enter into the question, since the acquisition of both official languages is as much a matter of capacity to acquire them as of opportunity, intermarriage, necessity, and so on.

Table 18 compares the percentages of the rural and urban population of Canada speaking both official languages and speaking neither of them, classified by sex and age in 1931.

18.—Percentages of the Population Speaking Both and Neither Official Languages, by Quinquennial Age Groups, Sex, Rural and Urban, Canada, 1931.

Age Group.	Percentage Speaking both French and English.				Percentage Speaking neither Language.

Mother Tongue.—At p. 122 of the 1936 Year Book will be found a table showing the mother tongue of the population, by provinces and for the Dominion.

### Section 10.—Rural and Urban Population.

For the purposes of the census the population residing in cities, towns, and incorporated villages has been defined as urban, and that outside of such localities as rural. Thus the distinction here made between 'rural' and 'urban' population is a distinction of provincial legal status rather than of size of aggregations of population within limited areas. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban (the laws of Saskatchewan, for example, making provision that 50 people actually resident on an area not greater than 640 acres may claim incorporation as a village, while the Ontario law now requires that villages asking for incorporation shall have a population of 750 on an area not exceeding 500 acres), the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion, as far as comparable aggregations of population are concerned.

A table published at p. 147 of the 1934-35 Year Book gives the rural and urban populations, by provinces and sex, and divides the incorporated urban centres into two groups, *viz.*, under one thousand, and one thousand or over, thereby allowing a closer comparison than is possible from Table 19. The population in urban places having less than one thousand was shown to have decreased for the whole of Canada but increased in Prince Edward Island, Nova Scotia, and British Columbia. In Table 19 are given statistics showing the growth of rural and urban population, respectively, by provinces, since 1891. To a limited extent Table 20

will permit the student of population statistics to make, at least for Canada as a whole, his own line of demarcation between rural and urban populations.\*

While a summary comparison between urbanization in Canada in 1931 and in the United States in 1930 would lead us to the conclusion that Canada, though far less densely peopled than the United States, had an almost equally large percentage of its population in urban communities, *viz.*, 53.70 p.c. in Canada as compared with 56.2 p.c. in the United States, the fact that in the United States, inhabitants of places having under 2,500 population are included with rural population must be taken into account. A fairer basis of comparison is secured if the same population limits are taken for both countries, as may be done by using Table 20. Thus, at the Census of 1930, the United States had 29.5 p.c. of its population resident in cities of 100,000 or over, while Canada in 1931 had only 22.44 p.c. of its population in such places. The United States had an additional 18 p.c. of its population residing in cities of between 10,000 and 100,000 population, and 4.8 p.c. in cities and towns of 5,000 to 10,000, while Canada had in cities of these categories only 14.87 p.c. and 4.42 p.c., respectively, of its population. Thus, taking all places of 5,000 or over—the lowest population for which comparative figures are readily available—52.3 p.c. of the population of the United States resided in such places as compared with 41.73 p.c. of the population of Canada, showing the much higher degree of urbanization which has been reached in the United States—a natural thing in an older settled and more densely peopled country.

On the basis of the census classification, it is apparent from Table 19 that in the decade 1921-31, as in the previous one, urban communities absorbed nearly 77 p.c. of the total increase in population, with the result that the urban population of Canada in 1931 exceeded the rural by 767,330. Out of every 1,000 persons in the country, 463 were resident, on June 1, 1931, in rural and 537 in urban communities, as compared with 505 in rural and 495 in urban communities on June 1, 1921; 546 in rural and 454 in urban communities in 1911; 625 in rural and 375 in urban communities in 1901; and 682 in rural and 318 in urban communities in 1891.

From Table 20, showing the distribution of urban population in Canada by size of cities and towns, it is seen that Canada possessed, in 1931, two cities of more than half a million population. These are Montreal and Toronto, with 818,577 and 631,207 inhabitants, respectively. Two other cities, Vancouver and Winnipeg, have attained the 200,000 mark and Hamilton, Quebec, and Ottawa each have populations of over 100,000. The two western cities of Calgary and Edmonton are now in the 75,000 to 100,000 class. In this respect London, which excelled Edmonton in 1921, now takes the next lower place with a population of 71,148. Details of the population of these and other smaller cities and towns of 5,000 or over, are given by censuses from 1871 to 1931 in Table 21, while the populations of urban communities having, in 1931, a population of from 1,000 to 5,000 each, are given for 1901, 1911, 1921, and 1931 in Table 22.

All the larger cities have in their neighbourhoods growing "satellite" towns or other densely settled areas in close economic relationship with the central municipality. This phenomenon is to-day of increasing importance largely as a result of the greater ease and speed of transportation by motor vehicle. It has, therefore, been considered advisable to calculate the total populations resident in what the United

\* In the United States, urban population, prior to 1930, was classified by the Census Bureau as that residing in cities and other incorporated places having 2,500 inhabitants or more with certain minor qualifications, but in 1930 the definition was slightly modified to include townships and other political divisions, not incorporated as municipalities, having a total population of 10,000 or more each, and a population density of 1,000 or more per square mile. The direct result of this modification has been to increase slightly the proportion of urban population.

States census authorities call the "metropolitan districts" On this basis the total populations of the larger cities at the Census of 1931 were as follows: Greater Montreal, 1,000,159; Greater Toronto, 808,864; Greater Vancouver, 308,340; Greater Winnipeg, 280,202; Greater Ottawa (including Hull), 175,988; Greater Quebec, 166,435; Greater Hamilton, 163,710; Greater Windsor, 110,385; Greater Halifax, 74,161; and Greater Saint John, 55,611.\*

<sup>1</sup> Some of the towns of 1901 were included with rural. <sup>2</sup> As corrected in Census Report, Prairie Provinces, 1916.

<sup>3</sup> The populations (48,000, 56,446, and 98,967, respectively) in territory now comprised in the provinces of Alberta and Saskatchewan and in Yukon and the Northwest Territories were classified as rural in the censuses of 1871, 1881, and 1891.

<sup>4</sup> Urban and rural populations for 1911 and 1901 are as corrected in Census Report, Prairie Provinces, 1916.

<sup>5</sup> The urban population of 970,791, shown in Vol. I, Census 1911, is reduced to 966,842 by the transfer of the populations of Maniwaki, Martinville, Moisie, St. Bruno, St. Martin, and St-Vincent de Paul from urban to rural; by adjustments in area of the villages of St. Anne and Ste. Genevieve; and Extension of Boundaries Act, 1912.

<sup>6</sup> As changed by Extension of Boundaries Act, 1912.

<sup>7</sup> Vol. I, Census 1911, places the urban population of Alberta for that year at 141,937. Included in this figure was the population (5,250) of twelve places which, according to the Report of the Municipal Commissioner for Alberta, were not then incorporated. The places so included were Aetna, Banff, Bankhead, Bellevue, Bickerdike, Canmore, Cardiff, Exshaw, Hillcrest, Passburg, Queenston, and Elmpark. The correction resulting from this and from other small adjustments consequent upon more definite knowledge as to incorporated areas, places the urban population for 1911 at 137,662. Similar corrections have been made in the urban and rural figures for the Census of 1901.

<sup>8</sup> This includes South Vancouver and Point Grey, with 1921 populations of 32,267 and 13,736, respectively, which were then classified as 'rural'.

<sup>9</sup> Members of the Royal Canadian Navy were counted at their homes in the Census of 1931.

## 20.—Urban Populations, Classified by Size of Municipality Groups, 1911, 1921, and 1931.

In Cities, Towns, or Villages of—	1911.			1921.			1931.		
	Number of Places.	Popula- tion.	Per Cent of Total Pop.	Number of Places.	Popula- tion.	Per Cent of Total Pop.	Number of Places.	Popula- tion.	Per Cent of Total Pop.

500 and 1,000	241	174,781	2.43	290	215,648	2.45	322	281,375	2.23
Under 500.....	419	87,077	1.21	679	159,410	1.81	750	179,762	1.73
Totals.....	1,656	3,272,947	45.42	1,443	4,352,122	49.52	1,685	5,572,858	53.70

Population is shown in Table 20 to be increasingly attracted to the larger cities. Thus, not only have cities of over 500,000 population (Montreal and Toronto) increased their proportions to the total, but cities of from 100,000 to 500,000 have increased their aggregate population from 5.90 p.c. of the total to 8.46 p.c., and cities of between 5,000 and 100,000 from 17.68 p.c. to 19.29 p.c. in the decade 1921-31. As will be seen, the large absolute increases in the total population of municipalities of less than 1,000 persons for 1921 and 1931 were due almost entirely to the addition of newly incorporated places.\*

\*See also reference in text footnote (\*) at top of p. 101.

21.—Populations of Cities and Towns having over 5,000 Inhabitants, Decennial Censuses 1871-1931 and the Quinquennial Census of 1936.<sup>1</sup>

NOTE.—The cities and towns in which a Board of Trade exists are indicated by an asterisk (\*), and those in which there is a Chamber of Commerce by a dagger (†). In all cases the populations for previous censuses have been rearranged as far as possible to cover the same area as in 1931.

<sup>1</sup> The 1936 figures cover towns and villages of the Prairie Provinces only. <sup>2</sup> Under the Saskatchewan Town Act, Lloydminster, Alberta, is merged with Lloydminster, Saskatchewan, for municipal purposes.

**Rural and Urban Farm Populations.**—At p. 126 of the 1937 Year Book statistics of rural and urban farm population, by provinces, as compiled from the Census of 1931 were given, and at p. 299 of the 1934-35 Year Book details regarding farm workers, those farms employing hired labour, the period of employment and the cost of labour were shown. The reader is also referred to the item "Wage-earners" (in agriculture) in the index of the present volume for further information on these topics.

### Section 11.—Literacy.

The subject of literacy was discussed at pp. 131-132 of the 1936 Year Book. At p. 157 of the 1934-35 Year Book will be found a table showing the literacy of the population of 5 years or over from 1901 to 1931, at pp. 158-159 of the same edition the same information as is now summarized in Table 23 was given by sex, while on p. 160 was shown the literacy of the population of cities and towns of 30,000 population or over, as in 1931.

## 23.—Literacy of the Population of 10 Years of Age or Over, by Provinces, 1931.

NOTE.—Corresponding figures for 1921 are to be found in the 1924 Year Book, p. 131.

Province.	Popula- tion 10 Years or Over.	Can Read and Write.	Can Read only.	Can neither Read nor Write.	Percentages.

## Section 12.—School Attendance.

At pp. 132-133 of the 1936 Year Book a treatment of this subject will be found, together with tables showing school attendance, (1) of the population 5-19 years of age, by sex, for the census years 1911, 1921, and 1931, (2) of the total rural and urban populations, by sex, for 1931, and (3) of the population 7-14 years of age, by nativity and sex, for 1931.

## Section 13.—Blind and Deaf-Mutes.

The 1936 Year Book showed, at pp. 134-135, figures of the number of blind and deaf-mutes by provinces and sex in 1931, together with the number and proportion of such persons as found at the decennial censuses from 1881 to 1931. Summary statistics are given below.

24.—Deaf-Mutes<sup>1</sup> by Number and Proportion per 10,000 Population, by Provinces, 1881-1931.

Province.	Number.						Proportions per 10,000 Population.

**Section 14.—Dwellings and Family Households.**

An extensive treatment of this subject, as it came under observation at the Census of 1931, will be found at pp. 136-139 of the 1936 Year Book.

Two additional tables are given below which supplement that treatment. The first, Table 25, shows a classification of a very important family unit, viz., one-family urban householders living in rented homes. These data throw light on the housing situation since the housing problem chiefly affects those urban families that pay rent. The extent to which overcrowding exists among families with low earnings living in low rental dwellings is clear from a study of the figures.

Table 26 is interesting as showing family composition in regard to heads, dependants, and (in detail) children.

**25.—Classification of Urban Households of One Family with Husband and Wife Living Together in Rented Home, by Rent Paid, Earnings, etc., Canada, 1931.**

<sup>1</sup> Less than one one-hundredth of one per cent.

The fact that there were only 68,228 more children in urban families than in rural is probably the most striking feature of the comparison between the number of children in families of rural and urban areas. At the same time there were 247,798 more urban families than rural, with nearly the same proportion (about 70 p.c.) having some children. When the families of 4 children or less are compared, there are 214,308 more families and 366,830 more children in urban families than in rural. In 80 p.c. of the total number of families with children, the average number of children living at home is larger for urban than rural, although the general average is decidedly lower for urban. This lower average is mainly due to the fact that the proportion of large families is comparatively much greater in rural areas.

In the families with between 1 and 5 children, inclusive (which constitute the majority of all cases), the average urban family has much the larger percentage of children than the rural. This is rather striking since it would seem much easier for the rural family to carry the heavier load. There is no doubt that rural families, considering the actual number of children born, are more prolific. The phenomenon noted above is a matter of the number of children who live at home, not of the number of children born to any family or living away from home.

### Section 15.—Occupations of the Canadian People.

An article specially prepared for the Year Book, and analysing comprehensively the occupations of the Canadian people as shown by the 1931 Census, appeared at pp. 128-146 of the 1937 Year Book.

### Section 16.—Quinquennial Census of the Prairie Provinces.

The latest census of the Prairie Provinces was that taken as of June 1, 1936. The 1937 edition of the Year Book, at pp. 146-152, showed statistics covering the population of each province, by electoral districts, sex, conjugal condition, age distribution, racial origin, birthplace, and by rural or urban habitation. Unfortunately,

at the June 1 enumeration a small area in Saskatchewan with 654 inhabitants was not covered and had to be enumerated later. The 1936 figures as published for Saskatchewan in the 1937 Year Book should therefore be corrected by adding 654 to the total rural population there published. An adjustment is also to be made to the urban population by deducting 98 on account of disorganized urban centres; this is also to be added to the rural. The total difference to the rural population is therefore an addition of 752 and that to the urban a deduction of 98, the net result being an addition to the provincial total of 654. Normally the tables would have been republished in this edition, but the error was not apparent until most of the Year Book had been 'made-up'. In Volumes I and II of the 1936 Census, the figures are published in final form.

As the composition of the population of the three provinces, taken as a unit, cross classified according to racial origin and birthplace, is of general interest, the following table has been specially compiled for the Year Book. It shows the birthplaces of both the rural and urban populations for each of the principal racial strains making up the population of the Prairie Provinces. Of the total population of 2,415,545, the number of persons of British racial origin was 1,189,612 or 49.2 p.c., of whom 1,120,242, or 94 p.c. (46.4 p.c. of the total) were born in Canada or in other British lands. The percentage born in Canada was 75. The population of French origin numbered 137,778, or 5.7 p.c. of the total, the great majority being Canadian-born.

Other important elements in the population are the German, Ukrainian, and Scandinavian racial strains, amounting to 12.8 p.c., 9.4 p.c., and 6.8 p.c., respectively. By place of birth, the population is divided as follows: Canada, 1,648,490, or 68.3 p.c.; other British countries, 275,820, or 11.4 p.c.; U.S.A., 152,908, or 6.3 p.c.; and other foreign countries, 338,327, or 14.0 p.c. From the information presented below, the reader will be able to make further analyses, according to the particular phase of the subject in which he may be interested.

## Section 17.—Annual Estimates of Population.

While the populations in different countries are actually counted at decennial or quinquennial censuses, annual estimates of populations are required by modern States for many purposes, such as the calculation of birth, death, and marriage rates, and of per capita figures of production, trade, finance, consumption, etc. In different countries various methods of obtaining annual figures of post-censal populations are adopted. For example, it is possible, with good vital statistics and records of arrivals and departures, to obtain the actual population at any particular date with approximate accuracy by the simple method of adding births and arrivals and subtracting deaths and departures during the period elapsed since the census. This method is impracticable for Canada, with 4,000 miles of common boundary line with the United States, crossed in both directions every day by many thousands of people. In almost all civilized countries, the actual methods of making the estimates vary. Thus, the method of arithmetical progression is widely used in estimating the populations in the older countries of the world; this method involves the annual addition to the population of the country and of particular areas within it of one-fifth or one-tenth of the numerical increase in the last quinquennial or decennial intercensal period. In the case of Canada annual figures of population were purely estimates, made on the basis of past increases, prior to the Census of 1931. They have now been worked out on a basis which takes into consideration collateral data back to 1867, and the resulting figures are believed to state the populations at intercensal periods more accurately than any published prior to 1931.

The new method upon which calculations are based was described at pp. 108-109 of the 1932 Year Book.\*

### 28.—Estimates of the Population of Canada, by Provinces, Intercensal years, 1906-38.

NOTE.—At every census the previous post-censal data are adjusted to the newly recorded population figure. Figures for 1867-99 will be found at p. 141 of the 1936 Year Book.

## Section 18.—Area and Population of the British Empire.

Statistics of the areas and populations of the territories included in the British Empire in 1931, together with comparative figures of populations for 1921 and 1911, were given in a table on p. 165 of the 1934-35 Year Book.

## Section 19.—Area and Population of the World.

Statistics showing the areas and the populations of the various continents, and details of each country, as in 1931, were given in a table on pp. 168-169 of the 1934-35 Year Book.

\* The table of estimates and the description of the method upon which calculations are based are the work of M. C. MacLean, M.A., F.S.S., Chief of Social Analysis, Dominion Bureau of Statistics.

## CHAPTER V.—VITAL STATISTICS.\*

The collection of vital statistics commenced in Canada, as in England, with the registration of baptisms, marriages, and burials by the ecclesiastical authorities. These registers, maintained by the priests from the first settlement of the country, have made it possible for the vital statistics of the French colony to be compiled from the year 1610.† The system of registration by the clergy was continued after the cession of the country to the British, and was extended to the newly-formed Protestant congregations of Lower Canada by an Act of 1795, but the registration, particularly of births, among these latter remained seriously defective, both in Lower Canada and in the new province of Upper Canada, the pioneer settlers often going out into the wilds far from the authority of government and the ministrations of religion. An early attempt was made to remedy the situation through the census by including a schedule requesting births and deaths for the preceding year, but the efforts made to secure records of births and deaths at the Censuses of 1851 and 1861 produced most unsatisfactory results. Nevertheless, in spite of the inherent unsoundness of securing, at a point of time in a decennial census, a record of births and deaths occurring over a considerable period of time, this method was followed down to 1911, when the obviously untrustworthy character of the results led to the discarding of the data obtained at the inquiry.

In English-speaking Canada, the earlier scheme of registration of baptisms, burials, and marriages by the clergy was succeeded after Confederation by Acts for the enforcement of registration of births, marriages, and deaths, with the civil authorities. Such Acts were passed in Nova Scotia in 1864, in Ontario in 1869, in British Columbia in 1872, in Manitoba in 1881, in New Brunswick in 1887, and in Prince Edward Island in 1906. The provinces of Saskatchewan and Alberta were not established until 1905 and, until provincial Acts were passed after this date, civil registration in these provinces was governed by ordinances for the Northwest Territories, the first of which was passed in 1888.

The Dominion Government instituted in the early '80's a plan for compiling the annual mortuary statistics of cities of 25,000 population or over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax, and Saint John. By 1891 the list had grown to 25, at a time when, in most of the provinces, the only birth and death statistics were those of the municipalities. Upon the organization of provincial bureaus of vital statistics, however, this work was abandoned, though a conference of Dominion and provincial officials, held in 1893, passed a resolution calling upon the provincial and Dominion authorities to co-operate in the work of collecting, compiling, and publishing the vital statistics of the Dominion. This resolution had no immediate practical results in securing accurate or comparable vital statistics.

\* This chapter has been revised by W. R. Tracey, B.A., Chief, Vital Statistics, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Sec. 1, under "Population".

† For a summary of the vital statistics of the Roman Catholic population from 1610 to 1883, see the Statistical Year Book of Quebec, 1921, English or French edition, p. 51. For details, by years, of this movement of population, see Vol. V of the Census of Canada, 1871, pp. 160-265, and Vol. IV of the Census of Canada, 1881, pp. 134-145.

The 1912 Commission on Official Statistics recommended that "for the Dominion, now engaged in building up its national unity, it is important that uniform data should render possible to statisticians the institution of true interprovincial and international comparisons. By effective co-operation of the provinces with the Dominion, this object should be capable of attainment without sacrificing the liberty of each province to satisfy its own special statistical requirements." Yet, prior to 1920, it was impossible to compile any satisfactory series of vital statistics figures for Canada as a whole. Among the obstacles to such a national compilation were the inequalities of registration between the provinces, the lack of uniformity in classification and in the method of presentation, the omission in some cases of important data, the choice in some cases of the fiscal instead of the calendar year as the unit of time, and the fact that for some of the provinces within comparatively recent years the series of publications was broken, while for New Brunswick no provincial vital statistics at all were published from 1895 until 1920.

Co-operation was finally effected as a consequence of the establishment of the Dominion Bureau of Statistics under the Statistics Act of 1918, which specifically provided that the Bureau should publish an annual report on vital statistics. A scheme was first drawn up in the Bureau and submitted to the various provinces; then Dominion-Provincial conferences on vital statistics were held in June and December, 1918, when final discussions took place.

In 1919, as a result of conference, a plan was devised whereby the Bureau of Statistics and the Registrar General's office in each province would co-operate in producing national vital statistics for the Dominion. Under this national system, while registration of births, marriages, and deaths, is carried out as heretofore by the provincial authorities, the legislation of each province conforms in its essentials to a model bill, prepared by the Dominion Bureau of Statistics, one of the features of which was compulsory registration. The Bureau of Statistics undertakes compilation and tabulation.

Under the scheme outlined above, the vital statistics for all the provinces except Quebec were secured and compiled on a uniform basis for the years 1921 to 1925. The annual reports for these years may be obtained on application to the Dominion Statistician.

Quebec has been included in the registration area as from Jan. 1, 1926, from which date her statistics are on a comparable basis with those of the other provinces. The final reports for 1926 to 1936, including the statistics of all the nine provinces, have appeared and may be procured from the Dominion Statistician, with the exception of the report for 1931, which is out of print.

Two important considerations should be borne in mind by the student who uses either the tables which follow or the detailed reports issued by the Bureau of Statistics for comparative purposes. First, in spite of the improvements of the past decade, registration generally, and the registration of births in particular, is not as yet universally carried out. Secondly, the very considerable differences in the age and sex distribution of the population in different provinces make comparisons of crude birth rates and crude death rates, as among the provinces, unfair and misleading. All rates in this chapter have been recalculated on the basis of the revised estimates of population given on p. 113.

In 1938 the Vital Statistics Branch inaugurated a series of reports, classifying deaths in Canada by place of residence, based upon 1935 figures. The first report of this series has been issued in two parts, Part I containing 4 tables showing: (1) Deaths according to place of residence and place of occurrence, for cities and towns of 5,000 population or over, and for the remaining parts of counties or census divisions; (2) Deaths according to residence and cause of death, by provinces; (3) The same information as in (2), for cities of 40,000 population or over; (4) The same information for places of 5,000 population or over but under 40,000. Part II shows deaths according to residences and causes for counties and census divisions, exclusive of places of 5,000 population or over. This report may be obtained from the Dominion Statistician, at a price of 25 cents for each Part.

The series has been extended to cover live births, stillbirths, and deaths under one year and under one month for the year 1936. This material is now (March, 1939) on press.

**Yukon and Northwest Territories.**—The vital statistics of Yukon and the Northwest Territories have been collected and compiled since 1924. They are not, however, presented with those of the nine provinces in the tables of this chapter because the figures are not regarded as complete, the details are in many cases not available, and the small and varying population is not known with sufficient accuracy for each year to enable the rates to be calculated. As these territories contain less than 1/700th of the population of Canada, their vital statistics are a negligible factor in the total. Births, marriages, and deaths in Yukon and the Northwest Territories, for the years 1924-37 are summarized in the statement herewith:—

VITAL STATISTICS OF YUKON AND THE NORTHWEST TERRITORIES, 1924-37.

Year.	Yukon.			Northwest Territories.		
	Births.	Marriages.	Deaths.	Births.	Marriages.	Deaths.

1937 <sup>1</sup> .....	74	37	77	210	45	147

<sup>1</sup> Preliminary figures.

The vital statistics of the provinces are taken up in the following order: births, marriages, deaths, and finally natural increase.

### Section 1.—Births.

Throughout almost the whole of the civilized world the birth rate has, in the past generation, been on the decline, though the consequent reduction in the rate of natural increase has been partly offset by the synchronous decline in the death rate.

The crude birth rate of England and Wales, for example, was 35.4 per 1,000 population for the average of the decennium 1871-80, 32.5 in 1881-90, and 29.9 in

1891-1900. In 1913 the birth rate was 24.1, and, though it rose to 25.5 in 1920, it has fallen quite rapidly, with minor fluctuations since then to 14.8 in 1936.

Similarly, in France the crude birth rate declined from an average of 25.4 per 1,000 population in the 1870's, 23.9 in the 1880's and 22.2 in the 1890's to 21.4 in 1920, 16.1 in 1934, and 15.0 in 1936. In Germany, again, the crude birth rate was 39.1 in the 1870's, 36.8 in the 1880's, 36.1 in the 1890's, 25.9 in 1920, 17.6 in 1930, and 14.7 in 1933. Since then the rate has recovered to 19.0 in 1936.

In Canada the crude birth rate still stands at a comparatively high figure, being 19.8 per 1,000 in 1937. This, however, is largely due to the influence of Quebec, where the rate, although declining, stood at 24.1 per 1,000 in 1937, as compared with 16.6 per 1,000 in Ontario. In the other provinces the figures varied from a low of 15.0 in British Columbia to a high of 24.0 in New Brunswick.

Birth statistics are given by sex in Table 1, below. Table 2 gives the number of live births in cities and towns of 10,000 population or over for the years 1933 to 1937, inclusive. For some years previous to 1930 there was a definite tendency for such births to increase, but the figures given indicate an opposite trend since that year.

**Births by Place of Residence.**—The Vital Statistics Branch of the Dominion Bureau of Statistics has, at the time of going to press, a report in process of compilation showing births by place of residence. See p. 116.

**Sex of Live Births.**—Table 1 shows the number and proportion of live male and female births reported for each province of Canada during the calendar years 1935, 1936, and 1937, with averages for the five-year periods 1921-25, 1926-30, and 1931-35. The figures for Quebec commence only with the year 1926, when that province entered the registration area, and the totals for Canada are limited in the same manner in consequence. Every province shows an excess of male births for the years or averages shown in the table. The table shows that among every 1,000 born in 1937 in the whole of Canada, 514 were males and 486 females. In other words, there were 1,057 males born to every 1,000 females.

**1.—Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1935-37, with Averages for 1921-25, 1926-30, and 1931-35.**

NOTE.—For corresponding figures for single years 1921-25, see p. 155 of the Canada Year Book for 1927-28, and those for 1926-30, p. 156 of the Canada Year Book for 1933, and those for 1931-33, p. 156 of the 1936 Year Book.

<sup>1</sup>Includes East Windsor, Sandwich, and Walkerville.<sup>2</sup>Census of 1936.

**Nativity of Mothers.**—Table 3 shows, by provinces, the percentages of legitimate children born alive to Canadian-born, British-born, and foreign-born mothers, respectively, for the years 1935, 1936, and 1937. The influence of the limited immigration in recent years is reflected in the figures. In the Prairie Provinces of Manitoba, Saskatchewan, and Alberta, where the percentages born to foreign-born mothers in 1933 were 25.9, 36.3, and 40.4, respectively, they were 18.0, 25.7, and 30.0, respectively, in 1937. Thus more and more of the children of the West are coming within the class of third generation Canadian.

**Fertility Rates.**—The crude birth rate of a young country is subject to influences which vitiate comparison with older lands. These influences are the result, to some extent, of differences in age or sex constitution or in conjugal condition. For this reason birth rates are frequently based on the number of births per thousand women within suitably chosen age-groups. Such rates are commonly known as fertility rates. At pp. 150-152 of the 1936 Year Book specific fertility rates of married women between the ages of 15 and 49 years were given, by provinces, for 1921, 1922, and 1930-32. Such statistics will not again be compiled until 1941 census data are available, and the interested reader is referred to that table for this information.

**Multiple Births in Canada.**—During the twelve-year period 1926-37, out of a total of 2,811,630 recorded confinements, 33,938 or 1 in 82.8 were multiple confinements. Of these 33,599 were twin and 337 were triplet confinements, while one, in British Columbia in 1931, was a quadruplet confinement from which all the children died within a few hours of birth. The remaining multiple confinement resulted in the birth of the Dionne quintuplets (May 28, 1934).

Table 4 shows the incidence of multiple births in each year from 1933 to 1937. In 1937 one in every 86 confinements was a twin confinement, a proportion which is fairly representative for the other years as well. There were only 23 triplet

confinements in 1937. Of the children born alive or dead one in every 43 was the product of a multiple confinement. For children born alive the proportion was one in 44 and for children stillborn one in 20. In the multiple confinements stillborn children formed 6.0 p.c. of the total births as against 2.7 p.c. in single confinements.

#### 4.—Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1933-37.

NOTE.—For statistics from 1926 to 1932, see p. 162 of the 1938 Year Book.

born alive (five males and three females).

<sup>2</sup> Including two sets of quadruplets, all

**Ages of Parents.**—Table 5 shows the age distribution of married fathers and mothers in 1926 (the first year for which the figures are available for the whole of Canada) and for the years 1934-36. The fathers and mothers in each of these years are arranged according to age and then divided into four equal groups. Each point of age at which a separation comes is called a quartile. To obtain these points of age it is assumed that those in the same year of age are evenly distributed from its lower to its upper limit. In similar manner the deciles divide fathers or mothers in each year into ten equal groups.

In 1936 one-quarter of the married fathers were under 27.89 years of age, one-half under 32.50 years and three-quarters under 38.39 years. One-quarter of the married mothers were under 24.10 years of age, one-half under 28.37 years and three-quarters under 33.60 years. Nine-tenths of the fathers were under 44.09 years and nine-tenths of the mothers under 38.25 years. It will be noted that in every case for fathers, the 1926 figure is appreciably greater than that for 1936. In other words, parents, generally speaking, are somewhat younger than in 1926, although for brief intervening periods the trend has been reversed.

**5.—Quartile and Decile Ages of Married Fathers and Mothers, in Canada, 1926, and 1934-36.**

**Birthplaces of Parents.**—Table 6 classifies the children born in 1926, 1936, and 1937 by country of birth of parents, and furnishes some idea to what extent the coming generation of Canadian born will be the offspring of Canadian-born, British-born, or foreign-born parents. The term "country not specified", under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. Between 1926 and 1937 the percentage of births for which both parents were born in Canada rose from 61.4 in 1926 to 67.8 and 69.5 for 1936 and 1937, respectively.

**6.—Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1926, 1936, and 1937.**

NOTE.—Comparable statistics for earlier years, from 1926, will be found in previous Year Books commencing with the 1929 edition.

<sup>1</sup> Less than one-tenth of one per cent.<sup>2</sup> Includes the Ukraine.<sup>3</sup> This figure gives the number of children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose fathers and mothers were born in different countries.<sup>4</sup> This excludes the percentage of "mixed parentage", i.e., where the two parents were not born in the same country.

Origins of Parents.—Table 7 gives the numbers and percentages of births during 1926, 1936, and 1937, distributed by the principal origins.

**7.—Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1926, 1936, and 1937.**

Note.—Comparable statistics for earlier years, from 1926, will be found in previous Year Books, commencing with the 1929 edition.

	1937	229,235	229,235	151,419 <sup>3</sup>	100.0	100.0	68.8 <sup>4</sup>

<sup>1</sup> Less than one-tenth of one per cent.      <sup>2</sup> Including "Galician" and "Bukovinian".      <sup>3</sup> This figure gives the number of children whose fathers and mothers have the same origin. The difference between this figure and the total number of births represents the number of children whose fathers and mothers are of different origins.      <sup>4</sup> This excludes the percentage of "mixed parentage", i.e., parents not of the same origin.

**Illegitimacy.**—The ratio of illegitimate to total births is, generally speaking, low in Canada as compared with other countries. The steady increase which is noticeable in recent years is probably due, in some measure, to more complete data.

Out of 220,371 live births in the nine provinces of Canada in 1936, 8,633, or 3.92 p.c., were returned as the issue of unmarried mothers. Figures for 1937 show a total of 220,235 live births, of which 8,574, or 3.89 p.c., were returned as the issue of unmarried mothers. Out of this number, 4,398 were males and 4,176 females—a ratio of 1,053 males to every 1,000 females, as compared with 1,085 males per 1,000 females in 1936, and a general 1937 rate for all live births of 1,057 males to 1,000 females. (See Table 8.)

8.—Numbers of Illegitimate Births, Classified by Age of Mother, by Provinces, 1937, Percentages to Total Live Births, and Totals of Illegitimate Births, by Sex, 1935, 1936, and 1937, with Averages or Totals, 1926-37.

**Stillbirths.**—Statistics of the number of children born dead in 1937 are shown below for Canada, according to the status and age of the mother. Stillbirths to unmarried mothers were 3.7 p.c. of total illegitimate births in 1937, whereas total stillbirths were only 2.8 p.c. of total births in the same year.

9.—Stillbirths, Classified by Age of Mother, by Provinces and Legitimacy of Child, 1937, with Averages or Totals, 1926-37, and Ratios to Totals, 1935, 1936 and 1937.

## Section 2.—Marriages and Divorces.

### Subsection 1.—Marriages.

The marriage rate in modern countries of the western world is appreciably influenced by the general level of prosperity prevailing. Marriages in such English-speaking countries, for instance, as the United Kingdom, the United States, Canada, and Australia tend to increase in "good times" and to diminish in "hard times", when great numbers of those who are contemplating marriage are led to postpone the event. Thus an examination of the figures for individual years over the past decade clearly shows that marriages reached a peak in 1929 after which the recession was steady and marked until 1932; for 1933 there was an improvement, though of little more than 2 p.c. over 1932, for 1934 a further improvement of over 14 p.c. was recorded, and the improvement continued from 1935 to 1937. This general trend for Canada as a whole was followed in the figures for each province, except in the cases of Prince Edward Island and Saskatchewan, both of which showed decreases as compared with 1936.

Summary statistics of marriages and marriage rates, 1935-37, with averages for 1921-25, 1926-30, and 1931-35, are given in Table 13, p. 129 and in Table 32, p. 151.

**Age at Marriage.**—The average age of all bridegrooms in the Dominion in 1936 was 29.1 years and that of all brides 25.0 years. The average excess of the bridegroom's age was thus 4.1 years. It may be noted in Table 11 that when the contracting parties are grouped by age of bridegroom, the average difference in age is less for the younger groups, grooms under 20 being 0.4 years younger than the brides, while the excess of the average bridegroom's age was 1.4 years in the group

20-24, and steadily increased for each quinquennial age group until it was 11.6 years for the bridegrooms 50 years or over in 1936. On the other hand, when the parties are grouped by the age of the bride, the same regularity is not shown. In the case of brides in the age groups 25-29 years and 30-34 years, the bridegrooms approximate most closely in age to their brides. Since these tables are based upon all marriages contracted during the year, the figures given should not be understood to signify the average ages at first marriage. Out of each 1,000 bridegrooms in 1937, 937 were bachelors, 53 widowers, 10 divorced men; out of each 1,000 brides, 958 were spinsters, 34 widows, 8 divorced women. The first year in which as many as 1 p.c. of those marrying had previously been divorced was 1928. The comparison between the figures of divorces granted, as shown in Table 15 of this chapter, and the number of divorced persons re-married is of some interest. Thus 1,870 divorces were granted in 1937, while 895 divorced males and 731 divorced females married again. This, of course, does not mean that these were the same persons. Table 12 gives the average ages of brides and grooms by provinces.

**Nativity of Brides and Bridegrooms.**—The majority of marriages contracted in the western provinces in past years were between persons born outside Canada. This condition, however, is being quickly changed and such percentages in all the western provinces show a general reduction over the past few years. (See Table 13.) Both Canadian-born brides and bridegrooms are now in the majority in each province and in the Maritime Provinces and Quebec they show a marked predominance. Taking Canada as a whole, nearly 82 p.c. of all grooms and over 88 p.c. of all brides in 1937 were born in Canada; these are the highest percentages shown for the period covered by the statistics.

13.—Percentage Distribution by Nativity of Persons Married in Canada, by Provinces, 1935, 1936, and 1937, with Averages for 1921-25, 1926-30, and 1931-35.

NOTE.—For figures for single years 1921-25, see the 1929 Year Book, p. 166; for 1926-30, the 1933 Year Book, pp. 163-164; for 1931-35, the 1936 Year Book, p. 164; and for 1934, the 1938 Year Book, p. 170.

<sup>1</sup> In the United States 1932 is the latest year for which the rate has been computed.

### Subsection 2.—Divorces.

For many years subsequent to Confederation the number of divorces granted in Canada was very small, 1883, with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in these years.

One effect of the War was to increase divorce. The causes may be found in the generally unsettling psychological influences of the war period, and the long separations between men on active service and their wives. The provision of new facilities for divorce is also to be considered; owing to a decision of the British Privy Council, divorces in the Prairie Provinces, have, subsequently to 1918, been granted by the courts of these provinces, so that Ontario and Quebec have since then been the only provinces in which the applicant for divorce must secure a special private Act of Parliament. In 1930, however, an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce cases to the Supreme Court of Ontario.

The above-mentioned causes tended to increase the number of divorces granted in Canada, which grew steadily from 114 in 1918 to 873 in 1930. The numbers are those of final decrees, which alone really constitute divorces. In 1931 the number decreased to 692, this being largely due to the transfer of jurisdiction in

Ontario divorces from the Parliament of Canada to the Supreme Court of the province, with the consequent delay between the granting of the decree *nisi* and the decree absolute. Since 1931 there has been an increase of 170 p.c. in the total number of divorces granted. All the provinces show increases over that year. The statistics of divorces granted in the years 1918 to 1938, inclusive will be found in Table 15.\*

15.—Statistics of Divorces Granted in Canada, 1918-38.

NOTE.—In consequence of a decision of the British Privy Council, divorces in Manitoba, Saskatchewan, and Alberta have, subsequently to 1918, been granted by the courts of these provinces. The statistics shown here have been revised since the publication of the 1937 Year Book. For divorces in each year prior to 1918, see the 1921 Year Book, p. 825.

Section 3.—Deaths.

Within the past century, and more especially within the past generation, there has occurred throughout the countries of the white world a notable decline in the death rate, except where man has brought death upon himself through wars and the aftermath of wars. How far this decline has been due to advances in medical science, how far to better sanitation, and how far to the improvement in the general

\* The General Statistics Branch of the Dominion Bureau of Statistics publishes a bulletin on Divorce showing the sex of applicants and the number of persons re-married, together with comparisons with certain other countries. Application for this bulletin should be made to the Dominion Statistician.

conditions of living, as a result of the increase in the productive power of humanity, is in dispute, but concerning the facts there is no doubt.

Perhaps the most impressive testimony regarding this decline in the death rate is furnished by the mortality statistics of Sweden, where vital statistics have been kept with great accuracy for the whole nation ever since 1750. There, the crude death rate declined from an average of 27.4 per 1,000 in the decade 1751-60 to 14.3 in the decade 1911-20 and to 12.0 in 1936.

Similarly, in England and Wales, the crude death rate, which was 22.5 per 1,000 in the 60's, 21.4 in the 70's and 18.2 in the 90's of the past century, declined to 15.4 in the first decade of the present century and 12.1 in the third; it was 12.1 in 1936. In Scotland, again, the average rate was 22.1 in the '60's, 21.8 in the '70's, 18.6 in the '90's, 13.9 in 1921-25, 13.6 in 1926-30, and 13.4 in 1936.

There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was 15.3 per 1,000, owing to the influenza-pneumonia epidemic, as against 12.0 in 1917 and 11.9 in 1919. Over a period, however, these abnormalities are reduced to negligibility, and it remains generally true that from decade to decade there is a decline in the crude death rates of the countries of the white man's world.

As for Canada, while the period elapsed since the introduction of complete and comprehensive vital statistics in 1920 has been too short to establish a definite downward trend, the rate of 12.4 per 1,000 for that year, in the eight provinces then included in the registration area, was substantially higher than in any subsequent year. A decided improvement is shown in the deaths and death rate of Quebec for the years 1933-36, although for 1937 the rate has increased to such a point that it is little better than it was in 1932 (11.3 as compared with 11.4). On the whole, however, improvement has been in evidence since 1926, and latterly Quebec has shown a lower rate than any of the provinces farther east.

### Subsection 1.—General Mortality.

Summary statistics of total deaths and crude death rates in recent years are given in Table 32, p. 151, for Canada, by provinces. The absolute number of deaths as well as the crude death rate was higher for 1936 and especially in 1937. In fact total deaths were greater in 1937 than they have been since 1920, and the death rate was higher than it has been since 1930, being 10.2 as compared with 9.7 in 1936 and 10.7 in 1930. Increased rates for 1937 are common to all provinces except Manitoba and Saskatchewan, both of which showed unusual increases in 1936 over 1935.

**Age Distribution of Decedents.**—The numbers of males and females dying in the nine provinces in 1936 and 1937 are given by single years of age up to 5 and by quinquennial age groups thereafter in Table 16, together with the percentage of deaths occurring in each group in each of these years.

The quartile and decile ages of decedents for the years 1926, 1935, and 1936 are given for each sex and for the two sexes combined in Table 17. The fifth decile and second quartile (or the median) both mark the middle points of the arrays, and the deciles, dividing each half into five groups, give a more detailed picture of the age distribution in each half than do the quartiles. It is shown very definitely that the average ages of decedents have been increasing steadily. The method of construction and interpretation of this table is given on p. 121 in connection with a similar one showing quartile and decile ages of married fathers and mothers.

## 16.—Numerical and Percentage Distribution of Deaths in Canada, by Sex and Age Groups, 1926-37.

**Standardized Death Rates.**—While the crude death rate gives the actual mortality per 1,000 of population, the differing age constitution of the population in different communities and the high mortality among infants and elderly people make the crude death rate no true test of the relative expectation of life in such communities. Where the age constitution of a particular group is particularly favourable to low mortality, for example among the selected lives of soldiers in peace time, the crude rate will naturally be lower than elsewhere.

When comparisons of the rates of mortality in several communities are made by age groups the effects of differences in age constitution between these communities are eliminated, but by a process which does not bring together and express completely as a single figure the facts of the situation. It has therefore been considered

desirable to adopt a particular community as a standard, and to find what the death rates of other communities would have been if the age and sex constitution of their population had corresponded to those of the community taken as a standard. The 'standard' population chosen for this purpose in England and Wales and the United States is the "standard million", based on the age and sex distribution per million of the population of England and Wales at the Census of 1901. That age and sex distribution was as follows:—

Age Group.	Both Sexes.	Males.	Females.
All ages.....	1,000,000	483,543	516,457
Under 5 years.....	114,262	57,039	57,223
5-9 years.....	107,209	53,462	53,747
10-14 years.....	102,735	51,370	51,365
15-19 years.....	99,796	49,420	50,376
20-24 years.....	95,946	45,273	50,673
25-34 years.....	161,579	76,425	85,154
35-44 years.....	122,849	59,394	63,455
45-54 years.....	89,222	42,924	46,298
55-64 years.....	59,741	27,913	31,828
65-74 years.....	33,080	14,691	18,389
75 years or over.....	13,581	5,632	7,949

Regarding the standard million of England and Wales the Registrar General says: "As the population of this country in 1901 included relatively few infants and old people it forms a standard exceptionally favourable to low mortality".

The process above described has been applied to the population of the eight provinces, the former registration area of Canada, for the years 1921-37 and to the population of Quebec for the years 1926-37 in Table 18. Of the rates there given, those for 1921 and 1922 have been calculated directly, the proportion of the population in each sex and age group according to the Census of 1921 being assumed to hold true for 1922 also; similarly the rates for 1930, 1931, and 1932 have been calculated directly from the proportions shown in each sex and age group at the Census of 1931. For the intervening years, 1923-29, for which estimates of total population but not of population by age groups were available, the following method was adopted. The proportions which the standardized rates of 1921 and 1922 (correct to three decimal places) bore to the crude were averaged, similarly those of 1930 and 1931, and the change was assumed to have taken place in an arithmetical progression during the intervening seven years. Quebec not having been in the registration area in the year 1921, a standardized rate was not available for that year or for 1922, but as the proportion of the standardized rate to the crude depends primarily on the sex and age distribution of the population, and as this distribution was known for 1921 and 1931, and the actual proportion of standardized rate to crude rate for 1931, it was possible to compute a theoretical proportion for 1921. The same method was followed for the total of the nine provinces. The rates for 1933-37 have been computed on the assumption that the arithmetical progression, to which reference has been made, continued over those years in all provinces with the exception of the Prairie Provinces, for which the data of the 1936 Census were used.

In all of the eight provinces for which 1921 figures are given the proportion of the standardized rate to the crude was higher in 1921 than in 1931; in other words, the age distribution had become more unfavourable in the later year. In the Maritime Provinces, Quebec, and Ontario the process of 'standardizing' the death rate results in a reduced rate. This is particularly true of Prince Edward Island, which has the largest proportion of aged persons of all Canadian provinces. In the western provinces, on the other hand, the standardized rates are generally higher

than the crude, although in Manitoba the standardized rate has been lower than the crude for the years 1933-37.

18.—Crude and Standardized Death Rates in Canada, by Provinces, 1930-37, with Averages, 1921-25, 1926-30, and 1931-35.

<sup>1</sup> Quebec was not included in the registration area prior to 1926.

**Causes of Death.**—Nearly 87 p.c. of deaths recorded in Canada in the years 1933 to 1937 were due to the 32 specific causes named in Tables 19 and 20. In these tables the groupings are in accordance with the revision of the International List in 1929, which was first applied to Canadian mortality statistics for the year 1931. In the chart which accompanies the tables, the main object has been to attain the greatest degree of comparability possible over the whole period 1926-37. For this purpose it has been necessary to depart somewhat from the grouping of Tables 19 and 20.

In any analysis of the relative importance of the causes of death it must be remembered that the Canadian population is an ageing one—that is, the average age is being advanced year by year due to the long-term influences of a falling birth rate, falling specific death rates, and very limited immigration. Since 1913 immigration has been very much curtailed and its effect on age distribution of population is illustrated by the movement of what may be termed the "immigration hump" (that increment of population due to extensive immigration before 1913). This is gradually passing up the age scale. Further, due to the improvements in sanitation and health conditions generally, the average age at which death takes place has been pushed gradually higher. All these factors tend to thrust those causes which are commonly associated with advancing years to the fore.

Some of the effects of the ageing of the population can be observed by the comparison of crude and standardized mortality rates for individual causes of death in 1921 and 1931, since standardized rates are calculated in order to eliminate the effects of changes in sex and age composition of the population. Cancer provides a pronounced example of the ageing effect. The crude rate for cancer was 75.3 in 1921 and in 1931 it was 95.8. The increase was thus 27 p.c. The standardized rate, however, was 72.7 in 1921 and 81.4 in 1931, an increase of only 12 p.c.\* It may be stated, therefore, that roughly more than half of the increase in the crude cancer death rate between 1921 and 1931 was accounted for by the ageing of the population. Nevertheless, cancer shows a persistent increase over the years in spite of all efforts to control its spread. Diseases of the heart and arteries are two other important causes which affect people of advancing years and which have shown substantial increases. In the case of diseases of the heart, the crude rate showed an increase of 25.5 p.c. between 1921 and 1931, but, again, the standardized rate increased by only 9 p.c.\* The crude rate for diseases of the arteries advanced by no less than 71 p.c. and the standardized by 50 p.c.\* over the decade. For nephritis, a disease which falls in the same general class, the increase in the crude rate was 28.5 p.c. and in the standardized, 12.5 p.c.\* Pneumonia is particularly fatal among those of advanced years and among infants; the same influences as have been mentioned have, no doubt, affected the figures for this disease.

\* More accurate diagnosis should not be overlooked as a factor in changing death rates from these diseases.

#### 19.—Deaths in Canada, by Principal Causes, 1933-37.

<sup>1</sup> The numbers given in this column refer to the International List of Causes of Death, as revised in 1929 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate, or abridged form, is accepted in almost all civilized countries.

## DEATH RATES PER 100,000 POPULATION IN CANADA

1926-1937

(EXCLUSIVE OF THE NORTHWEST TERRITORIES AND YUKON)

## EIGHT IMPORTANT CAUSES OF DEATH

(RATES PER 100,000)

\* The rubrics (of the International List) included in the indicated groups have been selected to preserve the greatest degree of continuity possible. For this purpose it has been necessary to depart in these cases (indicated by the asterisks) from the groupings in Tables 19 and 20. In all other cases the classification is the same as shown in the tables.

## 20.—Death Rates per 100,000 Population in Canada, by Principal Causes, 1933-37.

Int. List No. <sup>1</sup>	Cause of Death.	1933.	1934.	1935.	1936.	1937.

199, 200	Ill-defined diseases.....	9.3	8.7	7.0	6.5	7.0
	<b>Totals, Death Rates per 100,000 Population.....</b>	<b>955.9</b>	<b>939.7</b>	<b>966.6</b>	<b>971.9</b>	<b>1,024.9</b>

For footnote, see end of Table 19, p. 136.

**Deaths in Canadian Cities.**—Table 21 gives the numbers of deaths in Canadian cities and towns of 10,000 population or over for the years 1933-37, together with averages, 1926-30 and 1931-35. Deaths in Canada as a whole declined steadily for the period 1931-34, but for 1935, 1936, and 1937 there were substantial increases. The figure for the latter year was 113,824, over 9,000 more than for 1931. The total deaths of the 67 cities listed in Table 21 show a slightly increased proportion to population for the five-year period 1931-35 as compared with 1926-30. For 1932, which marked the depth of the economic depression, the deaths in these cities increased, thus going against the general trend for Canada; for other years, however, the general trend was followed.

**Deaths by Place of Residence.**—The Vital Statistics Branch of the Dominion Bureau of Statistics, has, at the time of going to press, a report in process of compilation showing deaths by places of residence, (see p. 116).

<sup>1</sup> Census of 1936.

**Comparative Crude Death Rates of Different Countries.**—In Table 22 will be found a comparative statement of the crude death rates of various countries for the latest available year. Those of the provinces of Canada are also given for comparison. The Netherlands, New Zealand, Australia, and the Union of South Africa (Whites), are the only countries with death rates under 10.0 per 1,000 of population. The low death rates in the Prairie Provinces are, in all three cases, due in part to a favourable age distribution of population.

22.—Crude Death Rates of Various Countries and of the Provinces of Canada in Recent Years.

Country or Province.	Year.	Crude Death Rate.	Country.	Year.	Crude Death Rate.
Netherlands .....	1936	8.7	Finland .....	1936	13.1

Subsection 2.—Infantile and Maternal Mortality.

In recent years a great part of the energy devoted by the medical profession and sanitarians to effect a decline in the death rate has gone to reduce infantile mortality, and in this field a large measure of success has been attained. In Canada, the Dominion, provincial, and municipal health authorities have all taken part in the struggle to reduce infantile mortality, and usually, in the absence of epidemics, each year is showing an improvement. In the seventeen years for which the figures are available there is evident a very considerable decline in infantile mortality, although the rate for 1937 shows an increase over 1936. In 1921 the infant death rate for Canada (using figures from provincial sources for Quebec) was 102 per 1,000 live births. This rate had been reduced to 76 in 1937. Table 23 gives figures for the whole of Canada for the years 1931 to 1937 and averages for the five-year periods 1921-25, 1926-30, and 1931-35. The infantile mortality in Quebec, which has exceeded that of any other province in the past, was below that of New Brunswick in 1937. A study of the Quebec rates shows that steady improvement has been made in the eleven-year period during which the province has been included in the registration area. In Canada as a whole almost 7,000 infant lives were preserved in 1937 which, under conditions prevailing in 1926, would probably have been lost.

23.—Infantile Mortality, by Provinces, together with the Rates per 1,000 Live Births, 1931-37, with Averages for 1921-25, 1926-30, and 1931-35.

<sup>1</sup> Exclusive of the Territories.

<sup>2</sup> Quebec was not included in the registration area prior to 1926.

Infantile Mortality by Causes of Death.—Twenty-one principal causes of death accounted in the years 1926 to 1937 for between 91 and 92 p.c. of the infantile mortality experienced in the Dominion, as is shown in Table 24. It is noteworthy that four causes present at birth, *viz.*, premature birth, injury at birth, congenital debility, and congenital malformations, accounted for over 40 p.c. of the infant

deaths of 1937. In 1926 it was 41.4 and in 1930, 42.3, and since the decline in rate of infant deaths has decreased by nearly 30 p.c. in the interval since 1926, great improvement in the post-natal care of infants is indicated. In the years 1936 and 1937, 50.7 p.c. and 45.1 p.c., respectively, of all infants who died were less than one month old, and 37.2 p.c., and 32.5 p.c., respectively, were less than one week old, as is shown in Table 25.

#### 24.—Infantile Mortality in Canada by Principal Causes of Death, 1926, 1936-37.

NOTE.—Figures for the former registration area for the single years 1921 to 1924 will be found at pp. 182-183 of the 1927-28 Year Book, and for 1925 to 1927 at pp. 177-178 of the 1929 Year Book. Figures for the whole of Canada for the years 1927 and 1928 will be found at pp. 133-140 of the 1932 Year Book, for 1929 and 1930 at pp. 177-178 of the 1933 Year Book, for 1931, 1932, and 1933 at pp. 202-203 of the 1934-35 Year Book, for 1934 at pp. 176-177 of the 1936 Year Book, and for 1935 at pp. 182-183 of the 1938 Year Book.

<sup>1</sup> Exclusive of the Territories.

**Infantile Mortality in Canadian Cities and Towns.**—Table 26 shows for the cities and towns of 10,000 population or over, the numbers of infant deaths and the death rates per 1,000 live births for the years 1935-37. But a very low rate for any particular year means little since wide fluctuations from year to year are the rule. Moreover, since maternity hospitals in many urban centres draw patients from surrounding districts, the rates based on place of occurrence, shown in Table 26, are often quite different from rates based on place of residence. This is illustrated particularly in the case of Westmount, where the number of infant deaths under one year by place of occurrence in 1937 was 25 compared with 8 by place of residence. Vancouver has a splendid record among the large cities over the three years. Three Rivers, Quebec city, Sorel, Hull, Glace Bay, Thetford Mines, Chicoutimi, Joliette, and Westmount have all rates of over 100 for 1937, and most of them have high rates over the three-year period. Apart from Vancouver, already mentioned, among the large cities Montreal has recorded steady improvement over the period and Winnipeg and Toronto have very low rates and good records.

The infantile mortality in the cities of Canada has been greatly reduced in the years since the inauguration of Dominion vital statistics. Thus the rate for Toronto has fallen from 90 in 1921 to 47 in 1937, that for Winnipeg from 78 to 42, for Vancouver from 56 to 33, for Hamilton from 88 to 38, for Ottawa from 130 to 85, for London from 92 to 37, for Edmonton from 89 to 46, for Halifax from 135 to 67, for Saint John from 147 to 62. Altogether, in the 13 cities of 40,000 population or over in the former registration area of Canada, there were 41,923 live births in 1921 and 3,833 infant deaths, being a rate of 91 per 1,000 live births. In 1937 in these same cities there were 35,940 live births but only 1,762 infant deaths, or a rate of 49 per 1,000 live births.

**Infantile Mortality in Various Countries.**—The rate of infantile mortality to live births has been greatly reduced in civilized countries by the recent advances in medical science and in sanitation. The low record is held at the present time by New Zealand, where in 1936 the rate of infantile mortality was only 31 per 1,000 live births as compared with 68 in 1905. The Netherlands, Australia, Norway, and Sweden, with rates of 39, 41, 42, and 43 in their latest available year (1936) were next in respect of low infantile mortality.

As showing the improvement in recent years, it may be stated that the rate of infantile mortality in England and Wales has been reduced from 128 per 1,000 live births in 1905 to 59 in 1936, while the rate in Germany has declined from 196 in 1904 to 66 in 1936. In the Netherlands, again, the rate has declined from 131 per 1,000 live births in 1905 to 39 in 1936. Statistics are given in Table 27 by leading countries and by provinces.

**Infantile Mortality in Certain Cities of the World.**—It is one of the greatest triumphs of our time that city life is in our day, if not as healthy, yet not necessarily more dangerous to human, especially to infant, life than the average living conditions in the country as a whole.

To give particular examples, the rate of infantile mortality in New York was 45 per 1,000 live births in 1936, as against a rate of 57 per 1,000 for the birth registration area of the United States. In 1936, Berlin had an infantile mortality rate of 61 per 1,000 live births, as compared with 66 for Germany; Paris had a rate of 70 (Av. 1934-36), compared with a rate of 67 for France in 1936. On the other hand, in 1936, London had a rate of 66 compared with 59 for England and Wales.

In Canada, Montreal had, in 1936, an infantile mortality of 81 per 1,000 live births as compared with 83 for the province of Quebec. Toronto had, in 1936, an infantile mortality rate of 51 per 1,000 live births as against 55 for the province of Ontario, while Winnipeg and Vancouver had much lower infantile mortality rates than their respective provinces. Over a number of years both Vancouver and Victoria have shown two of the lowest infantile mortality rates in the world.

**Maternal Mortality.**—Of cognate interest with infantile mortality is the maternal mortality arising out of pregnancy and child-birth. This maternal mortality is shown by Table 29 to be at its lowest among mothers under twenty-five years of age. The mortality among mothers of different ages per 1,000 live births is shown for the years 1934-37; averages are also shown for the years 1926-30 and 1931-35. The maternal mortality is shown by provinces and age groups in Table 30 and by causes of death in Table 31.

### 29.—Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1934-37, with Averages for 1926-30 and 1931-35.

NOTE.—Comparable figures for 1926-32 will be found at p. 208 of the 1934-35 Year Book, and for 1933 at p. 186 of the 1937 Year Book.

<sup>1</sup> Exclusive of the Territories.

As compared with the previous year, the number of maternal deaths shows a decrease of 162, or 13 p.c., but the decrease from 1930 is over 23 p.c. Decreases are shown for all provinces except Prince Edward Island, British Columbia, and Saskatchewan as compared with 1936 and in the last-named province the figure was the same as in 1936. By far the most serious causes of maternal mortality are puerperal septicæmia, and puerperal albuminuria and eclampsia (Int. List Nos. 140, 142a, 145, and 146), and deaths from these causes decreased from 687 in 1936 to 607 in 1937, or by 11.6 p.c.

#### Section 4.—Natural Increase.

Summary statistics of the births, deaths, and natural increase (births minus deaths) per 1,000 of population are given for the years 1921 to 1937, by provinces, in Table 32. Statistics of marriages are also included in this table for convenience. The province of Quebec is regarded as having one of the highest rates of natural increase per 1,000 population of any civilized area. The rate was 17.1 in 1931 and, while it has been appreciably reduced in line with common experience, it stood at

12.8 in 1937. Saskatchewan has usually approached Quebec in the matter of natural increase and for the years 1934 and 1935 the rates for this prairie province exceeded those for Quebec, although for 1936 and 1937 they were lower. Alberta and New Brunswick follow in the order given. In the case of the two western provinces the high rates of natural increase are due to their relatively younger populations and lower crude death rates, but in the case of New Brunswick the condition of an abnormally high birth rate combined with a high death rate exists. The high rates for these provinces brought the averages for Canada up to 10.6 in 1935, 10.3 in 1936, and 9.6 in 1937, in spite of the fact that the rate for British Columbia, which has always been low, was only 4.4 in 1937. The rate of natural increase in 1936 was 14.6 per 1,000 in the Union of South Africa (Whites), 7.8 in New Zealand, 7.7 in Australia, 5.2 in the Irish Free State, 5.8 in Northern Ireland, 4.5 in Scotland, and 2.7 in England and Wales, so that Canada compares quite favourably with most other British countries.

The rates of natural increase per 1,000 of the mean population for other countries in the latest years are as follows, the figures being for 1936: Netherlands, 11.5; Japan, 12.4; Italy, 8.7; Denmark, 6.8; Germany, 7.2; United States, 5.2; Finland, 5.0; Switzerland, 4.2; Norway, 4.2; Belgium, 2.4; Sweden, 2.2; France, -0.3.

BIRTH RATES, DEATH RATES AND RATES OF NATURAL INCREASE  
IN CANADA  
1926-1937

RATES PER 1000 POPULATION  
(EXCLUSIVE OF THE NORTHWEST TERRITORIES AND YUKON)

During recent years the rate of natural increase of the population of Canada has declined. In 1921 the rate was 17.8; it declined to 13.3 in 1926 and to 12.2 in 1929. After 1929 there was a temporary improvement but, as Table 32 shows, the rates for 1935, 1936, and 1937—10.6, 10.3, and 9.6, respectively—continued the downward trend. Among the provinces the trends generally follow that of Canada as a whole, except in the Maritime Provinces, for each of which the trend is not so regularly downward and has, in fact, been upward since 1934. Quebec shows the greatest improvement in death rate for the period since 1926. The birth rate is declining here as elsewhere and the rate of natural increase has shown a definitely downward trend, although not so markedly as that of Saskatchewan.

Statistics of natural increase in cities and towns of 10,000 population or over are given for the period 1926-37 in Table 33, but these are not worked out as rates

per thousand of population, though the census populations in 1931, which are also given, furnish some guide to such rates.

### 32.—Summary of Births, Marriages, Deaths, and Natural Increase, by Provinces, for the calendar years 1935-37, with Averages for 1921-25, 1926-30, and 1931-35.

NOTE.—For other than census years birth, marriage, and death rates are calculated on estimated population (see p. 113). Figures for individual years 1921-25 will be found at p. 160 of the 1927-28 Year Book; for 1926-30 at p. 150 of the 1933 Year Book; for 1931-32 at p. 147 of the 1936 edition; and for 1933 and 1934 at p. 190 of the 1937 Year Book.

Province.	Births.	Birth Rate per 1,000 Population.	Marriages.	Marriage Rate per 1,000 Population.	Deaths.	Death Rate per 1,000 Population.	Excess of Births over Deaths.	Rate of Natural Increase per 1,000 Population.

<sup>1</sup> Census of 1936.

**Natural Increase, by Sex.**—In Table 34 the relationship of births to deaths is shown by sex from 1926 to 1937 for Canada and for 1937 by provinces. In spite of higher male births, the natural increase is shown to be lower for males than females due to the higher mortality among the former.

**34.—Births, Deaths, and Natural Increase in Canada,<sup>1</sup> by Provinces and for each Sex, 1937, with Totals, 1931-37 and Averages, 1926-30, and 1931-35.**

Year and Province.	Males.			Females.			Both Sexes.

## CHAPTER VI.—IMMIGRATION AND COLONIZATION.\*

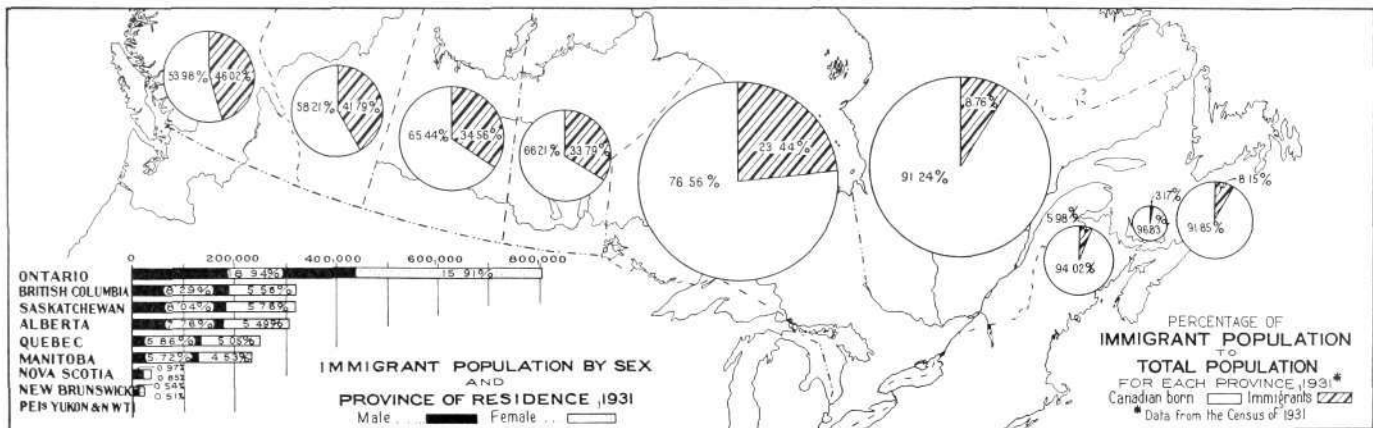

While the great majority of French Canadians can trace their descent to ancestors who left the Old World 250 years ago or even longer, most English-speaking Canadians are comparative newcomers both to Canada and to this continent, though a considerable number of the United Empire Loyalist families had been resident in the old colonies for generations before they moved north to establish English-speaking settlements in what is now the Dominion of Canada. During the middle third of the nineteenth century, a great English-speaking migration entered the province of Ontario and made it, for the first time, more populous than the sister province of Quebec, thus bringing about the agitation for representation by population. Thereafter, immigration slackened until the dawn of the twentieth century brought another flood of settlers to the newly opened territories of the great Northwest, resulting in an increase of population between the censuses of 1901 and 1911 greater than the combined increase of the three decades from 1871 to 1901.

Immigration during the second decade of the twentieth century promised, at its commencement, to be even greater than during the first. In its first three years no fewer than 1,084,934 persons entered Canada for purposes of settlement, but the Great War, which commenced for Canada on Aug. 4, 1914, dried up the sources of our immigration in the United Kingdom and Continental Europe, where every able-bodied man was needed for the defence of his country. Immigrant arrivals from the United Kingdom in 1918 numbered only about 3,000, as compared with 150,000 in 1913; immigrant arrivals from Continental Europe numbered less than 3,000 in 1916, as compared with approximately 135,000 in 1914. Since the War, immigration to the Dominion has never approached that of the pre-war period.

### Section 1.—Statistics of Immigration.

Immigration to Canada, as to other new countries, is generally greatest in "boom" periods, when capital as well as labour is leaving the older countries for the newer in order to secure the more remunerative investments generally to be found in virgin territories where the natural resources are still unexploited. In periods of depression, however, the sending abroad of both capital and labour is diminished, both preferring at such times to endure the ills which they know at home rather than take the risks of a new adventure at a distance. Indeed the depression which began about the close of 1929, with its accompanying unemployment and unsold surplus of farm products, raised the question whether it was desirable that Canada should accept immigrants in any considerable number. Therefore, the Government, on Aug. 14, 1930, passed an Order in Council whereby immigrants, except Britishers coming from the Mother Country or self-governing Dominions, and United States citizens coming from the United States, were allowed to come in only if they belonged to one of two classes—(a) wives and unmarried children under eighteen years of age, joining family heads established in Canada and in a position to look after their dependants; (b) agriculturists with sufficient money to begin farming in Canada. This limitation applies to the whole continent

\* Revised under the direction of F. C. Blair, Director of Immigration, Department of Mines and Resources, Ottawa.

of Europe as well as to many other countries. Regulations affecting immigration from the British Isles, the British Dominions or the United States have not been changed but a policy of no solicitation has been rigidly adopted. In harmony with this policy the Department of Immigration and Colonization, during 1931, closed all its Canadian Government Information Bureaus in the United States and reduced its representation in the British Isles.

For many years the Immigration Regulations have contained a general provision that immigrants coming to Canada must have sufficient funds to look after themselves until employment is secured. Naturally, when employment is readily available a sum would be considered sufficient which would be insufficient in periods of unemployment, and the enforcement of this regulation is an important factor in reducing immigration at the present time. An Order in Council (Aug. 7, 1929), prohibiting the landing in Canada of any immigrant coming under contract or agreement, expressed or implied, to perform labour or service of any kind in Canada, is also in effect but this prohibition does not apply to farmers, farm labourers, or houseworkers. Under the Order, the Minister of Immigration and Colonization may admit any contract labourer if satisfied that his labour or service is required in Canada.

The number of immigrants coming to Canada is shown by calendar years from 1852 to 1938 in Table 1, and the number of immigrant arrivals in Canada from the United Kingdom, the United States, and other countries, is given by years from 1908 in Table 2.

1.—Numbers of Immigrant Arrivals in Canada, calendar years 1852-1938.

Year.	Number.	Year.	Number.	Year.	Number.	Year.	Number.
1852	29,307	1874	39,373	1896	16,835	1918	41,845

1865	18,958	1887	84,526	1909	173,694	1931	27,530
1866	11,427	1888	88,766	1910	286,839	1932	20,591
1867	14,666	1889	91,600	1911	331,288	1933	14,382
1868	12,765	1890	75,067	1912	375,756	1934	12,476
1869	18,630	1891	82,165	1913	400,870	1935	11,277
1870	24,706	1892	30,996	1914	150,484	1936	11,643
1871	27,773	1893	29,633	1915	36,665	1937	15,101
1872	36,578	1894	20,829	1916	55,914	1938	17,244
1873	50,050	1895	18,790	1917	72,910		

**Sex and Conjugal Condition of Immigrants.**—As shown by Table 3, the 15,101 immigrants who came to Canada in the calendar year 1937 included 6,300 males and 8,801 females, males constituting only 41.7 p.c. of the total, as compared with 41.4 p.c. in 1936. Prior to 1932 males normally exceeded females, as shown on p. 213 of the 1934-35 edition of the Year Book, where figures for the fiscal years 1911-34 will be found. Similar information for the calendar years 1929-37 is given in Table 4.

## 2.—Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States, and Other Countries, calendar years 1908-38.

NOTE.—The 1936 edition of the Year Book showed, at p. 185, statistics of immigration on this basis, by calendar years from 1881 to 1900 and by fiscal years from 1901 to 1935.

Year.	Immigrant Arrivals from—			Total.	Year.	Immigrant Arrivals from—			Total.
	United Kingdom.	United States.	Other Countries.			United Kingdom.	United States.	Other Countries.

**Racial Origins of Immigrants.**—Where there is any considerable immigration into a democratic country, the racial and linguistic composition of the immigrants is of great importance. Canadians prefer that settlers should be of a readily assimilable type, already identified by race or language with one or other of the two great races now inhabiting this country and prepared for the duties of Canadian citizenship. Since the French are not, to any great extent, an emigrating people, this means in practice that the great bulk of the preferable settlers are those who speak the English language—those coming from the United Kingdom or the United States. Next in order of readiness of assimilation are the Scandinavians, Dutch, and Germans, who readily learn English and are already acquainted with the working of democratic institutions. Settlers from Southern and Eastern Europe, however desirable from a purely economic point of view, are less readily assimilated, and the Canadianizing of the people who have come to Canada from these regions in the present century is a problem both in the agricultural Prairie Provinces and in the cities of the East. Less assimilable still, are those who come to Canada from the Orient. On the whole, the great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those Continental European countries where the population is ethnically closely related to the British, though for some years there was an increasing immigration of Slavs.

The racial origins of the immigrants who arrived in Canada in the calendar years 1926-37 are shown in Table 5. In the latest year the British races contributed 41 p.c. of the immigrants and the French 6 p.c.

#### 5.—Racial Origins of Immigrants into Canada, calendar years 1926-37.

NOTE.—Dashes in this table indicate that no immigrants were reported under the corresponding stub items.

**Assimilation of Immigrants.\***—A sidelight on the question of the assimilation of immigrants is shown by Table 6, the statistics of which are taken from Volume I of the Census of 1931. These figures show the racial origins of the population, by country of birth, and the leading races with which males intermarry. The upper part of the table is interesting inasmuch as it shows the degree to which non-British stocks are becoming basic parts of the population, almost 80 p.c. of the persons of Dutch racial origin, for instance, being now Canadian-born.

The lower part indicates the varying tendencies towards intermarriage of persons of different racial origins. By 1931, 37.8 p.c. of the married men and 37.6 p.c. of the married women of North Western European origins had married outside their respective stocks, as against 18.4 p.c. of the men and 18.0 p.c. of the women of Southern, Eastern, and Central European stocks. Thus the North Western Europeans as a group had intermarried with others over twice as much as the Eastern and Central Europeans. Of the linguistic groups, the Scandinavians had married out to the greatest extent—approximately 54 p.c. for the men and 52 p.c. for the women; the Germanic peoples ranked second with 32 and 33 p.c. Only 25.9 p.c. of the men of Latin and Greek origin had crossed the racial line in marriage and 11.8 p.c. of the women; for the Slavs the figures were 17.6 and 19.4 p.c., respectively. The progress of intermarriage has thus proceeded much further with the Scandinavian and Germanic origins than with the Slavic and Latin and Greek. Many stocks have scarcely intermarried at all.

\* For further information on this subject, the reader is referred to Census Monograph No. 4 "Racial Origins and Nativity of the Canadian People", which may be obtained from the King's Printer, Ottawa, price 35 cents.

6.—The Cumulative Effects of Immigration on the Racial Composition of the Population: Percentages of each Origin Born in Leading Countries and Leading Races with which the Males have Intermarried, 1931.

**Languages of Immigrants.**—The languages of immigrants ten years old or over, arriving *via* ocean ports and from the United States, are shown for the calendar years 1931-37, in Table 7. English-speaking immigrants constituted 54 p.c. of the total in 1937, and French-speaking immigrants nearly 4 p.c.

**Nationalities of Immigrants.**—In the calendar year 1937 the percentage of British subjects immigrating to Canada was 26.6, while that of United States citizens was 31. In 1930, when total immigration was over eight times that of the latest year, the proportions were 34 p.c. and 21 p.c., respectively. The third largest group, comprising immigrants of Polish nationality, dropped from 16 p.c. in 1930 to 13.7 p.c. in 1937. Table 8 shows the nationalities of immigrants for the seven latest years.

**Countries of Birth of Immigrants.**—In Table 9 will be found the countries of birth of the immigrants into Canada in the calendar years 1931-37. The figures show that the United States with 4,180 was the birthplace of more of the 1937 immigrants than any other single country. This has been the case since 1930. In 1937 Poland came second with 2,095, England third with 1,603, and Czechoslovakia fourth with 1,456.

**Ports of Arrival of Immigrants.**—Throughout the greater part of our history, Quebec has been the port at which the greatest number of our immigrants have landed. Of recent years there has been a tendency for a larger percentage of immigrants to arrive at the port of Halifax. This would appear to have been due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Figures for recent years are given in Table 10.

**Destinations of Immigrants.**—Table 11 shows that in the nine latest calendar years the province of Ontario continued to receive the largest number of immigrants, as has been the case since 1905. In 1929 and 1930 Manitoba was in second place, while in the eight latest years Quebec stood second as the immediate destination of new arrivals. The 1934-35 edition of the Year Book gives similar information, by fiscal years, from 1901 to 1934.

**11.—Destinations of Immigrants into Canada, by Provinces, calendar years 1929-38.**

**Occupations of Immigrant Arrivals.**—The immigrants most universally acceptable to Canadians are those who settle on the land or those females who enter domestic service. In Table 12 will be found statistics of the occupations and destinations of immigrants arriving in Canada during the calendar year 1937.

12.—Immigrants Arriving in Canada, Classified by Occupation and Sex, According to Destination, calendar year 1937.

NOTE.—Dashes in this table indicate that no immigrants were reported under the corresponding stub item.

**Prohibited Immigrants.**—The following is quoted from Section 3 of the Immigration Act.

PROHIBITED CLASSES.

"No immigrant, passenger or other person, unless he is a Canadian citizen, or has Canadian domicile, shall be permitted to enter or land in Canada, or in case of having landed in or entered Canada shall be permitted to remain therein, who belongs to any of the following classes, hereinafter called 'prohibited classes':—

- (a) Idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane at any time previously;
- (b) Persons afflicted with tuberculosis in any form, or with any loathsome disease, or with a disease which is contagious or infectious, or which may become dangerous to the public health, whether such persons intend to settle in Canada or only to pass through Canada in transit to some other country: Provided that if such disease is one which is curable within a reasonably short time, such persons may, subject to the regulations in that behalf, if any, be permitted to remain on board ship if hospital facilities do not exist on shore, or to leave ship for medical treatment;
- (c) Immigrants who are dumb, blind, or otherwise physically defective, unless, in the opinion of a Board of Inquiry or officer acting as such, they have sufficient money, or have such profession, occupation, trade, employment or other legitimate mode of earning a living that they are not liable to become a public charge or unless they belong to a family accompanying them or already in Canada and which gives security satisfactory to the Minister against such immigrants becoming a public charge;
- (d) Persons who have been convicted of, or admit having committed, any crime involving moral turpitude;
- (e) Prostitutes and women and girls coming to Canada for any immoral purpose and pimps or persons living on the avails of prostitution;
- (f) Persons who procure or attempt to bring into Canada prostitutes or women or girls for the purpose of prostitution or other immoral purpose;
- (g) Professional beggars or vagrants;
- (h) Immigrants to whom money has been given or loaned by any charitable organization for the purpose of enabling them to qualify for landing in Canada under this Act, or whose passage to Canada has been paid wholly or in part by any charitable organization, or out of public moneys, unless it is shown that the authority in writing of the Deputy Minister, or in case of persons coming from Europe, the authority in writing of the Assistant Superintendent of Immigration for Canada, in London, has been obtained for the landing in Canada of such persons, and that such authority has been acted upon within a period of sixty days thereafter;
- (i) Persons who do not fulfil, meet or comply with the conditions and requirements of any regulations which for the time being are in force and applicable to such persons under this Act;
- (j) Persons who in the opinion of the Board of Inquiry or the officer in charge at any port of entry are likely to become a public charge;
- (k) Persons of constitutional psychopathic inferiority;
- (l) Persons with chronic alcoholism;
- (m) Persons not included within any of the foregoing prohibited classes, who upon examination by a medical officer are certified as being mentally or physically defective to such a degree as to affect their ability to earn a living;
- (n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property;
- (o) Persons who are members of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government, or advocating or teaching the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally of the Government of Canada or of any other organized government, because of his or their official character, or advocating or teaching the unlawful destruction of property;
- (p) Persons guilty of espionage with respect to His Majesty or any of His Majesty's allies;
- (r) Persons who have been found guilty of high treason or treason or of conspiring against His Majesty, or of assisting His Majesty's enemies in time of war, or of any similar offence against any of His Majesty's allies;
- (s) Persons who at any time within a period of ten years from the first day of August, one thousand nine hundred and fourteen, were deported from any part of His Majesty's dominions or from any allied country on account of treason or of conspiring against His Majesty, or of any similar offence in connection with the war against any of the allies of His Majesty;
- (t) On and after the first day of July, one thousand nine hundred and nineteen, in addition to the foregoing 'prohibited classes', the following persons shall also be prohibited from entering or landing in Canada: Persons over fifteen years of age, physically capable of reading, who cannot read the English or French language or some other language or dialect: Provided that any admissible person or any person heretofore or hereafter legally admitted, or any citizen of Canada, may bring in or send for his father or grandfather, over fifty-five years of age, his wife, his mother, his grandmother or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not, and such relative shall be permitted to enter; for the purpose of ascertaining whether aliens can read, the immigration officer shall use slips of uniform size prepared by direction of the Minister, each containing not less than thirty and not more than forty words in ordinary use printed in plainly legible type in the language or dialect the person may designate as the one in which he desires the examination to be made, and he shall be required to read the words printed on the slip in such language or dialect; but the provisions of this subsection shall not apply to Canadian citizens and persons who have Canadian domicile, to persons in transit through Canada, or to such persons or classes of persons as may from time to time be approved by the Minister;
- (u) Members of a family (including children over as well as under 18 years of age) accompanying a person who has been rejected, unless in the opinion of the Board of Inquiry no hardship would be involved by separation of the family."

The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

Table 13 shows the number of immigrants rejected upon their arrival at Canadian ports, by causes and nationalities, for the calendar years 1931-37. Figures covering the period 1903-34 on a fiscal year basis and comparable with those of Table 14 will be found at p. 222 of the 1934-35 Year Book. Table 14 shows the number of deportations after admission, for the fiscal years 1903-26 and by single years for the fiscal years 1927-38, also by causes and nationalities. The Immigration Branch of the Department of Mines and Resources does not compile these figures on a calendar year basis.

<sup>1</sup> Included with "other" for these years.

**Juvenile Immigrants.**—Among the most generally acceptable immigrants of recent years were the juveniles of both sexes, many of whom had been trained by highly accredited British organizations for Canadian life before coming to Canada, the boys being taught the lighter branches of farm work, and the girls instructed in domestic occupations. On arrival in Canada the boys were placed on farms, while the girls were placed either in town or country, but the organizations remained the guardians of the children until they had reached maturity, and, in addition the children were subject to efficient and recurrent government inspection until each reached the age of nineteen. This inspection was under the control of the Supervisor of Juvenile Immigration.

Under the British Empire Settlement Agreement the term "children" was applied to boys from 14 to 19 years of age and girls from 14 to 17 migrating to Canada under provincial or approved-society auspices. These organizations were assisted by the Oversea Settlement Agreement, which provided free transportation for the boys and girls from the British Isles migrating to Canada under their auspices. On Sept. 23, 1931, the societies concerned were notified that the Dominion Government had decided to discontinue any further assistance of that nature.

The number of such juvenile immigrants to Canada in each year since 1901 is given in Table 15.

**15.—British Juvenile Immigrants, fiscal years ended 1901-38.**

*Note.*—Juvenile immigrants are, of course, included in the total number of immigrants recorded elsewhere.

**Oriental Immigration.**—The immigration to Canada of Orientals is fundamentally an economic rather than a racial problem, affecting most of all those parts of the country which are nearest to the Orient and the classes which feel their economic position threatened. A record of Oriental immigration since the commencement of the century is given in Table 16, while Table 16A gives the same information for the calendar years for which it has been possible to compile the figures, *viz.*, 1929 to 1937.

## 16.—Record of Oriental Immigrants, fiscal years ended 1931-33, and by decades, 1901-30.

NOTE.—Statistics for individual fiscal years 1901-30 will be found at p. 206 of the 1933 Year Book.

*Chinese Immigrants.*—Oriental immigration to the Pacific Coast of North America appears to have commenced with the coming of Chinese immigrants about the time of the discovery of gold in California in 1849, and British Columbia is thought to have received its first Chinese immigrants some time before 1870. The original occupations of these immigrants were laundry workers and domestic servants. As early as 1872 Chinese were employed in the coal mines of the province and the Legislature was already considering the imposition of a poll tax on Chinese, the same proposition coming up later in the Dominion Parliament with the design of preventing the employment of Chinese labour in railway construction. A Royal Commission was appointed by the Dominion Government in 1884 to investigate Chinese immigration and this Commission recommended the imposition of a head tax of \$10 upon Chinese entering Canada, together with registration and special legislation regulating the entry of Chinese domestic servants. This led to the passage of legislation in 1885 (48-49 Vict., c. 71) providing that thereafter Chinese of the labouring class should be required, as a condition of entering Canada, to pay a head tax of \$50 each. On Jan. 1, 1901 (63-64 Vict., c. 32), this tax was increased to \$100, and on Jan. 1, 1904 (3 Edw. VII, c. 8), after another Royal Commission had reported on this matter, the head tax was further increased to \$500. This tax was paid by all Chinese immigrants except consular officers, merchants, and clergymen and their families, tourists, men of science, students, and teachers. In spite of this restrictive legislation, the number of Chinese enumerated at the decennial censuses rose from 4,383 in 1881 to 17,312 in 1901, to 27,774 in 1911, to 39,587 in 1921, and 46,519 in 1931. Of this latter number, 43,051 were males and only 3,468 females. Over 58 p.c. of all the Chinese in Canada, *viz.*, 27,139, were residents of British Columbia.

The Chinese Immigration Act of 1923 (13-14 Geo. V, c. 38)\* limits the entry to or landing in Canada of persons of Chinese origin or descent, irrespective of allegiance or citizenship, to the following classes:—

- Members of the diplomatic corps or other government representatives, their suites and their servants, and consuls and consular agents;
- Children born in Canada of parents of Chinese origin or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return;
- Merchants as defined by such regulations as the Minister may prescribe; students coming to Canada for the purpose of attending, and while in actual attendance at, any Canadian university or college authorized by statute or charter to confer degrees.
- Persons in transit through Canada.

Classes (c) and (d) are to possess passports issued by the Government of China and endorsed by a Canadian immigration officer.

*Japanese Immigrants.*—Japanese immigration to Canada commenced about 1896, and a total of some 12,000 came in between then and 1900, but at the Census of 1901 the total number enumerated as domiciled in the Dominion was only 4,738; in 1911, 9,021; in 1921, 15,868; in 1931, 23,342—22,205 of these latter being domiciled in British Columbia. The immigration of Japanese was especially active in the fiscal years 1906 to 1908, in which three years a total of 11,565 entered the country. In 1908 an agreement was made with the Japanese Government, under which the latter undertook to limit the number of passports issued to Japanese immigrants to Canada. Japanese immigration has been very restricted since 1929, only 139 Japanese immigrants having entered Canada in the fiscal year 1938.

*East Indian Immigrants.*—The immigration of East Indians, like Japanese, did not become active until the fiscal years 1906-08, when 5,134 arrived (see Table 15, p. 206, of the 1938 Year Book). However, as a consequence of the operation of the Immigration Regulations, East Indian immigration has for years been comparatively small. A resolution of the Imperial War Conference of 1918 declared that "it is the inherent function of the Governments of the several communities of the British Commonwealth that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities". However, it was recommended that East Indians, already

\* R.S.C. 1927, c. 95.

permanently domiciled in other British countries, should be allowed to bring in their wives and minor children. In the ten fiscal years 1929-38 only 415 East Indians, many of them women and children, were admitted to Canada.

**Expenditures on Immigration.**—The sums expended by the Dominion Government on immigration in fiscal periods ended 1868 to 1938, inclusive, as stated in the Public Accounts issued annually by the Department of Finance, are shown in Table 18.

**Emigration from Canada.**—An important factor tending to offset the immigration activities of the past was a movement from Canada to the United States which attained considerable proportions at certain periods. The quota system of immigration regulation, applied by the United States Government against immigrants generally, but not against the Canadian born, had the effect of limiting immigration to the United States and thereby encouraging Canadians to enter that country. No record of this movement had ever been kept by the Canadian Government, and, while its seriousness was recognized, its magnitude, as indicated by the United States returns, was questioned on the ground that these returns did not make allowance for Canadians returning to Canada after a more or less extended period of residence in the United States. The Canadian Department of Immigration and Colonization was convinced that a very considerable return movement was taking place, but, until 1924, no attempt was made to ascertain the exact magnitude of that movement. In that year immigration officers were instructed to take note of Canadians returning to Canada from the United States after having left Canada to reside in that country. The results are tabulated in Table 19.

Another circumstance which has, in the past, occasioned a considerable movement from Canada to the United States has, no doubt, been the practice of Europeans to enter Canada and declare themselves *bona fide* immigrants, with the real intention of entering the United States as soon as the quota restrictions would permit them to do so. The tightening-up of the United States regulations *re* persons entering the United States from Canada, and the active co-operation of the Canadian Department of Immigration and Colonization in discouraging this traffic, seem to have effectually met this situation.

Table 19 shows the number of Canadians who had gone to the United States for purposes of permanent residence and who returned to Canada during the period from Apr. 1, 1924, to Dec. 31, 1938.

<sup>1</sup> Nine months.

The movement of population between the two countries now appears to be slightly towards the United States. In the U.S. fiscal year ended June 30, 1938, the total movement from Canada to that country was 19,255, made up as follows: immigrants, 14,070; U.S. citizens returning after residence in Canada, 5,032; and persons deported from Canada, 153. The movement towards Canada totalled 9,960, made up as follows: immigrants, 4,324 (of whom 3,306 were U.S. citizens); persons deported to Canada, 1,941; and persons permitted to depart voluntarily to Canada in lieu of deportation proceedings, 3,695. Canadian immigration figures for the same period show 5,845 immigrants admitted to Canada and 5,097 returning Canadians, a total of 10,942. The discrepancy between the two series is probably due to incomplete emigration statistics.

In the past eight years there has also been considerable emigration from Canada to the British Isles. Table 20, taken from the Statistical Abstract of the United Kingdom, shows the movement of population between the United Kingdom and British North America from 1924 to 1938. Inasmuch as the movement between the British Isles and Newfoundland is negligible, the table may be taken as presenting a fair picture of immigrant and emigrant movement between Canada and the United Kingdom.

## Section 2.—Colonization Activities.

Recent information on this subject was given at pp. 201-202 of the 1936 edition of the Year Book. To it the interested reader is referred.

## CHAPTER VII.—SURVEY OF PRODUCTION.\*

Production in 1936 registered a gain of 12·5 p.c. in net value, thereby indicating considerable progress in the advance towards industrial recovery. The net value of commodities produced amounted to \$2,666,000,000 against a revised figure of \$2,369,000,000 in 1935, indicating that, on the whole, Canadians were more prosperous than in any year since 1931. Since the level of commodity prices advanced from 72·1 to 74·6, an adjusted gain of about 9 p.c. in volume is denoted, roughly confirming the rise of nearly 10 p.c. in the index of industrial production. A dominating influence in the rise was the pronounced increase in the price of farm products, greatly improving the relationship between such prices and those of goods which the farmer must buy. The general nature of the improvement was substantiated by the fact that each of the nine main branches of production participated in the advance with gains ranging from nearly 4 p.c. in trapping to over 22 p.c. in mining.

While changes in general method, beginning with 1935, prevent precise comparability, it is evident that the lowest point of the recent depression was reached in 1933 and that the revival commencing in the latter part of that year was fairly continuous until the end of 1937.

Price and volume indexes indicate that a further gain in net production occurred in 1937. The index of wholesale prices averaged over 13 p.c. higher, while the advance in the index of industrial production was 10·8 p.c. The gain in the index of general employment was 10 p.c.

The most encouraging development of the past decade has been the manner in which the mining, forestry, electric power, and manufacturing industries have taken up the slack caused by a succession of sub-normal crops. The Canadian economy in the degree of its diversification has become stronger and more resistant to the uncertainties of the climate.

**The Definition of 'Production'.—**The term 'production' is used here in its popular acceptance, *i.e.*, as including such processes as the growing of crops, extraction of minerals, capture of fish, conversion of water power into electric current, manufacturing, *etc.*—in economic phrase, the creation of 'form utilities'. It does not include various activities which are no less productive in a broad and strictly economic sense, such as (a) transportation, refrigeration, merchandising, *etc.*, which add the further utilities of 'place', 'time', and 'possession' to commodities already worked up into form, and (b) personal and professional services, such as those of the teacher and the doctor, which are not concerned with commodities at all, but are nevertheless essential to any civilized society—representing, in economic language, the creation of 'service utilities'.

As showing the importance of these latter activities, it may be pointed out, for comparison with the figures in the accompanying tables, that steam railway gross earnings in 1936, the latest year for which complete statistics of production are available, amounted to \$334,768,557, street railway gross earnings to \$41,391,927, and telephone and telegraph earnings to \$70,149,464, all of which, from a broad point of view, may be considered as production. Further, it may be noted that, according to the Census of 1931, out of 3,927,591 persons of ten years of age or over recorded as gainfully occupied, 306,273 were engaged in transportation activities, 387,315 in trade, 92,317 in finance, and 767,705 in service occupations. While 81,610 of the latter were engaged in custom and repair work, the value of which is included in the survey of production, the value of the production of the remaining

\* Revised by Sydney B. Smith, M.A., Dominion Bureau of Statistics.

1,472,000 gainfully occupied persons in the four occupational groups just mentioned would not appear to be included to any extent in the survey of production.

**'Gross' and 'Net' Production.**—The values of products are shown under two headings, namely, 'gross' and 'net'. Gross production represents the total value of all the individual commodities produced under a particular heading. Net production represents an attempt to eliminate the value of materials, fuel, purchased electricity, and process supplies consumed in the production process. The net figures, it will be seen, appear chiefly in the case of secondary production or manufactures, though eliminations are also made in certain cases in the primary or extractive industries, as, for example, seed in the case of field crops, and feed in the case of farm animals. On the other hand, such items as fertilizers in the case of field crops, and reforestation in the case of forestry, are disregarded as partaking of the nature of replacement. The cost of fuel and electricity is deducted in accordance with Resolution 23 of the Conference of British Commonwealth Statisticians, 1935, which states: "The term *net output* or *net value of production* should be used to denote the value added in each industry to the cost of the objects used in production, including all materials, whether transformed or not in the industrial processes, and fuel and purchased power consumed, whether used for heating, lighting or other purposes, but excluding any amount paid to other firms for work given out to be done by them".

**Difficulties in Differentiating between the Branches of Production.**—A survey of production must differentiate between the more important branches and at the same time give a purview of the whole which will be free from overlapping. This is somewhat difficult to present with clearness, in view of the varying definitions that attach to industrial groups from different points of view. For example, brick, tile, and cement are frequently included under "mineral production" as being the first finished products of commercial value resulting from the productive process; frequently, however, they are classified under "manufactures" in view of the nature of the productive process—either allocation being correct according to the point of view. In the summing up, production in such industries is regarded as primary production and also as secondary production, but the duplication is eliminated in the grand totals.

**Basis of Computation for Each Branch of Production.**—The primary industries of agriculture, fishing, forestry, mining, etc., are separated in this statement from the secondary or manufacturing processes. The close association between the two and the overlappings that are apt to occur have already been pointed out. As further explaining the procedure that has been followed in drawing up the tables, the following notes are appended:—

**Agriculture.**—Dairy factories are included under this heading; farm dairy products (gross) include the milk consumed whole and sold to dairy factories, and the butter, etc., made on the farm. The duplication is eliminated when obtaining the grand total values of gross and net production. The cost of seed and feed is deducted from the gross value of agricultural production to obtain the net value.

**Fisheries.**—Gross value is the sum of fish caught and landed, factory output, and value added domestically. Net is the value of fish marketed, less fuel, electricity, supplies, salt, containers, etc.

**Forestry.**—Forestry production is understood to consist of the operations in the woods as well as those of sawmills and pulp-mills, the latter being limited to the making of products such as pulp and paper, lumber, lath, shingles, and sawn railway ties. The cost of raw materials, fuel, and electricity is deducted to obtain the net value. Credit is given for materials used as fuel.

*Fur Production.*—The item of fur production is limited to wild-life production. To obtain a total of the pelts produced in Canada, it would be necessary to add to the wild-life output the production of pelts on fur farms, which is included in the total for agriculture.

*Mineral Production.*—Under mineral production many items are included that are also allocated to manufactures. Considerable overlapping exists as between mineral production on the one hand and manufactures on the other. The Bureau presents the detailed statistics of these groups (the chief of which are smelters, brick, cement, lime, etc.) in its reports on mineral production, since their product is the first to which a commercial value is ordinarily assigned. The figure for net production is the industrial total, *i.e.*, the net value of sales. The value of ores used by smelters, cost of fuel, purchased electricity, and process supplies, etc., are added to make up the gross value.

*Electric Power.*—Total revenue, interprovincial sales excluded, is regarded as the gross, and the cost of fuel is deducted to give the net value.

*Construction.*—The total value of work performed is regarded as the gross, and the cost of materials is deducted to obtain the net value.

*Custom and Repair.*—A special tabulation is made, based upon the Census of Merchandising and Service Establishments, 1930. The net value is obtained by deducting the cost of materials and supplies from gross receipts.

*Total Manufactures.*—The figure given for this heading is a comprehensive one including the several items listed with the extractive industries above, though also frequently regarded as manufactures, *viz.*, dairy factories, fish canning and curing, sawmills, pulp and paper mills, and certain mineral industries. This duplication is eliminated from the grand totals as shown in the tables. It should be noted that "central electric stations" and "dyeing, cleaning, and laundry work" have been dropped from the official Census of Manufactures for 1936 and the figures for the preceding year have been revised accordingly. The figures given for total manufactures are inclusive of the value of the products of all manufacturing processes closely associated with the extractive industries that are frequently included under this heading; hence it is obvious that the grand total is equivalent to an amount obtained by adding the values for total manufactures and for the other eight divisions, and deducting the amount of duplication between manufactures and the primary industries.

### Section 1.—The Leading Branches of Production in 1936.

The net value of a nation's commodity production is usually an excellent criterion of the purchasing power of the people. Net production signifies the value left in the producers' hands after the elimination of the value of the commodities consumed in production, including all materials, process supplies, fuel, and purchased electricity. Confining subsequent analysis to the net value of commodities produced, it is observed that each of the main divisions of industry showed appreciable advances in 1936 over the preceding year. The mining industry registered the greatest percentage gain, reflecting enhanced prices for base metals and expansion in the gold-mining industry. All metals, with the exception of silver, were moved in much greater volume. The gain in the mining industrial total after the usual deductions, was no less than \$53,400,000, an appreciation of 22.4 p.c.

As a result of the improved trend in agricultural prices, the decline in the volume of field-crop production was more than counterbalanced, the net value of agriculture rising to \$690,400,000, a gain of nearly 12 p.c., over the \$617,900,000

obtained in 1935. The percentage gain of 12.1 in manufacturing production was slightly greater than in agriculture, the net value in 1936 being \$1,289,600,000 against \$1,150,900,000 in the preceding year. Forestry production, including woods operations, sawmilling, and pulp and paper, recorded a gain of no less than 16.8 p.c., export marketing being particularly active. Newsprint production reached a new high level. Fisheries showed an encouraging advance of 13 p.c. in value, the near record catch in British Columbia and improved export and price factors indicating considerable betterment. Electric power continued its steady upward trend gaining 6.7 p.c. in net value over 1935.

The construction industry showed further revival in 1936, private operations more than counterbalancing the decline in governmental contracts. A net increase in value of \$15,000,000 or 12.4 p.c. was registered.

A detailed study of some 15 groups under the heading of custom and repair established this industry on a somewhat higher basis than formerly. The net value of custom and repair work in 1936 was placed at \$97,300,000, a gain of 6.1 p.c. over the preceding year.

Comparing the growth of primary and secondary industries, it is observed that the primary group registered a net advance of 14.1 p.c. in 1936 over 1935, compared with a net increase of 11.7 p.c. for secondary production in the same comparison. This divergence was due to the greater rise in the prices of primary materials. The official price index of producers' goods reached 72.4 in 1936, compared with 69.6 in 1935, whereas the index of consumers' goods advanced to only 74.7 from 73.6, indicating a close approach to a price parity between the two great branches of the national economy.

#### 1.—Gross and Net Values of Production in Canada, by Industries, 1935 and 1936.

Division of Industry.	1935. <sup>1</sup>		1936.		Percentage Increase in Net Value, 1936 from 1935.	Percentage of Net Value by Industry to Total Net Production 1936.
	Gross.	Net.	Gross.	Net.

<sup>1</sup> Revised since the publication of the 1938 Year Book. In conformance with Resolution 23 adopted by the Conference of British Commonwealth Statisticians of 1935, the cost of fuel and purchased electricity was deducted from the gross value of all industries for 1935 and 1936. This is in addition to the deduction for cost of materials and process supplies. <sup>2</sup> Gross values comprise the mineral production, as shown in Chapter XII, Table 1, plus the value of ores and other raw materials of the smelting industry. <sup>3</sup> The item "Manufactures" includes dairy factories, sawmills, pulp and paper mills, fish canning and curing and certain mineral industries, which are also included in other headings above. This duplication amounting in 1935 to a gross of \$557,105,137 and a net of \$213,624,608 and in 1936 to a gross of \$658,618,441 and a net of \$248,214,552 is eliminated from the grand total. <sup>4</sup> Secondary production includes the above-mentioned duplication. The percentage of the net manufactures, *s.e.s.*, to the total net production in 1936 was 39.06.

2.—Itemized Statement of the Net Values of Production in Canada during 1935 and 1936, Indicating the Method of Computation by Giving Separately the Duplicated Items.

Classification.	1935.	1936.

Mineral industries.....	65,738,948	82,776,877
Totals.....	213,624,608	248,214,552
Manufactures, <i>n.e.s.</i> .....	937,274,675	1,041,378,120

**Relative Importance of the Several Branches of Production.**—Mainly because of the adverse weather conditions and low prices experienced by agriculture in recent years, the relative importance of manufacturing has been accentuated. Agricultural production in 1936 represented about 26 p.c. of the net output of all

industries, while the total value added by the manufacturing process was over 48 p.c. of the total net production. Eliminating the duplicated items which are also included in the several extractive industries with which they are associated, we find that the output of manufacturing industries, not elsewhere stated, was 39.1 p.c. of the net total. Mining held third place in 1936, contributing nearly 11 p.c. of the Dominion aggregate. Forestry was responsible for 8.7 p.c. of the net, while construction and electric power contributed 5.1 and 5.0 p.c., respectively. Custom and repair, fisheries, and trapping followed in importance.

## Section 2.—The Provincial Distribution of Production.

All provinces showed gains in net production in 1936 over the preceding year. Considerable betterment was enjoyed in the Maritimes, the net total for the region being up 8.7 p.c., with advances of 13.3 p.c., 8.8 p.c., and 7.8 p.c. for Prince Edward Island, Nova Scotia, and New Brunswick, respectively. Extending the gain of the preceding year, the net production of Quebec showed an increase of 9.4 p.c. to \$657,000,000 in 1936. The increase in Ontario due to mining was somewhat more substantial at 12.9 p.c. The trend was unevenly upward in the Prairie Provinces. Manitoba registered an advance of 21.3 p.c., the greatest of any province, while Saskatchewan and Alberta gained 16.0 p.c. and 7.3 p.c., respectively. The net total for the area of \$442,700,000 was 13.9 p.c. greater than in 1935. Recovery continued apace in British Columbia, an advance of nearly 21 p.c. having been shown over the preceding year.

**Relative Production, by Provinces, 1936.**—Among the nine provinces, Ontario maintained her pre-eminence by a wide margin in the output of commodities, producing 44.4 p.c. of the Dominion total compared with 44.2 p.c. in 1935. Quebec followed with an output of 24.6 p.c. against 25.4 p.c. in the preceding year. British Columbia and Alberta were again in third and fourth positions, contributing 8.1 p.c. and 6.2 p.c. of the grand total. Saskatchewan, Manitoba, Nova Scotia, New Brunswick, and Prince Edward Island followed in the order named.

## 3.—Summary Analysis of the Value of Production in Canada, by Provinces, 1935 and 1936.

Province.	1935.				1936.			
	Gross Value.	Net Value. <sup>1</sup>			Gross Value.	Net Value. <sup>1</sup>

<sup>1</sup> In conformance with Resolution 23 adopted by the Conference of British Commonwealth Statisticians of 1935, the cost of fuel and purchased electricity was deducted from the gross value of all industries for 1935 and 1936. This is in addition to the deduction for cost of materials and process supplies. <sup>2</sup> Estimates of population on which these figures are based will be found on p. 113. <sup>3</sup> The value of production in Yukon, mainly in mining and trapping (including similar industries of the N.W.T.), was \$3,375,554 gross and \$3,110,950 net in 1935 and \$4,036,165 gross and \$3,401,279 net in 1936.

**Per Capita Production by Provinces.**—In the foregoing table the net commodity production is appraised on a per capita basis by provinces. This represents the net value of new wealth put into the national economy by the people and, as such, measures the annual dollar return on the natural resources, the plant, and equipment of the nation. As already stated, it is distinct from, and must not be confused with, the national income, which includes, in addition to the net commodity production, the value of services, the utilities of time, place, and possession, which, although somewhat intangible, are in their turn equally as valuable in the economic sense as the actual commodities produced.

All provinces recorded appreciable per capita betterment in 1936 over 1935. Owing to its pre-eminent industrial position, Ontario had a net commodity output of nearly \$321 per capita in 1936, an improvement of \$35 per capita over 1935, due to considerable gains in manufacturing, mining, and agriculture. British Columbia ranked second with a per capita production of \$283, registering an increase of \$44 per capita over 1935. Alberta and Quebec figures were quite similar at \$213 and \$212, respectively, both recording gains from the preceding year.

The Dominion figure of net commodity production, at nearly \$242 per capita, was 11.6 p.c. or \$25 in advance of the figure for 1935, with provincial totals ranging from \$136 for Prince Edward Island to \$321 for Ontario. The estimated increase in population in 1936 over 1935 was nearly 1 p.c., the estimate being 11,028,000 as at June 1st.

### Section 3.—Leading Branches of Production in each Province, 1936 compared with 1935.

**Maritime Provinces.**—The net value of production in the Maritimes during 1936 rose nearly 9 p.c. or \$13,336,000 over the preceding year. Agriculture contributed about one-quarter of the net, while manufacturing, eliminating duplication, accounted for 21 p.c. Construction was more active than in 1935. Mining continued to increase in importance with 13 p.c. of the total for the Maritimes attributable to this industry. Fisheries showed a gain of 12 p.c., the total reaching \$12,622,000.

**Quebec.**—Manufacturing continued to be by far the leading industry in Quebec, contributing, without duplication, 46.6 p.c. of the net value produced in the province during 1936. This percentage compares with agriculture at only 17 p.c., and forestry on a revised basis at 13 p.c. of the total net. Mining registered a gain in relative importance from 5.6 to 6.8 p.c., while electric power showed a percentage decline in importance.

**Ontario.**—The net value of manufacturing in Ontario during 1936, less duplication, was nearly half of the provincial total. Agriculture accounted for 20 p.c. with a net value of \$234,620,000. Mining advanced to 12.8 p.c., while forestry remained unchanged in relation to the net total.

**Prairie Provinces.**—Agriculture predominated in the Prairie Provinces, supplying over 62 p.c. or nearly two-thirds of the net production in 1936. Manufacturing accounted for one-sixth of the regional output. Mining increased 22.8 p.c. over 1935 and represented 8 p.c. of the value of the area's net product.

**British Columbia and Yukon.**—The net output from manufacturing in British Columbia during 1936 was \$87,780,000 or 40.6 p.c. of the provincial production, but over half of this amount was derived from manufacturing processes closely associated with primary industries, such as logging, mining, and fisheries. Eliminating this duplication, manufactures comprised 21.4 p.c. of the provincial net, whereas forestry supplied 25.4 p.c., mining 17.8 p.c., agriculture 12.9 p.c., and fisheries 6.5 p.c.

Tables 4 and 4A give the details of gross and net production by industries for each province in the years 1935 and 1936. Only in Saskatchewan, Alberta, and Prince Edward Island does agriculture rank in first place, manufactures surpassing this primary industry in most of the other six provinces. Tables 5 and 5A present some very interesting comparisons. In Nova Scotia, indeed, during 1936 mining was more productive in net value than agriculture, while in New Brunswick forestry ranked also above agriculture in the addition of new wealth. In British Columbia-Yukon, the products of forestry and mining, with manufacturing, ranked above agriculture.

On a provincial percentage basis mining is very much more important in Nova Scotia than it is in the premier mining province of Ontario. Likewise, the generation of electric power is relatively a more important industry in Nova Scotia, New Brunswick, Manitoba, and in British Columbia than it is in Ontario. While manufacturing is of first importance in Ontario and Quebec, it is also of major relative concern in Nova Scotia.

4.—Gross and Net Values of Production, Classified for each Province, by Industries, 1935.

NOTE.—Gross and net figures for 1935 have been revised since the publication of the 1933 Year Book. For Dominion totals, see Tables 1 and 2.

Manufactures <sup>1</sup> .....	39,567,839	13,042,743	23,780,134	73,633,833
<b>Totals<sup>1</sup>.....</b>	<b>101,253,414</b>	<b>134,006,749</b>	<b>153,271,341</b>	<b>179,078,123</b>

<sup>1</sup> The totals for manufactures involve duplicated amounts which were deducted in computing the total production for each province. The duplication arises from including in two places a number of industries which may be regarded as extractive or as manufacturing processes. The following are the amounts of the duplication by provinces: Prince Edward Island, gross \$1,252,414, net \$308,664; Nova Scotia, gross \$14,835,734, net \$6,241,090; New Brunswick, gross \$23,320,568, net \$11,446,210; Quebec, gross \$162,818,252, net \$60,783,281; Ontario, gross \$224,576,920, net \$90,426,814; Manitoba, gross \$18,309,500, net \$4,330,253; Saskatchewan, gross \$9,032,095, net \$2,512,384; Alberta, gross \$8,343,255, net \$3,203,300; British Columbia and Yukon, gross \$94,616,389, net \$34,372,612.

<sup>2</sup> The value of production in Yukon, mainly in the mining and trapping industries (including similar industries of the N.W.T.), was \$3,375,554 gross and \$3,110,950 net in 1935.

#### 4A.—Gross and Net Values of Production, Classified for each Province, by Industries, 1936.

NOTE.—For Dominion totals, see Tables 1 and 2.

<sup>1</sup> Includes the trapping and mining industries of the Northwest Territories.

## CHAPTER VIII.—AGRICULTURE.

Agriculture, including stock raising and horticulture, is the chief single industry of the Canadian people, employing, in 1931, 28·7 p.c. of the total gainfully occupied population and 33·9 p.c. or over one-third of the gainfully occupied males. In addition, it provides the raw material for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see p. 27 of this volume.

Following an introductory outline of the historical background of Canadian agriculture, this chapter treats of current governmental activities—Dominion, in as much detail as space will permit (to utilize such space to the best advantage, the system of special articles not repeated from year to year has been adopted) and Provincial by outlines and references to provincial sources of information. Comprehensive statistics of agriculture, collected and compiled by the Agricultural Branch of the Dominion Bureau of Statistics and covering Canada as a whole, close the chapter. These include data on agricultural revenue and wealth, field crops, farm live stock and poultry, dairying, fur farming, fruit, special crops, farm labour and wages, prices, miscellaneous, and, since Canadian exports of agricultural commodities are sold in the world market, a review of world statistics of agriculture, compiled from the publications of the International Institute of Agriculture.

**The Historical Background of Canadian Agriculture.\***—The actual beginning of agriculture in Canada cannot be stated definitely, as crude attempts at cultivation by the native Indians were reported by the earliest recorded visitors to the country. Jacques Cartier in 1535 reported that the Indians around Hochelaga, at the foot of Mount Royal, where Montreal now stands, were cultivating small patches of land for the production of maize. The Huron Indians, living in the area close to lake Huron and Georgian bay, are also reported to have been growing corn, peas, and beans when first visited by white adventurers.

Since the arrival of the first French colonists to Acadia, Canadian agriculture has gone through several rather distinct stages: the early settlements in the Maritime Provinces and Quebec with comparatively slow development until 1750; from 1750 to 1850 settlement of Upper and Lower Canada was in full swing and agricultural growth was steady if not rapid; after Confederation and the completion of the Canadian Pacific Railway in 1886, the development of Western Canada was rapid and agriculture in Eastern Canada went through a period of adjustment in the light of the development in the western provinces.

Historical information dealing with the first period of settlement is found chiefly in the reports of early visitors to the country and early records of settlement schemes. The first recorded white settlement in Canada was at Port Royal, now Annapolis, Nova Scotia, by a group of Frenchmen in 1605. Here the settlers cleared and cultivated small plots of land on which they grew maize, pumpkins, and beans. Cows were brought out by Poutrincourt in 1606. Lescarbot, in a history of New France, makes the following comments on the agriculture of the area: "Yet it is well to say here, that our French domestic animals prosper very well in those parts. We had hogs which multiplied abundantly; . . . we had but one sheep which enjoyed the best possible health, although he was not shut up at night, but was in the midst of our yard in winter time. M. de Poutrincourt had him twice shorn and the wool

\* This material has been contributed by G. S. H. Barton, C.M.G., B.S.A., D.Sc.A., Deputy Minister, Department of Agriculture, Ottawa.

of the second year was recorded in France two sous a pound better than that of the first. God blessed our labours, and gave us fair wheat, rye, barley, oats, peas, beans, hemp, turnips and garden herbs; and this so plentifully that the rye was as tall as the tallest man that may be seen, and we feared that this height would hinder it bringing forth seed, but it had fructified so well, that one French grain sowed there yielded such ears of corn that, by the testimony of my lord the Chancellor, neither the island of Sicily nor the country of Beauce yielded anything finer. . . . \*

Growth in the Acadian region was slow, however, and the Census of 1671 shows only 441 Acadians, having 429 arpents† under cultivation with 866 cattle, 407 sheep, and 36 goats. Early in the eighteenth century the French began to dyke the marshes of the Minas basin where they were able to secure level lands which did not require clearing and which proved very fertile for the production of grains and grasses. Reports of the agricultural technique of this period indicate that the wooded land was cleared by cutting off the timber about three feet above the ground. The trees were left to dry and then burnt off. In the fall, rye was seeded among the stumps and the next year potatoes were planted. After three or four years the stumps were pulled with a yoke of oxen and eventually the land was ready for cultivation. The cattle of the period were said to be rather small, lively-looking animals with fine horns. The method of raising calves was somewhat surprising to English observers of the period. The calves were allowed to suck one side of the cow while the women milked the other side. This method was followed for the first four months, after which the calves were put out on grass. The womenfolk of the settlement were highly praised for their industry in making both linen and woollen cloth, which they bleached and dyed themselves. Candles, soap, and starch were also made in the home.

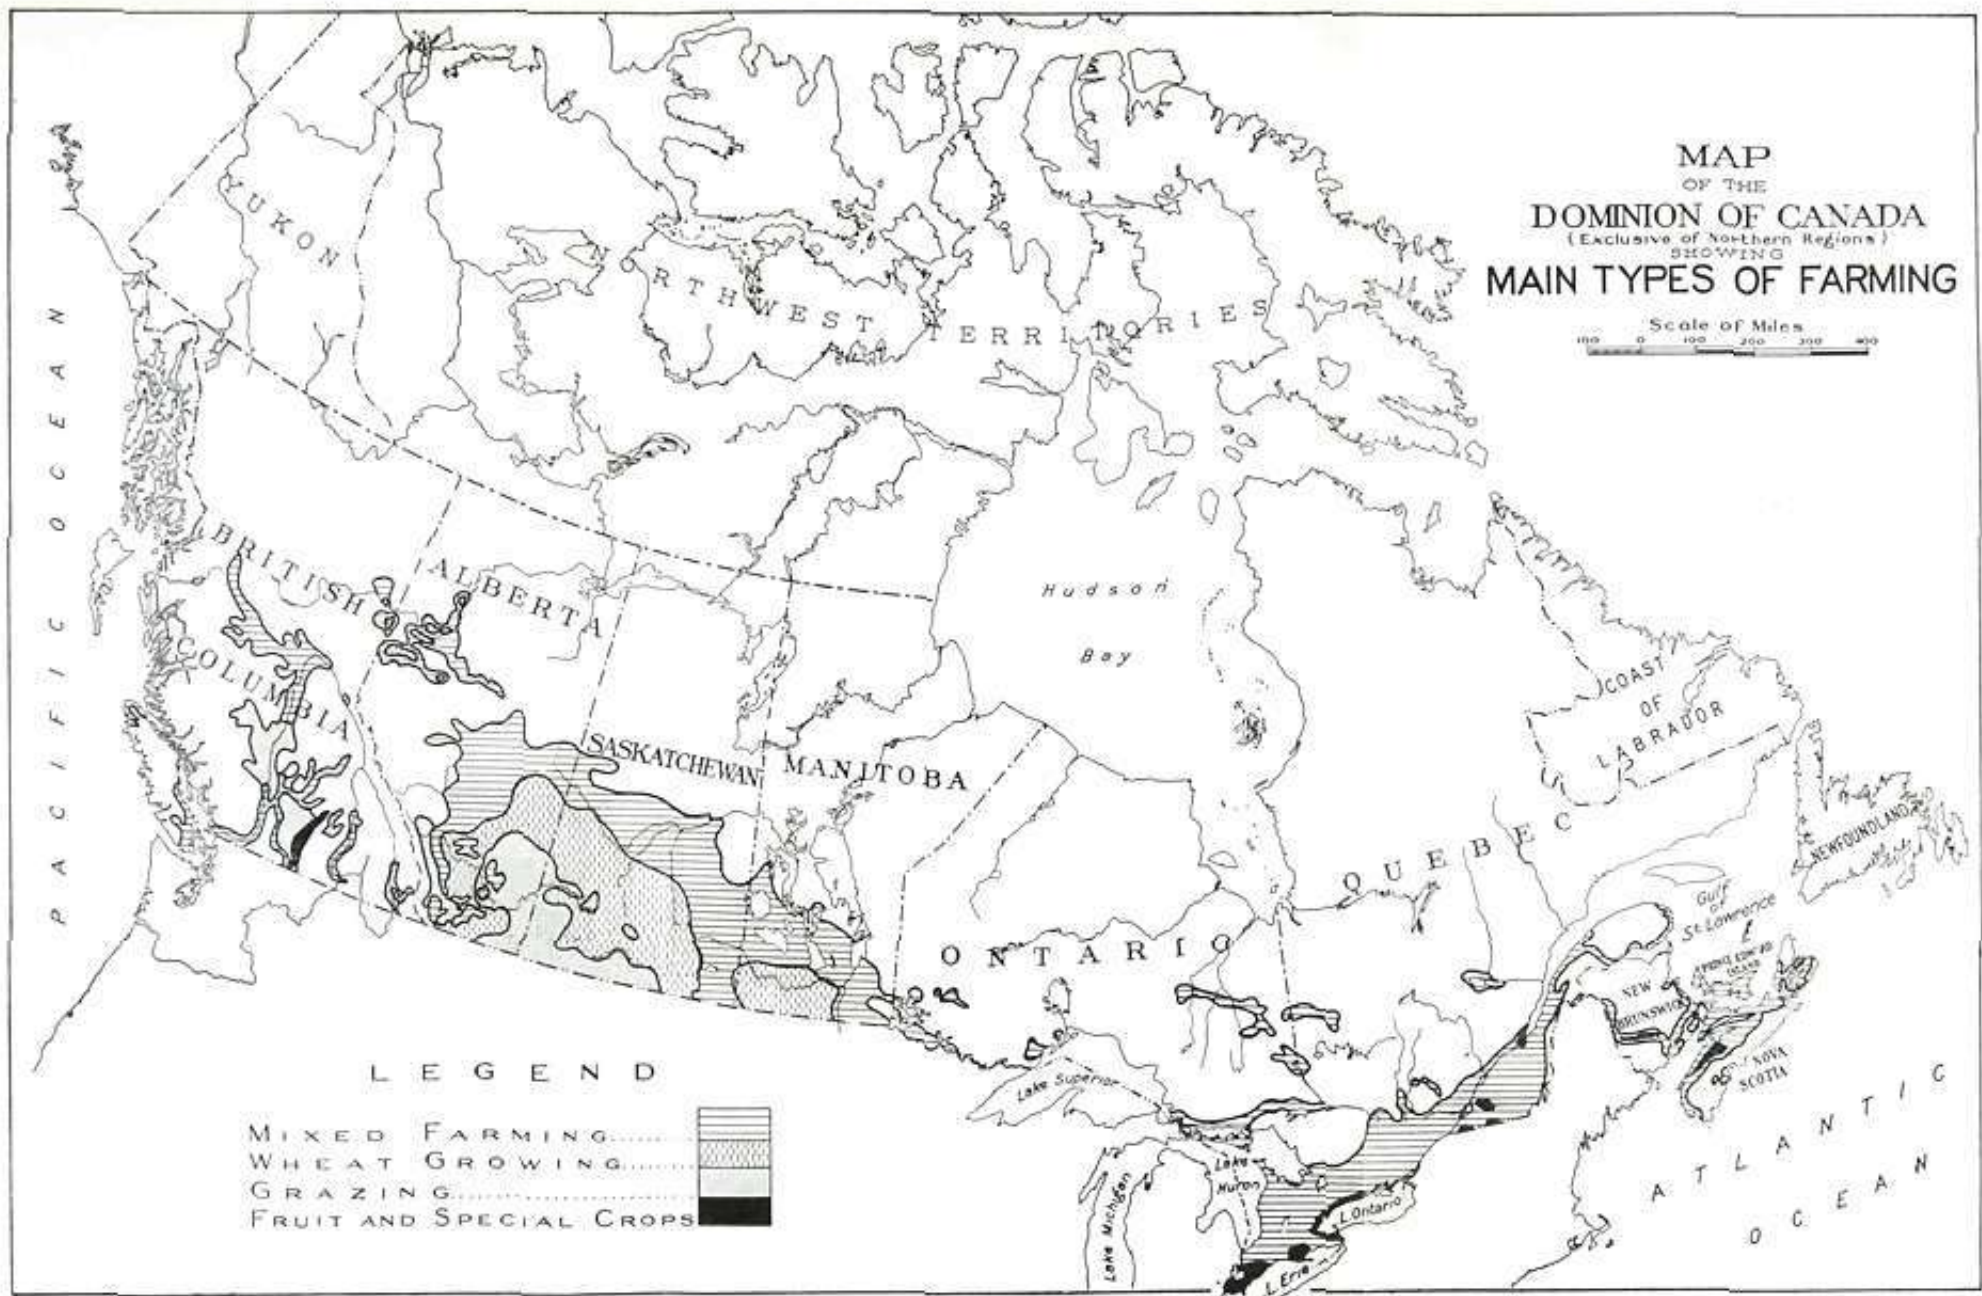

In the lower St. Lawrence valley some attempts at agriculture appear to have been begun as early as 1608 when Champlain, the founder of Quebec, came to the country. The first real farmer is said to have been Louis Hébert, who started farming in 1617 on the site of what is now Quebec city. Small settlements developed at various points along the St. Lawrence during these early days, but clearing was difficult and slow and it was a considerable time before the people were able to be self-sufficient in foodstuffs. Settlement of the so-called Eastern Townships of Quebec began shortly after 1800, the settlers coming chiefly from the New England States. However, it was not until after 1830 that they had satisfactory communication with Montreal and other parts of Canada. After that time agricultural progress was rapid in the area.

Agriculture in Upper Canada (Ontario) was also introduced by the French. The first settlement being established by Frontenac at Kingston in 1671. Difficulty of communication and transportation as well as the heavy work involved in clearing the land, kept settlement at a slow rate. When the United Empire Loyalists began coming into the area after 1780 settlement became much more active. The opening up of this part of the country was characterized by the fact that small isolated areas were settled in different sections of the province. The Talbot Settlement in Yarmouth township was settled under Colonel Talbot about 1820. The present county of Glengarry in eastern Ontario was settled by the Glengarry Fencible Regiment of Highlanders at about the same time. Other settlements were opened up around London, Niagara, Owen Sound, and Goderich. Roads were opened between settlements and eventually the intervening country was settled. By 1852 there were close to 100,000 farms in the province. Reports of the work of these early settlers

tell of the great difficulties encountered in clearing off the heavy timber. Very often the trees were felled and burned; the houses were mainly of log construction and the principal means of subsistence was flour and pork, until vegetables could be grown. In Upper Canada the pioneer farmers soon found it necessary to construct barns in which to store grain and hay. These were constructed of logs, unless a sawmill was located in the vicinity. Settlers often had to transport their grain twenty or thirty miles to the grist mill to be ground, a work which often required several days. A market for surplus produce was generally found among the more recent settlers who were not yet able to produce for themselves, or by trading with merchants for clothing and necessary groceries. A description of the primitive ploughs used in Loyalist times is given in H. Y. Hind's *Eighty Years' Progress*: "We find among the donations of George III to the U. E. Loyalists the old English plough. It consisted of a small piece of iron fixed to the coulter, having the shape of the letter L, the shank of which went through the wooden beam, the foot forming the point which was sharpened for use. One handle and a plank split from a curved piece of timber, which did the duty of a mold board, completed the crude implement. At that time the traces and leading lines were made of the bark of the elm or basswood, which was manufactured by the early settlers into a strong rope".\*

Other early references to the machinery of the time include a report of an invention by S. Williams of Whitby, which he called "a harvesting machine, which gathers, threshes and rough cleans wheat, barley, etc., at a rate of a bushel in three minutes". It is also of interest to find in a report printed in the *Montreal Gazette* in 1821, reference to the high quality of Canadian wheat. The report states that bakers of Scotland and England found the wheat particularly valuable for mixing with local wheats. Exports of Canadian wheat and wheat flours exceeded the equivalent of over one million bushels in 1802. That was an exceptional year, however, and was not surpassed until 1840. The successful production of apples and peaches is reported as early as 1820.

Efforts to improve agriculture in Eastern Canada through agricultural societies were made at an early date. One of the first of these was a society founded by Lord Dorchester in 1789, which published pamphlets on agriculture. Through the efforts of John Young in Nova Scotia, a Central Agricultural Society was formed in 1818. Other societies followed in Prince Edward Island and New Brunswick. The first agricultural school in Canada was opened in 1859 at Ste. Anne de la Pocatière.

An interesting point in the development of agriculture in Upper Canada was the persistent attempts in early years on the part of the Government to encourage the production of hemp. Several Acts were passed such as the one of 1804, entitled, "An Act for the Granting to His Majesty a certain sum of Money for the Further Encouragement of Growth and Cultivation of Hemp within this Province and the Exportation Thereof". Similar Acts appear in the Statutes for many years, but the results do not appear to have been very satisfactory. Other early legislation dealt with the inspection of flour, pot and pearl ashes, and other commodities. An Act passed in 1805 provided regulations for the curing, packing, and inspection of beef; an Act of 1807 granted to His Majesty duties on licences to hawkers, pedlars, and petty chapmen. Agriculture in Eastern Canada followed a wide diversification of production until about the beginning of the twentieth century. After that time the production of cereals in surplus quantities shifted to the newly opened provinces

\* Select Documents in Canadian Economic History, 1783-1885, H. A. Innis and A. R. M. Lower, University of Toronto Press, p. 59.

of the West and farmers of the East tended more and more towards live-stock production with some specialized crops.

The agricultural history of Western Canada dates back to the Selkirk Settlement along the Red river in Manitoba in 1812. These settlers experienced much difficulty, not only with Indians, but also because of the rivalry between the Northwest Company and the Hudson's Bay Company. Population grew only slowly and there was little real agricultural development until after the railway reached St. Boniface, opposite Winnipeg, in 1878. After the completion of the Canadian Pacific Railway in 1886, the settlement and consequent agricultural development of all Western Canada was very rapid. Many settlers came from the eastern provinces of Canada as well as from the United States, Great Britain, and European countries. Settlers from Eastern Canada and the United States often took stock and equipment with them and although they found it necessary to change many of their farm practices to meet the new conditions of soil and climate, they soon built up large farms and wheat production for export became increasingly important. In the short history of agriculture on the prairies there have been many important developments in technique with a decided tendency towards mechanization. More recently the type of farming in Manitoba and some sections of the other two provinces has been changing with more stress being placed on live stock and somewhat less on wheat.

Agriculture in British Columbia is reported to have started in the Fraser Lake district about 1810. The cultivated area, however, was small and expansion was hampered by the rugged nature of the country as well as the heavy forest covering. The Hudson's Bay Company maintained a number of farms in and around Fort Vancouver and on Vancouver island in the early days. Agriculture received indirect impetus from the Cariboo gold rush in the 'fifties in supplying produce to the camps. The first fruit-growing in the Okanagan valley was started at Penticton in 1864. It was not until the 'eighties that commercial plantings took place. Since that time this area has built up an enviable reputation for the production of apples and other fruits.

The period of rapid expansion and settlement in Canadian agriculture terminated with the beginning of the depression of the nineteen-thirties. Had not the War intervened, and thus restricted settlement, this period might have arrived somewhat earlier. With the sudden cessation of expansion and the strain imposed on the whole national economy arising out of maladjustments following on the world crisis, Canadian agriculture entered a new historical phase.

### Section 1.—Government in Relation to Agriculture.

It is provided in Section 95 of the British North America Act that "in each province the Legislature may make laws in relation to agriculture in the province"; it is also "declared that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the Legislature of a province relative to agriculture . . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada".

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, both in the Dominion and in each of the nine provinces, though in two provinces the portfolio of agriculture is combined with one or more other portfolios in the hands of a single Minister.

**Subsection 1.—The Dominion Government.**

A short sketch of the functions of the Dominion Department of Agriculture was published at pp. 212-223 of the 1936 Year Book, and an outline of agricultural progress in Canada and the Dominion Experimental Farms System appeared at pp. 221-228 of the 1937 Year Book. In the 1938 Year Book a special article on the Prairie Farm Rehabilitation Program of the Dominion Government appeared at pp. 223-230. This year the problems of the Entomological Branch of the Dominion Department of Agriculture, in controlling noxious forest insects are reviewed in a special article which appears in the chapter on Forestry at pp. 254 to 263, since it is closely related to the subject of forest resources.

**CANADIAN FARM LOAN BOARD.\***

This Board was appointed by the Governor in Council under the provisions of the Canadian Farm Loan Act (c. 66, R.S.C. 1927, as amended by c. 46, Statutes of 1934, and c. 16, Statutes of 1935) and administers a system of long-term mortgage credit for farmers throughout Canada as an agency of the Crown in the right of the Dominion.

The Board is empowered to loan money to farmers for the payment of debts, for the purchase of farm equipment and live stock, to assist in the purchase of farm lands, for farm improvements or for any other purpose considered as improving the value of the land for agricultural purposes.

Loans may be granted on the security of first mortgages on farm lands actually operated by the borrower up to an amount not exceeding 50 p.c. of the appraised value of such farm lands, but, in any event, not in excess of \$5,000 and such loans are repayable on an amortized plan of repayment over a period not exceeding 25 years.

In virtue of amendments to the Act, enacted in 1935, the Board is also empowered to make additional advances to farmers, who, having obtained a first-mortgage loan from the Board, require additional funds, the amount of such additional advance not to exceed 50 p.c. of the amount of the first mortgage loan, nor the aggregate of first and second mortgage loans to exceed two-thirds of the appraised value of the farm lands mortgaged as security for the loan, nor in any event an aggregate amount of \$6,000.

The capital requirements of the Board are provided as follows:—

(a) Initial capital advance from the Government in the amount of \$5,050,000.

(b) Sale to the Government of the capital stock of the Board equal to 5 p.c. of the loans made by the Board.

(c) Sale of bonds secured by farm mortgages. At the present time these bonds are being sold to the Government on a  $3\frac{1}{2}$  p.c. interest basis with a term of 25 years. Provision is made for the guarantee by the Government of the principal of and the interest on the bonds of the Board.

The rate of interest charged by the Board on its loans is determined by the rate of interest yielded by the latest series of such bonds increased by an allowance sufficient, in the judgment of the Board, to provide for expenses of operation and reserves for losses. The current rate of interest on loans made by the Board is 5 p.c. on first-mortgage loans and 6 p.c. on second-mortgage loans.

The first appointments to the Board were made in 1929 and loaning operations were then initiated in the provinces of British Columbia, Alberta, Manitoba, Quebec,

\* Revised by A. H. Brown, Secretary, Canadian Farm Loan Board, Ottawa.

New Brunswick, and Nova Scotia. Following the amendments passed in 1935, loaning operations were initiated in that year in the provinces of Saskatchewan, Ontario, and Prince Edward Island. Loaning operations are now being carried on by the Board in all provinces of Canada. The head office of the Board is at Ottawa and a branch office has been established in each province.

Table 1 shows the total loaning operations of the Board to Mar. 31, 1938. Table 2 shows the total amount of loans approved, by provinces, in the fiscal years ended Mar. 31, 1937 and 1938.

## THE DOMINION MARKETING BOARD.

The Dominion Marketing Board was established under authority of c. 57 of the Statutes of 1934—The Natural Products Marketing Act, 1934. The chief powers of the Board, as stated in Sec. 4 of the Act, were: to regulate marketing and distribution of natural products of agriculture, the forests, sea, lake, or river, as may be designated by the Governor in Council; to conduct pools for the equalization of returns received from their sale and compensate any person for loss sustained in withholding such products from the market or for shipment to any country whose currency is depreciated in relation to Canadian currency; to assist the construction of marketing facilities by grant or loan. Following the change in Government after the elections of 1935, the present Administration filed a general reference of the social legislation passed by the former Administration to the Supreme Court and to the Privy Council. The Privy Council decision was made on Jan. 28, 1937. In both cases the legislation was declared *ultra vires* of the Dominion Government. All Orders in Council relating to the Marketing Board were subsequently revoked and the Dominion Marketing Board itself has not functioned since 1936. Prior to the reference being made, 22 cases were acted on by the Board.

## Subsection 2.—Provincial Departments of Agriculture.\*

**Prince Edward Island.**—The Department of Agriculture is presided over by a Minister, and the staff consists of a Deputy Minister and live-stock superintendent, a superintendent of women's institutes, a dairy superintendent, two field promoters and a field man for the fox industry. Assistance is given in co-operative marketing, promoting the live-stock industry, and encouraging exhibitions, the formation of boys' and girls' clubs and the welfare of agriculture generally.

**Nova Scotia.**—Agriculture in the province of Nova Scotia is administered by the Department of Agriculture, with the Head Office (Minister's Office) and those of the Director of Marketing and of the Land Settlement Board situated in Halifax. Many of the technical officials are situated at the Agricultural College and Farm, Truro, and other Divisions of the Department include: extension service, agricultural societies, associations, and exhibitions; dairying; poultry; live stock; entomology and botany; apiculture; animal pathology; agricultural engineering; and women's institutes.

**New Brunswick.**—The branches of the Department of Agriculture of New Brunswick are as follows: (1) live-stock and agricultural societies; (2) dairying; (3) herd improvement; (4) soils and crops; (5) poultry; (6) horticulture; (7) women's institutes; (8) agricultural representatives; (9) industry, immigration, and farm settlement; (10) elementary agricultural education; (11) beekeeping.

**Quebec.**—The administration of agricultural policies is entrusted to a number of services and sections as follows: extension work, which deals with all problems faced by the 98 agricultural county agents; rural economy; animal husbandry; health of animals; plant protection; agricultural education; domestic science; field husbandry; publicity; and administration. The Chief Technical Adviser is directly responsible to the Deputy Minister, who remains the main technical authority of the Department. Each service is divided into divisions dealing with minor problems. There are also many other activities such as the Quebec Farm Credit Bureau, agricultural merit competition, provincial dairy school, provincial handicraft school,

\* For publications of provincial Departments of Agriculture, see in the index the entry "Publications of Provincial Governments".

etc. There is, therefore, for any kind of agricultural activity, a corresponding administrative service where accurate information may be obtained by interested persons.

**Ontario.**—The Ontario Department of Agriculture includes the following branches: statistics and publications; agricultural and horticultural societies; live stock; women's institutes; dairy; fruit; agricultural representatives; crops, seeds, and weeds; Co-operation and Markets Branch; and the Milk Control Board. The Department is responsible for the administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, the experimental farms at Guelph, Ridgetown, and Vineland, and demonstration farms at New Liskeard and Hearst.

**Manitoba.**—The Manitoba Department of Agriculture includes the following services and branches: agricultural extension, dairying, publications, statistics and weeds, live stock, the Debt Adjustment Board, and the Registrar of Co-operative Associations.

The Agricultural Extension Branch aids field-crop production, horticulture, beekeeping, poultry raising, suppression of insect outbreaks, boys' and girls' club work, and various home-making projects. It also directs the activities of rural agricultural representatives and supervises the work of agricultural societies, horticultural societies, and women's organizations. The Dairy Branch grades all cream supplied to creameries, supervises the activities of creameries and cheese factories and gives general support to the dairy industry. The Live Stock Branch licenses stallions and conducts projects and administers policies through which encouragement is given to the production of better types of animals.

**Saskatchewan.**—The Department of Agriculture includes branches dealing with: the agricultural representative service, live stock, field crops, dairying, statistics, co-operation and markets, and land utilization. There is also a bee division. The Live Stock Branch provides the organization for examining and licensing stallions, purchasing and selling cattle, sheep, and hogs to farmers on cash and credit terms in the pure-bred sire areas (areas created under statutory authority in order to eliminate undesirable sires and improve the quality of live stock), and registering brands for live stock. The poultry industry is promoted through a flock-culling service, a turkey-grading service, and an approved hatchery policy. The health of live stock is safeguarded in various ways and exhibits of animals are sent to the Royal Winter Fairs at Toronto. The Field Crops Branch aids in promoting good cropping and tillage practices as well as encouraging the use of good quality seed of cereal and forage crops; it arranges exchanges of commercial grain for pure seed of approved varieties under the Seed Exchange Plan, and provides measures for suppressing insect and weed pests. The Dairy Branch directs the grading of cream at all the creameries, promotes herd improvement through cow testing and administers the provisions of the Dairy Products Act with respect to licensing creamery operators, cream graders and testers, and the bonding of creameries. The Statistics Branch, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers annual data respecting crops and live stock of the province. The Co-operation and Markets Branch grants charters to co-operative associations under the Co-operative Associations Act, to marketing associations under the Co-operative Marketing Associations Act, and to credit unions under the Credit Union Act, promotes co-operative activities, including live-stock shipping and poultry marketing, provides an economic research service for co-operatives, licenses poultry dealers under the Live Stock and Live Stock Products Act, and publishes a

fortnightly news letter dealing with co-operation and marketing. Under the Agricultural Representative Service, as established, the province is divided into districts where qualified men carry on promotional and educational work. The Apiary Division registers all beekeepers and promotes better management and practices. Agricultural societies are organized by, and grants are paid through, the Department, but direction of the activities of societies is centred in the College of Agriculture of the University of Saskatchewan. The Land Utilization Board, composed of representatives of several interested departments of government, facilitates the withdrawal of lands unsuitable for such use from arable farming.

**Alberta.**—The main services of the Alberta Department of Agriculture are rendered through its various branches to the live-stock, grain-growing, dairy, poultry, and mixed-farming industries. Apiculture and fur-farming are important among the minor agricultural pursuits. Agricultural extension is being encouraged through twelve District Agriculturists located at strategic points in the province; a women's home bureau organization, short courses and field days, and school fairs and junior club programs for the rural young people. The development of a horticultural station at Brooks where suitable varieties of ornamental and fruit trees are tested and propagated, is one of the Department's latest projects. Two schools of agriculture are maintained; crop reports and statistical information are published; weed control and production of registered seed are encouraged; and beef feeding organizations are receiving added support. The Department has also inaugurated a bull policy designed to improve the beef cattle, and a swine improvement policy is under consideration. The Department is co-operating with the University of Alberta, under the Dominion-Provincial Youth Training Plan, to hold 36 short-course schools and it is supervising an intensive course in agriculture under Schedule "E" of this program.

**British Columbia.**—The Department of Agriculture deals with all matters of provincial concern connected with farming in its several phases. It consists of three main divisions, namely:—

(1) The Administration Division is responsible for the general direction of agricultural policies; the administration of legislative measures affecting agriculture; the supervision of agricultural extension programs; the collection of agricultural statistics; the preparation of agricultural and horticultural displays for showing at provincial, national, and international exhibitions and assistance to fall fairs. It also distributes departmental publications; supervises soil-survey work; apiary inspection; junior club projects; farmers' and women's institutes. The Markets Branch is included in this Division.

(2) The Animal Industry Division has direct supervision over general live-stock work in the province, including live-stock promotion and improvement; brand inspection; nutritional studies; animal parasite control, and contagious diseases of animals control. This Division consists of live-stock, veterinary, dairy, and poultry branches as well as the Brand Inspection Service. A pure-bred sire purchase policy is administered under which it is possible for farmers' institutes to purchase pure-bred sires under special financial arrangements with the Department. In the Dairy Branch there is a herd improvement service operating through Cow Testing Associations; official lists are maintained of pure-bred dairy sires which have five or more daughters with production records.

(3) The Plant Industry Division includes horticulture, plant pathology, entomology, and field-crop branches. Services of these branches include the general direction of fruit and vegetable production and various surveys dealing with

orchards, small fruits and bulb acreages, as well as greenhouse areas; the suppression or control of insect pests and plant diseases; inspection and control of noxious weeds; supervision of Field Crop Union activities; local and provincial seed fairs and educational work connected with horticulture and field-crop production.

The Extension Service of the provincial Department of Agriculture maintains District Horticulturists, District Agriculturists, and District Field Inspectors at suitable points. These extension officials feature either animal industry or plant industry, depending upon the predominating type of farming carried on in the several districts. Junior Club projects are organized and supervised by extension officials in practically all agricultural areas of the province; there are now more than one hundred clubs participating.

The detailed survey of orchard soils in the Okanagan valley which was started in 1931 as a joint undertaking between the Dominion Experimental Farms and the provincial Department of Agriculture, has been followed by reconnaissance surveys of lands adjacent to the areas formerly examined. Soil maps and soil reports covering more than half a million acres in the Lower Fraser valley and a similar area in the Okanagan valley have been prepared and new areas in central British Columbia are being examined.

### Subsection 3.—Provincial Agricultural Colleges and Experimental Stations.

Under the above heading, outlines of the work done at provincial agricultural colleges and experimental stations were given by provinces at pp. 198-203, inclusive, of the 1930 Year Book. The interested reader is referred to that volume, and to the following provincial publications, for information concerning courses and programs of work at these institutions:—

*Nova Scotia.*—Annual Report of the Department of Agriculture for Nova Scotia; Calendar of the College of Agriculture, Truro, N.S.

*Quebec.*—Announcement of Macdonald College, Macdonald College, Que., and the prospectuses and annual announcements of the College of Agriculture, Ste. Anne de la Pocatière, and the Oka Agricultural Institute and Veterinary School, La Trappe, Que.

*Ontario.*—Annual Report of the Ontario Agricultural College and Experimental Farm, Guelph, Ont.

*Manitoba.*—Annual Report of the Manitoba Agricultural College, Winnipeg, Man.

*Saskatchewan.*—Annual Report of the College of Agriculture, University of Saskatchewan, Saskatoon, Sask.

*Alberta.*—Annual Report of the College of Agriculture, University of Alberta, Edmonton, Alta.

*British Columbia.*—Annual Report of the Faculty of Agriculture, University of British Columbia, Vancouver, B.C.

## Section 2.—Statistics of Agriculture.\*

**Crop-Reporting Service.**—The voluntary crop-reporting service of the Dominion Government, which has been in operation since 1908, has for its object the

\* Revised in the Agricultural Branch, Dominion Bureau of Statistics. This Branch is concerned with both primary and secondary statistics of agriculture, including statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour, and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, dairying, milling, and sugar industries and cold-storage holdings. A list of the publications of this Branch is given in Chapter XXIX, Section I, under "Production".

issue of accurate, timely, and independent reports on crop conditions throughout the Dominion; first, in the interests of the general body of Canadian farmers; secondly, for the information and guidance of other interests allied to and dependent upon agriculture (interests represented by statesmen, economists, bankers, grain dealers, transportation agents, and others); and thirdly, for reporting to the International Institute of Agriculture at Rome (to which Canada is an adhering country) in return for reports on the production of other countries and of world totals which influence prices and consequently affect the interests of Canada. Supplementing the monthly reports from crop correspondents, the Bureau issues telegraphic crop reports utilizing the services of agriculturists throughout the Dominion. For the Prairie Provinces, these are issued every week from the latter part of May to the beginning of September while the reports on a Dominion-wide basis are issued every two weeks during the same period. The program of reports for 1939-40 is given in the *Monthly Bulletin of Agricultural Statistics*, January, 1939, pp. 54-56, and is also issued as a special leaflet.

**Annual Statistics.**—In addition to the crop-reporting service, statistics of the areas under field crops and of the numbers of farm live stock are collected. This work has been conducted since 1918 by the Dominion Bureau of Statistics in co-operation with the Provincial Governments. The statistics are secured by schedules which are at present returned by about one-fifth of the farmers of Canada. They form the basis of the estimates for the whole of Canada. The results for wheat, oats, barley, rye, and flaxseed in the three Prairie Provinces are ready for publication in late July, while the results for the remaining crops and for the numbers of farm live stock are published in October and November. The areas, thus determined, when multiplied by the average yields per acre as reported by crop correspondents, form the basis of the total estimated production for each crop.

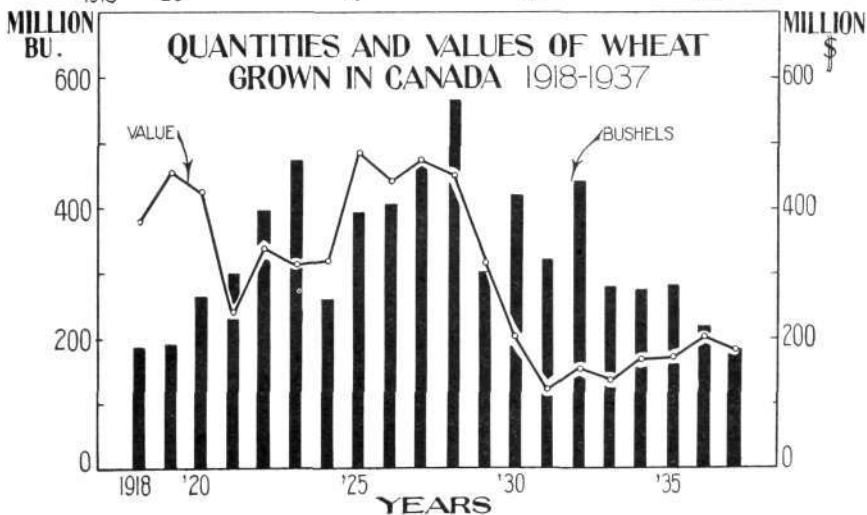

The June schedule covers the areas sown to field crops, the numbers of live stock and poultry on hand, and breeding and marketing intentions with regard to live stock and poultry. The December schedule contains practically the same items with the exception of field-crop areas.

The schedules are distributed and collected through the agency of the rural schools in New Brunswick, Quebec, Ontario, Manitoba, and Saskatchewan, while in Prince Edward Island, Nova Scotia, Alberta, and British Columbia the schedules are sent direct to the farmer through the mail.

**Monthly Bulletin of Agricultural Statistics.**—Originally established in 1908 as the "Census and Statistics Monthly", but changed to its present title in April, 1917, this publication is now in its thirty-second year. It is the official organ not only for the monthly crop reports and annual statistics previously described, but also for statistics of dairying, eggs, fruit, apiculture, hops, tobacco, maple products, sugar beets, beet sugar, flax fibre, clover and grass seeds, visible supplies, prices, values, foreign agriculture, and other subjects in considerable variety.

**Census Statistics.**—In addition to the statistics collected annually, which are the subject of this section, valuable information is published following each decennial census. The total number of farms, their tenure, acreage, value, mortgage debt, farm population, farm machinery and facilities, etc., were treated at pp. 295-301 of the 1934-35 Year Book. A summary presentation of agricultural development since 1871 was given in Subsection 9, pp. 270-273 of the 1936 Year Book.

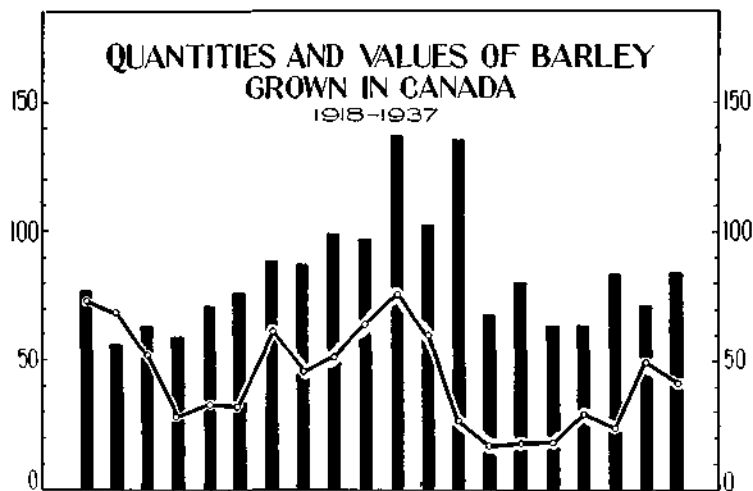

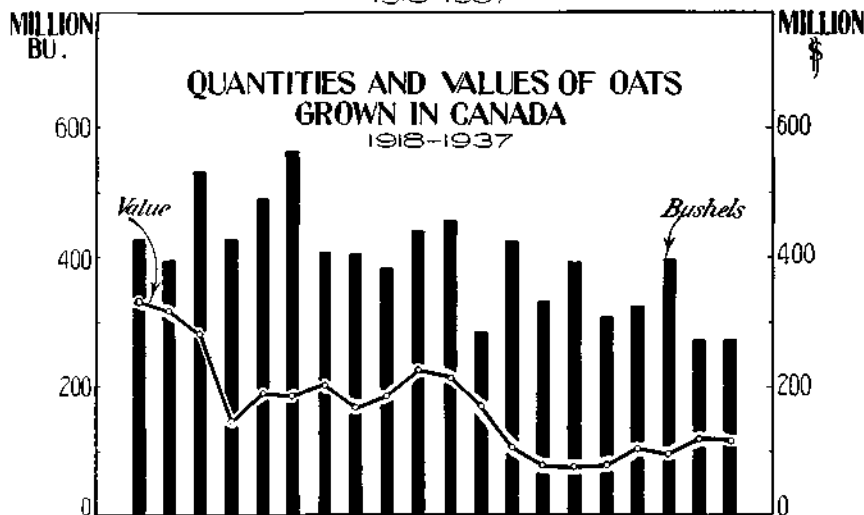

# AGRICULTURAL PRODUCTION 1918-1937

# AGRICULTURAL PRODUCTION

1918-1937

**Presentation of Agricultural Statistics.**—In the current edition of the Year Book, statistics of agriculture are presented under the following headings: (1) value of agricultural production and of farm capital; (2) acreages, yields, and values of principal field crops; (3) farm live stock and poultry; (4) dairying; (5) horticulture; (6) special agricultural crops; (7) farm labour and wages; (8) prices of agricultural produce; (9) agricultural statistics of the census; (10) miscellaneous agricultural statistics; and (11) international agricultural statistics.

### Subsection 1.—Value of Agricultural Production and of Farm Capital.

**Value of Agricultural Production.**—Table 1 shows, under principal headings, the gross agricultural revenue of Canada, by provinces, for the years 1933 to 1937. It is important to note that the figures represent gross values, as no distinction is made between crops used as materials for other kinds of production, such as the feeding of live stock, and no allowance is made for the costs of production. The total revenue for 1937 shows a decrease of \$27,873,000 or 2.6 p.c. as compared with 1936, which is accounted for largely by the decreased value of field crops in Saskatchewan.

#### 1.—Estimated Gross Value of Agricultural Production in Canada, Itemized by Provinces, 1933-37.

*Note.*—Preliminary figures for 1938 and revised figures for 1933-37 will be found in the Monthly Bulletin of Agricultural Statistics, March, 1939.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

<sup>2</sup> Based on returns from the 1936 Quinquennial Census.

The items included in the term "farm capital" as used in Table 2, are lands and buildings; implements and machinery, including motor trucks and automobiles; and live stock, including poultry and animals on fur farms. The 1931 values of lands, buildings, implements, and machinery were reported by the decennial census taken at June 1, in that year. Changes in the total value of lands and buildings for the years 1932 to 1937 have been based on the value of occupied farm lands reported annually by crop correspondents, while those in the annual values of farm implements and machinery have been estimated on the basis of sales reported each year; in the case of the Prairie Provinces, data are based on the Quinquennial Census of 1936.

The preliminary estimate of the current value of farm capital in Canada for 1937 is \$4,722,583,000 as compared with the revised estimates of \$4,626,161,000 for 1936; \$4,712,391,000 for 1935; \$4,464,147,000 for 1934; \$4,443,159,000 for 1933; and \$4,515,944,000 for 1932.

### Subsection 2.—Acreages, Yields, and Values of Field Crops.

**The Chief Field Crops of the Latest Ten Years.**—In Table 3 will be found a summary statement of the acreages, yields, and values of wheat, oats, barley, rye, buckwheat, flaxseed, potatoes, hay and clover, and alfalfa for the latest ten years.

A rapid increase in the acreage of field crops was a characteristic of the pre-war and the war periods, when settlement of the western plains occurred. During the latest ten years acreages have been relatively stable for wheat and oats. Fluctuations in the areas devoted to barley, rye, and flax have been quite marked as changes in the prices of these crops encouraged or discouraged production. Hay and clover acreage has shown a tendency to decline, but an upward trend in alfalfa acreage has occurred, due to the development of seed-producing areas in Western Canada. Successive droughts in the West have considerably reduced production of the principal grain crops from 1933 to 1937, and thus the data given in the table do not reflect the average productive capacity of the areas sown to each crop.

### 3.—Acreages, Yields, and Values of Principal Crops Grown in Canada, 1929-38.

**NOTE.**—Comparative figures for the years 1908-28 are given in the Canada Year Book, 1929, pp. 230-232. The total value for wheat for 1912 should be \$139,090,000 instead of \$19,090,000. For certain figures for earlier years on acreage, yield, and value see Statistical Summary of the Progress of Canada at the beginning of this volume.

**Distribution of Wheat and Oat Crops.**—The distribution of the wheat crops of Canada for the years ended July 31, 1937 and 1938, is calculated in Table 10.

**10.—Distribution of the Canadian Wheat Crops, by crop years, 1936-37 and 1937-38.**

**NOTE.**—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to 4½ bushels of wheat. For similar calculations extending over a series of years both for wheat and oats, see the Year Book, 1920, pp. 263-266, and the April issues of the Monthly Bulletin of Agricultural Statistics for each of the years 1920 to 1933. For 1934 and later years, preliminary estimates will be found in the August numbers of the Bulletin.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

Table 11 presents similar data for oats. The bulk of this crop is consumed as feed for live stock and the table shows approximately how the remaining portion of the crop is disposed of, including: the quantities exported as grain, oatmeal, and rolled oats; the quantities retained for seed; and the quantities milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry-over represents grain in the elevators, on farms, in transit, etc., and the balance is the quantity used in Canada for feeding to live stock, this amount being estimated at 235,467,000 bushels in 1936-37, and 220,754,000 in 1937-38.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

**Per Capita Consumption of Wheat in Canada.**—According to calculations, the average annual per capita consumption of wheat ground for human food in Canada during the ten years 1928 to 1937 was 4.1 bushels. The range for the period was between 3.9 and 4.4 bushels. The per capita consumption in 1937 was

estimated at 3-9 bushels. Details for the years 1919-27 were given at p. 241 of the 1929 Year Book. Annual estimates are published in the April number of the Monthly Bulletin of Agricultural Statistics.

**Subsection 3.—Farm Live Stock and Poultry.**

The growth of the live-stock and poultry industries in Canada from decade to decade is indicated in summary statistical form in Table 12.

**12.—Summary Statistics of the Numbers of Live Stock and Poultry on Farms in Canada, Censuses of 1871-1931.**

**Wool Production in Canada, 1920-38.**—Revised estimates of shorn and pulled wool production in Canada for the years 1920 to 1938 are contained in Table 16; the apparent consumption is also calculated from production, exports, and imports. The production of shorn wool is based on data secured from the Censuses of 1921, 1926, 1931, and 1936, and on a special survey made in the summer of 1938. Estimates of the number of sheep shorn were made from data obtained in the annual live-stock surveys. Total shorn wool is calculated by multiplying the number of sheep shorn by the estimated average yield per sheep.

Estimates of pulled wool production are based on the number of sheep and lambs sold alive off farms. An average yield of 3½ lb. per animal was applied to the sales.

The revised estimates of both shorn and pulled wool production are lower than the estimates previously published. Hitherto, an average of 7½ lb. per fleece has been used in calculating shorn wool production. The revised estimates take account of variations in yield due to differences in breeds and types of sheep and climatic conditions in different sections of Canada.

The prices applied to the production of shorn wool were those obtained annually from farm correspondents of the Dominion Bureau of Statistics.

**Egg Production.**—The data for egg-laying hens in Table 17 were calculated from the numbers of mature birds shown in the June surveys, with reductions to allow for cocks and cockerels. The production of eggs per hen and the average prices were calculated with the assistance and advice of extension workers and poultrymen connected with the provincial Departments of Agriculture.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

## Subsection 4—Dairying Statistics.

Statistics of the dairy industry of Canada are dealt with in the following sequence: total milk production, showing the quantities used for domestic purposes, live-stock feeding, and manufacturing; the value of dairy production, showing, separately, the total value of all products, and the farm value on a milk basis; the production of butter and cheese; miscellaneous milk products, consisting principally of concentrated milk and ice cream; and, finally, the estimated consumption of butter, cheese, and milk, the latter being shown by provinces on a basis of classified population groups.

The data given in these tables for 1938 are preliminary, while those for previous years are final. Special note should be made of the revisions in the quantities and values of milk otherwise used, necessitating significant changes in the quantities and values of the total milk production of Canada previously published. Revisions for the years prior to 1936 will appear in a subsequent issue of the Canada Year Book. All estimates have been made by the Dominion Bureau of Statistics on the advice of, or in co-operation with, the provincial dairy commissioners.

*Total Milk Production.*—The data presented in Table 18 represent the complete distribution of milk production and reveal a total of 15,770,235,900 lb. for 1938, an increase of 443,508,300 lb. or 2·9 p.c. over the previous year.

*Total Value of Dairy Production.*—The value of all dairy products in 1938 as shown in Table 19 is estimated at \$220,163,527, an increase of \$4,540,265 or 2·18 p.c. as compared with 1937.

*Farm Value of Milk Production.*—The data shown in Table 20 represent the total value of milk produced on farms. These values are based on the average prices of milk for domestic or manufacturing purposes at plants less local haulage costs. For the year 1938 the farm value of milk production amounted to \$150,201,000, an increase of \$6,507,000 or 4·5 p.c. in comparison with that of the preceding year. Deducting the quantities fed to live stock, the balance representing the gross farm income from dairy production is placed at \$144,221,000 in 1938. The gross income from the sale of dairy products for the year 1938 is estimated at \$118,652,000. This calculation is made by the addition of fluid sales and the sales of milk for dairy factory products (columns 2 and 3 in Table 20), plus the estimated revenue received

from the sale of dairy butter (\$6,431,000) which does not appear in this table. For further details refer to *Dairying Statistics of Canada, 1938*, published by the Dominion Bureau of Statistics.

*Butter and Cheese.*—The butter output of creameries in 1938 was 266,886,900 lb. and the estimated production of dairy butter amounted to 105,076,000 lb., a total of 371,962,900 lb. The latter represents an increase of 16,822,154 lb. or 4.78 p.c. over that of the previous year. The production of factory cheese in Canada in 1938 amounted to 121,314,600 lb. and together with the farm make of 1,101,300 lb. reached a total of 122,415,900 lb. The latter figures, in comparison with the 1937 production, revealed a decrease of 9,442,238 lb. or 7.2 p.c.

*Miscellaneous Factory Products.*—The production of concentrated whole milk products amounted to 122,180,000 lb. in 1938, and evaporated milk included in this figure 105,592,000 lb. The production of concentrated milk by-products reached a total of 38,984,000 lb. of which evaporated skim milk represented 25,921,000 lb. All concentrated milk products, whole milk and milk by-products combined, amounted to 161,164,000 lb. valued at \$11,774,000, representing increases of 17.3 p.c. and 15.7 p.c., respectively, over that of the previous year. Ice cream production, also included in the miscellaneous group, amounted to 5,723,232 gal. valued at \$6,965,444.

*Apparent Consumption of Butter, Cheese and Milk.*—The apparent consumption of butter and cheese for the years 1934-38 is shown in the Internal Trade Chapter of this volume (Table 17 of Chapter XVII). This shows that butter consumption in 1938 amounted to 356,797,062 lb., revealing a per capita consumption of 31.83 lb. Cheese consumption amounted to 40,555,515 lb. and a per capita consumption of 3.62 lb. The daily per capita milk consumption is shown in Table 23.

<sup>1</sup> The data in this column include the total value of skim milk and buttermilk. For all Canada this amounted to \$10,065,000 in 1938, as compared with \$9,514,000 in 1937, and \$9,604,000 in 1936.

<sup>2</sup> Consists of milk sold for domestic use valued at plants, and milk consumed and milk fed valued at farms.

<sup>1</sup>"Farm" population refers to that part of the population located on farms where milk is produced; "Non-Farm" population includes the total urban population, plus that part of the rural population located on farms where there are no milk cows. In other words, the former group is composed of milk producers while the latter is composed of milk buyers.

## Subsection 5.—Horticulture.

The statistical treatment of horticulture is confined to fruit growing, vegetable growing, floriculture, and nursery stock production, all on a commercial scale. Of the several branches of commercial horticulture, fruit and vegetable growing are the most important. In recent years the latter has made remarkable gains and now surpasses fruit growing in total value of production. Vegetables and flowers grown in home gardens for private use probably exceed the volume of commercial production. The processing of fruits and vegetables is an important development closely allied to the production industry. In 1937, the latest year for which complete figures are available, the total value of processed fruits and vegetables, including wine, was almost \$54,000,000.

Apple growing is the mainstay of the fruit industry in Canada, the value of commercial production averaging over \$10,000,000 annually for the years 1926-35. Other fruits cultivated include the pear, peach, plum, cherry, apricot, and grape, together with various berries of which the strawberry is most important. Substantial revenue is derived from the native blueberry and cranberry, the former being abundant over large areas of Eastern Canada, while the cranberry is found chiefly in the Maritime Provinces. Commercial fruit growing is centred mainly in

the provinces of Nova Scotia, Ontario, and British Columbia. For a fuller discussion of fruit growing in Canada, the reader is referred to pp. 242-247 of the 1931 edition of the Year Book.

Satisfactory annual statistics of the commercial vegetable-growing industry are not at present available, but important information on the subject is obtained through the decennial census. This material will be found on pp. 254-255 of the 1936 Year Book.

**Annual Statistics of Fruit Production.**—Table 24 shows the quantities and values of commercial fruit production in Canada for the years 1934-37, inclusive, together with the averages for the five-year period 1932-36.

**24.—Estimated Quantities and Values of Chief Commercial Fruit Production in Canada, 1934-37, with Five-Year Averages, 1932-36.**

*NOTE.*—Figures for the years 1926-33 will be found at pp. 258-259 of the 1937 Year Book.

**The Fruit Nursery Industry.**—The first commercial nursery in Canada was established near Fonthill, Ontario, and this district still continues to be one of the leading centres of the industry. While the province of Ontario accounts for the major part of the fruit stock output, there are nurseries distributed through all the provinces and the wholesale value of the product sold during the year ended May 31, 1938, was \$369,458, as compared with \$373,002 in 1937.

**Vegetables.**—Census figures of areas, quantities, and values of vegetables produced for sale on farms in Canada, in the years 1920 and 1930, were shown at pp. 254-255 of the 1936 Year Book.

## Subsection 6.—Special Agricultural Crops.

**Maple Syrup and Sugar.**—The Canada Year Book, 1924, contained on pp. 247-248 a description of the process of making maple sugar. Table 27 gives the production and value of maple sugar and syrup in Canada for the years 1936-38, as estimated by the Dominion Bureau of Statistics.

The table shows that in 1938 for the whole of Canada there was an estimated decrease of 959,200 lb. of maple sugar but an increase of 1,723,200 gal. of maple syrup, while the combined value of the two products showed an increase of \$1,604,900 as compared with the previous year.

**Sugar Beets and Beetroot Sugar.**—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time two companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg in Ontario, and the Canadian Sugar Factories, Ltd., with plants at Raymond, and Picture Butte, Alberta. Table 28 shows the areas, yields, and values of sugar beets grown in Canada in the years 1928-37.

## 28.—Acreages, Yields, and Values of Sugar Beets Grown in Canada and Quantities of Refined Beetroot Sugar Produced, 1928-37.

Notes.—For the years 1911-20, see the 1932 Year Book, p. 1057; for 1921-27, see the 1933 Year Book, p. 257.

The production in 1936-37 of raw beet sugar in the principal beet-growing countries, in thousands of short tons, was as follows: U.S.S.R., 2,203; Germany, 1,992; United States, 1,396; France, 960; Czechoslovakia, 801; United Kingdom, 650; Poland, 505; Italy, 380; Sweden, 330; Belgium, 286; Netherlands, 259; Denmark, 249; Spain, 249; Austria, 161; Hungary, 158; Yugoslavia, 110; Irish Free State, 107.

**Tobacco.**—The 1938 commercial crop of Canadian leaf tobacco is estimated at 98,427,900 lb., the largest crop on record in the history of the industry. This represents an increase of 26,334,500 lb. over the 1937 crop estimated at 72,093,400 lb. and is more than double the average production of the ten-year period 1927-1936.

The rapid expansion in the industry has been due almost entirely to the phenomenal increase in the production of flue-cured tobacco, particularly in Ontario where production of this type increased from 6,229,800 lb. grown on 7,550 acres in 1927 to 73,500,000 lb. on 61,500 acres in 1938. On the other hand, burley tobacco has shown wide fluctuations during the same period with production in 1938 amounting to only 10,657,700 lb. as compared with the peak production of 22,385,000 lb. in 1927.

The 1938 crop has a gross farm value estimated at \$19,563,000 as compared with \$17,139,200 in 1937 and \$9,374,100 in 1936. The values used in these estimates are based on average farm prices. As a result of unfavourable marketing conditions and a sharp break in prices in 1931 values reached very low levels in 1932. Prices rose steadily during the next five years, partly as the result of increased prices for all types of tobacco but particularly due to the rapid expansion in the production of flue-cured tobacco, which commands a higher price than other types. Owing to the very large crop in 1938 and high stocks on hand from the heavy production in the previous year, prices paid for the 1938 crop were generally lower than the corresponding prices in 1937.

**Apiculture.**—Data on apicultural production are shown by provinces for the years 1936 and 1937 in Table 33. Numbers of beekeepers and colonies, and the production estimates for honey and beeswax have been furnished for the most part by the Provincial Departments of Agriculture. Crop valuations have been made on the basis of the average farm prices reported by the Bureau's crop correspondents. Production in 1937 showed a decrease of 23 p.c. in both volume and value as compared with the crop of the previous year. An estimate of the 1938 honey crop places production at 37,278,900 lb., the highest on record.

### 33.—Estimated Production and Value of Honey and Beeswax in Canada, by Provinces, 1936 and 1937.

**NOTE.**—Figures of honey production, as at the Censuses of 1921 and 1931 will be found at p. 285 of the 1934-36 Year Book.

† Information not available.

### Subsection 7.—Farm Labour and Wages.

**Average Wages of Farm Help.**—The cost of farm labour reached its highest point in 1920. In the next two years there was a rapid drop, while from 1923 until 1929 there was little change. The years 1930 to 1933 showed continuous marked reductions in average values of yearly wages and board, following the downward trend of the prices of farm produce. From 1934 to 1938 slight increases were registered.

In Table 34 the values of wages and board are given for the years 1914, 1920, 1930, and 1936-38, both for the summer season and for the year, distinction being made in all cases between wages and board.

34.—Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930, and 1936-38.

**Subsection 8.—Prices of Agricultural Produce.**

The average monthly cash prices of representative grades of Canadian wheat, oats, barley, flaxseed, and rye in the Winnipeg market—basis, in store at Fort William and Port Arthur—will be found for each month from August, 1936, to December, 1938, in Table 35. The average monthly prices of flour, bran, and shorts at Montreal, Toronto, Winnipeg, Minneapolis, and Duluth for 1938 are given in Table 36.

The yearly average prices per cwt. of Canadian live stock at Toronto, Montreal, Winnipeg, and Edmonton are given for 1937 and 1938 in Table 37 and the average monthly prices in 1938 at these centres and at Calgary in Table 38.

**35.—Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flaxseed, and Eye—basis, in Store at Fort William and Port Arthur—Aug., 1936-Dec., 1938, and Yearly Average Prices for crop years ended July 31, 1926-38.**

**Index Numbers of Agricultural Prices.**—Records of the average prices received by farmers for their crops have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office or the Dominion Bureau of Statistics. From these records, annual index numbers of prices have been calculated for each crop and for the field crops as a whole. The results of these calculations using the crop year 1926-27 as the base period, are presented in Table 39. In addition to the price indexes shown here, index numbers have been calculated of the yields of the various crops from year to year, and, by a combination of the prices and yields, index numbers of the value of all field crops, weighted according to quantities, have been obtained. Indexes of yield and value are not shown here, owing to lack of space, but appear at pp. 31-32 of the Monthly Bulletin of Agricultural Statistics, January, 1939.

### 39.—Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, crop years, 1916-17 to 1935-39.

NOTE.—Average price, 1926-27 = 100. For the formulae used in the calculation, see Monthly Bulletin of Agricultural Statistics, January, 1939, p. 30.

<sup>a</sup> Prices quoted are per bushel, except for potatoes and turnips, etc., which are per cwt., and the last five items, which are per ton. For details of index numbers by provinces, see Monthly Bulletin of Agricultural Statistics, January, 1939, pp. 31-37. <sup>b</sup> Not available. <sup>c</sup> Subject to revision.

The general index number fell from 1924 to 1928, especially from 1926 to 1928, recovered strongly in 1929 but declined rapidly to reach the record low of 43.1 for the 1932 crops. All the crops contributed to this sharp decline, although the grain crops dependent upon overseas markets suffered the most. The forage crops and sugar beets, which are used within the country, held up well in price, partly owing to the fact that climatic conditions did not favour high yields in this year.

During the next two years there was considerable improvement in the prices of these field crops. Fodder and hay prices rose materially because of short crops and good demand. The general index rose from 43.1 in 1932 to 67.4 in 1934. The decline to 55.9 in 1935 was mainly due to increased production and consequent lower prices of coarse grains and forage crops, while sharply increased prices, especially

for the grain crops, brought the index up to 80.9 for 1936, the highest point since 1929. Short crops due to severe drought in Western Canada brought the index down to 77.2 in 1937. Although production was heavy in 1938, a sharp decline in prices reduced the index still further to 52.9.

**Subsection 9.—Agricultural Statistics of the Census.**

A summary of the more important agricultural statistics compiled from the Census of 1931 was published at pp. 295-301 of the 1934-35 edition of the Year Book. The review included statistics of tenure of farms; farm values; mortgage indebtedness; farm expenditures; farm population; farm workers; and cost of labour, farm machinery, and facilities. In the 1937 edition of the Year Book, further statistics were presented at pp. 270-273 which showed, for the Prairie Provinces, comparative figures of population, farm holdings, areas, and values, the condition of farm land, the numbers of live stock, and the acreages of the principal crops, for each of the census years 1936, 1931, 1926, 1921, and 1911.

A summary table follows showing, by provinces, the part-time farm operators classified by the other occupations that are followed by some or all of the members of families, especially on small farms of insufficient size\* to furnish a livelihood. Of such part-time operators, for Canada as a whole, 20.5 p.c. were, in 1931, either living on income or were following occupations not classified below; 19.8 p.c. of the remainder were engaged in unskilled labour; 11.6 p.c. in personal service; 11.5 p.c. in fishing, hunting and trapping; while other important occupations were agriculture (for others than themselves), construction, and transportation.

\* The census definition of a "farm" is a tract of land of one acre or more which produces agricultural products to the value of \$50 or more per annum.

**10.—Occupations of Part-Time Farm Operators, 1931.**

## Subsection 10.—Miscellaneous Agricultural Statistics.

**Agricultural Irrigation.**—*Alberta.*\*—The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial, irrigation, and other purposes, and the granting of licences for such purposes are dealt with thereunder. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (R.S.A., 1922, c. 114) and amending statutes provide for the formation of irrigation districts, and authorize the raising of loans under by-laws adopted by the voters of the district. Table 41 gives statistics of the larger irrigation projects in Alberta for the years 1936 and 1937.

41.—Major Irrigation Projects in Southern Alberta, 1936 and 1937.

The Canadian Pacific Railway has constructed three large projects known as the Eastern, Western, and Lethbridge sections, the last-named being the oldest irrigation project in Alberta. In 1935 the interests of the C.P.R. in the Eastern project were transferred to the water contract holders, who are now operating under the name of the Eastern Irrigation District. By agreement with the Canadian Pacific Railway, the Taber, Magrath, and Raymond irrigation districts procure their water supply from the main canal of the Lethbridge section, a further 43,603 acres being served by the canals of these districts.

The total irrigable area served by the Canada Land and Irrigation Company's project is 130,000 acres, while the New West Irrigation District, by agreement with the Canada Land and Irrigation Company, received a water supply for a further irrigable area of 4,563 acres.

In addition to the irrigated tracts enumerated in the foregoing table, there are approximately 391 privately-owned projects in Alberta, with a possible irrigable area of 57,751 acres.

\* Revised by L. C. Charlesworth, Director of Water Resources, Edmonton, Alta.

*British Columbia.*\*—The surface waters of British Columbia are vested in the Crown in the right of the province and are administered by the Water Rights Branch of the Department of Lands under the Water Act, the Drainage Dyking and Development Act and the Ditches and Watercourses Act. The administration of the Acts is vested in the Comptroller of Water Rights and the Water Board, the latter comprising a Chairman, the Comptroller of Water Rights and the Chief Engineer of the Branch.

Licences to use water for irrigation are issued by the Comptroller of Water Rights, and since 1858, when the first right to use water was given, upwards of 9,000 irrigation licences have been issued.

There are several forms of organization operating irrigation systems in British Columbia, and Table 39, pp. 272-273 of the 1938 Year Book, give statistics of the larger irrigation projects for 1937, the latest year available.

**Average Values of Farm Lands.**—Statistics showing the average values of farm lands in Canada in 1910 and from 1920 to 1938, are given in Table 42. The values are as estimated by crop correspondents and show the rise in land values between 1910 and 1920, the general decline with moderate fluctuations from 1920 to 1929, and the rapid fall since 1929 to a point below the 1910 level for the country as a whole.

42.—Average Values per Acre of Occupied Farm Lands<sup>1</sup> in Canada, as Estimated by Crop Correspondents, 1910 and 1920-38.

<sup>1</sup> Orchards and fruit lands, 1938, with 1937 in parentheses: Nova Scotia \$38 (\$96); Ontario \$37 (\$89); British Columbia \$265 (\$261).

### Subsection 11.—International Agricultural Statistics.

**World Production of Cereals and Potatoes.**—Table 43, constructed from data published by the International Institute of Agriculture, shows the areas and yields of wheat, oats, barley, rye, corn, and potatoes for the years 1937 and 1938, in countries of the Northern Hemisphere, and for the years 1937-38 and 1938-39 in countries of the Southern Hemisphere. The annual average acreages and yields are also given for the five-year period, 1932-36 (1932-33 to 1936-37), and the areas and yields of 1938 (1938-39) are compared in percentages with those of the five-year period.

\* Revised by J. C. MacDonald, Comptroller of Water Rights, Department of Lands, Victoria, B.C.

<sup>1</sup> Most of the figures for 1937 have been revised since the publication of the 1938 Year Book. <sup>2</sup> Not available. <sup>3</sup> In the Southern Hemisphere the annual statistics are for the crop years 1937-38 and 1938-39, and the averages are for the period 1932-33 to 1936-37. <sup>4</sup> Including Austria.

**World Exports and Imports of Wheat and Flour.**—Statistics showing the exports and imports of wheat and wheat flour for the principal countries of the world in the crop year ended July 31, 1938, with comparative figures for the previous crop year, are shown in Table 44. This information is taken from data published by the International Institute of Agriculture. During the crop year 1937-38, a total of 580,787,000 bushels of wheat and wheat flour expressed in bushels of wheat is shown as exported, as compared with 672,798,000 bushels in the previous year.

**44.—Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1937 and 1938.**

**World Live Stock.**—The statistics of Table 45, compiled from data published by the International Institute of Agriculture, show as nearly as possible the world situation with regard to live stock about 1936. For many countries, the figures are the result of careful enumeration, while for others they represent only approximate estimates. In the cases of Mexico and Kenya, the figures are for 1930, as are also those for horses in Uruguay, the Union of South Africa, and Santo Domingo, those for swine in Uruguay and Santo Domingo and those for cattle in the latter country. Earlier figures are: Belgium (sheep, 1929); Peru (1929); Bulgaria (1926); Venezuela (cattle, and sheep, 1929; horses and swine, 1921); Siam (swine, 1921).

**45.—Numbers of Live Stock in Principal Countries, circa 1936.**

## CHAPTER IX.—FORESTRY.\*

NOTE.—A short article on "Physiography, Geology, and Climate, as Affecting the Forests" was published at pp. 311-313 of the 1934-35 Year Book.

### Section 1.—Forest Regions.

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic, and soil conditions cause marked differences in the character of the forests in different parts of the country, hence more or less well-defined forest regions may be recognized. The following principal regions are described separately: Acadian, Great Lakes-St. Lawrence, Deciduous, Boreal, Sub-Alpine, Columbia, Montane, and Coast. For descriptive purposes, it is convenient to consider two sections of the Boreal Region as separate entities, and they are described hereunder as the Northern Transition, and the Aspen Grove Sections.

**The Acadian Forest Region.**—This region includes all of the province of Nova Scotia and Prince Edward Island, and all but the northwest corner of New Brunswick. Its climate is characteristic of maritime regions, and is highly favourable to tree growth. Annual precipitation averages about 40 inches. Topography and geology are widely varied. In northern New Brunswick the maximum altitude is 2,700 feet above sea-level, and northern Cape Breton island and parts of Nova Scotia are fairly rough. The surface of the remainder of the region varies from level to gently rolling.

There is a general coniferous character to the region, especially in the northern parts of New Brunswick and Cape Breton island. Mixed forests, interspersed with so-called "hardwood ridges", are common, however, occurring more frequently in the southern parts of New Brunswick and Nova Scotia.

Among the coniferous species red spruce is the characteristic dominant, and is usually associated with balsam fir. White and black spruce, and white and red pine, are widely distributed. Jack pine occurs in pure stands on sandy plains. Hemlock, which is still to be found in most parts of the region, is believed to have been much more important in former times. Other characteristic conifers are cedar and tamarack.

Yellow birch, maple, and beech occur in fairly large quantities and usually occupy well-drained ridges. White birch, wire birch, and poplar are found in association with the coniferous species. Among the other hardwoods are oak, butternut, basswood, ash, and elm.

**The Great Lakes-St. Lawrence Forest Region.**—This forest, centring on the Great Lakes system, and extending eastward down the St. Lawrence valley, is

\* Material in this chapter, with the exception of the special article appearing at pp. 254-263, has been prepared by R. G. Lewis, B.Sc. F., Chief of the Forestry Branch of the Dominion Bureau of Statistics, in co-operation with Roland D. Craig, F.E., of the Dominion Forest Service of the Department of Mines and Resources. Section 1 is based on Dominion Forest Service Bulletin No. 89, "A Forest Classification for Canada", by W. E. D. Halliday. The Forestry Branch of the Bureau of Statistics collects and compiles statistics relating to forest production and publishes four annual printed reports covering the lumber industry, the pulp and paper industry, and the wood-using and paper-using industries of Canada. These printed reports are usually preceded by a number of preliminary mimeographed reports, one for each important industry or group of industries. For detailed list of publications, see Chapter XXIX.

of an irregular character. It occupies a middle position between predominantly coniferous forests to the north and the deciduous forests to the south. Precipitation varies from an annual average of 25 inches in the west to 45 inches in the east, and the growing season is from 100 to 150 days. Good forest soils of sedimentary origin are common, but southward extensions of the granitic areas of the Canadian Shield are also included within the boundaries of the region.

The characteristic species are white pine, red pine, and hemlock, associated with the maples, yellow birch, and, in some sections, beech and basswood. Aspen, cedar, and jack pine are widely distributed, and spruce and balsam fir are common in certain localities. Among the less widely distributed hardwood species are white birch, elm, hickories, white and black ash, bur, red, and white oak, ironwood, and butternut.

The pine forests of the Ottawa valley and Algonquin Park have been famous as one of the greatest of Canada's lumbering areas. Elsewhere in the region forests of mixed type predominate, with a considerable proportion of pure hardwood stands in the more favoured locations towards the south.

**The Deciduous Forest Region.**—This region in Canada consists of a small northerly intrusion from the great forest of the same type in the United States, and occupies the southwestern portion of what is commonly referred to as the Ontario peninsula. It enjoys very favourable climatic and soil conditions which permit of the growth of a number of tree species not found elsewhere in Canada. Because of its fertile soil, the area is completely settled, and the forests are now represented only by woodlots, parks, and small wooded areas on the lighter soils.

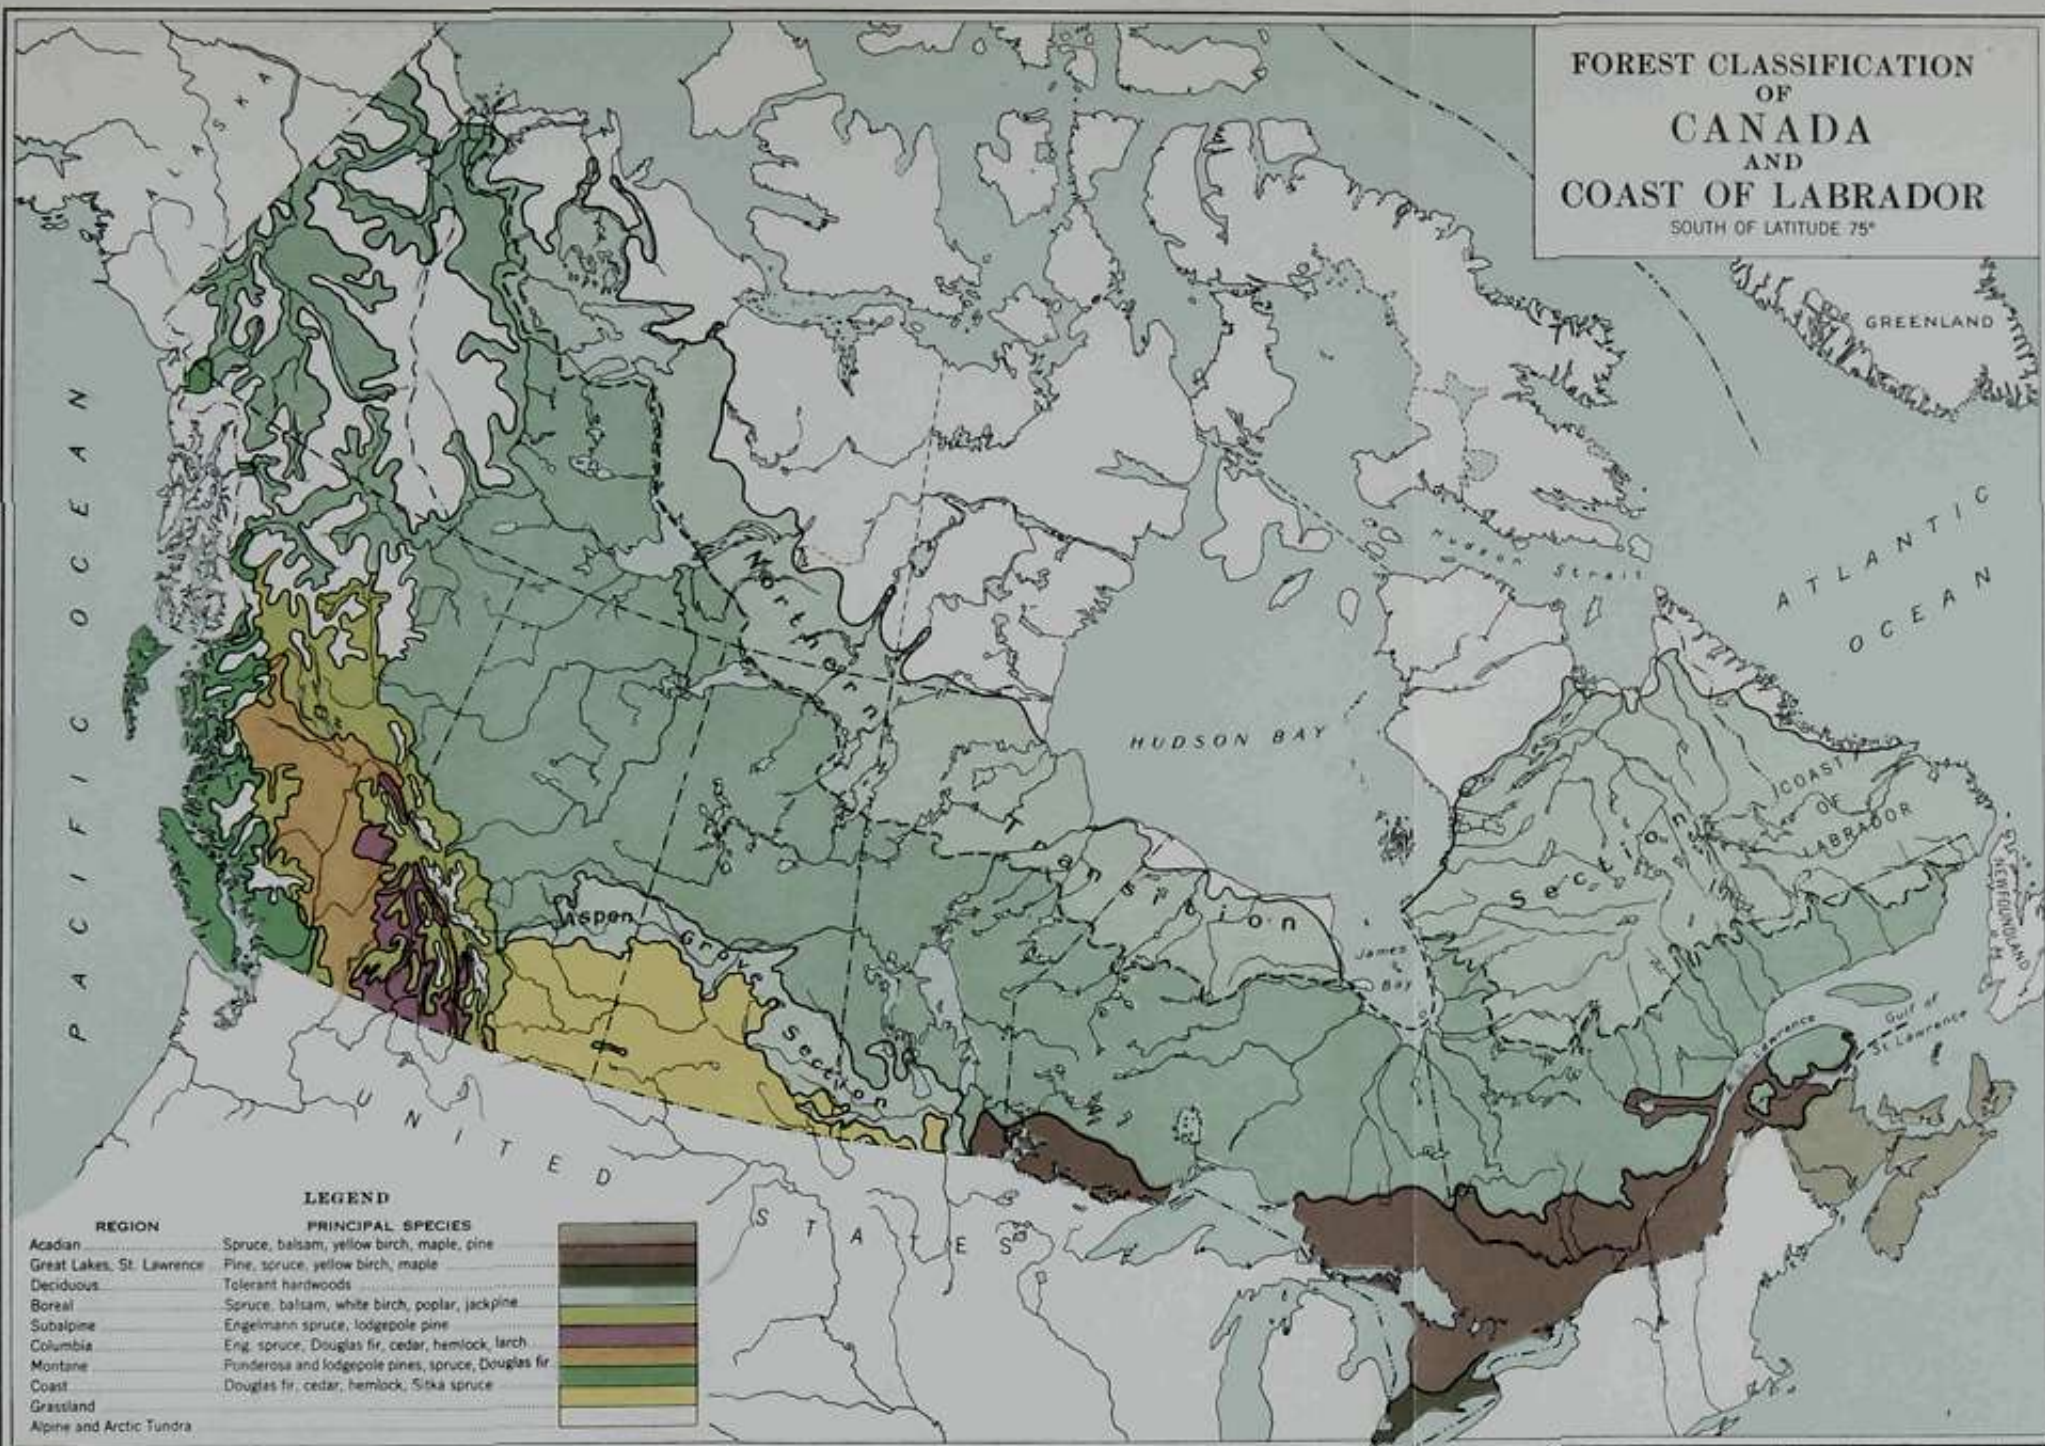

Among the characteristic trees are beech and sugar maple, together with basswood, red maple, and several oaks. Coniferous species are largely represented by scattered specimens of white pine, hemlock, and red juniper.

Among the less common hardwoods, which occur singly or in small groups, are hickories, black walnut, chestnut, tulip tree, magnolia, mulberry, sycamore, sassafras, black gum, Kentucky coffee tree, and a number of other species which find their northern limit in this region.

**The Boreal Forest Region.**—This region covers the greater part of the land area of Canada. It stretches unbrokenly from the Atlantic coast of Quebec westward to Alaska. Along its southern side it follows the limits of the Great Lakes-St. Lawrence Region, then skirts the open grasslands of the Prairie Provinces, and is terminated in the west in the foothills of the Rocky mountains. To the north it is bounded by the limits of tree growth.

The principal trees of the region are white and black spruce, balsam fir, poplars, white birch, and jack pine. Near the foothills of the Rocky mountains the latter species is replaced by lodgepole pine. In Quebec and Ontario, and as far west as a line running from lake Winnipeg to lake Athabaska in the Prairie Provinces, the region is, for the most part, underlain by granitic rocks of the Precambrian formations known as the Canadian Shield. Within the area described there are extensive tracts of good soil, formed from glacial or sedimentary deposits, but a larger portion of the region is characterized by shallow soils. Very considerable areas of bare rock testify to the disastrous results of forest fires followed by erosion.

**FOREST CLASSIFICATION  
OF  
CANADA  
AND  
COAST OF LABRADOR**  
SOUTH OF LATITUDE 75°

**LEGEND**

REGION	PRINCIPAL SPECIES
Acadian	Spruce, balsam, yellow birch, maple, pine
Great Lakes, St. Lawrence	Pine, spruce, yellow birch, maple
Deciduous	Tolerant hardwoods
Boreal	Spruce, balsam, white birch, poplar, jackpine
Subalpine	Engelmann spruce, lodgepole pine
Columbia	Eng. spruce, Douglas fir, cedar, hemlock, larch
Montane	Ponderosa and lodgepole pines, spruce, Douglas fir
Coast	Douglas fir, cedar, hemlock, Sitka spruce
Grassland	
Alpine and Arctic Tundra	

The forests of this part of the region are mainly coniferous, with black spruce and balsam fir as dominants, and are valuable chiefly for pulpwood.

West of lake Winnipeg the same tree species are in evidence but in different proportions. Here the soil is deep and relatively fertile, and the characteristic forest is a mixture of poplar and white spruce.

The climate of the region is severe, and precipitation ordinarily varies from 15 to 30 inches annually, although these amounts are exceeded in eastern Quebec.

*The Northern Transition Section.*—This area is a part of the Boreal Region, but is described separately because none of its forests is of commercial value although of considerable local economic value. It represents a transition from the merchantable forests of the south to the treeless wastes of the far north. White and black spruce, larch, and birch are the principal tree species, and these are usually of stunted growth because of the severity of the climate. In river valleys and other protected sites occasional clumps of trees of fair size are to be found. The principal economic value of the forests probably consists in the habitat which they provide for fur-bearing animals, and the wood they furnish for fuel and buildings for the scattered inhabitants of the region.

*The Aspen Grove Section.*—This section, which lies entirely within the Prairie Provinces, is also a part of the Boreal Region, but has very special characteristics. It is a zone of transition between the true forest region to the north and the open grasslands to the south. Aspen is the dominant tree, and is in sole possession of most of the area. In southern Manitoba stands of bur oak are found, and elm, basswood, and ash occur singly or in small groups in river bottoms. Most of the area is farmed and much of the forest is now in the form of woodlots.

*The Sub-Alpine Forest Region.*—This is essentially a coniferous forest extending from the grasslands of the prairies and the western border of the Boreal Region up the east slopes of the Rockies to timber-line. This same type of forest reappears in a narrow strip extending northwesterly from the International Boundary between the plateaux of the Montane Region and the non-forested tundra formation of the mountain tops of the Coast ranges.

In general, this forest formation occupies areas from 3,500 to 6,000 feet above sea-level. Rainfall is moderate, temperatures are low, and the growing season is short. The topography is mountainous with steep-sided valleys, and the soils are mostly derived from glacial and other residual material. The dominant tree species are Englemann spruce, alpine fir, and lodgepole pine. Less widely distributed are mountain hemlock, alpine larch, and white-barked pine.

*The Columbia Forest Region.*—This region, often referred to as the Interior Wet Belt of British Columbia, supports forests which are somewhat similar in composition to those of the Coast Region.

The forests properly attributable to the Columbia Region comprise stands in the valleys of the Columbia and other rivers which lie between elevations of 2,500 feet and 4,000 feet above sea-level. Below this range occurs the Montane Region, and above it the Sub-Alpine. The climate is intermediate between those of the Coast and Montane Regions. The precipitation varies from 30 to 60 inches. The region should actually be mapped as a series of 'islands' and 'stringers' surrounded

by patches of Sub-Alpine forest; but it is impracticable to do this on so small a scale as is used for the map facing page 248.

Some authorities consider the Columbia Region to be merely an extension of the Coast Forest Region. Because of the complete physical separation of the two regions in Canada, and also because of important differences in environmental conditions, the division made here has been adopted.

The principal species in this region are Englemann spruce, western red cedar, western hemlock, and Douglas fir. Among other species of considerable importance are alpine and grand firs, western white pine, and western larch. Lodgepole pine commonly replaces stands destroyed by fire. Black cottonwood is found on rich alluvial soils.

**The Montane Forest Region.**—This region forms part of what is often termed the Interior Dry Belt of British Columbia. It occupies an extensive series of plateaux, valleys, and ranges in the interior of the province, which extends northward from the International Boundary to the valley of the Skeena river. The climate is relatively dry, with low summer rainfall, and moderate to high temperatures. The driest conditions are found in the lower river valleys, where the forest gives way to open grassland.

The principal tree species are ponderosa pine, Douglas fir, lodgepole pine, and aspen. Towards the northern half of the region ponderosa pine disappears and associations of Douglas fir and lodgepole pine become dominant. Towards the north and east, stands of Englemann spruce and alpine fir grade into the forests of the Sub-Alpine and Columbia Regions. Aspen is an important constituent of the northern parts of this forest.

**The Coast Forest Region.**—This region includes the western slope of the Coast and Cascade mountains and the insular system, the higher elevations of which form Vancouver island, the Queen Charlotte group, and other islands along the coast.

The climate in this region is mild and equable, with heavy precipitation varying from 40 to 200 inches per annum, about 70 p.c. of which falls during the autumn and winter months. These conditions are conducive to the luxurious growth of coniferous forests, and produce the largest trees and the heaviest stands in the Dominion.

The dominant trees are western hemlock and western red cedar. Associated with these are Douglas fir in the south and Sitka spruce in the north. All four of these species, of which the most important commercially is Douglas fir, grow to large sizes, and occasionally are found in stands running up to 100,000 ft. b.m. per acre. Other conifers which occur in the region but are of much less importance include: yellow cedar; mountain hemlock; amabilis, grand, and alpine firs; and western white pine. Of the broad-leaved trees, several alders are widely distributed, and Garry oak and madrona are found in the vicinity of the straits of Georgia. Broad-leaved maple and vine maple occur at low elevations in the southern sections, and black cottonwood, which is perhaps the most important hardwood from the commercial point of view, is found on alluvial soils in the valleys.

## Section 2.—Important Tree Species.

In Canada there are approximately 125 species or distinct varieties of trees. Only 33 of these are conifers commonly known as "softwoods", but they comprise over 80 p.c. of the standing timber and 70 p.c. of the wood utilized for all purposes. While the number of deciduous-leaved or "hardwood" species is large, only about a dozen are of a commercial importance comparable with that of about two dozen species of conifers.

For descriptions of the individual tree species, the reader is referred to pp. 283-286 of the Canada Year Book, 1936, where the chief tree species were covered, and to Dominion Forest Service Bulletin No. 61, "Native Trees of Canada", published by the Department of Mines and Resources, where the subject is treated in detail.

## Section 3.—Forest Resources.

**Areas.**—The total land area of Canada, revised according to the latest surveys, is estimated at 3,466,556 square miles, of which 549,700 square miles is considered as being suitable for agricultural or pastoral purposes. About 254,873 square miles of this agricultural land is occupied and of this 213,236 square miles is classified as improved and under pasture and 41,637 square miles as forested.

On p. 27, the area of forested lands is shown in detail. It will be seen that the total area covered by existing forests is 1,223,522 square miles, including 41,637 square miles of occupied agricultural land still forested. Most of this will, no doubt, be left under forest cover in the form of farmers' woodlots. There is also a considerable area of forest land which is of agricultural value and will eventually be cleared, but it is estimated that 1,100,000 square miles is essentially forest land which can best be utilized for forest production. The accessible and productive forest area is estimated to be 769,463 square miles, of which 360,548 square miles carries timber of merchantable size and on 408,915 square miles there is young growth which, if protected from fire, will eventually produce merchantable timber. The remaining area of 454,059 square miles carries forests of value either because of their influence on water control, climatic conditions, game conservation, or by reason of their attraction to tourists and their value as a source of wood for local use. On account of their geographical location or because of unfavourable growth conditions these forests at present are considered as non-productive from a commercial viewpoint.

As a result of the constant and inevitable improvement in conditions affecting profitable exploitation, such as the extension of settlement and transportation facilities, the increasing world scarcity of forest products, and the ever-increasing demand for these products, due to the development of industry, the discovery of new uses for wood, and the improvements in the methods, equipment, and machinery used in logging and manufacturing forest products, some of this inaccessible timber will eventually become commercially exploitable. It is estimated that of the accessible forest area 442,354 square miles is producing softwood or coniferous timber, 221,138 square miles mixed softwoods and hardwoods, and 105,971 square miles hardwood or broad-leaved species.

In Canada as a whole about 10.5 p.c. of the total forest area has been permanently dedicated to forest production. The distribution of Dominion forest experimental areas, provincial forests, provincial parks and national parks, by provinces, is shown in the following statement.

FOREST RESERVES AND PARKS IN EACH PROVINCE, 1939.

Province.	Dominion Forest Experimental Areas.	Provincial Forest Reserves.	Provincial Parks.	National Parks.	Total.
	sq. miles.	sq. miles.	sq. miles.	sq. miles.	sq. miles.
Prince Edward Island.....	Nil	Nil	Nil	7.00	7.00
Nova Scotia.....	"	"	"	400.00	400.00
New Brunswick.....	35.00	"	"	0.10	35.10

Alberta.....	62.60	14,315.76	2.27	7,316.00 <sup>2</sup>	21,696.63
British Columbia.....	Nil	26,739.00	8,252.04	1,715.00	36,706.04
Totals.....	237.00	106,361.05	17,398.69	12,466.83	136,964.47

<sup>1</sup> Of this area 256.39 square miles have been placed under provincial park regulations. <sup>2</sup> Not including the Wood Buffalo Park, partly in Alberta and partly in the Northwest Territories, and the Tar Sands Reserve.

Of the total forest area, 8.5 p.c. has been permanently alienated, being owned in fee simple by private individuals or corporations. The Crown still holds title to 13.3 p.c. of the area, but has alienated the right to cut timber thereon under lease or licence. So far 78.2 p.c. has not been alienated in any way. It may be said that 91.5 p.c. of Canada's forest area is still owned by the Crown in the right either of the Dominion or the provinces and, subject only to certain temporary privileges granted to limit-holders, may at any time be placed under forest management and dedicated to forest production.

**Volume of Standing Timber.**—In 1935, the total stand of timber in Canada was estimated to be approximately 273,656 million cubic feet, of which 222,076 million cubic feet was of coniferous species and 51,580 million cubic feet of broad-leaved species. This estimate is the latest that has been made, officially.

During the ten years 1926-35, the average annual depletion due to use was approximately 2,034 million cubic feet of conifers and 547 million cubic feet of hardwoods. The average annual loss from fire was estimated at 241 million cubic feet of conifers and 26 million cubic feet of hardwoods. The loss from attacks of insects and fungi can only be estimated in a broad way, but it is placed at 700 million cubic feet annually for the ten-year period. In Nova Scotia, in 1931, the balsam suffered severely from "gout" induced, it is believed, by minute sucking insects of the genus *Dreyfusia*, previously undescribed. In the Gaspé peninsula the spruce saw-fly has become a serious menace, spreading to New Brunswick and as far west as Ontario. The total annual depletion during the ten-year period was, therefore, estimated to have been about 3,548 million cubic feet. To what extent this loss has been replaced by growth increment is not known but, considering the preponderance of the younger age classes in the reproduction, it is believed there has been a considerable net depletion in the merchantable age classes.

Another real difficulty is the division of the existing stand into merchantable timber and that which is inaccessible or unprofitable, since merchantability depends

not only on the location but on the density of the stand, the demands of the market for certain species or qualities of product, and the regulations as to cutting. Light stands covering large areas may in the aggregate carry very large amounts of timber and still not be exploitable at a profit. For some species, such as aspen and white birch, which comprise three-quarters of the hardwoods, there is very little demand, and therefore these cannot properly be classed as merchantable, though accessible as far as location is concerned.

In June, 1929, a conference of the Dominion and provincial forest authorities was held in Ottawa and it was decided to undertake a national inventory of the forest resources of Canada, each authority conducting the necessary stock-taking surveys on the land under its jurisdiction. In connection with the inventory, data are being secured regarding the depletion due to use, fire, insect damage, etc., and the increment accruing. The Forest Service of the Department of Mines and Resources acts as a clearing-house for the national inventory, and in addition to collecting and compiling the data furnished by the provincial authorities has conducted the inventorial work in the Prairie Provinces and the Maritime Provinces. The inventories for Manitoba and New Brunswick have been completed. The Dominion Service is also carrying on extensive surveys to determine the increment taking place in the forests and conducting more intensive silvicultural research at forest experiment stations located in New Brunswick, Quebec, Ontario, Manitoba, and Alberta.

Under present conditions it is estimated that 133,290 million cubic feet of conifers and 36,853 million cubic feet of hardwoods may be considered as accessible.

## Section 4.—Noxious Forest Insects and Their Control.\*

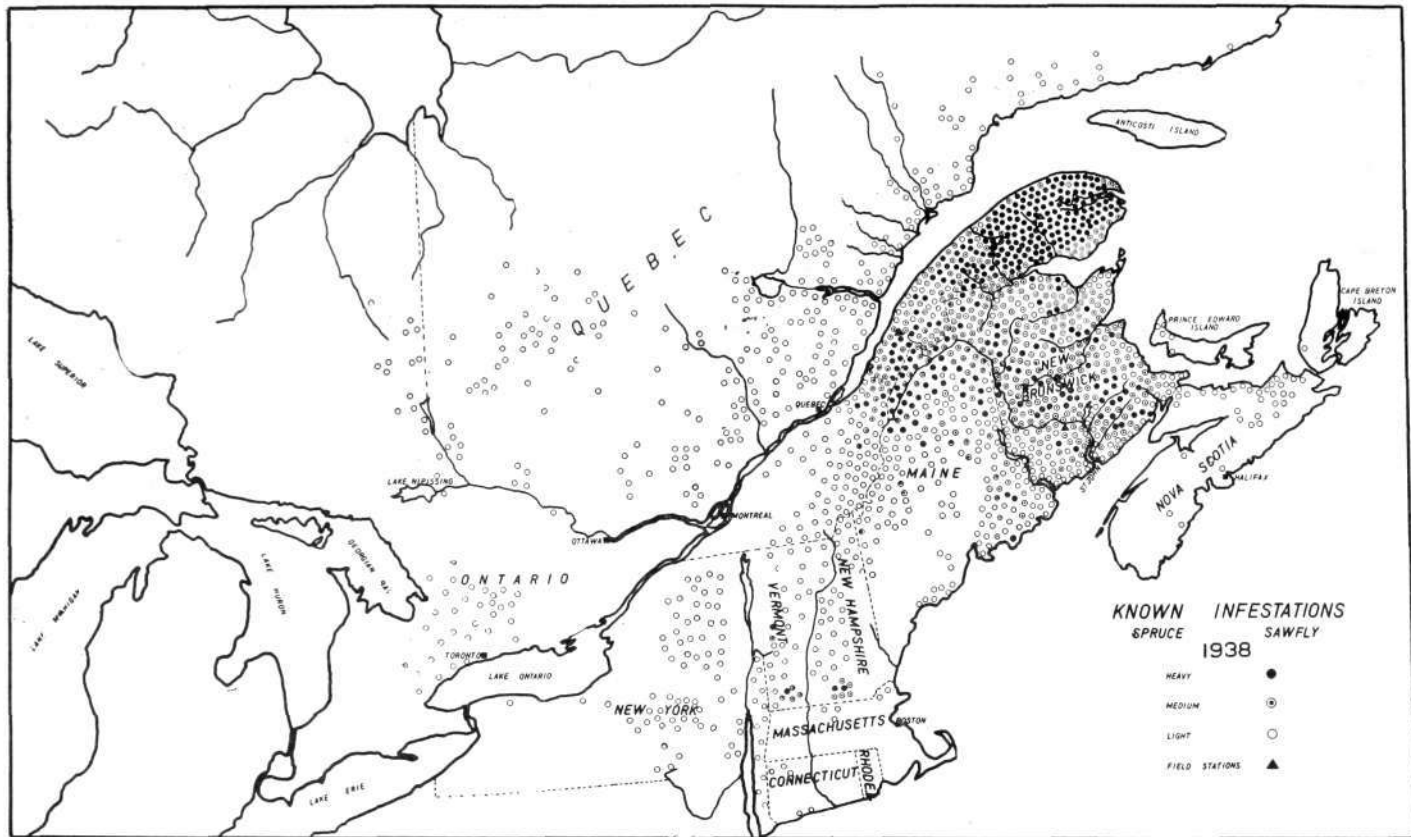

A sound appreciation of the losses caused by forest insects over any given period of time cannot always be confined to an estimate of damage to productive forests alone. Insect outbreaks in inaccessible stands may have an important bearing on the fate of commercial forests. Their significance must be calculated in terms which it is next to impossible to define. Furthermore, it is a common practice to evaluate insect damage by a measure of dead or dying stands and to ignore the depreciation entailed by the ravages of insects which actually do not kill the timber but merely render it unfit for profitable utilization. Loss of increment resulting from repeated attacks of defoliators is hardly, if ever, taken into consideration. The same may be said of loss of vitality, the effects of forest depletion on the so-called forest influences, the deterioration of fire-killed timber and of logs left in the woods. Increased fire risk in insect-killed stands, damage to stored stock, and even to manufactured articles, as well as a number of other factors should be taken into account to give a true idea of the destructive role played by insects affecting forests and forest products.

The losses thus sustained in Canada during the past fifty years, if they could be at all accurately computed, would no doubt be appalling. Classical examples of large-scale insect calamities are the larch saw-fly outbreak that some years ago destroyed practically all commercial larch stands in Eastern Canada, and the spruce bud-worm infestation with its toll of about two hundred million cords of spruce and balsam. The eastern spruce bark-beetle, the hemlock looper, the jack pine saw-fly, the black-headed bud-worm, the balsam woolly aphid, and several other species have all, at one time or another, appeared in destructive numbers over large areas. In some cases the changes brought about in the composition of the forest by insect outbreaks have been distinctly prejudicial to their commercial value since, the more useful species of trees having been replaced by less valuable ones, it may take centuries to repair such damage. In any event a merchantable forest crop, once lost, cannot be replaced in less than fifty to a hundred years.

**The Depredations of the European Spruce Saw-fly and the Jack Pine Bud-worm in Canada.**—At the present time, two outstanding outbreaks of forest insects are in progress in Canada, one caused by the European spruce saw-fly and the other by the jack pine bud-worm. The former is particularly important. In 1930 it was discovered that over an area approximately two thousand square miles in extent, situated in the Gaspé peninsula of the province of Quebec, the spruce trees had been severely defoliated by the larvæ of a saw-fly. Specimens submitted to specialists in the United States and in England were determined as *Diprion polytomum* Htg., a species native to Europe. By 1938 the area of heavy infestation had increased to approximately twelve thousand square miles and the insect was known to be present in greater or lesser numbers throughout Eastern Canada as far west as Sudbury, Ont., and in the United States as far south as New Jersey. (See the chart on p. 255.)

This saw-fly attacks all species of spruce grown in Canada. The larvæ feed principally on the old needles and usually do not attack the new growth until the supply of old needles has been exhausted. This peculiar feeding habit has the effect of retarding the decadence and death of infested trees and accounts for the comparatively small number of trees which have been killed in areas

\*Prepared under the direction of J. M. Swaine, Ph.D., Director of Agricultural Science Service, by J. J. de Gryse, Ph. Cand. (Louvain), Chief, Forest Insect Investigations, Division of Entomology, Department of Agriculture, Ottawa.

INFESTATIONS OF THE EUROPEAN SPRUCE SAW-FLY IN EASTERN NORTH AMERICA, 1938.

which are known to have been infested for several years. This ability of the tree to survive repeated attacks of the saw-fly is offset somewhat by the fact that the insect is exceedingly prolific, since its progeny consists almost exclusively of females, and mating is unnecessary for fertilization of the eggs. The saw-fly, moreover, is able to survive the most rigorous climatic conditions and, being of European origin, is almost completely free from attack by native insect parasites. The main natural control factors operating against it at present are small mammals, principally mice and shrews. These feed upon the cocoons in which the larvæ overwinter under the debris on the forest floor. Although perhaps between 40 and 50 p.c. of the cocoons may be destroyed yearly in this way, the ultimate measure of control effected by mammals, birds, native predacious and parasitic insects, is not sufficient to prevent a marked yearly increase in the intensity and spread of the infestation. From the beginning it was assumed that an insect which is favoured in so many ways by nature may constitute a very real menace to our spruce forests and the actual situation which has developed in recent years amply confirms this view.

Recent estimates of the damage show that, in the heavily-infested areas on the upper Cascapedia river, 24.8 p.c. of the volume of white spruce and 27.4 p.c. of the black spruce have been killed by the saw-fly. These figures do not include the mortality due to an apparently independent outbreak of the eastern spruce bark-beetle between 1931 and 1934. During this period 44.4 p.c. of the white and 5.6 p.c. of the black spruce were destroyed by the beetle, giving a total mortality for the region of about 69 p.c. of white and 33 p.c. of black spruce. In other parts, the mortality rates vary considerably from locality to locality. However, the number of trees actually killed by the saw-fly does not give a true appraisal of the situation; the probabilities of survival of the remaining trees constitute an equally, if not more, important factor. In many extensive areas in Gaspé and elsewhere the probability of recovery is gradually decreasing year by year and in the older centres of infestation it is virtually nil. Irrespective of local or seasonal fluctuations, it may be said that over the entire area in which the saw-fly occurs there has been a fairly steady yearly increase in extent and intensity of infestation since 1930. At the present time no one can safely predict what the future course of the outbreak will be. The known facts in the case are ample evidence of the seriousness of the situation and call for immediate, energetic action in an attempt to deal effectively with this dangerous pest.

While the European spruce saw-fly is gradually making inroads into the forests of Eastern Canada, the jack pine bud-worm, a native species, is appearing in outbreak form in northwestern Ontario and Manitoba. Although there can be no parity between the two infestations from the standpoint of actual or potential national and economic importance, the jack pine bud-worm presents a problem of the first rank for the lumber and paper industries in the affected territory. The centres of heaviest infestation are the extensive jack pine stands in the Quetico and Rainy River sections of the Great Lakes-St. Lawrence Forest Region. Lighter infestations have been found immediately north of these sections and westward as far as the eastern boundary of Saskatchewan. The trend of spread seems to be eastward. (See chart on p. 257.) Practically all the jack pine stands over an area of approximately sixty thousand square miles are involved to a greater or lesser extent.

The bud-worm is a biological race or strain of the notorious spruce bud-worm from which it differs in habits rather than in form. It exhibits such a marked preference for pine instead of spruce or balsam that from an economic standpoint it may be considered as a distinct species. The principal injury caused by the bud-

## FOREST INSECT PESTS AND THEIR CONTROL.

---

One of the most effective means of controlling destructive forest insects at the present time is by the propagation and distribution of parasites. This method has been adopted with success in the case of the larch saw-fly and is now under test with the spruce saw-fly. These pests, together with the spruce bud-worm and the jack pine bud-worm, have caused tremendous damage to the forests of Eastern Canada. Other methods of control illustrated are: the use of 'predator' insects which prey on the pests, and artificial control by which poison dust is spread from the air.

The layout on the opposite side of this insert shows:—

**European Saw-Fly.**—(1) The effects of European saw-fly infestation in the Gaspé peninsula. (2) Enlarged view showing an adult ovipositing in a spruce needle. (3) Larvae on a spruce twig.

**Parasitic Control of the European Saw-Fly.**—(1) A forest ranger placing a square cage containing parasites under a tree. The moss in his left hand will later be placed over the cage. (2) Greatly enlarged view of the adult of the European saw-fly parasite. (3) Adult laying its eggs in the cocoon of the European saw-fly. (4) Newly-formed pupae of the parasite in the cocoon.

**Predator.**—A predator attacking a larva of the European saw-fly.

**Artificial Control.**—The most practical method of artificial control is by spreading poison dusts over the forest from aeroplanes. This means of control is restricted, however, under Canadian conditions.

**Bud-Worm Pests.**—(1) Defoliation of a jack pine by the bud-worm. (2) Stages in the development of the spruce bud-worm: (a) lateral view of the pupa; (b) views of the adult female; (c) larva at the fourth stage of development; (d) larva at the sixth stage of development.

**Secondary Insects.**—Pine attacked by secondary insects—in this case *Ips pini* and *Monochamus confessor*—showing the deterioration of the wood.

worm consists in the defoliation of the host-tree. Usually the tops of the crowns suffer more severely than the lower parts, resulting in the formation of stag-heads which are a striking characteristic of infested stands. Repeated heavy defoliation or complete defoliation before the formation of the next year's buds is fatal. Although large trees are likely to succumb first, young trees growing under them are frequently killed by larvæ dropping from the older trees. Thus far, comparatively few trees have been killed outright, but the production of stag-heads is very general in heavily-infested stands and is likely to favour the entrance of rots and secondary insects which may ultimately either kill the tree or render it unfit for utilization except as firewood.

Areas Infected by Spruce Bud-worm and Jack Pine Bud-worm in Ontario and Manitoba (intensity of infection is shown by density of shading).

The outbreaks of the European spruce saw-fly and the jack pine bud-worm have been described somewhat in detail, because they constitute the most pressing problems at present and also because they will serve to illustrate the more important principles and practices adopted in dealing intelligently with emergencies of this kind.

**The Approach to the Problems Involved.**—The widespread, but fundamentally erroneous, belief that such insects as the spruce bud-worm, the spruce bark-beetle, the European spruce saw-fly, etc., are inherently noxious and that the sole reason for their existence is to cause calamities, should be deprecated at all times "in season, and out of season". In the natural order of things insects are part and parcel of that great economy commonly referred to as the "balance of nature". The forest is a vast biological unit composed of plants and animals; it is perpetually subject to changes through the succession of species and individual organisms competing with each other for a place in the sun, and its composition at any one point of time is the resultant of the complicated interaction of all its vegetational and animal components, itself again dominated by climatic and edaphic conditions.

In this intricate scheme of relationships insects play a dual regulatory role. Some, namely the herbivorous species, act upon the vegetation while others, endowed with carnivorous instincts, control the excessive multiplication of the first. Vegetarian insects may be roughly divided into two great classes: those which feed upon healthy, living trees and are therefore designated as primary; and those which attack only sickly, dead, or dying trees and, as such, are usually designated as secondary. Considered from the standpoint of man's economy, the primary insects are, potentially at least, the most injurious, and the majority of so-called destructive species are found among them. From the standpoint of nature's economy, they really act as useful protectors of those species whose existence becomes threatened by the undue dominance of others.

Generally speaking, secondary insects, by hastening the death of weakened trees or by contributing to the decomposition of dead trees, are useful agents in the regeneration of forests by the removal of trees which have reached the natural limit of their existence. The carnivorous insects comprise parasitic and predacious species that favour the vegetation by regulating the numbers of herbivores.

When, therefore, we refer to insects as pests or destructive enemies of the forest we speak in terms of human relationships and we forget that, more than often, man himself is the prime mover in the calamities which are visited upon him. Our knowledge of insect ecology is still very imperfect and it would be absurd to pretend that all the causal relationships underlying the rise and fall of any one insect outbreak can be determined. However, the fixing of man's responsibility is, in many cases, a comparatively simple matter. Improvident and reckless exploitation, ill-planned reforestation, destruction of wild life, fire, and the importation of insect species from foreign lands are broad categories under which man's offences may be readily classified. In planning measures of prevention and control, our first concern must be the regulation of man's activities and the correction of his mistakes. In some cases, appropriate legislation is the only course, in others the education of the individual will be more effective. In any event, whether legislative or educational procedure be adopted, it should at all times be based upon as thorough a knowledge of basic facts as it is possible to obtain.

**Dominion Government Organizations for Dealing with Entomological Problems.**—The study of forest insect problems in Canada is entrusted to the Forest Insect Investigations unit of the Division of Entomology, Science Service, Department of Agriculture. Forest entomology, as distinct from other phases of entomology, became a special section of the Dominion Entomological Service in 1911 and was formally established as a division in 1916. In the course of the recent general reorganization of the Department of Agriculture, forest entomology was ranked as a unit or section of the Division of Entomology. The headquarters of this service is in Ottawa and laboratories are maintained at Ottawa, Ont.; Fredericton, N.B.; Winnipeg, Man.; Indian Head, Sask.; and Vernon, B.C. Sub-laboratories are operated at Berthierville, Que.; Laniel, Que.; the Petawawa Forest Experiment Station at Chalk River, Ont.; and Vancouver, B.C. Temporary field stations and camps exist at a number of places throughout the Dominion. The personnel engaged in forest entomology consists of 17 permanent employees, 37 temporaries, and a small number of labourers who are hired whenever need for their services arises. The greater part of the permanent staff consists of officers specially trained in entomological research. The work accomplished by the unit may be classified under three headings: surveys, fundamental studies, and emergency projects.

**METHODS OF CONDUCTING SURVEYS.**—Surveys constitute a basic requirement in the development of fundamental studies and the treatment of emergencies. Not only are they indispensable in the timely discovery of incipient outbreaks, but they furnish a systematic inventory of assets as well as liabilities in the rational management of the forest insect fauna. In view of the enormous expanse of territory to be covered, any survey system for intelligence on forest insects must rely on the close co-operation of all parties interested in forest conservation. An efficient organization of this kind has been in operation in Canada since 1936. Practically all the important government and commercial agencies concerned with forestry or forest exploitation take an active part, and extensive use is made of their personnel in the collection of information. The country has been divided into five regions roughly corresponding to some of the natural divisions of the forest. Eventually in each of these a central laboratory will serve as a clearing house for specimens and information received. The complete results for the entire Dominion are collated yearly at the Ottawa headquarters. At present the system is based on the collection of samples of live insects and the submittal of concise, pertinent reports by rangers and wardens. All specimens are reared at the various laboratories receiving them. A wealth of information on insect conditions, heretofore unavailable, has already been collected in this way and has served as a basis for further study and practical application in control operations. An idea of the progress made during the past three years may be gained from a comparison of the number of reports received. This is clearly shown in Statement I.

The instruction of forest rangers on making observations and insect collections is an important phase of this work. Whenever possible short courses are given at various points during the winter or spring and these are supplemented by field demonstrations throughout the summer season.

**FUNDAMENTAL STUDIES.**—Fundamental studies are designed particularly with a view to unravelling the mysterious maze of ecological relationships which underlie the fluctuations in insect populations. Although, at present, they are purely scientific in scope, there cannot be the least doubt that ultimately they will lead to eminently practical results in the prevention and control of insect outbreaks. The thorough investigation of the biotic and physical factors influencing insect behaviour and reproduction will eventually eliminate much that is now empirical and uncertain from the practice of forest entomology. The very intricacy of the problem makes it a long-term project requiring a detailed analysis of soils, sites, flora, fauna, and meteorology of the region studied. The two sub-laboratories at Petawawa and Lanier are engaged upon work of this kind: the first is concerned with forests under intensive management, the second with forests under more or less natural conditions.

**EMERGENCY PROGRAMS.**—The last subdivision of activities in forest entomology is the one which deals with emergencies or, in other words, the problems of the hour. That it should have a more universal, popular appeal than the other two is readily understood. Sudden and spectacular outbreaks of insects, whether of local or country-wide importance, usually cause considerable alarm, and urgent appeals are made for immediate action. The entomologist must resort, at first, to his stock-in-trade, that is to say, to palliatives and remedies of more or less proved or even sometimes uncertain value. He must do as best he can and, in the meantime, make use of every opportunity to increase his knowledge and improve his methods. For this reason, any extensive operation in forest-insect control is always accompanied by a thorough-going study of the bionomics of the species involved. Control operations may be broadly classified as mechanical, chemical, silvicultural, and biological. Mechanical and chemical methods have only a limited application under conditions such as prevail in the Canadian forests. In nurseries, plantations, small parks and resorts, and in small-scale operations in the forest in the case of incipient outbreaks they have a definite place. In recent years some of them have been successfully employed in the control of bark-beetles by the burning of brood trees; in the prevention of injury from wood-borers by brushing over log piles and immersion of logs in water; in the reduction of hemlock-looper infestations by means of stomach poisons distributed from aeroplanes.

In our day and time, it is becoming increasingly evident that silvicultural and biological methods offer the true solution of the majority of our forest-insect problems.

*Silvicultural Control.*—The practice of silvicultural methods in the control of insects is beset with serious difficulties.

First among these is the fact that operators generally have not arrived at a realization of either the necessity or the advantages of rational silvicultural practices. In other words, they do not consider them profitable under the present conditions. This is no doubt due, primarily, to the fact that virgin stands are still available. As time goes on and as the depletion of our forests progresses, the present attitude towards silviculture in commercial forestry will gradually become altered, in fact, the industries are already looking for guidance in the management of their forests for continuous production. The second difficulty, knowledge of the factors involved, is, as yet, extremely rudimentary. One principle seems to be fairly well established,

namely, that the application of cultural practices will neither be effective nor profitable in the prevention or reduction of insect infestations unless the conditions which are favourable to the growth of trees are also, at the same time, either unfavourable or less favourable to the development of insects. Experience has shown that, in many cases, such a mutual inverse relationship exists. But there are exceptions. Other generalizations concerning the composition of the stand, the influence of site, density, crown cover, age, cutting methods, etc., cannot be made without considerable caution. The case of each insect, of each tree species, of each locality needs to be investigated.

The control of the jack pine bud-worm, for instance, is, according to entomologists in the United States, a problem which distinctly belongs to the field of silviculture. It hinges on the regulation of staminate flower production and may be accomplished by maintaining fully-stocked stands of jack pine. Planted trees and natural reproduction growing under susceptible trees should be protected by the removal of the latter. Large-crowned, orchard-type trees or overmature, round-crowned trees are the types which produce staminate flowers in great quantity. Their pollen is the preferred food of the young bud-worm larvæ and therefore such trees are most susceptible to bud-worm attack. The above recommendations are based on a study of the jack pine bud-worm in Michigan; to what extent they will apply in Canada has not yet been fully determined.

Cultural practices have been recommended in the case of the spruce bud-worm, the white-pine weevil, the locust borer, and many other insect pests of the forest; very often, however, such recommendations cannot be immediately put into practice.

*Biological Control.*—On the other hand, most important advances have been made in biological control. Although the use of natural enemies, more particularly insect parasites and predators, in fighting destructive insects has been practised for centuries in many countries, it is only in comparatively recent years that this method of control has been placed on a scientific basis and applied on a large scale. The campaign against gypsy and browntail moths in the United States was largely responsible for this development in entomology.

Biological control has been used almost exclusively in dealing with insects accidentally imported from other countries. This was a most logical deduction from the realization that introduced insects constitute a special menace by the very fact that they are free from the parasites and predators which help in keeping them in check in the country of their origin and that, usually, they are quite immune from attack by native species. In Canada the importation and propagation of foreign parasites have produced gratifying results. The European Lecanium scale and the satin moth have been successfully combated and a considerable measure of control has apparently been achieved in some areas by the introduction of parasites against the European larch saw-fly. It was only natural, therefore, that when the problem of the European spruce saw-fly arose, the importation of suitable parasitic species was resorted to at once. The seriousness of the situation fully warranted the expenditure of all the effort put forth in an attempt at stemming the progress of the saw-fly. In this work the forest entomologists co-operate closely with the Dominion Parasite Laboratory at Belleville, Ont. This laboratory is one of the most modern institutions of its kind in the world. It is adequately equipped for the importation, propagation, and liberation of parasites in large numbers. The following statement shows the number of parasites liberated against the European spruce saw-fly since 1933.

II.—LIBERATIONS OF SPRUCE SAW-FLY PARASITES, BY PROVINCES, 1933-38.<sup>1</sup>

Province.	Number.
New Brunswick.....	98,673,428
Nova Scotia.....	1,981,207
Ontario.....	6,696,881
Quebec.....	134,851,037
Total.....	242,202,553

<sup>1</sup> These figures were supplied by the Belleville Laboratory.

Of this total, 241,009,757 individuals belonged to a single species, *Microplectron fuscipennis*. This parasite and a species of *Exenterus* have succeeded in establishing themselves in Canada and have distinct possibilities of becoming a significant factor in control. Two other species also show promise of becoming established. In all, some 23 species have been tested to date and, although many of them have not yet been recovered in the field since the day of their liberation, this should not be interpreted too readily as being a sign of absolute failure.

The extensive use of insect parasites in the control of introduced pests constitutes in itself an argument for further investigation of similar practices in dealing with certain native species. Several lines of endeavour are more or less clearly indicated. Among others are: the study of the effect of species already introduced; new introductions for specific purposes, especially when it appears that native parasites are not adequate; and also more intensive studies of our native parasitic fauna and of methods by which its present effectiveness might be increased. Some steps have already been taken in this direction and it may be reasonably expected that, in years to come, this phase of biological control will become increasingly important in the field of applied entomology.

**CONTROL OF IMPORTATION.**—The realization that "an ounce of prevention is better than a pound of cure" is of particular value in dealing with foreign pests. For this reason, the Plant Protection Division of the Department of Agriculture exercises continual, unrelenting vigilance over the importation of plants and plant products from other countries. The function of this Division is well summarized in Regulation 1 of the Destructive Insect and Pest Act —

All trees imported are subject to the requirement of a permit issued by the Secretary of the Destructive Insect and Pest Act Advisory Board. The importations must enter through one of several ports of importation established in Canada, and in addition to being accompanied by a certificate of inspection from the country of origin, are subject to reinspection on arrival in Canada either at the port of importation or after delivery to the premises of the importer. No importations may be released from customs without authority under the above Act involving an inspection or clearance certificate issued in Canada, in addition to the permit.

Special regulations are drafted whenever new emergencies arise and are so designed as to ensure as complete protection as is humanly possible against the introduction of dangerous insects and diseases into Canada. Several important interceptions of forest pests have been made from time to time under these regulations.

**SALVAGE OF AFFECTED TIMBER.**—Finally, no account of activities in forest entomology would be complete without a word about salvage. No matter how efficient the organization for combating forest insects may become, it will always be

necessary to devise ways and means for the profitable utilization of timber damaged in the course of infestations. Under present conditions, forest entomologists are required to give advice on salvage in connection with almost every infestation of importance. Full information concerning the present and future state of the forest is required as the basis for cutting plans whereby losses due to insects may be reduced to a minimum. To make pronouncements in such matters places a very grave responsibility upon the entomologist and requires a knowledge of all important factors in the development of outbreaks.

In the case of the European spruce saw-fly, for instance, the Forest Service is often asked: whether or not the spruce in a certain area will eventually be killed; how soon the trees will begin to die; what proportion of each species, type, or age class will be killed; how soon cutting operations should be commenced; and what effect these will have on the remaining forest. The answers to these questions cannot be given in a general way; it is necessary to study each area individually and to determine the condition of the spruce, the severity of the attack, the probable rate at which the infestation will develop in the near future, as well as the rate of deterioration of the timber subsequent to death from insect attack. In the collection of data, the co-operation of companies and forest services is indispensable. A regular system of reporting has been developed for this purpose. Special report forms have been prepared for those who wish to avail themselves of this service. Prognostications and recommendations are made on the basis of these reports, but it will be readily understood that exact measurements of probabilities are not always possible.

From the above it will be seen that in the conservation of our forest resources the proper management and control of the insect fauna plays a most important part, and at the same time that the task of the forest entomologist is by no means simple. The organization of an adequate service for the protection of the forests against insect ravages should be developed as rapidly as possible, especially through active and wholehearted co-operation between governments and industries.

## Section 5.—Forest Administration.

### Subsection 1.—Administration of Dominion and Provincial Timber-Lands.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber-land outright. Under this system the State retains the ownership of the land and control of the cutting operations. Revenue is derived in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut), annual ground rent, and royalty dues collected as and when the wood is removed. Both ground rent and royalty dues may be adjusted at the discretion of the Governments so that the public may share in any increase in stumpage values or reductions may be made in the rates if conditions demand them.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 87 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick over 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately-owned forest land in the other provinces exclusive of National Parks and Indian reserves is as follows: Quebec, 8 p.c.; Ontario, 3.3 p.c.; Manitoba, 9.1 p.c.; Saskatchewan, 7.6 p.c.; Alberta, 7.7 p.c.; and British Columbia, 8.4 p.c. In all cases timber-lands are now

administered by the provinces in which they lie. As new regions are explored their lands are examined and the agricultural land disposed of. Absolute forest land is usually set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province in Canada. The ownership of forests by towns and communities, so common in Europe, is now beginning in Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on this basis.

The administration of forest lands under Dominion control and those under the control of each of the provinces is reviewed below.

**Forest Lands Under Dominion Control.**—The forests under Dominion control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, the Lands Registry Office administers the timber in Yukon and the Northwest Territories, and the Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the Forest Experiment Stations.

**Forest Lands Under Provincial Control.**—*Nova Scotia.*—In this province, 10,473 square miles, about 87 p.c. of the forest land, is privately owned. The Crown timber is administered by the Minister of Lands and Forests, with a Chief Forester in charge of protection, surveys, etc. Timber-cutting leases are granted by special agreements.

*New Brunswick.*—The Forest Service, under the Department of Lands and Mines, administers the forests in New Brunswick. At present timber-lands are disposed of as in the other provinces, but in the past several grants of forest land were made to railway companies, private concerns, and individuals, who now own in fee simple about 11,100 square miles of forest land.

*Quebec.*—The Forest Service of the Department of Lands and Forests administers the timber-lands in Quebec. Its powers include classification of land, disposal of timber, and regulation of cutting operations. Since 1924 forest protection has been under a separate organization, the Forest Protective Service. Licences are granted after public competition and are renewable from year to year, subject to changes in royalty by the Government at any time. Grants of land in fee simple, made in some cases under the French *régime* in Quebec, are responsible for the private ownership of about 31,048 square miles of forest land. Forest reserves cover 31,922 square miles and provincial parks 5,138 square miles.

*Ontario.*—Forest administration is carried out in Ontario by the Department of Lands and Forests, under a Minister, Deputy Minister, and Provincial Forester. In recent years the sale of saw timber has been by tender after examination, with conditions covering the removal within a specified period, disposal of debris, etc. Much of the merchantable timber is at present held under licences granted in the past and renewable indefinitely. Pulpwood areas are usually disposed of by individual agreements for longer periods than in the case of saw timber. The licensees usually undertake to erect a pulp-mill or a paper-mill within the province, the type and size of mill being stipulated in the agreement. In this province about 7,972 square miles of forest land have been disposed of outright. Provincial forest reserves cover 19,606 square miles, and the provincial parks 4,248 square miles.

*Manitoba.*—The Forest Service of the Department of Mines and Natural Resources has administered the forests of Manitoba since 1930. A provincial Air

Service is operated under the direction of the Provincial Forester, and is mainly used for purposes of forest fire protection. Six forest reserves, containing 3,775 square miles, are permanently reserved for the production of forest products. Timber is disposed of by licence or timber sale, and large numbers of timber permits, covering small quantities of wood, are issued annually to settlers and others. One pulp and paper mill is in operation in the province. The area of privately-owned forest land is estimated to be 8,500 square miles.

*Saskatchewan.*—The forests of Saskatchewan are administered by the Department of Natural Resources. The organization is unique in Canada, because the different resources are not controlled by different branches of the Department. Instead, each field officer handles matters pertaining to all resources within his district. Forestry affairs of the Department are controlled by the Director of Forests. Timber disposal is carried out under licence, sale, and permit. An Air Service is maintained, mainly for forest protection purposes. Forest reserves occupy 10,003 square miles and provincial parks 258 square miles. Privately-owned forest land is estimated to be 6,250 square miles.

*Alberta.*—The Forest Service of the Department of Lands and Mines administers and protects the provincial forests. Timber is disposed of through licences and permits except on forest reserves, where timber sales are disposed of but licensed berths are not. The area in forest reserves is 14,316 square miles, and 10,044 square miles of forest land are privately owned.

*British Columbia.*—In the province of British Columbia, the Forest Branch of the Department of Lands has administered timber-lands since 1912. All unalienated lands in the province which are found to be better suited to forest than to agricultural production are dedicated to the former purpose, and all timber-lands carrying over a specified quantity of timber are withdrawn from disposal until examined by the Forest Branch. During the past few years 26,739 square miles have been set aside permanently for forest purposes. Provincial parks include 8,252 square miles. The present practice is to sell cutting rights for a stated period by public competition but licences to cut, which are renewable annually in perpetuity, have been granted for a large proportion of the accessible timber. The royalties are adjusted periodically on the basis of prevailing industrial conditions. About 15,000 square miles of timber-land are privately owned.

#### Subsection 2.—Forest Fire Protection.

The protection of forests from fire is undoubtedly the most urgent and most important part of the work of the different agencies administering forest lands in Canada. Except for the forests of the National Parks, the Forest Experiment Stations, and the Northwest Territories and Yukon, which remain under Dominion control, the administration of forest lands now rests with the provinces. Up to the end of the fire season of 1930, the Forest Service of the former Dominion Department of the Interior was responsible for fire protection in the prairie provinces of Manitoba, Saskatchewan, and Alberta, and the Railway Belt of British Columbia. However, by reason of the transfer of natural resources from Dominion to provincial control, their administration is now a matter of provincial concern.

Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being in part distributed or covered by special taxes on timber-lands. In each province, with the exception just mentioned,

provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for close seasons during dangerous periods. An interesting development in this connection in the province of Quebec is the organization of a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction in Canada. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners. These officers co-operate with the railway fire-ranging staffs employed by the various railway companies, the compulsory control of all lines coming under the jurisdiction of the Board being one of the requirements of the Dominion Railway Act.

The most important single development of late years in forest fire protection has been the use of aircraft for the detection and suppression of incipient forest fires. Where lakes are numerous, flying boats can be used for detection and for the transportation of fire fighters and their equipment to fires in remote areas. Specially developed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected. As a general rule, aircraft are used in the more remote districts, while lookout towers, connected by telephone lines or equipped with wireless, are established in the more settled and more travelled forest areas. While these agencies have to a large extent supplanted the old canoe, horseback, and foot patrol for the detection of fires, a large ground staff with its equipment stored at strategic points will always be necessary for the fighting of larger fires. A ground staff is also necessary for the maintenance in the forest of fire lanes, fire guards, and systems of communication and transportation.

The most important improvement in forest fire-fighting equipment has been the portable gasoline pump. These pumps, each of which weighs from 45 to a little over 100 pounds, can be carried to a fire by canoe, motor boat, automobile, aircraft, pack-saddle, or back-pack. They can deliver efficient water pressure as far as seven thousand feet from a water supply and, when used in relays, to a much greater distance. Small hand pumps supplied by 5-gallon portable containers are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of close seasons for brush burning, and seasons during which permits are required for setting out fires and for travel in the forest during dangerous dry periods, have been of enormous value as preventive measures.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine which has a circulation of over 16,000, by railway lecture cars and motor trucks provided with motion picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools, by specially appointed junior forest wardens and other means, to educate

the younger generation as to the value of the forests, the devastation caused by fire, and the means of preventing such destruction.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another important advance in forest protection is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest fire hazard which is expressed in the form of an index computed from the weather factors. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing hazard at any given time, but, by the aid of weather forecasts, they can anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop.

### Subsection 3.—Scientific Forestry.

Up to the present, the practice of forestry in Canada has consisted chiefly in the administration and protection of existing forest areas. About 35 square miles is now being planted out annually, largely in connection with farmers' woodlots, shelter belts, and reclamation work, while several commercial reforestation projects have been carried on by paper companies and by Provincial Governments on denuded Crown lands. The great forestry problem in Canada, however, is the management of Crown forests, first under provisional and later more intensive working plans, so as to ensure a sustained yield. To this end, forest research activities are now assuming great importance. Silvicultural investigations are receiving marked attention both from the Dominion services and some of the provincial services.

About 400 technically-trained foresters are employed by the Dominion or provincial forest services or by paper and lumber companies. A considerable number of foresters are actively engaged in commercial logging operations. In addition to administrative work, these men carry on forest surveys either for the estimation of timber stands and making of maps, or to determine natural growth and reproduction conditions and factors. Aircraft are now being used extensively for exploring remote areas and mapping forest lands by means of aerial photography. Waste lands and the various forest types can be mapped more accurately and more economically by this means than by ground surveys.

**Dominion Forest Service.**—The activities of the Dominion Government in forest research are centred in the Dominion Forest Service, which is a bureau of the Lands, Parks, and Forests Branch of the Department of Mines and Resources. Until the time of transfer of the natural resources of the Prairie Provinces, and the Railway Belt and Peace River Block in British Columbia, to provincial control in 1930, the Forest Service was primarily concerned with the administration of forest reserves and the protection from fire of all forests on Crown lands. In addition silvicultural research work had been carried on at the Petawawa Experiment Station in the Ottawa valley since 1918. Since the transfer of the resources, the Service has been entirely devoted to investigations in the fields of forest economics, silvicultural research, forest protection research, and forest products research.

In co-operation with the provincial forest authorities, the Forest Service assembles the available information respecting the forest resources of the Dominion

in order to prepare a national forest inventory. Such material is revised every five years and published in reports entitled "The Forests of Canada", which are submitted to the quinquennial British Empire Forestry Conferences. Besides giving assistance to certain provinces in the preparation of their inventories, the Service is developing improved methods in interpreting the valuable forestry data contained in aerial photographs. The Economics Division also assembles data and issues reports on forest revenues and expenditures, the production of forest industries, the employment of labour, and trade in forest products.

Five forest experiment stations, where investigations of the underlying principles governing the growth of forests can be made, and where practical methods of management can be tested, are now in operation. Besides the original station at Petawawa, new establishments, opened since 1930, include the Acadia station near Fredericton, N.B.; the Valcartier station near Quebec; the Duck Mountain station in Manitoba; and the Kananaskis station in the foothills west of Calgary. The total area of the five stations is approximately 238 square miles. These stations or experimental areas, are used for forest fire-hazard research as well as for silvicultural work, and also form centres from which investigations can be conducted in other areas in the regions in which they are located.

One of the principal problems now exercising the minds of all who are interested in the future welfare of our forest resources concerns the present condition and future prospects of forest areas which have been cut or burned. The Forest Service is conducting a special series of investigations into this question in co-operation with the provinces and timber owners.

**Forest Products Laboratories.**—In order to promote the more efficient use of the forest resources of Canada and at the same time assist the wood-using industries in the more technical problems encountered in their manufacturing operations, the Forest Products Laboratories of Canada were organized in 1913 under the Forest Service of the former Department of the Interior. The need for them was felt because of the influence of the establishment of such laboratories in other important timber-growing countries. Besides, on account of Canada's large exports of timber and timber products, it became increasingly apparent that, in order to meet world competition in the timber trade, it was necessary that Canada keep fully abreast of other countries in scientific developments in wood utilization.

For several years the Laboratories carried on all their work in Montreal, under an arrangement with McGill University. The subsequent development of their work has necessitated the establishment of a branch laboratory in Vancouver in a building provided by the University of British Columbia, the transfer of the main laboratories to Ottawa, and the establishment of the Pulp and Paper Division of the Laboratories in Montreal in a building erected by the Canadian Pulp and Paper Association. In this building are also housed the executive offices of the Association and certain laboratories of McGill University devoted to research in cellulose and related products. The Pulp and Paper Association, in addition to providing accommodation makes a yearly grant to the Laboratories to assist in financing the work, and through a Joint Administrative Committee, consisting of representatives of the Government and the Association, takes an active part in formulating and forwarding the work of the Division. Close co-operation is also maintained with McGill University.

The main laboratories in Ottawa carry out work in timber mechanics, wood fabrication, wood preservation, lumber seasoning, timber pathology, wood structure,

wood identification, wood chemistry, and general wood utilization; they also cooperate with other Government Departments and industrial organizations in timber marketing problems. In addition, the Ottawa Laboratories carry out many investigations in connection with logging problems of the pulp and paper industry.

The Vancouver Laboratory devotes attention to special problems relating to Pacific Coast timbers which require local treatment and which cannot be carried out to advantage in the main laboratories on account of distance or for other reasons.

A research committee of the Canadian Lumbermen's Association was set up several years ago to effect liaison between the industry and the Laboratories and make as effective as possible the application of researches carried out by the Laboratories in the problems of the lumber industry.

Since the Laboratories were established, many advances have been made in the technique of wood utilization. Improvements have been made in treating railway ties, telephone poles, mining timbers, and other structural timbers with creosote, water-soluble salts, and other chemicals. This has enhanced the value of wood as a permanent structural material and permitted its use for a variety of purposes for which it is otherwise unsuitable. The work carried out in the treatment of hardwoods, especially birch, beech, and maple, has been of particular value. Reductions in the cost of manufacture of pulp and paper, and improvements in quality of products have resulted from researches of the Laboratories. Of particular interest has been the development in the Pulp and Paper Laboratory of the Canadian Standards Freeness Tester and the Johnston Fibre Classifier. Valuable work has also been carried out in the manufacture of groundwood pulp and in the pulping of resinous woods and hardwoods.

The study of the significance of discoloration in timber, as for example in jack pine, red cedar, and Douglas fir, has been responsible to a considerable degree in curtailing rejection of such material. Researches carried out in the spraying or dipping of timber, notably the sapwood of the pines, with chemicals which are toxic to wood-staining organisms have assisted in curtailing losses on this account, which in some years amounted to as high as one million dollars.

Through researches carried out in the Laboratories and at wood-working plants important advances have been made in seasoning both in the open air and in experimental dry-kilns. This work has been particularly valuable in both Eastern and Western Canada in connection with export markets which are becoming increasingly critical of specifications. The work carried out has been of significance to exporters of both softwoods and hardwoods.

Mechanical and physical tests have been carried out on nearly all important Canadian commercial species of timber according to practices which have been adopted by laboratories of countries of the British Empire and of the United States. A great deal of work has also been carried out on large structural timbers. This information has been widely used by Canadian engineers and by municipal authorities in the revision of building codes. It has also been made the basis for Canadian standard grades for all species of Canadian woods of structural importance which have been set up by the Canadian Engineering Standards Association. In logging operations in Canada a great deal of material such as limbs, small logs, defective logs, and species not ordinarily used commercially are left in the woods and wasted. At the sawmills quantities of bark, slabs, edgings, sawdust, and trim are consumed in refuse burners. The Laboratories are paying special attention to devising ways and means for curtailing this waste, and industry is becoming keenly aware of the

importance of such work in view of keen competition for their products in export markets.

Close co-operation is maintained between the Laboratories and the Commercial Intelligence Service of the Department of Trade and Commerce through its Trade Commissioners. The Laboratories also co-operate closely with the Dominion Department of Public Works in all its timber structures and with other Dominion Departments, notably Agriculture, National Defence, and Transport; also with Canadian railway companies and other large public utility organizations.

**Universities and Other Agencies.**—Education in forestry and opportunities for research are offered by four Canadian universities. The University of Toronto, the University of New Brunswick, and the University of British Columbia provide four-year courses leading to a professional degree. The School of Forestry and Surveying in connection with Laval University at Quebec provides, in the French language, a combined course of four years duration leading to diplomas in both sciences. The Government of Quebec has established a school in paper-making at Three Rivers in the heart of the paper industry; several agricultural colleges provide short courses in farm forestry and a school for forest rangers has been established at Duchesnay by the Quebec Forest Service.

A provincial forest experiment station of six square miles is maintained by the Quebec Forest Service at Duchesnay, near Quebec city, and the British Columbia Forest Branch has four such stations, totalling fourteen square miles and located at Alea lake, Campbell river, Cowichan lake, and Green Timbers.

The practice of forestry by individuals and private concerns is encouraged by the furnishing of expert advice by Dominion and provincial services and by the distribution of tree-planting material. The Dominion Department of Agriculture maintains two nurseries in Saskatchewan, one at Indian Head and the other at Sutherland, near Saskatoon. Over 7,000,000 trees are distributed annually to farmers and ranchers in the Prairie Provinces for planting woodlots and windbreaks. If certain conditions are fulfilled, the material and instructions are provided free except for transportation charges. A total of over 150,000,000 trees has been distributed.

The province of Ontario provides material under similar conditions and distributes to woodlot owners at least 7,000,000 trees annually from its 3 nurseries. As many more are being provided for the creation of county forests, demonstration forests and plantations on denuded Crown lands. To encourage the establishment of communal forests by towns and other municipalities, the Provincial Government undertakes to plant, free of charge, any area purchased by the municipality for this purpose. The Government also assists counties that purchase areas of not less than 1,000 acres of land for forest purposes. As a result of these inducements there are at present, scattered throughout the province, 50 communal forests (owned by municipalities) and 12 of the larger county forests. Mention should also be made of the 271 demonstration plots or woodlots, bordering on highways. These are supervised by the Forestry Branch for public educational purposes. Farm land used for forestry purposes, while so used, is exempt from taxation up to 10 p.c. of the total farm area but not exceeding a total of 20 acres.

In Quebec, a forest nursery at Berthierville serves as a demonstration station for the School of Forestry. It provides trees for sale and distribution in the province, comprising seedlings and transplants for forest planting and larger trees for ornamental purposes. The capacity of the nursery is about 10,000,000 trees. Provision

is made by legislation for the creation of communal forests and there are now 115 of these, covering 896,000 acres.

## Section 6.—Forest Utilization.

A short historical sketch of forest utilization in Canada appears at p. 325 of the 1934-35 Year Book and an article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., will be found at pp. 318-323 of the 1925 edition of the Canada Year Book.

### Subsection 1.—Woods Operations.

Differences in forest conditions throughout Canada give rise to differences in logging methods. Generally speaking, throughout Eastern Canada the climate is such that the cutting and hauling of logs can be carried on most economically during the fall and winter months. The trees are felled and the logs hauled to the nearest stream or lake, where they are piled on the ice or sloping banks. The presence of connected systems of lakes and streams makes it possible in most cases to float the logs from the forest to the mill at a minimum cost during the annual spring freshets. The logging industry east of the Rocky mountains is, therefore, almost entirely seasonal. In many cases lumbermen co-operate in river-driving operations and improvement companies, financed by the logging operators, build river improvements to facilitate the passage of the floating logs, the logs being finally sorted and delivered to their respective owners. In British Columbia the scarcity of drivable streams and the greater average size of the logs give rise to entirely different logging methods. Logs are assembled by cable systems operated by donkey engines and are transported to the mills or to water chiefly by logging railways but in many cases by motor trucks. These operations are more or less independent of frost, snow, or freshet and are carried on in most cases throughout the entire year.

In Eastern Canada logging operations are usually carried on by the mill owners or licensees of timbered lands, often through the medium of contractors, subcontractors, and jobbers. In the better-settled parts of the country a considerable quantity of lumber is sawn by custom sawmills or small mills purchasing logs from the farmers. Unmanufactured pulpwood, poles, ties, and other forest products have a market value, but sawlogs, being as a rule the property of the mill owner, are not generally marketed as such in Eastern Canada. In British Columbia logging is carried on more frequently as a separate enterprise by limit-holders, who cut and sell logs on the market. In many cases mill operators are not limit-holders but buy their entire supplies of raw material from logging concerns.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior, and other plants but that they also provide logs, pulpwood, and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling, and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss, and tanbark, which all go to swell the total.

Table 2 gives the total values of the products of woods operations in Canada for the years 1932 to 1936, inclusive. The exports and imports of forest products in the fiscal years ended Mar. 31, 1935-38, are shown in Tables 12 and 13 of the chapter on External Trade.

## 2.—Values of Woods Operations, by Products, 1932-36.

Product.	1932.	1933.	1934.	1935.	1936.
	\$	\$	\$	\$	\$

<b>Totals.....</b>	<b>92,106,252</b>	<b>93,773,142</b>	<b>105,539,732</b>	<b>115,461,779</b>	<b>134,804,238</b>

It has been estimated that operations in the woods in Canada in 1936 involved the investment of \$95,000,000 in logging equipment, gave employment for a part of the year equivalent to 90,000 man-years, and distributed over \$54,000,000 in wages and salaries. In estimating the annual drain on our forest resources, certain converting factors have been used. Each of these factors represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree. By the use of these factors it has been estimated that the total drain on our forest resources in 1936, due to consumption for use, amounted to 2,702,766,000 cu. ft. of standing timber. To this total must be added the volume of material destroyed by fire, insects, and fungi, which would bring the average annual depletion to more than four billion cubic feet of standing timber. Table 3 gives the reported or estimated quantities of wood cut, by chief products, together with the respective converting factor, the equivalent in standing timber, and the estimated value in each case for 1936, with totals 1926-35. Table 4 shows the extent of the drain on our forest resources in 1935 and 1936, by provinces.

## Subsection 2.—The Pulp and Paper Industry.

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. Paper was first manufactured in Canada about a hundred years ago but prior to 1860 no wood-pulp was used or produced. Rags, straw, esparto grass, cotton waste, and other substances were the raw materials used. The first paper-mill was established at St. Andrews in Quebec (then Lower Canada) in 1803 by United States citizens who obtained concessions from the seigneurs. Upper Canada's first mill, which is still in operation, was built in 1813 at Crook's Hollow (now Greenville) near Hamilton, and the Maritime Provinces entered the industry in 1819 with a mill at Bedford Basin near Halifax.

In 1866, Alexander Buntin installed at Valleyfield, Quebec, what is claimed to have been the first wood grinder in America and began the manufacture of wood-pulp by the mechanical process. During the same year Angus Logan and Co. built the first chemical wood-pulp mill in Canada at Windsor Mills in Quebec. During the next decade the use of wood-pulp in paper making was extensively developed and in 1887 Charles Riordon installed the first sulphite mill in Canada at Merritton in the Niagara peninsula; by the beginning of the century the output of the industry had exceeded \$8,000,000. In 1907 the Brompton Pulp and Paper Co. built, at East Angus in Quebec, the first mill in America to manufacture chemical pulp by the sulphate or kraft process.

The gross output of the industry increased rapidly and steadily until the boom years following the Great War, when it jumped to a peak of over \$232,000,000 in 1920. This was followed by a drop in 1921, after which there was a steady recovery, resulting in a second peak in 1929 of \$243,970,761. This was followed by annual decreases down to 1933 and annual increases up to 1937.

The rapid development of this industry up to 1929 was due chiefly to the existence in Canada of abundant water powers adjacent to extensive forest resources of pulpwood species and an increasing demand for newsprint paper in the United

States. Summary statistics for the combined pulp and paper industry are given on pp. 280-281.

There are to-day three classes of mills in the industry. These, in 1937, numbered 27 mills making pulp only, 47 combined pulp and paper mills, and 24 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp, and the manufacture of paper. These three stages cannot be treated as entirely distinct nor can they be separated from the different stages of the lumber industry. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and many lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. So far as operations in the woods are concerned, it is often impossible to state whether the timber being cut will eventually be made into lumber or into pulpwood.

On account of legislation already referred to, pulpwood cut on Crown lands must, in every province, be manufactured into pulp in Canadian pulp-mills except under special permit. The pulpwood which is exported to the United States is, therefore, largely cut from private lands. Table 5 shows the annual production of this commodity from 1930 to 1937, together with the quantities used by Canadian pulp-mills and the quantities exported and imported.

In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form, but by 1916 the proportion had declined to two-fifths. Since 1930 the proportion exported has been less than one-fifth.

#### 5.—Production, Consumption, Exports, and Imports of Pulpwood, calendar years 1930-37.

NOTE.—Figures for earlier years will be found in the corresponding table of previous editions of the Year Book.

<sup>1</sup> Exports of pulpwood in the calendar year 1933 were 1,587,529 cords.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export.

The supply of rags for paper-making is distinctly limited and the material too expensive for the manufacture of cheap paper. Early paper-makers experimented

with fibres from the stems, leaves, and other parts of numerous annual plants, but the small proportion of paper-making material recoverable from such sources led to experiments in the use of wood. Different species were tried, and finally spruce and balsam fir were found to be the most suitable for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of "cutting-up" and "rossing" mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4' by 4' by 8' of piled material), which is approximately equivalent to 500 feet board measure or to 90 cubic feet of solid wood.

There are, in Canada, four methods of preparing wood-pulp, one of which is mechanical and three chemical. Detailed descriptions of these processes were given in the 1931 Year Book, pp. 290-291.

**Pulp Production.**—Growth was steady up to 1920, when 1,960,102 tons of pulp were produced. There was a drop in production in 1921, but production in 1922 at 2,150,251 tons, more than overtook the previous year's drop. Following this, with the exception of 1924, each year up to 1929 showed consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons. This was followed by annual decreases down to 1932 since when steady increases have been recorded resulting, in 1937, in a new record of 5,141,504 tons. Table 6 shows the total production of pulp in Canada from 1930 to 1937, inclusive, together with the production of groundwood pulp and the production of fibre by chemical processes.

#### 6.—Pulp Production, Mechanical and Chemical, calendar years, 1930-37.

*Note.*—Figures for earlier years will be found in the corresponding table of previous editions of the Year Book.

Year.	Total Production. <sup>1</sup>		Mechanical Pulp. <sup>2</sup>		Chemical Fibre. <sup>2</sup>

1932.....	2,663,248	64,412,453	1,696,021	28,018,451	967,227	35,987,294
1933.....	2,979,562	64,114,074	1,859,049	25,332,444	1,120,513	38,781,630
1934.....	3,636,335	75,726,958	2,394,765	30,875,323	1,241,570	44,851,635
1935.....	3,868,341	79,722,039	2,563,711	32,323,820	1,283,743	46,444,144
1936.....	4,485,445	92,336,953	2,984,282	38,674,492	1,480,925	52,701,156
1937.....	5,141,504	116,729,228	3,384,744	46,663,759	1,756,760	70,065,469

<sup>1</sup> Some of these totals include unspecified pulp.

<sup>2</sup> Including screenings.

During 1937 there were 27 mills manufacturing pulp only and 47 combined pulp and paper mills. These 74 establishments turned out 5,141,504 tons of pulp, valued at \$116,729,228, as compared with 4,485,445 tons of pulp, valued at \$92,336,953 in 1936. Of the 1937 total for pulp, 4,063,088 tons, valued at \$67,155,333, were made in the combined pulp and paper mills for their own use in manufacturing paper. Of the remainder, 183,185 tons, valued at \$7,485,391, were made for sale in Canada, while 895,231 tons, valued at \$42,088,504 were made for export. As in the case of pulpwood, a part of the product at this stage of

the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 64 p.c. of the production in 1937 was groundwood pulp and almost 18 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, and soda fibre made up the remainder, with groundwood and chemical screenings, for which a considerable market has developed in recent years in connection with the manufacture of rigid insulating boards. Table 7 shows the production of pulp by provinces in the latest five years.

## 7.—Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1933-37.

Note.—Figures for earlier years will be found in the corresponding table of previous editions of the Year Book.

<sup>1</sup> Includes production in British Columbia, Manitoba, New Brunswick, and Nova Scotia.

**Pulp Exportation.**—The following table gives the quantities of pulp exported by the principal pulp-producing countries of the world in 1937. Figures for 1913, the year immediately preceding the War, and for 1936 are shown for comparison. Figures of the exports of wood-pulp from Canada in the fiscal years ended Mar. 31, 1935-38, will be found in Table 12 of the chapter on External Trade. In the calendar year 1938 the exports of wood-pulp from Canada were 554,037 tons. The total exports of the ten principal pulp-exporting countries of the world in 1937 were 7,646,649 short tons, of which Canada contributed about 11 p.c.

## 8.—Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1936, and 1937.

**Paper Production.**—The paper-making stage of the industry involves the consumption of wood-pulp and other paper stock in the manufacture of paper and other pulp products. Accurate annual statistics for this part of the industry are available only for 1917 to 1937. Figures for 1930-37 are given in Table 9.

During 1937 there were 47 combined pulp and paper mills and 24 mills making paper only. These 71 establishments produced 4,345,361 tons of paper, with a total value of \$175,885,423, as compared to 3,807,329 tons, valued at \$147,854,652 in 1936. Newsprint paper now forms nearly 85 p.c. of the annual paper production in Canada. In 1937, the production was 3,673,886 tons, valued at \$126,424,303, a record production for volume although its value was lower than that of 1929, the record year for value. The preliminary estimate for 1938 is 2,624,580 tons, also a decrease of 28.1 p.c. from 1937.

## 9.—Summary of Paper Production in Canada, calendar years 1930-37.

<sup>1</sup> Revised since the publication of the 1938 Year Book.<sup>2</sup> Includes some unspecified paper products.

Newsprint made up about 84.5 p.c. of the total paper production in 1937, with about 9.7 p.c. of paper boards, 2.5 p.c. of wrapping paper, 1.9 p.c. of book and writing paper, and about 1.3 p.c. of tissue and miscellaneous papers.

## 10.—Production of Paper in Canada, by Provinces, 1937.

Province.	Quantity.	Value.
	tons.	\$
Quebec.....	2,232,075	87,502,033
Ontario.....	1,342,084	58,678,363
British Columbia.....	320,820	12,629,711
Nova Scotia, New Brunswick, and Manitoba.....	450,282	17,075,316
<b>Totals.....</b>	<b>4,345,361</b>	<b>176,885,423</b>

Quebec produced 51.3 p.c. of the total quantity, Ontario 30.9 p.c., British Columbia 7.4 p.c., and Nova Scotia and New Brunswick the remaining 10.4 p.c.

**World Production of Newsprint.**—The world production of newsprint in 1937 has been estimated at 8,971,000 short tons, of which North America supplied 55 p.c. and Canada alone over 41 p.c. The estimated production in the leading 24 countries, compared with 1936, and the ten-year averages 1928-37 were as follows:—

11.—Estimated Quantities of Newsprint Produced in Leading Countries, 1936 and 1937, and the Ten-Year Averages, 1928-37.

<sup>1</sup> A slight difference in classification accounts for the difference between these figures and those shown in Table 9. <sup>2</sup> Not available.

**Exportation of Newsprint Paper.**—In the fiscal year 1908, exports of printing paper were for the first time separately recorded, and valued at \$2,833,535. In the fiscal year 1913, when quantities were first shown, Canada exported 146,792 short tons valued at \$5,692,126. For the fiscal year ended Mar. 31, 1938, our exports of newsprint amounted to 3,190,790 tons valued at \$120,007,550 and ranked second only to wheat among the exports of the Dominion. For exports of newsprint and other paper in the fiscal years ended Mar. 31, 1935-38, see Table 12 of the chapter on External Trade.

As early as 1913 Canada led the world in the exportation of newsprint, and since that date her exports have increased more than thirteen times in quantity. The following table shows the exportation of newsprint from the 12 principal exporting countries in 1913, 1935, 1936, and 1937. Canada contributed to the total over twice as much as the other 11 countries combined in 1937. Canada's exports of newsprint paper for the calendar year 1938 were 2,424,655 tons.

**Statistics of the Combined Pulp and Paper Industries.**—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries as they are frequently carried on in separate plants by entirely independent companies. For some time, however, it has been the practice of many Canadian concerns to combine the manufacture of pulp and paper in one complete establishment. In more recent years there has been a further tendency to combine in one plant the manufacture of basic stock and the converting of this paper into towels, stationery, and other highly processed paper products. In some cases, what might otherwise be considered as three distinct industries, are carried on in one plant as three steps in the production of the finished paper article. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper,

\* See Chapter XIV—Manufactures—and Index for further particulars regarding the pulp and paper and paper-converting industry.

and converted paper products. All converting operations carried on in paper mills in this industry are now attributed to the particular industrial group of converting plants to which they properly belong. The 1937 figures therefore exclude all information pertaining to paper converting which tends to lower perceptibly all the principal statistics of the pulp and paper industry and to render these figures not strictly comparable with those of previous years. Including manufacturing operations as far as the basic paper-making stage, there were altogether 98 mills in operation in 1937. The capital invested amounted to \$570,352,287, the employees numbered 33,205 and their salaries and wages amounted to \$48,757,795. If we disregard the pulp made for their own use in combined pulp and paper mills we can consider the total of materials and supplies used in the industry as a whole as amounting to \$91,121,629 in 1937, \* \$72,202,983 in 1936 and \$57,995,037 in 1935 and the gross value of production as \$226,255,915 in 1937\* as compared with \$185,144,603 in 1936 and \$182,651,282 in 1935. The net† value of production amounted to \$106,013,221 in 1937, \* \$87,150,666 in 1936 and to \$81,973,352 in 1935.

The pulp and paper industry, one of the leading single manufacturing industries in Canada, has been first in wages and salaries paid since 1922, when it first exceeded the sawmills. It was the leading industry in gross value of production from 1925, when it replaced the flour-mills, until 1935 when it was overtaken by non-ferrous smelting and refining. It has been second to central electric stations in net value of production and capital for some years. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid, or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the \$12,088,329 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry toward Canada's excess of exports over imports in 1937 amounted to \$181,278,079, representing the difference between exports and imports of pulpwood, pulp, paper, and paper products.

The United States market absorbs annually all but a very small part of Canada's pulpwood exports, about 85 p.c. of her pulp and 77 p.c. of her paper shipments. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

### Subsection 3.—The Lumber Industry.

The manufacture of lumber, lath, shingles, and other products of the sawmill is the second most important industry in Canada depending on the forest for its raw materials. Annual statistics covering this and other forest industries were collected and published by the Forest Service of the former Department of the Interior from 1908 to 1916, since when the work has been carried on by the Dominion Bureau of Statistics, in co-operation with the Forest Service.

The production of sawn lumber in Canada in 1920 reached a total of over four billion feet board measure, the highest cut recorded since 1912. Production in 1921 decreased by over a third and the average value by over \$10 a thousand feet. This was followed, with one exception, by annual increases up to 1929 and then by annual decreases down to 1932. There were increases in 1933, 1934, 1935, 1936,

\* Owing to the adjustment in connection with combined paper-mills and paper-converting mills, the 1937 figures are not exactly comparable with those of previous years.

† This is the net value of production as calculated for years since 1934. It is obtained by deducting cost of power, fuel, and consumable supplies, as well as cost of materials, from gross value of production.

and 1937. British Columbia now produces 52 p.c. of the total. Table 13 gives the production of lumber, lath, and shingles in each year from 1927 to 1937.

### 13.—Quantities and Values of Lumber, Shingles, and Lath Produced in Canada, calendar years 1927-37.

NOTE.—Figures for the years 1903-26, inclusive, will be found at p. 300 of the 1931 Year Book.

Year.	Lumber Cut.		Shingles Cut.		Lath Cut.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

1933.....	1,957,989	27,708,908	1,939,519	4,448,876	151,653	332,364
1934.....	2,578,411	40,509,600	2,408,616	4,422,578	177,988	442,844
1935.....	2,973,169	47,911,256	3,258,253	7,593,765	228,854	586,087
1936.....	3,412,151	61,965,540	3,019,080	6,754,788	286,323	874,231
1937.....	4,005,601	82,776,822	3,048,395	7,631,691	392,922	1,231,965

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills, and mills for the cutting-up and barking or rossing of pulpwood reporting in 1937 was 3,836, as compared with 3,638 in 1936. The capital invested in these mills in 1937 was \$90,405,105, employment amounted to 33,917 man-years and wages and salaries amounted to \$27,173,872. The logs, bolts, and other materials and supplies of the industry were valued at \$57,280,080 and the gross value of production was \$104,849,785. The net production in 1937 was \$46,727,302.

The production of sawn lumber increased in quantity from 1936 to 1937 by 17.4 p.c. Lath production increased by 37.2 p.c., and shingle production increased by 1.1 p.c. Quantity and value increases were reported in all products but sawn ties, plywood, staves, and spoolwood. The total gross value of production increased from \$80,343,291 in 1936 to \$104,849,785 in 1937.

<sup>1</sup> Includes all other sawmill products.

British Columbia came first in total production, contributing 51.7 p.c. of the total cut in lumber and 80 p.c. of the shingles in 1937. Quebec followed in second place, Ontario was third and New Brunswick fourth. Douglas fir is the most important kind of lumber sawn, and is produced almost entirely in British Columbia. Spruce is sawn in every province and comes second, with hemlock, white pine, cedar, and balsam fir next in order of importance. Cedar is the most important shingle-wood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood in this industry, only 5 p.c. being deciduous-leaved trees or hardwoods.

**Lumber Exportation.**—The square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to Great Britain and later to the United States. Our trade with the latter country has been from the first largely confined to planks, boards, and dimension stock. During the American Civil War our exports of forest products of all kinds to the United States for the first time exceeded those to Great Britain, but in late years this has become the rule. The total quantity of sawn lumber and square timber exported from Canada changed little from 1900 to 1929, averaging about two billion ft. b.m. per annum, but decreased considerably in the next three years reaching its lowest level in 1932. This was followed by substantial increases in 1933 and 1934, a decrease in 1935, increases in 1936 and 1937, and a decrease in 1938 to 1,753,091 M ft. b.m. Of the 1938 exports, 56 p.c. went to the United Kingdom and 13 p.c. to other Empire countries, making 69 p.c. to the Empire as a whole. Twenty-six p.c. went to the United States and 5 p.c. to other foreign countries, making 31 p.c. to all foreign countries. The exports of lumber, square timber, lath, and shingles all decreased in 1938.

#### Subsection 4.—Manufactures of Wood and Paper.

Sawmills and pulp-mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products, and pulp and paper. There are also a number of important industries which use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, others manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries which use wood indirectly in the manufacture of articles which do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors, other millwork, and planing-mill products; boxes, baskets, cooperage, and other containers; canoes, boats, and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks, and silos; spools, handles, dowels, and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery, and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1937, this group, comprising 8,497 establishments gave 147,254 man-years of employment and paid out \$165,298,485 in salaries and wages. Capital invested in the industries of the group amounted to \$927,070,757, the gross value of its products was \$597,061,878 and the net value, \$306,961,553.

The forests of Canada contribute substantially to her export trade values. During the fiscal year ended Mar. 31, 1938, exports of wood and paper products amounted to \$253,434,860 and made up 23.7 p.c. of the total value of exports for the period, amounting to \$1,070,228,609. Domestic exports of wood and paper products were exceeded by those of mineral products, which made up 36.6 p.c. of the total, and agricultural (vegetable and animal) products with 34.7 p.c. Wood and paper products are prominent among the individual items of export. News-print paper was first on the list in 1938, with planks and boards sixth and wood-pulp eighth. The gross contribution of wood and paper products toward a favourable trade balance for Canada amounted to \$219,213,679 during the same period.

#### Subsection 5.—Forest Depletion and Increment.

**Fire Losses.**—No accurate summing up of forest fire losses in Canada's forests has ever been made, but it has been estimated that more than 60 p.c. of the original forest has been burned, about 14 p.c. has been cut for use and about 25 p.c. remains. Though the loss of merchantable timber has been greatly reduced in recent years by forest protective services and the education of the public, it still constitutes a serious drain on Canada's resources.

Since the historic Miramichi fire, which burned along the valley of the Miramichi river in New Brunswick in 1825, there have been a number of disastrous fires.

About the year 1845 vast areas west of lake Superior were burned over. Some years later a very extensive fire burned along the height of land from lake Timiskaming to Michipicoten. In 1871 a fierce fire swept over more than 2,000 square miles of forest from lake Nipissing westward along the north shore of Georgian bay. About the same time the greater part of the Saguenay and Lake St. John district, in Quebec, was swept by one of the most destructive fires on record. During a period of dry years from 1883 to 1893, a series of disastrous fires destroyed immense areas of timber in eastern and northern Manitoba and in northern Saskatchewan. Two other fires in 1891 and 1896 devastated more than 2,000 square miles of country in the southern Algoma district; in Quebec, country along the line of the Quebec and Lake St. John Railway also suffered by a number of disastrous forest fires about this time.

During more recent times a series of disastrous fires swept over northern Ontario. A number of isolated fires around the mining camp of Porcupine culminated, on July 11, 1911, in a conflagration which resulted in the loss of 72 lives and property damage estimated at \$3,000,000. In 1916 fires in the same general region were responsible for the deaths of at least 224 people. In 1922 a third fire destroyed the town of Haileybury and other centres. In 1908 a fire originating in the forest around Fernie, B.C., destroyed that city. Every year thousands of acres are devastated by fires of less individual importance, which in the aggregate are rapidly depleting our forest resources. In 1923 there were unusually disastrous fires, chiefly in Eastern Canada. A total area of over 6,000,000 acres was burned over with a loss of approximately \$46,000,000. The average area burned over for the ten-year period from 1928 to 1937 was slightly over 2,524,000 acres with an average annual loss of 325 million cubic feet of standing timber of merchantable size and over 1,000,000 acres of young growth and cut-over land. The cost of fire-fighting and the value of timber and other property destroyed averaged \$4,878,000 annually.

Speaking generally, there are, annually, two periods in Canada when the forest fire hazard is highest—in the spring, after the disappearance of the snow, when the forest floor is dry and the green underbrush has not yet developed, and again in the fall when the herbaceous growth is dead and the ground covered with dry leaves.

Statistics compiled by the Dominion Forest Service from reports received from the various provincial and private forest protective organizations show that, during the ten-year period from 1928 to 1937, 85 p.c. of all fires reported were due to human agencies and were, therefore, preventable. The chief causes of forest fires in Canada, on a percentage basis are: camp fires, 20 p.c.; settlers, 16 p.c.; lightning, 15 p.c.; smokers, 14 p.c.; with railways and incendiary, 8 p.c. each.

**Losses Through Insects and Fungi.**—From 1912 to 1923 the spruce bud-worm caused tremendous damage to the spruce and balsam-fir forests in Eastern Canada. In Quebec it was estimated that 100,000,000 cords of pulpwood were destroyed by this insect, and in New Brunswick the loss was placed at 15,000,000 cords. In these regions the active state of the infestation is now practically over, but the insect is causing damage to jack pine in northern Ontario, Manitoba, and Saskatchewan. Other insects, though not as destructive as the spruce bud-worm, entail a heavy drain on the forest. The hemlock looper and a new species closely related to the spruce bud-worm cause considerable damage in eastern coniferous forests. The most serious forest insect infestation at present is that of the spruce saw-fly, which is causing extensive damage in Quebec and New Brunswick. During recent years dusting by aeroplane has been developed on a practical basis by the Division of Entomology of the Department of Agriculture and promises to be effective in the control of certain defoliating insects under certain conditions.

Perhaps the most effective means of controlling destructive forest insects is by the introduction of parasites. The Division of Entomology has developed this means of attack with marked success in the case of the larch saw-fly and has recently secured from Europe some millions of parasitic insects which are being liberated in the forests infested with the spruce saw-fly. The loss caused by blister rust, the various forms of rot and other fungous diseases, is probably not less than that caused by insects under normal conditions. The butt rot is especially prevalent in balsam fir, and the value of the hardwoods is also greatly decreased by rot.

**Summary of Losses and Increment.**—During the ten years 1927 to 1936, the average annual consumption of standing timber for use amounted to about 2,567,000,000 cubic feet. During this period, fire has destroyed annually about 304,000,000 cubic feet of merchantable timber and young growth of various ages estimated to be equivalent to 264,000,000 cubic feet. The destruction occasioned by insects, fungi, and windfall is not known, but is estimated at 700,000,000 cubic feet per annum. It may be safely estimated that the forests of Canada are being depleted at the rate of about 3,835,000,000 cubic feet per annum. With about 600,000 square miles of accessible timber in a growing condition, an average annual increment of 10 cubic feet per acre would be quite possible under forest management and would cover this depletion. In view of the destruction of young growth which occurs and the deterioration of the forests and the soil, caused by repeated fires, there is little hope that this increment is being produced in merchantable timber at the present time throughout Canada, although particular areas are producing greatly in excess of this quantity. Nevertheless, extensive reproduction and rate-of-growth surveys conducted by the Dominion Forest Service indicate that the increment is greater than previously estimated.

## CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION.

This chapter is divided into three sections dealing, respectively, with: the fur trade, using that term in the sense which historical association has given it in Canada; fur farming, which follows closely the treatment formerly given the subject in the chapter on agriculture; and fur production and trade statistics, covering the total production and external trade in raw furs.

### Section 1.—The Fur Trade.

**Historical Sketch.**—The place which the fur trade held during the French régime in Canada, when for a century and a half it was at once the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said with truth to have held the West until the Dominion had grown to absorb it, bequeathing, to the civilization which followed, a native race accustomed to the white man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the Canada Year Book, 1934-35, pp. 343-344.

**Fur Resources.**—In the early years of the 19th century, the exports of furs from Canada exceeded in value those of any other product. Conditions have greatly changed, but the total output has not seriously declined and Canada may still be regarded as possessing, in her northern regions, one of the great fur preserves of the world. The rapid development of the country and the opening up of the West during the later 19th and earlier 20th centuries, together with improvements in transportation and settlement, meant the exhaustion of the fur resources of the settled parts. The trade, therefore, gradually retreated to less accessible territory. More recently the development of mining on a large scale over the Precambrian Shield has forced the trapper still farther north. Decline in fur resources has, however, been accompanied by increase in demand and higher prices, the encouragement of fur farming, and the introduction of conservation measures. Nevertheless, the belt of northern Canada, which includes the whole of the Northwest Territories, the northern parts of the Prairie Provinces, and extends through northern Ontario and Quebec and into the Maritimes, remains one of the few natural reservoirs for fine furs and the fur resource of this vast area constitutes one of its major assets to-day; in fact, minerals and furs will probably remain the chief resources since much of the area is unsuited to settlement or forest growth.

The fur bearers of Canada are mostly carnivorous animals, but two very valuable rodents are included, *viz.*, beaver and muskrat. The largest fur-bearing animal is the bear—polar, along the Arctic coast and Hudson bay; grizzly, in the Rocky mountains; and black, common in wooded areas generally. Wolves are common and wide-spread—grey, black, and blue are colour varieties of the same species. Fox pelts account for more than half of the fur trade. Fur farms now supply nearly all of the silver fox pelts, while the Arctic regions provide a great number of white skins and a few blue ones. The ermine, or weasel, is fairly plentiful throughout the Dominion and is found as far north as trappers are operating. Otter, beaver, marten, fisher, and mink are furs of exceptional quality and beauty and are secured throughout the whole of the timbered parts of the northern belt. The mink is now being raised extensively on fur farms and the pelt of the ranch-bred mink is regarded as superior to that of the mink taken in the wilds.

Among the rodents, the beaver has the most valuable fur, but this animal has begun to show signs of decreasing and restrictions on the taking of beaver have been made more rigid in consequence. Muskrat is now quite highly prized and, so far as number of pelts taken is concerned, is far in advance of any other species; under the trade name of "Hudson seal", its pelt has become a favourite moderate-priced fur.

**Conservation.\***—The conservation of the fur bearers of Canada is a matter coming under the jurisdiction of the respective Provincial and Territorial Governments. Nevertheless, the Dominion, as a whole, is concerned in the conservation of fur and of all wild-life resources. It was to co-ordinate the wild-life conservation efforts of the various Dominion Departments that the Advisory Board on Wild Life Protection was organized in 1916. The Board is specially authorized to advise with respect to the administration of the Migratory Birds Convention Act and the Northwest Game Act, but has dealt with many other problems of wild-life conservation. Through conferences of provincial and Dominion officials which were convened for many years by the former Department of the Interior, but are now arranged by the Department of Mines and Resources, uniform and concerted action has been taken and the conservation of Canada's wild-life resources has been advanced. The general policy followed with regard to the fur-bearing animals has been mainly along two lines: first, to so regulate the taking of animals by limitation of catch or close season as to prevent their extinction in districts where natural conditions provide a suitable habitat; and second, to provide sanctuaries in strategic places which serve as reservoirs from which large areas of surrounding wild country may be naturally restocked.

Many of our most valuable fur-bearing animals are subject to marked fluctuations in numbers. The periods of abundance and of scarcity recur in sufficient regularity to be called cycles and they have an important bearing upon the fur trade generally and more particularly upon the well-being of a large percentage of our Indian and Eskimo population who depend upon the wild life for their livelihood. The Department of Mines and Resources, with the assistance of the Bureau of Animal Population, Oxford University, and the Hudson's Bay Company, has commenced an inquiry in the form of an annual questionnaire distributed to a number of Arctic stations with the object of endeavouring to determine the facts about each of these recurring fluctuations. It is necessary to continue this investigation from year to year because the situation is changing continuously, and it is hoped that the work will produce data from which a forecast can be made relating to the expected abundance of each important species. The study might also be suggestive of measures to prevent unnecessary depletion of any species of wild life during the periods of scarcity.

Information on the wild-life conservation activities of the provinces and territories may be secured from the chief game officials listed below: Roy A. Gibson, Deputy Commissioner, Northwest Territories, Ottawa (administers Northwest Game Act); G. A. Jeckell, Controller, Controller's Office, Dawson, Yukon; F. R. Butler, Commissioner, 411 Dunsmuir St., Vancouver, British Columbia; W. H. Wallace, Fish and Game Commissioner, Department of Agriculture, Edmonton, Alberta; Edward S. Forsyth, Game Commissioner, Department of Natural Resources, Regina, Saskatchewan; A. G. Cunningham, Director, Game and Fisheries Branch, Department of Mines and Natural Resources, Winnipeg, Manitoba; D. J. Taylor,

\* Prepared under the direction of F. H. H. Williamson, Controller, National Parks Bureau, Department of Mines and Resources, Ottawa, by Hoyes Lloyd, Superintendent of Wild Life Protection.

Deputy Minister of Game and Fisheries, Toronto, 2, Ontario; L. A. Richard, Deputy Minister of Mines and Fisheries, Quebec, Quebec; Lt.-Col. H. H. Ritchie, Chief Game Warden, Department of Lands and Mines, Fredericton, New Brunswick; F. A. Harrison, Director, Department of Lands and Forests, Halifax, Nova Scotia; W. R. Shaw, Deputy Minister and Live Stock Superintendent, Department of Agriculture, Charlottetown, Prince Edward Island.

### Section 2.—Fur Farming.\*

Fur farming is now recognized as an industry upon which the fur trade is becoming more and more dependent for its supplies of raw furs. In 1921 the value of pelts of ranch-bred animals accounted for only 3 p.c. of the total value of raw fur production, while in 1937 it had risen to approximately 40 p.c.

**Origin of the Fur-Farming Industry.**—A short account of the origin of the fur-farming industry in Canada was given on p. 249 of the 1929 edition of the Year Book, while a more detailed account of the earlier history of the industry was given in a publication of the Commission of Conservation, Ottawa, entitled "Fur Farming in Canada", by J. Walter Jones, B.A., B.S.A., the second edition of which was published in 1914.

**Fur Farms of Canada.**—The term "fur farm" includes farms devoted entirely to the raising of fur-bearing animals (principally silver foxes), together with parts of farms where the raising of fur-bearing animals is carried on as a branch of the operations. Although the silver fox is of chief importance, other kinds of fur-bearing wild animals are being raised successfully in captivity—mink, raccoon, skunk, marten, fisher, and fitch. The mink in particular thrives in captivity if it receives proper care, and the number of mink farms is accordingly increasing at a rapid rate. In 1936 the value of the silver foxes on the farms represented 85 p.c. of the total amount, and the value of the mink, 13 p.c., leaving 2 p.c. for all other kinds combined. In addition to the farms already mentioned, where animals are raised in rather confined quarters, many areas of marsh, stream, or lake are being operated as muskrat and beaver farms. In the case of these semi-aquatic animals, however, although the animals are usually kept within a carefully fenced area where they are given supplementary food and are protected from predatory enemies, they nevertheless live and breed under natural conditions.

For many years the fox-farming industry was expanding so rapidly, both in Canada and abroad, that the chief source of income of ranches was the sale of live animals for breeding purposes, while the production of pelts was a minor or incidental feature. Thus, in 1925, the value of live silver foxes sold was \$2,755,000, while that of silver fox pelts was only \$736,000. As the number of foxes on fur farms progressively increased, ranchers had to readjust their economy to declining values for both live animals and pelts. The industry appears to be gradually becoming stabilized on a pelt basis rather than on a live animal basis. In the latest year, 1936, the value of live silver foxes sold was only \$542,888, while that of silver fox pelts sold was \$4,950,290, and for all fur farms the sales of pelts represented 87 p.c. of the total revenue. Mink is forging ahead in importance both as to values of animals and pelts sold. For the latest two years shown the increases have been about 7 p.c. and 270 p.c., and 122 p.c. and 102 p.c., for animals and for pelts, respectively, whereas over the same period the value of silver fox animals sold from farms has diminished appreciably and that of silver fox pelts has increased by only about 20 p.c. and 12 p.c.

\* Revised by Miss F. A. Brown, Chief of the Fisheries and Animal Products Branch, Dominion Bureau of Statistics. This Branch publishes detailed annual reports on fur farms and on the production of raw furs.

**Statistics of Fur Farms.**—The earliest Dominion-wide statistics of fur farms were collected for the year 1919. The statistics of 1919 recorded 429 fur farms with 8,326 fur-bearing animals.

**Preliminary Statistics for 1937.**—According to figures published at the time of going to press, fur farms numbered 9,179, lands and buildings were valued at \$7,687,171, and fur-bearing animals at \$9,676,431. Animals sold alive numbered 25,202, valued at \$1,030,888, while the 259,870 pelts sold were valued at \$5,779,498.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

Table 2 indicates that the numbers of silver foxes and mink, the two fur-bearing animals which have proved most readily adaptable to domestication, were higher in 1936 than in any previous year. The values of animals on fur farms, on the other hand, have been greatly affected by the decline in prices since 1929.

<sup>1</sup> Revised since the publication of the 1938 Year Book.<sup>2</sup> The publication of information concerning rabbits on farms has been discontinued.<sup>3</sup> Based on estimates furnished by the operators of the farms.

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. Table 4 shows the sales of animals by kinds in the years 1928 to 1936 and Table 5 the sales of pelts. During late years the sales of pelts have exceeded the sales of live animals, while in former years the reverse was the case.

<sup>2</sup> The publication of information concerning rabbits on farms has been discontinued.

### Section 3.—Statistics of Total Production and Trade in Furs.

**Fur Production Statistics.\***—Early records of raw fur production are confined to the decennial censuses, when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual statements, based on royalties, export tax, etc., have been made available by the provincial game departments (excepting Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. In the case of Prince Edward Island, the sales of pelts shown on the annual returns of fur farms had, prior to the season 1935-36, been used to prepare statistics of fur production for the province. In the season 1935-36, the Prince Edward Island Department of Agriculture was able to supply a statement of the total fur production, while for the season 1936-37 the statistics are based on returns supplied directly to the Bureau by the fur traders who deal in furs produced in the province.

The value of the raw fur production of Canada in the twelve months ended June 30, 1937, was \$17,526,365, compared with \$15,464,883 in the preceding season and \$12,843,341 in the season 1934-35. These totals comprise the value of pelts of fur-bearing animals taken by trappers and of pelts sold from fur farms, the value of the latter representing 40 p.c. of the whole in 1936-37.

\* Revised by Miss F. A. Brown, Chief of the Fisheries and Animal Products Branch, Dominion Bureau of Statistics.

<sup>1</sup> Fur prices in this year were abnormally high. Any comparison of this figure with those of later years should take this into account.

The leading provinces with respect to value of raw fur production are Ontario, Quebec, Prince Edward Island, and Alberta, in the order named. The relation which the value for each province bore to the total for Canada in the year ended June 30, 1937 was: Ontario, 17.0 p.c.; Quebec, 14.4 p.c.; Prince Edward Island, 12.5 p.c.; Alberta, 12.3 p.c.; Manitoba, 9.3 p.c.; British Columbia, 8.0 p.c.; Saskatchewan, 7.6 p.c.; Northwest Territories, 6.7 p.c.; Nova Scotia, 5.2 p.c.; New Brunswick, 5.0 p.c.; and the Yukon Territory, 2.0 p.c.

Details by provinces of the numbers of pelts produced in the two latest years are given in Table 7.

The principal item in Canada's raw fur production is silver fox, with a total value in 1936-37 of \$6,777,644, or 39 p.c. of the total for all kinds of furs. The fox farms produce practically the entire supply of silver fox pelts, and the number recorded for the season 1936-37 (230,030) was the highest in the history of the industry. The total value also established a high record, but the average price per pelt (\$29.46) was lower than in any previous season. Following silver fox, in order of total value, was mink, with \$2,267,835. The mink is now being raised extensively on fur farms, and perhaps a third of the number of pelts shown in the fur production

report may be credited to the farms. The number of mink pelts recorded for the season 1936-37 was 139,673, a decrease from the preceding season of 14,606. The value, on the other hand, showed an increase of \$566,258, the increase being due to the higher average price—\$16.24 per pelt compared with \$11.03 in the season 1935-36. Among other important furs were muskrat (\$2,250,971); ermine (\$318,290); red fox (\$716,747); beaver (\$699,011); marten (\$642,204); lynx (\$605,526); and cross fox (\$518,066). Each of these kinds recorded an increase over the preceding season in the average price per pelt.

The total number of pelts of all kinds produced during the season 1936-37 was 6,237,640, compared with 4,596,713 in the season 1935-36. The large increase in total number is attributed chiefly to the greater number of squirrel pelts—2,147,114 compared with 629,580 in the preceding season.

The following table gives details of raw fur production by kinds for 1936 and 1937.

<sup>1</sup> Coyote or prairie wolf pelts for Manitoba are included with wolf pelts.

At the close of the Great War, Montreal took a position as an international fur market, holding the first Canadian fur auction sale in 1920. At the sales held in Montreal during the year 1937, the pelts sold numbered 922,615 while the value amounted to \$5,666,991. Fur auction sales are held also at Winnipeg, Edmonton, and Vancouver. An important industry in Canada is the manufacture of fur goods, such as coats, capes, scarves, muffs, etc. In 1936 the number of plants so engaged was 331, and the total value of output \$14,474,935. Then there is the fur-dressing and -dyeing industry whose 14 plants in 1936 treated fur skins to the number of 6,221,363. The chief kinds of furs, with regard to number treated, were rabbit (3,256,879) and muskrat (955,181).

**External Trade in Furs.**—The important external markets for Canadian furs are London and New York; the trade tables for the twelve months ended June 30, 1937, show that of the total of \$18,529,254 worth of raw furs exported, the United Kingdom took \$10,384,268 and the United States \$7,217,087. In 1667 exports of furs to France and the West Indies were valued at 550,000 francs. In 1850, the first year for which tables of the Customs Department are available, the value of raw furs exported was £19,395. The following table shows exports for recent years which are greatly in excess of the earlier values.

Among living animals exported from Canada only two kinds of fur-bearing animals are separately classified by the Customs Department. These are foxes, separately recorded first in 1925, and mink, in 1931. Live foxes exported were valued at \$1,388,459 in the fiscal year ended Mar. 31, 1925, \$1,434,686 in 1926, when the highest value was recorded, and only \$44,853 in 1938. Live mink exported were valued at \$66,811 in 1931 and \$39,888 in 1938. Foxes have been separately classified among imports of living animals since the fiscal year ended Mar. 31, 1928, when those imported were valued at \$6,914 compared with \$4,533 in 1938.

## CHAPTER XI.—THE FISHERIES.

### Section 1.—The Early Fisheries.

Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. Fishing may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has since yielded a perennial harvest to both Europe and America. According to the Census of 1931, of 3,927,591 persons in Canada gainfully occupied in that year, 34,340 were reported as occupied in the fishing industry, that is, in primary fishing operations exclusive of canning and curing.

A more detailed account of the history of the Atlantic fisheries was given on p. 348 of the 1934-35 Year Book.

### Section 2.—The Canadian Fishing Grounds.

The fishing grounds of the Dominion are of exceptional national value inasmuch as two of the four great sea-fishing areas of the world border on Canada. They fall naturally into three divisions: Atlantic, inland, and Pacific fishing grounds. A detailed description of each division, of the fish caught, and of the methods of fishing, will be found at pp. 222-225 of the 1932 Year Book.

### Section 3.—The Government and the Fisheries.\*

Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a Department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries (except those of the mainland portion of Quebec, which, by agreement, are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island, and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. [See the Fisheries Act (22-23 Geo. V, c. 42).] The expenditure of the Dominion on the fisheries in the fiscal year 1937-38, including civil government salaries, contingencies, etc., was \$2,162,111 and the revenue \$119,824.

**Conservation.**—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of close seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear, and fishing operations generally. In

\*Revised under the direction of W. A. Found, Deputy Minister, Department of Fisheries, Ottawa.

addition, an extensive system of fish culture has been organized; the Dominion, in 1937, operated 16 main hatcheries, 7 subsidiary hatcheries, 3 rearing stations, 8 salmon retaining ponds, and several egg collecting stations at a cost of \$218,055, and distributed 61,831,780 trout and salmon eggs, fry, and older fish. The young fish are distributed gratis if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 in Prince Edward Island, by the Dominion Department of Fisheries, and are now being extended to areas in Nova Scotia. In New Brunswick, the oyster areas are under the jurisdiction of the provincial authorities, but in a portion of Shediac bay the areas have been transferred to the Dominion Department of Fisheries by the Provincial Government in order that certain oyster investigations might be begun there.

**Direct Assistance.**—On the Atlantic coast where conditions attending fishing operations make such a service desirable, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72) systems of instruction in improved methods of fish-curing and barrel-making have been in operation for several years.

By parliamentary vote the sum of \$300,000 was made available for use by the Department of Fisheries during the fiscal year 1937-38 to aid, in co-operation with the provinces concerned, in the re-establishment of needy fishermen. Four provinces, where the fisheries are administered by the Dominion in whole or in part—Nova Scotia, New Brunswick, Prince Edward Island, and Quebec—entered into agreements with the Dominion authorities to carry out the purpose of this vote. In each of the four, the Department of Fisheries spent two dollars for each dollar spent by the Provincial Government in direct aid to fishermen who were in need of assistance and the total spendings from the departmental appropriation were \$218,004. In the Maritime Provinces and the Magdalen islands loans were made to fishermen and associations of fishermen and the total number of these loans to fishermen was 9,176 and to fishermen's associations, 25.

In further effort to aid the fishermen by expanding the demand for their products, large-scale advertising is carried on by the Department of Fisheries. In the main, the advertising was carried on within the Dominion but in the fiscal year 1937-38 a substantial amount was expended in the United Kingdom with the particular object of increasing sales of Canadian canned lobster and canned salmon. In Canada many publications of different classes are distributed to the public in all parts of the country and direct attention to the merits of Canadian fish foods, generally.

**Scientific Research.**—Under the direction of the Fisheries Research Board of Canada (formerly the Biological Board of Canada), stations for the conduct of research into the numerous complex problems occurring in connection with the fisheries are established at Halifax, N.S., St. Andrews, N.B., Grand Rivière, Que., and Nanaimo and Prince Rupert, B.C. Another station, chiefly for oyster investigation work, is conducted by the Board at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. A permanent staff of scientists is employed by the Board. The life histories of edible fishes, the bacteriology of fresh

and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and papers dealing with them issued by the Board. Instructional courses for fishermen are given at some of the stations and information brought out by the station research is made available without charge to interested branches of the fishing industry.

**International Problems.**—Fisheries problems of international importance have arisen from time to time on both coasts of the Dominion, as well as in the Great Lakes area where problems are complicated by the number of State governments concerned. A major international problem has been the question of United States privileges in Atlantic fisheries of Canada. An outline of the history of this question may be found on pp. 351-352 of the 1934-35 Year Book. Since 1933, under the former *modus vivendi* plan, which grew out of the unratified treaty of 1888, United States fishing vessels have again been permitted to enter Canadian ports to buy bait and other fishing supplies.

Joint steps to deal with two important Pacific Coast fisheries problems have been taken in recent years by Canada and the United States—one problem the preservation of the halibut fishery of the Northern Pacific Ocean and Bering Sea, the other the protection, preservation, and extension of the sockeye salmon fisheries in the Fraser River system.

The first treaty relating to the halibut fishery was signed on Mar. 2, 1923. Under this treaty a close season for halibut fishing in each year was provided for and an international commission was set up to conduct an investigation into the fishery and the life history of the halibut. A further convention, signed at Ottawa on May 9, 1930, and ratified by the respective Governments on May 9, 1931, provided for the regulation of the fishery by the commission through the division of the convention waters into fishing areas, changing of dates for close seasons, and so on. A new convention was signed at Ottawa on Jan. 29, 1937, extending the regulatory powers of the commission. Steps taken by the international commission under the several conventions have resulted in steady improvement in the state of the halibut fishery in the waters concerned.

The Sockeye Salmon Fisheries Convention was signed at Washington on May 26, 1930, but exchange of ratifications did not take place until July 28, 1937, although the Canadian Parliament had given approval to the treaty several years before that time. The convention waters include not only the Fraser River watershed in British Columbia but also certain Canadian, United States, and international waters making up the Fraser approach and through which the Fraser River sockeye pass.

Under the sockeye treaty the International Pacific Salmon Fisheries Commission was set up in 1937, consisting of three members appointed by Canada and a like number appointed by the United States. The Commission, which has established its headquarters at New Westminster, B.C., is empowered by the Convention to make "a thorough investigation into the natural history of the Fraser River sockeye salmon, into the hatchery methods, spawning ground conditions, and other related matters", to conduct the sockeye salmon fish cultural operations in treaty waters, and to make recommendations to the Governments on matters concerning "removing or overcoming obstructions to the ascent of sockeye salmon, that may now exist or may from time to time occur, in any of the waters covered by this convention . . .".

Certain powers of regulation were also given the Commission by the Convention but one of the understandings on which the treaty was approved by the two countries was that "The commission shall not promulgate or enforce regulations until the scientific investigations provided for in the convention have been made covering two cycles of sockeye salmon runs, or eight years".

**Fishing Bounties.**—By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat-building, provision is made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters, of \$150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to \$160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1937, payment was made under authority of the Deep Sea Fisheries Act (R.S.C. 1927, c. 74) on the following basis: to owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty, \$7.60 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$6.90 each. The total amount paid in 1937 was \$159,857. Details of the distribution of bounties for the years 1934 to 1937 are as follows:—

**Collection of Statistics.**—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries, and those branches of the different Provincial Governments having jurisdiction with regard to fisheries. Under this arrangement, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local fishery officers, checked in the Department of Fisheries, so far as operations in areas where the fisheries are under Dominion administration are concerned, and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditious and correct reports.

### Section 4.—The Modern Fishing Industry.\*

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only \$125,000. It doubled in the following decade and by 1860 had passed the million mark. Ten years later it reached \$6,000,000 and this was again more than doubled by 1878. By 1900 it had reached a total of \$21,000,000 and the growth continued with little interruption until 1918, when it reached the high record of \$60,000,000. Since then there have been decreases in value, due to lower prices rather than to smaller catches. In 1937 the value was \$38,976,294. It will be understood that the figures given represent the total value of fish as marketed,

whether in a fresh, dried, canned, or otherwise prepared state. The numbers of employees engaged in the industry have increased in proportion to the catch, amounting in some years to over 90,000, and the capital investment has gone as high as \$64,000,000. In 1937 the number of employees was 84,025, and the capital investment, \$44,926,764.

Among the different kinds of fish, the cod of the Atlantic and the salmon of the Pacific, in the earlier years of the fishing industry, disputed the primacy; since 1895 salmon has definitely taken the lead, and the heavy packs and high prices of lobster have, in more recent years, sent cod down to third place. The value of output of the salmon fishery in the period 1869-1937 was approximately \$474,000,000,

\* Revised by Miss F. A. Brown, Chief of the Fisheries and Animal Products Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with advance summaries on fish caught, marketed, and prepared, by provinces. These may be obtained from the Dominion Statistician.

and that of the cod fishery, \$293,000,000. These facts have affected the relative standing of the provinces, British Columbia now occupying the leadership that in earlier times belonged to Nova Scotia. The record of production since 1870, production by provinces for the past six years, and the record of principal fish products for the past five years, are shown in Tables 2, 3, and 4, respectively.

In Table 4 the quantities given are those of primary products caught, but the values are those of all products, primary and secondary, marketed. The grand totals are also subdivided so as to show the values that the sea fisheries and inland fisheries, respectively, yield, as compared with the whole. More detailed tables of quantities and values of both sea and inland fish marketed, such as those published on pp. 326-328 of the 1938 Year Book, may be found at pp. 17 to 23 of the Report on Fisheries Statistics, 1937, published by the Dominion Bureau of Statistics.

<sup>1</sup> Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas from 1934 on the United States landings are excluded from the statistics and the figures cover landings by Canadian vessels only.

<sup>2</sup> Prior to 1935 clams and quahaugs were combined.

<sup>3</sup> Including other items not specified above.

**Quantities and Values in Recent Years.**—The values upon which the figures of Table 5 are based are those of the fish products as marketed, i.e., they include values added by processing such as the canning, curing, etc., of fish products. The indexes of volume, on the other hand, are based upon the quantities of fish reported as caught and landed. The indexes of volume for the individual kinds of fish are calculated directly from the quantities reported in each year but, since the quantities of different kinds of fish are reported in different units, the indexes of volume for the totals of sea and inland fish are calculated from the percentage change, due to variation in quantity from one year to the next, obtained by taking the quantities of the later year at the prices of the previous year. The changes in the indexes each year are, therefore, weighted by the prices of the previous year.

5.—Percentages of Total Value and Indexes of Volume of Fisheries Production, by Principal Kinds of Sea and Inland Fish, 1926-37.

NOTE.—Based on values as marketed and quantities caught.

Kind of Fish.	1926.	1927.	1928.	1929.	1930.	1931.	1932.	1933.	1934.	1935.	1936.	1937.

<sup>1</sup> Ling cod was included with cod in 1926. <sup>2</sup> Landings at British Columbia ports by United States vessels excluded in 1934 and later years. <sup>3</sup> Clams only in 1935 and later years. <sup>4</sup> Totals include minor items not specified. <sup>5</sup> First reported in 1927 and in that year the value was too small to be represented as a percentage. For volume index, 1927=100. <sup>6</sup> See footnote 1. The average of the years 1927-30 was taken as the quantity of ling cod for 1928 and this was deducted from the quantity of cod reported for 1928.

† Included with "Other".

**Capital and Employees.**—The total capital invested reached an all-time record of \$64,026,297 in 1930, declined successively for three years to \$40,914,057 in 1933, rose again in 1935 and in 1936, and in 1937 declined slightly to \$44,926,764. The number of persons employed in the primary and secondary operations connected with the fishing industry declined from 80,450 in 1929 to 74,882 in 1931, rose steadily since then to 83,436 in 1934, dropped in 1935 to 82,918, rose again to 86,973 in 1936 and declined in 1937 to 84,025. The 1937 figure is the second highest in the period 1920 to 1937.

**Trade.**—The domestic consumption of fish is relatively small in Canada and the trade depends largely upon foreign markets. From 60 to 70 p.c. of the annual capture is an average export, of which the United States takes approximately one-half and the United Kingdom one-fourth. In the calendar year 1937, total exports amounted to \$28,902,152, of which \$14,004,575 went to the United States and \$6,721,764 to the United Kingdom. A further division shows that \$11,178,572 went to British Empire countries and \$17,723,580 to foreign countries. The most important single export is canned salmon (to the United Kingdom and European markets), followed by fresh lobster, canned lobster, fresh salmon, fresh whitefish, and dried cod (to the West Indies, South America, etc.). For fresh fish the United States is the chief market. Canadian imports of fishery products in the calendar year 1937 amounted to \$2,877,131. For convenience of the reader a general review of the import and export trade in fish for 37 years past is given in Table 12, by fiscal years, while Table 13 gives a comparative record of exports, by countries, during the calendar years 1936 and 1937. A complete analysis of imports and exports, as well as of production, is given in the Report on Fisheries Statistics, 1937, issued by the Dominion Bureau of Statistics.

## 12.—Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-38.

**NOTE.**—In this table "Exports" includes seal skins, fish oils, and whale oil, and "Imports" includes turtles, whalebone, shells and their products, fur skins of marine animals, fish oils, and ambergris, in addition to fishery products as shown in Tables 12 and 13 of Chapter XVI on External Trade, in this volume.

**Fisheries Production, 1938.**—Preliminary reports for 1938 indicate that there will be some increase in the total landings of sea fish and shellfish but that the landed value of the catch to the fishermen will be smaller than in 1937. Weakened prices, notably in the case of lobsters, adversely affected the value return for 1938. At the time of writing (Mar., 1939) the statistics of fresh-water catch and landed value for 1938 are not available.

## CHAPTER XII.—MINES AND MINERALS.\*

NOTE.—An article on the geology of Canada will be found at pp. 14-25 of the present edition of the Year Book.

**Historical Sketch.**—The early settlements in the lower St. Lawrence valley were hemmed in by the non-agricultural rock formations of the Canadian Shield which approached closely to the first points of colonization. An important epoch of Canadian expansion, about the middle of the 19th century, coincided with the surmounting of the transportation difficulties presented by the arm of the Canadian Shield which crosses the St. Lawrence river above Montreal and is responsible for the series of rapids between that city and lake Ontario. A second and greater period of expansion followed again when railways bridged the barriers of rocky country separating lake Superior in the east and the Pacific coast in the west from the extensive agricultural plains of the Prairie Provinces. These forbidding areas, with their exposed ancient rocks, their forests, and their lakes, which impeded Canadian growth and agricultural settlement until nearly the end of the 19th century, have now become the chief source of the expansion of wealth and productive activity because of their resources of pulpwood, water power, and mineral deposits.

The discovery of minerals in Canada was closely associated with the early exploration of the country. Iron and silver, and later coal, were reported in Nova Scotia by some of the first French adventurers. Bellin's maps published in 1744 indicated the existence of silver-lead not ten miles distant from the now famous Cobalt Silver Camp. However, in the early period of Eastern Canada's history such development of mineral resources as occurred was almost entirely incidental to the agricultural colonization of the country and consisted principally of the smelting of bog iron ores and of the production of such necessities as salt and building materials.

Though coal was discovered on Vancouver island in 1835, it was the alluvial deposits of the Fraser river and the gold rush to the Cariboo in 1859 that really opened up the interior of the mainland, so that, on the western coast, mineral exploitation preceded agricultural settlement.

These early isolated discoveries were followed by others, notably the gold ores of Nova Scotia, the copper-nickel of Sudbury, the silver of Silver islet on lake Superior, copper-gold at Rossland, and silver-lead in the Kootenays. A foundation for the mining industry was laid with the setting up of the Geological Survey of Canada under Sir William Logan and the publication in 1863 of the *Geology of Canada*. However, it was not until the mining development in British Columbia in the 1890's and the discovery of rich deposits of silver and gold in northern Ontario in the first decade of this century that the mining industry began to give promise of its tremendous possibilities. The effects of successive steps in the development of the mineral resources may be traced in the per capita figures of mineral production in Table 1, p. 317. The first period of rapid increase from 1895 to 1900 resulted from

\* The sections of this chapter, with the exception of Section 1, have been revised, as regards production figures, by W. H. Loese, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXIX, Section 1. Subsection 1 of Section 1 has been compiled from material supplied by the Lands, Parks and Forests Branch of the Department of Mines and Resources, Ottawa, and Subsection 2 of Section 1 from material furnished by the Provincial Governments.

the placer discoveries of Yukon and the expansion of lode mining in British Columbia. The next important increase in 1906-13 followed the discovery of silver and gold at Cobalt and Porcupine.

War prices stimulated the production of base metals from properties already developed, but on the whole active prospecting was much curtailed during the War period. However, in the decade following the War, new discoveries were widespread and the expansion was very rapid. The aeroplane furnished a means of comparatively easy access to remote districts and the discovery of new deposits of minerals increased annually. Important discoveries of base metals were the copper-gold areas of Rouyn in western Quebec, and the copper-gold-zinc ore bodies near the Manitoba-Saskatchewan boundary. Expansion programs were carried out at nickel-copper properties in the Sudbury district of Ontario and silver-lead-zinc properties in British Columbia. New gold mines were brought to the production stage in western Quebec, northwestern Ontario, and eastern Manitoba. An intrepid prospector went farther afield and uncovered silver-radium ores at the easterly end of Great Bear lake.

It should not be imagined from the brief outline given above that the successful and profitable development of mining enterprise in Canada has depended solely upon the discovery of the ore bodies. Even in the case of occurrences of free-milling gold ores, a long and expensive process of exploration is required before the possibilities of a property as an economic producer can be determined, and, only a very small percentage of mining claims, though showing promising indications of mineralization when located, ever develop to profitable production. In the case of base-metal ore-bodies, not only is the expenditure for preliminary development necessary, but also difficult problems in metallurgy are presented, requiring long periods of research and experiment for their solution before profitable production is made possible. The nickel-copper deposits of Sudbury were discovered in 1883, but production on an important scale did not come until after 1900 and the greatest expansion has occurred since the War. The great Sullivan silver-lead-zinc deposit in the Kootenay district of British Columbia was discovered in 1892, but production upon anything like the present scale did not come until after the War, when a successful method of separating the lead and zinc had been worked out.

**Statistics of Mines and Minerals.**—The compilation and publication of statistics concerning mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent to those engaged in mineral industries are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

For more detailed information on the mineral production of Canada, the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. The more important of these are: annual preliminary reports on the mineral production of Canada; a complete, detailed, annual report on the mineral industries; monthly bulletins on the pro-

duction of the 16 leading minerals; and monthly, quarterly, and annual reports on coal statistics. (See footnote to p. 309.)

The following material of this chapter is divided into six sections: (1) a sketch of the administration of mineral lands and mining laws; (2) a summary of general production; (3) the industrial statistics of the mineral industries; (4) production of metallic minerals; (5) production of non-metallic minerals; (6) production of clay products and structural materials.

## Section 1.—Mineral Lands Administration and Mining Laws.

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves, and in National Parks; all other mineral lands lying within the boundaries of the several provinces are administered by the respective Provincial Governments.

### Subsection 1.—Dominion Mining Laws and Regulations.

Dominion lands to which these regulations apply are those administered by the Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the Territories of Canada reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

**Placer.**—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person 18 years of age or over; claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, \$200 in Yukon and \$100 elsewhere. Royalty 2½ p.c. under the Yukon Placer Mining Act.

**Quartz.**—"Mineral" under this heading means all deposits of metals and other useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen, and oil shales.

Under the present regulations, effective Apr. 2, 1932, applicable to the Northwest Territories, any prospector or locator of a mineral claim, whether an individual, mining partnership, or a company, must hold a miners licence, the fee being \$5 for an individual, from \$5 to \$20 for mining partnerships, and larger amounts proportionate to their capitalization for mining companies. A licensee may stake out 6 claims on his own licence and 12 more for 2 other licensees, not exceeding 18 in all in any one licence year in any mining division. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51.65 acres, being 1,500 feet square. Entry is granted by a mining recorder, fee \$5 for a claim located by a

licensee on his own licence and \$10 if located on behalf of another licensee. Grant is renewable from year to year, subject to representation work to the value of \$100 being done on the location each year, and the renewal of the owner's miners licence. A maximum of 36 claims may be grouped for purposes of representation work. When prescribed representation work to the value of \$500 has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense, and certain other requirements met, a lease is issued for a term of 21 years, renewable, the rental for the full term of a claim not exceeding 51.65 acres being \$50. The cost of the survey, reckoned at \$100, may be counted as work done on the claim. When the profits of a mine exceed \$10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to profits. Miners licences are not required in Yukon under the Yukon Quartz Mining Act, but the general provisions of the Act are similar to those of the Quartz Mining Regulations above, except that the fee for a grant is \$10 and only 8 mineral claims may be grouped for operation.

In addition to these Quartz and Placer Mining Regulations, applicable to the Northwest Territories, and the Yukon Quartz and Placer Mining Acts, the following regulations regarding minerals are in force: *Yukon*.—Dredging Regulations; Petroleum and Natural Gas Regulations. *Yukon and Northwest Territories*.—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations and Domestic Coal Permits. *Northwest Territories*.—Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations and Permits to remove sand, stone, and gravel from beds of rivers.

#### Subsection 2.—Provincial Mining Laws and Regulations.

The granting of land in any province except Ontario no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. Some early grants in New Brunswick and Quebec also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas), and quarrying. Under these divisions of the mining industry provincial regulations may be summarized as follows:—

*Placer*.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

*General Minerals*.—These are sometimes described as quartz, lode minerals, or minerals in place. The most elaborate regulations apply in this division. In all provinces a prospectors or miners licence to search for mineral deposits, valid for a year, must be obtained. A claim of promising-looking ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years, when a grant or lease of the mining rights may be obtained subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

*Fuels*.—In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held.

In some cases royalties are provided for. In the cases of petroleum and natural gas, a boring permit on likely ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

**Quarrying.**—Regulations under this heading define the size of holding and the terms of lease or grant.

The more important features of the regulations dealing with these divisions of the mining industry are outlined for each of the provinces below.

**Nova Scotia.**—*Administration.*—Minister of Public Works and Mines, Parliament Buildings, Halifax. *Legislation.*—Mines Act (c. 22, R.S.N.S. 1923) and amending Acts of 1927 (c. 17), 1929 (c. 22), 1933 (c. 12), 1935 (c. 23), 1936 (c. 46), 1937 (c. 19), and 1938 (c. 48).

*General Minerals.*—Prospectors licence at nominal fee. Lease of mining rights—40 years for gold and silver; 20 years, three times renewable, for other minerals; both subject to annual rental and performance of work.

*Coal.*—Royalty—12½ cents per long ton, with exemption of coal used in mining operations and for domestic purposes by workmen employed about the mine.

*Quarrying.*—Rights to limestone, gypsum, and building materials are acquired with ordinary land title.

**New Brunswick.**—*Administration.*—Department of Lands and Mines, Fredericton. *Legislation.*—Mining Act (c. 35, R.S.N.B. 1927), as amended by c. 27, 1927, and c. 23, 1933. In most grants of Crown land since about 1805, all mines and minerals are reserved to the Crown. Prior to that time, most of the land grants reserved only gold, silver, copper, lead, and coal.

*General Minerals.*—Prospectors licence, terminating Dec. 31, costs \$10. *Claims.*—A prospector may stake 10 claims of 40 acres each which must be registered within 30 days and 25 days' work done in each claim within the year. All this work may be concentrated on one of a group of claims. Mining rights are granted by mining licence, renewable annually, upon payment of \$10 per claim. When the mine produces on a commercial basis, a 20-year lease under similar conditions may issue.

*Fuel.*—Royalties are 10 cents per long ton on coal and 5 p.c. on the value at the well's mouth for petroleum and natural gas.

**Quebec.**—*Administration.*—Minister of Mines, Quebec. Information and statistics on mining operations and geological explorations are to be found in the Annual Report of the Quebec Bureau of Mines. *Legislation.*—Quebec Mining Act (c. 80, R.S.Q. 1925) and amendments. In townships the Crown retains full mining rights on lands patented subsequently to July 24, 1880, and gold and silver rights on lands patented previously to that date. All mining rights belong to the Crown in most of the seigneuries.

*General Minerals.*—Miners certificate good for calendar year; fee \$10. *Claims.*—Five claims of 40 acres each must be recorded and 25 days' work per claim done within 12 months; a development licence renewable annually is granted upon payment of \$10 recording fee and 50 cents per acre. Mining rights can be purchased as a mining concession for \$5 per acre for superior minerals and \$3 per acre for inferior minerals. Operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated from 4 p.c. upward.

**Ontario.**—*Administration.*—Department of Mines, Parliament Buildings, Toronto. A resident mining recorder is appointed for each mining division. *Legislation.*—Mining Act (c. 45, R.S.O. 1927), with amendments; applies to all Crown lands except Indian lands. Title is a grant in fee simple, except in provincial forests where mining lands are leased. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the recorder, or on appeal, by the Judge of the Mining Court of Ontario.

*General Minerals.*—Annual miners licence—fee \$5 for an individual; \$100 on each \$1,000,000 capital for companies; holder permitted to stake 3 claims in any and every mining division for himself and 6 additional for other licence holders, but not more than 3 for any individual licensee. *Claims.*—In unsurveyed territory 20 chains square (40 acres) with lines N.-S. and E.-W. astronomically; in surveyed territory an eighth, a quarter, or a half lot, *i.e.*, up to 50 acres. Representation work consists of the actual performance of at least 200 days' work within 5 years. *Taxation.*—Five cents per acre per annum on patented and leased mining lands with an area of 10 acres or over in unorganized territory; on net profits, with \$10,000 exempt, 3 p.c. up to \$1,000,000, 5 p.c. from \$1,000,000 to \$5,000,000, and 6 p.c. on the excess above \$5,000,000.

*Fuels.*—Petroleum, natural gas, coal, and salt on the James Bay slope may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres. Certain areas have been withdrawn from staking.

**Manitoba.**—*Administration.*—Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg; mining recorders' offices at Winnipeg and The Pas. *Legislation.*—The Mines Act (c. 27, 1930; c. 28, 1932; c. 25, 1933; c. 27, 1934; c. 26, 1937-38) and regulations thereunder; the Mining Tax Act (c. 27, 1933; c. 44, 1937); and the Well Drilling Act (c. 50, 1937).

*General Minerals.*—The regulations follow closely those summarized for Dominion lands in Subsection 1, except that: not more than 3 claims may be staked for any one licensee, and not more than 9 altogether by one person in any year in any mining division; representation work required is 25 days' work per year for 5 years, for which purpose 9 claims may be grouped.

*Fuels.*—A prospecting permit, good for one year, is necessary to search for oil, coal, gas, or salt. If mineral is discovered a 21-year lease, subject to annual rental and certain work, is granted.

*Quarrying.*—Lands up to 40 acres containing building stone, clay, gravel, gypsum, or sand may be leased as a quarrying location at an annual rental.

**Saskatchewan.**—*Administration.*—Department of Natural Resources, Regina. *Legislation.*—Mineral Resources Act of 1931 and regulations thereunder; Saskatchewan Mines Act, providing for the competency of mine managers and pit bosses, for the reporting of accidents, and the welfare and safety of those employed in the production of minerals; Coal Mining Industry Act, 1935, providing for a Coal Administrator to administer all legislation pertaining to the coal industry.

*General Minerals.*—The regulations follow closely those outlined for Dominion lands in Subsection 1, except that the holder of a miners licence may stake not more than 3 claims for himself and 3 for each of 2 other licensees, while not more than 9 claims may be grouped for representation work.

**Coal.**—Three locations may be applied for by mail or in person; the size of a location may be from 40 acres to 640 acres, but the length must not exceed three times the breadth. All operators must be licensed by the Coal Administrator, the licence being contingent upon payment of fair wages, workmen's compensation assessments, rentals and royalties to the Crown, and certain other conditions. Operators must mine annually 5 tons per acre, on leases issued since Jan. 1, 1936.

**Petroleum and Natural Gas.**—Locations may be applied for by mail or in person. The area of a location may be from 40 acres to 19,200 acres, and one person may apply for 3 locations, but not over 19,200 acres in all, except in unsurveyed lands, in which the limit is 1,920 acres. An operator must obtain a permit and furnish a substantial bond. All drillers must secure licences of competency. The record of a driller may be obtained by payment of a fee.

**Alberta.**—*Administration.*—Department of Lands and Mines, Edmonton. There is a staff of inspectors of mines. *Legislation.*—The Provincial Lands Act, 1931; the Oil and Gas Wells Act, 1931; the Oil and Gas Resources Conservation Act, 1938; the Coal Mines Regulations Act; the Coal Sales Act; and the Coal Miners Wage Security Act.

The fuels—coal, natural gas, and petroleum—constitute the most important mineral resources of Alberta.

**Coal.**—All coal rights are disposed of under terminable leases at an annual rental of \$1 per acre and subject to a royalty of 5 cts. per short ton on production. The minimum area is 40 acres and the maximum 640. New leases are granted only for the continuation of existing operations or in the few instances for purely local needs if the locality cannot be economically supplied by existing mines. The Chief Inspector of Mines with a staff of mine inspectors administers the regulations for the safe operation of all mines, sets examinations, approves and issues certificates of competency to operating officials, requires all companies to register their trade name and sell coal under their registered name, and also requires all coal operators to provide bond to insure payment of wages.

**Petroleum and Natural Gas.**—Areas of from 10,000 to 50,000 acres in a block may be placed under reservation for geological exploration for 45 days for a fee of 5 cts. per acre. If monthly reports prove that the work is being diligently carried on, extensions up to a total of six months may be granted. Provided the work has been satisfactorily completed and all geological reports filed, leases may be applied for. The applicant may be granted a credit to be applied on lease rentals of part of the expenditure in excess of 20 cts. per acre.

Applications for leases must be made in person. The minimum area is 160 acres and the maximum 1,920. Leases are issued for a period of 21 years, renewable for a further 21 years, at a rental of \$1 an acre per year, and a royalty of 10 p.c. on the product of the location.

The drilling and production operations, and the production from oil and gas wells is controlled by the Petroleum and Natural Gas Conservation Board under very complete regulations based on sound engineering practice and waste prevention. Drilling sites must be approved. In producing oil fields the Board issues monthly orders giving the production allowable for each well, based on bottom hole pressure, gas-oil ratio, acreage, and rate of flow. The Board may levy a tax on petroleum property to cover administration costs.

**British Columbia.**—*Administration.*—Department of Mines, Victoria. The Department includes all Government offices in connection with the mining industry. *Legislation.*—The Department of Mines Act and other Acts respecting mining and minerals, notably: the Mineral Act (c. 181, R.S.B.C. 1936); the Placer-Mining Act (c. 184, R.S.B.C. 1936); Metalliferous Mines Regulation Act (c. 189, R.S.B.C. 1936); the Coal-Mines Regulation Act (c. 188, R.S.B.C. 1936); and amendments to the above Acts.

*Placer.*—Claims are of three classes: (1) creek diggings—250 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) bar diggings—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) dry diggings over which water never extends—250 feet square. A placer claim must be worked by the owner, or someone on his behalf continuously during working hours. Discontinuance for 7 days, except in close season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner, is deemed abandonment. To hold a placer claim more than one year, it must be again recorded before the expiration of the year.

Placer leases of unoccupied Crown lands, approximately 80 acres in extent, may be granted by the Gold Commissioner of the district, the annual rental for such a lease being \$30 and the annual expenditure required in development work \$250. Provision is also made for the granting of special leases of areas in excess of that referred to above.

*General Minerals.*—The terms of the mining laws are favourable to the prospector and operator, fees and rentals being small. Prospectors licence or "free miners certificate"—applicant must be over the age of 18; fee for individual \$5 per annum; for a joint-stock company \$50 or \$100 per annum depending on capitalization. Mineral claims must not exceed 1,500 feet square (51.65 acres); work, amounting to \$500, which may be spread over 5 years, required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding \$5 per acre.

## Section 2.—Summary of General Production.

Historical and current statistics of mineral production in Canada as a whole are presented in Subsection 1, while production by provinces is dealt with in Subsection 2.

For the proper understanding of the importance of mineral production as compared with other primary industries in Canada, the reader is referred to Chapter VII, beginning on p. 175, while its part in the external trade of Canada is dealt with in Chapter XVI, especially Subsections 3 and 7.

### Subsection 1.—General Statistics of Mineral Production.

*Historical Statistics.*—Definite records of the annual value of mineral production go back only to 1886, as given in Table 1, although actual production began with the earliest settlements. The figures given are not strictly comparable throughout the whole period, minor changes having been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends of the mineral industry.

1.—Value of Mineral Production in Canada, calendar years 1886-1938.

Calendar Year.	Total Value.	Value per Capita.	Calendar Year.	Total Value.	Value per Capita.	Calendar Year.	Total Value.	Value per Capita.

<sup>1</sup> Beginning with 1931 exchange equalization on gold production is included.

<sup>2</sup> Figures for 1938 are subject to revision.

**Current Production.**—The trend in the development of the mineral resources of Canada was affected by the incidence of the depression for several years after 1929. The decline in the prices of base metals materially reduced the prospecting for, and development of, new deposits of these metals, but the higher price of gold after 1932 greatly stimulated the development of auriferous deposits. Prospecting for gold ores and the exploration and development of known auriferous deposits have been more extensively carried on throughout Canada since 1932 than ever before. These activities have been common to both the older producing camps and new areas. In certain of the older camps properties closed prior to the revaluation of gold were reopened and placed in production or further explored as to their economic possibilities. In some of the producing mines the higher price for the metal permitted a very considerable extension or increase of pay ore with the resultant milling of rock of lower gold content and important increases in ore reserves.

The economic recovery since 1932 and the rising trend in base-metal prices have resulted in a rapid increase in production from deposits which were already known and partly developed before 1929; this expansion has occurred in spite of the fact that base-metal prices have not yet reached the level relative to gold which existed prior to 1929. The metals, copper, lead, and zinc were produced in greater quantities in 1938 than ever before in Canada in spite of a decline in prices as compared with the previous year. Prospecting for new base-metal deposits was not particularly active, but on some producing properties, developments disclosed valuable new ore bodies.

Production of various non-metallic minerals, especially asbestos and coal, have realized important gains since 1932. The gains in the structural materials industries, where recessions were severe during the period of business depression, have been encouraging since 1933, but there is room for a large expansion in this division when the construction industry recovers its normal activity.

In 1937, the latest year for which comprehensive world figures of the Imperial Institute are available, Canada stood first in the production of asbestos, nickel, the platinum metals, and radium; third in zinc and silver; and fourth in gold, copper, and lead. During that year, Canada produced approximately 89 p.c. of the world production of nickel, 58 p.c. of the asbestos, 10 p.c. of the copper, 12 p.c. of the gold, 11 p.c. of the lead, 10 p.c. of the zinc, and 8.5 p.c. of the silver.

### QUANTITY PRODUCTION OF THREE LEADING METALLIC AND THREE NON-METALLIC MINERALS

The Preliminary Report on the Mineral Production of Canada, released by the Dominion Bureau of Statistics in March, 1939, shows a total valuation of \$444,824,222 for the mineral output of the Dominion in 1938 compared with \$457,359,092 in 1937. This represents a decrease of 2.7 p.c. from 1937 and reflects the recession in world trade and industrial conditions which existed in 1938.

**Analysis of Current Value and Volume.**—In order to interpret more clearly and simply the trends in mineral production in Canada over the period since 1929, the table that formerly appeared here and showed the fluctuations due to changes in price or volume for the two latest years only, has been replaced in this edition by Table 3, showing the percentage of the total value contributed by each principal mineral in each year, and also showing indexes of volume for the period.

Although the year 1929 was an abnormal rather than a normal year in most economic senses, mineral production in Canada was developing and changing so rapidly up to that point, that the adoption of an earlier year as the base year would

tend to distort the picture in the case of numerous minerals. Furthermore, the primary purpose is to show the changes and trends which have resulted under the circumstances arising since 1929. Therefore that year is used as a base for the indexes of volume.

Values upon which percentages in this table are based are the annual values of mineral production expressed in Canadian currency as published.

Indexes of volume for individual items are calculated directly from quantities reported as produced in each year. Indexes for groups and grand totals are calculated by applying the percentage change in value due to variation in quantity in each year as compared with the previous year to the cumulative percentage the said previous year represented of the base year.

The part of the table showing the percentage which the value of each mineral bears to the total production in each year, indicates the rise in the relative importance of the metals and the decline in fuels and especially in clay products and other structural materials. The rise in metals has been relatively greatest in gold, nickel, copper, and the platinum metals, although gold did not form so large a proportion of the total in 1937 as in 1933. The production of coal was a lower percentage of the total in 1937 than in any other year, but the percentage of structural materials rose slightly in 1937 from the low point of 1936.

The volume of mineral production reached its lowest point of the depression in 1932, as this year marked the low point for the principal groups. For structural materials, however, the low point came in 1933. The volume of nickel production declined more than that of any other important metal in the depression, but the price remained comparatively stable. Clay products declined to a lower point than any other important mineral and the volume of all structural materials was still relatively low in 1937.

## Subsection 2.—Provincial Distribution of Mineral Production.

The principal mineral-producing province of Canada in recent years has been Ontario, which accounted for 50.3 p.c. of the Dominion total in 1937. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the province. British Columbia holds second place in the value of minerals produced with 15.1 p.c. of the Dominion totals in 1937. The mineral resources of British Columbia are probably more varied than those of any other province, since its production includes most of the important metals as well as substantial quantities of coal. Mineral production in Quebec has increased greatly in the post-war period, accounting for 14.2 p.c. of the total for Canada in 1937. Whereas formerly non-metallics (especially asbestos) and structural materials made up nearly all of its mineral production, more than half the value is now made up of metals, particularly gold and copper. Nova Scotia and Alberta are the most important coal-producing provinces. Manitoba and Saskatchewan, in recent years, have been making a growing contribution to the production of gold, copper, and zinc in the Dominion. The total value of mineral production in each of the provinces for each year since 1911 is given in Table 4.

## 4.—Mineral Production of Canada, by Provinces, calendar years 1911-38.

NOTE.—Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book.

<sup>1</sup> Includes production from the Northwest Territories in 1932-33.

\* Figures for 1938 are subject to revision.

The quantities and values of the minerals produced in each province during 1937 are shown in Table 5. This table shows the different minerals which make up the mineral production of each province and also the particular province or provinces which contribute to the production of each mineral in Canada.

## 5.—Detailed Mineral Production of Canada, by Provinces, calendar year 1937.

NOTE.—The mineral production of Yukon and the Northwest Territories during the calendar year 1937 was as follows, in quantities and values: gold 47,982 fine oz., \$1,678,890 (current price); lead 8,440,454 lb., \$329,107; silver 4,091,946 fine oz., \$1,836,507; coal 84 tons, \$812; petroleum 11,371 bbl., \$56,855; natural gas 1,500 M cu. ft., \$335; total, \$8,902,506. Radium and uranium salts were produced in Canada in 1937 from ores mined in the N.W.T., but statistics pertaining to those minerals are not available for publication. For Dominion totals by individual minerals, see Table 2. Dashes in this table indicate that there was no production reported.

### Section 3.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc., in the Mineral Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines, and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid, and net value of sales, while for 1934 and 1935 there was added a special survey of expenditures for equipment, supplies, freight, and insurance by the mining industry, and for 1937 a similar survey for the metal-mining and smelting industries only. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals, by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

A new figure "net income from sales" has been introduced since 1935 in accordance with a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa in 1935. The net income from sales is obtained by deducting the cost of fuel, electricity, and consumable supplies (explosives, lubricants, chemicals, etc.), consumed in the production process, from the net sales. In view of the fact that statistics of process supplies were not collected prior to 1935, it is impossible to present statistics of net income from sales for previous years comparable to this new figure beginning with 1935.

The figures for net income from sales of industries given in Tables 6 and 7 are those reported by the operators, and are in each case the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada. The totals indicate more nearly the actual return to the different industries than do the values for the minerals in Table 2 of this chapter, where, in the cases of copper, lead, zinc, and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity, and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 6 and 7 include products not of Canadian origin.

#### Subsection 1.—Principal Factors in the Mineral Industries.

**Capital.**—In connection with the item of capital, operators are requested to report *only the capital actually invested in the enterprises*, including: (1) present value of lands, buildings, plant, machinery, and tools; (2) cost of materials on hand, supplies, finished products, and ore on dump; and (3) cash, trading and operating accounts, and bills receivable. It should be specially noted that no estimate of ore reserves is included in the capital. Indeed, capital expenditures in mining ventures are frequently very difficult to designate. For instance, purely exploratory workings might properly be charged to current expenses, but if these exploratory workings open up new ore resources and become the channel by which such ore

is utilized, such workings become part of the productive plant and as such their cost is an item of capital. On the other hand, after an ore body is exhausted, much of the mining plant has practically no resale value and, for this reason, many companies drastically write off the capital value of their plant during profitable years of operation. In these circumstances, the actual amount of capital employed in mining enterprises is uncertain and the figures of capital given in Tables 6 and 7 should be used with such reservations in mind.

**Employees.**—Tables 6 and 7 below also show the numbers of persons directly employed in the operating mineral industries. These figures, however, do not include those engaged in prospecting and exploration for individuals or small syndicates from whom no returns can be obtained, amounting probably in the aggregate to a considerable number. Neither do the figures include consulting geologists and mining engineers nor contract diamond drillers and their respective organizations.

**Commodities and Services Purchased.**—In addition to the expenditures for remuneration of those directly employed in the mineral industries, statistics are collected annually of expenditures for fuel and electricity, but the figures prior to 1935 given in Tables 6 and 7 are exclusive of the fuel and electricity used in metallurgical processes, such as reduction furnaces, electrolytic cells, etc. The mining industry expends annually large additional sums for the purchase of equipment, machinery, explosives, and a great variety of other supplies, and for freight and insurance. In special investigations to obtain an estimate of these expenditures, firms engaged in all the mineral industries were circularized regarding such expenditures in 1934 and 1935, while, for 1937, a similar survey covered operators in the metal-mining and smelting industries only. For the earlier surveys returns received covered fairly completely the operating firms in the metal-mining and fuel industries, but in the other groups of mineral industries, where there are many small operators of gravel pits, small quarries, etc., the returns were much less complete. Furthermore, no attempt was made to reach prospectors and small development parties, though their aggregate expenditures, with the exploratory activity that exists at present, would amount to a large sum. The figures resulting from the surveys\* of 1934 and 1935 must, therefore, be regarded as suggestive rather than by any means comprehensive and the investigation for 1937 was confined to that portion of the mineral industry which could be most readily and completely covered. In 1935, the reported expenditures amounted to almost \$85,000,000. Of this freight and express made up 14.7 p.c.; electric power, 12.6 p.c.; fuel and lubricants, 11.7 p.c.; timber and building materials, 7.8 p.c.; explosives, 6.5 p.c.; insurance, 6.0 p.c.; and the remaining 40 p.c. consisted of a great variety of purchases such as machinery and tools, railway equipment, electrical equipment, motor vehicles, rubber goods, chemicals, pipe, etc. The metal mines and smelters accounted for 77.7 p.c. of the expenditures and coal mines for 11.1 p.c. These expenditures for 1934 and 1935 were shown by commodity items, by industries, and by provinces at p. 356 of the 1937 Year Book. Expenditures during 1937 are shown by principal commodities in the statement on p. 329. The comparable expenditures by the gold-mining industry in 1935 amounted to \$28,707,000 or 33.8 p.c. of the total, and by the base-metal mining and smelting industries to \$37,182,000 or 43.9 p.c. of the total reported expenditures by all the mineral industries in 1935. Therefore such expenditures by the gold mines in 1937 increased 41.5 p.c. and by the base-metal mines and smelters 59.5 p.c. as compared with 1935.

\* The results of these surveys are given in the "Special Report on the Consumption of Supplies by the Canadian Mining Industry" for 1934 and 1935, and in special bulletins on the consumption of supplies by the gold-mining and the base-metal mining, smelting and refining industries in 1937, published by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, and obtainable from the Dominion Statistician.

## PURCHASES BY THE CANADIAN METAL-MINING AND SMELTING INDUSTRIES, 1937.

Item.	Gold Mining and Milling.	Base-Metal Mining and Smelting.
	\$	\$

Totals (including other items not specified).....	40,625,357	59,331,709

## Subsection 2.—Growth of the Mining Industry in Recent Years.

**Growth, 1922-29.**—From 1922 to 1929, the output of the mineral industries increased by 72 p.c., capital investment by 76 p.c., employment by 53 p.c., and the salaries and wages by 65 p.c. Progress was most rapid in the metallic mineral industries, where the expansion in net production amounted to 170 p.c. with proportionate increases in capital and employment. The period from 1922 to 1929 was marked by a rising cycle of activity in construction. This was reflected in the expansion of industries engaged in the production of clay products and other structural materials. The output of this group of industries increased by 47 p.c. during the period, while, within the group, progress was much greater in industries producing cement, gravel, and stone than in the clay products industries. The group of non-metallic mineral industries remained relatively stationary in contrast to the other two main groups during this period of rapid expansion. This may be attributed to the fact that coal mining is the predominant industry in the non-metallic group and, under increasing competition from oil fuels and hydro-electric power, did not participate in the general industrial expansion of the period.

**Developments Since 1929.**—Following 1929 the mining industry in Canada was affected for some years by the world-wide economic disturbances and by a very drastic decline in the prices of most of the principal metals, especially copper, lead, zinc, and silver. In the case of gold, on the other hand, since 1931 the price has risen to a level about 69 p.c. above that formerly prevailing. Under the influence of the early decline in base-metal prices, the value of the net production of the metallic mineral industries declined by 27 p.c. from 1929 to 1932, with a decline of 29 p.c. in employees and 30 p.c. in salaries and wages paid. But, since the higher

price for gold stimulated its production and the readjustment of costs stabilized the base-metal industries, metal production has expanded again, and while the net sales in 1937 were not on a comparable basis with those of 1929, employees were 76.8 p.c. above, and salaries and wages 80.5 p.c. above 1929. While industrial statistics for 1938 are not yet available, the production figures for this latest year indicate that metal production was well maintained in spite of lower prices for base metals.

Among the non-metallic industries the demand for coal declined during the depression years owing to reduced requirements in industrial and transportation activities. Similarly, the demand for asbestos and gypsum was affected by the lower level of industrial and construction operations. Salt was an exception to the general rule, as its production was well maintained throughout, partly owing to its increased consumption in certain chemical industries. A large measure of recovery has taken place in this group of industries, especially in the production of non-metallic minerals other than fuels.

The production of clay products and other structural materials is directly dependent upon construction activities within Canada. During the early years of the depression, these activities were partly maintained by governmental relief projects and by the carrying to completion of some large operations which had commenced before 1930. As a result, construction reached its lowest level in Canada during 1933, and the group of industries producing clay products and other structural materials was at a lower level of operation in that year than in any other year recorded since 1921. From 1929 to 1933 there was a decline of 71 p.c. in net sales, 69 p.c. in employees, 74 p.c. in salaries and wages and 76 p.c. in expenditures for fuel and electricity, a large item in the cost of production in these industries. However, construction has been more active in Canada since 1933 (see Chapter XV) and this increased activity has been accompanied by a welcome change to a rising trend in the production of clay products and other structural materials, although these industries are still at a low level compared with their activity prior to 1929.

#### 6.—Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1929-37, and by Provinces, 1937.

NOTE.—For the years 1921-28, see the 1936 Year Book, pp. 355-356. In the past, the net value of production, called "net sales", in these industries has been gross sales less freight and treatment charges in the case of mines, and less the value of ores charged in the case of smelters. According to a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa, 1935, the net figure, called the "net income from sales", is now obtained from net sales as defined above by a further deduction of the costs of fuel, electricity, and consumable supplies used in the production process. In the table below, however, to facilitate comparison with previous years, figures for 1935 are given to show deductions and resultant net by both methods, and figures since then on the new basis only.

<sup>1</sup> Exclusive of fuel and electricity used in metallurgical processes, except for the footnoted figures for 1935, 1936 and 1937, which include all fuel and electricity (whether for metallurgical processes or not) and also the cost of consumable supplies. <sup>2</sup> See headnote. <sup>3</sup> This is "net income from sales"; see headnote.

<sup>4</sup> Includes cost of freight and treatment charges reported for the first time in 1937. They were formerly deducted by the shipper of metal-bearing ores in reporting the value of such ores shipped.

Subsection 3.—The Principal Mineral Industries.

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1936 and 1937 is presented in Table 7. Gold mining had in 1937 the largest labour force, having exceeded coal mining for the first time in that year. Employment in the gold industry is much less subject to seasonal fluctuations

and its expenditures on salaries and wages are considerably greater than those of the coal-mining industry. The smelting and refining industry was third in the number of its employees and in salaries and wages paid.

### 7.—Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1936 and 1937.

<sup>1</sup> See headnote to Table 6, p. 330. <sup>2</sup> Revised since publication of the 1938 Year Book. <sup>3</sup> Includes freight and treatment charges. See footnote 4, Table 6, p. 331. <sup>4</sup> "Abrasives (natural)" are included with "Miscellaneous" in 1937. <sup>5</sup> Includes a small production of peat, normally included in fuels.

### Section 4.—Production of Metallic Minerals.

The metals of chief importance in Canada are cobalt, copper, gold, iron, lead, nickel, those of the platinum group, radium, silver, and zinc. These are dealt with in separate subsections in alphabetical order. In addition, there are a number of others produced in minor quantities, principally as by-products in the treatment of metalliferous ores, and their production during the three latest years is shown in Table 2, while their production by provinces in 1937 appears in Table 5.

#### Subsection 1.—Cobalt.

The major portion of the world supply of cobalt was for almost two decades prior to 1925 derived from the ore bodies of the Cobalt district, which were discovered in 1903, and carry silver, cobalt, nickel, bismuth, and arsenic. Large deposits of

cobalt-bearing ores occur in Africa in the Belgian Congo, Northern Rhodesia, and French Morocco, and the introduction into world markets of cobalt from this source has increased world production while Canadian production has declined since 1925.

### 8.—Production of Cobalt in Canada, calendar years 1904-38.

NOTE.—Quantities and values as reported by the Ontario Bureau of Mines up to 1920; thereafter by the Dominion Bureau of Statistics.

<sup>1</sup> Preliminary figures.

### Subsection 2.—Copper.

The earliest important copper-mining district in Canada was in the Eastern Townships of Quebec. There is still an annual production from this field. Production from the Sudbury district became important about 1889, and from the mines of British Columbia about 1896. From 1898 to 1929 British Columbia was the leading copper-producing province due to the mines of the Rossland and Boundary districts, the Copper Mountain mine, and the Britannia and Hidden Creek mines along the coast. Shortly after the War, large development programs were carried out in connection with the Noranda and other copper-producing properties of western Quebec, with the Flinflon and Sherritt-Gordon properties in western Manitoba, and a very large expansion program at the nickel-copper properties of Sudbury. The effect of these developments has been the tremendous increase since 1927 in the production of copper and nickel as well as associated metals such as platinum, palladium, selenium and tellurium. Modern and efficient mining methods and plants, and the presence in the ores of small but appreciable quantities of precious metals have made possible the profitable production of copper even under the relatively low prices prevailing since 1930.

**9.—Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-38.**

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272.

<sup>1</sup> First reported production in this province or territory. <sup>2</sup> Includes a small production from New Brunswick and Alberta. <sup>3</sup> Includes 779,307 lb. valued at \$73,855 produced in Nova Scotia in 1936, and 180,609 lb. at \$23,820 in 1937. <sup>4</sup> Preliminary figures.

**World Production of Copper.**—World production of copper was estimated at 2,300,000 long tons in 1937, as compared with 1,920,000 long tons in 1929, the previous record year. Canada had an output of 236,620 tons in 1937, producing about 12.2 p.c. of the estimated world total and standing fourth among the nations.

**10.—Copper Production of the Leading Countries and of the World, 1913-37.**  
(In long tons of 2,240 lb.)

NOTE.—Figures in this table, except as indicated, are from the Imperial Institute's Statistical Summary.

<sup>1</sup> Dominion Bureau of Statistics figures. <sup>2</sup> Totals include productions of other countries not specified. <sup>3</sup> First reported production for this country. <sup>4</sup> Preliminary figures except for Canada.

## Subsection 3.—Gold.

Canada has been a gold-producing country for over 75 years. During the last half of the 19th century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. The quantities and values of gold produced in Canada are given by provinces for 1911 and subsequent years in Tables 11 and 12. The official estimate for 1938 is 4,715,480 fine oz.

Producers of gold have benefited in recent years not only from the general decline in the prices of other commodities, with a consequent reduction in their operating costs, but also from the rise in the world price of gold itself. Under the stimulus of higher prices, prospecting for gold has been more active during recent years than ever before.

Gold is produced in Nova Scotia, at points across the Canadian Shield from Quebec to the Northwest Territories, and in the Cordilleran region of British Columbia and Yukon. Except for comparatively small amounts obtained from alluvial workings in Yukon, British Columbia, and Alberta, the production is derived from lode mining either of auriferous quartz or of other metallic ores such as copper, nickel, and zinc which carry varying amounts of gold. The principal producing districts are: western Quebec; the adjacent districts of Kirkland Lake and Porcupine in Ontario, with other smaller camps scattered across northern Ontario to the western boundary; the Rice Lake and Gods Lake areas in eastern Manitoba and the Flinflon district on the Manitoba-Saskatchewan boundary; and the Bridge River district in British Columbia. Among new areas at present under active development may be mentioned Lac la Ronge and Goldfields near lake Athabaska in Saskatchewan, Yellowknife north of Great Slave lake in the Northwest Territories, and Zeballos on the west coast of Vancouver island. With new areas of promise being discovered, and with the reserves in older camps being extended and operations expanded, there is every prospect for the continued increase of gold mining in Canada. At the present time the leading gold mine in Canada is the Lake Shore mine in the Kirkland Lake camp, the second is the Hollinger of Porcupine and the third is Noranda, the copper-gold mine of the Rouyn district of Quebec. In 1937 about 85.2 p.c. of the total production came from auriferous quartz mines, about 12.6 p.c. from mines in which gold was associated with ores of copper, nickel, zinc, etc., and about 2.2 p.c. from alluvial operations. The number of producing auriferous quartz mines increased from 37 in 1930 to 189 in 1937.

<sup>1</sup> From 1911 to 1931, inclusive, values calculated on basis 1 fine oz. = \$20-671834; since then, at world prices in Canadian funds. <sup>2</sup> First reported production in this province. <sup>3</sup> Includes value of production of the Northwest Territories amounting to \$7,028 in 1935; \$35 in 1936; and \$140,444 in 1938. <sup>4</sup> Preliminary figures.

**World Production.**—A sketch of the development of the gold-mining industry of the world since the discovery of America may refer to four successive periods. During the first period extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851, respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it declined to 5,201,000. The production of the period was contributed chiefly by the United States, Australia, and Russia.

In the fourth period, extending from 1891 to the present time, covered by the figures of Table 13, the outstanding features were the entry of South Africa as an important and later as the leading producer, the increase in the output of most of the gold-producing countries through the introduction of the cyanide process and, more recently, the rapidly increasing world production as a result of the appreciation in the value of gold. The output was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 22,847,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum production of 15,497,000 fine oz. in 1922. However, the notable decline in general commodity price levels which occurred in 1921 and 1922 again reduced the costs of gold production and the industry responded with a distinctly upward trend thereafter throughout the 1920's. The increased price of gold since 1930 has accelerated the expansion in world production during recent years with all previous records being exceeded.

<sup>1</sup> At \$20-67+ per oz. fine prior to 1934; at \$35 per oz. fine in 1934 and later years.

<sup>2</sup> Preliminary figures.

In 1937 the world's chief producers were the Union of South Africa, with 33.7 p.c., U.S.S.R. (Russia), including Siberia, with 14.3 p.c., United States with 11.8 p.c. and Canada with 11.8 p.c.\* As Australia, Rhodesia, British West Africa, and British India were also important producers, about 56.6 p.c. of the world production of 1937 was produced in the British Empire.

Detailed statistics of world gold production for 1936 and 1937 appear in Table 14.

\* This percentage, derived from world production, as reported by the Director of the United States Mint, is slightly less than that derived from estimates of the Imperial Institute, as given on p. 317.

11.—Quantities and Values of the World Production of Gold and Silver, by Principal Countries, calendar years 1936 and 1937.

## Subsection 4.—Iron.\*

Iron ore is widely distributed in Canada and extensive deposits have been discovered from time to time, but none at present available can compete in low cost with high-grade external sources of supply.

Bog iron ore was first mined and smelted in the province of Quebec early in the eighteenth century, and from that time until 1883 the industry was carried on almost continuously at Three Rivers. Other furnaces using local ore were operated at Radnor Forges and Drummondville, the last to shut down being the Drummondville furnace in 1911.

No ores for the production of iron have been mined in Canada since 1923. The large iron and steel industry of Nova Scotia draws its requirements from the easily accessible and abundant supplies of the high-grade Wabana deposit in Newfoundland. In Ontario, also, there has been a broad development of the primary iron and steel industry largely because cheap and high-grade supplies of iron ore are readily available from the Mesabi range of Minnesota, while coal supplies are drawn from the nearby coal-fields of Pennsylvania.

## 15.—Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys, and Steel Ingots and Castings, calendar years 1911-38.

NOTE.—For the years 1886-1910, see Canada Year Book, 1936, p. 373.

<sup>1</sup> Although shipments of ore are expressed in short tons, the trade uses long tons as the quantity unit for pig iron, etc.

<sup>2</sup> Revised since publication of the 1938 Year Book.

<sup>3</sup> Preliminary figures.

A revival in iron-ore mining in Ontario is indicated by the fact that, during the summer of 1937, the Algoma Properties Ltd. commenced rebuilding the surface equipment at the new Helen mine in the Michipicoten district, where reserves are

\* The known resources of iron ore were briefly described at p. 411 of the 1934-35 Year Book, and a sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-23 Year Book.

estimated at 60,000,000 tons of iron carbonate rather high in sulphur and therefore requiring roasting to fit it for use in the blast furnace. An Act passed by the Ontario Legislature has provided for a bounty of two cents per unit of iron content for a period of 10 years commencing Jan. 1, 1939.

From Table 15 it will be observed that the tonnage of pig iron made in Canada in 1929 exceeded that of any previous year, while the 1929 quantities of steel ingots and castings made were exceeded in 1937 and in the War years 1917 and 1918. Production declined greatly after 1929, but has been recovering since 1932. Production in the ferro-alloy industry (ferro-manganese, ferro-silicon, etc.) provides the chief source of exports of primary iron products from Canada.

### Subsection 5.—Lead.

Lead is obtained in Canada largely from the ores of British Columbia, where production began with 88,665 lb. in 1891. Bounties were paid on lead produced in Canada from 1899 to 1918 (see the 1920 Year Book, p. 454) but the highest production of this period was 56,900,000 lb. in 1905. However, as a result of developments in British Columbia mentioned below, production has increased greatly since the War, as shown in Table 16.

### 16.—Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-38.

NOTE.—For figures for the years 1887-1910, see 1929 Year Book, p. 367.

1924.....	175,485,499	14,221,345	8-104	1938 <sup>2</sup> .....	418,913,257	14,008,459	3-344

<sup>1</sup> Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amounts recovered. Since 1912 the data given represent the quantities of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported. <sup>2</sup> From 1911 to 1925, average prices at Montreal; from 1926 to 1938, average yearly prices at London, England. <sup>3</sup> Preliminary figures.

**British Columbia.**—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc, and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing from 1930 to 1935 for lead, zinc, and silver, many of the small silver-lead mines of the Slocan have remained idle.

**Other Provinces.**—Occurrences of lead have been found in Gaspe peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf County, where the Tetreault mine produces lead and zinc concentrates. Lead production in Ontario has come chiefly from the Galetta mine and smelter, which closed down in the summer of 1931. An important production of lead came in recent years from the silver-lead ores of the Mayo district of Yukon, and in 1935 production of silver-lead-zinc concentrates was resumed at the Sterling mine, Richmond County, Nova Scotia. Production by provinces in 1937 is shown in Table 5, pp. 324-326

**World Production.\***—The world production of lead in 1937 was about 1,650,000 long tons. The principal producers were the United States with 25.2 p.c., Australia 14.9 p.c., Mexico 12.4 p.c., Canada 11.2 p.c., Burma 5.5 p.c., Yugoslavia 4.2 p.c., Germany 4.2 p.c., and Russia 3.0 p.c.

### Subsection 6.—Nickel.

With the exception of the small amounts of nickel recovered from the ores of the Cobalt district and relatively small shipments in recent years of nickel-copper ore from the B.C. Nickel Mines, Ltd., the Canadian production of nickel has been derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. The ore is mined principally for its nickel and copper content but gold, silver, selenium, tellurium, and metals of the platinum group, though present in relatively small quantities, are profitably recovered in the metallurgical processes. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

Since the War, the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending their efforts, together with a great expansion in the plants at Sudbury, have accounted very largely for the marked increase in production. The automobile industry, electrical machinery, cooking utensils, new submarine cables, and various nickel alloys have all helped to absorb this increased production.

### 17.—Quantities and Values of Nickel Produced in Canada, calendar years 1911-38.

Note.—For figures for the years 1899-1910, see 1929 Year Book, p. 368.

Year.	Quantity.	Value.	Year.	Quantity.	Value.	Year.	Quantity.	Value.

1919.....	44,544,883	17,817,953	1928....	96,755,578	22,318,907	1938 <sup>1</sup> ..	210,673,270	53,949,311

<sup>1</sup> A change in the method of computing the value of nickel production accounts for the drop in value after 1923.

<sup>2</sup> Preliminary figures.

**World Production.\***—The world production of nickel was about 113,000 long tons in 1937, of which output about 89 p.c. was Canadian in origin, while the remainder was derived chiefly from New Caledonia.

\* From the Imperial Institute's Statistical Summary.

## Subsection 7.—Metals of the Platinum Group.

Metals of this group produced in Canada include platinum, palladium, rhodium, ruthenium, osmium, and iridium. Platinum and palladium are of chief importance. Since the early days there has been a small recovery of platinum associated with the gold of the alluvial deposits of British Columbia and other small amounts have been recovered in the refining of base metals at Trail. However, the chief source of these metals in Canada is the nickel-copper ore of Sudbury, and the great expansion in the mining industry of that district has resulted in a large increase in the production of the platinum metals, making Canada the leading producing country of the world. The next most important countries are Russia and Colombia.

## 18.—Quantities and Values of Platinum and Palladium Produced in Canada, 1921-38.

NOTE.—Records of platinum production in Canada go back to 1887, but the amounts were comparatively small and were not on the same basis as those of 1921.

<sup>2</sup> Preliminary figures.

## Subsection 8.—Radium and Uranium.\*

The silver-pitchblende deposits of the Eldorado Gold Mines Ltd., at the east end of Great Bear lake were discovered in 1930. Since that time a modern mining and milling plant has been established at the deposits; extensive improvements in transportation facilities have been introduced over the 1,500-mile route from the railway at Waterways in Alberta down the Mackenzie, up the Great Bear river, and across the lake to the mine; and a plant for the refining of radium and uranium products has been brought into operation at Port Hope, Ont. Silver, copper, cobalt, and lead, as well as radium and uranium, are recovered from the ores. Extensive ore reserves have been indicated at the mine and during 1937-38 the capacity of the refining plant at Port Hope was approximately trebled. Canadian production from this source has resulted in a reduction of the world price of radium by about 62 p.c. from 1933 to approximately \$22 per milligram in 1937, and of about 37 p.c. in the price of uranium salts during the same period.

\* Contributed by the Director, Mines and Geology Branch, Department of Mines and Resources, Ottawa.

## 19.—Production of Radium and Uranium in Canada, 1933-37.

<sup>1</sup> First year of operation for Eldorado concentrator and refinery.

## Subsection 9.—Silver.

Although no official statistics of the production of silver were published prior to 1887, the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of \$4,800,000, were produced in the Port Arthur district in Ontario.

The current silver production of Canada is chiefly derived from the silver-lead-zinc ores of British Columbia, the silver-cobalt ores of northern Ontario, and the silver-lead ores exported from Yukon. An appreciable amount of silver also occurs in the gold ores of northern Ontario; the nickel ores of the Sudbury district; the copper-gold ores of Quebec, Manitoba, and British Columbia; and the pitchblende ores of the Great Bear Lake district in the Northwest Territories. Thus in Canada silver is produced chiefly in combination with other metals.

Silver production in Canada attained its maximum of 32,869,264 fine ounces in 1910 when the famous Cobalt silver camp was at its peak but production from that source has declined since then and now the Sullivan mine in British Columbia, primarily noted for its lead and zinc, is the largest producer of silver in Canada.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1911 in Table 20, while statistics of the quantities and values produced in the chief silver-producing provinces are given in Table 21.

<sup>1</sup> First recorded production from this province.

<sup>2</sup> Preliminary figures.

**World Production of Silver.**—The world production of silver was estimated by the Director of the United States Mint, as shown in Table 14 of this chapter, p. 339, at 273,873,598 fine oz. for 1937, the highest ever recorded, being an increase of 8.0 p.c. from 1936 and 5.0 p.c. greater than the former maximum produced in 1929. The silver production of Canada in 1937 was 22,977,751 fine oz., or about 8.4 p.c.\* of the estimated world total for that year. This placed Canada third, next to Mexico and the United States.

In Table 22 the world production, value, and average price of silver are given for each year from 1860 up to the present. During the period from 1860 to 1872, silver was still a monetary base in parts of the western world and the price remained fairly stable at about \$1.32 to \$1.35 per fine oz. (about 15½ oz. silver = 1 oz. gold), although production is estimated to have more than doubled during these 12 years. After the demonetization of silver in Germany and the United States, production

\* This percentage, based on the world estimate of the Director of the United States Mint, differs slightly from that on p. 317, based on the world estimate of the Imperial Institute.

continued to increase rapidly while the price declined to a generally lower level. During the disturbed conditions of the War period production was curtailed and the price rose to \$1.12 per fine oz. in 1919. However, in the period 1922-29 production increased to new records although the price declined to about half that of 1919. In the course of the depression the price declined further by nearly 50 p.c. and production contracted also, but both have tended to recover since 1932. The fact that silver is to a great extent a by-product in the mining of other metals, helps to explain its increasing production, in spite of lower prices, since 1872.

## 22.—Quantities and Values of World Production of Silver, with Annual Average Prices, 1860-1937.

(From the Annual Report of the Director of the United States Mint.)

<sup>1</sup> At the average par price of a fine ounce of silver in London, excepting the years 1918-22, inclusive, and 1931-37, for which the means of the New York bid and asked prices were used. <sup>2</sup> Revised since the publication of the 1938 Year Book.

<sup>3</sup> Preliminary figures.

### Subsection 10.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia and the production of electrolytic zinc from the Flinflon copper-zinc ores of Manitoba. The growth of production since 1911 is shown in Table 23.

The principal zinc-mining regions of British Columbia are situated in the Kootenay district, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, while other mines are located in the Ainsworth and Slocan divisions of the West Kootenay district. The Britannia mine on Howe sound, while primarily a copper-gold property, also produces zinc concentrates.

In northwestern Manitoba, the Flin Flon and Sherritt-Gordon mines have ores in which zinc is closely associated with copper and gold, and refined zinc has been made at the Flin Flon smelter since the autumn of 1930. In Quebec, zinc and lead concentrates are produced at the Tetreault mine, Notre-Dame-des-Anges and zinc concentrates were shipped also during 1938 from the Waite-Amulet mine in the Rouyn district. At the Sterling mine, Richmond County, Nova Scotia, the production of lead and zinc concentrates was resumed in 1936. Production by provinces in 1937 is given in Table 5, pp. 324-326.

## Section 5.—Production of Non-Metallic Minerals.

### Subsection 1.—Fuels.

#### COAL.

The fuel situation in Canada is somewhat anomalous, as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while the areas of densest population and greatest industrial development in Ontario and Quebec are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio.

**Dominion Fuel Board.**—The Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It is composed of permanent members of the Dominion Civil Service and the staff of the Board constitutes a division in the Bureau of Mines and Geology, Department of Mines and Resources. In recent years the policy of the Government has been to extend the market for Canadian coal and to that end financial assistance in the form of subventions has been given to the coal industry since 1928, the Board being responsible for the administration of subvention payments. The amount of coal moved under these assisted rates has increased from 146,126 short tons in 1928 to 2,637,345 tons in 1937. Of the total moved under assisted rates in 1937, 1,908,821 tons were from Nova Scotia and 323,821 tons from Alberta and the Crownsnest district of British Columbia.

**Coal Production.**—During 1937 there was a further recovery from the low level of 1933. Production was, however, still 9.9 p.c. below that of 1928, the record year. The average price per ton, which had been \$3.63 in 1928, had dropped to \$3.02 in 1933, and was about \$3.08 in 1937. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia, and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous, and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1937 production among these classes is given in Table 28.

#### 24.—Production of Coal in Canada, by Provinces, calendar years 1911-38.

NOTE.—For annual production from 1874-1910, by provinces, see 1911 Year Book, p. 419.

<sup>1</sup> Not available.

**Coal Consumption.**—The sources of coal consumed in Canada in the calendar years 1911-37 are shown in Table 27, detailed figures of coal made available for consumption during 1937 are given in Table 28; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the

apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

### 27.—Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-37.

NOTE.—For the years 1886-1910, see 1921 Year Book, p. 354.

<sup>1</sup> The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees, and coal used in making coke, etc., less the tonnage of coal exported.

<sup>2</sup> Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

<sup>3</sup> Figures based on estimates of population given on p. 113.

### 28.—Coal Output, Exports, Receipts from Other Countries, and Coal Made Available for Consumption in Canada during 1937.

NOTE.—For details by provinces, see the Bureau's annual report, "Coal Statistics for Canada".

<sup>1</sup> Includes 327,757 tons from Germany, 160,889 tons from Russia, 8,131 tons from Belgium, and 391 tons from other countries.

**World Production.**—The total estimated coal production of the world in 1937 amounted to about 1,510,000,000 long tons, an increase of 6·3 p.c. over the estimate for the previous year. Canada contributed 14,139,244 long tons or about 1·0 p.c. Table 29 shows the production of the British Empire and the chief foreign countries in units of 1,000 long tons during each of the years 1913 and 1921-37.

### 29.—Coal Produced in the Principal Countries of the World, 1913, 1921-37.

**Note.**—For corresponding figures for 1914-20, see 1932 Year Book, p. 281. Figures in this table, except as indicated, are from the Imperial Institute's Statistical Summary.

## NATURAL GAS AND PETROLEUM.

**Natural Gas.**—The producing wells in Eastern Canada are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island, and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1937, Ontario was credited with about 56 p.c. of the total value but only 33 p.c. of the total quantity, while Alberta produced 41 p.c. by value and 65 p.c. of the total quantity. The production by provinces since 1920 is given in Table 30.

**30.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-35.**

NOTE.—For the years 1892-1919, see "Mineral Production of Canada", 1928, p. 188.

<sup>1</sup> Totals for Canada include small productions in Manitoba, Saskatchewan, and Northwest Territories.

<sup>2</sup> Preliminary figures.

**Petroleum.**—The Turner Valley field in Alberta is the principal source of production in Canada. The earlier wells in this field give a wet gas from which a very high grade of crude naphtha and casinghead gasoline is obtained. However, in June, 1936, a well on the west flank of the southern end of the Turner Valley field, was brought into production with a heavier grade (44° A.P.I.) of crude oil than that formerly derived from the Turner Valley. The successful completion of this well resulted in much drilling activity on the west flank of the field and other producing wells were completed. Furthermore, the flow of oil was greatly increased by acidation of a number of these wells. Near the end of 1938, a crude well was brought into production nearly 2 miles to the northwest of any previously producing well in the Turner Valley and 17 miles from the most southerly wells of the field. Under present circumstances, the available market being largely localized by high transportation costs, and subject to serious seasonal curtailment in winter, production is under stringent proration regulation and therefore the actual rate of production is much below the potential rate of the wells presently producing, while

many new wells are still being drilled, and the limits of the field are by no means yet determined. These developments appear to forecast a major oil field in the Turner Valley of Alberta, the potentialities and probable life of which may warrant the capital outlay for pipe-line facilities in order to reach more distant and larger consuming markets.

The Red Coulee field in southern Alberta, near the International Boundary, began to yield some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton. Production from wells near Fort Norman on the lower Mackenzie river increased from 910 barrels in 1932 to 11,371 barrels in 1937. This oil is treated locally in a small refining plant and is used to a large extent in connection with mining operations and transportation in the lower Mackenzie River and Great Bear Lake region.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. The maximum production of these fields was reached in the '90's and has since declined. New Brunswick's small production comes from the Stony Creek field, near Moncton. For the production by provinces in 1937, see Table 5, pp. 324-326.

### Subsection 2.—Other Non-Metallic Minerals.

**Asbestos.**—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than \$25,000 in 1880 to \$14,792,201 in 1920 and \$13,172,581 in 1929. Owing to trade depression, production was much curtailed from 1929 to 1932, as will be seen in Table 32. However, since 1932, production has shown a distinct improvement. The Imperial Institute's estimate for the world total of asbestos production in 1936 is 503,000 long tons. In 1936 Canada produced more than half the world total (about 54 p.c.) while other leading countries with their production in long tons were: Russia, 123,141; Southern Rhodesia, 50,309; Union of South Africa, 21,812; United States, 9,754; and Cyprus, 9,202. Russian production in 1937 was not available at the time of going to press but increases were reported in nearly all other producing countries.

The Eastern Townships of Quebec have for many years been the most productive asbestos-mining area in the world. The most important deposits are: at Black Lake, in Coleraine township; at Thetford and Robertsonville, in Thetford township; at East Broughton, in Broughton township; and at Danville, in Shipton township. The veins of chrysotile asbestos vary in width from  $\frac{1}{4}$  inch to  $\frac{1}{2}$  inch

and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted for spinning. Both open-out and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening, and grading of the mine product. Some development work has been conducted on an asbestos property at Rahn lake, Bannockburn township, Ontario; the fibre in this deposit is reported as being of high quality.

There are 13 plants in Canada which manufacture asbestos products, including the following commodities: asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos yarn; asbestos dryer felts; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil, and hydraulic operations.

### 32.—Quantities and Values of Asbestos Produced in Canada, calendar years 1911-38.

Note.—Figures for the years 1896-1910 are given in the 1911 Year Book, p. 424.

<sup>1</sup> The quantities and values of sand, gravel, and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years.

<sup>2</sup> Preliminary figures.

**Gypsum.**—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness, and Victoria Counties, Nova Scotia; Hillsborough, New Brunswick; Hagersville and Caledonia, Ontario; Gypsumville and Amaranth, Manitoba; and Falkland, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. The greater part of Canada's production is exported in crude form from the Nova Scotia deposits, which are conveniently situated for ocean shipping and during recent years account for about 80 p.c. of the total Canadian production. Production of gypsum in Canada reached its highest point in 1928 with 1,246,368 tons valued at \$3,743,648. Production during 1937 was 1,047,187 tons valued at \$1,540,483, and preliminary figures for 1938 are 1,019,188 tons valued at \$1,517,070. The production by provinces during 1937 is shown in Table 5, pp. 324-326.

**Salt.**—The greater part of the Canadian salt production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia have shown an increasing production in recent years. The first production of commercial importance in Manitoba was recorded in 1932 and for Saskatchewan in 1933, while some commercial shipments have been made from deposits near McMurray in Alberta.

An important part of Canadian salt production (45 p.c. in 1937) is used in the form of brine in chemical industries for the manufacture of caustic soda, liquid chlorine and other chemicals.

The Canadian production during the present century has shown fairly steady growth from 59,428 tons in 1901 to 91,582 in 1911, 164,658 in 1921, 262,547 in 1926 and a record at that time of 330,264 tons in 1929. Production declined to 259,047 tons in 1931 but has since recovered to 458,957 tons valued at \$1,799,465 in 1937. (See Tables 2 and 5 pp. 319 and 324.) The estimate for 1938 is 467,408 tons, valued at \$1,941,585.

## Section 6.—Production of Clay Products and Other Structural Materials.

Production of these materials is naturally dependent upon the activity of the construction industry in Canada. Building and construction work fluctuates widely with business cycles and during the recent depression dropped to a very low ebb. Under these circumstances, the production of clay products, cement, gravel, and stone was severely curtailed. Some uncompleted large engineering construction operations and governmental relief projects eased the decline in the early years of the depression but the downward trend was still evident in 1933. With a slight recovery of construction activities since then (see Chapter XV) there has been a moderate increase in the production of the chief structural materials, the total reported value of production being \$34,869,699 in 1937 as compared with \$16,696,687 in 1933.

**Brick and Tile.**—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Production fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, as will be seen from Table 33, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1936 and 1937 is shown in Table 2 of this chapter, while the production by provinces in 1937 is given in Table 5. The estimated value of all clay products made in 1938 was \$4,437,086.

**Cement.**—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica, and alumina. The lime is usually furnished by limestone and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta, and British

Columbia. As may be seen from Table 33, production declined greatly from 1929 to 1933, but has recovered somewhat since then. Production by provinces in 1937 is given in Table 5, pp. 324-326.

**Sand and Gravel, and Stone.**—The Mining, Metallurgical, and Chemical Branch of the Bureau of Statistics presents details of production and organization of the stone industry separately from that of sand and gravel, but for the sake of brevity they are here discussed together. However, the figures of stone production shown do not include the limestone used to produce lime and cement, nor the quartz and other rock minerals, which are shown separately in Table 2, pp. 319-320. Production of these materials increased greatly up to the recent world depression. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased by 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply, but since 1933 there has been some recovery. Among the developments in Canada that resulted in increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated on p. 355 by a decline in brick production and an increase in that of cement; (2) the extensive improvement during that period in

the mileage and character of roads and highways in Canada; and (3) the improvement of railway roadbeds.

The provincial distribution of the 1937 production of sand and gravel, and stone, is shown in Table 5, p. 324, while the chief purposes for which these materials were produced are shown in Table 34.

<sup>1</sup> Relatively small and included with "For concrete, roads, etc." not specified.

<sup>2</sup> Totals include minor items

The quantities and values of stone produced, given in the table above, represent only the production of those establishments which actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments which buy rough stone and dress, polish, or finish it; although dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production. Of the total quantity of stone produced in 1937 about 80 p.c. was limestone, 16 p.c. granite, 3.4 p.c. sandstone, and 0.3 p.c. marble. The average value per ton was \$0.84 for limestone, \$1.61 for granite, \$1.46 for sandstone, and \$4.09 for marble. Prices averaged lower in 1937 than in 1936 because a larger proportion of all stone except marble was used for riprap and crushed stone. The marble was used chiefly for stucco dash, in glass factories, pulp and paper mills, and other industrial processes, for poultry grit, and pulverized as whiting. Large quantities of limestone were used for fluxing and other chemical purposes, but by far the largest part of all stone except marble was used as crushed stone.

## CHAPTER XIII.—WATER POWERS.

The fresh-water area of Canada is officially estimated at 228,307 square miles—an area nearly twice as large as the whole land area of the British Isles, and certainly larger than the fresh-water area of any other country in the world. As many parts of this well-watered country are situated at considerable heights above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the waters from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

This chapter of the Year Book is divided into three main sections: the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric or Power Commissions in other provinces.

### Section 1.—The Water Powers of Canada.\*

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was secured largely by the combustion of coal and was therefore looked upon as a secondary product, whereas, when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as basic. Statistics are published, just as with the production of pig iron, coal or cotton. In this case they show the kilowatt hours of electric energy produced and take note of undeveloped water power as being a source of raw material, just as important as uncut forests or untapped oil fields. The relationship of power to production is now so vital, that those associated with power development in any country are keenly interested in methods and progress in other parts of the world. To facilitate a study of world power conditions, three Plenary World Power Conferences have already been held to consider the technical, economic, and statistical aspects of power development. The latest of these Conferences, held at Washington in September, 1936, was composed of representatives of more than fifty member States. Following these Conferences, sectional meetings were held to consider special problems related to the production and supply of energy. Tentative arrangements have been made for the holding of a fourth World Power Conference at Tokyo, Japan, in 1942.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. More than 95 p.c. of the total main-plant equipment of the central electric stations of Canada is hydro-power, and this equipment generates more than 98 p.c. of the total electrical output.

\* By J. T. Johnston, Controller, Dominion Water and Power Bureau, Surveys and Engineering Branch, Department of Mines and Resources, Ottawa.

Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table 1 shows the provincial distribution of available and developed power in Canada at Dec. 31, 1938.

1.—Available and Developed Water Power in Canada, by Provinces, Dec. 31, 1938.

<b>Canada.....</b>	<b>20,347,400</b>	<b>33,617,300</b>	<b>8,190,772</b>

The figures of available power in the above table are based upon rapids, falls, and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or smaller power capacity, not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The turbine installation in the above table represents the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures for the purpose of deducing therefrom the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated at ordinary six-month flow. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,700,000 h.p. In other words, the present turbine installation represents only 18½ p.c. of the present recorded water-power resources and the figures of available power in Table 1 may be said to represent the minimum water-power possibilities of the Dominion.

**Growth of Water-Power Development.**—The commencement of the long-distance transmission of electricity at the beginning of the present century resulted in the extensive development of hydro-electricity for distribution over wide areas. The growth of installation during the period from 1900 to 1938 is shown, by provinces, in Table 2.

<sup>1</sup> Includes totals for Yukon. Turbine horse-power in Yukon was 5 from 1900 to 1906, 2,085 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910, 13,195 from 1911 to 1913, 13,199 from 1914 to 1934, and 18,199 from 1935 to 1938.

<sup>2</sup> First reported installation in Saskatchewan.

**Distribution of Developed Water Power.**—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures there given, which indicate that 7.9 p.c. of the developed power is installed by pulp and paper companies, in comparison with 4.2 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and about 95 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries developed by central electric stations, converted into electricity and delivered to the various industrial plants.

## 3.—Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Dec. 31, 1938.

<sup>1</sup> Includes only hydro-electric stations which develop power for sale.

<sup>2</sup> Includes only water power actually developed by pulp and paper companies.

In addition to this turbine installation, pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations aggregating more than 1,200,000 h.p., making a total of more than 1,846,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electrical boilers.

<sup>3</sup> Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations.

<sup>4</sup> Estimated by the Dominion Bureau of Statistics.

## Section 2.—Central Electric Stations.\*

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electrical appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horsepower, kilowatt hours generated and number of customers for the 21 years ended 1937, together with the number of persons employed and the amount expended for salaries and wages. The total output for 1937 amounted to 27,687,646,000 kilowatt hours which was a new high record for the industry. Based on preliminary figures from the large stations, the total production in 1938 is estimated at 26,000,000,000 kilowatt hours.

Exports to the United States reached a low point in 1932 with 467,215,000 kilowatt hours, but they began a steady increase about the middle of 1933 and continued to increase each year, the total for 1938 being 1,826,515,000 kilowatt hours, or four times the low record of 1932. The use of electric energy in electrical boilers in various industries and particularly in the pulp and paper mills has increased rapidly and fairly steadily. In 1937 it reached a high record of 7,313,014,000 kilowatt hours, or 26 p.c. of the total output, and more than double the quantity so used in 1932. This power is partly off-peak power available at various times each day and partly surplus power available continuously until a better market develops. The domestic service consumption or the electricity used in residences has also increased steadily even during the years 1930-33 and in 1937 amounted to 2,007,433,000 kilowatt hours, an increase of 35 p.c. over the 1930 consumption and 6 p.c. over the 1936 consumption.

\* Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX.

Interesting factors affect the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low-priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada. Again, the pulp and paper industry is proportionately a smaller industry in the United States than in Canada. While the average consumption for domestic use is 69 p.c. higher in Canada than in the United States, the total consumption for domestic or residential use is about 7.2 p.c. of the total output of central electric stations for Canada and 17.0 p.c. for the United States.

<sup>1</sup> Excluding non-generating stations in 1920 and subsequent years.      <sup>2</sup> Revised to exclude duplications.

<sup>3</sup> Not including auxiliary plant equipment.

<sup>4</sup> Data not available.

**Equipment of Central Electric Stations.**—The main-plant primary power equipment of all central electric stations aggregated 7,342,085 h.p. in 1937. This included water wheels and turbines, steam reciprocating engines and turbines, and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 95.7 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 4.3 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 197,350 h.p., or 2.6 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 44 main-plant steam reciprocating engines in central electric stations in 1937, only 8 in number were over 500 h.p. The steam turbines averaged approximately 4,300 h.p. with 20 units averaging 9,300 h.p., but there were only 65 steam turbines in the industry and these were confined to 26 stations, whereas the 819 water wheels and turbines averaged 8,600 h.p., including 4 at 65,000 h.p. and 5 at 66,000 h.p. each.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces

bituminous and lignite coals are used for the steam engines and gasoline, oil distillates, and producer gas for the internal combustion engines.

Of the 358 main-plant internal combustion engines in central electric stations in 1937, 194, or 54 p.c., were in Saskatchewan, 63 or 18 p.c. in Alberta, and 25 or 7 p.c. in Manitoba.

During 1937, the thermal engines produced 511,923,000 kilowatt hours at a cost for fuel of \$2,582,729, an average of 0.5 cents per kilowatt hour. This production was, however, less than 2 p.c. of the total output.

**Provincial Distribution of Electric Energy.**—The distribution by provinces of the electric energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1932-37. In the latest year over 83 p.c. of the total generated electric energy was produced in the leading industrial provinces of Ontario and Quebec. From Table 7 it is seen that the total electric energy exported in the calendar year 1938 was 1,826,515,000 kilowatt hours, or 7.0 p.c. of the estimated production by central electric stations in that year; in 1937 it had amounted to 1,847,099,787 kilowatt hours, or 6.7 p.c. of the total amount generated in central electric stations.

**Electric Light and Power.**—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the export of electric energy is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

In previous Year Books, Table 7 showed the quantities produced for export, including the line losses between the power houses and the International Boundary, and the data were on a fiscal-year basis. The data below in Table 7 are the quantities actually exported and are for calendar years.

### Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a "key industry" in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This "public ownership" movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given in Subsection 1. More recently, Manitoba, Nova Scotia, New Brunswick, and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

#### Subsection 1.—The Hydro-Electric Power Commission of Ontario.\*

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the "Hydro"—is an organization of a large number of partner-municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public

\* Revised by R. T. Jeffery, Chief Municipal Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ontario.

agitation to ensure the provision of adequate supplies of electric power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1937 electrical service was supplied by the Commission to about 795 municipalities, comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission, and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts are carried on by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electric energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually* through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years. The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service 'at cost'. The rates charged by the municipal utilities for retail service are under the control of the Commission and are designed to ensure that each class of consumer bears its appropriate share of the expenses of the undertaking. Each type of consumer is charged with the cost of the service received as far as is practicable.

**Power Supplies.**—To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately-owned generating plants. Of the 43 hydro-electric power plants operated by the Commission in 1937, the largest is the Queenston-Chippawa development on the Niagara river which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for the needs of the near future has been made — including existing plants, plants under construction and power under contract for present and future delivery—up to an aggregate of about 1,600,000 h.p.

**Hydro-Electric Power Commission Statistics.**—The Canada Year Book of 1910 (p. xliii) described the turning on, at Berlin (now Kitchener), Ontario, on Oct. 11, 1910, of electric energy generated by Niagara falls. The small initial load of less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p., and in 1930 it was over 1,260,000 h.p. Table 8 shows the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated over \$424,000,000 in 1937.

**Statistics of Urban Municipal Electrical Utilities of Ontario Supplied by the Commission.**—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner-municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking. Summary statistics regarding service to rural consumers are given in Table 14.

Statistics of the assets and liabilities of the electrical departments of urban municipalities served by the Hydro-Electric Power Commission are given in Table 12. These show, for 1937, total assets of \$159,082,200 as compared with liabilities of \$38,611,188. Of the difference, \$63,869,253 is allotted as reserves, leaving a surplus of \$56,626,334. The item "Equities in H.E.P.C. systems", listed under both assets and reserves, relates to the sinking fund equities acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt to total assets the equity in Hydro systems is not taken into account. It will be noted that between 1933 and 1937 total assets have increased by \$23,378,947, while total liabilities have decreased by \$11,309,566.

**Rural Electrical Service in Ontario.**—During the past few years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Legislature passed two additional Acts relating to rural service. The Rural Power District Loans Act, 1930, provides for advances up to \$1,000 to actual farm owners of lands and premises in rural power districts, for the installation of electrical wiring and the purchase of equipment. The Rural Power District Service Charge Act, 1930, provides for the fixing of low maximum service charges for all classes of rural service. In Table 14 will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission. A steady rate of increase is apparent from these statistics.

**14.—Statistics Relating to Electrical Service to Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1933-37.**

*Note.*—Re rural power district legislation, consult the following Ontario Government publications:—*The Power Commission Act (R.S.O., 1927, c. 57); The Rural Hydro-Electric Distribution Act (R.S.O., 1927, c. 59); The Rural Power District Loans Act, 1930 (20 Geo. V, c. 14); and The Rural District Service Charge Act, 1930 (20 Geo. V, c. 15).*

**Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.**

**Quebec.**—*Quebec Streams Commission.*—Created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., 1925, c. 46), and by 20 Geo. V, c. 34, the Commission is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has not undertaken the direct production of electric power, but has assisted companies engaged in such work by a systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by constructing storage dams holding water in large reservoirs during flood periods and using it to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 18,000 second-feet, on lake Kenogami, the St. Francis, the Métis, the Ste. Anne de Beauré, and the

North rivers. The entire cost to the Commission of these storage works has been about \$9,000,000 and the annual revenue exceeds \$670,000.

Other reservoirs on the Gatineau, Lièvre, and Mattawin rivers which are the property of the Commission and are operated by that body have been built and paid for by the benefiting companies instead of being financed by the Commission.

*Provincial Electricity Board.*—Created by an Act passed at the 1937 session of the Legislature (1 Geo. VI, c. 25), the Provincial Electricity Board superseded, with wider powers, the former Quebec Electricity Commission which operated from Dec. 2, 1935, to Aug. 31, 1937. The new Board is given power to control undertakings for the production, sale, and distribution of electricity in the province, to fully investigate the property and accounts of such undertakings, to alter and cancel abusive contracts, and to fix rates for the sale of electricity based upon the value of physical assets and reasonable expenses of an undertaking. All electrical undertakings in the province are to operate under licence from the Board, such licences to remain in force for two years. The duration of all contracts for the distribution of electricity is limited to five years. The Act does not apply to municipal corporations which have established an electricity service, except that such corporations may benefit by the provisions for obtaining revision of an abusive contract.

*National Electricity Syndicate.*—Created by an Act of the 1937 Legislature (1 Geo. VI, c. 24), the Syndicate is intended to develop electricity-generating plants and distributing systems in the province. The Syndicate may establish its undertakings by one or both of two methods: first, by funds advanced by the Provincial Government; secondly, by the issue of stock or debentures of which the Provincial Government is to purchase at least 60 p.c. to give it a controlling interest. The Act authorizes the Syndicate to use the first method to develop generating plants and distributing systems in the electoral districts of Abitibi, Timiskaming, Lake St. John, and Roberval, and for this purpose authorizes an advance to the Syndicate of \$10,000,000 which may be subsequently increased by the Legislature. No further alienation or extension of leases previously granted on water-power sites of over 300 h.p., capacity may be granted without consent of the Legislature. The Act also permits the Government to contribute up to 55 p.c. of the cost of an electricity distributing system established by any rural municipality.

*Nova Scotia.*—The development of water powers within the province of Nova Scotia was initiated under the Acts of 1914 and carried on in an investigatory manner in co-operation with the Dominion Government until 1919, when the Nova Scotia Power Commission was created under the Power Commission Act. The Commission consists of three members, two of whom may be members and one of whom shall be a member of the Executive Council. Although the Commission has its own Department of Investigation, certain investigatory work is still carried on in Nova Scotia by the Dominion Government represented by a branch of the Dominion Water and Power Bureau with which the Nova Scotia Power Commission is closely associated, although a separate entity.

The function of the Commission is primarily generation of electric power and energy by the most economical means available that is practically suited to the case under consideration. Its operations are carried out on a cost basis and, while a considerable number of retail customers are served, it is not the policy to compete in the retail field, but rather to serve those districts where it is not practicable to receive service from other sources. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service and full advantage is being taken of this legislation by residents in various parts of the province.

The annual delivery is approximately 210,000,000 kwh. distributed to twenty-three 'bulk' power and energy customers, and more than 2,500 retail customers over a system of 755 miles of transmission and distribution lines.

The Commission operates 9 systems comprising 17 generating stations housing 36 generating units with a total installed capacity of 76,300 h.p. The *Antigonish System* is non-generating and is supplied by the *Sheet Harbour System*. It serves the town of Antigonish and various rural districts in the county of Antigonish. The *Canseau System* is made up of a number of distribution districts throughout the island of Cape Breton and is served by diesel electric units except in Mabou district for which energy is purchased from the Inverness Collieries. There are five districts at present in active operation, viz., St. Peter's, Cheticamp, Mabou, Port Hawkesbury, and Isle Madame; during the year 1939 other distribution districts will be added to these known as Margaree, Grand Anse, Whycoomagh, and Judique, which will require 160 miles of transmission and distribution lines in addition to those already in use. Also a hydro-electric development of 350 installed h.p. will be constructed on Barry brook. The *Markland System* is non-generating and supplied by the *Mersey System* from its Cowie Falls development. It serves the town of Liverpool, the Caledonia valley and places in the vicinity, and supplies power for a woodworking factory. The *Mersey System* supplies the demands of a pulp and paper mill at Brooklyn, Queens county. The *Mushamush System* sells power wholesale and retail in Lunenburg county. The *Roseway System* sells power wholesale to the town of Shelburne, and wholesale and retail in the town of Lockeport and vicinity. The *Sheet Harbour System* supplies *Antigonish System* and the town of Truro through the Pictou County Power Board to which it sells power wholesale. It supplies the demands of a groundwood pulp mill at Sheet Harbour, and retails in Sheet Harbour and in Musquodoboit and Stewiacke valleys. The *St. Margaret System* sells power wholesale and retail in Halifax and vicinity. The *Tusket System* sells wholesale in Yarmouth and supplies the demands of the Cosmos Imperia! Mills Limited at Yarmouth.

The control of the water resources of the province is vested in the Crown and administered by the Nova Scotia Water Act. The Commission pays the regular fees for water rights in the same proportion as others do who enjoy these privileges.

Financially the Commission is self-supporting, repaying its own borrowed obligations, an item of cost, from revenue. It also has the right to issue securities for money should it be deemed advisable. Expenditure on capital account must be authorized by the Lieutenant-Governor in Council, but replacements are paid for from reserves set up for that purpose.

The balance sheet at Nov. 30, 1938, showed fixed assets of \$14,679,822 and work in progress valued at \$1,091,737. The total reserves accumulated amounted to \$2,789,245.

**New Brunswick.**—The New Brunswick Electric Power Commission, incorporated under provincial legislation, owns and operates two generating stations: an 11,000-h.p. hydro-electric plant at Musquash, twelve miles west of Saint John; and a 15,000-h.p. plant at Grand lake in the Minto coal area. Transmission lines of 66,000 volts connect the two plants with each other and with the cities of Saint John and Moncton. A 33,000-volt line delivers power from the Grand Lake plant to Fredericton and Marysville. A 66,000-volt line delivers power from the Grand Lake plant to the towns of Newcastle and Chatham.

Power is sold *en bloc* to the cities of Saint John, Moncton, and Fredericton and to the town of Sussex, supplying 18,300 customers in these communities. Power is also distributed directly by the Commission to villages and rural districts, serving directly 11,770 customers. The high-voltage line mileage is 307 and 1,520 miles of distributing lines are in operation. The Commission has under construction rural distribution lines totalling 100 miles in length which will add 400 customers.

The Commission has a plant investment of \$8,658,500 and an annual revenue of \$1,160,000.

**Manitoba.**—The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations, and individuals. Legislation was passed in 1929 by which the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electric energy. In 1931 passage of the Electrical Power Transmission Act reorganized the administration of the Commission by establishing a Board and vesting it with additional authority.

The first transmission line was completed in 1920 to serve the city of Portage la Prairie. Power was sold to the city in bulk. With Portage la Prairie as a nucleus, the lines were rapidly extended over the entire southern and western portions of the province, and at the present time the Commission is serving 118 cities, towns, and villages. During this period the Commission took over several municipally-owned plants, notably the plants at Birtle, Brandon, Virden, and Minnedosa. Each of these services has now been tied into the main system and the plants are relegated to standby service. The Commission purchases energy from the municipally-owned plant at Dauphin and distributes it to outlying districts. Power is also purchased from the Winnipeg Electric Company at Selkirk and distributed to the summer resort areas along lake Winnipeg. The Commission has made rapid strides in the promotion of electrical services for farms. The farm rates have been lowered and the cost of building farm extensions has been considerably reduced. In 1937 the Commission made its first incursion into the eastern part of the province, when the towns of Whitemouth and Elma were served. During 1938 the extension of the Commission's network in eastern Manitoba was enlarged by the addition of six new towns in this area.

In 1936 arrangements were completed for the export of a block of power to the Inter-State Power Company at Niche, North Dakota.

The Commission owns and operates a central steam-heating system at Brandon, supplying heat to the business part of the city and to part of the residential section. It also owns and operates the Brandon gas plant.

The object of the Commission is to extend service to any district in which the available revenue is sufficient to justify the necessary capital expenditure. In this connection about 30 inquiries were received by the Commission during 1938 and service was extended to 22 new towns.

**Saskatchewan.**—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S., 1930, c. 30), authorizing the Commission to manufacture, sell, and supply electric energy, to acquire and develop

water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power, and to enter into contracts with municipalities for the supply of energy. The Commission is also given certain control and regulatory powers re the operation of electrical public utilities, and is charged with the responsibility for the administration of the Electrical Inspection and Licensing Act, 1935 (1934-35, c. 64).

The initial operations of the Commission were concerned with acquiring by purchase municipally-owned plants which were improved, enlarged, or supplemented by installations made by the Commission and were operated as individual systems of supply. Examples of such acquisitions made in 1929 were the Saskatoon, Humboldt, and Rosthern plants, while the plant at Shellbrook, the Wynyard-Elfrs-Wadena and the Leader-Prelate-Sceptre Systems, served from plants at Wynyard and Leader, were established by the Commission in the same year. In 1930 the municipal plants at North Battleford, Swift Current, Unity, and Lanigan and the privately-owned plant of the Maple Creek Light, Power and Milling Co. at Maple Creek were acquired, and in 1931 the generating plant at Willowbunch was added. The Watrous-Nokomis System, including ten towns and villages, was also purchased from Canadian Utilities, Ltd., and has been connected with the Bulyea System of the Montreal Engineering Co., Ltd.

Transmission lines run from Saskatoon, as the centre of the main system, easterly to Humboldt, northerly to Shellbrook, and Duck Lake, westerly to Radisson, and southwesterly to Rosetown. Additional lines link Rosetown with Moose Jaw, and Tisdale (where the Commission has a generating plant) with Nipawin. The systems built in 1929 have been extended. All transmission lines supply towns and villages along their courses. By a line built in 1935, service is given to the town of Battleford from the North Battleford plant. At the beginning of 1937 the Commission acquired, by purchase, the municipal plant and distribution system formerly owned by the town of Canora, and installed a new generating unit. Towards the end of the same year 25 miles of transmission line were added to the Tisdale System to serve the centres Arborfield, Aylsham, and Zenon Park. There are now 1,388 miles of transmission lines owned and operated.

The Commission purchases several blocks of power or contracts for the interchange of power from private interests in addition to supplying energy generated at its own plants. The number of consumers served directly in 126 towns and villages is approximately 8,975 and those indirectly served (where the cities operate the distribution systems) number 16,648. The total plant investment as at Dec. 31, 1937, was approximately \$7,609,910.

**British Columbia.**—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electric energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. The Water Board, a quasi-judicial body, regulates the rates which are charged by public utility companies.

## CHAPTER XIV.—MANUFACTURES.\*

This chapter deals with manufacturing industries in Canada under five main headings: the first, The Evolution of Canadian Manufacturing Industries, shows the historical development of manufacturing in Canada in so far as statistical data are available; the second, Production of Industrial Groups and Individual Industries, gives a detailed treatment of current production under various groupings and individual industries; the third shows the Provincial Distribution of Manufacturing Production under present-day conditions; the fourth analyses the Principal Factors in Manufacturing Production under such sub-headings as capital, employment, salaries and wages, size of establishment, and power and fuel; and the fifth presents statistics of Manufacturing Industries in Cities and Towns.

With regard to the first section dealing with historical development, it has been impossible to compile absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made for the present edition to carry all major revisions, in so far as possible, back to 1917, so that, in the main, the figures for the period since then are on a reasonably comparable basis. Revisions made since publication of the 1938 Year Book are indicated by notes to the tables affected.

### Section 1.—The Evolution of Canadian Manufacturing Industries.

The type of manufactures established in a community will, in the beginning, be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was probably the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were necessarily connected with the satisfaction of the primary needs of human beings for food, clothing, and shelter, and with the other primary need—protection. It is therefore significant that, at a census of occupations taken in 1681, a comparatively large number of tailors, shoemakers, masons, carpenters, gunsmiths, and edge-tool makers were enumerated.

Since the earliest settlements two main influences have been operating upon the development of manufacturing in Canada: first, the domestic requirements of the growing Canadian population; and secondly, the processing of natural products of Canada to change them to more suitable forms for export. The comparatively

\* Revised by A. Cohen, B.Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the vegetable products, textile, and miscellaneous manufacturing industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch, see Chapter XXIX, Section 1, under "Production"

small home market, a large part of it in scattered agricultural areas, has always limited the range of goods which may be economically manufactured in Canada for that market. As the Canadian population increases and as the means of distribution improve, the range of goods which may be efficiently manufactured for the home market is being constantly widened, although, as the general standard of living in Canada rises, the variety of fabricated goods for which there is an effective demand within the country is continually expanding, so that there will always be a place in the Canadian market for imports of highly fabricated goods from larger and more intensely industrialized countries.

A striking modern feature of manufacture for the home market is the importation of raw materials not indigenous to Canada for the production of goods for which there is a large domestic market. Typical examples are the cotton textile and the rubber goods industries. Furthermore, a large iron and steel industry has grown up in Nova Scotia, Quebec, and Ontario, dependent upon imported iron ore from Newfoundland and the United States.

From the beginning, important manufacturing operations in Canada have been associated with the preparation of natural products for export. Early examples were the curing of fish and furs and the preparation of forest products. In the days of wooden ships, shipbuilding was an important industry along the St. Lawrence and in the Maritime Provinces. Similarly, under modern conditions, the largest industries are mainly based upon the country's natural resources in agriculture, forests, and minerals, while cheap water power is an important factor in the ability of these great manufactures to compete successfully in world markets.

Under modern conditions the major part of our exports of natural products have undergone some manufacturing process before being shipped abroad. Typical examples are: wheat flour, dairy products, and dressed meats arising from the agricultural resources; lumber, shingles, and pulp and paper from the forests; refined metals from the mines of Canada; and cured and canned fish from the Atlantic and Pacific fisheries. The proportions of manufactured goods among Canadian exports may be found in the Condensed Preliminary Report on the Trade of Canada, 1937-38, pp. 34-40, and in Chapter XVI—External Trade—of this volume (see Index under "Trade").

#### Subsection 1.—Growth of Manufacturing in Canada since 1870.

**Growth of Canadian Manufactures Prior to the War.**—Until the later '90's, the growth of Canadian manufacturing industries was not particularly rapid, though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the gross values of manufactured commodities from \$221,600,000 in 1870 to \$469,800,000 in 1890, as shown in Table 1. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from \$368,700,000 in 1890 to \$1,166,000,000 in 1910 and to \$1,381,500,000 in 1915.

**The Influence of the War.**—The influence of the War upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had previously been imported. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great pros-

perity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure. Incidentally, factory methods became more specialized, a high degree of administrative and mechanical efficiency was attained, and Canada became an important industrial country.

Since the annual Census of Manufactures was begun only in 1917, the growth of manufacturing production during the first years of the War cannot be shown in Table 1. Figures of 1915 are not on a strictly comparable basis with those of later years. However, the effect of the inflation of the war period, which reached its height in the summer of 1920, is evident. The course of manufacturing production thereafter throughout the 1920's is clearly shown in the figures of the table. In 1929 gross values of production exceeded those of 1920, although the prices of manufactured goods had dropped about 41 p.c. in the intervening period.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1937.

Note.—Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925. Figures for 1917 and subsequent years have been revised since publication of the 1938 Year Book due to the exclusion of the central electric stations and dyeing, cleaning, and laundry industries from the statistics of manufactures.

<sup>1</sup>In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924. <sup>2</sup>Not reported. <sup>3</sup>A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

**Effects of the Depression on the Manufacturing Industries of Canada.**—The downward trend in manufacturing operations, which began in the fall of 1929, continued with increasing force to about the middle of 1933. As a result, the output of manufactured products in 1933 was lower in value than in any other year since the annual census was begun in 1917 but the wholesale price index for fully and chiefly manufactured goods on the 1926 base declined from 93.0 in 1929 to 70.2 in 1933, and rose only to 73.6 in 1936. That the decline in the volume of manufactures produced was not so great as that of values is evident by comparing the figures of Table 6, p. 388, with those of Table 3. Table 8, p. 390, shows in percentages the effect of the depression on employment, salaries and wages, and gross value of products. Both these analyses indicate that the incidence of the depression affected some industries much more than others. Generally speaking, the production of consumption goods was much better maintained than that of capital goods.

## 2.—Summary Statistics of Manufactures, by Provinces, for Representative Years, 1917-37.

NOTE.—Figures have been revised since the publication of the 1938 Year Book; see headnote to Table 1.

**Summary Statistics of Manufactures.**—In Table 4 will be found an analysis of the most important statistics of manufactures for the period 1917 to 1937, brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values during the War and immediate post-war periods and the drop in prices of commodities during the depressions of 1921 and 1930, the figures for these years are not completely comparable. One very important figure, however, which shows the trend of development clearly and uninterruptedly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 4,461,867 in 1936, an increase of 169 p.c. in nineteen years. In the same period horse-power per wage-earner increased from 3.06 to 9.11, indicating the rapidly increasing utilization of electric power in manufacturing production. The significant feature is the increase in both the absolute figures of power employed and the average per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 have reduced the averages for later years. Another interesting comparison is the trend of value added by manufacture per employee and of average salaries and wages paid since 1929. Compared with 1917, the figures for average salaries and wages per employee in 1937 represent an increase of 33.1 p.c., while the estimated increase in the value added by manufacture per employee was only 8.0 p.c. Wholesale prices of commodities declined 26.0 p.c. in the same period.

**Consumption of Manufactured Products.**—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period approximately corresponding to 1936 was \$2,794,000,000, a figure obtained by adding to the value of manufactured products in 1936 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1937, and deducting the value of the corresponding exports for the same period. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Vegetable, iron, textile, animal, and wood and paper products were, in that order, the leading groups in the value of finished goods made available for consumption. The large amount of manufactured vegetable products made available for consumption was due to the large domestic production, as the exports and imports were about equal, while manufactures of textiles and iron and steel products, in addition to a large production, showed an excess of imports over exports of \$59,000,000 and \$92,000,000, respectively. Wood and paper, animal, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

In 1929, the order of the groups by the values available for consumption was iron, vegetable, textile, wood and paper, and animal products. Since 1929 the consumption of vegetable, animal, chemical, and textile products has been much better maintained than that of iron, non-metallic mineral, and wood products.

## 4.—Summary Statistics of Manufactures for Representative Years, 1917-37.

<sup>1</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

<sup>2</sup> Net values of products; see footnote 1, Table 1, p. 379.

<sup>3</sup> Not available at time of going to press.

## 5.—Consumption of Manufactured Products, by Groups, 1936, with Totals for 1922-35.

NOTE.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years. Figures have been revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

Year and Industrial Group.	Value of Products Manufactured.	Manufactured and Partly Manufactured Goods.		Value of Manufactured Products Available for Consumption. <sup>1</sup>

<sup>1</sup> Net imports are total imports less foreign products re-exported. For 1923 to 1936 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible, since foreign exports for these years had never been analysed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927, inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

## Subsection 2.—Value and Volume of Manufactured Products.

**Value of Products.**—In the presentation of manufacturing statistics, the value of products is given in two forms, namely, gross value and net value or the value added by manufacturing processes. Formerly this figure of net value was obtained by deducting only the cost of materials from the gross value. However, in accordance with a resolution passed by the Conference of British Commonwealth Statisticians in 1935, the net value is now computed by subtracting the cost of fuel and electricity consumed, as well as the cost of materials used, from the gross value of products. Statistics of cost of electricity are not available prior to 1924, but in the present edition the figures for 1924 and later years have been revised in accordance with the above resolution.

Values are affected by fluctuations in price levels as well as changes in the volume of output. Therefore, in the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at

114.3 in 1917, 155.9 in 1920, 97.3 in 1922, 95.6 in 1929, 67.1 in 1933, and 84.6 in 1937. (See under "wholesale prices" in Index.) Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, and 73.6 in 1936.

**Volume of Manufacturing Production in Recent Years.\***—An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. Since real income is ultimately measured in goods and services, the growth of the volume of manufactures becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume is based on the quantities of manufactured products reported and includes 71.1 p.c. of the total value of the production in 1926. It is weighted according to the values added by manufacture in 1926. A complete description of the manner in which the index is constructed will be found in the publication referred to in the footnote to this page.

The physical volume of manufacturing production increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression was chiefly due to reduced exports and a cessation in production of capital equipment. The purpose classification of Table 6 shows that by 1936 the volume had risen above 1929 for the main consumption groups of food and clothing, but still lagged in durable goods such as vehicles, industrial equipment, house furnishings, etc.

As may be seen from Table 6, all groups in the component material classification reported declines in the volume of production during the depression. In comparing the low point of the depression, *viz.*, 1933, with 1929, it is found that the iron and steel group suffered the greatest contraction in production with a decrease of 61.1 p.c. This was followed by the miscellaneous industries group, with a decrease of 46.5 p.c., non-metallic mineral products 46.3 p.c., wood and paper products 30.0 p.c., non-ferrous metal products 29.1 p.c., vegetable products 25.2 p.c., chemicals and allied products 17.6 p.c., animal products 9.4 p.c., and textiles and textile products 5.7 p.c.

Since 1933 there has been a material improvement, the index of production for all industries rising from 82.0 in 1933 to 116.6 in 1936. Four groups—animal products, textiles, non-ferrous metals, and chemicals—were above the 1929 level of production. In the case of each of these groups the volume of production attained in 1936 was higher than in any previous year. The output of textiles in 1936 was about 14.8 p.c. greater than in 1928, the highest pre-depression year for this group.

\*For a much more detailed and comprehensive treatment of this subject, see the study "The Quantity of Manufacturing Production in Canada 1923-29" by A. Cohen, B. Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics.

### 6.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923, 1929 and 1932-36.

(1926=100.)

Classification and Group.	1923.	1929.	1932.	1933.	1934.	1935.	1936.
<b>Component Material Classification—</b>							
Vegetable products.....	78.3	121.6	92.5	90.9	103.3	108.6	118.2
Animal products.....	81.4	95.4	83.2	86.4	93.9	99.1	107.1
Textiles and textile products.....	84.9	113.6	98.5	107.1	118.1	124.8	131.9
Wood and paper products.....	83.4	127.5	87.2	89.3	104.5	115.0	126.3
Iron and its products.....	82.2	129.7	53.4	50.5	68.1	84.5	94.3
Non-ferrous metals.....	72.9	138.7	100.4	98.3	120.8	138.5	156.1
Non-metallic minerals.....	88.9	145.0	84.4	77.8	91.9	99.1	112.7
Chemicals and allied products.....	84.0	120.4	93.7	99.2	112.5	123.8	132.8
Miscellaneous industries.....	80.1	110.0	66.1	58.9	70.8	76.6	81.7

In analysing the changes in the volume of production, on a purpose classification basis, some interesting facts are revealed. In comparing 1933 with 1929 it is found that the food group reported a decrease of 10.6 p.c., while that of clothing decreased 14.7 p.c. The output of vehicles and vessels, which is largely made up of the automobile and rubber-tire industries, recorded a decrease of 59.5 p.c.—this is the greatest decrease of any group. Producers materials and industrial equipment declined 37.5 p.c. and 45.8 p.c., respectively, due to the general decline in industrial activity. House furnishings dropped 36.6 p.c., personal utilities 30.3 p.c., drink and tobacco 31.5 p.c., and books and stationery 7.2 p.c. The decrease in the personal utilities group needs some explanation. The production of musical instruments, which is included in this group, has been decreasing steadily during the past few years, the output of pianos, phonographs and phonograph records becoming smaller and smaller. The main product of the musical instruments industry, namely, the radio, is now produced in the electrical apparatus industry. This industry, however, is credited to the industrial equipment group, as by far the largest part of its output consists of industrial equipment.

All groups have shared in the improvement since 1933. Food and clothing were major groups in which volume was greater in 1936 than in 1929, while the minor groups, "books and stationery" and "miscellaneous" were considerably above 1929.

The index of the physical volume of production dropped from 122.9 in 1929 to 82.0 in 1933 and has risen to 116.6 in 1936, making a net decrease of 5.1 p.c. since 1929. This decrease is significant when compared with a decrease of 26.5 p.c. in the net value of production and 15.2 p.c. in the number of wage-earners employed.

The construction of this new index of the volume of manufacturing production has superseded, for 1923 and later years, the index published in 1931 and previous years. The former index, which made no pretence to the reliability of the new one, was made by dividing the gross value of manufactures by the index number of the prices of manufactured goods. The central electric stations were included in the former index, but are excluded from the new one. However, the former index covered the period 1917 to 1923 not covered in the new one and, since this earlier period was one of wide fluctuations in money values, the following index numbers are given for the whole period since 1917, using the earlier method, but excluding central electric stations, for the years 1917 to 1922, and the new index, transposed to the 1917 base, from 1923 to 1936.

INDEXES OF THE VOLUME OF MANUFACTURING PRODUCTION, 1917-36.  
(1917=100.)

1917	100.0	1922	96.0	1927	136.5	1932	105.0
1918	102.0	1923	104.8	1928	148.8	1933	105.1
1919	98.1	1924	102.9	1929	157.5	1934	123.7
1920	95.0	1925	112.7	1930	142.8	1935	136.4
1921	86.1	1926	128.1	1931	124.1	1936	149.4

## Section 2.—Production of Industrial Groups and Individual Industries.

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component material of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail and in the historical series already shown in Table 3. However, there are also less detailed analyses under purpose groupings appearing in Table 10 and under origin groupings in Table 11.

### Subsection 1.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes have been made, the most important being the elimination of the central electric station industry from the compilation in 1936. For this edition revisions due to these changes have been carried back to 1917 in so far as possible.

**Effects of the Depression upon the Main Groups.**—In Table 8 is shown the effects of the depression and the recovery since 1933 upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline in the depression, money values both of wages and of products were naturally affected more than the number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are a number of reasons why the variation in the number of employees should be less than that of money values. The figures of Table 8 should be compared with those of Table 6 which show changes in volume of production.

As noted elsewhere in this chapter (especially under the discussion of volume of manufacturing production on pp. 387 to 389), the depression affected the production of capital or durable goods much more than that of consumption goods. Therefore, production in such groups as iron products, and wood and paper products declined more seriously than that in such groups as textiles, vegetable products, and animal products, and in 1936 the recovery had not progressed far enough for the production of durable goods to have regained the relative position it held in 1929.

### 8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Groups of Industries Compared for Specific Years, 1929-36.

Note.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

Group of Industries.	1933 Compared with 1929.			1936 Compared with 1929.			1936 Compared with 1933.		
	Em- ployees.	Salaries and Wages.	Gross Value of Pro- ducts.	Em- ployees.	Salaries and Wages.	Gross Value of Pro- ducts.	Em- ployees.	Salaries and Wages.	Gross Value of Pro- ducts.

\* An increase of less than five-hundredths of one per cent.

**Vegetable Products.**—The industries of this group are mainly dependent upon the agricultural crops of Canada for their raw materials and, in some instances, their products enter largely into the export trade. However, there are some important industries in the group—e.g., the rubber industry—which are almost entirely dependent upon imported raw materials.

*The Flour-Milling Industry.*—This is the most important member of the group from the standpoint of gross value of production. Under modern conditions the industry has a capacity for flour production far in excess of domestic consumption, so that its prosperity has fluctuated widely with the condition of the export market. Exports of wheat flour declined from 10,700,000 barrels in 1928 to 4,850,000 in 1936, but in spite of the decrease Canada continues to be one of the leading exporters of wheat flour. A majority of flour-mills also grind coarse grains for the production of live stock feeds. In rural districts there are many small mills devoted entirely to the grinding or chopping of feed grains, usually on a custom basis.

FLOUR-MILLS OF CANADA, WITH THEIR EQUIPMENT AND CAPACITIES, BY PROVINCES, 1936, WITH TOTALS, 1935.

Province.	Flour and Grist Mills.	Chopping Mills.	Total Mills.	Rolls.	Stones.	Capacity of Flour-Mills.
	No.	No.	No.	pairs.	pairs.	bbl. per day.

Totals, 1935.....	334	743	1,127	4,496	238	105,240

*Bread and Bakery Products.*—With the increase in urban population, and the changes resulting from motor transportation which make it possible for factory-made bread to be economically distributed in rural communities, the bread industry has expanded rapidly in the last decade. Table 12, p. 408, shows that in 1936 this industry ranked eleventh in gross value of products, eighth in net value, third in number of employees, and seventh in salaries and wages paid.

*Rubber Goods.*—The rubber industry in 1936 ranked third in this group and twelfth among the industries of Canada in gross value of products. This industry is, of course, closely related to the use of motor vehicles, and the fact that in 1936 Canada stood fifth among the nations of the world in the number of such vehicles registered partly accounts for her ranking among the leading countries as a manufacturer of rubber goods. The industry is able to operate so efficiently in Canada upon a quantity basis that, besides supplying the domestic market, it contributes largely to the export trade. See the Condensed Preliminary Report on the Trade of Canada, 1937-38, p. 46, where it is shown that in 1937 Canada ranked third in the export of rubber tires.

*Fruit and Vegetable Preparations.*—This industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., is another important member of the vegetable products group. The industry has grown rapidly since the War. During the period 1923-36 the volume of fruit and vegetable preparations produced increased nearly 200 p.c. (see Table 7, p. 388). This growth is remarkable as it represents an increase in the domestic demand, both imports and exports being relatively small as compared with domestic production, although there is a small export surplus.

*Tobacco, Cigars, and Cigarettes.*—The tobacco manufacturing industry is another important division of this group which caters very largely to the domestic market.

Imports and exports of manufactured tobacco are small. The industry normally absorbs about three-quarters of the tobacco crop of Canada, although a proportion of imported raw leaf is used for blending.

Other important industries of this group are: biscuits and confectionery, brewing, distilling, and sugar refineries. With regard to this last industry, refineries situated on the Atlantic and Pacific coasts use imported raw cane sugars, while others in Western Ontario and Alberta manufacture beet sugar. The production of the latter is shown in the Agriculture chapter, p. 227.

**Animal Products.**—The industries of this group process the products of agricultural live stock, of the fisheries, and of fur-bearing animals.

*Slaughtering and Meat Packing.*—The products of this, the leading industry of the group, besides supplying the home market, constitute an important element in exports, especially bacon and hams. The growth of the industry from a production valued at \$3,800,000 in 1870, and \$7,100,000 in 1890, to that of to-day has been accompanied by a concentration of the major part of the production into a comparatively small number of large establishments, thereby facilitating greater efficiency of operation and the utilization of by-products such as fertilizers, glue, and canned meats and soups. There has been a large increase in the number of establishments since 1931, due to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry. The numbers of live stock slaughtered at Canadian inspected establishments are shown in the Internal Trade Chapter (see Index).

*Butter and Cheese.*—This industry has been for many years of leading importance in Canada. It originated in the mixed-farming and dairying districts of Eastern Canada, and about the beginning of the century there were large exports of butter and cheese. However, with the increase of population accompanying the expansion of grain growing on the prairies, exports of these products declined. Since the War there has been a tendency for mixed farming and dairying to spread in certain districts of the West and in some years there has been a considerable export movement of butter again. Cheese production has declined since the War, but a large proportion of the production is still exported. Further information regarding the dairy industries appears in the Agriculture chapter (see Index).

*Leather Tanneries, and Boots and Shoes.*—The tanning industry has long been established on a considerable scale, mainly, of course, because the large numbers of cattle raised and slaughtered provide a ready supply of hides. The industry is now so well developed that there is an export surplus of tanned leather. The boot and shoe industry almost completely supplies the home market in standard lines, the small import surplus being largely confined to expensive shoes. The tanning industry is chiefly centred in Ontario, while more than half the production of boots and shoes comes from Quebec.

*Fish Curing and Packing.*—This industry occupies an important place in relation to the fisheries of Canada. A considerable proportion of the annual catch is exported to foreign markets in cured and canned forms. Further information regarding the industry appears in the Fisheries chapter, especially at pp. 304 to 306.

**Textile Products.**—The industries of this group have developed from the household spinning and weaving of the early settlers. They now supply the bulk of the requirements of domestic consumption (see Table 5, p. 386). The import balance under this heading consists largely of either raw materials or fine goods which cannot

be competitively manufactured in Canada. Two important raw materials consumed by branches of industry in this group—namely, raw cotton and raw silk—are entirely imported. The industries of this group are chiefly developed in the eastern provinces, where the factors of climate, cheap power, available labour forces, and accessibility of raw materials are favourable to large-scale growth.

In net production, *i.e.*, in value added by manufacture, which is a truer criterion than gross production of the place of the group in the industrial life of the country, the textile group was fourth in 1936 among the nine major groups shown in the summary statistics of Table 3, p. 383, being exceeded only by the wood, vegetable, and iron and its products groups. Textiles accounted for about 13 p.c. of the net manufacturing production of Canada. As an indication of the contribution which the textile group made in 1936 to employment in the Dominion, the group stood second in the number of employees and third in salaries and wages paid, with about 19.4 p.c. of the total employees in manufacturing and 15.5 p.c. of the total salaries and wages paid. (See Table 21, p. 422.) The manufacture of textiles may be regarded under two general divisions: (1) the spinning, weaving, and knitting trades, and (2) the finishing trades. In the past, the second division, which consists principally of the making up of piece goods into articles of clothing, has been the larger, but in recent years there has been a tendency for the first or primary division to equal or exceed the second in value of production.

*Cotton Yarn and Cloth.*—This is the largest industry in the textile group, and in 1936 ranked tenth among the industries of Canada (see Table 12, p. 408), and third among the industries of Quebec (Table 14, p. 412).

*Hosiery and Knitted Goods.*—This industry is important from the standpoint of employment in the Dominion. In 1936, although ranking only sixteenth in value of production, it was ninth in salaries and wages paid (Table 25, p. 427). The volume of knitted goods produced has increased materially in recent years and in 1935 and 1936 exceeded the volume of 1929 (Table 7, p. 388).

*Silk and Artificial Silk.*—This industry has shown a remarkable expansion during recent years. While the great majority of other manufactures have scarcely yet regained the level of production attained in 1929, this industry has since then increased 23 p.c. in capital investment, 133 p.c. in the number of employees, 132 p.c. in salaries and wages paid, 82 p.c. in net value and 86 p.c. in gross value of production. As most of these comparisons are in money values, the record is especially remarkable in view of the decline in price levels during the period. Much of the growth has been due to the development of artificial silk textiles.

*Finishing Trades.*—As already mentioned, the industries engaged in making up piece goods into clothing are a very important division of the textile group. The largest of these industries are women's factory clothing, men's factory clothing, and men's furnishing goods, while the manufacture of hats and caps and of corsets are somewhat smaller industries in the same division. The manufacture of woollen textiles is not so largely developed in Canada as that of other textile products. Nevertheless, the woollen cloth, woollen goods, woollen yarn, and carpet industries taken together constitute quite a large textile production and, in addition, the products of the hosiery and knitted goods industry include a large percentage of woollen materials. Detailed statistics of these industries are shown in Table 9, while their relative importance compared with other industries in Canada appears in Table 12. Imports and exports of textile products may be found in Tables 12 and 13 of the External Trade chapter of this volume.

**Wood and Paper Products.**—While the gross value of production by industries of this group in 1936 was second among the main groups to that of vegetable products, the wood and paper group stood highest in net values, employees, and salaries and wages paid. These industries draw their raw materials almost entirely from the forests of Canada. The primary operations in the woods provide work during part of the year for an average of 200,000 individuals, largely during the season when other forms of employment are at their minimum. This has a valuable steadying effect on general labour conditions throughout the year.

The operations of the two leading industries under this group, namely, pulp and paper mills and sawmills, are treated fully in the Forestry chapter at pp. 273 to 284, while statistics regarding capital, employees, power installed, etc., appear in Table 9, p. 398.

The printing industries—printing and publishing, printing and bookbinding, lithographing, engraving, and trade composition—are included within this group because paper is the principal material used by them. The first two especially make an important contribution to manufacturing production in Canada, as indicated by their place in the forty leading industries (Table 12). Other large industries included in the wood and paper group are: paper boxes and bags, furniture, and planing mills, sash and door factories.

**Iron and Its Products.**—The gross value of production by industries of this group was third among the nine main groups in 1936. However, in periods of active prosperity the relative standing of the group tends to rise and thus it stood first in 1920 and 1929 (Table 3), while in 1933 it was fifth. The value of production more than doubled from 1933 to 1936, while the volume (Table 6) nearly doubled. The demand for durable goods depends in large measure upon the rate of capital improvement, which is almost at a standstill in times of depression and rises to a high level in times of prosperity.

**Primary Iron and Steel.**—There are at present four companies operating blast furnaces in Canada for the production of pig iron. One of these is located in Nova Scotia and uses local coal and iron ore from the great Wabana deposit in Newfoundland which it controls. The other three are located in Ontario on the Great Lakes waterways where they have the advantage of cheap water transportation for iron ore imported from the Messabi range of Minnesota and coal from Pennsylvania. These firms also operate open-hearth steel furnaces and rolling mills to make steel ingots, blooms and billets, merchant and alloy steel bars, rails, structural shapes, plates, sheets, rail fastenings, etc. There is also a large production in Canada of ferro-alloys (ferro-silicon, ferro-manganese, etc.) which are produced in electric furnaces. These alloys usually constitute the most important item of Canadian exports of primary iron. Output of these products since 1911 is shown in Table 15 of the Mines and Minerals chapter, p. 340.

**Automobiles.**—This is the most important industry of the iron group and is indeed one of the largest industries in Canada (Table 12). Table 4 of Part III of the Transportation chapter shows the number of vehicles manufactured, imported, and exported in each year, while in the Internal Trade chapter, the retail sales of motor vehicles are shown (see Index).

**Automobile Supplies.**—As an adjunct to the manufacture and wide use of motor vehicles, a large industry has developed for the independent production of parts and supplies required for the making, repair, and upkeep of such vehicles.

**Railway Rolling-Stock.**—With railway transportation so important a factor in the economic life of Canada, the manufacture and repair of railway vehicles is a large and widespread industry. In addition to rolling-stock for the standard steam

and electric railways, the industry produces locomotives and cars for industrial, mining, and engineering purposes. The industry stands high among the industries of Canada in the number of employees engaged and in salaries and wages paid.

Other important industries classified under the iron group are: machinery, sheet metal products, castings and forgings, wire and wire goods, hardware and tools, agricultural implements, etc. The manufacture of agricultural implements has been at a low level for some years owing to the depressed condition of agriculture, especially in the grain-growing West.

**Non-Ferrous Metals.**—Two industries classified under this group have shown outstanding development in the period since the War.

*Non-Ferrous Metal Smelting and Refining.*—This industry now ranks first in gross value of products and second in net value. An important factor in its rapid growth has been the discovery and development of a number of large deposits of base metal ores in Canada, while the availability of low-cost electric power has been another factor in its expansion. This latter factor very largely accounts for the establishment of one large plant on the Saguenay where imported aluminium ore is smelted into bars and other forms of pure metal for export. The products of the whole industry now constitute an important element of the export trade.

*Electrical Apparatus and Supplies.*—The total horse-power installed in central electric stations in Canada has increased from 1,900,000 in 1919 to 7,100,000 in 1936, while the production in kilowatt hours has increased in the same period from 5,500,000,000 to 25,400,000,000 (see Table 4, Water Powers chapter, p. 364). Accompanying this growth of production there has been a very widespread extension of the use of electricity for industrial, commercial, and domestic purposes. A large market has therefore developed in Canada for a wide variety of electrical equipment from the largest generators down to household appliances, and a very large industry (ninth among the industries of Canada in 1936, as shown in Table 12) has grown up to supply that market.

**Non-Metallic Mineral Products.**—About half the total production of this group is accounted for by the petroleum refining industry.

*Petroleum Products.*—This, the petroleum refining industry, has grown to its present size with the increased use of motor vehicles. In the past the crude petroleum has been largely imported and the refineries were located where such imports were economically available either by water or pipe-line transportation. Developments in the Turner Valley are providing a large supply of crude petroleum in Canada.

*Coke and Gas Products.*—This industry, being chiefly the production of domestic heating and illuminating gas, has not shown any marked expansion, being affected by the competition of low-cost electricity. However, most of the main centres of population are provided with gas services. Production in 1921, valued at \$33,000,000 was little less than that of the present time.

Other important industries included in the non-metallic mineral group are: glass products, abrasives, cement, and clay products. The two last-mentioned industries were below normal production in 1936 owing to the low level of activity in construction and building. The manufacture of artificial abrasives is well developed in Canada because of the advantage of low-cost electric power and a considerable part of the product of the industry is exported.

**Chemicals and Allied Products.**—Industries of this group are widely developed in Canada. Production attained a very high level during the War. However, since those war industries disappeared there has been a very real growth for ordinary commercial and industrial purposes. Volume of production under this group was higher in 1936 than in any other year since the War (Table 6).

### Subsection 2.—Manufactures Classified by the Purpose of the Products.

In addition to the classification according to the chief component material of the products used for the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented in Table 10 for representative years, 1922-36, in summary form, and for 1936 in more detail.

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. Indicative of the increasing industrialization of the Dominion is the increase in the "industrial equipment" group from 14.2 p.c. of the total value of production in 1922 to 14.8 p.c. of the total in 1936, and the increase in "producers materials" from 27.9 p.c. to 32.0 p.c. during the same period. Another significant change is the decline in the "food" group which dropped from a production of 28.2 p.c. to 23.5 p.c. of the total. Whereas in 1922, food products comprised the leading group, in 1936 the production of producers materials ranked first in importance. It should also be noted, however, that the cost of materials in this group is abnormally high. The following other groups have improved their positions since 1922: vehicles and vessels advanced from an output of 6.7 p.c. to 7.8 p.c. of the total value of production; drink and tobacco from 4.2 p.c. to 4.6 p.c., while books and stationery held the same proportion at 4.2 p.c.

### 10.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-36, and in Detail for 1936.

NOTE.—Figures have been revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

<sup>1</sup> For the years 1922, 1924, and 1926 the figures for "cost of materials" and "gross value of products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this chapter.

Subsection 3.—Manufactures Classified by Origin of the Materials.

The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 11 for the years 1924, 1926, 1929, 1933, 1935, and 1936. By this means manufacturing production may be analysed from another angle, and interesting comparisons can be made with the external trade classification according to origin (see Table 15 of the External Trade chapter).

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials which cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc., but it should be understood that industries included in the Canadian origin classes may be using large quantities of imported corn, fruit, tobacco, hides, wool, etc.

The mineral origin group includes, in addition to the non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and other mineral substances the raw materials of which are very largely imported. Products of mineral origin with the exception of fuels are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. In 1936, the gross value of manufactures of mineral origin in Canada almost equalled those of farm origin, which included textiles as well as foods.

In value added in manufacture the mineral origin group advanced from second place in 1924 with 30.5 p.c. of the total value added by manufacture in all industries to first place in 1936 with 37.2 p.c. of the total. On the other hand, the manufacture of materials of farm origin receded from first place with 33.3 p.c. of the total in 1924 to second place with 32.0 p.c. of the total in 1936. The value added in manufacture of materials of forest origin was in third place at both the beginning and end of the period, but the proportion dropped from 26.0 p.c. in 1924 to 20.7 p.c. in 1936 and both the gross value and the value added were actually lower in 1936 than in 1924. These three groups accounted for about 90 p.c. of the value added.

In 1936, industries of the farm origin group had the largest number of employees but the mineral group had the greatest capital and paid out the most in salaries and wages. Industries of the mineral group had an average capital per employee of nearly \$7,000 and an average salary or wage of \$1,258, while for industries of the farm origin group the respective averages were \$4,600 and \$930.

**11.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924-36.**

Note.—Figures have been revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

<sup>1</sup>For the years 1924 and 1926 the figures for "cost of materials" and "gross value of products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this chapter.

Subsection 4.—The Forty Leading Manufacturing Industries.

In the following statement, the rank of the ten leading industries in 1936, from the standpoint of gross value of production, is compared with their respective ranks in representative years since 1922.

THE TEN LEADING INDUSTRIES, 1936, COMPARED AS TO RANK FOR REPRESENTATIVE YEARS 1922-35.

Industry.	Rank in—						
	1936.	1935.	1934.	1933.	1929.	1926.	1922.
Non-ferrous metal smelting and refining.....	1	1	2	2	9	9	—
Pulp and paper.....	2	2	1	1	1	1	2
Slaughtering and meat packing.....	3	3	3	3	2	3	3
Flour and feed mills.....	4	6	4	4	3	2	1
Butter and cheese.....	5	5	5	5	6	6	5
Automobiles.....	6	4	7	11	4	5	6
Petroleum products.....	7	7	6	6	10	11	9
Sawmills.....	8	8	11	14	5	4	4
Electrical apparatus and supplies.....	9	9	14	16	8	13	17
Cotton yarn and cloth.....	10	11	8	8	13	8	7

A prominent feature of Canadian manufacturing development in recent years has been the growth of non-ferrous metal smelting. This industry, based upon mineral resources, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources.

The incidence of the depression resulted in a re-arrangement in the rank of many industries which has already proved temporary in some cases. The suspension or curtailment of capital expenditures greatly reduced the output of such important industries as: sawmills, electrical equipment, automobiles, railway rolling-stock, primary iron and steel, machinery, etc. On the other hand, the demand for goods for immediate consumption was more stable, including such industries as: petroleum products, bakeries, cotton yarn and cloth, printing and publishing, clothing, tobacco, beverages, etc.

Since the statistics of the forty leading industries in 1937 were completed before this chapter went to press, they have been included here in Table 12A.

12.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1936.

Industry.	Establishments.	Capital.	Employees.	Salaries and Wages.	Cost of Materials.	Value of Products.	
						Net.	Gross.
	No.	\$	No.	\$	\$	\$	\$
1 Non-ferrous metal smelting and refining.....	15	143,858,717	10,015	14,346,050	154,604,285	71,276,645	229,737,420

### Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1936 amounted to \$2,411,000,000 or over 80 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coal-fields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had in 1936 the third largest gross manufacturing production, with 7.2 p.c. of the total, and Manitoba the fourth with 4.1 p.c. Alberta, Nova Scotia, New Brunswick, Saskatchewan, and Prince Edward Island followed in the order named.

#### Subsection 1.—The Manufactures of the Maritime Provinces, 1936.

Table 13 gives statistics of the leading industries in each of the Maritime Provinces in 1936. In Prince Edward Island the predominant fishery and agricultural resources make fish curing and packing, butter and cheese, and slaughtering and meat packing the leading manufactures of the province. Nova Scotia is renowned for its coal mines and its fisheries, but it has also extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron ore supply of Newfoundland. These resources give rise to its leading manufactures of primary iron and steel, fish curing and packing, pulp and paper, railway rolling-stock, and butter and cheese. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although manufactures of fish and agricultural products add to the varied output of the province.

<sup>1</sup> Net value is derived from gross value by deducting costs of materials, fuel, and electricity. <sup>2</sup> Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island, cotton and jute bags, sheet metal products, and fertilizers; in Nova Scotia, sugar refineries, cotton yarn and cloth, wire and wire goods, coke and gas, and petroleum products; in New Brunswick, sugar refineries, railway rolling-stock, and cotton yarn and cloth.

## Subsection 2.—The Manufactures of Quebec, 1936.

Among the assets of Quebec which have tended to develop manufacturing industries in the province, may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the province in nineteenth place in 1927. It was in second place in 1935 and 1936. The petroleum-refining industry has also expanded and risen in importance during about the same period.

The importance of the pulp and paper industry in Quebec is shown by comparison with the industry throughout Canada. The Quebec section of the industry, in addition to supplying about 10 p.c. of the total gross value of all products manufactured in the province, furnished 48 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed 69 p.c., the value of railway rolling-stock 46 p.c., the value of tobacco, cigars, and cigarettes 85 p.c., and the value of boots and shoes 58 p.c. of the Dominion totals for these products.

<sup>2</sup> Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published, since there are less than three establishments reporting.

**Subsection 3.—The Manufactures of Ontario, 1936.**

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1936 represented about 51.5 p.c. of the total for the whole Dominion, while that of Quebec, the second province in importance in this respect, amounted to about 29 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show: in 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c., 1890, 51 p.c.; and 1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia, and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible, has resulted in a greater development of the iron and steel industries in this province than in any other. The province is endowed with a wide range of natural resources of forests, minerals, water powers, and agriculture. Its large population and central position in Canada, with excellent water and rail transportation facilities to other parts of the country, have encouraged industrial development. Other factors in this development have been its proximity to one of the most densely populated sections of the United States and the establishment within the province of branch factories of United States industries as in automobile manufacturing.

The depression was particularly hard on industries producing capital or durable goods, and these constitute an important factor in the manufactures of Ontario. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted not only in a drop in the rank of such industries within the province, but in a lowering of the manufacturing production of the whole province relatively to that of other provinces less affected by these influences. Since 1933, however, these industries in general have made a good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1936 increased the relative value to 51.5 p.c.

Outstanding among industries in which the province of Ontario was pre-eminent, was that of automobile manufacturing, which was carried on practically in this province alone. Other important industries in which Ontario led, with the percentage which the production of each bore to that of the Dominion in 1936, were as follows: agricultural implements, 96 p.c.; leather tanneries, 89 p.c.; rubber goods, 81 p.c.; furniture, 61 p.c.; fruit and vegetable canning, preserving, etc., 70 p.c.; electrical apparatus and supplies, 77 p.c.; castings and forgings, 64 p.c.; primary iron and steel, 64 p.c.; slaughtering and meat packing, 42 p.c.; flour and feed mills, 55 p.c.; hosiery and knitted goods, 62 p.c.

## Subsection 4.—The Manufactures of the Prairie Provinces, 1936.

The leading industries of these provinces are those based on their agricultural resources—their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries serving the resident population such as bread and baking, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock. The widespread use of motor vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the three provinces as an economic group, slaughtering and meat packing had the largest gross production in 1936, amounting to \$52,500,000, followed

by flour milling with \$36,700,000, and butter and cheese with \$23,200,000. These three industries for the processing of the agricultural products of the provinces accounted for 45 p.c. of their total manufacturing production.

16.—Statistics of the Leading Industries of Manitoba, Saskatchewan, and Alberta, 1936.

Industry.	Estab- lish- ments.	Capital.	Em- ployees.	Salaries and Wages.	Cost of Materials.	Gross Value of Products. <sup>1</sup>

<sup>1</sup> See footnote 1 to Table 13.

<sup>2</sup> Other leading industries, individual statistics of which cannot be given because there are fewer than three establishments in each industry, are: Manitoba, pulp and paper and non-ferrous metal smelting and refining; Saskatchewan, non-ferrous metal smelting and refining; Alberta, sugar refining, wood preservation, and malt and malt products. The statistics of the three industries of Alberta are included under the heading "All other leading industries".

## Subsection 5.—The Manufactures of British Columbia,\* 1936.

British Columbia was, in 1936, the third most important manufacturing province in the Dominion with 7.2 p.c. of the total production. The rich forests have given the wood industries a pre-eminence in the province. Sawmilling, in 1936, accounted for 21 p.c. of the manufacturing production of the province and for nearly 57 p.c. of the total value of sawmill output in the Dominion. Further emphasising the importance of the forests in the industrial life of the province, the pulp and paper industry ranked third. Second in importance was fish curing and packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 61 p.c. of the total production of this industry in Canada. The varied resources of the province and its position on the Pacific coast have resulted in a good deal of diversification in its manufactures.

\*Includes Yukon.

## 17.—Statistics of the Leading Industries of British Columbia and Yukon, 1936.

Percentages of leading industries to totals of all industries.....	72.2	90.4	87.3	88.0	92.9	91.4

<sup>1</sup> See footnote 1 to Table 13.

<sup>2</sup> Includes other leading industries, statistics of which cannot be published, because there are fewer than three establishments in each industry. Such industries are: condensed milk, sugar refineries, wood preservation, non-ferrous metal smelting and refining, bridge and structural steel, and explosives, ammunition, and fireworks.

## TWENTY YEARS OF CANADIAN MANUFACTURING

### PURPOSE CLASSIFICATION 1937

### COMPARISON OF THE GROSS VALUES OF CONSUMPTION GOODS AND CAPITAL GOODS MANUFACTURED IN CANADA

## Section 4.—Principal Factors in Manufacturing Production.

### Subsection 1.—Capital Employed.

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1936 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$3,271,000,000 as compared with \$2,334,000,000 in 1917, an increase of 40 p.c. in 19 years, while wholesale prices have declined about 35 p.c. in the same period.

Wood and paper products was the leading group in 1936. Next in importance were the iron and its products and the vegetable products groups. It is interesting to note that in the case of the wood, iron, non-metallic mineral, and chemical groups the capital exceeded the gross value of products, while in the remaining groups the reverse was the case. These remaining groups, however, had relatively high material costs. By a comparison with Table 24, the non-metallic mineral group had the largest capital per wage-earner and also paid the highest average wage, but this relationship does not hold good in the case of all groups.

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportions of fixed and liquid assets. In 1924, land, buildings, machinery, and tools constituted 59 p.c. of the total capital; in 1929 the proportion was still 59 p.c.; in 1933 it was 66 p.c.; but in 1936 it had declined again to 63 p.c. The fixed assets amounted to \$2,062,000,000 in 1936, while current assets, including inventories of raw materials and finished products, bills and accounts receivable, cash, and sundries, were valued at \$1,210,000,000. Details by provinces and industrial groups are given in Table 19.

Subsection 2.—Employment in Manufactures.

The total number of persons engaged in those manufacturing industries of Canada for which statistics were obtained in 1936 was 594,359, as compared with 468,658 in the same industries in 1933 and 666,531 in 1929. The 1936 employees included 104,417 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 489,942 wage-earners, the average number employed as derived from the manufacturers' records of the numbers on the pay-rolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12 whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which were in operation only a limited

number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, not only in seasonal industries but also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method had a reducing influence on apparent average wages and on all other averages per wage-earner and per employee. In 1931, however, the old method of computing the average number of wage-earners was again adopted. A change was also made in the compilation of the number of salaried employees. Prior to 1931, owners who were working as ordinary wage-earners, such as small bakers, reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. In 1931, also, travelling salesmen who were attached to the plant and devoted all or the greater part of their time in selling the products of that plant were included with salaried employees. Prior to this they were not reported at all. These changes, therefore, explain the apparent increase in the number of salaried employees in 1931 as compared with the previous year; actually there was a decrease, this apparent increase being attributable in part to a decrease in the number of wage-earners.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table 20. Then, taking the percentages of the wage-earners and the total employees in each year to those of 1917, and dividing these percentages into the volume of manufacturing production in each year (see p. 388 for the index of volume), the quotients give tentative conclusions regarding the efficiency of production per wage-earner and per employee in years subsequent to 1917, as compared with that year. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of employees adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. The table illustrates the development of modern industry which has accomplished a large increase in production with a comparatively small increase in wage-earners, by better organization and the use of improved equipment. Capital invested in manufacturing industries has increased by 40 p.c. from 1917 to 1936, compared with a decrease of 9.5 p.c. in wage-earners, while the horse-power used per wage-earner has increased from about 3 in 1917 to 9 in 1936. The factor of better organization is not susceptible of measurement. However, salaried employees have increased 61 p.c. since 1917, or more nearly in proportion to the growth in production than wage-earners. The result of these developments has been the increase of 65.1 p.c. in the volume of production per wage-earner and a smaller increase of 52.4 p.c. per employee, owing to the increased proportion of salaried employees in the total. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices; it is possible that the sudden rise in the indexes of efficiency in 1921 and 1922 may be partly accounted for by the elimination of less competent workers in the contraction of industrial operations which occurred at that time. During the recent depression years the reduced volume of production lowered the indexes of efficiency.

**20.—Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-36.**

NOTE.—Figures in this table have been revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

<sup>1</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years. <sup>2</sup> The apparent increase in the number of salaried employees in 1931, at a time when the total number of employees decreased, is due to the following changes in method:—(a) Working proprietors, such as bakers, sawmill and feed-mill operators, were classed as salaried employees instead of wage-earners, as formerly had been the case; (b) Travelling salesmen who were attached to the plant and devoted all or the greater part of their time to selling the products of that plant were included with salaried employees. Prior to this they were not reported at all.

**Distribution of Employees in 1936.**—The percentages, by provinces and industrial groups, of employees on salaries and on wages are shown for 1936 in Table 21. The actual numbers upon which these percentages are based appear in Table 24. Interesting comparisons may be made with the distribution of capital appearing in Tables 18 and 19 and with that of values produced shown in Tables 2 and 3. In 1936, the 24,202 establishments covered, employed 104,417 salaried employees and 489,942 wage-earners, a total of 594,359 persons. Out of every 1,000 persons employed in manufacturing, 176 were classed as salary earners and 824 as wage-earners; the former earned 28.3 p.c. and the latter 71.7 p.c. of the total amount paid out as remuneration for services.

Ontario had a lower percentage of salaried employees and a lower percentage of wage-earners than its proportion of gross production (51.5 p.c.) or of net production (53.2 p.c.). In Quebec, on the other hand, the percentages of both salaried and wage-earning employees were higher than the proportions of gross (28.7 p.c.) and net (29.3 p.c.) production. The percentages of salaries were relatively high in both Ontario and Quebec, as these provinces contain the head offices of many large corporations with their salaried executives. In Ontario the percentage of female salaried employees was higher than that of the male, *i.e.*, it had a larger proportion of females among its salaried employees than the other provinces. The same was true of Quebec with regard to the wage-earners, due, no doubt, to the textile industries of Quebec.

The proportion of salaried employees was relatively high in the wood and paper group, while the proportion of wage-earning employees was high in the textile and the iron groups. The proportion of females to males among both salaried and wage-earning employees was high in the textile group. The vegetable products group also had a high proportion of female wage-earners, while the wood and paper, iron, and non-metallic mineral groups had very low proportions. It is of interest to note that out of every 1,000 wage-earners in the textile industries 541 were females, while in all the other groups 141 were females. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that out of all female wage-earners engaged in the manufacturing industries of Canada, 50.4 p.c. were found in the textile group.

**Monthly Record of Employment in Manufactures.**—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled from the Census of Industry, is given in Table 22 for representative years 1922 to 1936 and by sex for certain of the years. Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. In 1929, however, the rising tide of "good times" was checked about midsummer and then the recession set in during the autumn with the stock market crash. Employment during 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment was reached in June, 1929, when 575,693 wage-earners were on the payrolls. This compared with the peak month in 1933 of 410,954 wage-earners, 440,664 in 1934, 476,961 in 1935, and 511,072 in 1936. In

July, 1933, employment took an upward swing; for the first time since 1929 the number of wage-earners on the payroll was higher than that for the corresponding month of the previous year. The improvement has been generally maintained since then.

## 22.—Total Numbers of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and by Sex, for Representative Years 1922-36.

NOTE.—Figures in this table have been revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

**Hours Worked by Wage-Earners.**—The number of wage-earners working specified numbers of hours per week in the month of highest employment in 1932 to 1936 and in detail by provinces, industrial groups and in the forty leading industries for 1936 is shown in Table 23. An explanation should be made of the term "month of highest employment" as used in connection with this table. Each firm is required to report the number of hours per week worked by its wage-earners during the month in which the greatest number were employed. It therefore happens that, in the case of one firm, the month of highest employment might be May, while in that of another firm October might be the month of highest employment. The month of highest employment as shown in the following table, therefore, does not refer to any particular month but represents the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is of more significance, as in this case it coincides for a great number of the firms engaged in the same industry.

**23.—Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment from 1932 to 1935 and in Detail by Provinces, Groups, and the Forty Leading Industries, 1934.**

NOTE.—These are the regular hours worked per week and do not, therefore, include overtime. Totals for years prior to 1936 have been revised since publication of the 1938 Year Book.

<sup>1</sup> Figures not available.

The number of hours worked per week is affected both by business conditions and by changes due to government legislation and union demands. In times of depression the average number of hours per week is reduced, due to the policy of some employers of spreading the available work over as many employees as possible. With the return of better times the number of hours worked by each employee is naturally increased. This increase is, however, offset by the reduction in hours through legislative enactments and union agreements. The period of five years, for which the figures of Table 23 are available, is not long enough to establish a definite trend in the average hours worked.

For Canada as a whole, 36 p.c. of the wage-earners worked under 48 hours in 1936, 23 p.c. worked 48 hours, 19 p.c. worked between 49 and 54 hours, while 22 p.c. worked 55 hours or over.

### Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries.

The total salaries and wages disbursed by manufacturers in 1936 was \$612,071,434 paid to 594,359 workers, compared with \$777,291,217 paid to 666,531 persons in 1929 and \$497,801,844 paid to 606,523 persons in 1917. Of the 1936 aggregate, \$173,198,057 or 28.3 p.c. was paid to 104,417 salaried employees who constituted 17.6 p.c. of the total number, and \$438,873,377 or 71.7 p.c. was paid in wages to 489,942 wage-earners, who formed 82.4 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1936 was \$1,659, compared with \$2,007 in 1930 and \$1,315 in 1917, while the average wage in 1936 was \$896, compared with \$777 in 1933, \$1,042 in 1929 and \$762 in 1917. Thus during the nineteen years since 1917, average salaries have increased by 26 p.c., while average wages have increased by only 18 p.c. (See Table 25.)

**Average Earnings, by Provinces and Industrial Groups.**—In 1936, British Columbia showed the highest average salary of \$1,722, followed by Ontario with \$1,718, Quebec, \$1,631, and Manitoba with \$1,579. The head offices of many large corporations being located in Montreal, Toronto, Vancouver, and Winnipeg tends to raise the average salaries in the provinces in which these cities are situated. In the other provinces the averages were smaller, the lowest being in Saskatchewan. No regional tendency is observable in average salaries as shown by Table 24.

British Columbia, with average wages paid of \$1,055 per annum, was the highest in 1936, being \$159 higher than the general average. In the western provinces, average wages are usually higher, due to an unusually small proportion of women workers. In the four provinces situated to the east, average wages in manufacturing were lower than the mean for the Dominion, while from Ontario westward the opposite was the case. The seasonal nature of some of the leading industries, notably fish preserving and lumbering, tends to reduce the mean wage in the Maritime Provinces and Quebec, while, in addition to this, Quebec also has a larger proportion of female wage-earners (employed chiefly in the textile, food, and tobacco industries), than any other province except Prince Edward Island.

The highest average salary, *viz.*, \$1,866, was reported by the non-ferrous metal products group, while the animal products group, with an average salary of \$1,338 in 1936, was the lowest. In wages paid, the iron and the non-metallic groups were highest with an average of \$1,070, there being few female wage-earners in these groups. The textile industries, on the other hand, had the lowest average wage of \$715, due to the fact that in this group about 54 p.c. of the wage-earners were females. As is stated at the top of p. 421, of all the female wage-earners in the manufactures of Canada, over 50 p.c. found employment in the textile industries.

<sup>1</sup> Revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

**Average Earnings in the Forty Leading Industries.**—Table 25 shows employees by sex and the average salaries and wages paid in the forty leading industries during 1936, together with average salaries and wages paid in 1935. The rank of each industry is based on the aggregate salaries and wages paid.

In only nine industries did the average salaries exceed \$2,000; in six they ranged from \$1,800 to \$2,000; in sixteen they ranged from \$1,500 to \$1,800; while in the remaining nine they were below \$1,500. The lowest salaries were reported by the sawmilling, butter and cheese, and bread and other bakery products industries which include a large proportion of small establishments.

The highest wages, those above \$1,200, were paid in six industries—non-ferrous metal smelting and refining, \$1,330; printing and publishing, \$1,316; petroleum products, \$1,302; coke and gas products, \$1,298; automobiles, \$1,286; and pulp and paper, \$1,201—in all of which the proportion of skilled workers is probably high. In seven other industries average wages ranged from \$1,000 to \$1,200. In most of these industries the proportion of women workers is low. In thirteen other industries average wages ranged between \$800 and \$1,000, while in the remaining fourteen they were below \$800. This last group includes seasonal industries, such as fruit and vegetable canning, fish curing and packing, and industries which contain a large number of small units in which the work is intermittent, such as feed mills. Other industries with low average wages were: textiles, tobacco, and boots and shoes, in which the proportion of female wage-earners is high, the number in several of these industries being greater than those of the males.

25.—Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1936, together with Comparative Figures of Average Salaries and Wages Paid in 1935, and Totals and Averages Paid in Previous Representative Years.

NOTE.—Industries ranked according to the aggregate salaries and wages paid.

<sup>2</sup> See headnote to Table 36, p. 428.

**Real Earnings of Employees in Recent Years.**—When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 24.6 p.c. between 1917 and 1936. The details of the computation are given in Table 26. There was little change in real wages during the three years 1917 to 1920, when prices were rising rapidly. During the following two years, 1921 and 1922, when prices dropped rapidly, real wages increased by 5 p.c. From then until 1931 there was a definite and almost continuous upward trend. In 1931 real wages reached 119.1 and then declined to 112.7 in 1933 and rose again to 124.6 in 1936, the highest on record.

**26.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living, and Real Wages of Wage-Earners, in Manufacturing Industries, 1917-36.**

*NOTE.*—The averages of wage-earners and earnings for the years 1931 to 1936 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries. (See footnote 1 to Table 4.) Figures have been revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

Year.	Amount of Wages Paid.	Average Number of Wage-Earners.	Average Yearly Earnings.	Index Numbers.

<sup>1</sup> See headnote.

**Percentages of Wages and Salaries to Net Value of Products.**—Table 27 shows the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of wages and salaries, of interest, rent and taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage of salaries was highest in the years 1931 to 1936. These were years in which manufacturing production was curtailed and it is probable that, salaried employees being a part of the organization of an industry rather than of its productive force, salaries were an abnormally high percentage of the lower levels of production then prevailing. The percentage declined steadily with the increasing manufacturing production maintained during the period 1924 to 1929, while from 1931 to 1936, due to decreased

industrial activity, the percentage of salaries to value added was abnormally high. It should be borne in mind, however, that salaried employees increased 49 p.c. during the period 1924-36 while wage-earners increased but 17·2 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more readily adjusted to the activity of the industry and wage levels likewise more readily adjusted to the price levels of the products. The percentage of wages to the values added in manufacture was thus only 3·6 p.c. lower in 1936 than in 1924. The percentage was highest in 1920, when, in the post-war inflation, average wages were highest and the efficiency of production lowest (Table 20).

In previous reports on manufactures the percentage of wages and salaries paid to the value added by manufacture was carried back to 1917. Under the new method of calculating the value added, whereby the cost of materials plus fuel and electricity is deducted from gross values, it is possible to go back to 1924 only.

### 27.—Percentages of Wages and Salaries Paid to the Total Net Values of Manufacturing Production, 1924-36.

Note.—Figures in this table have been revised since publication of the 1938 Year Book; see headnote to Table 1, p. 379.

Year.	Value Added by Processes of Manufacture. <sup>1</sup>	Salaries Paid.	Wages Paid.	Percentage—

<sup>1</sup> Equivalent to "net value of products"; see footnote 1, Table 1, p. 379.

#### Subsection 4.—Size of Manufacturing Establishments.

A modern characteristic of industry in all industrial countries has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. Both measures are subject to two limitations: firstly, they depend on the fluctuation of business activity and the demand of the consumer; secondly, over any lengthy period of time there is the difficulty of comparability resulting from changes in the method of the census.

**Size as Measured by Gross Value of Products.**—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954 or 53 p.c., of the total. Due to the elimination of central electric stations, the figures since 1932 are not directly comparable with those for 1929 or 1922.

**28.—Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922, 1929, 1935, and 1936.**

Size of Establishments as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 it had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 p.c. (central electric stations included), With the recovery in production since 1933 the percentage has risen again and in 1936 stood at 24.4 p.c. The same also holds true for all establishments employing 101 hands or over. In 1923 they employed 58.6 p.c. of the total, in 1929, 61.9 p.c., in 1933, 55.7 p.c., and in 1936, 61.2 p.c.

**Size of Establishments of Some of the Leading Industries.**—The following statement and Table 32 show the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the cases of non-ferrous metal smelting, petroleum products, automobiles, slaughtering and meat packing, pulp and paper, and cotton yarn and cloth, whereas in the cases of butter and cheese, and sawmills, the degree of concentration is low. With regard to flour and feed mills, concentration is marked in the case of flour mills, but the small size of the average feed mill offsets this for the industry as a whole.

**PERCENTAGE IMPORTANCE OF ESTABLISHMENTS, EACH WITH A GROSS PRODUCTION OF \$1,000,000 OR OVER, IN CERTAIN INDUSTRIES,<sup>1</sup> 1936.**

Industry.	Number of such Establishments.	Percentage to Total Number in the Industry.	Percentage of Total Production in the Industry.
Non-ferrous metal smelting.....	15	100	100
Pulp and paper.....	54	88	93
Slaughtering and meat packing.....	35	25	91
Flour and feed mills.....	20	1.8	64
Butter and cheese.....	9	0.3	13

## Subsection 5.—Power and Fuel.

**Power.**—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is increasingly dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

### 33.—Totals for Canada of Power Installed in the Manufacturing Industries, 1922-35, with Details by Provinces and Industrial Groups, 1936.

NOTE.—Figures in this table have been revised since publication of the 1938 Year Book; see headnote to Table I, p. 379.

\* Not available.

\* None reported.

Central electric stations, which generate electricity for sale for both lighting and power purposes have been eliminated from the manufacturing statistics and, therefore, are not included in Table 33. Internal combustion engines include all gasoline engines, gas engines (natural, coal, and producer gas), and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

The great increase since 1923 in the power equipment of manufacturing industries has been in electric motors operated by power purchased from central electric stations. Nearly 96 p.c. of the power installation of these stations is water power (see Water Powers chapter, p. 364). However, some sections of Canada are not so well provided with water power and in such sections primary power derived from steam engines and turbines and internal combustion engines has also increased rapidly during the period covered. In the provinces of Prince Edward Island, Nova Scotia, Saskatchewan, and Alberta, power produced from fuels is an important factor. The total installation of electric motors increased 2,190,387 h.p., or 167 p.c. in the 13 years from 1923 to 1936, by far the greatest part of this increase being in motors operated by power purchased from central electric stations.

Of the total power equipment installed in the manufacturing industries (Table 33), it will be seen that approximately 50 p.c. is used in the manufacture of wood and paper products; the next group in importance is iron and its products, which accounts for a little over 15 p.c.; non-ferrous metal products is third with 10.3 p.c. Together, these three groups account for about 75 p.c. of such installation.

**Fuel and Electricity.**—Fuel is used quite generally throughout the industrial field for the generation of power by means of steam and internal combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to the materials to facilitate or accomplish the desired transformation are foundries and machine shops, brick, tile, lime, and cement making, petroleum refining, the glass industry, distilleries, food preparation, rubber goods, etc. Fuel used for such heating purposes, as well as for power, is included in the figures of Table 34. In addition to the electricity used for ordinary power purposes, the figures include also the electricity used for heating boilers in the pulp and paper industry. Consumption of surplus energy in electric boilers has increased rapidly in recent years.

The figures of the table do not include fuel charged in furnaces in metallurgical operations as in the iron and steel industry and in non-ferrous metal smelting. Neither do they include fuels which constitute the raw materials to be transformed as coal in the coke and gas industries and crude petroleum in the refining industry. Electricity used in metallurgical processes as in the electrolytic refining of non-ferrous metals is also excluded.

The value of fuel consumed was \$53,790,000 in 1924, \$60,564,000 in 1929, and \$44,816,000 in 1936. The value was, therefore, lower in 1936 than in 1924. The quantity of bituminous coal, the principal fuel consumed, declined by 17 p.c. and its value by 28 p.c. The cost of electricity, on the other hand, has increased during the same period by 134 p.c. and there has been a decline in the average unit cost of electricity as there has been in the case of fuels. According to Table 4, of the Water Powers chapter, p. 364, the revenue of central electric stations from the sale of power, per kilowatt hour generated, has declined by 33 p.c. from 1924 to 1936. Out of a fuel account of \$44,815,665, Ontario's requirements cost \$22,550,167 or 50.3 p.c. of the total; Quebec's cost \$12,066,700 or 27 p.c.; Nova Scotia's \$2,691,890; and British Columbia's \$2,676,212.

### 34.—Fuel and Electricity Used in the Manufacturing Industries of Canada, 1922-35, with Details by Provinces and Groups, 1936.

NOTE.—Figures in this table have been revised since publication of the 1938 Year Book: see headnote to Table 1, p. 379.

<sup>1</sup> Including gasoline and kerosene.

<sup>2</sup> Cost of electricity not available.

<sup>3</sup> Does not include the cost of electricity.

The groups of industries in which fuel was most extensively used in 1936 were: wood and paper \$10,355,511, non-metallic minerals \$9,603,766, iron and steel products \$8,835,960, and vegetable products \$6,264,720.

The wood and paper products group is the largest user of electric power, the consumption in 1936 being 45.1 p.c. of the total cost of power used by all manufacturing industries. The iron and its products group ranks second with only 11.6 p.c. of the total. Other principal users were non-ferrous metal products, vegetable products, and textiles.

In the provinces of Quebec and British Columbia the cost of electricity exceeded that of fuel. The expenditure of Quebec, which is the largest user of electric power, represented 43.5 p.c.; and British Columbia, 9.9 p.c.

### Section 5.—Manufacturing Industries in Cities and Towns.

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the West the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 35, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for over 90 p.c. of the total, while in British Columbia and the Maritime Provinces, where sawmilling, fish packing, and dairying are leading industries, the proportion falls to about 69 p.c. In the Prairie Provinces manufacturing is confined largely to a few large urban centres.

#### 35.—Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1936.

Note.—Statistics published in this table are in some cases higher than the figures published in Table 37, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information in Table 37 without disclosing the operations of individual establishments.

Province.	Cities and Towns with a Gross Production of over \$1,000,000 each.	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each.	Total Production in Cities and Towns Producing over \$1,000,000 each.	Total Production in each Province.	Production in Cities and Towns as a Percentage of Total Production in each Province.

The six chief manufacturing cities of Canada in 1936 were: Montreal, Toronto, Hamilton, Windsor, Vancouver, and Winnipeg. Montreal proper exceeded Toronto proper by a slight margin. Greater Montreal was also ahead of Greater Toronto and continued to be the leading manufacturing area in the Dominion. According to the Census of 1931, Hamilton was proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully occupied population was employed in manufacturing. The amalgamation of the border cities to form the present city of Windsor did not occur until 1934, but the original city of Windsor at the time of the Census of 1931 had 34 p.c. of its gainfully employed population engaged in manufacturing. Toronto had 28 p.c., Montreal 27 p.c., Winnipeg, 18 p.c., and Vancouver 16 p.c.

Nineteen other important cities with a gross production of manufactured goods of over \$15,000,000 in 1936 were as follows, in descending order of the value of their products: Montreal East, Oshawa, London, Kitchener, Quebec, Calgary, Peterborough, Ottawa, Three Rivers, Brantford, Edmonton, Sarnia, St. Boniface, New Toronto, Niagara Falls, St. Catharines, Cornwall, Saint John, and Welland. Statistics of manufactures of cities and towns with a gross production of \$1,000,000 or over and with three or more establishments are given for 1936 in Table 37.

### 36.—Principal Statistics of the Manufacturing Industries of the Six Leading Manufacturing Cities of Canada, 1932-36.

NOTE.—The dyeing, cleaning and laundry industry is included for the years prior to 1936.

## CHAPTER XV.—CONSTRUCTION.

### Relation of Construction Industry to General Business Conditions.—

The construction and building industry is not only the most widespread in its operation, it is one which expands most rapidly in good times when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed as the result of the introduction of new types of construction. Nevertheless, in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

Activity in construction is of particular interest not only to those engaged in the industry itself but to those concerned with supplying raw materials, such as lumber, steel, cement, paint, glass, and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913 and that between 1926 and 1929, construction contributed in large measure to produce the 'booms' of those years, as is indicated in the figures of Table 9.

During the War period the industry was at a low ebb, except for the construction of munition plants, but after the War the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table 12. The urgent requirements due to the practical suspension of the industry during the War were fully met in the post-War years, but the peak of the inflation cycle in 1929 was reflected in the highest value of construction contracts on record. This was followed by successive declines until 1933,\* when the industry reached a very low level of activity. There was some recovery in 1934-36 and a further increase of about 37 p.c. in 1937, but a decrease of 16.5 p.c. is shown for 1938. However, a very great deficiency in housing and other forms of construction must still remain from the suspension of activity during the depression years, to be overtaken when confidence is restored in the future stability of prices and the permanence of the recovery. To facilitate and encourage this process, the Dominion Housing Act was passed in 1935.

**Dominion Housing Act, 1935.**—Prior to August, 1938, loaning facilities to assist in the construction of new homes were provided under the Dominion Housing Act, 1935 (see pp. 473-474 of the 1938 Year Book). More extensive facilities of a similar nature are now provided under Part I of the National Housing Act as described below.

**National Housing Act.**—Administered by the Department of Finance, the National Housing Act, 1938, has a twofold purpose: (1) to assist in the improvement

\* October, 1933, marked the lowest point of activity in this industry.

of housing conditions; and (2) to assist in the absorption of unemployment by the stimulation of the construction and building material industries. The Act is comprised of three separate parts.

PART I re-enacts the main features of the Dominion Housing Act, 1935, with important amendments designed to encourage the construction of low-cost houses and the extension of lending facilities to the smaller and more remote communities. The Minister is empowered to make advances and pay expenses of administering this Part to the extent of \$20,000,000, less advances already made and administrative expenses already incurred under the Dominion Housing Act which amounted to approximately \$5,500,000. All loans are made through approved lending institutions. Loans may be for an amount not exceeding 80 p.c. of lending value of the property. Where lending value is \$2,500 or less and the house is being built for an owner-occupant, loans may be for an amount not exceeding 90 p.c. of such lending value. The equity of at least 20 p.c. or 10 p.c., respectively, is to be provided by the borrower. Provision is also made for loans ranging between 70 p.c. and 80 p.c. when the lending value exceeds \$2,500, and for loans ranging between 50 p.c. and 90 p.c. when the lending value does not exceed \$2,500. In order to encourage the extension of the Act to the smaller and more remote communities, and to special areas in the larger centres, the Minister is authorized to guarantee approved lending institutions against loss up to an amount not in excess of 25 p.c. of the total amount of such loans made by each such lending institution. The Minister has entered into contracts with various lending institutions under which guarantees are given running from a minimum of 7 p.c. to a maximum of 25 p.c., based on the total amounts and classes of loans made by the lending institutions. The interest rate paid by the borrower on all loans made under Part I is 5 p.c. This is made possible by the fact that the Government advances one-quarter of the total mortgage money on an interest basis of 3 p.c. Loans are made for a period of 10 years subject to renewal for a further period of 10 years upon revaluation of the security and on conditions satisfactory to all parties concerned. Interest, principal, and taxes are payable in monthly instalments. Amortization of principal over 20 years is provided for, but more rapid amortization may be arranged to suit the borrower. Sound standards of construction are required.

The results of operation under the Dominion Housing Act (October, 1935-July, 1938, inclusive), and the National Housing Act to the end of December, 1938, are as follows:—

PART II of the National Housing Act is designed to assist local housing authorities, including limited dividend housing corporations, to provide decent, safe, and sanitary housing to be rented to families of low income who cannot afford the "economic rental" for such accommodation which is 9½ p.c. of the cost of construction plus the taxes which would ordinarily be levied on the property by the municipality. The Dominion is authorized to make first mortgage loans to local housing authorities up to a maximum amount of \$30,000,000, but loans to any one municipality must not exceed the proportion of \$30,000,000 which the population of the municipality bears to the total urban population of Canada, based on the 1931 Census. Loans of 80 p.c. of the cost of construction (including cost of land, building, architectural and legal expenses, and any other expenses necessary to complete the project), but not exceeding \$2,400 per family unit, may be made to limited dividend housing corporations organized to construct, hold, and manage houses built as a low-rental housing project, and dividends on the shares of which are limited to 5 p.c. annually. Loans of 90 p.c. of the cost of construction, and not exceeding \$2,700 per family unit, may be made to other local housing authorities. Interest is at 1½ p.c. in the case of limited dividend corporations, and 2 p.c. for other local housing authorities. Payments are made half-yearly covering principal and interest so as to amortize the loan in approximately 35 years. The municipality must agree not to levy taxes in excess of 1 p.c. of the cost of construction. Loans to local authorities other than limited dividend housing corporations are to be guaranteed as to principal and interest by the government of the province concerned.

PART III authorizes the Minister of Finance to pay the municipal taxes (including general real estate tax and school taxes but excluding special taxes and local improvement charges) levied on a house costing \$4,000 or less, the construction of which begins between June 1, 1938, and Dec. 31, 1940, as follows: 100 p.c. of such taxes for the first year in which the house is taxed; 50 p.c. for the second year; and 25 p.c. for the third year. The chief conditions to be complied with are: (1) the municipality in which the house is erected, if it owns lots suitable for residential purposes, must make a satisfactory offer to sell a reasonable number of such lots at not more than \$50 per lot, or at not more than the lowest price at which the municipality may sell such lots, to persons who agree to begin the construction of houses for their own occupation within one year from the respective dates of purchase. Any new house is eligible for tax assistance, and not only houses built on lots sold by the municipality; (2) the cost of construction of the house including land, building, architectural and legal expenses, must not exceed \$4,000; (3) finally, the house must be a single-family house, built for a person for his own occupation.

**The Government Home Improvement Plan.**—Although operative, by agreement between the Dominion Government and lending institutions, since Nov. 1, 1936, the Home Improvement Plan derives its legislative sanction from "An Act to Increase Employment by Encouraging the Repair of Rural and Urban Homes", assented to on Mar. 31, 1937. The object of the legislation is clearly indicated in its title. The method adopted is to stimulate the advance of money for home repair and improvement by a government guarantee up to 15 p.c. of the aggregate amount loaned under the Plan by each approved lending institution.

The Plan, which is administered by the Department of Finance, was first sponsored by the National Employment Commission, and the Commission, at the request of the Government, undertook to advance it by all possible methods. Voluntary co-operative committees, provincial and local, were set up in every province. Through the co-operation of Canadian industry, an extensive publicity and advertising campaign was initiated and carried on without cost to the Government. Explanatory booklets and leaflets in both languages were distributed extensively throughout the Dominion, speeches and radio broadcasts were utilized, and in a number of cities, home improvement exhibitions designed to emphasize the desirability of house repair and modernization were held. From time to time statements indicating the increase in loan totals were issued by the Department of Finance.

The Plan provides for the making of loans by chartered banks and other approved lending institutions to owners of residential property (including farm buildings) for repairs, alterations, and additions (including built-in equipment) to urban and rural dwellings. Loans may be made up to a maximum of \$2,000 on any single-family house. In the case of a multiple-family dwelling the maximum amount which can be borrowed is \$1,000, plus \$1,000 for each family unit provided for in the building when the repairs or improvements are completed. The limit of time allowed for the payment of a Home Improvement loan is three years for a loan of \$1,000 or less, and five years for a loan exceeding \$1,000. Payment may be made in equal monthly instalments or in such other instalments as are adapted to the financial circumstances of the borrower. The maximum charge must not exceed a rate of discount of 3½ p.c. for a one-year loan, repayable in equal monthly instalments. This is equivalent to an effective interest rate of 6.32 p.c.

The limit of the aggregate loans is \$50,000,000 and the limit of the Government's guarantee is therefore \$7,500,000.

Loans made under the Government Home Improvement Plan to the end of 1938, by provinces, were as follows:—

**2.—Loans made under the Government Home Improvement Plan, by Provinces, 1936-38.**

### Section 1.—The Annual Census of Construction.

The annual Census of Construction undertaken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken by contractors, builders, and public bodies throughout Canada but does not include maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities when such work is done by the employees of these concerns in the ordinary way. Nor can it include a substantial amount of construction in the aggregate done by farmers and other individuals performing work on their own structures who might be otherwise unemployed. It is doubtful whether a great deal of the work of railways and utilities is construction in the sense understood in the census: for instance, the routine "maintenance of way" expenditures, so far as they relate to inspection work, are not construction, although so far as they concern re-building of line for road bed or structures they might be said to fall in that category.

The following statement gives an idea of the volume of such work carried on by steam and electric railways alone. If only one-fifth of this is taken as applicable to construction proper, then the figure for 1937 to be added to the census figures given later on would be about \$27,500,000, but, as pointed out, there are also telegraph and telephone systems as well as other utilities, and farmers and others working on own account to consider. The reader will therefore appreciate the limitations of the census figures given in Tables 3-6, as indicating, as explained, construction, maintenance, and repair work undertaken by contractors only.

#### EXPENDITURES BY STEAM AND ELECTRIC RAILWAYS ON MAINTENANCE OF WAY AND STRUCTURES, AND MAINTENANCE OF EQUIPMENT, 1934-37.

Item.	1934.	1935.	1936.	1937.
	\$	\$	\$	\$
<b>Steam Railways—</b>				
Maintenance of way and structures.....	53,502,807	55,250,291	60,378,275	58,309,150
Maintenance of equipment.....	54,004,990	57,424,860	63,755,028	73,166,522
<b>Totals.....</b>	<b>107,507,797</b>	<b>112,674,951</b>	<b>124,133,303</b>	<b>131,475,672</b>
<b>Electric Railways—</b>				
Maintenance of way and structures.....	2,486,521	2,435,644	2,654,875	2,561,156
Maintenance of equipment.....	2,889,868	2,966,127	3,179,552	3,276,960
<b>Totals.....</b>	<b>5,376,389</b>	<b>5,401,771</b>	<b>5,834,427</b>	<b>5,838,116</b>
<b>Grand Totals.....</b>	<b>112,884,186</b>	<b>118,076,722</b>	<b>129,967,730</b>	<b>137,313,788</b>

Further, no relationship exists between the total value of construction as shown below, and the value of contracts awarded as indicated in Table 9 of Section 2, p. 451. In the latter case all values are included as soon as awards are made irrespective of whether the contract is completed or even begun in that year, whereas the tables below cover construction work carried on and actually performed in the calendar year.

**Industrial Statistics of Construction.\***—A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935 so that with the completion of the 1937 figures comparable statistics are now available covering the years 1935-37. In Table 3, principal statistics of the construction industry are summarized for the three years.

\* Revised by F. I. Tanner, Chief, Construction Statistics Branch, Dominion Bureau of Statistics.

Table 6 classifies the various types of construction carried out in 1937. The item "trade construction" covers such items as brick laying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information on the industry than it is possible to include in the limited space available here, will be found in the Bureau's report on the construction industry for 1937.

### 6.—Description, Classification, and Value of Construction in Canada, 1937.

NOTE.—Comparable figures for 1935 and 1936 are given in the corresponding table of the 1937 and 1938 Year Books.

Tables 7 and 8 show the employment and wage-earnings for the construction industry. The employment figures, shown on a monthly basis, reflect the fact that, while the industry is seasonal in nature, it is not as decidedly so as is sometimes thought; this is noted especially when the statistics for the period 1935-37 are studied. The month of highest employment in the industry as a whole, in 1937, was September with 194,211 wage-earners and the lowest was February with 58,046.

### 7.—Average Monthly Employment of Wage-Earners and their Remuneration, by Groups and Months, 1937.

NOTE.—Comparable figures for 1935 and 1936 are given in the corresponding table of the 1937 and 1938 Year Books.

**Section 2.—Contracts Awarded and Building Permits.**

In this section barometric statistics are given of work actually in sight as contracts awarded and building permits. These figures are related to the figures of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done. Obviously, these statistics and those of Section 1, cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and, especially as regards big contracts, extends into more than one year. The figures here given are, therefore, supplementary to those of Section 1 and are valuable as showing from year to year the work immediately contemplated during the period.

A record of contracts awarded during the years 1911-38, as compiled by MacLean Building Reports, Ltd., is given in Table 9. The aggregate for 1938 was less by 16.4 p.c. than the 1937 figure. Table 10 shows, in some detail, the value of the construction contracts awarded in the latest six years.

Engineering contracts accounted for 28.2 p.c. of the total value of the contracts awarded in 1938, residential buildings for 29.4 p.c., industrial buildings for 8.5 p.c., and business buildings for 33.9 p.c. As compared with 1937, residential building showed a decrease of 2.1 p.c. in value, engineering projects of 32.7 p.c., industrial construction of 52.7 p.c., while business construction increased to the extent of 14.5 p.c.

**Building Permits.**—The estimated value of construction in 58 cities of Canada, as indicated by their building permits, is shown for the years 1933 to 1938, inclusive, in Table 11. These cities had in 1931 about 36 p.c. of the population of Canada while their 1938 building permits aggregated \$60,817,332 or 32.5 p.c. of the total contracts awarded, as shown in Table 9. In Table 11, the 35 cities for which statistics of building permits are available since 1910 are indicated by an asterisk (\*), and the totals for these cities are given beneath the totals for the wider group.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North Vancouver in the case of Vancouver. South Vancouver and Point Grey were annexed to Vancouver as from Jan. 1, 1929.

The construction contracts in 1938 as shown in Table 10 declined by 16.4 p.c. compared with 1937, but the building permits of 58 cities in Table 11 increased by 8.9 p.c. In connection with this comparison, it may be noted that the contracts awarded for residential building declined by only 2.1 p.c. in 1938, while there was an increase of 14.5 p.c. in the value of the business buildings for which construction contracts were let. These classes figure prominently in the building authorizations of the cities.

## 11.—Values of Building Permits Taken Out in 58 Cities, calendar years 1933-38.

Note.—Asterisks indicate the 35 original cities, statistics for which are available since 1910.

Table 12 shows the values of the building permits issued by 35 cities in the years 1910-38. The average weighted index numbers of wholesale prices of building materials since 1912 are given, together with index numbers of employment in the construction industries as reported by employers since 1920, both these indexes having been compiled by the Dominion Bureau of Statistics. The average index numbers of wages in the building trades since 1910, as compiled by the Department of Labour, are also given. These indexes show as far as possible the fluctuations in building costs with their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. However, the results of a survey made in 1934 and published in "Building in Canada" (June, 1934) showed that in fifteen cities the average proportions in all types of construction were 63.6 p.c. for materials and 36.4 p.c. for labour. The reduction in the cost of building operations in the depression years has probably been much more than is indicated by the declines in the indexes of wholesale prices and wages from the relatively high averages shown since the Great War.

**Employment in Building Construction, and Average Annual Expenditure, 1911-38.**—The Dominion Bureau of Statistics makes current surveys of the employment afforded by industrial establishments normally employing 15 persons or over. The index of employment in building construction, calculated upon the 1926 average as 100, from data furnished by some 800 employers, averaged 60.1 in 1938; this was the same as in 1937, while in 1936 the index had been 55.4. The 1937 and 1938 figure was higher than in any other year since 1931.

Over the period 1911-38, inclusive, or since the beginning of MacLean's record of construction contracts awarded as shown in Table 9, p. 451, there has been an average annual per capita expenditure on construction of about \$29. The period covered includes, of course, the War years and the depression since 1930, as well as the booms of 1911-13 and 1926-30. This average, consequently, is not unreasonably high. For the present population, the annual total of construction, on the basis of this average, should amount to over \$330,000,000. Furthermore, there is undoubtedly an accumulated deficiency in construction from the recent years of subnormal activity. Some idea may be gained, therefore, of the part which the normal functioning of the construction industry might play in the reduction of unemployment.

## CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings: value and quantum\* of world trade (including Canada's position in world trade); historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries; principal commodities imported and exported; trade in raw and manufactured products; main historical tables and tables showing current trends (Tables 1 to 21); and comparison of the volumes of imports and exports (Table 22). The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

### Section 1.—The Development of Tariffs.

The development of tariffs as affecting Canada is here outlined under two divisions: first, a historical sketch showing phases in the growth of Canadian trade which have influenced tariff development; and second, the present tariff relationships with other countries. Owing to the limitations of space in the Year Book, it is impossible to go into detail with such an intricate matter as tariffs. It has therefore been necessary to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

#### Subsection 1.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on, by Governments permeated by the mercantile spirit, for "ships, colonies, and commerce" Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering State arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the

\* The term "quantum" is commonly used in international discussions of trade. For this reason it is retained in the analyses of international trade made here although, in line with the common practice in Canada, "volume" is used in the discussion of Canadian trade in Subsection 10.

merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal, for the most part returned to France, and the trade of the Colony fell into the hands of the traders from England, Scotland, and New England, who had flocked into the country on the heels of the invading armies. Some of their descendants are still among the leading figures in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was, however, a factor which could not be permanently ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 the United Kingdom made large concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, Nova Scotia, and New Brunswick, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government and, coming at a time when all important parties in the United Kingdom had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials and import from the United Kingdom the manufactured commodities which they required.

**The Abolition of Preference and the Reciprocity Treaty of 1854.**—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent opening of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction between the United Kingdom and the United States during the Civil War period, and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the

ten-year period for which it had been negotiated and ceased to operate 12 months later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent consume each other's products.

**Tariff Policy since Confederation.**—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became coterminous with British North America, the area of internal free trade was thereby extended, while protection against outside competition was generally maintained. However, the protective tariff of the old Province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the world-wide depression which commenced in 1873, and the consequent falling-off in a revenue based upon trade, necessitated an increase of the general rate to 17½ p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from 17½ p.c. to 20 p.c., the rates on cotton goods from 17½ p.c. to rates, specific and *ad valorem* equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper, and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods, and woodenware, to 25 p.c. Pig iron, previously free, now paid \$2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and 17½ p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards, but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, binder twine, barbed wire, pig iron, flour, and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This reciprocal tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India. Belgium and Germany, in virtue of their trade treaties with the United Kingdom, were also admitted to the benefits of the reciprocal tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunisia, and Venezuela, on account of most-favoured-nation treaties between these countries and the United Kingdom, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the reciprocal tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga, and Spain under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation

by the United Kingdom of her most-favoured-nation treaties with Germany and Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and later of a remission of 33½ p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

### Subsection 2.—Tariff Relationships with Other Countries.\*

Tariff relations between Canada and other countries are governed by: (1) application to Canada of some old commercial treaties of Great Britain; (2) participation in commercial treaties of Great Britain by Canadian Acts of Parliament; (3) Canadian Conventions of Commerce or Trade Agreements; (4) Exchange of Notes respecting reciprocal tariff concessions; (5) British preferential rates granted by the Tariff Act; (6) power of extending, by Orders in Council, British preferential or lower rates, intermediate rates, or other reduced duties as compensation for concessions received; (7) authority to impose a surtax on goods from a foreign country whose tariff discriminates against Canadian goods.

### EMPIRE COUNTRIES.

**Empire Preferences.**—The Tariff Act assented to June 13, 1898, by which Canada replaced the Reciprocal Tariff of the year before by a purely British Preferential Tariff, specifically granted the benefit of the new preferential duties to the United Kingdom, Bermuda, British West Indies, and British Guiana. A provision whereby the benefit could be extended to any British possession whose tariff was equally favourable to Canada was at once invoked to give the preferences to British India, Ceylon, Straits Settlements, and New South Wales. In 1904 these preferences were extended to New Zealand, to the colonies now comprising the Union of South Africa, and to Southern Rhodesia, all of which, about that time, had granted newly introduced preferences to Canada. All these countries, except New South Wales, which had ceased to be a separate customs area, were named in the Tariff Act of Apr. 12, 1907 (still in force, in amended form), as being entitled to British preferential rates. The British preference margin, which had been increased in 1900 from one-quarter to one-third, remained at approximately one-third in the 1907 revision, but has since been much varied and enlarged. The 1907 Tariff contains three columns—British Preferential, Intermediate, and General. Sec. 4 of the Tariff Act empowers the Governor in Council to extend British preferential rates, intermediate rates in whole or in part, or most-favoured-foreign-nation treatment to any part of the Empire or British mandated territories.

British preference has been extended to many new areas under Sec. 4. (See p. 520 of the 1934-35 Year Book.) The year 1937 witnessed its further extension (Order in Council Sept. 29, 1937) to Malta, Gilbert and Ellice Islands, British Solomon Islands Protectorate, Nauru, Papua, and Norfolk Island. The Intermediate Tariff was extended to Hong Kong as from Feb. 4, 1933. Orders in Council were passed which accorded most-favoured-foreign-nation treatment to the United Kingdom and the Union of South Africa on July 19, 1935; to Australia and New Zealand on Aug. 21, 1935; to the British West Indies on Oct. 20, 1936; to all the non-self-governing British colonies and protectorates, Palestine, Tanganyika territory, and the territories of Togoland and Cameroons under British Mandate on

\* Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

Sept. 29, 1937. Ireland is similarly favoured due to the fact that her Trade Agreement with Canada guarantees to her duties as low as apply to the United Kingdom.

Either by means of the Tariff Act or Trade Agreements with the United Kingdom, Ireland, Australia, New Zealand, Union of South Africa, and British West Indies, Canada now accords her British Preferential Tariff, or lower rates, to almost the whole Empire, including British protectorates and mandated territories. In addition, the products of the Newfoundland fisheries are declared by Sec. 8 of the Tariff Act to be free of customs duty until otherwise determined by Order in Council.

Reciprocal concessions in Empire markets are widespread. Nearly all Canadian products are given tariff preferences when entering Great Britain and Northern Ireland, Australia, New Zealand, British West Indies, Bermuda, British Guiana, British Honduras, Fiji, Northern Rhodesia (Zambesi Basin), Gambia, Sierra Leone, Seychelles, British Somaliland, St. Helena, Western Samoa, British Protectorate of Tonga, British Solomon Islands, Gilbert and Ellice Islands, Cyprus, Channel Islands, and Isle of Man, while Southern Rhodesia, Mauritius, Ceylon, and Malta grant preference to most Canadian goods. To a considerable extent tariff preference is granted to Canadian goods in Ireland and Union of South Africa; also, on some goods, in the Federated and Unfederated Malay States, British North Borneo, Sarawak, Brunei, and Cayman Islands. Empire motor cars enjoy preference in Hong Kong and the Straits Settlements; spirits, wines, malt liquors, and tobaccos in Gibraltar; and wines in the Falkland Islands.

**United Kingdom.**—Canada has granted to the United Kingdom her British Preferential Tariff since its inception in 1897. The United Kingdom, in 1919, introduced preferences for Canada and the rest of the Empire on the limited number of products then comprising her tariff. In subsequent years, with expansion of the tariff, Empire preferences in the United Kingdom extended to more commodities. (See pp. 521-522 of the 1934-35 Year Book.) The Import Duties Act, effective Mar. 1, 1932, imposed a duty of 10 p.c. *ad valorem* on all non-Empire goods not already dutiable or specifically exempted. On the report of an Advisory Committee created by the Act the general rate was increased within two months on many manufactured articles to 15, 20, 25, 30, or 33½ p.c. Less comprehensive Orders issued from time to time have made further increases or changes. The Act exempted products of the Colonial Empire altogether and exempted products of the Dominions, India, and Southern Rhodesia until Nov. 15, 1932. A Trade Agreement between Canada and the United Kingdom signed on Aug. 20, 1932, extended the period of exemption of Canadian goods (see p. 486 of the 1936 Year Book) for five years. The 1932 Agreement was superseded by one signed Feb. 23, 1937, which renewed exemption of Canadian goods from the Import Duties Act, or any other duties not already applicable, with the qualification, as in the previous Agreement, that the United Kingdom, after notification, may impose duty (preferential) on Canadian eggs, poultry, butter, cheese, and other milk products, or in consultation with the Canadian Government may regulate supplies. The United Kingdom granted specified preferences on Canadian wheat, copper, lead, zinc (conditional on Empire producers supplying the demand at world prices); butter, cheese, raw or canned apples, pears, eggs, processed milk, honey, fish, timber, asbestos, and patent leather. The preference margin on Canadian natural silk hosiery was increased, the rate on motor cars and parts stabilized, the duty on reed organs removed, and a fixed preference on tobacco assured until Aug. 19, 1942. Canada obtained the benefit of all British Preferential Tariffs in the Colonial Empire and also exchanged specific preferences with certain colonies. Canada conceded to the United Kingdom reduced

duties under 179 tariff items, gave assurance of no upward revision of existing preferential rates under 246 items, and in the case of 91 items (mainly products of a class not made in Canada), undertook that margins of preference would not be reduced. (See p. 489 of the 1938 Year Book.) The 1937 Agreement was approved by the Canadian Parliament on Mar. 31, 1937, implemented by the United Kingdom Budget of Apr. 20, 1937, and formally proclaimed in force from Sept. 1, 1937. It is to remain in force until Aug. 20, 1940, and afterwards until terminated on six months' notice.

To facilitate conclusion of a United Kingdom-United States Trade Agreement signed Nov. 17, 1938, Canada, Australia, New Zealand, the Union of South Africa, Newfoundland, and India consented to certain modifications of their rights under their existing trade agreements with the United Kingdom, Canada agreeing to cancellation of the 3 pence per bushel preference on wheat, seasonal reduction of preference on apples and pears, and some reduction of preference on canned apples, honey, chilled or frozen salmon, certain timber, and patent leather, as well as to certain changes in Colonial preferences. Similarly, the United Kingdom and the Union of South Africa consented to modification of preferences guaranteed to them by Canada to facilitate a new trade agreement between Canada and the United States, also signed Nov. 17, 1938.

**Ireland.**—Ireland at its inception in 1923 as the Irish Free State, granted Canada any preferential rates in force, and in return received the benefit of the British Preferential Tariff. A formal Trade Agreement between Canada and Ireland, signed Aug. 20, 1932, secured for all goods the produce and manufacture of Canada, the benefits of the lowest rates of duty accorded to similar products of any country. In return, goods the produce or manufacture of Ireland, when imported into Canada, were to be accorded the same tariff treatment as similar goods imported from the United Kingdom.

**Australia.**—A Trade Agreement between Canada and Australia (superseding a 1925 arrangement of limited scope) was brought into force on Aug. 3, 1931. British Preferential Tariffs were exchanged, with some reservations by Australia, and some additional concessions by Canada. Enlarged margins of preference were also granted by each country on certain products of importance to the other. (See p. 484 of the 1936 Year Book.) The Agreement, which was obligatory for one year, has remained in force subject to six months' notice of denunciation by either Government. During the fiscal year 1936-37 Canada's exports to Australia reached \$27,000,000. Imports from Australia were \$9,500,000. In view of trade balances being so much in Canada's favour, the Australian Government had intimated that if the Agreement was to continue, further Canadian concessions should be accorded Australian products. After negotiations, the Canadian duties on certain Australian goods were reduced by Order in Council effective Oct. 1, 1937, and the Trade Agreement was kept in force, subject, as before, to denunciation on six months' notice by either Government.

**New Zealand.**—Canada was granted the British preferential rates of the New Zealand Tariff established in 1903. Canada has extended her British Preferential Tariff to New Zealand since 1904. On Oct. 1, 1925, Canadian special rates then granted Australia were also extended to New Zealand, but withdrawn on Oct. 12, 1930. As from June 2, 1931, New Zealand cancelled nearly all her British preferential rates to Canada. On May 24, 1932, a new Trade Agreement was brought into force for one year (applicable also to Western Samoa and Cook Islands), whereby

Canada granted New Zealand some rates lower than British preferential, and otherwise the British Preferential Tariff. New Zealand restored the British preferential rates to Canada except for 6 items upon which intermediate rates were conceded. A New Zealand surtax of 22½ p.c. of duty (in a few instances 5 p.c.) instituted on Aug. 18, 1930, was cancelled by a New Zealand tariff amendment of Nov. 19, 1932, as regards all Empire goods except those from Canada, Union of South Africa, Irish Free State, Newfoundland, and India. The 1932 Trade Agreement was made for one year, but has been kept in force by various renewals. A one-year renewal to Sept. 30, 1938, effected by Canada granting further reductions in duty on some New Zealand products was followed by another renewal to Sept. 30, 1939, by Canada waiving exchange dumping duty on New Zealand butter and New Zealand undertaking to co-operate as far as possible by limiting shipments to proportions that would not unduly prejudice the interests of Canadian producers.

**Union of South Africa.**—In addition to the British Preferential Tariff which Canada accords to the Union of South Africa under the Tariff Act of 1907, commerce with the Union of South Africa is governed by a Trade Agreement signed Aug. 20, 1932. It provides for exchange of preferential treatment on selected commodities. (See p. 487 of the 1936 Year Book.) By an Exchange of Notes (Union of South Africa dated Aug. 2, 1935; Canada dated Aug. 31, 1935) effective July 1, 1935, each Dominion assures the other of as low rates as apply to the goods of any foreign country.

**Southern Rhodesia.**—A Trade Agreement signed Aug. 20, 1932, exchanging preferences on a few selected commodities and each country's British Preferential Tariffs on nearly all other commodities, was terminated as from Jan. 2, 1938, on notice by Southern Rhodesia. Although the Trade Agreement was cancelled, Southern Rhodesia, under a new tariff of 331 items, adopted May 18, 1937, accords Canada and the United Kingdom the same preferences over foreign countries on 177 tariff items. On 78 items Canada has a rate intermediate between the United Kingdom and foreign countries. On 10 items Canada has no preference over foreign countries although the United Kingdom has preference. On the remaining 66 items the rates are the same to all countries. Canada, under the Tariff Act of 1907, applies her British Preferential Tariff to Southern Rhodesian goods.

**British West Indies.**—Under the Canadian Customs Tariff Act, 1907, the British Preferential Tariff applies to the British West Indies, Bermuda, and British Guiana, and by Order in Council effective Feb. 1, 1913, to British Honduras. Special tariff concessions were made to the British West Indies in a reciprocal Trade Agreement of 1912, enlarged in 1920. The latter was replaced on July 6, 1925, by an Agreement still more extensive and brought formally into force by proclamation as from Apr. 30, 1927, and binding for a 12-year period and thereafter until terminated, on a year's notice. It includes: Jamaica, Trinidad, Barbados, Bahamas, Leeward Islands, Windward Islands, Bermuda, British Guiana, and British Honduras. (For further details see p. 484 of the 1936 Year Book.) Notice for termination of this Agreement as from Dec. 31, 1939, was given by the Dominion Government with a proposal that in the meantime negotiations be entered upon leading to a new Agreement.

#### FOREIGN COUNTRIES.

The power given under Sec. 4 of the Tariff Act to extend the Intermediate Tariff, in whole or in part, by Order in Council, to British countries, applies equally to foreign countries. Another important means of arranging for reciprocal concessions from foreign countries is afforded by Sec. 11 of the Customs Tariff which

authorizes the making by Order in Council of such reductions of duties on goods imported into Canada from any other country as may be deemed reasonable by way of compensation for concessions granted by any such country. On the other hand, power is given under Sec. 7 to impose a surtax of 33½ p.c. *ad valorem* on goods from any foreign country which treats imports from Canada less favourably than those from other countries.

**Most-Favoured-Nation Treatment.**—Mutual guarantee of most-favoured-foreign-nation treatment, or, as it is commonly called, most-favoured-nation treatment, enters into many of the tariff arrangements between Canada and foreign countries. Usually, this means that Canada and the other contracting State agree that each party will accord to the goods of the other the benefit of the lowest duties applied to similar goods of any other foreign origin. There may be reservations. These reservations are likely to be tariff advantages, not relatively of far-reaching importance, such as one State may grant to another on historical, political, or geographical grounds, or some other special relationship. The concessions arising out of most-favoured-nation treatment under the Canadian tariff now consist of the rates of the Intermediate Tariff, and lower rates on some goods provided in Trade Agreements with France, the United States, and Poland. It will be seen that the guarantee by Canada of most-favoured-nation treatment to a foreign country does not entitle the foreign country to preferences existing only under the British Preferential Tariff or an Empire Trade Agreement. In other words, Empire preferences are confined within the Empire.

The benefit to Canadian exports of most-favoured-nation treatment in any country depends on the customs and treaty system of the particular importing country concerned. Several foreign nations have maximum and minimum schedules, meaning that there are two scales of duties for practically all goods imported. There may be also an intermediate scale of duties. Some countries maintain reduced duties only on specified items of their tariffs, which they have conceded in one or more commercial treaties. A country, too, may adhere strictly to a single-column tariff. Even when it makes concessions in a commercial treaty it may incorporate these in the normal tariff, thus discriminating against no country. The number of countries maintaining uniform tariffs regardless of the origin of goods, however, is becoming smaller from year to year. The benefit of most-favoured-nation treatment would, of course, depend also on the extent to which tariff favours apply to countries competing in the market in question. It has been the practice to include import restrictions when bargaining for most-favoured-nation treatment but the significance of this is greatly lessened in recent years by countries administering import quotas independently of most-favoured-nation commitments.

**Argentina.**—A Treaty of Amity, Commerce and Navigation between Great Britain and Argentina, signed Feb. 2, 1825, exchanging most-favoured-nation treatment is still applicable to the tariff relations between Canada and Argentina. Argentine customs duties, with minor exceptions, apply equally to imports from all countries. Extensive tariff reductions made in an Agreement of Sept. 26, 1933, with the United Kingdom, have been extended to imports from all countries.

**Austria.**—An Exchange of Notes, July 6-8, 1933, and Canadian Orders in Council of July 5, 1933, Dec. 29, 1933, and Jan. 14, 1935, the latter for an indefinite period, granted the Canadian Intermediate Tariff in return for most-favoured-nation treatment in Austria. Many important items of the Austrian Tariff were subject to conventional or reduced rates of duty which applied to countries having such treaty

relationship with Austria. Although annexed to Germany in 1938 Austria remained a separate customs area until Apr. 1, 1939.

**Belgium.**—A Convention of Commerce between Canada and Belgium, signed July 3, 1924, provided for exchange of most-favoured-nation treatment of each other's goods. The Belgian Tariff consists of a Minimum Tariff and a Maximum Tariff (three times the minimum). The Minimum Tariff, however, is in practice applied equally to imports from all countries.

**Bolivia.**—Article 15 of the Treaty of Commerce of Aug. 1, 1911, between the United Kingdom and Bolivia, was accepted by Canadian Order in Council of July 20, 1935, the effect being an arrangement between Canada and Bolivia for exchange of most-favoured-nation treatment of each other's goods. Customs duties in Bolivia are applied equally to imports from all countries.

**Brazil.**—On account of Brazilian policy to cancel old Trade Agreements, an arrangement was made between Canada and Brazil by Exchange of Notes, July 25-30, 1936, granting the Canadian Intermediate Tariff for the Brazilian Minimum or lowest tariff. This arrangement continued the former reciprocal relationship between the two countries. It was superseded by an Exchange of Notes of June 12, 1937, providing for the mutual concession of most-favoured-nation treatment in tariff matters. The Tariff of Brazil consists mainly of a Minimum Tariff and a General Tariff, approximately one-quarter higher. Some rates lower than the minimum, established by an Agreement of Feb. 2, 1935, with the United States, apply to imports from countries enjoying most-favoured-nation treatment.

**Colombia.**—A Treaty of Friendship, Commerce and Navigation between the United Kingdom and Colombia, signed Feb. 16, 1866, requires Colombia and Canada to give each other most-favoured-nation treatment in tariff matters. Colombia on Mar. 1, 1938, gave one year's notice of termination of this treaty, but Notes were exchanged on Dec. 30, 1938, continuing the treaty in force until Sept. 30, 1939, and thereafter until terminated on three months' notice. An Agreement between Colombia and the United States, signed Sept. 13, 1935, created many reduced Colombian duties, to which treaty countries became entitled. Otherwise Colombian duties apply equally to imports from all countries.

**Costa Rica.**—A Costa Rican law of Feb. 16, 1933, established a surcharge of 30 p.c. of the duty on imports from countries not granting most-favoured-nation treatment to Costa Rica. Reduced duties appeared in an Agreement with the United States signed Nov. 28, 1936. An Exchange of Notes of Mar. 1-2, 1933, with the United Kingdom, set forth that Costa Rica would extend most-favoured-nation rates to any part of the British Empire on a reciprocal basis. A Canadian Order in Council of July 20, 1935, extended most-favoured-nation treatment to Costa Rica, thus entitling Canadian goods to a reciprocal concession in Costa Rica.

**Czechoslovakia.**—A Convention of Commerce between Canada and Czechoslovakia of Mar. 15, 1928, exchanged most-favoured-nation treatment in tariff matters. Czechoslovakia has conventional or reduced duties on many goods.

**Denmark.**—Danish Treaties of Peace and Commerce with Great Britain of Feb. 13, 1660-1, and July 11, 1670, establishing reciprocal most-favoured-nation treatment of each other's goods, still apply to the tariff relations between Canada and Denmark. Although Denmark has a single-tariff schedule, which is applicable to all countries, provision is made for penalty duties against countries which discriminate against her.

**Estonia.**—Article 28 of the United Kingdom-Estonia Treaty of Commerce and Navigation of Jan. 18, 1926, providing means for a most-favoured-nation arrangement between Canada and Estonia, was accepted by the Canadian Trade Agreements Act of June 11, 1928. The duties of the Estonian Minimum Tariff are half those of the General Tariff, while on some goods conventional rates lower than the Minimum Tariff exist.

**Finland.**—Article 23 of the United Kingdom-Finland Treaty of Commerce and Navigation of Dec. 14, 1923, providing means for exchange of most-favoured-nation treatment between Canada and Finland, was accepted by the Finland Trade Agreement Act of June 12, 1925. Finland has in force some conventional rates lower than her General Tariff.

**France.**—The Franco-Canadian Trade Agreement of 1922 having lapsed on June 16, 1932, negotiations for a new Agreement ensued and were concluded by the signing of a Trade Agreement on May 12, 1933. This Agreement was brought into force as from June 10, 1933. Under its terms Canada was accorded the rates of the French Minimum Tariff and most-favoured-nation treatment on 185 items or parts of items and reductions varying from 17 p.c. to 73 p.c. of the General Tariff on 24 items or parts. The French General Tariff is, for most goods, four times the Minimum Tariff. Intermediate rates are expressed as varying percentage reductions from the General Tariff. In return Canada conceded to France a rate as low as British preferential on 7 items, reductions from the Intermediate Tariff of from 10 p.c. to 25 p.c. on 95 items and Intermediate Tariff rates on an extensive list of items. The French colonies are included within the scope of the Agreement. The Agreement was supplemented by a Protocol of Feb. 26, 1935, and Notes exchanged Mar. 20, 1936, July 30, 1937, and Nov. 12-18, 1938, under which Canada secured the Minimum Tariff on 25 more items of the French Tariff, in return for adjustments of duty on some French products. These supplementary arrangements also made provision for quotas on many Canadian articles of which the import into France is subject to quantitative restrictions.

**Germany.**—In the absence of a commercial agreement, a 'Super Tariff' (*Obertariff*) created by a German law of Jan. 18, 1932, two to four times as high as the General Tariff, on goods affected, was invoked against Canada on Apr. 1, 1932. On account of negotiations that ensued, the Super Tariff was suspended on July 1, 1932, for six months. By Exchange of Notes effective Jan. 1, 1933, an Agreement, for the duration of three months, was entered into, giving Germany the Canadian Intermediate Tariff in return for its ordinary General Tariff and any existing conventional duties. This arrangement was renewed, first for nine months, and on Jan. 1, 1934, for an indefinite period, subject to termination on six months' notice. A Provisional Trade Agreement, including exchange of most-favoured-nation treatment, was signed on Oct. 22, 1936, to become effective fourteen days after exchange of ratifications, and to remain in force until Nov. 14, 1937, and thereafter until terminated on two-months' notice. A Canadian Act ratifying the Agreement was assented to on Apr. 10, 1937. On account of the control exercised by Germany over exchange for payment of goods, a Payments Agreement was also entered into on Oct. 22, 1936. It authorized utilization of definite percentages of exchange accruing from German exports to Canada for purchase of Canadian wheat, apples, cheese, honey, fish, fox skins, asbestos, lumber, wood-pulp, sausage casings, and some other goods. Unallocated exchange is available for miscellaneous purchases. By Exchange of Notes on the day the Trade Agreement was signed, Canada agreed, on a basis of reciprocity, to give effect to the Trade Agreement as from

Nov. 15, 1936, the Payments Agreement having gone into force on that day. The Exchange of Notes is to remain operative until replaced by the Provisional Trade Agreement or until terminated on six weeks' notice.

**Guatemala.**—A Guatemalan law of Jan. 25, 1936 (renewing with slight changes a surtax law of Jan. 26, 1935), provided for increasing by 100 p.c. the customs duties on goods from countries whose trade balances are adverse to Guatemala and who had increased their exports to Guatemala by 100 p.c. or more in 1935 as compared with 1934. A Trade Agreement between Canada and Guatemala signed Sept. 28, 1937, by exchange of most-favoured-nation treatment, exempted Canadian goods from the customs surcharge and entitled Canada to reduced duties provided for some items in a Guatemalan Agreement of Apr. 24, 1936, with the United States. Pending ratification of the Agreement, an Exchange of Notes on the same date established most-favoured-nation treatment reciprocally as from Oct. 14, 1937. A Canadian Act ratifying the Agreement was assented to on May 25, 1938. Ratifications were exchanged bringing the Agreement into force as from Jan. 14, 1939. It is drawn for three years and thereafter until terminated on six months' notice.

**Haiti.**—Haiti reduced duties on some United States products in a Trade Agreement of Mar. 28, 1935, and on Apr. 9, 1935, adopted a new Maximum Tariff (double the Minimum) which would have applied to Canada, if by Exchange of Notes of June 10, 1935, renewed Apr. 6, 1936, and Apr. 15, 1937, Canada and Haiti had not exchanged most-favoured-nation treatment in tariff matters. A Canadian-Haiti Trade Agreement signed Apr. 23, 1937, and approved by a Canadian Act assented to on May 25, 1938, confirms this tariff arrangement. The Agreement is for one year and thereafter until terminated on six months' notice. Ratifications were exchanged bringing the Agreement into effect in both countries on Jan. 10, 1939.

**Hungary.**—Article 20 of the United Kingdom-Hungary Treaty of Commerce and Navigation of July 23, 1926, affording means for exchange of most-favoured-nation treatment in tariff matters between Canada and Hungary, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Hungary has in force various conventional rates lower than her General Tariff, resulting from treaties with other countries.

**Italy.**—A Convention of Commerce between Canada and Italy of Jan. 4, 1923, provided for exchange of most-favoured-nation treatment in tariff matters. The General Tariff of Italy is applicable to imports from all countries except where reduced rates for many goods have been established by commercial treaties.

**Japan.**—A Treaty of Commerce and Navigation between the United Kingdom and Japan on a most-favoured-nation basis signed Apr. 3, 1911, was accepted by Canada (with minor provisos) in an Act of Apr. 10, 1913. Certain surtaxes were imposed by Japan on July 20, 1935, and by Canada on Aug. 5, 1935, against each other's goods. An Exchange of Notes on Dec. 26, 1935, effected the removal of the surtaxes by both countries and stated the basis for Canadian customs valuations on Japanese goods. (See p. 489 of the 1936 Year Book.)

**Latvia.**—Article 26 of the United Kingdom-Latvia Treaty of Commerce and Navigation of June 22, 1923, providing means for exchange of most-favoured-nation treatment in tariff matters between Canada and Latvia, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Latvia has a minimum schedule

of duties and a maximum schedule twice as high, as well as some rates of duty fixed by conventions with other countries.

**Lithuania.**—Article 4 of the United Kingdom-Lithuania Agreement of May 6, 1922, providing means for exchange of most-favoured-nation treatment in tariff matters between Canada and Lithuania, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Lithuania has in force a Maximum Tariff on certain specified items double the ordinary Tariff. Resulting from treaties on a few items there are rates lower than the ordinary Tariff.

**Netherlands.**—A Canadian-Netherlands Convention of Commerce of July 11, 1924, provided for exchange of most-favoured-nation treatment in tariff matters between Canada, Netherlands, Netherlands India, Surinam, and Curaçao. The Netherlands Tariff consists of a single schedule of duties, without tariff preference to any country.

**Norway.**—A Convention of Commerce and Navigation between the United Kingdom and Norway (and Sweden) of Mar. 18, 1826, is applicable to British territories to the extent of still providing exchange of most-favoured-nation treatment in tariff matters between Canada and Norway. Norway has a single-tariff schedule but there exist provisions for imposing penalty duties on non-reciprocating countries.

**Panama.**—Article 12 of a United Kingdom-Panama Treaty of Commerce and Navigation, signed Sept. 25, 1928, affording means for reciprocal most-favoured-nation relations with Panama, was accepted by Canadian Order in Council of July 20, 1935. A Canadian Order in Council of Dec. 29, 1936, conceded the Canadian Intermediate Tariff to the Panama Canal Zone. Duties in Panama apply equally to imports from all countries.

**Poland.**—A Convention of Commerce between Canada and Poland, signed July 3, 1935, effective Aug. 15, 1936, exchanged most-favoured-nation treatment and, as regards scheduled goods, granted reductions from the Canadian Intermediate Tariff and from the lowest Polish tariff. The Polish Tariff comprises two columns of rates for all goods, the rates of Column I being about 25 p.c. higher than the rates of Column II. On some goods there are conventional rates resulting from trade treaties which Poland has concluded with other countries and which are lower even than the rates of Column II. The Free City of Danzig was declared party to the Convention from Jan. 1, 1937.

**Portugal.**—Article 21 of the Treaty of Commerce and Navigation between the United Kingdom and Portugal, signed Aug. 12, 1914, providing for exchange of most-favoured-nation treatment in tariff matters, was accepted in the Canadian Trade Agreements Act of June 11, 1928. The Portuguese Tariff has maximum and minimum scales, the treaty arrangement securing the minimum for Canada.

**Roumania.**—Article 36 of the Treaty of Commerce and Navigation between the United Kingdom and Roumania of Aug. 6, 1930, affording means for exchange of most-favoured-nation treatment between Canada and Roumania, was utilized in an Exchange of Notes of Sept. 30, 1930. Roumania has a Minimum Tariff on some commodities, one-third lower than her General Tariff, also, as a result of treaties, reductions from the Minimum Tariff on certain goods.

**Russia.**—A Canadian Order in Council of Feb. 27, 1931, prohibiting importation from the Union of Soviet Socialist Republics of coal, wood-pulp, pulpwood, lumber, asbestos, and dressed furs, was cancelled, by an Order in Council of Sept.

10, 1936, in consequence of which the Soviet Union repealed an Order of Apr. 20, 1931, which had prevented her importing organizations and trade representatives from purchasing Canadian goods or chartering Canadian vessels.

**Salvador.**—By Exchange of Notes of Nov. 2, 1937, Canada and El Salvador granted each other most-favoured-nation treatment in tariff matters. The Tariff of El Salvador consists of a Maximum Tariff, a Minimum Tariff (one-third the maximum) and some conventional rates lower than the minimum.

**Spain.**—A Treaty of Commerce and Navigation between the United Kingdom and Spain, signed Oct. 31, 1922 (revised Apr. 5, 1927), providing for exchange of most-favoured-nation treatment in tariff matters, was accepted on behalf of Canada by the Spanish Treaty Act of June 11, 1928. The Tariff of Spain consists of a First (the highest) Tariff, a Second Tariff (usually one-third of the first) and some conventional rates lower than the Second.

**Sweden.**—A Convention of Commerce and Navigation between the United Kingdom and Sweden (and Norway) of Mar. 18, 1826, had the effect of establishing most-favoured-nation tariff relationship between Canada and Sweden. Sweden, in commercial treaties with various countries, has granted conventional rates of duty which, however, have been incorporated into the ordinary tariff and made applicable to all countries.

**Switzerland.**—Under the Treaty of Friendship, Commerce and Reciprocal Establishment between the United Kingdom and Switzerland of Sept. 6, 1855, Canada and Switzerland exchanged most-favoured-nation treatment of each other's goods. Switzerland has reduced some of her rates in treaties, but reductions are incorporated in a single-column tariff which applies to all countries.

**United States.**—A Trade Agreement between Canada and the United States, signed on Nov. 15, 1935, became operative as regards tariff reductions on Jan. 1, 1936, and upon exchange of ratifications went into force in its entirety on May 14, 1936. United States negotiations were under a tariff amendment Act of June 12, 1934 (Reciprocal Trade Agreements Act), first enacted for three years duration, but extended for another three years by a law of Mar. 1, 1937. The enactment sets 50 p.c. as the maximum reduction that can be made in any rate of duty. Concessions to Canada in the 1935 Agreement were 50 p.c. on 27 items; 25 to 49 p.c. on 32 items; under 25 p.c., or existing rate confirmed on 8 items; continuance of free entry assured on 21 items. There were Canadian tariff reductions on 88 items, modification of some customs valuations and exemption from duty of purchases up to \$100 made by returning Canadian residents, corresponding to a similar provision in the United States tariff. The Agreement exchanged unconditional most-favoured-nation treatment with reservation of Canada's Empire preferences and United States preferences granted to Cuba, Philippine Islands and the Panama Canal Zone.

A more comprehensive Trade Agreement, signed Nov. 17, 1938, grants Canada concessions on 202 items or sub-items of the United States tariff, covering 83 p.c. of Canadian sales (dutiable and free) to the United States for the year 1937. On 107 of these items, representing \$76,577,000 (about half the dutiable imports in 1937) the maximum 50 p.c. reduction in duty was obtained. Of the remaining items 58 are accorded reductions in duty ranging from 10 to 50 p.c., 5 are assured continuance of the existing rate and 32 continuance of free entry. All concessions of the 1935 Agreement are retained and where quotas existed, they are either increased or the quota limitation entirely removed. Principal Canadian products benefiting

are lumber, shingles, horses, cattle, dairy products, hog products, potatoes, fish, certain grains, hay, poultry, pulp and paper, metals, non-metallic minerals, ferro-alloys, and many lines of manufactured goods. Among the benefits accruing to Canada under the reciprocal most-favoured-nation clause are many reductions in United States duty arising out of a United States-United Kingdom Trade Agreement signed on the same day as the Canadian Agreement. Canada's concessions to the United States affect 447 tariff items or sub-items, under which imports for the fiscal year 1937 amounted to about 58 p.c. of the total imports from the United States. Reductions in Canadian duty are made on 283 items or sub-items, and duty is fixed at rates hitherto effective on 146. Canada undertakes to remove a special excise tax of 3 p.c. now levied on these items. The Agreement contains safe-guarding clauses as to quantitative restrictions, customs valuation, variations in rate of exchange, preventing the principal benefit of a concession going to a third country. The President of the United States formally proclaimed the new Trade Agreement on Nov. 25, 1938. On the day following the President's Proclamation, i.e., Nov. 26, 1938, Article IX of the Agreement became provisionally effective, the result being to exempt Canadian lumber, shingles, and telegraph poles shipped to the United States from the necessity of a mark of origin. Duty concessions, except where otherwise stated, became provisionally effective in both countries on Jan. 1, 1939. The Canadian ratifying Act was assented to in Ottawa by His Majesty the King on May 19, 1939. The Agreement is to go fully into force on exchange of ratification by the King and a copy of the President's Proclamation. It is to be effective for three years from the effective date of Article IX and thereafter, subject to termination on six months' notice by either party.

**Uruguay.**—Canada signed an Agreement, on a most-favoured-nation basis, with Uruguay on Aug. 12, 1936, as regards customs duties, quotas, and allocation of exchange for commercial transactions, to come into force 30 days after exchange of ratifications, and to remain in force for three years and thereafter until termination on six months' notice. A Canadian Act ratifying the Agreement was assented to on Apr. 10, 1937. The Agreement awaits ratification by Uruguay. Notes were exchanged at the same time, effective at once, granting the Canadian Intermediate Tariff in return for Uruguayan trading facilities for Canadian exports, pending the coming into force of the formal Agreement. Provision exists under the tariff of Uruguay whereby duties may be increased by 50 p.c. on imports from countries which do not offer reciprocity, or do not accord most-favoured-nation treatment to Uruguayan goods.

**Venezuela.**—A Treaty of Amity, Commerce and Navigation between the United Kingdom and Colombia (of which Venezuela was then part) of Apr. 18, 1825, applies to Canada and provides for exchange of most-favoured-nation treatment. The Venezuelan Executive Power is authorized to increase duties up to 100 p.c. on certain goods originating in a specified country, but it has not been learned that this power has been used. A limited number of reduced Venezuelan duties are provided in a Trade Agreement of Aug. 6, 1936, between France and Venezuela. Otherwise no preferences exist under the Venezuelan Tariff.

**Yugoslavia.**—Article 30 of the United Kingdom-Serb-Croat-Slovene Kingdom Treaty of Commerce and Navigation of May 12, 1927, (affording means for exchange of most-favoured-nation treatment of each other's goods between Canada and Yugoslavia) was accepted by means of the Canadian Trade Agreements Act of June 11, 1928. The Yugoslavian Tariff comprises maximum, minimum, and conventional duties (usually incorporated in the minimum duties).

## Section 2.—The Commercial Intelligence Service.\*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets, and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

**Organization at Ottawa.**—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Directories—where the Exporters Directory, listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up to date; Editorial—where the Commercial Intelligence Journal is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal and Fish Products; Vegetable Products; Metals and Chemical Products; Forest Products; and Manufactured Products. These last five divisions handle correspondence falling within their respective classifications.

In order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to possible Canadian exporters and makes direct contacts with Canadian manufacturers regarding opportunities and conditions of trade in his territory.

**Organization Abroad.**—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office, and cable address of the Trade Commissioner in each case is given below:—

### CANADIAN GOVERNMENT TRADE COMMISSIONERS.

*Notes.*—This list was revised as at Jan. 1, 1939. Cable address of Trade Commissioners is "Canadian" unless otherwise stated.

<i>Argentine Republic</i> (Territory includes Uruguay)...	J. A. Strong, B. Mitre 430, Buenos Aires (1).
<i>Australia</i> — Sydney (Territory covers Australian Capital Territory, New South Wales, Queensland, Northern Territory and Dependencies.)	L. M. Cosgrave. Address for letters—P.O. Box No. 3952V. Office—City Mutual Life Building, Hunter and Bligh Streets.
Melbourne (Territory covers States of Victoria, South Australia, Western Australia, and Tasmania.)	Frederick Palmer. Address for letters—Box 196C, G.P.O. Office—Safe Deposit Office Building, Melbourne.
<i>Belgium</i> .....	Yves Lamontagne, Shell Building, 60 Ravenstein Street, Brussels.
<i>Brazil</i> .....	L. S. Glass. Address for letters—Caixa Postal 2164, Rio de Janeiro. Office—Ed. Da "A Noite", Sala 302, Praca Maua.

\* Revised by L. D. Wilgress, Director, Commercial Intelligence Service, Department of Trade and Commerce.

## CANADIAN GOVERNMENT TRADE COMMISSIONERS—continued.

- British Malaya* (Territory includes the Straits Settlements, the Federated and Unfederated Malay States, British Borneo, Northern Sumatra, Siam and Netherlands Indies.)
- British West Indies*—  
Trinidad (Territory includes Barbados, Windward and Leeward islands and British Guiana.)  
Jamaica (Territory covers Jamaica, Haiti, the Bahamas, and British Honduras.)
- China*—  
Shanghai (Territory includes North and Central China and Manchuria.)
- Cuba* (Territory includes Dominican Republic and Puerto Rico.)
- Egypt* (Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Persia, Greece, Turkey, Bulgaria, and Roumania.)
- France* (Territory includes French Colonies in North Africa.)
- Germany* (Territory covers Germany, Czechoslovakia, Austria, Hungary, Poland, Lithuania, Latvia, and Estonia.)
- Hong Kong* (Territory includes South China, the Philippines, and Indo-China.)
- India and Ceylon*.....
- Irish Free State and Northern Ireland*.....
- Italy* (Territory includes Spain, Portugal, Gibraltar, Malta, Albania, and Jugoslavia.)
- Japan*—  
Tokyo.....  
Kobe.....
- Mexico* (Territory includes Guatemala, Honduras, and Salvador.)
- Netherlands* (Territory includes Switzerland.)
- New Zealand* (Territory includes Fiji and Western Samoa.)
- Norway* (Territory includes Scandinavian countries and Finland.)
- Panama* (Territory includes the Canal Zone, Venezuela, Colombia, Nicaragua, and Costa Rica.)
- Peru* (Territory includes Bolivia, Chile, and Ecuador.)
- South Africa*—  
Cape Town (Territory includes Cape Province and Southwest Africa, Natal, Tanganyika, Kenya, Uganda, Mauritius, and Madagascar.)  
Johannesburg (Territory includes Transvaal, Orange Free State, Bechuanaland, Somaliland, the Rhodesias, Portuguese East Africa, Mozambique, and Nyasaland.)
- United Kingdom*—  
London.....  
London (Territory covers Home Counties, South-eastern Counties, and East Anglia.)
- B. C. Butler, Union Building, Singapore, Straits Settlements.
- M. B. Palmer. Address for letters—P.O. Box 125, Port of Spain. Office—Colonial Bank Building.
- F. W. Fraser, P.O. Box 225. Office—Canadian Bank of Commerce Chambers, Kingston.
- Acting Trade Commissioner. P.O. Box 264, Shanghai. Office—Ewo Building, 27 The Bund, Shanghai.
- C. S. Bissett. Address for letters—Apartado 1945, Havana. Office address—Royal Bank of Canada Building, Calle Aguiar 75, Havana.
- Henri Turcot. Address for letters—P.O. Box 1770, Cairo. Office—22 Shari Kasr el Nil, Cairo.
- Hercule Barré, Commercial Attaché, 8 rue Scribe, Paris (9). Cable address—Cancomac.
- J. C. McGillivray, 801 Columbus Haus, Potsdamer Platz, Berlin W. 9.
- V. E. Duclou. Address for letters—P.O. Box 80, Hong Kong. Office—Hong Kong and Shanghai Bank Building, Hong Kong.
- Paul Sykes. Address for letters—P.O. Box 2003, Calcutta. Office—23 Esplanade Mansions, Government Place East, Calcutta.
- James Cormack, 66 Upper O'Connell Street, Dublin, Irish Free State; and 44 Ann Street, Belfast, Northern Ireland. Cable address—Adanac.
- A. B. Muddiman, Via Manzoni Nr. 5, Milan (102).
- C. M. Croft, Commercial Secretary. Address for letters—P.O. Box 18, Akasaka Post Office, Tokyo. Office—Canadian Legation, 16 Omotecho, 3-chome, Akasakaku, Tokyo.
- P. V. McLane. Address for letters—P.O. Box 230, Kobe. Office—309 Crescent Building, 72 Kyomachi.
- R. T. Young. Address for letters—Apartado Num. 126-bis, Mexico City. Office—Edificio Banco de Londres y Mexico, Num. 30, Mexico City. Cable address—Cancoma.
- James Langley, Coolsingel 111b, Rotterdam.
- W. F. Bull. Address for letters—P.O. Box 33, Auckland. Office—Yorkshire House, Shortland Street, Auckland.
- Richard Grew. Address for letters—Stortingagaten 28, Oslo.
- W. J. Riddiford. Address for letters—P.O. Box 222, Panama City. Office—Royal Bank of Canada Building, Santa Ana Plaza, Panama City.
- M. J. Vechler. Address for letters—Casilla 1212, Lima. Office—Portal de Belem No. 166, Plaza, San Martin, Lima.
- G. R. Heasman. Address for letters—P.O. Box 633, Cape Town. Office—Cleghorn and Harris Building, Adderley Street, Cape Town. Cable address—Cantracom.
- J. L. Mutter. Address for letters—P.O. Box 715, Office—Prudential Assurance Building, 92 Fox St., Johannesburg. Cable Address—Cantracom.
- Frederic Hudd, Chief Trade Commissioner in the United Kingdom, Canada House, Trafalgar Square, S.W. 1. Cable Address—Sleighing, London.
- I. H. English, Canada House, Trafalgar Square, S.W. 1.

## CANADIAN GOVERNMENT TRADE COMMISSIONERS—concluded.

<i>United Kingdom</i> —concluded.	
London (Territory—for fresh fruit only—covers United Kingdom, Norway, Denmark, Sweden, France, Holland, Belgium, and Germany.)	W. B. Gornall, Fruit Trade Commissioner, Aldine House, Bedford Street, Strand, W.C. 2. Cable address—Canfracom.
London.....	W. A. Wilson, Animal Products Trade Commissioner, Canada House, Trafalgar Square, S.W. 1. Cable address—Agrilson.
Liverpool (Territory covers North of England, Lincolnshire, North Midlands, and North Wales.)	A. E. Bryan, Martins Bank Building, 31 North John Street.
Bristol (Territory covers West of England, South Wales, and South Midlands.)	E. L. McColl, Northcliffe House, Colston Ave.
Glasgow.....	G. B. Johnson, 200 St. Vincent Street. Cable address—Cantracom.
<i>United States</i> —	D. S. Cole, British Empire Building, Rockefeller Centre, New York City. Cable address—Cantracom.
New York City. (Territory includes Bermuda.)	

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters, and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

**Commercial Intelligence Journal.**—The *Commercial Intelligence Journal*, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is \$1 per annum in Canada and \$3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the *Commercial Intelligence Journal*.

### Section 3.—Statistics of External Trade.\*

External trade statistics are derived by recording the physical movement of goods outwards or inwards across the frontiers or through ocean ports and the valuations placed upon them at the time of movement. Such statistics cannot take cognizance of the complex financial transactions involved in this physical movement of goods, which transactions may take place prior to or subsequent to the actual shipment (although in investigating the balance of international payments, as in Sec. 5 of this chapter, such financial transactions are the sole consideration). Certain problems of procedure arise in recording trade statistics and it is necessary to explain these. Such problems may be conveniently classified as those relating generally to recording the movements of goods and those relating to the movements of gold.

**General Explanations regarding Trade Statistics.**—For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of terms used, as well as certain features of the statistics that necessitate adjustments to the external trade figures, should be carefully kept in mind, if the true position of trade in relation to the total of Canada's international transactions is to be understood.

**Fiscal Years.**—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

\* Revised by A. L. Neal, B.A., B.Sc. (Econ.), Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the *Annual Report on the Trade of Canada*, the *Condensed Preliminary Report on the Trade of Canada* (annual), the *Quarterly Report on the Trade of Canada*, the *Calendar Year Report on the Trade of Canada*, the *Summary of the Trade of Canada* (monthly), etc. For complete list of the publications of this Branch, see Chapter XXIX, Section 1, under "External Trade".

*Quantities and Values.*—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

*Imports: Valuation.*—"Imports" means "imports entered for consumption" "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada; but the value shall not be less than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Secs. 35 to 45 of the Customs Act.) Under these provisions and amendments thereto, some imports are given arbitrary valuations differing from those upon which actual payments for the imports are made.

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Sec. 55 of the Customs Act and Orders in Council respecting currency valuations.) Differences arising from fluctuations in the exchange rates of foreign currencies are treated more fully below under the heading "Discrepancies in Trade Statistics between Canada and Other Countries".

*Canadian Exports: Valuation.*—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminium extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

*Foreign Exports: Valuation.*—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

*Countries to which Trade is Credited.*—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another.

*Discrepancies in Trade Statistics between Canada and Other Countries.*—Canadian statistics of exports are rarely in exact agreement with the import figures of her

customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and those of the valuations of other countries.

The recent period of disturbed currency relations between countries has introduced an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at \$4.86½ to the £, although for two years after Sept. 21, 1931, the actual value of the £ was below that figure, dropping as low as \$3.70, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. More recently, when the exchange value of the £ was above par, imports from the United Kingdom were undervalued. Similar difficulties have resulted from disturbances in exchange levels with other countries, and the placing of arbitrary valuations upon their currencies, as in the case of imports from Japan.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1935, in connection with distilled spirits, an important item in our imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the excise duty in addition to the British export valuation, an excess valuation aggregating over \$200,000,000 for the period 1920-34. The excise duty has been excluded from the valuation of such imports since Apr. 1, 1935.

(2) Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and end of the period.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. A considerable proportion of Canada's exports to overseas countries (11.4 p.c. in 1938) is shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium, and France are included in Canadian imports from those countries but are not included by those countries in exports to Canada.

For more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, and pp. 21 and 24 of the Condensed Preliminary Report on the Trade of Canada, 1938, both published by the Dominion Bureau of Statistics.

**Treatment of Gold in Trade Statistics.**—Exports of gold in Canadian trade statistics are distinguished as between monetary and non-monetary. Monetary gold exports are those which entail a corresponding reduction in the Dominion's monetary gold stocks. All other gold exports (classed as non-monetary) are shown as merchandise and included with total merchandise exports in trade statistics. This procedure was determined, following the Conference of British Commonwealth

Statisticians in 1935, by the Dominion Bureau of Statistics in conference with the Bank of Canada and the Department of National Revenue. In former times there was a movement of gold from Canada in the form of "gold-bearing quartz, dust, nuggets, and gold bullion obtained direct from mining operations". When the Royal Mint in Ottawa began to refine gold, exports formerly shipped as "gold-bearing quartz, dust, etc.", began to be exported in the form of bullion and were recorded under "coin and bullion" as distinct from "merchandise". In order to maintain comparability with the statistics of previous years it was considered expedient to adopt the present procedure. It was also felt that since gold, like other great export staples, is a product of Canadian resources and industry and, in large part, is exported independently of domestic monetary considerations, it ought not to be excluded from the statistics of exports, and should not be classed as 'money' when it bears no relation to the Canadian monetary system. The change was inaugurated on Apr. 1, 1936, and appropriate revisions made in the trade statistics for previous years back to 1926. Prior to this time no substantial revision was necessary. When the change was made it was considered that there would be no re-exports of non-monetary gold, *i.e.*, exports (non-monetary in character) of previously imported gold; therefore no provision was made for this distinction with respect to exports of foreign products. However, it was found, as will be indicated below, that in order to faithfully represent the facts of the case the distinction was necessary for foreign exports as well as domestic exports and, accordingly, that has been done since Apr. 1, 1938. Since June 1, 1931, gold exports have been valued at the monthly average current market price.

Certain difficulties, however, arise when gold is included with ordinary commercial commodities.

The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities. In particular, the movement of gold in international trade is determined almost exclusively by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. The nationality of gold does not affect its value as an export asset and, therefore, domestic and foreign gold are mutually substitutable. It is doubtless correct to treat new gold based on current production as a commodity of mineral origin and so classify it in export statistics, but it may happen that foreign (*i.e.*, previously imported) gold may be exported without reducing monetary stocks. At certain times recently, substantial amounts of foreign gold coin have been exported owing to the premium obtainable on coined gold. Exports of domestic bullion were correspondingly smaller, since it was substituted for the foreign gold in stocks held in Canada. Furthermore, gold does not move in international trade in any direct or normal relation to sales and purchases. It may be sold abroad without moving out across the frontier. Trade statistics deal only with physical movements, sales or purchases of gold which do not involve an actual movement being more properly taken care of in the "International Balance of Payments" statements dealt with in Sec. 5 of this chapter. Domestic gold added to earmark stock, although sold abroad, does not appear in export statistics because it remains in Canada. In view, however, of the relation to external trade, statistics respecting holdings of earmarked gold are now appended in the Bureau of Statistics trade reports with an explanatory footnote, while in this edition of the Year Book they are shown in Statement XV under Sec. 5, p. 563.

To comprehend in its entirety, therefore, the effect of gold movements upon the figures of the export trade of Canada, it is necessary to consider non-monetary

exports of domestic gold and of foreign gold, as well as earmarkings by the Bank of Canada. Admittedly, the statistics in this connection are somewhat complicated, but they represent complicated facts. However, it is very necessary that the effects of fluctuations in the movement of gold should be borne in mind in dealing with statistics of trade. Gold may now form a very large item in the value of annual exports (Canada's production in 1938 is estimated as worth nearly \$165,000,000) so that fluctuations in the movement may materially affect the apparent value and distribution of Canada's trade. For instance, in one year the major part of the gold may be shipped to London, in another year to New York, or it may be accumulated under earmark, resulting in wide variation in the value and proportion of exports to the United Kingdom and the United States. So far exports have been confined almost entirely to these two countries. It may sometimes be desirable to view movements of trade in strictly commercial commodities alone. In order to facilitate doing so, a statement of non-monetary gold exports is given below, which will enable the student to make the desired adjustments to the trade statistics given in the main body of this chapter.

**Subsection 1.—Value and Quantum of World Trade.\***

World imports and exports, on which the figures in Statement V, p. 484, are based, are taken as the sum of the recorded imports and exports of individual countries reduced to the common monetary unit of United States old gold dollars (i.e., gold valued at \$20.67 per fine ounce). On this basis the value of world trade increased by nearly 23 p.c. in 1937. The average prices in gold for goods entering into world trade rose by between 8 and 9 p.c. and the quantum of trade rose by about 13 p.c. and reached a level only about 3 p.c. below that of 1929. The quantum of trade declined annually from 1929 to 1932 when it had reached a level about 25 p.c. below that of 1929. Since 1932, quantum has increased each year from only slightly in 1933 to the largest increase in 1937. Average gold prices of goods comprising world trade had been declining since 1925. The annual declines were comparatively small until the end of 1929, became quite precipitous to 1932, and then tapered off to 1935, in which year they were only 42.5 p.c. of their level in 1929 or about 41 p.c. of that of 1927. The trend of gold prices turned upward in 1935 and rose quite steeply in the latter part of 1936 and first half of 1937, but declined again in the second half of 1937.

\* Abbreviated from "Review of World Trade, 1937", published by the League of Nations.

The high level of world trade during 1937 was due largely to very active conditions in the early part of the year. Both gold prices and quantum declined toward the end of the year. Short crops in the Northern Hemisphere in the autumn of 1936 were a factor in higher prices of grains and foodstuffs, generally. Buoyant industrial conditions in the United States with consequent greatly increased imports provided a stimulus to production and trade throughout the world in the latter part of 1936 and the first quarter of 1937. However, thereafter a change in market conditions took place, resulting partly from the reduction in imports of raw materials by the United States on account of her declining industrial activity, although a contributory factor was the reduction in the purchases of Japan after the outbreak of her conflict with China. Armaments in Europe and Japan and capital equipment activities in most countries caused an exceptional demand for iron and steel. Trade in manufactured articles expanded, particularly on account of the great demand from raw-material countries and from the United Kingdom. The industrial countries whose exports of manufactured goods in 1937 increased were chiefly the United States, Germany, and the small industrial countries of Europe. The exports of the United Kingdom increased less because of enlarged domestic demand and those of France showed little progress.

Later monthly reports of the League of Nations indicate that the trend in both quantum and prices was decidedly downward during the early part of 1938 but levelled off in the latter part of the year.

**Trade by Groups of Commodities.**—The commodities that enter into world trade may be roughly divided into three groups, namely, foodstuffs, raw materials, and manufactured goods.

The estimated movement since 1929 of the proportion of total trade, average gold prices, and quantum of commodities belonging to the three groups is shown in

Statement II below. The estimates are based on information concerning five\* principal trading countries representing about 41 p.c. of world trade. Foodstuffs constituted an increasing proportion of total world trade from 1929 to 1932, but have since been a declining element, so that in 1937 they constituted a smaller percentage than in 1929. The same trends have applied to manufactured goods. Raw materials, on the other hand, declined in the early years of the depression but have increased to a larger proportion in 1937 than in 1929. The average prices of raw materials fell further and more rapidly than either of the other groups. Prices of foodstuffs declined more slowly, but the decline continued longer and carried the price level almost as low as that of raw materials. Prices of both of these groups rose in 1936. Prices of manufactured goods declined still more slowly and not so far as for the other groups, but the average prices of manufactured goods for the year 1936 were still at the lowest level. Prices of all three groups rose in 1937, and prices of manufactured goods continued relatively higher than those of the other two groups although the gap was further narrowed in 1937. The quantum movements of these groups were almost the reverse of their price movements. The quantum of trade in manufactured goods declined more rapidly and to a lower point than that of either of the other groups and, although it has been rising relatively more rapidly since 1932, it was still low in 1937. The quantum of raw materials did not decline so far and in 1937 was well above the 1929 level. The quantum of foodstuffs did not drop so far as either of the other groups, but the decline continued until 1934 and the rise since then has been comparatively small.

The improvement, developing since 1932 in the barter terms of trade of agricultural and mineral-producing countries, continued, although the terms of trade of these countries had deteriorated so rapidly during the early years of the depression that they still remained lower than in the years 1925-29. Such countries reached their most advantageous position since 1929 in the first half of 1937. Declining prices of primary commodities caused a deterioration in their barter terms again toward the end of the year.

\* United Kingdom, United States, Germany, France, and Italy.

II.—PRICE AND QUANTUM MOVEMENTS OF GROUPS OF COMMODITIES IN WORLD TRADE, 1929 AND 1932-37.  
(1929=100.)

<sup>1</sup> Revised since the publication of the 1938 Year Book.

An important factor in the buoyancy of trade in raw or partly manufactured materials, as shown in Statement II, was an exceptional demand for iron and steel in 1937. Prices of coal and raw iron continued to increase after the prices of many other industrial raw materials turned downward in the early part of 1937. The demand was due, not only to ordinary capital equipment activities which were high in the majority of countries, but also to enlarged armament programs. In certain countries, the re-orientation of imports towards metal products for armament purposes, clearly implied a reduction in the capacity for importing materials required for the production of articles of consumption.

*Trade in Certain Staple Products.*—A study of the trade in the major staple products throws some light upon certain of the tendencies which have recently affected the international exchange of goods.

Of important food staples, coffee was the only one of which lower quantities entered into world trade in 1937 than in 1936. The average price of all articles was higher than in 1936. The trade in wheat during the early part of 1937 was determined largely by the simultaneous failure of the 1936 crop in Canada and in several countries of Western and Central Europe and around the Mediterranean. The increase in the demand of Western and Central Europe was met largely by imports from the Argentine and certain countries of Southeastern Europe, which had the benefit of an unusually large crop. The Canadian crop of 1937 was again very low, and Canadian wheat exports, which had reached 6.6 million metric tons in 1936 fell to 2.6 millions in 1937. The improved crop of the United States, however, permitted some net exports from that country. During the four years 1933-36, the United States had been a net importer of wheat; in 1935 and 1936, her excess of imports had, indeed, been greater than that of any other country, with the exception of the United Kingdom.

The increase in quantum as well as in the price of raw materials was generally greater than in the case of foodstuffs. The quantities of mineral products entering into trade were unusually large; that of coal rose by over a fifth, and a similar or greater increase appears to have occurred in the case of mineral oils and certain metals. Trade in certain raw materials of agricultural origin was not so active; the quantity of cotton entering into trade appears to have been about the same as in 1936, while the prices fetched were lower than in that year, and the quantity of wool declined.

The high prices brought by the majority of primary products during the early part of 1937 coincided with an exceptional activity in trade. The quantum of trade in raw materials reached a record level, partly on account of purchases in anticipation of a further increase in prices. Stocks in the producing countries in many cases declined, and restrictions on the production of controlled commodities were relaxed. During the second half of 1937, on the other hand, the demand from certain countries fell off. The reduction in the United States imports of raw materials on account of her declining industrial activity was one of the principal causes of the change in market conditions, but importance should also be attributed to the reduction in purchases by Japan, where stocks of imported raw materials, accumulated during the first half of the year, were absorbed by the manufacturing industry. Improved crops in many countries increased the supply of certain agricultural products, particularly cotton. World demand for numerous commodities also remained high, however, during the latter part of 1937. The intensive activity of armament industries in many countries contributed to maintaining or even raising imports of coal, iron and steel, and base metals, and naturally also stimulated indirectly the

trade in foodstuffs, and raw materials employed in the manufacture of consumption goods. The unstable political situation towards the end of 1937 and at the beginning of 1938 is known to have led to purchases by certain countries, for government or private account, of certain commodities, such as foodstuffs, metals, and mineral oils, for storage; authoritative information concerning the amount of such purchases is, however, not available. These facts help to explain why prices of certain foodstuffs, coal, certain steel products, etc., continued to rise in the second half of 1937. The decline in the prices of certain other primary products must be attributed to the fact that their production had risen disproportionately owing to the relatively high prices brought during the preceding period when demand had risen briskly, while supply in many cases had been restricted by measures of control adopted by the principal producers.

**Geographic Distribution of World Trade.**—In Statement III, showing the percentage distribution of world trade by continents for the period 1929-37, the figures for each continental group are the sums of those of the individual countries comprising such group and therefore include trade between the members of the group. The United Kingdom and the United States have been separated from the remainder of their respective continental groups because trade tendencies in these two principal trading countries show movements differing from those of the remainder of their continental groups. Thus while the total trade of the United Kingdom has become an increased percentage of total world trade, that of the remainder of Europe has become considerably less. The trade of the United States has declined materially as a percentage of world trade, but that of the remainder of North America (chiefly Canada), after declining during the depression, was about the same percentage in 1936 as in 1929. These trends were reversed in 1937, the trade of the United States and the smaller countries of Europe expanding more than the general average of world trade.

The movement of the figures in this statement between 1929 and 1932 on the one hand and between 1932 and 1937 on the other is naturally due largely to variations in the relative price movements; it is natural, for example, that Europe's share in world trade expanded with the improvement in the terms of trade of industrial countries (trading largely between themselves) during the first depression years, and declined during the subsequent period. But as price relationships in 1937 reverted nearly to the position of 1929, comparison between the percentage distribution of trade in these two years is not greatly affected by relative price movements and is likely to bring out the trend of events more clearly than comparisons with the intervening years.

The similarity between the years 1929 and 1937—both being, in a sense, 'boom' years and years in which the prices of primary products were relatively high—renders clear the fundamental changes in the conditions under which world trade is conducted that have taken place during the intervening years.

Imports into Europe represented a higher share in world trade in 1937 than in 1929, while the reverse is true of North America. The increase in Europe's share is due wholly to the United Kingdom, whose share in world imports represented 17·2 p.c. in 1937 as against 15·2 p.c. in 1929. The relatively high level of United Kingdom imports must undoubtedly be attributed to the fact that her net capital exports in 1929 estimated at £118,000,000, were turned into a net capital import in 1937. The rise in Africa's share in world imports between 1929 and 1937 is accounted for largely by the Union of South Africa, and is due to the relative increase in wealth brought to that country by profitable gold exports.

<sup>1</sup> Revised since the publication of the 1933 Year Book.<sup>2</sup> United States, Canada, Newfoundland, Greenland, St. Pierre-Miquelon.

The above analysis of trade by continental groups may be supplemented by analysing the trade of the principal political groups or empires, as in Statement IV. As in the case of the preceding statement, the figures for each group are the sums of those of the individual countries comprising the group.

The share of the British Commonwealth (including colonies, protectorates, etc., as well as the Dominions) in world trade fell from 27.9 p.c. in 1929 to 26.7 p.c. in 1931, but has since increased to 30.8 p.c. in 1936 and 29.8 p.c. in 1937. The United Kingdom herself accounts for the bulk of the rise in the share of world imports, but her share in world exports declined. Intra-Commonwealth trade was estimated at 25.7 p.c. of the total trade of the British Commonwealth in 1929 and 1931, 29.1 p.c. in 1932, 30.4 p.c. in 1935, and 30.6 p.c. in 1936. The rise from 1932 to 1937 in the share of the British Commonwealth in world trade contrasts sharply with the fall in that of the French Empire.

<sup>1</sup> Revised since the publication of the 1933 Year Book.

As indicated on p. 480, the year 1937, when compared with 1929 (since in these two years industrial and trade conditions were active and price disparity was reduced to a minimum), offers an opportunity to consider the tendencies in world trade due to other influences. While space does not permit an exhaustive analysis of the circumstances which have determined the changes taking place, certain of the chief factors may be mentioned.

*The Tendency towards Bilateralism.*—The unrestricted trade of each country usually results in an export surplus with certain countries and an import surplus with other countries. In the early depression years the rather complicated structure of trade balances of this kind was seriously disturbed by the cessation of capital exports and other factors. A strong tendency to restrict triangular or multilateral trade and thus make international transactions (particularly merchandise trade) balance in each direction, has been one of the most outstanding factors in the commercial policy of numerous countries since 1931. As an equalization of the balances in certain directions entails a similar equalization in others, attempts to balance trade between two countries have sometimes had world-wide and unintentional effects.

*Increased Intra-Imperial Trade.*—The increase since 1929 in the United Kingdom's share in the imports as well as the exports of Australia, Canada, and New Zealand, and in the exports of India must be attributed largely to tariff preferences and other measures encouraging British intra-Commonwealth trade. Similarly, in the cases of France and Italy, the shares of overseas countries under their control in the total trade of those countries has increased, with a resultant decline in the share of such important trading countries as the United Kingdom and United States in the trade of France and Italy.

*Exchange Control and Clearing Agreements.*—Germany has to an increasing extent diverted her exports from industrial creditor countries to raw-material countries. One of her reasons for this has been to reserve her currency supply for the purchase of raw materials in bilateral exchange. Certain industrial creditor countries, which had endeavoured to safeguard a portion of the financial payments due to them by Germany through clearing agreements with that country, have found it necessary to restrict their exports to Germany. These exports were also curtailed by German measures taken to reduce imports of manufactured goods. The raw-material countries that have expanded their trade with Germany are principally those applying exchange control. The higher prices paid by Germany in exchange clearing have afforded a special inducement to exporters in those countries to dispose of their products in Germany but the necessity for importing German manufactured products in exchange has frequently proved uneconomical to them.

*Decline of International Specialization.*—International trade depends largely upon the relative advantage of the production of different types of goods in different countries. It has been frequently pointed out that protective measures aiming directly at the lessening of international specialization of production are likely to have an adverse effect upon the quantum of trade of the countries concerned and to affect the composition and geographical distribution of their trade. Less attention has been paid to the fact that measures merely interfering with the geographical distribution of trade also tend to reduce the international specialization of production. Countries with highly diversified production and exports have, as a rule, been able, without great difficulty, to adapt the geographical distribution of their trade to the influences of modern commercial policy. Countries whose production and exports are specialized in favour of one or a few articles have proved much more

vulnerable. The tendency of a decline in specialization is therefore most obvious in the trade of non-industrial countries. In the case of 37 out of 45 principal raw-material producing countries for which comparable statistics of exports are available for 1929 and 1936 the share of the most important article of export in 1929 had declined in the later year, but in the case of a few of these countries there appears only to have been a shift in specialization from one article to another. However, in the great majority of cases there is evidence of an almost universal lessening in specialization of production of primary products. This tendency must not be assumed to result from restrictive or discriminatory measures alone; other important factors in the change are recent improvements in production, the enterprise shown by certain countries in starting and developing new activities, and the inevitable and ever-active shifts in world demand.

**Canada's Position in World Trade.**—The foregoing brief outline of the course of world trade in the period since 1929, taken from the League of Nations' reports, is presented as a background against which Canada's position in world trade may be viewed. According to these figures, Canada, in 1937, stood eighth in imports, fourth in exports, and sixth in total trade, whereas in 1929 she was fifth in each category. The position of fourth in exports in recent years was due largely to the decline in exports of France, a decline which may be temporary. During the declining phase of the depression from 1929 to 1932, Canada's share in total world trade declined from 3.68 p.c. to 3.24 p.c. due to a great decline in the share of imports more than offsetting a slight increase in the share of exports. In the recovery phase of the depression since 1932, Canada's share in total world trade has increased to 3.6 in 1937. The share of imports was still very low although it has recovered considerably since a low point of 2.3 p.c. in 1933. Canada's share of exports has been well maintained and, with increases since 1932, is now considerably larger than in 1929. The position is shown in the first section of Statement V.

The section of Statement V showing the index of gold prices is significant as an indication of changes in the barter terms of trade for the countries shown. Canada, as a country whose imports are chiefly manufactured goods and whose exports are chiefly primary materials, experienced a greater decline from 1927 to 1932 in the average price of exports which dropped to 47.8 p.c. of the 1927 level, than of imports which were 50.8 p.c. Since 1932, export prices have become slightly higher than import prices but in this comparison it should be borne in mind that Canadian exports in the statement include domestic gold, so that the remainder of Canadian exports are under poorer barter terms than the figures indicate.

The quantum of Canadian imports has been recovering since 1932, but in 1937 it was still only 95.2 p.c. of that of 1927, was still more below that of 1929, and was below the estimated average for the world which stood at 104.3 p.c. of 1927. The quantum of Canadian exports has likewise been recovering since 1932 and made a remarkable gain in 1936, but declined in 1937, although still keeping above the levels of 1927 and 1929.

Some of the factors which especially affected Canada's trade in 1937 deserve mention. Poor grain crops in 1936 and 1937 curtailed exports of wheat, flour, and similar products. The high level of industrial activity in the United States in the first half of 1937 was a stimulus to Canadian production along many lines but especially in forest products. The general world demand and higher prices for base metals caused increases in the quantity and value of their production. Exports of gold and other precious metals were at a higher level than ever before.

V.—PERCENTAGE, PRICE, AND QUANTUM OF TRADE OF TWENTY-TWO LEADING COUNTRIES OF THE WORLD, CALENDAR YEARS 1929, 1932, 1936, AND 1937.

NOTE.—Basis: Recorded values of merchandise trade converted to U.S.A. old gold dollars. Price indexes are on the basis of old gold dollars. The year 1927 is taken as the base for both price and quantum indexes.

<sup>1</sup> Includes exports of gold produced within the country. <sup>2</sup> Imports are adjusted for over- or under-valuation (see p. 474). <sup>3</sup> Exports include exports of foreign produce. <sup>4</sup> Including improvement and repair trade in 1936 and 1937. <sup>5</sup> Totals include other countries not specified. <sup>6</sup> Data were not given in the Review of World Trade, 1937. <sup>7</sup> Indexes based on year 1928. <sup>8</sup> Estimated from preliminary Canadian sources. <sup>9</sup> Excluding Manchuria since July 1, 1932.

### Subsection 2.—Historical Statistics of Canadian Trade.

The most important features of Canadian trade are reviewed historically, since Confederation in most cases, in the first nine main tables of this chapter (pp. 502-509).

A general view of the trade of Canada in the fiscal years from 1868 to 1938 is furnished in Table 1 (p. 502), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising from the different methods adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce since 1920 has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past 18 years, re-exports of foreign products from bonded warehouses have not been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that, in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. Since that time, however, there has been an annual excess of exports except in the fiscal years

ended 1921, 1930, and 1931, when there were heavy return movements of funds to Canada in the form of an excess of imports.

The values of coin and bullion imported and exported are shown in Table 3 (p. 504). Exports of non-monetary gold bullion are not included in this table (see pp. 474-476).

The figures of Tables 5 and 6 (pp. 506-507) show the overwhelming predominance of the two English-speaking countries in Canada's foreign trade; in the year ended Mar. 31, 1938, for example, 77.8 p.c. of the Dominion's exports of domestic produce was shipped to these two countries, which, in the same year, together provided 79.1 p.c. of our imports for home consumption. Tables 7 and 8 show, respectively, by years, the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1911, and the *ad valorem* rates of duty collected on imports from these and from all countries from 1868 to 1938. The apparently higher average rate collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is explained briefly on p. 489 and in more detail at pp. 58-59 of the Condensed Preliminary Report on the Trade of Canada, 1936, and at pp. 509-510 of the 1937 Year Book.

### Subsection 3.—General Analysis of Current Import and Export Trade.

The figures of Statement VI, p. 487, indicate the seriousness of the decline in trade during the depression shown by the figures for the fiscal year 1933, and the extent of the recovery since then. That the decline in the quantum or volume of trade was not so great as that of the values here shown is evident from the analyses in Subsections 1 and 10 of this chapter. The recovery from the low point of the depression has been greater in exports than in imports. Imports are an indication of purchasing power and are especially influenced by the expansion or contraction of capital expenditures within Canada. In the past, years of population growth and rapid expansion in the productive equipment of Canada have been associated with greatly increased imports, since such imports of goods provide the means by which external capital is brought into the country. Conditions for such capital imports on a large scale do not exist at present, while Canada's productive facilities provide a large volume of exports, the surplus of which represents in large measure retirements of foreign indebtedness (see Sec. 5 of this chapter, pp. 561-565).

Current trends in external trade are largely determined by conditions and policies throughout the world which influence the geographical distribution of trade, and by changes regarding the supply of, and demand for, commodities of trade in which Canada is interested. These factors are discussed as completely as space permits in Subsections 1, 6, and 7 of this Section.

The figures of exports shown in Statement VI indicate that a shift is taking place in the importance of groups in the composition of our exports. In the prosperity period, 1925-29, Canadian exports were predominantly agricultural. Indeed, in that period it was largely because bountiful harvests coincided with an active world demand at good prices that prosperity was widespread in Canada. In 1927 the two groups, vegetable and animal products, made up 59 p.c. of exports, while non-ferrous metals constituted only 6.4 p.c. In 1938, on the other hand, vegetable and animal products made up only 35 p.c. of exports, but non-ferrous metals (including gold) increased to over 27 p.c. In this connection see the text regarding principal commodities exported on p. 497.

## VI.—SUMMARY OF THE TRADE OF CANADA BY MAIN GROUPS, FISCAL YEARS ENDED MAR. 31, 1914, 1927, 1933, 1937, AND 1938.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

Statistical Tables of Current Trade.—Tables 10 to 18 (pp. 510-551) deal with the current trade statistics of the Dominion. Tables 10 and 11 are summary tables, showing by groups our trade with the United Kingdom, the United States, and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13, for imports of all important commodities. Table 14 shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1934-38. Table 15 shows imports and exports for the fiscal year ended 1938 by degree of manufacture

and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries dutiable or free under the general, preferential, and treaty rate tariffs in 1938.

#### **Subsection 4.—Trade with the United Kingdom and the British Empire.**

**Trade with the United Kingdom.**—Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States (see Tables 5 and 6 of this chapter). In the early years of the Dominion, the United Kingdom, which was then lending Canada capital on a considerable scale for those times, supplied more than half her imports, though as a customer she came second to the United States. The export trade continued for some time to follow its accustomed channels to the United States, in spite of the denunciation of the Reciprocity Treaty which had expired on Mar. 17, 1866. However, partly as a result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the proportion of exports tended to increase to the United Kingdom and decrease to the United States. In the '70's this proportion to the latter country, which had been over 50 p.c. in the first few years of Confederation, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890 when it fell to 35 p.c. in 1892, and as low as 27 p.c. in 1898. The United Kingdom, although it had been the chief market for Canadian exports in certain years between 1874 and 1887, definitely took the lead in 1890 and steadily retained that position until 1920. During the War period the flow of goods from Canada to the United Kingdom was naturally exceptionally large. However, the United States again became the chief market in 1921 and has maintained that position continuously since 1927, except in the fiscal year 1934, when exports to the United States dropped to 34 p.c. of the total, partly due to the diversion of exports of gold to London during that year (see p. 476), and also to the industrial depression in the United States.

As already indicated, at the time of Confederation, the United Kingdom was the principal source of Canadian imports and until 1875 that country supplied half or more of the requirements. The United States took the lead in 1876 and has maintained it since 1883. Imports from that country have exceeded half the total from 1877 to 1879 and continuously since 1896, the proximity of the two countries, the increasing population on both sides of the boundary line, the common language, and the similarity of tastes and economic conditions being largely responsible. The proportion of imports coming from the United Kingdom has shown a generally declining trend since 1872, although after the enactment of the British Preference in 1897 the actual values of imports from the United Kingdom grew larger until the War. (See under the Preferential Tariff and Empire Trade below.) Even during the great growing period before the War, when large amounts of British capital were being invested in Canada, the proportion of imports from the United Kingdom tended to decline while that from the United States increased. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, imports from that source were curtailed and dropped as low as 8.0 p.c. in the fiscal year 1919, while imports from the United States rose to about 82 p.c. of the total at that time. Since the War, the proportion of imports from the United Kingdom has been generally a trifle lower and that from the United States higher than in the pre-War period, although during the depression, under the influence of the Ottawa

Agreements and the suspension of imports of capital goods from the United States, the trend was reversed, apparently temporarily.

Statement VI, p. 487, shows Canada's trade with the United Kingdom in two recent years compared with that in 1933, 1927, and 1914. It may be noted that in the latest years there has been a very great decline in imports of textiles, partially compensated by some increase in imports of iron, non-metallic mineral, and chemical products. Vegetable and animal products continue to make up the major part of exports to the United Kingdom, but there has been an actual and a great proportional increase in exports of wood and paper products and non-ferrous metals.

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in summary form in Tables 10 and 11, and in detail in Tables 12 and 13 of this chapter.

**The Preferential Tariff and Empire Trade.**—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to on p. 462.

The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56.7 p.c. After the introduction of the British preferential tariff, the downward trend in the value of imports from the United Kingdom was reversed, although the proportion of our total imports coming from the United Kingdom continued to decline. Imports from other Empire countries which were insignificant before the beginning of the century have increased both in actual value and proportion of total imports.

**Average Rates of Duty under the British Preference.**—Table 18 on p. 551 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff, while Table 8, on p. 508, shows the average *ad valorem* rates of duty on imports from the United Kingdom, United States, and all countries in each year since Confederation. The apparently higher average rate collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is due largely to the following factors: (1) imports of alcoholic beverages, which are subject to high duties, bulk largely in imports from the United Kingdom but are negligible from the United States; (2) imports of raw materials for processing in Canada, which are free of duty, form an important part of imports from the United States; and (3) dutiable imports from the United Kingdom are largely highly manufactured goods which are subject to relatively higher rates than semi-manufactured goods for further manufacture in Canada, which form another large element of imports from the United States. To make a fair comparison between the United Kingdom and the United States of the average rates of duty collected on ordinary dutiable imports, imports of alcoholic beverages and manufactured tobaccos should be eliminated, while imports free of duty under the British preference but dutiable when imported from the United States should

be added to the dutiable imports from the United Kingdom. After these logical adjustments the average rate of duty on imports from the United Kingdom has been lower in every year since 1922 while the difference in favour of the United Kingdom has become 50 p.c. or more in recent years. This subject is treated in more detail at pp. 58-59 of the Condensed Preliminary Report on the Trade of Canada, 1936, and at pp. 509-510 of the 1937 Year Book.

**Trade with the British Empire.**—An abbreviated statistical survey of Canada's trade with the United Kingdom and the remainder of the Empire is given in Statement VII below. Empire trade has accounted for a much larger proportion of exports than of imports. The percentage of both import and export trade with the Empire, other than the United Kingdom, has shown a generally upward trend in the period covered since 1886. The industrial development of Canada draws increasing imports of raw materials from other Empire countries, which in turn provide an expanding market for her manufactured and specialized products.

For the intelligent interpretation of trends in trade over a long period such as that covered in Statement VII it is essential to bear in mind the effects of shifts in the production of commodities and in world demand, as well as fluctuations in price levels and in business cycles. These factors are discussed in connection with the principal commodities imported and exported on pp. 495-499, and also in the Review of World Trade on pp. 476-485, and should be studied in connection with the trends evidenced here.

**Subsection 5.—Trade with United States and Other Foreign Countries.**

For convenience of comparison and to avoid repetition, the relative importance of the United Kingdom and the United States in the trade of Canada is discussed in connection with the United Kingdom under Subsection 4, p. 488. A record of the value and proportion of trade with the United States in each year since 1868 is given in Tables 5 and 6 of this chapter, pp. 506 and 507.

The commodities of Canadian export and import trade with the United States are shown in summary form in Tables 10 and 11 and in detail in Tables 12 and 13 of this chapter.

Trade with the United States by main groups of commodities for two recent fiscal years compared with 1933, 1927, and 1914 is shown in Statement VI, p. 487. Non-metallic minerals (chiefly coal and petroleum products) and chemicals are an increasingly important factor in imports from the United States, although iron products again became the most important group in 1935 and there are still large imports of textiles which include raw cotton, and of vegetable products largely comprised of tropical or out-of-season fruits and vegetables. Aside from the effects of the Ottawa Agreements, with their purpose of increasing intra-Empire trade, and of the at-times heavy discount against Canadian funds in the United States, a factor in the fluctuation of the United States share in imports into Canada which should not be overlooked is the influence of capital expenditures here. The United States is the principal external source for machinery, equipment, and structural materials. The almost complete cessation of capital expenditures in the depression, therefore, affected imports from the United States more than from any other country, while recovery tends to cause them to rise more rapidly again.

Another important factor influencing imports from the United States is Canadian purchasing power which is very directly affected by exports to the United States. These latter were seriously curtailed by the very high rates on important Canadian products introduced by the Hawley-Smoot Tariff of June, 1930, and thereafter imports from the United States showed a greater decline than Canadian exports to that country. (See the 1936 Year Book, p. 508.)

However, this situation has been relieved by the trade agreements. The influence of the economic recovery in both Canada and the United States should not be overlooked as a factor in the recent increases of trade, while shipments of gold to the United States have augmented exports to that country.

**Canadian Trade via the United States.**—Imports from overseas countries via the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported via a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1938 imports via the United States have decreased from 9.5 p.c. to 2.0 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going via the United States shows a considerable decline since 1927, the percentages by fiscal years being: 1927, 39.4; 1928, 38.7; 1929, 36.6; 1930, 33.7; 1931, 27.3; 1932, 18.7; 1933, 14.2; 1934, 14.4; 1935, 17.3; 1936, 18.4; 1937, 16.5; 1938, 11.4. An important factor in the decline for recent years was the requirement of direct shipment for goods to qualify under the Empire preferences introduced in Britain,

but this factor was cancelled, so far as wheat is concerned, under the United Kingdom-United States Trade Agreement which came into effect Jan. 1, 1939. Details of exports *via* the United States by countries are given in Table 21 of this chapter.

**Trade with Other Foreign Countries.**—The positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1938 are shown in Statement VIII below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion, while those from other foreign countries declined. With this exception, the proportion of imports from other foreign countries has remained surprisingly constant, at about one-tenth to one-eighth of total imports, over the period of nearly half a century. Canadian exports to other foreign countries increased from 4.5 p.c. to as high as 24.0 p.c. in 1929 but they have declined again since then. Factors affecting these trends are referred to in the text preceding Statement VII on p. 490.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 14 to 45 (pp. 89-129) of the Condensed Preliminary Report on the Trade of Canada, 1938, published by the Dominion Bureau of Statistics. These tables show the trade of Canada in leading commodities with 96 British and foreign countries for the fiscal years 1937 and 1938.

### Subsection 6.—Geographical Distribution of Canadian Trade by Continents and Countries.

**Canadian Trade by Continents, 1938.**—A summary of the imports and exports of Canada by continents for representative fiscal years since 1929 is given in Statement IX, below. The part of the table showing percentages is of particular interest as indicating trends in the distribution of trade. In connection with these trends, the influences affecting the geographical distribution of world trade as outlined on pp. 480-483 should be considered. The fiscal year 1929 was the peak year before the depression while 1933 was the lowest year. In the declining phase of the depression the percentage of imports from the United Kingdom and "Other Europe" tended to increase while that from the United States fell off very considerably. In the recovery phase since 1933 the percentage of imports from the United States has risen again, while that from "Other Europe" has declined to a much lower figure than formerly. Compared with 1929, much larger proportions of imports are now coming from Asia, Oceania, and Africa, due to increased direct imports of industrial raw materials from these continents. The restrictive measures regarding trade adopted by many European countries have greatly reduced the share of "Other Europe" in the exports of Canada while the market for Canadian goods in Oceania and Africa has expanded.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

**Imports from Principal Countries.**—Statement X, which follows, shows how predominant are the two great English-speaking countries as sources of supply of Canadian imports. Trade with these two leading countries is more fully covered in Subsections 4 and 5 of this Section. The percentage of imports from countries from which Canada obtains important industrial materials is tending to rise with

the progress of recovery in Canada. Imports from France have been seriously affected in recent years by the unfavourable economic conditions prevailing in that country, while Germany's restrictive policy regarding trade is resulting in a declining trend in imports from that country. In Table 19 of this chapter will be found the values of imports from all important countries in recent years.

X.—PERCENTAGES OF TOTAL IMPORTS INTO CANADA FROM EACH OF TWELVE LEADING COUNTRIES, FISCAL YEARS ENDED MAR. 31, 1935-38.

**Exports to Principal Countries.**—Percentages in Statement XI, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as customers of Canada. Similarity of tastes and standards of living, as well as favourable tariff arrangements, are considerable factors in expanding exports of Canadian products to the other British dominions. Table 20 of this chapter gives actual values of Canadian exports to all important British and foreign countries for the latest five fiscal years.

**Subsection 7.—Principal Commodities Imported and Exported.**

The commodities which make up Canada's external trade are shown in detail for the four latest fiscal years in Tables 12, dealing with exports, and 13, with imports, beginning on p. 512 and p. 524, respectively.

**Canada's Principal Imports.**—Statement XII, which follows, shows the long-term trend of principal commodities imported into Canada in the fiscal years 1890, 1900, 1910, 1920, 1930, and 1938. In the interpretation of the trends in imports, shown in this statement, the effects of price changes and of fluctuations of the so-called business cycle should be kept in mind. Thus the Bureau of Statistics' index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889, 52.1 in 1899, 59.5 in 1909, 134.0 in 1919, 95.6 in 1929, and 84.6 in 1937, these calendar years approximating to the fiscal years ended 1890, 1900, 1910, 1920, 1930, and 1938. In the matter of business fluctuations, the fiscal years 1890 and 1900 were affected by the long period of depressed commercial conditions accompanying declining price trends extending from 1872 to 1897, the fiscal year 1910 was influenced by the general development boom in Western Canada, 1920 was affected by the feverish activity which immediately followed the War, 1930 represented the end of the security inflation period and the beginning of the downturn, while in 1938, recovery, as compared with the low figures of 1933, was under way to a marked degree, both in general activity and in the level of wholesale prices.

During the period of 48 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports, such as crude petroleum, automobiles and parts, artificial silk, electrical apparatus, and aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products, and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery, and fruits, which still remain among the chief items of imports owing to the absence of coal and high-grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century, many of the leading imports are now raw materials required by Canadian industries. The quantities of a number of these raw materials imported in each year since 1911 are shown in Table 9, p. 509.

Among the factors affecting short-term fluctuations of imports, in distinction from the long-term trends outlined above, probably the greatest is the so-called business cycle. In periods of prosperous industrial and commercial activity, when exports move freely to world markets at remunerative prices, the national income is on a correspondingly high level and the demand for imported goods in great variety expands accordingly. Especially typical of prosperity periods are large expenditures on capital improvements and upon luxuries, while in years of depression, expenditures under these two categories are eliminated or very seriously curtailed. It is, therefore, an indication of returning prosperity in Canada to find imports of

machinery, rolling-mill products, electrical apparatus, farm implements, automobiles, unmanufactured wood, etc., recovering something of the relative importance among imports which they held for a few years up to 1930.

XII.—CANADA'S LEADING IMPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, AND 1933.

Note.—Commodities arranged in order of importance, 1933.

**Canada's Principal Exports.**—Statement XIII, which follows, gives Canada's leading domestic exports for the fiscal years ended 1890, 1900, 1910, 1920, 1930, and 1938, arranged in descending order of importance in 1938. In the interpretation of these figures of the main commodities exported, the same qualifications should apply regarding price changes and business fluctuations as cited above in the case of imports. Furthermore, factors influencing world trade, as outlined for recent years in Subsection 1, pp. 476-483, have an important bearing upon trends in Canadian exports. Since agricultural products are still an important element in Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year-to-year volume and value of exports. Among special circumstances affecting Canadian exports in the fiscal year 1938, may be mentioned poor crops in the Prairie Provinces in the autumn of 1937, further industrial recovery in the United States and other countries, and an increased demand for metals, due partly to armament programs.

Over the period of 48 years covered by the statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal, and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. The five leading exports in 1938 were very unimportant in 1890. The year 1910 is the earliest year in which wheat appears as the leading export in the statement, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles, and rubber tires. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese, and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1938 than in 1890. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent

consumed within the country. The rapid progress during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of non-monetary gold, copper, nickel, silver, zinc, lead, aluminium, and platinum. The part played by these industries in supporting Canada's export trade has increased since 1930 with the curtailment of world trade in agricultural products. Indeed, in 1938, these great mining and metallurgical industries provided exports slightly greater than those of either the agricultural or forest resources of Canada, although agricultural exports in that year were affected by poor crops in the autumn of 1937. The direct effect of Canada's resources of water power may be traced in the statement, not only in the growth of exports of pulp and paper and of electric energy, but also in that of non-ferrous metals, artificial abrasives, and certain chemicals such as fertilizers, sodium compounds, and acids, in all of which economic production is due largely to cheap hydro-electric power.

The wide variety of exports illustrates the extent to which the Canadian economy has been broadened and strengthened since the beginning of the century. While exports are still chiefly derived from the natural resources, the products are now exported in more finished manufactured forms, and in greater variety. The increased production of minerals and the wider range of forest products have made Canadian exports more readily adaptable to changing conditions throughout the world. Furthermore, fully manufactured commodities such as automobiles, whisky, rubber goods, farm and other machinery, electrical apparatus, etc., now form important items of the list. The self-sufficiency programs with regard to food supplies of nations with dense industrial populations have had a serious effect on Canadian agriculture, but the situation for the Canadian economy at large would have been infinitely worse, had it not been for the broadened production indicated above.

XIII.—CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, AND 1938.

NOTE.—Commodities arranged in order of importance, 1938.

## Subsection 8.—Proportions of Trade in Raw and Manufactured Products.

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. This is discussed as extensively as space permits in the preceding subsection. Statement XIV shows how Canada's imports and exports, analysed into the three categories of raw materials, partly manufactured goods, and fully or chiefly manufactured goods, are divided

between the continents and leading countries of the world. In trade with industrialized continents, such as Europe and Asia, Canadian imports are largely manufactured goods and exports mainly raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa, and North America (if the United States be excluded) the situation is the reverse. See also Table 15 of this chapter which shows the external trade classified by main groups according to origin and degree of manufacture.

XIV.—CANADA'S IMPORTS AND EXPORTS, BY CONTINENTS AND LEADING COUNTRIES, ACCORDING TO DEGREE OF MANUFACTURE, YEAR ENDED MAR. 31, 1938.
